Sakura Finetek—These semi-disposable autopsy knives are made of high quality stainless steel with autoclavable plastic handle which accommodates all three sizes of blades while maintaining optimal balance and control.

Cat.#	Tissue-Tek	Description	Pack
62572-01	4781	Autopsy Knife Handle	each
62572-10	4782	Autopsy Blade, 100mm	5/pk
62572-17	4783	Autopsy Blade, 170mm	5/pk
62572-20	4784	Brain Blades	5/pk

► One Piece Scalpel Blade with Handle

An all metal, carbon steel scalpel with a black enamel handle. Blade length: 1½". Overall length: 6" (165 mm).

Cat.#	Description	Pack
72048-01	Scalpel Blade with Handle	each

► Disposable Scalpel Sets

High quality carbon steel is mounted on plastic handle, individually foil wrapped and sterilized by gamma irradiation. Packed 10 each /box. They are exceptionally strong and relatively uniformly sharp, ideal for routine laboratory dissecting, tissue mincing and where you do not need high cost blades

Cat. #	Description	Qty
72052-10	Scalpel Handle Set #10	10/pk
72052-11	Scalpel Handle Set #11	10/pk
72052-15	Scalpel Handle Set #15	10/pk
72052-20	Scalpel Handle Set #20	10/pk
72052-22	Scalpel Handle Set #22	10/pk

► Tissue-Tek® Accu-Edge® Trimming Knife Handles and Disposable Blades

Sakura Finetek - Extremely sharp and light weight. Designed for surgical grossing and autopsy procedures. Extremely sharp edge allows a wide variety of sectioning and trimming tissue samples. Disposable blades can be easily inserted into handle.

Cat.#	Tissue-Tek	Description	Pack
Handles:			
62560-01	4786	Short, Straight	each
62560-04	4790	Long, Straight	each
62560-10	4787	Short, Right Handed	each
62560-14	4788	Short, Left Handed	each
Disposable Blades:			
62561-10	4785	Short Blade, (130 mm L x 18mm W)	50/pk
62561-20	4789	Long Blade, (260 mm L x 18 mm W)	50/pk

► Tissue-Tek® Accu-Edge® Replacement Blade Scissors

Sakura Finetek—These Accu-Edge® replaceable blade scissors are sharp and prevent cross contamination every time a scissor is used for tissue processing. Blades are made from stainless steel and are autoclavable, corrosion free and easily inserted and removed with the use of an enclosed tool. Blades are available separately or as a pair. They are sold 5 pairs per package: sharp-sharp, sharp-blunt, blunt-blunt.

Cat.#	Tissue-Tek	Description	Pack
62570-01	4794	Replacement Blade Scissors	each
62570-05	4795	Blades, Sharp-Sharp	5/pk
62570-06	4796	Blades, Sharp-Blunt	5/pk
62570-07	4797	Blades, Blunt-Blunt	5/pk

Dissecting Forceps and Needles see Tweezers and Tools section pages 818-825 >>>>

► Lighted Forceps and Scissors: Illuminated and Ergonomic

- Increases the visibility of the specimen
- Minimizers Floaters
- Allows for accurate orientation of tissue and specimen
- Reduces embedding and prep time

77905-01	Lighted Forceps, 13CM Smooth Fine Tip	kit
77905-02	Lighted Forceps, 15CM Smooth Fine Tip	kit
77905-03	Lighted Forceps, 18CM Smooth Fine Tip	kit
77905-04	Lighted Forceps, 14CM, Smooth, Fine Tip, Ergonomic Embedding Forceps	kit
77905-05	Lighted Forceps, 16CM Serrated Blunt Tip	kit
77905-06	Lighted Forceps, 20CM Serrated Blunt Tip	kit
77905-07	Lighted Mayo Scissor 17CM Blunt/Blunt Tip	kit
77905-07	Lighted Surgical Scissor 17CM Blunt/Blunt Tip	kit

(Each kit includes: one instrument, power pack & battery charger)

Scissors

Forceps

See your samples and your embeddings in a whole new light! These lighted forceps ease identification and location of otherwise undetectable tissue fragments, while reducing embedding time. Increases the visibility of specimen allowing for more accurate work. Made of German stainless steel, are submersible and light longevity approx. 20,000 hours.

► Halstead Mosquito Forceps

Stainless Steel hemostatic forceps with box lock joint and serrated jaws. It measures: 5" (127mm) long.

72942-5S	Halstead Mosquito Forceps, Straight	each
72942-5C	Halstead Mosquito Forceps, Curved	each

72942-5S

72942-5C

► Baby Metzenbaum Scissors

Very delicate stainless steel scissors.

72943-5S	Metzenbaum Scissors 5½", (146mm), Straight	each
72943-5C	Metzenbaum Scissors 5½", (146mm), Curved	each

72964-01

72966-03

► Steel Ruler

Stainless steel ruler. 1 millimeter thick, 1 centimeter wide, 1 decimeter long. Its volume is 1 cubic centimeter and its weight in grams is the specific gravity. One edge is graduated in millimeters.

72909 Steel Ruler each

► Perfect Loop; Light Microscopy

70940

Using our perfect loop you can pick up your freshly cut thick sections easily onto the grid mesh without creases. The outside diameter of the loop is 7mm.

70940	LM set of handle & Loop	set
70941	LM loop only	each
70942	LM loop only	5/pk
70943	LM handle	each

For a more detailed description of the Perfect Loop see page 260 >>>>

► Crucible Tongs

Stainless steel tongs with tapered tips which meet precisely when closed. Length: 9½" (241mm).

72906 Crucible Tongs each

► Seeker/Probe

Stainless steel with a hexagonal handle.

- Single end probe which comes with one fine point curved tip.
- Double ended probe which comes with one end tapered to a point and one end curved with a rounded tip.

72945-01	Single-End Seeker/Probe	each
72945-02	Double-End Seeker/Probe	each

► Stainless Steel Probes

These probes are scalpel sharp for fine probing. They are useful for many applications, such as micro positioning, solder probing, and band inspection.

62125-10	Stainless Steel Probes	4/set
62125-11	Stainless Steel Probes #1	each
62125-12	Stainless Steel Probes #2	each
62125-13	Stainless Steel Probes #3	each
62125-14	Stainless Steel Probes #4	each

► Mall Probe

63324-20

6" long, Chrome plated with one blunt bent end and hexagonal shape handle

Cat. #	Description	Qty
63324-20	Mall Probe, 6" L,	each

► Probe with Eye

Stainless steel, 5" long, 2mm diameter. Flat one end with eye.

Cat. #	Description	Qty
63324-30	Probe With Eye, 5" L	each
63324-32	Probe With Eye, 6" L	each
63324-33	Probe With Eye, 7" L	each
63324-34	Probe With Eye, 8" L	each

► Huber Probe

63324-10

Chrome Plated. 6" long, one blunt bent end, and one chisel finish on the other end

Cat. #	Description	Qty
63324-10	Huber Probe 6" L	

► Forceps Jar

Made of stainless steel with wide base and polished finished.

Cat. #	Description	Qty
63313-03	Forceps Jar, 3" Dia x 3" High	each
63313-04	Forceps Jar, 4" Dia x 4" High	each
63313-05	Forceps Jar, 3" Dia x 4" High	each
63313-06	Forceps Jar, 4" Dia x 5" High	each
63313-07	Forceps Jar, 4" Dia x 8" High	each

► Combination Probe Set

Probe set include two-way handle and four probe heads. These probe heads (A, B, C, D) are easily screwed into the handle (H). This set is very convenient for field work or on the move.

All packed in a handy plastic zippered case. Handle is 6.5 inch long.

63325-00

Cat. #	Description	Qty
63325-00	Combination Probe Set	each

► Probe and Hook

63324-40

Chrome plated, 6" long with pointed probe in one end and pointed sharp curved hook on the other end

Cat. #	Description	Qty
63324-40	Probe and Hook, 6" L,	each

► Disposable Delta Spreaders

- **Edgeless Design** — Soft, rounded corners won't tear agar.
- **Even Pressure** — Unique delta shape smoothly distributes media.
- **Ripple Handle** — Allows for easy and comfortable manipulation.
- **Sterile** — May be used right out of the box.
- **Measurements** — 172mm x 37mm, 4mm diameter.

Cat. #	Description	Qty
70498-40	Purple, Delta Spreader	500/case

► Disposable L-Shaped Spreaders

- **Smooth Surface** — Will not tear agar or disrupt media layer.
- **ABS Plastic** — Spreaders are durable and lightweight.
- **Sterile** — No flaming required.
- **Measurements** — 146mm x 38mm, 4mm diameter.

Cat. #	Description	Qty
70498-45	Green, L Spreader	500/case

► Dissecting T-Type Pins

Stainless steel, with T shapes head pin and pointed end.

63307-60

Cat. #	Description	Qty
63307-60	Dissecting T-Type Pins,	6/pk

62420-10

► Bacti-Cinerator IV

Features:

- Sterilizes loops and needles safely and conveniently.
- Prevents infectious spatter and/or cross contamination.
- Safeguard laboratory personnel -no open flame -no hazardous gas.
- Ideal for use in anaerobic chambers.

The Bacti-Cinerator IV sterilizes by infrared heat (Heater Element contains no asbestos) - organic material is incinerated deep inside the ceramic tunnel. To use, simply insert loop or needle into the tunnel. Complete sterilization takes only 5 to 7 seconds at optimum sterilizing temperature of 1,500°F. There is no need to wait for the loops or needles to turn red. Unit does not require oxygen so it can be used in anaerobic chambers. Operates on 120 Volt, 60 Hz. UL approved.

Cat.#	Description	Qty/pk
62420-10	Bacti-Cinerator IV , 115 Volt	each
62420-20	Bacti-Cinerator IV , 220 Volt	each
62420-40	Bacti-Cinerator IV , 240 Volt	each
62420-52	Replacement Switch	each
62420-51	Replacement Bacti III Heater Element, 115V	each
62420-53	Replacement Bacti III Heater Element, 220V	each
62420-54	Replacement Bacti III Heater Element, 240V	each
62420-55	Replacement Bacti IV Heater Element, 115V	each
62420-56	Replacement Bacti IV Heater Element, 220V	each
62420-57	Replacement Bacti IV Heater Element, 240V	each

► Inoculating Loop/Needle

72952-10

72952-20

Nichrome wire. An 8" aluminum handle with a 3" nichrome wire, 25 gauge. Loop O.D. is 4mm; loop I.D. is 2.5 mm. Available with a loop or a needle.

72952-10	Inoculating Loop	12/pk
72952-20	Inoculating Needle	12/pk

► Calibrated Loops

The 0.01 ml loops are calibrated to A.P.H.A. Standards and are made from 19 gauge B&S platinum wire with 5% rhodium. The 0.001 ml loops is made from 26 gauge B&S platinum with 15% iridium.

Cat.#	Contained Volume	Loop Diameter	Length	Pack
62430-10	0.01 ml	4 mm	25 mm	each
62430-20	0.01 ml	4 mm	70 mm	each
62430-30	0.001 ml	1.45 mm	70 mm	each

► Inoculating Needle

Made from 26 gauge B&S platinum wire with 15% iridium to provide rigidity with thinner wire for delicate work. Both ends are ground smooth.

62432-01	Inoculating Needle, 70 mm	each
----------	---------------------------	------

► Inoculating Loops

Our high quality inoculating loops are made from platinum wire. The 15% iridium adds necessary rigidity permitting thinner wire for delicate work. The loop section is welded and smoothly finished to form a "perfect circle".

62438-03	3	28 (0.3206 mm)	70	each

► BIOLOOP Disposable Incubation Loops and Needles

- Eliminate the need for flaming metal loops and exposure to airborne pathogens.
- Precision molded from biological inert polymers.
- Three color coded designs: Blue - 1µl loop/needle
Natural - 10µl loop/1µl loop
Yellow - 10µl loop/needle
- Irradiation sterilized.
- Available either individually wrapped or in zip seal bags.

Ordering:

Cat.#	Description	Qty/cs
62446-01	10µl Loop/Needle, Yellow, Individually Wrapped, 500/bag	500/cs
62446-02	10µl Loop/Needle, Yellow, 50 Bags of 10	500/cs

62447-03	10µl/1µl Natural, 50 Bags of 10	500/cs

► Loop and Needle - Disposable

Made from Polystyrene

- Eliminates the need for flaming metal loops and exposure to air-borne pathogens
- Cross contamination due to improper sterilization is eliminated
- Surface treated for enhanced droplet adhesion
- Supplied sterile in easy-to-open packs of 10 or 25
- Color coded for product identification
- Problem-free inoculation with smooth loop surface
- Precision molded
- Made from virgin raw material which complies with USP class VI requirements
- Calibration certificate available
- Total length: 22.7cm

► Needle and Knife Interchangeable Handle

Made from stainless steel, pin-vise type Handle, which accepts either dissecting needles or a knife.

Handle: 92 mm (3 $\frac{3}{8}$ ") L x 6 mm ($\frac{1}{4}$ ") diameter

Needle: available with straight or bent, 60 mm (2 $\frac{1}{2}$ ") long

Knife: spear type with single or double edge, 75 mm (3") long

Cat.#	Description	Qty/pk
72953-HD	Handle	each/pk
72953-10	Needle, Straight	36/pk
72953-11	Needle, Bent	36/pk
72953-20	Spear Shape Knife, Single Edge	36/pk
72953-21	Spear Shape Knife, Double Edge	36/pk

► Inoculating Loop and Needle Holders

Made from durable, heat resistant brass with a fiberglass insulating sleeve over the gripping area. The threaded collet type collar holds all wire gauge.

62440-06	Loop & Needle Holder 6 in. (152mm)	each
62440-08	Loop & Needle Holder 8 in. (203mm)	each

► The EMS Germinator 500 – The Germ Terminator™

Dry Sterilizer

The GERMINATOR 500™ is a convenient effective way to quickly decontaminate your micro-dissecting instruments. No more need for messy chemicals or open flames in the lab, and the small footprint saves bench space! Very effective

The GERMINATOR 500 is a simple, inexpensive way to quickly decontaminate your micro-dissecting instruments between procedures. The unique stainless steel glass bead bath remains at a constant 500 degrees F, allowing you to insert the tips of your instruments whenever you wish to decontaminate them. And it's fast...most micro-dissecting instruments decontaminate within 15 seconds!

- The operating temperature for the unit is 500°F 15° (233°C)
- No messy chemicals and no need for open flames in the lab.

The unit measures 6.75" x 5.25" x 5.25" (H x W x D) and the Stainless Steel Well measures: 2.0" diameter x 4.0" deep(ID). The unit only weighs 4.5lbs and it is available in 110 or 220 volt. (UL Listed)

The GERMINATOR 500 has the following features:

- Easy to use
- Fast, effective decontamination
- Small footprint saves bench space
- Proven durable design
- Perfect for micro-dissecting scissors and forceps
- Glass Beads: 1.5mm lead free glass balls
- U.L. Listed
- 1 YEAR WARRANTY!
- Modular Cord
- Exclusive Well Collar

66118-10	EMS Germinator 500™ 110 Volt	each
66118-20	EMS Germinator 500™ 220 Volt	each

► Glass Bead Sterilizers

These glass bead sterilizers are quick and easy to use and they are compact and light weight which makes them suitable for table tops or workbenches. They are used to sterilize instruments used in most laboratories and doctors' offices, dentists' offices, clinics, hospitals etc, killing spores and bacteria within 10 seconds!

All units are supplied with one filling of glass beads. Glass beads size ranging 1.5 – 2.0 mm diameter.

BS500 #66116-5

► Micro Spoon with Resin Coated Handle

A micro spoon and spatula made from nickel stainless steel and coated with a glazed finish resin on the handle. The wire is 0.103" (2.62 mm) in diameter.

Overall length: 6-1/2" (165 mm).

The spoon end length: 1" (25 mm) x 1/4" (6.35 mm) wide.

Cat.#	Description	Pack
62410-01	Micro Spoon with Resin Coated Handle	each

► Micro Spoon Heyman Type A

A Heyman type micro spatula made from nickel stainless steel with a glazed finish. The wire diameter is 0.103" (2.62 mm).

Overall length: 6-1/4" (159 mm).

Flat end: 1-1/4" (31.35 mm) long.

The spoon end: 1/2" (12.5 mm) long x 1/8" (3 mm) wide.

Cat.#	Description	Pack
62411-A	Micro Spoon Heyman Type A	each

► Micro Spoon Heyman Type B

A Heyman type micro spatula made from nickel stainless steel with a glazed finish. The wire diameter is 0.103" (2.63 mm).

Overall length: 6-1/4" (159 mm).

Sharpened bent end: 1-1/2" (37.5 mm) long.

V-Shaped formed other end: 1/2" long.

Cat.#	Description	Pack
62411-B	Micro Spoon Heyman Type B	each

► Stainless Steel Spatulas

We offer a selection of stainless steel spatulas - a "must tool" when handling embedding wax.

Cat.#	Description	Qty
63320-03	SS Spatula 3" Long x 9/16" Wide Blade	each
63320-04	SS Spatula 4" Long x 1/2" Wide Blade	each
63320-05	SS Spatula 5" Long x 13/16" Wide Blade	each

► Cartilage Knife

A heavy duty stainless steel blade with a riveted wooden handle.
Blade length: 3½" (90mm), Total length: 8½" (216mm)

72990 Cartilage Knife each

► Autopsy Instruments

EMS now offers these premium grade, hardened stainless steel autopsy instruments, featuring a protective coating for extra durability and protection from rust and corrosion. Satin-matt finish reduces eye-fatiguing glare.

A. Brain Knife

Double-sided edged knife for precision brain sectioning.

B. Skull Breaker

Fracturing hammer for brain access. Available with chisel bottom or hook bottom.

C. Rachitome

Curved rachitome. For specific skull fracturing.

Cat No.	Description	Qty.
70566-10	A. Brain Knife, 9-1/2" (241 mm) Blade	each
70566-11	B. Skull Breaker 5-1/2" (140 mm), Hook End	each
70566-12	B. Skull Breaker 5-1/2" (140 mm), Chisel End	each
70566-13	C. Rachitome 8-3/4" (222 mm)	each

► Brun's Metacarpal Saw

A stainless steel saw. Its overall length is 190mm and its cutting edge is 70mm.

72895-30 Brun's Metacarpal Saw each

► Saws

Three styles of manual bone saws are available. The broad bladed Satterlee Saw (**A**), the thinner rounded tip Charriere Saw (**B**), and the solid handle Langenbech Metacarpal Saw (**C**). Each saw has serrated teeth.

Cat No.	Description	Qty.
70566-30	B. Charriere Saw 10-1/2" (267 mm)	each
70566-31	A. Satterlee Saw 11-1/2" (292 mm)	each
70566-32	Satterlee Saw Replacement Blade	each
70566-33	C. Langenbech Metacarpal Saw 9" (229 mm)	each

► Bone Saw

A rounded end, 203mm blade. The inside handle grip is 70mm and the finger opening is 25mm.

72895-20 Bone Saw each

► Bone Shears

Made from stainless steel with a removable bar spring; perfect for cutting cartilage and bone.

72894-05 Bone Shears, 5½"(L) (140mm) each
72894-08 Bone Shears, 8"(L) (203mm) each

CoreDish™

Multiple Biopsy Containers Half Prefilled with 10% Formalin

We are proud to offer a multi-compartment container in the shape of a dish and half prefilled with 10% Neutral buffered Formalin, for holding and transporting biopsies. It is supplied with a leak-proof closure with O-ring ensuring total protection of contents. It conforms to OSHA directives.

For more information, see page 42. >>>>

► **Bone Rongeurs and Cutters**

Made from stainless steel with a polished finish

► **A. Friedman**

Mini Bone Rongeur, Curved. The jaw width is 2mm and it is 5½" long.

77980-01 Friedman Bone Rongeur each

► **B. Micro-Friedman**

Bone Rongeur, curved.

Very delicate. The jaw width is 1.3mm. and it is 5½" long.

77981-01 Micro-Friedman Bone Rongeur each

► **C. Luer**

Bone Rongeur, curved. Delicate

The jaws width is 3mm. and it is 6" long.

77983-01 Luer Bone Rongeur, 3mm Blade each

► **D. Lempert**

Bone Rongeur. The jaw width is 2.5mm and the length is 6½".

Available either straight or slightly curved

77982-S Lempert Bone Rongeur, Straight each

77982-C Lempert Bone Rongeur, Slightly Curved each

► **E. Blumenthal**

Bone Rongeur. The jaw width is 3mm and it is 6" long.

77984-01 Blumenthal Bone Rongeur, Light Curved each

77984-02 Blumenthal Bone Rongeur, Full Curved each

► **F. Adson**

Bone Rongeur. The jaw width is 7mm and it is 8" long.

77985-S Adson Bone Rongeur, Straight each

77985-C Adson Bone Rongeur, Slightly Curved each

► **G. Micro Cleveland**

Bone Rongeur. Curved jaws. They are available with a 4mm jaw width 5½" long or 5mm jaw width and 7" long.

77986-04 Micro Cleveland Bone Rongeur, 4mm each

77986-05 Micro Cleveland Bone Rongeur, 5mm each

► **H. Beyer**

Bone Rongeur. Double action

– They are curved and have

a jaw width of 3.5mm and

are 7" long

77987-C Beyer Bone Rongeur, Double Action each

► **I. Bohler**

Bone Rongeur. Double action. The jaw width is 3mm and they are 6" long.

77988-S Bohler Bone Rongeur, Double Action, Straight each

77988-C Bohler Bone Rongeur, Double Action, Curved each

► **J. Liston**

Bone Cutting Forceps. Box joint and they are available either straight or angled.

77994-5S Liston Bone Cutting Forceps, 5½" Straight each

77994-7S Liston Bone Cutting Forceps, 7½" Straight each

77994-8S Liston Bone Cutting Forceps, 8½" Straight each

77994-5A Liston Bone Cutting Forceps, 5½" Angled each

77994-7A Liston Bone Cutting Forceps, 7½" Angled each

77994-8A Liston Bone Cutting Forceps, 8½" Angled each

► **K. Bohler**

Double action bone cutting forceps. They are 6" long.

77995-6S Bohler Bone Cutting Forceps, 6" Straight each

77995-6A Bohler Bone Cutting Forceps, 6" Angled each

► **L. Bone Nipper**

A delicate straight 4" long nipper.

77996-6S Bone Nipper, 4" Straight each

► **M. Bone Cutting Forceps**

These forceps are chrome plated and they are 5½" long.

77997-5S Bone Cutting Forceps, 5" Straight each

► Thumb Dressing Forceps

These conventional forceps are very popular and are available in a variety of length, tip, and handle styles.

- Made of premium grade, hardened stainless steel
- Feature a protective coating for extra durability and protection from rust and corrosion
- Satin-matt finish reduces eye-fatiguing glare

Cat No.	Description	Qty.
77937-21	4" (102 mm) Serrated Tips, Fine Grip	each
77937-22	5" (127 mm) Serrated Tips, Fine Grip	each
77937-23	A. 5-1/2" (140 mm) Serrated Tips, Fine Grip	each
77937-24	B. 6" (152 mm) 2 mm Smooth Tips, Broad Grip	each
77937-25	7" (178 mm) 2 mm Smooth Tips, Broad Grip	each
77937-26	6" (152 mm) Serrated Tips, Fine Grip	each
77937-27	C. 6" (152 mm) Serrated Tips, Broad Grip	each
77937-28	7" (178 mm) Serrated Tips, Broad Grip	each
77937-29	8" (203 mm) Serrated Tips, Broad Grip	each
77937-30	12" (305 mm) Serrated Tips, Fine Grip	each

► Adson Forceps

Available in 4 styles. All feature a paddle-style, fine-grooved handle.

- Made of premium grade, hardened stainless steel
- Feature a protective coating for extra durability and protection from rust and corrosion
- Satin-matt finish reduces eye-fatiguing glare

Cat No.	Description	Qty.
77937-35	A. 4-3/4" (121 mm) Adson Tissue Forceps, Serrated	each
77937-36	6" (152 mm) Adson Tissue Forceps, Serrated	each
77937-37	7" (178 mm) Adson Tissue Forceps, Serrated	each
77937-38	B. 4-3/4" (121 mm) Adson Tissue Forceps, 1 x 2 Teeth	each

► 7" (178 mm) Ergonomic Paddle Handle Forceps

Available with either smooth, serrated, needle tips, or with 1 x 2 teeth.

178mm versions are for those preferring a longer forcep and a wider variety of tip choices.

Curved styles are well suited for retrieving specimens from the inside perimeter of transport jars and tissue separation in the water bath.

- Made of premium grade, hardened stainless steel
- Feature a protective coating for extra durability and protection from rust and corrosion
- Satin-matt finish reduces eye-fatiguing glare

Cat No.	Description	Qty.
77937-44	7" (178 mm) Ergonomic Forceps, Paddle Handle, 3 mm Smooth Tips	each
77937-45	7" (178 mm) Ergonomic Forceps, Paddle Handle, 3 mm Serrated Tips	each
77937-46	7" (178 mm) Ergonomic Forceps, Paddle Handle, 3 mm 1 x 2 Teeth	each
77937-47	7" (178 mm) Ergonomic Forceps, Paddle Handle, 1.5 mm Smooth Tips	each
77937-48	7" (178 mm) Ergonomic Forceps, Paddle Handle, 1.5 mm Serrated Tips	each
77937-49	7" (178 mm) Ergonomic Forceps, Paddle Handle, Needle Tip	each
77937-54	7" (178 mm) Ergonomic Forceps, Paddle Handle, 1.5 mm Curved 30° Serrated Tip	each
77937-55	7" (178 mm) Ergonomic Forceps, Handle, 1.5 mm Curved 30° Smooth Tips	each

► 5-1/2" (140 mm) Ergonomic Forceps

Available with smooth, serrated, or needle tips.

5 1/2" (14 cm) ergonomic versions for those who prefer a shorter forcep.

- Made of premium grade, hardened stainless steel
- Feature a protective coating for extra durability and protection from rust and corrosion
- Satin-matt finish reduces eye-fatiguing glare

Cat No.	Description	Qty.
77937-56	5-1/2" (140 mm) Ergonomic Forceps, 1.5 mm Smooth Tips, Straight	each
77937-57	5-1/2" (140 mm) Ergonomic Forceps, 1.5 mm Smooth Tips, Curved 30°	each
77937-58	5-1/2" (140 mm) Ergonomic Forceps, 1.5 mm Serrated Tips, Curved 30°	each
77937-59	5-1/2" (140 mm) Ergonomic Forceps, 1.5 mm Serrated Tips, Straight	each
77937-60	5-1/2" (140 mm) Ergonomic Forceps, 1.5 mm Serrated Tips, Needle Tip	each

► Forceps

► SEMKEN

These forceps are available in Serrated/Straight tips with either a 1.3mm or a 1.7mm tip width.

78608-5S	Semken Forceps, 1.3mm Tip, 5" Long	each
78608-6S	Semken Forceps, 1.7mm Tip, 6" Long	each

► IRIS – Dressing Forceps

Made from stainless steel, 4" long. The forceps are delicate and the tips are serrated (1mm wide). Comes complete with a guide pin.

78610-4S	Iris Dressing Forceps, Straight	each
78610-4HC	Iris Dressing Forceps, Haft Curved	each
78610-4FC	Iris Dressing Forceps, Full Curved	each

► IRIS – Tissue Forceps

Same as above but with 1x2 Teeth and they are extra delicate. Made from stainless steel and they are 4" long. The tips are 1.2mm wide.

78611-4S	Iris 1x2 Teeth Tissue Forceps, Straight	each
78611-4HC	Iris 1x2 Teeth Tissue Forceps, Haft Curved	each
78611-4FC	Iris 1x2 Teeth Tissue Forceps, Full Curved	each

► HARMS – Micro Suturing Forceps

These forceps are delicate with a 6mm parallel platform. They are 4" long. And they are available with either straight tips or curved tips.

78614-4S	Harms Micro Suturing Forceps, Straight	each
78614-4C	Harms Micro Suturing Forceps, Curved	each

► MICROSURGERY FORCEPS– With Tying Platform

These are very delicate forceps with a knurling handle and are 5" long

78622-5S	Microsurgery Forceps, Straight	each
78622-5C	Microsurgery Forceps, Curved	each

78615-4S

78615-4A

► MCPHERSON – Tying Forceps

Available with straight or angled tips with 5mm tying platform (parallel gripping platform). 4" long.

78615-4S	Mcpheerson Tying Forceps, Straight	each
78615-4A	Mcpheerson Tying Forceps, Angled	each

► KELMAN-MCPHERSON – Tying Forceps

These forceps are angled with a 7.5mm tying platform (parallel gripping platform) and they are 4" long.

78616-4A	Kelman-Mcpherson Tying Forceps, Angled	each
-----------------	--	------

► CASTRO-VIEJO – Micro-Dissecting Forceps with Tying Platform

These forceps are available with straight tips and in 4 configurations. All of them are 4½" long.

78620-4A	Castro-Viejo w/Tying Platform, 0.12mm Teeth	each
78620-4B	Castro-Viejo w/Tying Platform, 0.3mm Teeth	each
78620-4C	Castro-Viejo w/Tying Platform, 0.5mm Teeth	each
78620-4D	Castro-Viejo w/Tying Platform, Smooth Jaw	each

► Non Slip Grip Forceps – Ergonomic

78300-S and 78300-C

78301-S; 78301-C, and 78301-B

78303-S

78304-S

This outstanding design fits nicely into all hands with perfect functionality. These forceps offer a light touch and they are non-slip and have high precision finish tips. They are the choice of all histologists. These ergonomic forceps come in 7 different configurations.

Cat.#	Description	Pack
78300-S	140mm long. Tip width: 1.0mm. Serrated and Straight Tips	each
78300-C	Same as #78300-S but Curved Tips	each
78301-S	175mm long. Tip width: 0.75mm. Serrated and Straight Tips	each
78301-C	Same as #78301-S. Serrated and Curved Tips	each
78301-B	Same as #78301-S Serrated and Bent Tips	each
78303-S	175mm long. Tip Width: 0.05mm. Fine and Smooth Straight Tipseach	each
78304-S	175mm long. Tip width: 2.0mm. Smooth, Round and Straight Tips	each

► DIEFFENBACH Serrefine

Stainless steel, serrated jaws.

Cat.#	Description	Pack
63326-S	Serrefine, 1½", Straight	each
63326-C	Serrefine, 1½", Curved	each
63327-S	Serrefine, 2¼", Straight	each
63327-C	Serrefine, 2¼", Curved	each

► Ear Punch

Made from stainless steel. Allows for you to make a 2mm hole through the animal ear in just one second. It also can be used as a specimen puncher.

Cat.#	Description	Qty
72893-01	Ear Punch	each

► Curved Forceps

6" (152mm), Stainless Steel, Medium fine tips, curved smooth points.

72910	Curved Forceps	each
-------	----------------	------

► Curved Forceps

EMS Brand, Swiss made forceps from low carbon austenitic steel, corrosion resistance, high quality, curved tips, available with different length and tips style

■ Curved Forceps with medium tips

Cat. #	Description	Qty
72910-6	6" (152mm L) Medium, Non-serrated Tips	each
72910-6S	6" (152mm L) Medium, Serrated Tips	each
72910-7	7½" (180mm L) Medium, Non-serrated Tips	each
72910-7S	7½" (180mm L) Medium, Serrated Tips	each

► Curved Forceps with Fine Tips

Cat. #	Description	Qty
72911-6	6" (152mm L) Fine, Non-serrated Tips	each
72911-6S	6" (152mm L) Fine, Serrated Tips	each
72911-7	7½" (180mm L) Fine, Non-serrated Tips	each
72911-7S	7½" (180mm L) Fine, Serrated Tips	each

► Magic Wands

Magic Wands are made from PEEK, a high performance plastic, with excellent chemical resistance and withstands high temperatures (up to 300°C).

Magic wand is ideal for use for electronic high-tech areas to laboratories, from preparation of samples to applying adhesives, using it as a stirring rod, or evendosing samples etc.

Cat.#	Description	Qty	Price
63323-01	Fine tip and Flat strong tip, 6" (150mm)	each	
63323-02	Curved tip and flat strong tip, 6" (150mm)	each	
63323-03	Flat fine tip and flat sharp tip, 5" (130mm)	each

► Dissecting Kit, 8 pieces, Stainless Steel

Kit includes:

- | | | |
|--|---|---|
| 1 4½" Dissecting forceps with curved and serrated tips | 1 4½" Dissecting forceps straight and serrated tips | 1 4½" Dissecting scissors, sharp, straight points |
| 1 Curved dissecting needle | 1 Dissecting scalpel, 6" long, 1½" cutting edge. | 1 Plastic ruler 6", ¼" div., millimeter and centimeter. |
| 1 Glass pipette with rubber bulb | | |

72950

Dissecting Kit

set

► Large Dissecting Kit

Kit includes:

- | | | |
|--------------------------------------|---|--|
| 12 Scalpel Blades #11 with #3 Handle | 4½" Iris Scissors | Jaws Forceps |
| 6" (15mm) Clear Ruler | 5½" Dissecting Scissors | 5½" Straight Blunt tip Serrated Jaws Forceps |
| 6" long Light Small Probe, Blunt | Suture Hook | 2 mm Diameter Stainless Steel Punch |
| 5½" Kelly Hemostat, Straight | Set of Dissecting Needle, one Straight and one Bent | Large Wood Handle Spatula |
| 6¼" Kelly Hemostat, Straight | 4½" Straight Fine Point Serrated | |

72951-15

Large Dissecting Kit

set

► Dissecting Kit for Botany

Kit includes:

- | | | |
|---|--|--|
| Dissecting teasing needle angular with metal chuck brass-chromed | Dissecting forceps 4.5" curved fine point with guide-pin | Glass dropper |
| Dissecting teasing needle straight with metal chuck brass-chromed | Dissecting forceps medium point 4.5" with guide-pin | Replacement dissecting needle straight, 6/pk |
| Ruler 6" | Dissecting Iris scissors 4.5" | Replacement dissecting needle angular, 6/pk |
| | Dissecting scalpel handle #3 | Vinyl storage, zippered case with liner. |
| | No. 10 scalpel blade, 10 pcs | |

72951-20

Dissecting Kit for Botany

set

► Anatomy Dissecting Kit 1

Kit includes:

- | | | |
|--|--|---|
| Cartilage knife 2" blade | Iris dissecting scissors, 4.5" | Dissecting mall probe chrome, 6" |
| Dissecting scalpel 1.5"L blade | Dissecting scissor, 4.5", sharp/blunt points | Ruler 6" plastic, metric/English markings |
| Narrow blade scalpel 1.5"L blade | Dissecting teasing needle, straight, metal chuck | Dissecting chain & hook chrome |
| Dissecting forceps 4.5" with guide pin, medium points | Dissecting teasing needle, angular, metal chuck | Dissecting blow pipe, 6" |
| Dissecting forceps 4.5" with guide pin, curved, fine points. | | Double folded, vinyl storage case |

72951-25

Anatomy Dissecting Kit

set

► Anatomy Dissecting Kit 2

Kit includes:

- | | | |
|--|--|---|
| Cartilage knife 2" blade | Iris dissecting scissors, 4.5" | Probe and hook, chrome |
| Dissecting scalpel handle #4 | Dissecting teasing needle, straight, metal chuck | Ruler 6" plastic, metric/English markings |
| Dissecting scalpel handle #3 | Dissecting teasing needle, angular, metal chuck | Dissecting chain & hook chrome |
| Scalpel blade #10, 1 piece | Dissecting forceps 4.5" with guide pin, fine points. | Dissecting blow pipe, 6" |
| Scalpel blade #24, 1 piece | Dissecting forceps 5" | Double folded, vinyl storage case |
| Dissecting scissor, 5.5", sharp/blunt points | | |

72951-30

Anatomy Dissecting Kit 2

set

► Biology Dissecting Kit

Kit includes:

- | | |
|--|--|
| Dissecting mall probe, chrome, 6" | Dissecting forceps, 4.5", chrome plated |
| Dissecting teasing needle, straight with metal chuck | Glass dropper |
| Dissecting teasing needle, angular with metal chuck | Ruler 6", plastic, metric/English markings |
| Dissecting scissors, 4.5" | Single folded vinyl storage case |
| Dissecting scalpel | |

72951-35

Biology Dissecting Kit

set

► Acrytol Mounting Media

Acrytol is a rapid-drying mounting medium which enables slides to be screened immediately. It has a low viscosity, allowing the medium to flow easily. It also prevents air bubbles from becoming trapped.

Acrytol contains an antioxidant to inhibit stain fading and prevent the formulation of annual rings. A thin coating of Acrytol is all that is needed to adhere a coverglass to a microscope slide.

It is soluble in xylene, toluene and most xylene substitutes.

13518 Acrytol Mounting Medium Pint

► Biomount™

Some mounting media oxidize rapidly upon exposure to air, forming carboxyl groups. This can be more pronounced when sections have been cleared in a solution containing aldehyde. It is

sometimes observed that the immunogold/silver signal fades after a few weeks, or even in a shorter time, from sections that have been mounted with these media under cover slips. The silver is still present, but has formed translucent silver carboxylate salts. Visibility can be retrieved by removing the cover slip and washing in xylene and then immersing the slide in photographic developer, but this is a tedious procedure.

BIOMOUNT is a specially formulated mounting medium that reduces fading of immunogold/silver signals in sections on glass slides. It is suitable for resins as well as wax embedded sections of tissue.

RT **17894** BioMount 100ml

For all of our other Adhesives and Mountants, see pages 9-21 >>>>

► Biomed™ Substitutes

► Clear-Mount (A Direct Substitute for BioMed™ Crystal Mount)

Clear-Mount is a water based mounting medium designed for the permanent mounting of hydrated tissues, which may be damaged by organic solvents. Such samples include cell smears, with peroxidase and alkaline phosphatase chromogens.

This mounting medium preserves Fast Red, Aminoethylcarbazole (AEC), NBT/BCIP, INT/BCIP chromogens and is also compatible with counter-stain such as Hematoxylin and Nuclear Fast Red. It is also suitable for chromogens like DAB and DAB with Nickel and Cobalt. It is not compatible with H & E staining.

Application: Mounting of Immunohisto slides.

For our original formula:

0-5°C	17985-12	Clear-Mount, (with Tris Buffer)	30 ml
0-5°C	17985-15	Clear-Mount, (with Tris Buffer)	250 ml

For a more stable pH:

0-5°C	17985-16	Clear-Mount, (with PIPE Buffer)	30 ml
0-5°C	17985-17	Clear-Mount, (with PIPE Buffer)	100 ml

► Limonene-Mount (A Direct Substitute for BioMed™ Clarion Mount)

This mounting medium is made with limonene, a natural product from orange peels. It preserves tissues and cell smears that can be dehydrated with organic solvents in immunohistochemistry, e.g. DAB and DAB with nickel or cobalt. Our Limonene-Mount also works well with alkaline phosphatase chromogens, and organic solvent resistant Supper Fast Red. It is also a good choice for mounting H & E stained slides.

Application: Mounting tissues and cell smears.

0-5°C	17987-01	Limonene-Mount	100 ml
0-5°C	17987-06	Limonene-Mount	6x100 ml/bx
0-5°C	17987-25	Limonene-Mount	250 ml

► EMS-Mount

EMS-Mount is a non-permanent, low viscosity an aqueous mounting medium designed for mounting of tissue sections and cell smears with peroxidase and alkaline phosphatase chromogens that cannot be dehydrated with organic solvents. This mounting medium preserves Fast red, Aminoethylcarbazole (AEC), BCIP/NBT, BCIP/INT chromogens and is also compatible with counterstain like Hematoxylin and Nuclear fast red (NFR). It is also suitable for chromogens like DAB and DAB with nickel and cobalt. (It is not compatible with H and E staining). Refractive Index: 1.372 +/- 0.002

Application: Mounting of chromogens that cannot be dehydrated with organic solvents.

Reagent: Ready to use mounting medium

Storage: 2-8°C is recommended

2-8°C	17985-05	EMS-Mount	30 ml	2-8°C	17985-07	EMS-Mount	250 ml
2-8°C	17985-06	EMS-Mount	100 ml	2-8°C	17985-08	EMS-Mount	1000 ml

► EMS Shield Mount

EMS Shield Mount is an aqueous non-permanent, low viscosity mounting medium for immunofluorescence. This unique formula prevents rapid photobleaching of FITC, Texas Red, AMCA, Cy2, Cy3, Cy5, Alexa fluoro 488, Alexa fluoro 594, Green fluorescent protein (GFP), tetramethyl rhodamine and Redox. The fluorescence is retained during storage at 4°C in the dark. This medium does not contain phenylenediamine, which destroys immunofluorescence of Cy dyes. Refractive Index : 1.380 +/- 0.002

Application: Immunofluorescence, confocal microscopy.

Reagent: Ready to use mounting medium for Immunofluorescence.

Storage: 2-8°C is recommended

2-8°C	17985-09	EMS Shield Mount	30 ml
2-8°C	17985-100	EMS Shield Mount	100 ml

► EMS Shield Mount with Anti Fading

EMS Shield Mount with antifading agent 1, 4-Diazobicyclo-(2,2,2-octane (DABCO™) is an aqueous non-permanent, low viscosity mounting medium for immunofluorescence. This unique formula prevents rapid photobleaching of FITC, Texas Red, AMCA, Cy2, Cy3, Cy5, Alexa fluoro 488, Alexa fluoro 594, Green fluorescent protein (GFP), tetramethyl rhodamine and Redox. The fluorescence is retained during storage at 4°C in the dark. This medium does not contain phenylenediamine, which destroys immunofluorescence of Cy dyes. Refractive Index: 1.382 +/- 0.002

Application: Immunofluorescence, confocal microscopy.

Reagent: Ready to use mounting medium for Immunofluorescence.

Storage: 2-8°C is recommended

2-8°C	17985-150	EMS Shield Mount with DABCO™	30 ml
2-8°C	17985-200	EMS Shield Mount with DABCO™	100 ml

► BiomedTM Substitutes (continued)

► Fluoro-Gel (A Direct Substitute for BioMedTM Gel-Mount)

Fluoro-Gel is a water based mounting medium designed for the permanent mounting of fluorescent stained tissues, which may either be damaged or soluble in organic solvents, such as xylene or toluene. This unique formula prevents rapid photo-bleaching of FITC, Texas Red, AMCA, Cy2, Cy3, Cy5, Alexa Fluoro 488, Alexa Fluoro 594, Green Fluorescent Protein (GFP), Tetramethylrhodamine, Redox, Phycoerythrin (RP-E), Phycocyanin (PC), and Allophycocyanin (APC). The fluorescence is retained during prolonged storage at 4°C in the dark.

Application: Immunofluorescence, confocal microscope.

For our original formula:

0-5°C	17985-10	Fluoro-Gel, (with Tris Buffer)	20 ml
0-5°C	17985-11	Fluoro-Gel, (with Tris Buffer)	100 ml

For a more stable pH:

0-5°C	17985-30	Fluoro-Gel, (with TES Buffer)	20 ml
0-5°C	17985-31	Fluoro-Gel, (with TES Buffer)	100 ml
0-5°C	17985-40	Fluoro-Gel, (with PIPE Buffer)	20 ml
0-5°C	17985-41	Fluoro-Gel, (with PIPE Buffer)	100 ml

► Fluoro-Gel II Mounting Medium

Fluoro-Gel II is similar to Fluoro-Gel, but Fluoro-Gel II contains DAPI (4, 6-diamino-2-phenylindole), which is a counter stain for DNA. This product is to be used in in situ hybridization techniques or other methods where fluorescence of DNA staining is required. DAPI excites at 360 nm and emits at 460 nm, producing blue fluorescence. RNA is also stained with DAPI.

Application: Immunofluorescence, confocal microscopy.

0-5°C	17985-50	Fluoro-Gel II	20 ml
0-5°C	17985-51	Fluoro-Gel II	100 ml

► Fluoro-Gel III Mounting Medium

Fluoro-Gel III Mounting Medium is similar to Fluoro-Gel, however, Fluoro-Gel III with the addition of PI (Propidium Iodide) which is a counterstain for DNA, makes this a unique mounting medium, which prevents rapid photobleaching of FITC, Texas Red, AMCA, Cy2, Cy3, Cy5, Alexa Fluoro 488, Alexa Fluoro 594, Green Fluorescent protein (GFP), Tetramethylrhodamine, Redox, Phycoerythrin (RP-E), Phycocyanin (PC), and Allophycocyanin (APC). The fluorescence is retained during prolonged storage at 4°C in the dark. This medium does not contain Phnylenediamine, which destroys immunofluorescence of Cy dyes, RP-E, PC, and APC. This product is to be used in in situ hybridization techniques or other method where fluorescence of DNA staining is required. PI excites at 535 nm, emits at 615 nm, producing a red fluorescence. RNA is also stained with PI.

Application: Immunofluorescence, confocal microscope

0-5°C	17985-60	Fluoro-Gel III	20 ml
0-5°C	17985-61	Fluoro-Gel III	100 ml

► Fluoro Gel with DABCOTM

Fluoro Gel with antifading agent 1, 4-Diazobicyclo-(2,2,2-octane (DABCOTM) is an aqueous mounting medium for preserving fluorescence of tissue and cell smears. This unique formula prevents rapid photobleaching of FITC, Texas Red, AMCA, Alexa fluoro 488, Alexa fluoro 594, Cy dyes, tetramethyl rhodamine, and Redox. The fluorescence is retained during prolonged storage at 4°C in the dark. Refractive Index: 1.366 +/- 0.002

Application: Immunofluorescence, confocal microscopy.

Reagent: Ready to use mounting medium with anti-fading agent

Storage: 2-8°C is recommended

2-8°C	17985-01	Fluoro Gel with DABCO	20 ml
2-8°C	17985-02	Fluoro Gel with DABCO	100 ml
2-8°C	17985-03	Fluoro Gel with DABCO	250 ml
2-8°C	17985-04	Fluoro Gel with DABCO	1000 ml

► Fluoro-Gel with Anti-Fading Mounting Medium

Fluoro-Gel Mounting Medium with a strong anti-fading agent 1,4-phenylenediamine is an aqueous mounting medium for preserving fluorescence of tissue and cell smears. This unique formula preserves rapid photobleaching of FITC, Texas Red, AMCA, Cy2, Cy3, Cy5, Alexa Fluoro 388, Alexa Fluoro 594 tetramethyl rhodamine, and Redox. The fluorescence is retained during prolong storage at 4°C in the dark. This medium contains Phnylenediamine and is not suitable for immunofluorescence of Cy dyes, Phycoerythrin (R-PR) phycocyanin (PC), and allophycocyanin (APC). Refractive index: 1.366 +/- 0.002

Application: Immuno-fluorescence, confocal microscopy.

Reagent: Prepared from TRIS buffer. Ready-to-use mounting medium with dark coffee color, this is normal, and does not interfere with immuno-fluorescence

Storage: 2 – 8°C is recommended. Protect from light. DO NOT FREEZE.

	Cat. #	Description	Qty
2-8°C	17983-20	Fluoro-Gel with Anti-Fading Agent	20 ml
2-8°C	17983-100	Fluoro-Gel with Anti-Fading Agent	100 ml

► In-Situ Mount (A Direct Substitute for BioMedTM Situ Mount)

In-Situ mounting medium is a unique mounting medium designed for permanent preservation of tissue sections and cell smear with alkaline phosphatase chromogens like NBT/BCIP and red stain.

Application: Mounting tissues and cell smears.

0-5°C	17988-30	In-Situ Mount	30 ml
-------	-----------------	---------------	-------

*The names BioMeda Gel Mount, Crystal Mount, Clarion, Situ Mount are all owned by BioMeda Corporation

► Mounting Medium for all Laser Scanning and Conventional Microscopes

A revolutionary new Mounting Medium which helps to control the effects of Refraction.

These Mountant Solutions:

- Have a refractive index of 1.52 to match the refractive index of your slides and coverslips
- Are simple to use – Just apply the solution to the specimen followed by a cover slip
- May be kept at room temperature – comes with dropper tip to aid in dispensing
- Are water miscible (aqueous glycerol based), and therefore the specimen does not need to be dehydrated prior to the addition of the mounting solution.
- Have a pH compatible with the specimens: CFM-1 has a pH of ~6.5, and CFM-2 has a pH of ~8.5
- Contain an antifadent to help reduce the bleaching of the fluorochromes (CFM-1 Plus Antifadent)
- May be used as a immersion oils in addition to being a mountant solution and since they are water-based, they facilitate cleaning the microscope optics.

► CFM-1 and CFM-1 Plus Antifadent

This glycerol-phosphate buffered saline based mountant solution has been specially formulated so as to have a refractive index of ~1.52 @ room temperature. The addition of antifadent retards the bleaching of fluorochromes. Its refractive index is similar to glass; therefore effects of refraction on image quality are minimized. The CFM-1 Plus antifadent will be particularly useful for high magnification work, where immersion oils are used to minimize distortion of the image due to the refraction of the viewing light and where bleaching of the fluorochrome occurs.

The solutions should also be very valuable for laser scanning microscopy where, three-dimensional imaging of specimens is carried out e.g. with confocal fluorescence microscopy where integrity of the image has to be maintained.

Both solutions are medium viscosity, and water-clear. CFM-1 Plus Antifadent have a pH of ~10
CFM-1 has a pH of ~6.5

► CFM-2 Mountant

This glycerol-tris-buffered based mountant solution has been specially formulated to have a refractive index of ~1.52 (at room temperature) i.e. a refractive index similar to glass so that the effects of refraction on image quality are minimized. This mountant solution may also be used as an immersion oil. The CFM solutions will be particularly

useful for high magnification work where immersion oils are used to minimize distortion of the image due to refraction of the viewing light. The solutions should also be particularly valuable for laser scanning microscopy where three-dimensional imaging of specimens is carried out e.g. with confocal microscopy.

The solution has a medium viscosity, and it is water-clear, and has a pH of ~8.5

► CITIFLUOR™ - Antifadent Mountant Solutions

A mounting medium for immunofluorescence, which overcomes the problems of fading.

This mounting media is designed to reduce the fading of the fluorescence of dyes used for labeling biological specimens.

In the technique of fluorescence microscopy, the fluorescence is stimulated by high intensity UV and/or visible light. Absorption of the light populates an excited state of the dye (usually a singlet state) and this leads to fluorescence. However, the excited state of the dye may undergo chemical reaction, which leads to destruction as evidenced by the fading of the fluorescence and consequent loss of the image. CitiFluor™ mounting media is designed to solve this problem.

Selection of the appropriate product:

There is no universal antifadent due to the fact that biological material is so varied in nature that the fluorescence fading of fluorochromic conjugates is a complex process.

The general anti-fadents are AF1, AF2, and AF3. The AF87 is a specialist immersion oil-based antifadent.

AF1 (Glycerol-phosphate buffered solution containing an additive for use with labeled tissue sections). Should be used if you normally examine specimens in glycol solution. If you normally use saline solution with your specimens. Refractive Index is 1.46.

AF2 (Glycerol solution containing additives for use with labeled tissue sections) is simply a glycerol solution of the antifadent. Refractive Index is 1.47.

AF3 (Phosphate-buffered saline solution containing additives for examination of whole cell) is appropriate. Refractive Index is 1.34.

AF87, the antifadent, is contained in non-fluorescent immersion oil. It is designed for those requiring work at high magnification. It is useful for preventing the fading of such dyes as DAPI, which have the tendency to disperse in glycerol based mountant solutions.

CFPVOH is an aqueous solution of poly (vinyl alcohol) for use as a solid mountant. Apply a few drops of the solution to your sample, and allow drying to give a clear film. Refractive Index is 1.34–1.35.

AF100 is a solution of antifadents to be used with CFPVOH when fading of fluorescence in the poly(vinyl alcohol) is a problem. To prepare a CFPVOH solution containing AF100, add 0.1ml of Af100 to 0.9ml of CFPVOH. If more or less of the solid mountant solution is required, mix the reagent in the appropriate ratio. Once these solutions have been made up, they should be used within a period of days since the solution deteriorates on storage. Refractive Index is 1.34-1.35. All of these products have a long shelf life, a minimum of 2 years. The solution can be stored at room

temperature. With LD50's >2000mg/kg (in rat), this product exhibits no toxicological problems.

► CitraMount® Mountant

This butyl acetate and acrylic resin mixture is the first mounting medium developed for coverslipping directly from d-limonene based clearants. Superior results are also achieved with xylene. CitraMount® medium is recommended for manual coverslipping only as it may cause damage to the valves of automated coverslippers.

- Clear seal with drying time is less than 24 hours
- Refractive index is 1.42 – Viscosity is 90 cPs

RT	18005-01	CitraMount® Mountant	100 ml
RT	18005-05	CitraMount® Mountant	500 ml

► CMCP Macroinvertebrate Mounting Medium

CMCP is a colorless, non resinous, water miscible mounting medium for permanent transparent mounts. This medium used like Canada Balsam, it can be used to mount almost any material, provided it is not stained, calciferous material, or thin tissue sections. This mounting media has the advantage of allowing live or preserved specimens to be mounted directly from water or alcohol.

Free living nematodes and live parasitic worms are among the organism suitable for mounting with CMCP. The CMCP mounting provide then with rapid relaxation, death, and clearing action.

RT	18003-01	CMCP-9 Low Viscosity Mountant	100 ml

TECHNICAL TIP

DEPEX (EMS Cat. #13514) is an Improved Mounting Medium

Most mounting media cause fading of histological preparations over time. A study was conducted to find the most suitable mounting media that would not fade. Depex as a Mounting Media appeared to have a conserving effect on the stain as compared to other available mounting media. The study was based on Araldite embedded semithin sections of rabbit cerebral cortex stained with Toluidine Blue and Pyronin G. The study also showed that the average optical density of sections prepared with DEPEX after one year was higher than the sections treated with other mounting techniques.

Cordula Schmolke (1993). Effects of Mounting Media on Fading of Toluidine Blue and Pyronin G Staining in Epoxy Sections. *Biotech. & Histochem.* 68/3, pg.132-136

► CytoSeal™ Mounting Medium

Premium quality; formulated from the highest quality advanced acrylic resin. It will not become brittle and crack, nor will it discolor or yellow with age. CytoSeal dries rapidly, allowing examination soon after application. It can be used with oil immersion objectives and in fluorescent procedures. Slides will not stick together and the medium will not "cold flow" to the edge of the slide during long term storage. CytoSeal can be dissolved in toluene or xylene. An antioxidant has been added to the formulation to prevent fading of slides. CytoSeal comes in a Controlled Drop Dispenser, with varying viscosities.

- CytoSeal 60, which has a viscosity of 60cps, is intended primarily for use with cover glass.
- CytoSeal 280, which has a viscosity of 280cps is intended for use where minimal spread of medium is required.

RT	18006	CytoSeal 60	4oz.
RT	18007	CytoSeal 60	16oz.
RT	18008	CytoSeal 280	4oz.

► DEPEX Mounting Media

A colorless, neutral, xylene miscible mountant which is suitable for preparations where Canada Balsam is usually used. R.I. 1.5222 @ 23°C.

RT	13514	DEPEX Mounting Media	100ml
----	--------------	----------------------	-------

► DPX Mountant for Microscopy

A mixture of Distyrene, a plasticizer, and xylene. A colorless synthetic resin mounting media which replaces Xylene-Balsam. It preserves the stain and dries quickly. R.I. 1.5175 @ 23°C.

RT	13510	100ml
RT	13512	500ml

► Entellan® A rapid mounting media for microscopy

For long life preparations, without bubble formation at high ambient temperatures. It can be used for all dehydrated microscopic preparations. Cure time is 20 minutes at room temperature. It is colorless with an acid number less than 2.50 and a R.I. N_D²⁰ approx 1.49-1.5. (Contains xylene).

RT	14800	Entellan®	100ml
RT	14802	Entellan®	500ml

► Eukitt™; Mounting Medium

Eukitt is a mounting medium (contains 45% Acrylic Resin and 55% Xylenes), used in microscopy. It is an adhesive and specimen preservative that can be used manually and in automated cover-slipping equipment. Adhesive and sealant for use with glass, non plastic and other non-reactive materials. Spreads quickly and evenly without forming any air bubbles.

- Fast-drying (20 minutes)
- Refractive index close to glass (1.510)
- Chemically neutral
- Little sensitivity to water
- No reaction to staining
- Temperature limits: 42°C-17°C
- Passive to ultraviolet light
- Can be used in place of epoxy resins for mounting petrographic thin sections
- Used in fluorescence dyes in bones

RT	15320	Eukitt™	100ml
RT	15322	Eukitt™	500ml

► Fluoromount-G™ Slide Mounting Medium

A special mounting media for immunofluorescent staining procedures. It is a water soluble, non-fluorescing medium which is well suited for use when the staining procedure has an aqueous final step. It contains 10% polyvinyl alcohol in phosphate buffered glycerol with 0.1% sodium azide as a preservative. One bottle is sufficient to mount up to 500 slides. Refractive Index: 1.46

0-5°C	17984-25	Fluoromount-G	25 ml
-------	-----------------	---------------	-------

► DAPI-Fluoromount G™

DAPI-Fluoromount™ G is a water-soluble, instant blue nuclear probe fluorescing (455nm) compound for mounting fixed slides using a staining procedure having an aqueous final step. Mounting slides with DAPI Fluoromount™ G stains the cell nucleus and may reduce fluorochrome quenching during analysis of slides by fluorescence microscopy. This mounting medium also provides a semi permanent seal for long term storage of slide preparations.

0-5°C	17984-24	DAPI Fluoromount-G™	20 ml
-------	-----------------	---------------------	-------

► Glycerin Jelly

For the mounting of hydrated sections.

RT	17998-10	Glycerin Jelly,	100ml
RT	17998-50	Glycerin Jelly,	500ml

► Histomount

A mixture of xylene - mixed isomers and non hazardous ingredients to offer a very good synthetic mountant. Once dried the refractive index is 1.58.

RT	17995-01	Histomount	100 ml
RT	17995-05	Histomount	450 ml

► Hydromount™

Ideal for frozen tissue sections

Hydromount™ is the traditional choice whenever a nonfluorescing aqueous medium is needed. Hydromount™ is water-based and is suitable for mounting specimens that have been processed in water. Hydromount™ is effective for frozen sections, amyloid, and immunofluorescent staining procedures. Should it become necessary, Hydromount™ may be removed by soaking the slides in warm saline.

RT	17966-01	Hydromount™	100ml
----	-----------------	-------------	-------

Histomount™ and Hydromount™ are Trademarked names of National Diagnostics

MM 24® Mounting Media

Specially formulated for automatic glass coverslippers

MM 24 is a low viscosity mounting medium that is compatible with both aliphatic (eg Sub-X) and aromatic (eg xylene) clearing agents. It is specially formulated to achieve optimum results with automatic glass coverslippers, yet is also effective for manual slide preparation. Set up time before permanent filing is normally 24 hours with aromatic agents and 48 to 72 hours with aliphatics.

	Cat No.	Description	Qty.
RT	13520-21	MM 24® Mounting Media, Pint	each
RT	13520-22	MM 24® Mounting Media, Pint	4/case
RT	13520-23	MM 24® Mounting Media, 4 oz. Dripper Bottle (12)	12/case

► Mount Quick, Solvent/Water Base

Mounting media for cover glass. It comes in a convenient dispensing tube or bottle. Solvent based media which is soluble in xylene and has a 10 minute dry time. Its viscosity is 33 cps at 25°C.

RT	18000	Mount Quick-Solvent Base;	30cc
RT	18002	Mount Quick-Water Base;	30cc

► Omnimount™

- Optical clarity combined with exceptional durability
- Compatible with HistoClear II
- Higher flash point and lower toxicity than xylene based mountants

Specially developed to provide compatibility with National Diagnostic clearing agents, HistoClear II. Omnimount™ combined outstanding optical characteristics with low fluorescence and exceptional durability. In addition to being the ideal partner for HistoClear II, Omnimount is a truly universal mounting medium compatible with all common clearing agents: xylene, toluene, limonene, and petroleum derived products.

The Omnimount solvent has a higher flash point and a lower toxicity than xylene based mountants, so Omnimount™ provides both a safer work environment and reduce shipping costs.

RT	17997-01	Omnimount™	100 ml
----	-----------------	------------	--------

► Permout™* Mounting Medium

A toluene-based synthetic resin mounting medium. The right choice for both rapid mounting and long term storage of slides. Its low viscosity allows for a thinner mounting layer offering better optical quality and bubble-free preparations. It has a refractive index near that of a fixed protein which helps to keep images free of distortion. Ideal for mounting coverslips to slides with thick or thin specimens. Permout preserves most biological stains with little or no fading when the slides are stored in darkness. It contains an anti-oxidant to prevent the formation of annular rings and its high softening point (155°C/311°F) makes it suitable for microprojection.

RT	17986-01	Permout Mounting Medium	100ml
RT	17986-05	Permout Mounting Medium	500ml

*Ownership of Fisher Scientific

► Slide Coating Adhesive

See page 555 >>>>

► Cargille Meltmounts

- Instant thermal mountants that require "no-oven-time".
- 100% Usable; contains no solvents.
- Reversible, thermally, for particle retrieval or re-orientation
- Soluble in toluene for special techniques or clean-up.
- Fluid at 65°C, a temperature chosen because it makes permanent mount and protects the majority of specimens from thermal changes.
- PCB-Free.
- Direct replacement for old mountant mediums (Canada Balsam, Aroclor 5442, Naphrax...)

Cargille Meltmount™ (optical quality) is a series of mounting media which are specifically formulated for use in microscope slide mounting and in other optical coupling applications.

Melt Mount is also available in a Quick-Stick™ form which can be used to make permanent microscope slide mounts quickly. These Melt Mount sticks can be applied to a slide on a hotplate. As soon as the specimen and coverglass are positioned and the slide is cooled you have a permanent prepared slide that can be reversed by reheating, if you should wish to retrieve a particular particle. Each Quick-Stick™ weighs approximately ⅓ oz. (18g).

1. Meltmount™ 1.539

Has a refractive index (n_D @25°C) of 1.539 and an Abbe V dispersion of 45. Its optically similar to Canada Balsam and therefore ideal for mounting many biological specimens but without the long drying time of Canada Balsam.

RT	17994-10	Meltmount 1.539	1 oz.
RT	17994-11	Meltmount 1.539 Quick-Stick™	each

2. Meltmount™ for Chrysotile Asbestos

It has dispersion characteristics making it appropriate for mounting chrysotile asbestos.

RT	17994-20	Meltmount for Chrysotile	1 oz.
----	----------	--------------------------	-------

3. Meltmount™ 1.582

It has a refractive index n_D @25°C) of 1.582 and an Abbe V dispersion of 33. Its optical clarity makes it the preferred choice for minimum visible absorption.

RT	17994-30	Meltmount 1.582	1 oz.
RT	17994-31	Meltmount 1.582 Quick-Stick™	each

4. Meltmount™ 1.605

It has a refractive index (n_D @25°C) of 1.605 and an Abbe V dispersion of 30, making it appropriate for mounting Asbestiform Tremolite, Anthophyllite, and Actinolite.

RT	17994-40	Meltmount 1.605	1 oz.
RT	17994-41	Meltmount 1.605 Quick-Stick™	each

5. Meltmount™ 1.662

It has a refractive index (n_D @25°C) of 1.662 and an Abbe V dispersion of 26, optically similar to Aroclor 5442 but is PCB-free.

RT	17994-50	Meltmount 1.662	1 oz.
RT	17994-51	Meltmount 1.662 Quick-Stick™	each

6. Meltmount™ 1.680

It has a refractive index (n_D @25°C) of 1.680 and an Abbe V dispersion of 25, making it appropriate for mounting Amosite and Crocidolite asbestos.

RT	17994-60	Meltmount 1.680	1 oz.
RT	17994-61	Meltmount 1.680 Quick-Stick™	each

7. Meltmount™ 1.704

It has a refractive index (n_D @25°C) of 1.704 and an Abbe V dispersion of 24, similar to Naphrax.

RT	17994-70	Meltmount 1.704	1 oz.
RT	17994-71	Meltmount 1.704 Quick-Stick™	each

► Liquid Coverglass; SHUR/Mount™

Shur/Mount is a liquid coverglass and mounting medium. Its low viscosity minimizes bubble formation under the coverglass. An antioxidant present in the medium prevents fading of the stain even over years of storage. A UV absorbent present in our Shur/Mount prevents the yellowing of the resin.

Available in three types:

- A toluene-based acrylic resin; rapid drying. It is used for mounting and preservation of microscope slide specimens, and is ideal for manual coverslipping. Refractive index: 1.49
- A xylene-based formula which is used for automatic cover slipping instruments. Refractive index: 1.48
- A unique water based mounting medium for Immuno procedures.

RT	17990-01	Shur/Mount - Toluene Based	4 oz.
RT	17990-12	Shur/Mount - Toluene Based	12x4 oz./cs
RT	17991-01	Shur/Mount - Xylene Based	16 oz.
RT	17991-06	Shur/Mount - Xylene Based	4x16 oz./cs
RT	17992-01	Shur/Mount - Water Based	20ml
RT	17992-04	Shur/Mount - Water Based	4x20ml

► Sub-X Mounting Medium

Sub-X Mounting Medium is a toluene based low viscosity quick-drying, permanent mountant formulated to be compatible with all xylene substitutes on the market. It may be used for all coverslip preparations that are cleared in xylene and or toluene. It may be used for manual as well as automated coverslipping. Sub-X contains an antioxidant to inhibit fading of stains.

RT	13519	Sub-X Mounting Medium	Pint
----	-------	-----------------------	------

► Tissue-Tack Adhesive

- Good for JB-4 and JB-4 Plus Sections.
- Improves permanent adhesion of sections to the glass slide during prolonged staining procedures and washes.
- Useful for immunofluorescent, immunoperoxidase and routine staining procedures.

RT	71301-01	Tissue-Tack Adhesive	100ml
RT	71301-05	Tissue-Tack Adhesive	500ml

► UV Mount Medium

- A mounting medium that is designed to match the refractive index of JB-4 embedded sections.
- Cures within 2 minutes when exposed to long wave UV light (365nm) when applied to moist sections.
- Sections are mounted after last staining water rinse.
- Slides must be coverslipped.

0-5C	17996	UV Mount Medium	100ml
------	-------	-----------------	-------

► Staining Apparatus:

► Five-Slide Gripper

- The 5-Slide Gripper accommodates 5 microscope slides in one staining procedure.
- It fits most coplin and round-open staining jars.
- It is made from a special material which is resistant to all chemicals and solvents which are used in staining.
- There is no need to remove slides for drying.
- It withstands drying temperatures up to 80°C

71410-06 Five-Slide Gripper 6/pk

► Glass Coplin Staining Jar, Screw Cap

5-Slide Unit. Holds 5 single 1"x3" slides vertically, or 10 slides back-to-back. Slides extend above the opening, allowing for the manipulation of them without the use of forceps.

A screw cap has a metal foil liner that withstands stains and organic solvents and it prevents evaporation. Overall measurement: 3 3/8"(H)x2 3/8"(W) base x 2 3/8"(dia) top.

70315 Complete Unit 4/cs

► Staining Jar With Glass Lid

An all glass jar which holds 5 to 10 standard slides (3" x 1"). They can be used as a chromatography jar with a choice of 2 ground glass lids. The lids are ground to the flange of the jar which deters evaporation. The jar with a taller lid (70316-04) accommodates larger slides: 4" x 1" (102mm x 25mm).

70316-02 Staining Jar w/Ground Lid 4/pk
70316-04 Staining Jar w/Tall Ground Lid 4/pk

► Glass Coplin Staining Jar, Screw Cap

5-Slide Unit. Holds 5 single 1" x 3" slides vertically, or 10 slides back-to-back. Slides stay within the jar so that it can be capped during staining. Complete with a screw cap and a metal foil liner. Overall measurement: 4 3/8"(H) x 2 3/4"(W) base x 2 3/8"(dia) top.

70317 Complete Unit 4/cs

► Staining Rack; Coverglass

Made from polished stainless steel:

- Securely holds thirty (30) 22mm or 24mm cover glass
- Spring-type detachable handle
- Welded stainless steel
- 4" (10.2cm) long.

72239-04 Large Coverglass Staining Rack each

► Coverglass Staining Jars (with Plastic Caps)

- For use with cover glass sizes 18 to 22mm.
- Accommodates eight cover glasses back-to-back.
- Caps have been tested to be resistant against most staining solutions

72242-21 Coverglass Staining Jars, Screw Cap each
72242-24 Coverglass Staining Jars, Screw Cap 4/pk

► Coverglass Staining Rack

Made from polished stainless steel. Specially designed to be used with coplin jars.

- Holds five of 22 x 24mm coverglasses.
- Comes with a handle, 5" (12.7cm) long.

72240 Coverglass Staining Rack each

► Wash-N-Dry™ Coverslip Rack

Holds 10 Coverslips

Fast & easy cleaning, surface-treating and drying. Holds all slipcover sizes including 18, 22 and 25mm.

Durable and Hassle Free

One piece polypropylene rack does not require assembly and is chemically and thermally resistant. Autoclavable!

Secure Innovative design includes a notch to secure coverslips with a rubber band or loop of monofilament.

Compatible Fits inside a 100ml beaker with space underneath for a small stir bar when submerged.

Economical Available at a fraction of the cost of PTFE products.

70366-16 Wash N'Dry Cover Slip Rack each

► Wash-N-Dry™ Slide Rack

Maximum Circulation

Offset design allows liquid and air to completely flow around the entire slide ensuring cleanliness and faster drying times.

"Hands Off Design"

Tailored to contact a minimal amount of slide surface area permitting solutions and air to affect entire slide.

Holds 12 Slides Securely

holds slides for convenient cleaning, treating, staining, and drying. Fits standard slide sizes including 25 mm and 1".

Laboratory Friendly Utilizes chemically and thermally resistant glass infused polypropylene. Autoclavable!

Create A System Use in conjunction with a 200ml tall form beaker to efficiently use solutions.

70366-17	Wash N'Dry Slide Rack	each
70366-18	200ml Tall Form Beaker	each

► Adjustable Cover-Glass Rack

Innovative design saves you time and headache when you are looking for a cover-glass holder!

This rack is machined from polypropylene and fabricated to accommodate a variety of cover-glasses in different sizes. With the ability to simply adjust the holder to fit your desired size and then securing it by tightening the reset screws with the hex key (hex key is included) all sizes of cover glasses are accommodated. Because the holder is made from non ferrous material, it is microwaveable. The rack accommodates 10 cover glasses, round, square or rectangular, adjusting from 5 mm to 60 mm. Removable handle. Rack comes with two set of holding rods. One set accommodate cover glasses from 5 to 25mm, and the other set for cover glasses from 5mm to 60mm.

Rack measures 1 1/2" W x 1 1/2" H (38 x 38 mm)

72243	Adjustable Coverglass Rack	each
-------	----------------------------	------

► Vertical Staining Jar w/Glass Lid

An all glass rectangular staining jar which accommodates 8 to 16 slides and comes with a glass lid. Its wide top eliminates the need for forceps in the handling of the slides. It accommodates slides up to 4"x1 1/2" (103mm x 39mm) in size.

70318-04	Vertical Staining Jar	4/pk
----------	-----------------------	------

► Slide Staining Jar, Square

Made from polypropylene, holds 10 slides, back-to-back.

Designed in a square shape and short body to conserve space and staining solution. When the cap is removed the slides can be handled without touching the solution. The screw cap has a locking recess to support the slides and both body and cap have a molded-in lug to enable them to be wired together for transit. The jars measure: 83mm(H)x33mm(W)x3mm(H)

When the cap is removed the slides can be handled without touching the solution. The screw cap has a locking recess to support the slides and both body and cap have a molded-in lug to enable them to be wired together for transit. The jars measure: 83mm(H)x33mm(W)x3mm(H)

71405-01	Square Slide Staining Jar	each
71405-04	Square Slide Staining Jar	4/bx

► High-Density Polyethylene Staining Jar

An unbreakable, high-density polyethylene Staining Jar with internal grooves and a shallow screw cap. The jar holds 5 single 1"x3" slides or 10 back-to-back slides vertically. Overall measurement: 4 1/2"(H) x 2 1/2"(dia)

70319	Complete Unit	4/cs
-------	---------------	------

► Rectangular Staining Dish

Heavy, clear, soda lime glass stain dish, accept glass slide measure 75 x 25mm or 3 x 1"

This dish comes with glass cover, holds 20 slides back-to-back horizontally. Inside dimensions: 3" x 2-5/16" x 1-3/16" deep.

70314-01	Rectangular Stain Dish	each
----------	------------------------	------

► Slide Staining Rack; Polypropylene

- Made from polypropylene; autoclavable.
- Accommodates up to 20 slides 3x1" (76x26mm).
- With a removable snap-on handle.

It measures: 2 3/4"x3 3/8"x1 1/8" (without handle) (70x86x21mm)

70321-10	Staining Rack, Polypropylene	each
----------	------------------------------	------

See page 576 for LockMailer Slide Jars >>>>

EasyDip™ Slide Staining System

The EasyDip™ Slide Staining System has two components: a square staining jar and a 12-position vertical slide staining rack. Jars can be loosely joined to each other laterally, therefore making sure they are kept in the same order when moved around on the lab counter. They also are available with five different colors to help better identify contents or applications.

EasyDip Slide Staining Jars - 71385-series

The Staining Jar being made from acetal plastic will not break like most glass jars do. It will resist attacks from most staining reagents including alcohol and xylenes but not phenols. The wide stable base offers greater stability while the inside is recessed, allowing for a smaller reagent volume of only 80ml. Ideal for frozen sections, small jobs and special processes. Dimensions: 64mm x 76mm x 92mm (2½ x 3 x 3¾).

The EasyDip™ Slide Staining Rack will hold up to 12 slides of 25x75mm or 26x76mm (3x1") with a thickness of 1.0 to 1.2mm. The lid completely covers the EasyDip™ Slide Staining Jar to minimize spill and evaporation. The handle is permanently attached to the rack for easy insertion or removal of the slide. The base of the rack is placed in the vertical position to ensure the slides are in place, and are rotated sideways for easy slide removal. Dimensions: 60 x 64 x 97mmH (2¼ x 2½ x 3¾")

Slide Staining Rack - 71386-DR

For your convenience, we offer EasyDip® Slide Staining Kit. Kit consists of one Staining Jar and one Staining Rack, color white.

Cat. #	Description	Qty
71385-W	EasyDip™ Slide Staining Jar, White	2/cs

EasyDip™ Stainless Steel Holder

This holder is designed to six EasyDip™ staining jars together. Measures: 16 ¾" L x 4" W x 1 ½" H (425 x 102 x 38 mm)

Cat. #	Description	Vol.	Qty
71388-50	EasyDip Stainless Steel Holder	1	each

Slide Staining Dish And Storage Box

A universal slide rack and container for Autoradiography and all other staining techniques. It is molded from black Polyethylene-terephthalate (PET) plastic. This unbreakable plastic has many advantages over glass in cytological and histological laboratories. There are no metals to corrode. The rack and dish are easy to clean and are resistant to most laboratory chemicals.

■ **Slide Rack:** The slide rack has an open bottom for rapid draining when transferred. It holds 1"x3" (25mm x 76mm) slides in slots numbered 1 to 25.

71400 Slide Staining Rack each

■ **Staining Dish:** This unbreakable 3.7"(L) x 3.2"(W) x 1.9"(H) (94mm x 81mm x 49mm) staining dish has a light tight cover with a compartment for the drying agent and a perforated slide partition to support the drying agent. The partition has index numbers and a surface for writing. Included is a removable clip which is placed on the top edge of the dish permitting staining solution to drain back into the reservoir from the tilted rack. Staining takes place in complete darkness. The small size of the dish saves on staining liquids, developing fluids and intermediates since only 150ml is needed. Actual capacity is 250ml. The light tight lid is essential for evaporated baths. The dish is easy to clean and especially suited for the storage of enzymes. The cover will not jam in freezer storage.

71402 Staining Dish for One Rack each

■ **Storage Box:** A black polystyrene storage box (not for staining) which can hold four of the slide racks. The box cover has a paper index marked off in four sections, each numbered from 1 to 25. The box measures 7½" x 6¾" x 1½" high (19 x 17 x 5cm).

71404 Storage Box only each

Slide Staining Dish

The dish is made from polymethylpentene "glass clear" for use with our staining rack (Cat# 70321-10) shown above. It comes with two lids; one lid should be used when the rack is not inserted. It measures: 3¾"x4x3¾" (81x101x86.5mm)

70321-20 Staining Dish each

► Vertical Slide Tray

A stainless steel tray with grooves that hold 76 x 26 mm (3" x 1") microscope slides vertically. Accommodates up to 60 slides.

Cat.#	Description	Pack
71393-01	Vertical Slide Tray	each

► Horizontal Slide Tray

A stainless steel tray with grooves to hold various microscope slides horizontally. Accommodates up to 60 slides.

Cat.#	Description	Pack
71394-01	Horizontal Slide Tray	each

► Staining Dishes

A variety of inexpensive staining dishes made from molded glass with and without fitted glass and Stainless Steel lids.

The following sizes are available: (Outside Measurements)

120 x 120 x 50 mm	105 x 86 x 75 mm
100 x 100 x 100 mm	200 x 100 x 100 mm

Cat.#	Description	Pack
71423-DL	Staining Dish, Fitted Glass Lid, 120 x 120 x 50 mm	each
71424-DL	Staining Dish, Fitted Glass Lid, 105 x 86 x 75 mm	each
71424-D	Staining Dish only, 100 x 100 x 100 mm	each
71424-L	SS Lid for 71424-D	each
71422-D	Staining Dish Only, 200 x 100 x 100 mm	each
71422-L	SS Lid for 71422-D	each
71422-DL	Staining Dish and SS Lid, 200 x 100 x 100 mm	each

► Hellendahl Staining Dish

The Hellendahl type dish for the staining or use as a TLC developing chamber. Holds up to 8 individual 3" x 1" (76 x 26 mm) slides, or 16 slides back-to-back. These dishes are made from soda lime glass.

The approximate inside dimensions: 76 mm long x 25 mm wide x 75 mm deep.

Cat.#	Description	Pack
70313-01	Hellendahl Staining Dish	each

► Staining Dish; 20 Slide Unit

Ideal for immersing slides in several solutions. The removable glass slide rack has an open bottom which allows for rapid filling and draining. It holds back to back 20 slides-

3" x 1" (76 x 25mm), or 3" x 1½" (76 x 38mm) or 3" x 2" (76 x 51mm) in size. The staining dish measures: 107mm(L) x 87mm(W) x 70mm(H) Our complete set consists of 1x Staining dish, 1x Cover, 1x Slide Rack and Handle. The slide rack measures: 102mm (L) x 80mm (W) x 24mm (D).

Cat.#	Description	Pack
70312-20	20 Slide Unit Staining Dish	Set
70312-21	Dish only	each
70312-22	Cover only	each
70312-23	Dish and Cover only	each
70312-24	Slide Rack only	each
70312-25	Handle only	each

► 25 Slide Unit - Glass Staining Dish

A molded glass-staining dish with a fitted glass lid.

Volume: 240 ml. The outside measures 120mm x 120mm x 75mm (H) (4¾" x 4¾" x 3"H) and the inside

measures 4" x 4" x 2". The stainless steel rack has a swing handle for easy access and has grooves to take 76mm microscope slides, up to 40mm wide horizontally. Capacity: 25 slides. Complete set includes one staining dish with lid and one swing handle rack.

Cat.#	Description	Pack
71420-25	25-Slide Unit Staining Dish Complete Set	Set
71420-DL	240ml Staining Dish and Lid only	each
71420-SR	25 Slide Swing Handle Rack only	each

► Staining Dish for 30 Slide

These mix and match components offer greater flexibility in meeting your requirements. This staining dish accommodates 16, 20 and 30 slide racks (listed below). Slides range from 3x1" (75 x 25mm), 3" x 1½" (75 x 38mm), and 3 x 2" (75 x 38mm), and 3x2" (75 x50mm). The dish is made from soda-lime glass.

The inside dimensions: 135mm (L) x 102mm (W) x 69mm (H).
Outside dimensions: 146mm (L) x 113mm (W) x 83mm (H)
30-slide staining set consists of one Staining Dish, one Lid, one 30-slide stainless steel Rack.

Cat.#	Description	Pack
70312-30	30-Slide Staining Dish	Set
70312-31	30-Slide Staining Dish only	each
70312-32	Cover for 30-Slide Dish	each
70312-33	30-Slide Staining Dish and Cover	each

► 20/40 Slide Rack

This glass rack holds 20 single slides, or 40 slides back-to-back. This rack is made from soda-lime glass.

Cat.#	Description	Pack
70312-36	20/40-slide Glass Rack with Handle	each

► Staining Dish; 50 Slide Unit

A stainless steel, slotted rack, designed to hold 50 slides individually in a variety of sizes: 3"x1", 3"x1½", and 3"x2". The unit measures approximately 200x105x83mm overall. The rack is made from nontarnishable stainless steel and is resistant to most staining solutions. The handle is permanently attached allowing for closure of the dish and for easy insertion and removal of the slides. The inside of the staining dish measures: 186mm(L)x89mm(W)x68mm(H)
The complete set consists of 1x dish, 1x rack, and 1x cover.

70312-50	50 Slide Unit Staining Dish	Set
70312-51	Dish only	each
70312-52	Cover only	each
70312-53	Dish and Cover only	each
70312-54	Slide Rack only	each

► 30 - Slide Swing Handle Rack

This 30 slide rack is made from non-tarnishing stainless steel and it is resistant to most staining solutions. The handle is permanently attached but it is swing-able to permitting for closure of the dish and easy insertion and removal of the slides.

► 16/32 Slide Rack

This glass rack holds up to 26 single slides, or 32 slides back-to-back. The rack is made from soda-lime. Rack measures: 4" x 3½" x 2"H

Cat.#	Description	Pack
70312-34	30-Slide Stainless Steel Rack	each
70312-35	16/32-slide Glass Rack with Handle	each

► Fixed Handle Rack and Vertical Slide Rack

Fixed Handle Rack: A stainless steel rack with a fixed handle for use with large slides. The rack is grooved to take 76mm microscope slides up to 50mm wide horizontally. The rack accommodates up to 24 slides

Vertical Slide Rack: A stainless steel rack with a fixed handle and grooves to take 76 x 26mm microscope slides vertically for maximum use of space and solution. The rack accommodates up to 48 slides (24 slides each row).

Cat.#	Description	Pack
71421-FR	Fixed Handle 24-Slide Rack only	each
71421-VR	Vertical 48-Slide Rack only	each

► Fixed Handle Rack and Vertical Slide Rack

Fixed Handle Rack

(#71422-FR): A stainless steel rack with fixed handle for use with larger slides. The rack is grooved to take 76mm microscope slides up to 50mm wide horizontally. The rack accommodates up to 55 slides.

Vertical Slide Rack (#71421-VR): A stainless steel rack with a fixed handle and grooves to take 76 x 26mm microscope slides vertically for maximum use of space and solutions.

Cat.#	Description	Pack
71422-FR	Fixed Handle 55 Slide Rack only	each
71421-VR	Vertical 48-Slide Rack only	each

► **Tissue-Tek® Slide Staining Set**

Sakura Finetek - Designed for staining histological and cytological specimens. With up to 12 solution wells, each deep enough for total immersions of 1x3" microscope slides. The set comes complete with a metal frame and a snap on locking cover that protects from spills. The set consists of 10 white polypropylene dishes, two green solvent resistant dishes, measures: 28"Lx9"W x 5½"H drain tray covers. Additional staining dishes and 24-slide holders with removable handles are sold separately. Staining dish (white or green) inside measures: 38mm x 90mm x 90mm H

Cat.#	Tissue-Tek	Description	Pack
62540-01	4451	Slide Staining Set	set
62541-01	4456	Staining Dish, Green	each
62541-12	4456	Staining Dish, Green	12/pk

62543-06	4465	24-Slide Holder w/Handle	6/pk

► **Coverslip Staining Rack**

A stainless steel rack with grooves to take 22 x 22 mm coverslips vertically. It accommodates 25 coverslips at a time. The rack measures 3¾" x 1"(W) x 2"(H)

Cat.#	Description	Pack
72241-01	Staining Rack, Vertically	each

► **Disposable Slide Staining Tray Set**

Stain, Rinse and Dry on a Single Tray – Then Simply Throw Away!

Stain, rinse, and dry your slides on a single working tray. Use the tray for a clean and fresh working surface area for staining. These trays are made from Polypropylene / polyethylene blend and is very durable

Stain, rinse, and dry your slides on a single working tray. Use the tray for a clean and fresh working surface area for staining. The deep well can hold liquid waste up to 38mL. Place eight slides comfortably onto the base. With its compact size, tray provides comfortable transport from work area to sink. Convenient pour spouts to easily dispose of unwanted liquid waste. Unique dark lid protects slides when used with fluorescents.

The Tray measures 305mm (l) x 127mm (h) x 29.5mm. The tray holds up to 8 slides maximum with a 38ml liquid capacity.

A complete set has 4 base trays and one lid. The dark lid protects the slides for light sensitive applications

Cat. #	Description	Qty.
71147	Disposable Slide Staining Tray Set	set

► **Slide Staining Tray and Rack**

The unit consists of four-bar racks which accommodates 22 slides (3x1"), and a slotted rack which accommodates 10 cover glasses. A stainless steel tray catches excess stain solution as it drains from the slides.

The unit measures: 12½"(L)x9½"(W)x2"(H) (32x24x5cm).

70323	Slide Staining Tray and Rack	set

► Reagent Reservoirs Bio-Pure

Disposable – Sterile and Non-Sterile varieties

Unique – “Trough within a trough” maximizes reagent recovery.

Convenience – Pour-off spouts on all four corners.

Stable – A wide base provides stability and avoids spills.

Measurable – Graduated marks on inside wall.

Sterile – Sterilized by gamma irradiation.

Compatible – 25ml Reservoir with divider accommodates eight channel pipets on one side and one to four channel pipets on the other. The divider is also convenient for adding controls.

Options – Offered in bulk cases or individually wrapped (ideal for use in clean rooms).

100ml Sidecar Reservoir

25ml reservoirs with divider (left) and without (right)

Sidecar Reservoir* Features:

- “Two-in-One design” for precise reagent adding/mixing
- Ideal and efficient to use with small volume control and large volume test reagents
- “Sidecar” holds as little as 10ml of liquid or as much as 20ml

► Non-Sterile Cases of Reagent Reservoirs

Cat.#	Description	Qty.
70497-10	100ml Reservoir, Non Sterile	100/case*
70497-20	25ml Reservoir with divider, Non Sterile	100/case*
70497-30	25ml Reservoir, Non Sterile	100/case*
70497-35	50ml Reservoir, Non Sterile	100/case*
70497-40	100ml Sidecar Reservoir, Non Sterile	100/case*

Note: Each Case of 100 is packaged as 10 packs of 10 Reservoirs

* Patent Pending

► Sterile Cases of Reagent Reservoirs

Cat.#	Description	Qty.
70495-10	100ml, Sterile	100/case*

70495-35	50ml Reservoir, Sterile	100/case*
70495-40	100ml Sidecar, Sterile	100/case*
70496-10	100ml, individually wrapped	50/case
70496-20	25ml with divider, individually wrapped	50/case
70496-30	25ml, individually wrapped	50/case
70496-35	50ml Reservoir, individually wrapped	50/case
70496-40	100ml Sidecar, individually wrapped	50/case

*Each Case of 100 is packaged as 10 packs of 10

► Sterile Biodegradable Reagent Reservoirs

A special additive helps the plastic bio-degrade by allowing bacteria and other organisms to breakdown the complex molecular chain. This speeds up the process to reduce the resin to its natural components within five years as opposed to 1,000 years or more.

Biodegradable - Using a special additive to PET, our reservoirs will safely degrade over time.

100% Eco-Friendly - Each case of Bio-Pure Reservoirs are packed in bio-degradable bags and recycled cardboard cases.

70497-45	Bio-Pure 100 ml Biodegradable Reservoir - Sterile	100/case*
70497-46	Bio-Pure 25ml w/divider Biodegradable Reservoir - Sterile	100/case*
70497-47	Bio-Pure 25ml Biodegradable Reservoir- Sterile	100/case*
70497-48	Bio-Pure 50ml Biodegradable Reservoir - Sterile	100/case*

*Each Case of 100 is packaged as 10 packs of 10

► Reagent Reservoir Cooler

Benchtop Cooling of Reagents

‘Keep Your Cool’ - Reagents are kept at ~5°C for approximately 3 hours

No Mess - No need for a cumbersome ice bath, the frozen gel is contained in a sealed molded cavity.

Extra Time - Extends safe working time for temperature sensitive reagents

Extend benchtop working time and keep reagents cool up to 3 hours.

Fitted - Each 100ml* Reservoir fits perfectly and snugly onto the Cooler ensuring uniform cooling

70497-50	100ml Reservoir Cooler	each
70497-51	50ml Reservoir Cooler	each
70497-52	25ml Reservoir Cooler	each

► WINLAB Slide Staining Racks and Carriers

STAINLESS STEEL AND PLASTIC SLIDE RACKS

- They are very good chemically as well as thermally
- Has limited uses in microwave and solvents.
- When it comes to inserting the slide, easy to break the glass or tear the tape on abrupt edges.

WINLAB SLIDE RACKS

- WINLAB Racks made from Poly-ceramic that maintains its structural integrity to 200°C in any solvent while being microwaved.
- WINLAB Racks last a lot longer than any other materials.
- Save time and money.

ADVANTAGES OF WINLAB SLIDE RACKS:

- Made from Poly-ceramic with more than 40 years of product development and state of the art molding technology.
- **Microwave Safety** – in a distortion-free rack
- **Chemical Resistant** – to all solvents below 200°C
- **Designed** – for histology and cytology staining and coverslipping
- **Quality Control** – Every rack is tested for performance criteria and dimensional accuracy, ensuring consistency, which makes WINLAB a name you can trust
- WINLAB Racks fit the Tissue-Tek Tape Machines
- **Easy Slide Insertion** - V-Grooves slots

1. WINLAB 30-Slide Racks

WINLAB 30-Slide Racks available with two models: LS-30 and LSM-30

The LS-30 – is held rigid by the carrier the same way as the Sakura / Bayer models, preferred for Leica stainers. Handle positions: 1 x Vertical, 2 x 45 degrees, and 2 x 90 degrees.

The LSM-30 version swivels by carrier as does the Medite stainless Steel racks and has the advantage of fitting Leica, VBS, Bayer, Sakura, Medite, coverstaining machines and Sakura tape coverslipper. Handle position: Swivel 45 degrees

WINLAB 30-Slide Racks measure: 4½" L x 2½" H x 1⅝" W (115 x 65 x 35 mm)

2. WINLAB 20-Slide Racks

WINLAB 20-Slide Racks available in two models: LS-20 and LSM-20 (LSM-20 is fit Medite stainers)

WINLAB 20-Slide Rack is fitted to a Sakura Staining Dish, either Green or White and also fits most other staining dishes.

Racks measure 3" L x 2 ½ " H x 1" W (77x64x25mm)

3. WINLAB 30-Slide Rack Carriers

Steel wire hooks molded to the polypropylene handle to form Slide Rack Hanger. The Slide Rack Hanger is very easy to attach or detach from the WINLAB Slide Racks.

30 Slide Rack Carriers fit all Models LS-30 and LSM-30 above.

4. WINLAB 20-Slide Rack Carriers

Same construction as 30-Slide Rack Carrier but they fit all LS-20 and LSM-20 Slide Racks

5. WINLAB 30-Slide Rack Carrier for InstrumeC/Dako Slide Racks

6. WINLAB 20-Slide Rack Carriers for InstrumeC/Dako Slide Racks

7. WINLAB Slide Racks Wire Handles

Steel wire is bended to form a handle. Use these Handles for manual staining and the Medite stainer.

Model **W3-5** fits all WINLAB 30-Slide Racks

Model **W3-6** fits all WINLAB 20-Slide Racks

8. WINLAB Plastic Handles

Model **SR-20** for all 20 Slide Racks

Model **SR-30** for all 30 Slide Racks

These handles are economical as well as microwave safe and solvent resistant. They may be used for all manual staining to avoid unwanted chemical and heat contact.

► StainTray™ - Slide Staining System

An ideal device for immunohistochemistry slide staining. The

StainTray™ has a black base, made from tough ABS plastic, withstanding a wide range of chemicals (except chlorinated hydrocarbons). It will accept up to 20 slides on four plastic rails covered with a polymer strip to perfectly hold the slides even if the tray is held at an angle. When humidity is needed, the wells between the rails will hold the water securely without splashing. Rails are raised not only to avoid water touching the slides but also make the slides more easily retrievable. The base will also hold excess stain solution that drips from the slides. Four rubber feet add to the base for stability. Units are stackable to save space.

Two covers are available:

- A clear cover, allowing for visual examination. Made from PETG with temperature a range of -20°C to 60°C
- A black cover for fluorescent work. Made from ABS with a temperature range of -80°C to 80°C.

Dimensions with the cover:

20-Slide unit: 38 x 24 x 4.5 cm H (15 x 9½ x 1¾" H)

10 Slide unit: 24 x 24 x 4.5 cm H (9½ x 9½ x 1")

This tray is not only suitable for routine staining requiring a humid chamber but is also ideal for hematology, cytology and microscopy laboratories

► Glass Slide Processing Holder

The holder is designed to hold securely five 1x3" microscope slides. It comes with a handle for easy manipulation. Up to 50 slides (10 holders) can be processed at one time in one staining vessel from start to finish without interruption. The slide holder has two sides - one being black and the other white. This allows for easy grouping and identification of the slides. The holder is ideal for both frozen and paraffin sections.

The Slide Holder can be used to:

1. Fix frozen sections in acetone.
2. Deparaffinize and rehydrate paraffin sections.
3. Isolate sections on the slide with our PAP Pen (#71310).
4. Immunostain, incubate and wash.
5. Counter stain.
6. Mounting with medium.

The holder measures: 6¼" x 3½" (159mm x 89mm) excluding the handle.

71524-01	Glass Slide Processing Holder	each
71524-10	Glass Slide Processing Holder	10/pk

► Immuno Stain Moisture Chamber

This low-cost, high precision moisture chamber for ten slides is another innovative product from Evergreen.

Each moisture chamber is divided into ten individual compartments with approximately half-inch empty space between the compartments. When the chamber lid is closed, eight barrier dividers are placed into the empty spaces between the microscope slide compartments completely isolating all compartments. This is a very desirable feature when doing immuno staining.

The microscope slides are placed on four pedestal posts and four corner posts each 0.460 inch (11.5 mm) high thus raising the surface of the slides approximately half-inch off the floor to keep the slides away from the water below and to make the slides easily retrievable (either by hand or by forcep).

The chamber is fabricated out of heavy-duty polystyrene with an air-tight design to keep moisture in. The chambers are designed to be stackable in order to save counter and/or refrigerator space.

Available in clear, black and amber.

63305	Cork Discs	100/pk

► Post Mortem Board Table

Low profile made from stainless steel post mortem table, which includes #63302-77 mortem boards. This board is rested at a slight gradient to

aid drainage away from the operator. The table has rubber feet to prevent movement and a removable perforated tray is provided for specimen fluid drainage, as well as storage area for dissecting instruments. The overall table measures 668 x 313 x 108 mm (26 1/8" x 12 1/2" x 3 7/8"). The board size is: 454 x 307 x 18mm (17 3/4" x 12 1/8" x 1 1/16"). Tray size: 307 x 105 x 18mm (12 1/8" x 4 1/8" x 1 1/16").

Cat.#	Description	Qty
63301	Post Mortem Board Table	each

► DissecTable™ Set

The first and only reversible dissecting table for the laboratory

► The DissecTable™ Board Base

Made from high impact polystyrene

To make dissecting more comfortable, this heavy duty base is used to elevate the DissecTable™ Board to the right height. The bases are stackable and will not move sideways during the dissecting work. The base will also retain excess fluid if necessary.

Dimensions: 481 mm x 656 mm x 91 mm (19¼" x 26¼" x 3½")

► The DissecTable™ Board

Made from high-density polyethylene

A new and unique approach makes this dissecting board more convenient than any other board found on the market today. It is no longer necessary to buy different sizes as this board offers a large surface on one side and two smaller ones on the other side.

Made from heavy-duty thick polyethylene, it will last for years to come without changing shape, bending or swelling. In order to contain fluids, a drain groove is carved all around the edge of the DissecTable™

On one side, you will find a large cutting area including dimensional scales in inches and centimeters, along with a 60 x 80 mm grid made of 48 x 10 mm squares. Six dimensional circles are also printed from 1/8 to 5/8 in. and 4 to 14 mm in diameter.

Flip it over and the other size, others two cutting boards half the size with the same dimensional features printed on each one of them. All corners have rubber feet giving more stability to the working surface.

Dimensions: 575 mm x 400 mm x 12.5mm (23" x 16" x ½")

► The DissecTable™ Set

The set consists of DissecTable™ Board Base and DissecTable™ Cutting Board

► Disposable Dissecting Board

Manufactured from white, water resistant cardboard and sponge sandwich. The board measures: 297 x 420 x 5mm (10" x 16" x 3")

Cat.#	Description	Qty
63306	Disposable Dissecting Board	10/pk

► The EMS DispoCut™ Dissecting Board

The DispoCut™

Disposable Dissecting Board is strong yet inexpensive enough to throw away. It is especially developed to provide a clean, safer and more efficient way of handling infectious tissue specimens for the pathologist. It can be used on both sides, a great money saving feature. Printed with helpful imperial and metric dimensional scales in inches, centimeters and millimeters. Available in three sizes to accommodate small biopsies to large gross anatomy procedures.

DispoCut™ is extrusion made using a copolymer resin in order to increase impact and high and low temperature performance. Copolymer resins are also used because they retain the ability to be flexed an unlimited number of times without breaking. Chemically, DispoCut is inert. At regular temperatures most oils, solvents and water have no effect, allowing it to perform under adverse weather conditions or as a product component exposed to harsh chemicals.

Each surface has many conveniently located rulers including seven dimensional circles from 4 to 16 mm in diameter and five larger ones from 2 to 6 cm in diameter. Surface will not dull knives. Perfect for use with dissecting pins. All sizes of DispoCut™ Disposable Dissecting Boards are ideal for pathology labs, medical schools, classroom dissections, forensic labs, medical research labs, pharmaceutical labs, surgery and more.

Temperature performance range: -17 °F to 160 °F, Melting point: 162 °C, 324 °F

Sterilization: DispoCut™ may be wiped down with alcohol with no effect on the material. There are many types of autoclaves on the market. DispoCut™ is being autoclaved (in excess of 3 years) in many situations. There are some extreme settings which will be damaging and we suggest a trial to determine performance in your equipment. Ethylene oxide gas sterilization has no effect of any kind on DispoCut™ and may be repeated any number of times.

63308-20	DispoCut™ 6 x 8 in. (152 x 203 mm)	24/pk
63308-30	DispoCut™ 9 x 12 in. (229 x 305 mm)	24/pk
63308-40	DispoCut™ 12 x 19 in. (305 x 483 mm)	12/pk

► Dissecting Boards

Made from ½" thick high-density poly-ethylene. A white background with X,Y scales in centimeters offers a quick orientation and sizing of the specimens. It is chemical and stain resistant and comes with a spill control border and rubber feet to prevent spillage and sliding. To secure the specimen to the board, styrene-capped pins are available (optional). Boards are available in two sizes.

Measurements: Board B 13"(L)x11"(W)x½"(H)(33x28x1.6cm)
Board C 23"(L)x16"(W)x½"(H)(58.4x40.6x1.6cm)

63307-20	Dissecting Board B	each

63007-04	22"x26"x4" Deep	HDPE	each

► Instrument Trays

Blue polyethylene.

- These deep trays keep fluids from splashing.
- Has a smooth surface and rounded internal corners for easy cleaning.
- It is lightweight and noiseless as compared to heavy metal trays.

Available in 2 sizes:
 ■ Size 1 measures: 20"x12"x6" deep
 ■ Size 2 measures: 21 1/2"x15 1/2"x6" deep

63310-02	Instrument Tray 1, 6" Deep	each
63310-06	Instrument Tray 2, 6" Deep	each

► Petri Dish Incubation Trays

For the organization of all of your Petri dishes. Increases your incubator capacity.

These trays are stackable and can be autoclaved. They are designed to hold five 10 cm diameter or fifteen 6 cm diameter Petri dishes. Each tray comes with two large label areas for critical sample identification by either using a marker or a label.

Features:

- Increase incubator capacity
- Transport and store Petri dishes with ease while maintaining even CO₂ circulation
- Easy sample grouping and identification
- Autoclavable

Made from polypropylene, the tray measures 9 1/2" x 9 1/2" x 1 1/2" high (251 x 237 x 35 mm).

Cat.#	Description	Pack
71395-03	Petri Dish Incubation Tray	3/pk.

► Tissue-Tek® Microtome Waste Collection Tray

Sakura Finetek - This unique tray assists in the collection of all of the waste trimmings from paraffin blocks, therefore this system helps eliminate slippery hazards caused by paraffin shavings on the floor or the work area. The set includes a durable plastic tray, bag holder and 25 disposable waste collection bags.

Cat.#	Tissue-Tek	Description	Pack
63318-01	4657	Waste Collection Set	set
63318-25	658	Waste Collection Bag	250/cs

► Tissue-Tek® Cold Plate

Sakura Finetek - This cold plate is made from a polystyrene top and base molded together for a tight seal, with an additional Styrofoam insulator at the base to prolong cooling and prevents moisture accumulation. The plate freezes in about 4 hours in a freezer and the surface remains cold for up to 3 hours. The plate is ideal in chilling and preparing paraffin blocks for sectioning at the microtome or for other laboratory procedures. Not for use with organic solvents such as toluene, xylene, acetone. It holds up to 24 cassettes or embedding rings. Measures 11"(L)x5 1/2"(W)x1"(H). Packed 6 cold plates and 1 insulator base per package; 4 packages per case.

Cat.#	Tissue-Tek	Description	Pack

Latex Powder Free

► Nitrile Exam Textured Gloves

Powder-Free Green Gloves with Aloe Vera

Made from 100% synthetic nitrile, contains no latex. It is an extremely tough glove yet gentle on the hand. It offers superior textile strength and they are puncture resistant when compared to other similar thickness of latex or vinyl gloves. There are no natural rubber protein allergens as is present in natural latex rubber gloves. With the addition of Aloe Vera, the powder-free gloves will provide the user with superior comfort, excellent flexibility and dexterity. Textured gloves provide a positive grip on wet and or dry surfaces. The nitrile compound provides a broad range of hand protection against accidental chemical splashes.

► Cut-Resistant Gloves; Safeknit™

The comfortable choice when choosing a high performance cut resistant glove. Safeknit is a blend of abrasion-resistant Spectra® fiber and other synthetics. The mix of these fibers form a rugged cut resistant barrier that offers the histologist sensitivity for manipulation but with extreme comfort and productivity.

NOTE: These gloves are neither puncture proof nor water resistant. They should not be used to protect against intentional cutting. Avoid use near moving blades. For applications which are related to fluids where a water resistant glove is required, we recommend either double gloving or using Nitrile Gloves, (Cat # 71106-71109 or 71068.)

► Finger Cots; Latex– Powder Free

Inexpensive, expandable finger cots. Seamless. Protective dexterity without covering the entire hand. Powderless, non-rolled. 3/8mil (0.0030"), 2 3/4" (40mm)L.

71130	Latex Finger Cots Small	1 gross/pk
71131	Latex Finger Cots Medium	1 gross/pk
71132	Latex Finger Cots Large	1 gross/pk

SAFETY TIP

The standard latex surgical gloves do not offer adequate skin protection when handling glutaraldehyde. Nitrile or Neoprene gloves provide the protection that is needed. However, dexterity is inhibited with these gloves. Therefore, double-gloving with latex gloves is recommended for delicate work.

Raewyn Eager, Dept. of Zoology, Auckland University. EM News. Newsletter of the New Zealand Society for Electron Microscopy. No. 24, Dec. 1992

SAFETY TIP

In the past several years there has been documentation in the medical literature of numerous cases of latex allergy in medical and other laboratory personnel. Many people are experiencing itchy hands, shortness of breath or other signs of allergic reactions when they use latex gloves in their laboratory work. Some people are changing to powder free gloves with some relief; however, other people get relief only after changing to another type of glove.

E. Ann Ellis, Ellis EM Consulting Service, 1316 SW 61st Terrace, Gainesville, FL. 32607

► Tissue Marking Dyes

A specialized dye for marking tissue biopsies and pathology specimens.

- For use with frozen or fixed tissues.
- Permanently mark the margins of excised surgical specimens for exact orientation.
- Specially formulated binding pigment that evenly coats the tissue without penetrating the tissue surface.
- The marking dyes do not interfere with diagnostic interpretation due to the fact colors are not similar to standard histopathology dyes.
- Fast drying, easy-to-use, and ideal for work with frozen sectioning.
- Dyes are available individually (8oz/bottle) or as a set of a 2oz per bottle with the following colors: blue, black, red, yellow, green, purple and orange. The set also comes with 50 applicator sticks and a wooden storage case.

► Wet Surface Pen

This unusual pen will write clearly on wet surfaces, such as marking slots on wet Southern, Northern, and Western blots. Use it for marking alignment dots on blotting filters placed over agar plates containing bacterial colonies or phage plaques. Mark lanes on wet plots prior to cutting the filter into strips to be incubated separately with different antisera or probes. It can be used to correct or write on wet labels that were kept in a water bath, in liquid nitrogen or in a freezer at 0 degrees. The Wet Surface Pen is extremely useful for marking filters during processing under water-based buffers. The pen can, of course, also be used to write on dry paper as a standard ball pen.

72128 Wet Surface Pen, Black each

► Manomark™ Pen

Writes on all plastic, glass, metal, wool, paper and cloth, including PTFE, fluoropolymer resins. With its precision seal valve the pens life is preserved and as well it allows for a smooth flow of ink even if it's left uncapped. Once dry, the solvent base ink is temperature resistant from 0°C to 155°C (32°F – 310°F) > Markings are insoluble in water or hydrocarbons, resist many solvents, and are easily removed with alcohol.

72127-AS	Manomark Pen Assorted (4 black, 2 red, 2 green, 2 blue, 2 orange)	12/pk
72127-B1	Manomark, Black only	each
72127-B12	Manomark, Black only	12/pk

► Solvent-Resistant Pens & Teeny Writers

Solvent Resistant Pens feature an ultra-permanent ink.

- Resistant to xylene, alcohol, acetone and formalin
- Ideal for histology and cytology
- Markings will not run on embedding cassettes or frosted/painted slides and labware, even after repeated washes and solution treatments
- Remove markings with acetic acid, an ethanol/xylene mixture or paraffin. Testing advised before use

Teeny Writers are perfect general use lab markers.

- The Twin-Tip Teeny Writer has a fine tip and an ultra fine tip
- The original Teeny Writer has an extra fine tip
- Both are ideal for writing on Tough-Tags and Tough-Spots
- Use for labeling samples stored at room temperature and not exposed to chemicals and/or caustic agents

The Twin-Tip Too laboratory marking pen provides a new option for all writing needs. It is the best of both worlds. It is resistant to most mild laboratory chemicals and gives the flexibility of a twin tip pen for fine tip writing on small tubes and labels. Keep it close by utilizing the included handy pocket clip.

Testing is recommended.

Cat. #	Description	Color	Tip (Millimeters)	Qty.
62053-B	Solvent Resistant	Black	Extra Fine (0.6)	each
62053-R	Solvent Resistant	Red	Extra Fine (0.6)	each
62054-B	Twin-Tip	Black	Fine/Ultra Fine (0.7/0.3)	each
62052-B	Teeny Writer	Black	Extra Fine (0.4)	each

Twin-Tip
Teeny Writer

► Securline II Marker

Fine tip, ultra permanent ink that resists solvents such as xylene, alcohol, acetone and formalin.

Ideal for histology and cytology labs.

Cat.#	Description	Qty
72107-B1	Securline II Marker, Black	each
72107-B10	Securline II Marker, Black	10/bx
72107-R1	Securline II Marker, Red	each
72107-R10	Securline II Marker, Red	10/bx

► WRITE-ON™ Marker Pens

These pens are made from specially formulated ink and are to be used on anterior surfaces as well as sides of histology cassettes. The ink will dry almost instantly and withstands temperatures up to 195°C and is resistant to solvents.

72106-01	Write-On™ Marker Pen, Red	each
72106-10	Write-On™ Marker Pen, Red	10/pk

► Marker Pen; Markal Sharpie

Smear resistant, water-resistant, fast-drying no. 15 fine line. Usable on glass, porcelain, metals, and plastics.

72110	Black Felt Tip	each
72120	Black Felt Tip	box/12
72130	Red Felt Tip	each
72140	Red Felt Tip	box/12

► Slide Markers - SHUR/Mark™

A perfect marker designed to mark glass slides and cassettes with priming action; comes with a replaceable felt tip.

- Quick drying; will not smudge or smear.
- Chemically resistant; especially to alcohol, xylene and many other solvents.
- Consistent ink flow with effortless writing.
- Replaceable priming tip, which eliminates clogged and/or worn out tips.

TO USE: Simply depress the tip until the tip is saturated with ink.

72100-01	Shur/Mark Black	each
72100-12	Shur/Mark Black	12/pk
72102-01	Shur/Mark Red	each
72102-12	Shur/Mark Red	12/pk
72104-12	Shur/Mark Replacement Tips	12/pk

► Slide Markers - Histo-Mark Pen

The Histo-Mark pen is designed to work like a pen. It is a fine-line marker that can be used on any surface. The Histo-Mark pen is solvent resistant, especially to alcohol, acetone, xylene, xylene substitute and toluene. Marking quality remains consistent throughout the life of the ink barrel.

72155-01	Histo-Mark Pen	each
72155-12	Histo-Mark Pen	12/bx

► High Opacity – Paint Markers

Constructed aluminum barrel, actuating ball and hard felt tips, these markers permanently cover nearly any surface. Weatherproof. Resistant to alcohol and acetone. Contain xylene.

Markers are available in black, red and white with bullet tips. Except model 130, it writes like a pen with white ink for marking on dark surfaces, including carbon tabs, which is used in SEM specimen mounting purpose.

Cat. #	Description	Pack
72167-R1	Small Marker, Red	each
72167-R2	Large Marker, Red	each
72168-W1	Pen-like Marker, White	each
72168-W2	Large Marker, White	each
72168-B1	Small Marker, Black	each
72169-B2	Large Marker, Black	each

► StatMark Pen

Permanent ink in an ultrafine tip is ideal for labeling microscope slides and cassettes. StatMark Pens are made of rigid nylon that allow for precise hand marking on glass slides as well as on most tissue embedding cassettes. This quick drying ink is highly resistant to aqueous based stains, alcohols, xylene and xylene substitutes. StatMark Pens do not dry out easily and last twice as long as many of the leading 'laboratory' pens.

Cat. #	Description	Pack
72109-01	StatMark Pen	each
72109-12	StatMark Pen	12/box

► Transport/Sample Collection Vials and Tubes

► 1. Transport Vials

Transport Vials - ideal for sample collection and storage. Made from virgin polypropylene, they are available in three sizes, and come either sterile or non-sterile. Graduations provide convenient and accurate references. 5 ml and 10 ml sizes are supplied with white screw cap; 50 ml are supplied with blue cap that has a molded-in sealing ring for a leak-proof fit.

- Conical tubes with freestanding skirts
- Tubes are autoclavable
- Write-on area on side

Cat.#	Description	Pack
63034-05	5 ml Transport Vials with white caps, Non-sterile	4x250/pk
63035-05	5 ml Transport Vials with white caps, sterile	20x25/pk
63034-10	10 ml Transport Vials with white caps, Non-sterile	4x250/pk
63035-10	10 ml Transport Vials with white caps, sterile	20x25/pk
63034-50	50 ml Transport Vials with blue caps, Non-sterile	500/pk
63035-50	50 ml Transport Vials with blue caps, sterile	20x25/pk

► Large, Screw Cap Centrifuge Tubes

Premium quality general purpose centrifuge tubes with printed graduations

SUPERIOR CLARITY & DURABILITY

- 50ml: Made from premium polypropylene copolymer for excellent chemical resistance; withstands temperature extremes of -40°C to 125°C ; high centrifugation of 6000RCF with exceptional clarity.
- 15ml: Available in poly-styrene or polypropylene. Polystyrene offers glass-like clarity and can withstand 1800RCF. Polypropylene has excellent chemical resistance and can withstand 6400 RCF.

These tubes are available in bulk, bag pack, or in expanded styrene foam trays. As well they are available non-sterile or sterile

Cat.#	Volume	Material	Sterile	Pack
64763-01	15ml	Polystyrene	Sterile	Tray 50
64764-01	15ml	Polypropylene	Sterile	Tray 50
64763-02	15ml	Polystyrene	Sterile	Bag 25
64764-02	15ml	Polypropylene	Sterile	Bag 25
64763-10	15ml	Polystyrene	Non Sterile	Bag 500
64764-20	15ml	Polypropylene	Non Sterile	Bag 500
64760-01	50ml	Co-Polymer	Sterile	Tray 25
64760-10	50ml	Co-Polymer	Sterile	Bag 25
64760-20	50ml	Co-Polymer	Sterile	20 bags/25/pk
64761-01	50ml	Co-Polymer	Non Sterile	Tray 25
64762-01	50ml	Co-Polymer	Non Sterile	Bag 25
64762-20	50ml	Co-Polymer	Non Sterile	Bag 500

► 2. Transport Tubes

Transport Tubes—Ideal for rapid sample collection when a plug cap is needed. Made from virgin polypropylene (PP) or polystyrene (PS). They also work well in Olympus automated testing equipment. Tube volume is 12 ml. Plug caps are available in yellow color and you can choose from hollow top (HT) or hollow bottom (HB)

Cat.#	Description	Pack
63036-PS	12 ml PS Conical Bottom w/skirt Tube, no cap	1000/pk
63036-PP	12 ml PP Conical Bottom w/skirt Tube, no cap	1000/pk
63037-PS	12 ml PS Flat Bottom Tube, no cap	1000/pk
63037-PP	12 ml PP Conical Bottom Tube, no cap	1000/pk
63040-HT	Hollow Top Plug Cap, yellow	1000/pk
63040-HB	Hollow Bottom Plug Cap, yellow	1000/pk

► EZFlip™ Conical Centrifuge Tubes (Patented*)

- Leak-proof – Hinged, flip-cap design.
- One handed opening and closing.
- Good chemical resistance – low protein binding.
- 15 ml and 50 ml – Sterile.
- Freezer/Refrigerator capability.
- Clarified polypropylene – good visibility of contents.
- Easily maintain aseptic conditions.
- Compatible with all major centrifuges and rotors.

EzFlip™ Conical Centrifuge tubes offers a safer alternative to screw cap tubes. A patented closure system improves ergonomics and versatility. An improved tube and cap design increases mechanical strength to withstand aggressive centrifugal forces. The 15 ml tube's maximum relative centrifugal force (RCF) is 8,500 x g, and the 50ml tube's maximum RCF is 9,500 x g.

Tubes are graduated and feature a writing area. All EZFlip™ tubes are available in rack or bag of 50, case of 500.

Ordering:

Cat.#	NUNC #	Description	Size, mm Dia x L	Qty/ Pack	Qty/ Case

► The B.O.P.[®] Kit* (Biopsy Organizer Plates)

Introducing the World's First Single Specimen Container for Multiple Endoscopic Biopsies

Simply stated, a BOP kit is a secure plate of specialized, easy to open and reseal biopsy specimen containers in an anatomical map format.

► The BOP Kit:

The BOP Starter Kit includes 1 case of 12 BOP Kits and 2 of the B.O.P Kit Table Top Light Box; one for use in the GI/Endoscopy specimen collection area, and the other for use in the laboratory for enhanced visualization in specimen retrieval.

► The BOP Kit Table Top Light Box

Provides bright, even light for illuminating specimen containers and enhancing visualization for specimen retrieval via the 8" x 10" illumination area. Runs on "D" cell batteries or an AC Adapter (sold separately).

► The BOP Kit Light Box

An Essential Accessory for both GI/Endo Department and the Receiving Lab

► The BOP Kit Slim Light Pad:

This light box is ultra thin, only 1/2" (14mm) thick. This new technology provides bright, even 5400K light for illuminating specimen containers and easily finding even small specimen material with the clear plastic 8" x 10" illumination panel. 12 VAC adapter provided.

* Product of 3GEN SCIENTIFIC – Designed by a pathologist

What Can A B.O.P Kit Do For My GI Department?

- Streamlines and Simplifies submission of multiple biopsy specimens
- Reduces the risk of misidentification of specimens
- Saves time, effort and money
- Reduces storage space
- Maintains all patient's specimens in a single container

Cat.#	Description	Qty.
63920-01	BOP Starter Kit, 12 kit/cs with 2 Light Boxes	each
63921-01	BOP Kit for Lower GI, 12 Kit/case	each
63920-50	BOP Table Top Light Box	each
63920-60	Slim Light Pad for BOP Kit w/Adapter	each

► Peel n' Seal

Pre-Cut, Breathable and Non-Breathable Sealing Membranes for Flasks

Breathable - A breathable option is available for cell culture applications

Non-Breathable - A non-breathable option is available for general sealing applications

Sterile - All membranes have been gamma irradiated to remove cyto-toxins and other contaminants

Protects - Liquid-tight membranes keep solutions safe from outside contamination during storage

Proven - Non-breathable Peel-n-Seal is made from our Titer-Tops material and breathable Peel-n-Seal is made from our Breathe-Easier material; both are trusted and proven throughout the life science industry

Temperature Ranges

Breathable: -20°C to 80°C/Non-Breathable: -40°C to 100°C

Peel-n-Seal Utilizes: Breathe-Easier and Titer-Tops

Cat. No.	Description	Flask Size	Qty
Breathe-Easier			
77578-10	Breathable Peel-n-Seal, 1.50" (38.1mm) dia.	250ml	50/pack
77578-20	Breathable Peel-n-Seal, 1.63" (41.4mm) dia.	500ml	50/pack
77578-30	Breathable Peel-n-Seal, 2.13" (54.1mm) dia.	1,000ml	50/pack
Titer-Tops			
77578-40	Non-Breathable Peel-n-Seal, 1.50" (38.1mm) dia.	250ml	50/pack
77578-50	Non-Breathable Peel-n-Seal, 1.63" (41.4mm) dia.	500ml	50/pack
77578-60	Non-Breathable Peel-n-Seal, 2.13" (54.1mm) dia.	1,000ml	50/pack

► Thumbs-Up Microtubes

Made of autoclaveable polypropylene

- Opens with flip of thumb!
- Easy retrieval from rotors
- Special reaction vessels in lid
- Color option for easy identification
- RNase and DNase free
- Temperature range: -196°C to 130°C
- RFC rating of 17,00 x g

Cat. #	Description	Qty
72370-0	0.5 ml Thumbs-Up Microtubes, Clear	1,000/pk
72370-1	0.5 ml Thumbs-Up Microtubes, Blue	1,000/pk
72370-2	0.5 ml Thumbs-Up Microtubes, Green	1,000/pk
72370-3	0.5 ml Thumbs-Up Microtubes, Pink	1,000/pk
72370-4	0.5 ml Thumbs-Up Microtubes, Purple	1,000/pk
72370-5	0.5 ml Thumbs-Up Microtubes, Yellow	1,000/pk
72371-0	1.5 ml Thumbs-Up Microtubes, Clear	500/pk
72371-1	1.5 ml Thumbs-Up Microtubes, Blue	500/pk
72371-2	1.5 ml Thumbs-Up Microtubes, Green	500/pk
72371-3	1.5 ml Thumbs-Up Microtubes, Pink	500/pk
72371-4	1.5 ml Thumbs-Up Microtubes, Purple	500/pk
72371-5	1.5 ml Thumbs-Up Microtubes, Yellow	500/pk

► Breathable Tube Membranes

- Micro-permeable Membranes for Microtubes
- Ideal for cell growth and freeze drying
- Permits consistent gas exchange
- Easy microtube cap closure
- Will not bind in centrifuge rotors
- Easy-to-use finger tab for quick liner removal
- Pre-cut to fit a variety of popular tube sizes
- Sterile and free of cytotoxins

Cat.#	Description	Qty.
70537-10	Breathe-EASY	100/pk.
70537-20	Breathe-EASIER	100/pk.

1 Remove the paper liner and adhere the membrane to the tube opening.

2 Remove the top protective layer to expose the breathable membrane

► Hinged Lid Containers PE

These hinged lid containers are ideal for use just about anywhere. They feature a secure snap closure with hinged lid that eliminates lost caps. Containers offer air and moisture resistance to contents. Manufactured from flexible FD approvable polyethylene resin.

Cat.#	Capacity	Diameter	Height	Qty
64238-01	¼oz (7.4ml)	1½" (38mm)	½"(12.7mm)	100/pk

64238-10	1oz Flat	1½" (38mm)	1½" (38mm)	100/pk
64238-12	1oz (29.57ml)	2" (50.8mm)	1" (25.4mm)	100/pk
64238-15	2oz (59.14ml)	2" (50.8mm)	1½" (38mm)	50/pk
64238-20	4oz (118.3ml)	2" (50.8mm)	3¼" (83mm)	50/pk

► Polystyrene Containers – Sterile

These containers are made from polystyrene and they are clear and rigid.

- **Sterile:** All containers are manufactured aseptically within a state of the art clean room.
- **Various Labels:** Labeling options include unlabeled printed or plain.
- **Various Closures:** The 30 universal uniquely relies on special seal technology. Other sizes employ liners or crab claw closures to facilitate sample containment.
- Some sizes are available with spoons.

Polystyrene Containers #	Capacity ml	Label	Type	Spoon	Cap Material	Height mm	Diameter mm	Case Quantity

► Histology Containers

- **Designed for the storage and transport of histology specimens in fixatives.**
- **Made from durable polypropylene (except 8L size, which is made of polyethylene)**
- **Leak-proof self-seal caps**

All of the containers (except the 5ml size) have graduated markings on three sides. 2L to 8L sizes are supplied with snap-top lids and carrying handles, and has no graduations.

Cat.#	Visibility	Inside Height x Top I.D.	Size	Pack
64233-10	Semi-Clear	2" x ½" (50 x 13mm)	5ml	500/pk
64233-11	Semi-Clear	1½" x 1¼" (40 x 28mm)	20ml	200/pk

64233-14	Semi-Clear	2¼" x 1¾" (55 x 42mm)	60ml	100/pk
64233-16	Semi-Clear	2¾" x 1¾" (75 x 42mm)	90ml	400/pk
64233-17	Semi-Clear	3" x 1⅞" (75 x 48mm)	120ml	300/pk
64233-18	Opaque	2¼" x 3½" (55 x 88mm)	250ml	100/pk
64233-20	Opaque	4" x 3½" (110 x 88mm)	500ml	100/pk
64233-22	Opaque	5¼" x 4¼" (135 x 110mm)	1000ml	100/pk
64233-24	White	4¾" x 7¾" (120 x 184mm)	2000ml	20/pk
64233-26	White	7½" x 8⅞" (190 x 126mm)	5000ml	10/pk
64233-28	White	9¾" x 9" (245 x 230mm)	8000ml	10/pk

► Discups™; Disposable Paper Beakers

With environmental awareness in mind these disposable paper beakers create less waste and are as economical as plastic.

Discups and Lids

- Graduated in English and Metric units (½ oz. or 10cc increments).
- Very economical.
- Constructed from unwaxed, plain finished paper.

60954-10	Discups™, 120cc	100/pk
60954-20	Polystyrene Lids	100/pk

► 4 Oz. Specimen Container

This 4 oz. specimen container provides a “full-turn” screw thread cap, which offers an excellent “leak-proof” seal that meets the NCCLS Specimen Handling Guidelines for primary containers. These versatile, graduated, polypropylene containers with polyethylene caps can be used for almost any liquid or solid specimen for either storage or transport purposes. They come with color coded caps: Green for individually wrapped sterile caps; White for non-sterile ones.

64231-20	4 oz. Specimen Containers, Non-Sterile	20/bag
64231-50	4 oz. Specimen Containers, Non-Sterile	500/cs

► Antibody Saver Tray

- Minimize the use of expensive antibodies when incubating filters in the Western Blot process

- Trays are available for popular midi and mini and multiple lane filters
- Each tray is molded of polypropylene and includes an attached lid to protect from spillage.
- Trays are stackable, reclosable and reusable.
- Single lane trays are linked together for easier handling but can be separated.

70480-10	Single Lane Trays, 1.6 x 11.5cm (5.8 x 4½")	5/pk
70481-10	Small Square Trays, 90 x 90cm (3½" x 3½")	5/pk
70481-20	Large Square Tray, 165 x 165 cm (6½" x 6½")	5/pk

► Tri-Seal™* Specimen Containers

Introducing the World's First Patented, Leakproof, Airtight, Touch-Top Specimen Containers for the Pathology Lab

- Triple Seal Design – Vials are “closed in the mold” during manufacturing
- Permanent Hinge – Allows for one-hand opening and closing
- Patented Leakproof Touch-Top Construction ideal for the Pathology lab
- Molded from 100% high-density, translucent polypropylene
- Available in a variety of sizes from 13 ml to 300 ml
- Locking latch option for optimum security **
- No more loose threaded screw caps to deal with – just press down the triple-seal lid to securely close and seal

* Tri-Seal Containers are the product of 3GEN SCIENTIFIC

** Included in indicated products only

► The 4 Most Popular Styles for Pathology:

(These containers come with Locking Latch, except 15ml size)

Cat.#	Description, (Overall Diameter x High)	Qty.
64234-15	Tri-Seal Container 15 ml, 1/8" x 2 1/2"	500/pk.
64234-15B	Tri-Seal Container 15 ml Bulk	2000/pk.
64234-90L	Tri-Seal Container 90 ml, 2 1/8" x 2 1/2"	400/pk.
64234-120L	Tri-Seal Container 120 ml, 2 5/8" x 2 1/2"	250/pk.
64234-240L	Tri-Seal Container 240 ml, 3" x 3"	140/pk.

► The Other Tri-Seal Touch-Top Containers:

Cat.#	Description, (Overall Diameter x High)	Qty.
64235-13	Tri-Seal Container 13 ml Tall, 15 x 95 mm	500/pk.
64235-50T	Tri-Seal Container 50 ml Tall, 28 x 84 mm	600/pk.
64235-50TL	Tri-Seal Container 50 ml Tall, 28 x 84 mm (with Locking Latch)	600/pk.
64235-75T	Tri-Seal Container 75 ml Tall, 33 x 93 mm	400/pk.
64235-90	Tri-Seal Container 90 ml Tall, 50 x 50 mm	400/pk.
64235-120	Tri-Seal Container 120 ml Tall, 63 x 50 mm	250/pk.
64235-120T	Tri-Seal Container 120 ml Tall, 43 x 90 mm	25/pk.
64235-120TL	Tri-Seal Container 120 ml Tall, 43 x 90 mm (with Locking Latch)	250/pk.
64235-240	Tri-Seal Container 240 ml Tall, 75 x 75 mm	150/pk.
64235-300TL	Tri-Seal Container 300 ml Tall, 30 x 80 mm (with Locking Latch)	100/pk.
64235-45TE	Tri-Seal Container 45 ml Tall, 30 x 80 mm Tamper Evident Transport Container)	700/pk.

Test

► EMS Click-Leak-Proof Container

WE'VE ADDED A CLICK AND REMOVED THE LEAK.

Our new EMSClick container was designed to eliminate leakage that occurs during specimen transport. The container produces an audible "clicking" sound when the leak-proof seal has been properly engaged, assuring accurate closure and specimen integrity during transport.

Say Goodbye to Messy Clean-Ups and Unnecessary Exposure

- 100% virgin medical grade plastic (HDPE) provides consistent vial to vial performance
- Audible proof of closure confirms engagement of leak-proof seal
- Cap designed to enhance seal during positive and negative pressure differentials
- Rounded knurls on cap offer an easy gripping surface for users
- Vial "ears" prevent cap from backing off during rough transport

The Vials are 20 ml in capacity and they measure 3.04 CM in Diameter and are 4.43 cm in height.

64233-09	EMSClick Container	800/Case

► SecurTainer™ I Tamper Evident Specimen Containers

Container made of polypropylene - Closure made of polyethylene
This shatter resistant, especially designed for collection, transport and specimen storage.

- Unique integrated leak resistant seal
- High clarity to allow specimen to be viewed without opening
- The magenta lids are ribbed for easy opening
- Container are stackable with straight side format.
- SecurTainer™ I is a unique tamper evident to ensure no alter allow. (SecurTainer™ can be used without using the tamper evident locking mechanism)
- For color coding purpose, use CapInsert (Cat. #68106-series)

Both containers and caps are manufactured without the use of plasticizers or mold release agents. All material used are free from latex. All containers are 95kpa compliant. Non sterile, container and caps are packaged separately in bag of 100.

EMS #	Description	Qty

64236-12	SecurTainer I, Size 120 ml	300/pk

► SecurTainer™ II Tamper Evident Specimen Containers

This model uses a different tamper evident concept compared to the SecurTainer I above. No locking tab to push up is necessary when the tamper evident is used. Simply screw the cap on the container and the tamper evident sealing ring is automatically locking in place. When unscrewed, the ring is detached from the cap. All other features are the same as SecurTainer I.

► FlexTainer™ Containers

Made from polypropylene

This is a space-saving expandable accordion-style jug with flattens down for easy transport and storage.

Great ideal for storing and carrying numerous types of fluids, it is suitable for any laboratory. Made of high strength polyethylene, it features comfortable carry grip and screw-on cap with

on/off spout. It is available in many sizes up to 8 liters. Come with individually wrapped.

► Petri Dishes –Sterile Petri Dishes

Made from polystyrene

Our Petri Dishes are available in a variety of shapes and sizes for use in routine procedures and with automated equipment. Economical, optical clarity, dishes are precision-molded from biomedical grade polystyrene so cultures are clearly visible without distortion. Dishes are packaged 20 each in sturdy polyethylene sleeves. These dishes are not recommended for tissue culture application, due to non treated by "corona effect".

Cat. #	Model	Description (actual Dimension)	Vol	Qty
70678-10	D210-7	Dish 90x20mm – Commonly referred to as a 100x20mm dish. For unimpaired observation of specimen growth with raised straight ridge around top for stable stacking	500 ml	100/pk
70678-20	D210-7WL	Dish 90x20mm – Commonly referred to as a 100x20mm dish. This dish has three venting ribs into the underside of the lid to prevent condensation build-up	100 ml	500/pk
70678-30	D210-8	Dish 90x25mm – Commonly referred to as a 100x25mm dish. Accommodates deeper fills for longer culture periods. Used for fungal cultures, plant propagation. This dish has three venting ribs into the underside of the lid to prevent condensation build-up	125 ml	500/pk
70678-40	D210-8R	Dish 90x25mm – Commonly referred to as a 100x25mm dish. Similar to D210-8 but with no-vented lid having a raised straight ridge around top for stable stacking.	125 ml	500/pk
70678-50	D210-13	Dish 55x13mm – Commonly referred to as a 60x15mm dish. For use whenever a small quantity of culture is desirable. For unimpaired observation of specimen growth with raised straight ridge around top for stable stacking. Dish has three venting ribs on the edge of the dish to prevent condensation build-up.	28 ml	500/pk
70678-60	D210-14	Dish 50x8mm – Commonly referred to as a 60x9mm dish. Box type dish, for classroom studies, culturing of mycobacteria aerosol testing, membrane filter and immunodiffusion techniques. Tight lid prevents sample dehydration.	12 ml	500/pk
70678-70	D210-15	Dish 35x10mm – Commonly referred to as a 35x10mm dish. Selected for small quantities culture media. For unimpaired observation of specimen growth with raised straight ridge around top for stable stacking. This dish has three venting ribs into the underside of the lid to prevent condensation build-up.	9 ml	500/pk

► Square Petri Dish

Made from polystyrene – Radiation sterile

This dish commonly referred to as a 100 x 15 mm dish. Free from optical distortion and sterile, these dishes are ideal for phase typing, susceptibility testing, plate counts, and probe assays.

The square Petri dish with grid is consists of 36 of 13 x 13 mm squares, each 13 mm grid is marked numerically in one direction and alphabetically in the other. This dish has four venting ribs into the underside of the lid to prevent condensation build-up.

Cat. #	Description	Qty
70691	Square Petri Dish with Grid, 10/sleeve	100/pk
70691-CS	Square Petri Dish with Grid, 500/cs	500/pk
70690	Square Petri Dish, Plain, 20/sleeve	100/pk
70690-CS	Square Petri Dish, Plain, 500/cs	500/pk

► Contact Plate

Made from polystyrene

These dishes are free from optical distortion. The dish has 16 of 10 x 10 mm square grids, which is marked numerically in one direction and alphabetically in the other. The model 70692-20 is designed with a convex bottom to save on culture medium. Dishes are packaged 20 per sleeve and are radiation sterile.

Cat. #	Description	Vol.	Qty
70692-10	Contact Plate, 60x15mm	20 ml	500/pk
70692-20	Contact Plate, convex bottom, 60x15mm	15 ml	500/pk

► Bacterial Cell Spreader

Made from high impact polystyrene

No flame sterilization needed. Designed for easy spreading of cells onto the surface of an agar plate. Supplied sterile in individually packs. Total length of handle: 176 mm, width of spreader: 36mm. Color green

Cat. #	Description	Qty
62452	Bacterial Cell Spreader	100/pk

► Histology Cassettes

All the histology cassettes listed below are specially made to be used either manually or in any leading automatic cassette labeling instruments.

► Tissue Processing/Embedding Cassettes

Made from Acetyl Polymer, which is a special high density polymer that keeps specimens safely submerged in solution. These cassettes are totally resistant to most histological solvents and their slots offer maximum flow through for good fluid exchange and proper drainage. The lids either come attached to the cassette or are packaged separately. The lids can be opened and closed as often as necessary and they always relock securely without danger of specimen loss. Large labeling areas are located on three sides of the cassette for your convenience. Each slot measures: 1x5m, total 128 slots per cassette. Available in 11 different non-cytotoxic, non-metallic colors. Anterior writing area is at 45° angle to make the cassette universal.

1. Label cassette on front or sides.

2. Press on back tab to open cover.

3. Insert sample.

4. Press down on lid to lock it in place.

5. To open, lift tab while pressing down on the center of lid with thumb.

6. Remove the cover by pivoting it forward.

► 1. Slotted Cassettes With Lids

A. Lids are packed separately

Ordering: Each case contains 2 dispenser boxes of 500 cassettes and 1 dispenser box of 1000 lids.

Cat.#	Color	Qty/Cs

► Compartment - Micro Processing/Embedding Cassettes – 6-Compartment

Made from Acetal Polymer. These biopsy cassettes can hold up to six tissue specimens, each one placed in its own compartment, numbered from 1 to 6 and measuring $\frac{1}{4}'' \times \frac{1}{16}'' \times \frac{3}{16}''$ D (7x12x5mm). Cover and base have over 3000 0.26mm square openings. Cassettes keep specimen safely submerged in solvent and are totally resistant to the most histological solvents.

The efficient flow-through slots maximize fluid exchange and insure proper drainage. The one-piece integral lid eliminates the need for separate steel lids. Large labeling areas are located on three sides of the cassette. The anterior writing area is at a 45° angle, making the cassette, to some degree, able to be used with certain types of cassette labeling instruments. Each case contains 4 dispenser boxes of 250 cassettes with covers assembled.

► Process/Embedding Cassettes (Without Lids)

Made from Acetal copolymer – Disposable plastic tissue cassettes are suitable for holding and identifying tissue samples in processing, embedding, and sectioning procedures. The cassettes fit securely in microtome chuck adapters. They are molded from a high-density polymer that is totally resistant to histological solvents. These cassettes are designed to accept standard metal lids (#70025-10) and will also fit either the standard stainless steel base molds or the disposable plastic ones. Only Clear one is made of polypropylene. All other are made of Acetal Polymer. Stainless Steel Lids order separately. Each case contains 3 dispenser boxes of 500 cassettes.

► Micromesh™ - Single Compartment

Biopsy Processing/Embedding Cassettes with Lid Made from acetyl polymer

This new version of Micromesh™ offers 1676 square openings (0.38 mm) allowing for a greatly improved fluid exchange without having to use the biopsy pads. Large anterior and posterior slots in both cassette and cover ensure that the Micromesh™ biopsy cassettes will sink rapidly (far better than cloth mesh cassettes). A large square compartment measuring 27 mm is perfect even for needle biopsies. The cover does not protrude above the cassette, a great space saving feature allowing more cassettes to be stacked in automatic labeling machines and tissue processors.

- These patented cassettes keep specimens safely submerged in liquid
- Totally resistant to the most histological chemicals and solvents.
- The Micromesh™ ensures efficient fluid exchange and drainage.
- One-piece integral lid eliminates the need for separate steel lid.
- Lid is locked securely, no danger of specimen loss.
- Anterior writing area at a 45° angle – these cassettes are ideal for automated cassettes printers.
- Available in non-cytotoxic, non-metallic colors.

Each case contains four dispenser boxes of 250 cassettes with covers.

► MicroMesh™ - Four-Compartment

Biopsy Processing/Embedding Cassettes with Lid

This model is similar to the one above – single compartment – but cassettes have four square compartments each measuring 13 mm. Cover and base have about 1676 square openings maximizing fluid exchange and ensuring proper drainage.

Each case contains four dispenser boxes of 250 cassettes with covers.

IP ActivFlo Biopsy I

► IP ActivFlo™ Biopsy Cassettes

Patented "Fluidic Flow" pore design maximizes reagent exchange.

IP ActivFlo Biopsy Cassettes feature innovative V-shaped 0.67 mm pores that pull fluid in and force air out.

Sloped walls create a basket for small tissue management. The one-piece cassettes with 'frangible lids' have been designed for the Leica IPC Cassette Printer, with <1% printing error rate.

■ Available in loose and taped packaging for easy printer loading.

■ Choose from eleven colors in quantities of 500 loose or 1000 taped.

► Activflo Mini Biopsy Cassette

Ideal for needle biopsies and small tissues

Activflo Mini Cassettes are one third the size of standard cassettes, and feature sloped walls, creating a basket for small tissue management. The smaller size allows double the number of blocks to be stored, reducing specimen storage space.

- Excellent solution for microwave and rapid tissue processors
- Available in eleven colors.

► Supamega Tissue Processing Cassettes:

■ Ideal for prostate, brain, breast tissue and eyes

■ Extremely useful for research and toxicology laboratories

■ Measures: - Inside: 64mm x 48mm x 13mm - Outside: 75mm x 52mm x 18mm

Cat.#	Color	Qty
70065-W	White	100/pk.
70065-G	Green	100/pk.
70065-B	Blue	100/pk.
70065-P	Pink	100/pk.
70065-Y	Yellow	100/pk.

► SupaMega Stainless Steel Base Molds

The SupaMega range of stainless steel base molds have extra deep side walls, allowing wax to be decanted into the cassettes during embedding without the risk of the usual leakage of wax. The smaller faced mold also saves wax on medium sized blocks too large to fit into standard cassettes, negating the use of full size molds.

Cat.#	Description	Qty
62354-36	SupaMega SS Base Mold, 36 x 36 x 10mm	5/pk.
62354-60	SupaMega SS Base Mold, 60 x 45 x 15mm	5/pk.

► Strip Disposable Base

Disposable base molds are manufactured from high impact polystyrene, offering a low cost alternative to stainless steel.

These molds are available in a choice of sizes and depths. The molds have a smooth interior finish and rounded corners for ease of removal. There are five molds per strip and they are packed 100 strips to a case.

■ Wide range of sizes to suit your needs

■ Disposable – no cleaning required

■ International standard sizes

■ Convenient with 5 mold per strip

Cat.#	Description	Size	Qty.
62351-07	Strip Disposable Mold	7 x 7 x 5 mm	100/pk.

62351-39	Strip Disposable Mold	39 x 25 x 13 mm	100/pk.

► Easy-Load Cassettes for Automated Labeling Instruments

Made from acetal copolymer – This newly patented cassette, allows you to load the Micro-Writer® and Shur/Mark® Cassette Labeling Instruments in one simple operation. Each convenient stack contains 50 unique cassettes. No more manual insertion one-by-one. Save time and money.

Two types of cassettes are offered in order to suit your needs: Slotted tissue cassettes and meshed biopsy cassettes.

The anterior printing area is a 45° angle which suits most cassette labeling instruments. Lids are available as one-piece disposable plastic. It can be opened and closed as often as necessary and it always relocks securely without danger of specimen loss. Cassettes are packaged in stacks of 50. Each case contains 2 boxes of 20 stacks. Order cassette bases and cover separately.

► Macro-Cassette

Processing/Embedding Cassettes (with lids)

Made from Acetal-Polymer. Comes complete with a one piece integral lid. It is specially designed

to hold large specimens during the embedding process, as well as in a storage cabinet. Inside measurements: 29mm(L)x25mm(W)x11mm(D).

Cat.#	Description	Qty/Pk
70077-W	Macro-Cassettes Cassettes, White	250/pk

► Disposable Deep Base Mold for Macro-Cassette

Made from PVC with excellent thermal exchange. Specially designed for the Macro-Cassette above. It has a smooth interior finish and rounded corners to facilitate its removal. Will resist temperatures from -80°C to 60°C. Not to be used with xylene or acetone. Measures: 37 x 24 x 10mm, and 5ml volume.

62353	Disposable Base Mold for Macro-Cassettes	500/pk

➤ 1. Uni-Cassettes® System by Tissue Tek; Sakura Finetek

Tissue-Tek® Uni-Cassette® System is now easier to use in every way. It is made from a solvent and decalcifying solution resistant plastic and comes with a snap-latch hinge-lock disposable lid. The cassettes have three textured writing surfaces. Biopsy/Uni-Cassette® cassettes are the same Uni-Cassette® but feature 1mm pores instead of slots, which eliminates the warping of most small specimens and reduce the risk of specimen loss.

Features:

- Smooth, single action, fracture-back hinge - Fractures when being closed, then breaks easily and smoothly without rough edges for greater protection.
- Raised Spacer nubs - Placed at the center and the corners. Helps maintain the space between the cassettes for better exchange of processing reagents.
- Wider, thicker finger tab - Eliminates sharp edges; reduces strain on operator's finger. It simplifies opening of the lid.
- Improved front latch - Provides secure closure while making it easier to open.
- New smooth edge, sure-locking lid - The closure guides make it easier to close the lid. Secures sample throughout entire processing cycle.
- Oversize front writing surface - For large print and/or more information. Angled to make the cassette easier to hold and label.

➤ 2. Mesh Biopsy Cassette System

The perfect cassette for the smallest specimens. This Mesh Biopsy Cassette System is now the easier, ideal way for processing the smallest of biopsy specimens. Using our Mesh Biopsy Cassettes, you avoid reagent carryover in the tissue processor and you eliminate the structural artifacts usually caused by sponge and tea bag abrasion. They also allow direct specimen filtration into the cassette and facilitate embedding.

Additional features:

- Large venting slots improve flow-through.
- Mesh screen with a blue tint for safe specimen containment and easy visualization.
- Tongue-and-groove seal surrounds entire specimen.
- Rounded inner walls for easier removal.

➤ 3. Tissue-Tek® II Stainless Steel Base Molds-for Uni-Cassettes and Process/Embedding Systems

These base molds are to be used with Tissue-Tek® embedding cassettes and Tissue-Tek® Uni-Cassette® cassettes. These molds are made from polished stainless steel, offer optimal thermal conductivity, as well as easy paraffin block removal. All corners are precisely rounded for optimal paraffin ribboning.

► Precision Cryo-Embedding System

This section offers you a simple system of stainless steel well bars, chucks and freezing blocks, kept cold in cryostat, allow you to perform a variety of precision embedding techniques addressing the most difficult embedding tasks with ease and minimum time needed.

SPEED

- 20 to 60 seconds to freeze (depending on the well size)
- Multiple samples handled quickly
- No monitoring necessary (for placement of heat extractor)

PRECISION

- Precise flat or on edge embedding
- Predictable orientation
- Liquid samples easily embedded
- No crush artifact caused by heat extractor weight

REDUCED TISSUE WASTAGE

- Less trimming the result of flat plane of embedding
- Minute samples embedding in the same plane.

EASY AND COMFORTABLE

- Less cryostat adjustments
- Comfortably performed on a shelf just inside most cryostats
- Easy to used – and safe time

► 1. Embedding Wells

61710-18

61712-34

61713-50

61715-24

Cat #	Description	Qty
61710-18	Embedding Bar, 4-Well of 18 x 18mm	each
61710-24	Embedding Bar, 4 well of 24 x 24 mm	each
61710-30	Embedding Bar, 3 well of 30 x 30 mm	each
61712-34	Embedding Bar, 2 wells of 30 & 24 mm	each
61713-50	Embedding Bar, 2 well of 50 x 30 mm; completely fills a standard glass slide	each
61714-20	Embedding Bar, 20 x 20 mm, 9mm Deep Wells; Ideal for research applications, such as re-embedding snap frozen blocks and embedding fresh blocks and embedding fresh whole small animal organs.	each
61715-24	Embedding Bar, 2 Deep Well of 24 x 24 mm x 6mm deep and two 24 x 24 mm x 9 mm deep. Ideal for research applications such as re-embedding snap frozen blocks and embedding fresh whole small animal organs. Using refrigerated embedding medium will maximize speed and prevent thawing of snap frozen tissues.	each
61716-10	Embedding Bar, Four 10 mm square wells. Two wells are 4.0 mm deep and 2 wells are 6.0 mm deep. Designed for small specimens when multiple sections need to be placed on a single slide. This well freezes in 10 seconds at -24°C. Useful in both clinical and research applications	each

► 2. Stainless Steel Chucks

These stainless steel chucks are designed to be used cold for rapid freezing, and to maximize the gripping power required to hold the embedded tissue block. The stem of the chuck provides the focal point for a sharp tap resulting in an easily release of the block from the well. These chucks fit many of the major brand cryostat and can be used in most cryostats with use of an adapter. These Chuck Adapters have stem measures 20mm L x 9mm diameter, and fit Leica and most Microm cryostats. We also offer adapters to use these chuck for other cryostats.

Cat #	Description	Qty
61720-28	Small Chuck – Made of stainless steel, 28 mm square with gridded surface	each
61720-36	Large Chuck – Made of stainless steel, 36 mm square with gridded surface	each
61721-36	Large Chuck – Stainless steel, 36 x 28 mm rectangular with gridded surface	each
61721-55	Extra Large Chuck – Stainless steel 55 x 36 mm rectangular shape with gridded surface	each

► 3. Stainless Steel Over Chucks Freezing Blocks

These stainless steel rectangular blocks are a useful tool for a number of tasks. They serve as a heat extractor, designed to fit over the stem of the chuck. The flat surfaces can also be used as an extra heat extractor when using conventional cryostat embedding technique. The freezing block also served as a dislodging tool. A light tap of the chuck stem cleaves the plane of adhesion holding of the formed block to the well. These blocks also serve as a convenient hand held flat freezing surface useful in gently cooling the tissue without the use of sprays and in plastering technique.

Cat #	Description	Qty
61725-01	Over-Chuck Freezing Block	each

► 4. Chucks Bin

A sturdy stainless steel bin to store over-chuck freezing block while staying cold in cryostat. Removable cover for easy access the contents.

Cat #	Description	Qty
61725-50	Chuck Storage Bin	each

► 5. Dispensing Slides

These thin transparent polyvinyl slides serve as a surface to precisely orient the tissue into the desired position and as a means to accurately transfer tissue to the embedding well floor. Tissue is applied face down to the end of the dispensing slide where it can be visualized from below and manipulated into position. The face that is visible will be laid onto the well floor and will ultimately be the embedded surface to be sectioned.

Cat #	Description	Qty
61727-08	Dispensing Slide	8/pk

► Precision Cryo-embedding System (continued)

► 6. Embedding Shelf

This removable shelf can be installed below the opening of the cryostat in the most convenient and location available. The shelves can be made in various sizes to accommodate most instruments.

Also available two more models of 3 pieces shelf size 4 x 8" for temporary or permanently installation. One for Leica or Micron cryostats, and one for Shandon Cryostat

Cat #	Description	Qty
61728-01	Embedding Shelf, size 4 x 8"	each
61728-LM	Embedding Shelf for Leica/Micron	each
61728-Sh	Embedding Shelf for Shandon	each

► 7. Well Bar Storage Platform

This stainless steel plate to fit to the Laica cryostat for storing Well Bar inside the cryostat

Cat #	Description	Qty
61730-01	Well Bar Storage Platform	each

► 8. Chuck Adapter

This Chuck Adapter machined to fit Shandon and Ames / Tissue-Tek cryostats.

Cat #	Description	Qty
61731-01	Chuck Adapter for Shandon	each
61732-01	Chuck Adapter for Ames/Tissue-Tek	each

► 9. Frozen Section Brushes

Flat white boar bristle brushes which are cut into an angle. These stiff bristles will prevent the frozen section from curling through the brush. We offer a set of four brushes: two #1 with 3/8" angle cut and #2 with 1/4" angle cut.

Cat #	Description	Qty
61735-01	Frozen Section Brush	4/set

► Well Bar Sets

We offer these Well Bar Sets to make your ordering easier and to offer you a complete set for facilitate your work:

Cat #	Description	Qty
61700-01	Well Bars Set 101	set
<i>Includes: Three sizes well bars (61710-18, 61710-24, 61710-30); Six small chucks (6 x 61720-28); Four large chucks (4 x 61720-36); Four Over-Chuck Freezing Blocks (4 x 61725-01); One Chuck Bin (1 x 61725-50); 16 Dispensing Slide (61727-08); Cutting Board/Freezing Girdle (61733-01); 1 Elevated Freezing Block (61734-01); 1 Angle Embedding Forceps (78359-124); and accessories</i>		
61701-01	Well Bars Set 102	set

This set is dedicated for Ames / Tissue-Tek Cryostats.

Includes: Two sizes well bars (61710-18, 61710-24); Six small chucks (6 x 61720-28); Four large chucks, 36x28mm (4 x 61721-36); One Chuck Adapter (61732-01); Four Over-Chuck Freezing Blocks (4 x 61725-01); One Chuck Bin (1 x 61725-50); 16 Dispensing Slides (61727-08); Cutting Board/Freezing Girdle (61733-01); 1 Elevated Freezing Block (61734-01); 1 Angle Embedding Forceps (78359-124); and accessories

Cat #	Description	Qty
61704-01	Small Embedding Well Bar Set	set
<i>Includes: One 18 mm Well Bars (61710-18); Four Small Chucks (61720-28); Two Over Chuck Freezing Blocks (61725-01); Dispensing Slides (61727-08); Accessories included.</i>		

Cat #	Description	Qty
61704-02	Medium Embedding Well Bar Set	set
<i>Includes: One 24 mm Well Bar (61710-24); Four Small Chucks (61720-28); Two Over Chuck Freezing Blocks (61725-01); Dispensing Slides (61727-08); Accessories included.</i>		

Cat #	Description	Qty
61704-03	Large Embedding Well Bar Set	set
<i>Includes: One 30 mm Well Bars (61710-30); Four Small Chucks (61720-36); Two Over Chuck Freezing Blocks (61725-01); Dispensing Slides (61727-08); Accessories included.</i>		

Cat #	Description	Qty
61704-04	24/30 mm Well Bar Set	set
<i>Includes: One Well Bar with two wells 24 mm and two wells 30mm (61712-34); Two Large Chucks (61720-36); Two Small Chucks (61720-28); Two Over Chuck Freezing Blocks (61725-01); 8 Dispensing Slides (61727-08)</i>		

Cat #	Description	Qty
61704-05	50/30 Well Bar Set	set
<i>Includes: One Well Bar 50 x 30 mm (61713-50); Two Large Chucks (61720-36) Two Small Chucks 55 x 36 mm (61721-55)</i>		

Cat #	Description	Qty
61704-06	20 x 20 mm Deep Well Bar Set	set
<i>One 20 x 20 mm Deep Well Bar (61714-20); Two Small Chucks (61720-28); Two Over Chuck Freezing Blocks (61725-01); 8 Dispensing Slides (61727-08)</i>		

► Freezing Griddle/ Elevated Freezing Block Set

Includes:

Cutting board / Freezing griddle — The steel "freezing griddle" serves as a freezing surface on which to prepare frozen blocks when used in conjunction with the elevated freezing block. The small attached cutting board serves as a cold surface to cut the frozen block while maintaining the freezing temperature. This simple piece of apparatus is kept cold in the cryostat and is removed to the work bench only during the process of cutting the frozen block. As sections are cut, they are kept cold on the freezing griddle.

Elevated Freezing Block — This steel block is kept cold in the cryostat and is used in conjunction with the freezing griddle. The two broad sides of the block are equipped with feet measuring 3.0 mm on one side and 4.5 mm on the other. The feet create a space between the two steel bars in which the frozen blocks are prepared. Additional elevating bars are supplied to further elevate the block when preparing very thick portion of tissue.

Epoxy Coated Forceps

Putty knife and extra elevating bars

Cat #	Description	Qty
61706-01	Freezing Griddle/ Elevated Freezing Block Set	each

► CytoSep™ Family

The Simport CytoSep™ Family is a series of Cytology Funnel sample chambers specially designed to concentrate cells into thin layer preparation. These Cytology Funnels are disposable and manufactured to use with numerous major models, such as Shandon Cytospin™ 4 Cytocentrifuge, the Sakura Cyto-Tek™ Cytocentrifuge, the Hettich Cyto-System. They are safer than reusable sample chambers and lower your risk of contamination to pathologic samples. These disposable CytoSep™ Cytology Funnels are time saver compared to cleaning and sterilizing reusable sample chambers. The CytoSep™ Cytology Funnels are recommended for the following applications:

- Bronchial alveolar lavage washes
- Cerebrospinal fluids
- Exudates and transudates
- Fine needle aspirates, and other aspirates
- Gastric washes – Oral cavity washes
- Pericardial fluids - Peritoneal fluids
- Pleural fluids – Synovial fluids
- Sputum
- Urine

► CytoSep™ for the Shandon Cytospin® 4 Cytocentrifuge

A. Simport Single CytoSep™ Cytology Funnels

Fully compatible with the Shandon CytoSpin® Centrifuge, the Simport CytoSep™ Cytology Funnels can be used to deposit a thin layer of cells in a clearly defined area of a microscope slide. The filter card absorbs any excess fluid. These Cytology Funnels have the filter cards pre-attached for consistent, reliable results. No alignment necessary. All disposable funnels are packaged with closure caps to seal in specimen for added protection. All components are also available separately.

- For sample volumes of up to 0.5 ml, use the Single CytoSep™ Cytology Funnel with a White Filter Card & Cap. It provides a cell deposition area of 6 mm (28 mm squares) and allows one sample to be run simultaneously on a single slide. It is not necessary to use a different stainless steel slide clip.
- For sample volumes of up to 0.4 ml, such as spinal Fluids, use the Single CytoSep™ Cytology Funnel with Brown Filter Card & Cap. It allows for a slower absorption of fluids. All the individual components are also available separately.

EMS #	Description	Qty	EMS #	Description	Qty
62750-10	Single Funnel with White Filter & Cap	50	62750-35	Funnel Cap only	50
62750-20	Single Funnel with Brown Filter & Cap	50	62750-40	White Filter Paper for Single Funnel	200

B. CytoSep™ for the Shandon Cytospin® 4 Cytocentrifuge

Simport Double CytoSep™ Cytology Funnels

This double CytoSep™ Cytology Funnel with disposable sample chamber allows for two samples to be run simultaneously on a single slide and is ideal for immunohistochemistry work. The Double CytoSep™ Cytology Funnels provides a cell deposition area of 6 mm (28mm squared) for sample volumes of up to 0.5 ml. The filter card come pre attached. Cap is included. No need to use a different stainless steel slide clip. Components are also available separately.

EMS #	Description	Qty
62751-10	Double Funnel with White Filter & Cap	50
62751-30	Double Funnel only	500
62750-35	Funnel Cap only	50
62751-40	White Filter Paper for Double Funnel	200

C. CytoSep™ for the Shandon Cytospin® 4 Cytocentrifuge

Simport ALL PLASTIC Single CytoSep™ Cytology Funnels

These are so easy to use, and improve turn-around time while giving more diagnostic information. Being totally disposable, they eliminate time consuming decontamination and cleaning. They are safe to use and reduce the risk of exposure to pathologic samples. They also decrease the possibility of cross-contamination.

This series of CytoSep™ Funnels is single-use. The disposable sample chambers do not need metal clips and are designed to meet any processing equipment. They are capable producing high quality thin-layer slide preparation while improving laboratory efficiency.

The disposable Sample Chambers with white Filter Cards are used for sample volumes up to 0.5 ml, the ones with the Brown Filter Cards are for sample volumes up to 0.4 ml. The cell deposition area is 6 mm diameter (28 mm squared). Filter Cards are pre-attached> Excellent for scanty specimens such as CSF. All components are also available separately.

62752-30	Single Funnel only	50	62750-40	White Filter Paper for Single Funnel	200
			62750-45	Brown Filter Paper for Single Funnel	200

► CytoSep™ Family (continued)

D. CytoSep™ for the Shandon Cytospin® 4 Cyto centrifuge Simpport ALL PLASTIC Double CytoSep™ Cytology Funnels

This double CytoSep™ Cytology Funnel with disposable sample chamber allows for two samples to be run simultaneously on a single slide and is ideal for immunohistochemistry work. The Double CytoSep™ Cytology Funnels provides a cell deposition area of 6 mm (28mm squared) for sample volumes of up to 0.5 ml. The filter card come pre attached. Cap is included. No need to use a different stainless steel slide clip. Components are also available separately.

EMS #	Description	Qty
62753-10	Double Funnel with White Filter & Cap	40
62753-30	Double Funnel only	50
62752-32	Funnel Base only	50
62750-35	Funnel Cap only	50
62751-40	White Filter Paper for Double Funnel	200

E. CytoSep™ for the Shandon Cytospin® 4 Cyto centrifuge Simpport MEGA Double CytoSep™ Cytology Funnels

This ALL PLASTIC CytoSep™ MEGA Funnel provides an easy, efficient and cost effective method of producing high quality thin-layer slide preparations. It eliminates the needs for stainless steel clips. It is ideally for preparation of large volume samples.

The larger funnel is quick and easy to remove. The large rectangular cell deposition area of 22 x 14.75 mm (325 mm squared) provides for up to 12 times the sample volume (6 ml) of the single Cyto™ Cytology Funnel. Strategically placed baffles inhibit cell setting which results in uniform cell deposition and excellent quality slide preparations. This MEGA funnels and cap minimize user exposure to pathogens while reducing the risk of specimen cross contamination. Can prepared both air dried and fixed preparations.

EMS #	Description	Qty
62754-10	Single Funnel with Cap	40

► CytoSep™ for the Sakura Cyto-Tek® Cyto centrifuge

All components are available separately. The Simpport CytoSep™ Cytology Funnel offers the 1 ml fluid chamber component including 1 ml fluid chamber, 1 ml base holder, 1 ml chamber cap, and the appropriate filter paper

EMS #	Description	Qty
62755-25	Fluid Chamber only, 1 ml	50
62755-32	Base Holder only	50
62755-35	Cap only	50
62755-40	White Filter Card only	200

► CytoSep™ for the Hettich Cyto-System

The Simpport CytoSep™ Funnel Chambers for the Hettich Cyto-System optimize lab throughput with multiple funnel options in 2, 3 or 4 funnels per slide. These funnels are perfect for every application such as CSF, Viral infections, Bronchial secretions and come in four sizes from 1 ml to 8 ml. The 1 ml chamber is for small-volume samples of low cell contents. Both 2 and 4 ml chambers are suggested for cell-rich samples, e.g. pleura, ascites and bronchial washing while the 8 ml chamber is perfect for large volume samples such as urine.

EMS #	Description	Qty
62756-30	One-Funnel Chamber, 1ml	10
62756-31	One-Funnel Chamber, 2 ml	10
62756-32	One Funnel Chamber, 4 ml	10
62756-33	One Funnel Chamber, 8 ml	10
62756-40	Filter for 1, 2 and 4 ml Chambers	200
62756-41	Filter for the 8 ml Chamber	200

► Processing Embedding Cassettes Systems by Tissue Tek®; Sakura Finetek

► 1. Tissue-Tek® Process/Embedding Cassette

Made from chemical resistant plastic. These cassettes have an angled, texture writing surface, ensuring positive identification throughout processing, embedding, sectioning and storage. Stainless steel cover is available separately.

Cat.#	Tissue-Tek	Description	Pack
62520-C	4191	Clear	1500/cs
62520-W	4187	White	1500/cs
62520-A	4129	Aqua	1500/cs

62520-Y	4179	Yellow	1500/cs
62520-25	4194	SS Cassette Cover	25/pk

► 2. Tissue-Tek® Embedding Rings

Made from polystyrene and reinforced with the dual bar center support to prevent warping, these rings have a cross-hatch surface design that provide excellent paraffin bonding for clamping and sectioning.

Cat.#	Tissue-Tek	Description	Pack
62525-W	4151	White	1000/pk
62525-B	4116	Blue	1000/pk
62525-G	4115	Green	1000/pk
62525-P	4114	Pink	1000/pk
62525-Y	4113	Yellow	1000/pk

Tissue-Tek® Filing Cabinet System, See page 609 >>>>

► 3. Tissue-Tek® Base Molds for Embedding Rings

Made from high quality stainless steel for optimal thermal conductivity, and they have a well polished surface for easy paraffin block removal. All of the corners are rounded for good paraffin ribboning. These Base Molds are for all applications in specimen embedding with Tissue-Tek® Embedding Rings shown above.

Cat.#	Tissue-Tek	Description	Pack
62527-16	4121	Base Mold 16x16x6 mm	12/pk
62527-22	4122	Base Mold 22x22x6 mm	12/pk
62527-32	4123	Base Mold 32x25x6 mm	12/pk
62527-38	4124	Base Mold 38x25x6 mm	12/pk
62528-22	4131	Base Mold 22x22x12 mm	12/pk
62528-32	4132	Base Mold 32x25x12 mm	12/pk
62528-38	4133	Base Mold 38x25x12 mm	12/pk

► Tissue-Tek® Embedding Supplies by Tissue Tek; Sakura Finetek

1. Tissue-Tek® Mold Release, Concentrate

Use this solution to coat base molds to ensure complete separation of embedding paraffin from the mold. The working solution is prepared by adding 5ml of Concentrate to 95 ml of ethyl alcohol or isopropyl alcohol. Molds are dipped in solution and dried prior to use.

2. Tissue-Tek® Marking Pencil

These pencils are made from soft lead, which is ideal for marking plastic cassettes.

Cat.#	Tissue-Tek	Description	Pack
62530-01	4141	Mold Release	4 oz
62530-12	4141	Mold Release	12/cs
62531-01	4160	Marking Pencil	12/pk
62531-06	4160	Marking Pencil	6pk/cs

► Tissue-Tek® Cryomold®; Sakura Finetek

These disposable plastic Cryomolds produce a uniformly shaped flat surface specimen block with tissue freezing medium (O.C.T.) for frozen sectioning, Standard Cryomold fits directly into Cryobar® freezing wells of the Tissue-Tek® II microtome/cryostat.

Use a Cryomold® adapter to adapt smaller biopsy and intermediate Cryomold® molds to freezing wells on the Cryobar® unit.

Cat.#	Tissue-Tek	Description	Pack
62534-25	4557	Standard, 25x20x5mm	100/pk
62534-10	4565	Biopsy, 10x10x5mm	100/pk
62534-15	4566	Intermediate 15x15x5mm	100/pk
62535-15	4568	Intermediate Cryomold Adapter	12/pk

► Accessories for Tissue-Tek® CRYO₃® Microtome/Cryostat Cryo 2000™

1. Cryomold® Specimen Holders

Plastic Cryomold®, round shapes with a tab for easy handling. Available in standard and biopsy configurations. The standard mold measures 22mm (D) x 5mm deep. The Biopsy mold measures 15mm (D) x 5mm deep.

2. Round Object Holders

Machined from solid aluminum with an embossed surface for holding frozen embedding blocks. Measures: 26mm top diameter (without 'O' ring), 28.55mm diameter with 'O' ring, 23mm body diameter, 16mm height

Cat.#	Tissue-Tek	Description	Qty/cs
62532-01	4728	CRYO3 CryoMold, Standard	100/cs
62532-12	4728	CRYO3 CryoMold, Standard	1200/cs
62533-01	4730	CRYO3 Cryomold, Biopsy	100/cs
62533-12	4730	CRYO3 Cryomold, Biopsy	1200/cs
62537-01	4726	Round Object Holder, 25mm	each
62537-06	4726	Round Object Holder, 25mm	6/cs

► Tissue-Tek® Microtome Lubrication Kit

This kit contains special low temperature blended lubricants and grease for the routine maintenance of all of the Tissue-Tek microtomes. Tissue-Tek® II and Tissue-Tek® brand Cryo 2000™.

Cat.#	Tissue-Tek	Description	Pack
62556-01	4556	Tissue-Tek™ Lubricating Kit	each

► Autopsy Cassettes

Made from stainless steel. It is fully perforated allowing for free movement of fluids. It comes with a snap-cap which provides positive enclosure.

Cat.#	Description	Measure (mm)	
62310-12	SS Autopsy Cassettes	50(L)x25(W)x12(D)	each

► Embedding Rings

Molded from the highest quality plastic, our Embedding Rings fit most base molds.

For added convenience, there are four colors from which to choose (Blue, Pink, Green, Yellow). The large writing surface further eases identification and handling.

The Base measures 1 7/8" x 1 1/8" (42 x 28mm)

The Ring measures 1" x 1" (25 x 25mm)

62350-W	Embedding Ring, White	250/bx
62350-B	Embedding Ring, Blue	250/bx
62350-P	Embedding Ring, Pink	250/bx
62350-G	Embedding Ring, Green	250/bx
62350-Y	Embedding Ring, Yellow	250/bx

► Disposable Base Mold

Our Disposable Base Mold is designed to fit all existing cassettes. Because our base molds are disposable you save time on cleaning and storing and they offer you less exposure to hazardous chemicals.

Cat.#	Description	Measure (mm)	Pack
62352-07	Disposable Base Mold	7x7x5mm	500/pk
62352-15	Disposable Base Mold	15x15x5mm	500/pk
62352-24	Disposable Base Mold	24x24x5mm	500/pk
62352-30	Disposable Base Mold	30x24x5mm	500/pk
62352-37	Disposable Base Mold	37x24x5mm	500/pk

PathScan Enabler IV

Low Cost Digital Histology Slide Scanner

The PathScan Enabler IV, is designed to allow scanning of an entire whole mounted histology sample attached to standard 1 x 3 inch cover slipped glass slide. The PathScan Enabler IV solves low power, large field of view, high resolution imaging problems.

For more information, see page 606. >>>>

► Paraffin Tissue Microarrays

Paraffin tissue microarrays (TMAs) are becoming more common in the laboratories. Current techniques including organizing, punching, and inserting tissues is time consuming and involving costly equipment.

This Arraymold is the simple tool but great answer for this current technique for laboratories to perform TMAs with less time consuming, excellent results.

With this Arraymold, you can process up to 150 specimens onto one single slide with very little time consuming, minimal technical training.

DVD instruction accompanies each kit, with a step by step guide to performing the entire TMAs process.

Arraymold features include:

- Allow pathologist or researcher to view many different samples on the same single slide
- Helpful in finding IHC markers for control or quality assurance from hundreds of samples
- Staining markers will be more consistent when hundreds of samples are on one slide
- Used less costly antibody
- Arraymold kit is small enough to be stored in a drawer
- Rubber arraymold can be reused many times without losing its flexibility.

► Arraymold Kit A, (60 cores)

This mold generates 2 mm diameter sample core, 60 cores per mold. Kit consists of:

- 10 Disposable 2 mm sterile dermal needle
- 2 Stylets (used to remove sample from needle)
- 1 Brass Plate (for setting cryoarray punches)
- 1 2 mm reusable rubber Arraymold (60 cores)
- 1 DVD instruction (NTSC) for showing how to use the mold.

69130-10 Arraymold Kit A, 60 Cores each

► Arraymold Kit D, (36 cores)

This mold generates 2 mm diameter sample core, 36 cores per mold. Kit consists of:

- 10 Disposable 2 mm sterile dermal needle
- 2 Stylets (used to remove sample from needle)
- 1 Brass Plate (for setting cryoarray punches)
- 1 2 mm reusable rubber Arraymold (36 cores)
- 1 DVD instruction (NTSC) for showing how to use the mold.

69130-15 Arraymold Kit D, 36 Cores each

► Arraymold Kit G, (24 cores)

This mold generates 3.5 mm diameter sample core, 24 cores per mold. Kit consists of:

- 10 Disposable 3.5 mm sterile dermal needle
- 2 Stylets (used to remove sample from needle)
- 1 Brass Plate (for setting cryoarray punches)
- 1 4 mm reusable rubber Arraymold (24 cores)
- 1 DVD instruction (NTSC) for showing how to use the mold.

69130-55 Arraymold Kit G, 24 Cores each

► Arraymold Kit B, (150 cores)

This mold generates 1.5 mm diameter sample core, 150 cores per mold. Kit consists of:

- 10 Disposable 2 mm sterile dermal needle
- 2 Stylets (used to remove sample from needle)
- 1 Brass Plate (for setting cryoarray punches)
- 1 1.5 mm reusable rubber Arraymold (150 cores)
- 1 DVD instruction (NTSC) for showing how to use the mold.

69130-20 Arraymold Kit B, 150 Cores each

► Arraymold Kit F, (35 cores)

This mold generates 3 mm diameter sample core, 35 cores per mold. Kit consists of:

- 10 Disposable 3 mm sterile dermal needle
- 2 Stylets (used to remove sample from needle)
- 1 Brass Plate (for setting cryoarray punches)
- 1 4 mm reusable rubber Arraymold (35 cores)
- 1 DVD instruction (NTSC) for showing how to use the mold.

69130-45 Arraymold Kit F, 35 Cores each

► Arraymold Kit C, (15 cores)

This mold generates 4 mm diameter sample core, 15 cores per mold. Kit consists of:

- 10 Disposable 4 mm sterile dermal needle
- 2 Stylets (used to remove sample from needle)
- 1 Brass Plate (for setting cryoarray punches)
- 1 4 mm reusable rubber Arraymold (15 cores)
- 1 DVD instruction (NTSC) for showing how to use the mold.

69130-40 Arraymold Kit C, 15 Cores each

► Arraymold Kit E, (72 cores)

This mold generates 1.5 mm diameter sample core, 72 cores per mold. Kit consists of:

- 10 Disposable 1.5 mm sterile dermal needle
- 2 Stylets (used to remove sample from needle)
- 1 Brass Plate (for setting cryoarray punches)
- 1 1.5 mm reusable rubber Arraymold (72 cores)
- 1 DVD instruction (NTSC) for showing how to use the mold.

69130-25 Arraymold Kit E, 72 Cores each

► Arraymold Package Kit

To save money, you can order Arraymold Package Kit. This package includes two or three Arraymold kits listed above.

- Arraymold Kit 1: Including Arraymold Kit A and Arraymold Kit B
- Arraymold Kit 2: Including Arraymold Kit A and Arraymold Kit C
- Arraymold Kit 3: Including Arraymold Kit B and Arraymold Kit C
- Arraymold Kit 4: Including all three Arraymold Kit A, B, and C

69131-01 Arraymold Package Kit 1 (A +B) each

69131-02 Arraymold Package Kit 2 (A +C) each

69131-03 Arraymold Package Kit 3 (B +C) each

69131-04 Arraymold Package Kit 4 (A +B+C)each

► Spare Accessories for the ArrayMold

69130-56 Punch Needle 1.5mm	50/pk
69130-57 Punch Needle 2.0mm	50/pk
69130-58 Punch Needle 3.0mm	50/pk
69130-59 Punch Needle 3.5mm	50/pk
69130-62 Punch Needle 4.0mm	50/pk
69130-63 Styler 1.5mm	each
69130-64 Styler 2.0mm	each
69130-65 Styler 3.0mm	each
69130-66 Styler 3.5mm	each
69130-67 Styler 4.0mm	each

► Micro Baskets

Made from stainless steel and has a positive clip-on cover. It is ideal for processing micro specimens. It can be used as a holder for paraffin sections while removing paraffin wax. Available in medium and fine mesh. It measures: 20mm (dia.)x 5mm(deep).

62312-10	Micro Baskets, Medium Mesh	each
62312-16	Micro Baskets, Medium Mesh	6/pk
62312-20	Micro Baskets, Fine Mesh	each
62312-26	Micro Baskets, Fine Mesh	6/pk

► Expandable Capsules

Made from stainless steel and comes with a positive snap cap. They are expandable. When closed its dimensions are 40mm (dia.) x 7mm (deep) and can be expanded to 11mm deep. Perforated top and bottom.

62314-01	Expandable Capsule	each
62314-06	Expandable Capsule	6/pk

► Stainless Steel Tissue Capsules

Features:

- A secure positive snap-on cover.
- Perforated on the top and bottom for easy fluid circulation.
- Can be partitioned for up to 4 sections.

The separator is not included. They measure: 37mm(I.D.)x6mm(deep) (1 $\frac{1}{16}$ "x $\frac{3}{16}$ ")

62320-01	SS Tissue Capsule	each
62320-06	SS Tissue Capsule	6/pk
62320-20	Tissue Capsule Separator	2/pk

► Plastic Tissue Capsules

- Molded from polyethylene; resistant to all processing chemicals, including Zenker's fixative.
- A three-compartment divider which is removable for specimens up to 35mm.
- A weighted end floats the capsule in a upright position to conserve space.
- Perforated on the top and bottom for better circulation of the fluid.
- Snap-on hinged cover.

They measure: 35mm(I.D.)x35mm(I.D.)x10mm(deep) (1 $\frac{3}{8}$ "x $\frac{3}{8}$ ")

62322-12	Plastic Tissue Capsules	12/pk
-----------------	-------------------------	-------

► Tissue Processing Capsules

These one piece plastic capsules are hinged and perfectly aligned, offering convenience and ease of use. Both the top and the bottom of the capsule have an open mesh offering maximum fluid flow during processing. A frosted marking surface assures permanent identification. These capsules are commonly used with the Embedding Ring System. They are available in two sizes.

To Use: Simply place the tissue in the capsule, close the cover to lock, and the sample is now ready for processing.

- The 38mm(Dia.)x8mm(Deep) are intended for use with normal tissue.
- The 29mm(Dia.)x6mm(Deep) are intended for use with Biopsy tissue.

Cat.#	Color	Capsule Size	Pack
62358-W	White	38mmx8mm	500/pk
62359-W	White	29mmx6mm	500/pk

► Specimen Discs

Accurately machined chrome plated aluminum discs that fit most micro-tomes and cryostats. They have a knurled surface for better specimen handling. The shanks all measure $\frac{3}{8}$ " (10mm) 1 $\frac{1}{8}$ " Long (40mm) in diameter and are straight. Available in a variety of disc sizes. The thickness of the table is $\frac{1}{8}$ " (3mm).

62355-01	Specimen Disc, size $\frac{3}{8}$ " (2.2cm)	each
62355-04	Specimen Disc, size 1 $\frac{1}{8}$ " (2.9cm)	each
62355-07	Specimen Disc, size 1 $\frac{1}{2}$ " (3.8cm)	each
62355-10	Specimen Disc, size 2" (5.1cm)	each

► Embryo Dishes

These dishes are molded from clear glass and come with a glass lid for the viewing or staining of free-floating specimens.

Cat.#	Description	Pack
70543-30	Embryo Dish, 30 mm O.D.	each
70543-45	Embryo Dish, 45 mm O.D.	each

► Paper Biopsy Bags

Due to the amazing demand from our customers, EMS is re-introducing the original Paper Biopsy Bags. These bags are made from porous paper which provides maximum tissue safety during processing. The bags permit proper fluid exchange and drainage.

To Use: Simply introduce the specimen into the bag and fold its end, enclosing the cassette or capsule – you are now ready to process as usual.

Bag measurement: Overall 1 1/4" W x 3" L (45 x 75 mm), Inside Seam: 1 1/8" W (35 mm)

Cat.#	Description	Qty
62326-01	Paper Biopsy Bags	100/pk.
62326-05	Paper Biopsy Bags	500/pk.

► Biopsy Foam Pads

Made from polyester urethane foam. These pads are used to hold biopsies in place and prevent them from being lost during processing. Biopsy samples are sandwiched between two foam pads and are placed either in tissue capsules or cassettes with metal or plastic lids.

Cat.#	Foam Pad Measures	For Use With	Qty
62325-01	25mm Dia x 2mm Thick	Small Capsules	1000/pk
62325-04	34mm Dia x 2mm Thick	Large Capsules	1000/pk
62325-06	30 x 25 x 2mm Thick	Cassettes	1000/pk

► Biopsy Bags

- Made from nylon cloth, 0.2mm mesh diameter. All seams are heat-sealed.
- Allows for unrestricted fluid movement around the tissue.
- Reduces the loss of small biopsy specimens.
- Reduces cross contamination and pressure artifacts by using sponges.

Cat.#	Bag Measures	Qty
62324-35	Nylon Biopsy Bag 35 x 50mm	100/pk
62324-75	Nylon Biopsy Bag 45 x 74mm	100/pk
62324-98	Nylon Biopsy Bag 98 x 75mm	100/pk

► CellSafe™ Biopsy Insert

The CellSafe is a disposable plastic biopsy insert consisting of two hinged inter-locking frames with an integral nylon mesh. The mesh is extra fine and therefore ensures a high level of specimen security.

Measurements—Overall: 28 mm x 25 mm x 5 mm high (1.1" x 1" x 1/4"); The mesh area: 18 mm x 18 mm x 2 mm high

Cat.#	Description	Pack
62327-10	CellSafe™ Biopsy Insert	100/pk

► Stainless Steel Biopsy Inserts

A two-part fitting stainless steel capsule with welded mesh that fits inside the processing cassettes preventing the loss of small or friable material while allowing interchange of fluids.

They fit all process/embedding cassettes such as 70025 and 72025 as well as Uni-Cassettes (62500).

Cat.#	Description	Pack
62328-01	Stainless Steel Biopsy Insert	each

► Peel Away Disposable Embedding Molds

For plastic or paraffin embedding; no block trimming needed. Inside fingers hold ID slip which becomes embedded in the block for positive permanent identification.

70180	Truncated Mold, size 8x8x22mm(Deep)	288/cs
70181	Truncated Mold, size 12x12x22mm(Deep)	288/cs
70182	Square Mold, size 22x22x22mm(Deep)	288/cs
70183	Rectangular Mold, size 22x30x22mm(Deep)	288/cs
70184	Rectangular Mold, size 22x40x22mm(Deep)	288/cs

► Adjustable Embedding Mold

These two "L" shape and stainless steel base plate form an adjustable embedding mold, suitable for embedding various size specimens with a minimum of waste material. Available in 5 different sizes.

Cat.#	Inside Measurements	Pack
62361-01	Adjustable Mold, 7/8" x 1 1/4" x 1/2" (22x44x13mm)	each
62361-03	Adjustable Mold, 7/8" x 1 1/4" x 3/4" (22x44x19mm)	each
62361-05	Adjustable Mold, 7/8" x 1 1/4" x 1" (22x44x25mm)	each
62361-07	Adjustable Mold, 7/8" x 1 1/4" x 1 1/4" (22x44x32mm)	each
62361-09	Adjustable Mold, 3 1/2" x 5 3/4" x 1" (89x146x25mm)	each

► Embedding Blocks

- Precisely machined from hard phenolic resin.
- The faces of the embedding blocks are cut very deeply providing a firm hold of the embedded specimen.
- Suitable for cellodin or paraffin sections.

Available in four sizes.

62363-01	Embedding Block, 19x19x19mm High	each
62363-02	Embedding Block, 25x25x19mm High	each
62363-03	Embedding Block, 38x38x19mm High	each
62363-04	Embedding Block, 51x51x19mm High	each

▶ Coverslip Tape Knives

Coverslip Machine Tape
Cutting Knives

65005-50 Coverslip Tape Knives 5/pk

Glass knife strips, see Specimen Preparation section, page 255 >>>>

▶ Tissue Capture Pen

With one swift application of the EMS Tissue Capture Pen, you are able to change your plain glass slide into a coated one.

The EMS Tissue Capture Pen is a coating pen with a wide point (18mm) for fixing various tissue sections (paraffin embedded, frozen and formalin sections, etc.) The unique pen is unaffected by heat up to 120°C so it offers secure and firm adhesion of the tissue section. It may be used in Microwave staining, immunostaining, in situ etc. . . .

One application is all that is needed, and after it is applied, allow to dry for 1-2 minutes. The EMS Tissue Capture may be used in conjunction with our Pap-Pen (71310) and will allow for easy placement of adherent as well as non-adherent cells on a glass slide. Immunostaining/ISH can be performed by applying a few drops of tissue suspension or liquid media onto the glass slide which is circled by the Pap-Pen, and then your section can be placed.

71314-10 EMS Tissue Capture Pen each

▶ Liquid Blocker-Super PAP PEN

The Newest Staining Guard Pen

New and improved... The Super PAP PEN outperforms the original PAP Pen. The Super PAP PEN may be used at temperatures as high as 120°F. (The old style PAP PEN worked only up to 90°F). With this high temperature feature, one can now use the Super PAP PEN to perform the peroxidase method, ABC method, and Fluorescent antibodies method with satisfactory results.

71310 Super PAP PEN, Large each
71312 Super PAP PEN, Small each

▶ Slide Coating Adhesive

EMS EXCLUSIVE Prepared from 3-aminopropyltriethoxysilane in acetone. Good for coating glass slides to adhere paraffin sections for further processing without sections falling off from the slide. **READY TO USE.**

71302 Slide Coating Adhesive 100ml

For Our Biobond, Tissue Sectioning Adhesive, see page 9 >>>>

▶ Fro-Marker

A wide tipped pen designed for use with frozen sections. The pen provides a sticky membrane which when applied to the slide and onto which the section is placed it eliminates the section from falling off, moving, or wrinkling on the slide during immunostaining procedures. The membrane is stable up to 110°C and is suitable for vigorous applications such as in-situ hybridization.

71313-10 Fro-Marker each

▶ Aqua-Hold Pap Pen

The Aqua-Hold Pap Pen draws a liquid repellent barrier around a section of tissue. Used like a paint

pen, you just draw a well on a slide. The barrier creates the proper surface tension to hold aqueous solutions such as costly antibody and other valuable specimens. After application, the barrier material is insoluble in alcohol and acetone but can be removed after staining with xylene. Each pen holds 13ml of long-lasting material, making hundreds of wells. Red tint distinguishes the well drawing on the slide to easily view.

71311 Aqua-Hold Pen each

▶ Para-Marker

A wide tipped pen, designed for use with paraffin sections. Provides a sticky membrane to the glass slide which not only prevents paraffin sections from falling off but also keeps the sections flat on the slide.

71313-20 Para-Marker each

► Tissue-Tek® SmartWrite Color Slide Printer

On-Demand Color Slide Printing is what you get with this unit

Features and Benefits

- High resolution color printing - reduces need for managing multiple color slide inventory, lowering costs
- On-demand slide printing - streamlines workflow and reduces specimen identification errors
- Small footprint - fits perfectly on a microtome work station or next to a cytology slide processor
- Prints directly onto slides - eliminates errors from hand writing and label application
- Scannable 2D and 1D bar code, alphanumeric and graphic printing capabilities — optimizes flexibility for now and in the future
- Optional SmartWrite™ Software - provides configurable label design and is interfaceable to LIS systems
- Print resistant to Xylene, alcohol, histology reagents, stains, heat, and chemicals*. Ensures reliable identification of slides now and in the future

Applications

- On demand slide printing - color or black labels printed directly onto slides

Specifications

Electrical	
Power	AC100–240VAC, 50/60 Hz, 60 watts
Environmental	
Operational Ambient Temp.	10 - 40 degrees C (50 - 105 F)
Operational Relative Humidity	30 - 85% (non-condensing)
Storage Ambient Temp.	-10 - 60 degrees C (14 - 140 F)
Storage Relative Humidity	10 - 85% (non-condensing)
Physical	
Height	8.6" (218.4mm)
Width	7.08" (179.8mm)
Depth	12.58" (319.5mm)
Weight	16.8 lbs. (7.62 kg)
User Interface	
Power Button	One power switch with LED indicator, located on the upper right side of the control panel on the front of the instrument
Slide Feed Button	One button with LED indicator located on the upper right side of the control panel on the front of the instrument beneath the power button
Lid Open Button	One button located on the upper left side of the instrument
Blue Slide	Illuminates blue slide holder indicating

Holder Light	Proper loading
Diagnostic Function	Self diagnosis, error messages and codes
Functional Printing Technology	Thermal transfer
Print Speed	Up to 9 slides/minute (monochrome) Up to 5 slides/minute (solid colors) Up to 4 slides/minute (blended colors)
Print Resolution	300 dpi
Ink Type	Resin thermal transfer
Ribbon Types	CMYK: 1000 prints; Black: 5000 prints
Printable Colors	Multiple solid colors; others available via software
Slide Types	3" x 1" standard or positive charged, smooth surface white frosted end, clipped corners
Slide Capacity	100 slides - Blue Slide Holder
Output Tray Capacity	15 slides
Construction	Steel frame with powder-coated steel and plastic covers
Data Interface	USB 2.0
Printer Drivers	Windows™ XP/Vista/7
Warranty	One year parts and labor

Applications
On demand slide printing — color or black labels printed directly onto slides

Standard Accessories

- One Operating Manual
- One Quickstart Guide
- One Printer Driver
- One Blue Slide Holder
- One Black Print Cartridge
- One Color Print Cartridge
- One Print Head Cleaning Pen
- One USB Cable
- One Power Cord
- One Power Converter

Optional Accessories

- 2D Bar Code Scanner with Stand
- Tissue-Tek® SmartWrite™ Software
- Touch Screen PC
- Blue Slide Holder one
- Black Print Cartridge 6/case
- Color Print Cartridge 6/case

Electron Microscopy Sciences Announces their State of the Art
Scientific Equipment Repair Center

No equipment is too small or impossible to either
Repair, Refurbish, or Upgrade!

Our facility is equipped to handle the following Manufacturers:

- Balzers/Baltech
- Leica
- Denton
- Reichert-Jung
- Edwards
- LKB
- Emitech
- RMC-Boeckeler
- Emscope
- And Many More...
- Bio-Rad

Our unique service allows us to come to you, or you send the equipment to us, depending on the level of Repair/Refurbishment needed.

Equipment such as:

- Vacuum Systems
- Lynx
- Microtomes
- Freeze Fracture Instruments
- Ultramicrotomes
- High Pressure Freezers/ Slammers/ Propane Jet Freezers
- Tissue Slicers
- Vibratomes
- Ovens
- Shakers
- Baths
- Tissue Processors
- And Much More...

For more information on any of our services, a comprehensive quote, please call, write, or e-mail us today.

► Microscope Glass Slides -Esco

Our microscope glass slides are manufactured by Esco - Erie Scientific Co, where reliability and quality are recognized to be the best.

- Made from the highest quality glass sheets; white glass.
- The dimensions of the slides have been standardized to millimeters according to the U.S. Government Specifications.
- They are packed with care to assure cleanliness.
- The glass is fully annealed to minimize chipping.

Our microscope glass slides are precleaned and are made from clear-white glass. They are individually inspected and free from moisture, dirt, and film. All of our slides are flat, uniform and durable. They are packed 72 slides/box and cellophane wrapped.

Microscope Slide Specifications: Soda Lime Glass

Chemical Makeup	Green (%)	White (%)
Silicon Dioxide	72.2	72.15
Sodium Oxide	14.5	14.25
Calcium Oxide	6.5	6.25
Magnesium Oxide	4.4	4.1
Aluminum Oxide	1.5	1.12
Potassium Oxide	0.3	1.15
Sulfur Trioxide	0.3	0.3
Iron Oxide	0.1	0.3
Titanium Oxide	0.05	0.05

Physical Properties:

Glass Density:	2.4024g/cm ³
Softening Point:	724°C
Annealing Point:	545°C
Strain Point:	511°C
Dispersion Value (Nu Value):	.64
Dimensional Variance:	±1.5000
Thermal Expansion:	(0 -300°C) 8.36x10 ⁻⁶ /°C
Dielectric Constant:	@20°C (68°F) (1MHz):ET =6.7
Young's Modulus:	E = 10,000,000 lbs/sq"
Torsion Modulus:	G = 4,000,000 lbs/sq"
Poisson's Ratio:	μ = 0.2
Luminous Transmittance:	@ 0.040: 91.8%
Refractive Index:	1.517 @ 546.07 nm wavelengths

► 1. Microscope Slide, Plain End

Cat.#	Thickness	Size,mm	Pack
71880-01	1.2 mm	25x75	Gross
71880-10	1.2 mm	25x75	10 Gross
71880-20	1.2 mm	25x75	20 Gross

► 2. Microscope Slide, Frosted End

These slides have 3/4" sandblasted frosting on one end which allows for easy marking.

Cat.#	Thickness	Size,mm	Pack
71870-01	1.2 mm	25x75	Gross
71870-10	1.2 mm	25x75	10 Gross
71870-20	1.2 mm	25x75	20 Gross

► 3. Microscope Slide, SUPERFROST® End

With a superfrosted end. These slides have one side which is frosted with a brilliant white opaque coating that will take and retain all pen markings. They offer superior readability and they are permanent.

Cat.#	Thickness	Size,mm	Pack
71867-01	1 mm	25x75	Gross
71867-10	1 mm	25x75	10 Gross
71868-01	1.2 mm	25x75	Gross
71868-10	1.2 mm	25x75	10 Gross

► 4. Microscope Slide, SUPERFROST® PLUS - Adhesion Slide

These Superfrost Plus(+) glass slides are made by a new process offering the following features:

- They place a permanent positive charge in the microscope slide.
- They electrostatically attract frozen tissue sections and cytology preparations, binding them to the slide.
- They form a bridge so that covalent bonds develop between formalin fixed sections and the glass.
- Tissue sections and cytological preparations adhere better to the Plus glass slides without the need for special adhesives or protein coatings.

continued >>>>

➤ **Microscope Glass Slides -Esco (continued)**

➤ **4. Microscope Slide, SUPERFROST® PLUS - Adhesion Slide (continued)**

BENEFITS:

- Plus glass puts an end to background staining.
- It eliminates blue or red background staining which is often encountered in hematoxylin and eosin staining of tissue sections mounted on albuminized glass.
- No brown background staining occurs when immuno-peroxidase or in situ DNA procedures are performed on our Plus glass. A higher degree of enzyme digestion can be performed on plus glass without the loss of tissue sections.
- Cytological preparations placed on Plus glass resist cell loss during enzyme digestion, DNA denaturation and RNA hybridization.
- Plus glass improves tissue adherence in microwave staining.
- Chromic acid washes are redundant for molecular hybridization because the slides are RNAse-free.
- Plus slides are Color coded to help keep track of specimens during processing as well as filing.

The slides measure: 25x75 mm, 1 mm thick.

➤ **5. Superfrost® Plus Gold Slides**

These slides are specially designed for the application of fresh or formalin fixed frozen tissue. They are inherently tissue binding so there is no need to add sprays or adhesives to the slides.

FEATURES:

- Securely attach frozen breast, brain, skin and other normally difficult to bond tissue sections to the slide.
- Ideal when special stains, immunocytochemical and in situ DNA hybridization techniques are applied on fresh and fixed frozen tissue.
- Assist tissue adherence during immunocytochemical analysis of estrogen and progesterone receptors in fresh frozen breast tissue.
- They are compatible with both toluidine blue and hematoxylin and eosin rapid frozen section stains.

71864-10	Superfrost Plus Gold Slide	10 cs

➤ **6. Colormark™ Plus Glass Slide**

Specimen Slide identification is VITAL. Automated etched slide labeling instruments ensure specimen slide integrity but are difficult to read on ordinary slides. To clearly read diamond scribed slide labels against any surface, you need the only slide designed to be used with your automated slide labeling instrument. You need COLORMARK slides. These brightly printed slides greatly improve etched labeling visibility and offer all the advantages of Superfrost® slides. A bright contrasting color has been printed on the back of the Superfrost end so that patient or specimen information etched through the painted end on the front is clearly visible. Colormark Plus slides are adhesive coated therefore ensuring the adhesion of the section to the slide during staining procedures.

➤ 7. Control Slides

Use our Histology Control Slides and you will always know for sure which specimen is the Patients and which is the Control.

- Patient and Control tissue samples on the same slide.
- Positive identification of control and patient samples.
- Utmost adhesion of samples to slide throughout staining procedure.
- Proof of correct staining procedures.
- Easy and permanent identification of slides.

Available in two configurations: Style #329+ with 3/4 inch of frosted area; style 334+ with 1 inch frosted area.

➤ D. Slides with Etched Rings

Useful for Fluorescent Antibody Examination. The size of the slide is 3"x1", approximately 1 mm thick, with an etched frosted end. Pre-cleaned. Packed 72/bx.

71879-10	Two Etched 10mm Circle Slide	1 gross
71879-11	Two Etched 10mm Circle Slide	10 gross
71879-15	Two Etched 15mm Circle Slide	1 gross
71879-16	Two Etched 15mm Circle Slide	10 gross

➤ 9. SuperFrost™ Clipped Corner Slide

Designed specially for the Sysmex SP-100 slide prep unit and recommended for the Diagnostics. The 45 degree clipped corner slide offers exceptional cleanliness and resistance to sticking. The tight tolerances for the length and width help to reduce accumulation of glass chips within the instrument. The pre-cleaned slide is 25 x 75mm and approximately 1 mm thick.

Ideal for technicians, who routinely prepare large number of slides.

► Microscope Slide – Gold Seal®

In our line of slides we proudly introduce GOLD SEAL® microscope slides for your convenience. GOLDSEAL® slides are made from pure white glass (soda-lime) and at accurately cut sizes. To preserve the highest quality from manufacturer to ultimate user, all GOLD SEAL® slides are hermetically sealed in our Moisture-Barrier™ system, providing a dry-slide environments during shipment and storage.

UltraStick™ (adhesion coating: APTES, 3-Aminopropyl Triethoxysilane)– Adhesion coated micro slides- one of the best from GOLD SEAL®- are ideal for histological and cytological applications demanding superior specimen-to-slide adhesion. The enhanced silane coating eliminates tedious procedures and special additives to your water bath. Procedures such as immunoperoxidase, in situ DNA hybridization, enzyme digestion and frozen tissue processing will benefit from the amplified adhesion characteristics of this product. Overall cost savings and assured quality of your prepared specimen will be recognized with UltraStick™ from Gold Seal®

► Large Glass Slides

In addition to our comprehensive collection of glass slides manufactured by ESCO we now carry large glass slides which are available in 75x38mm and 75x51mm. These slides are precleaned, individually selected and are suitable for large specimen sections such as, brain tissue.

71860-01	75x38mm Glass Slide, 1mm Thick	1 gross/pk
71862-01	75x51mm Glass Slide, 1.2mm Thick	1 gross/pk

► Quartz Microscope Slides

There are many applications that require slides that have absolute UV transparency and high temperature properties. EMS now is introducing the highest quality, clear fused quartz microscope slides to meet all of these requirements.

- The window of highest transparency to UV is between 0.15µ to 5µ.
- Typical flatness measured 2" to 4" bands per inch.
- Soften point is about 1250°C (2282°F).
- Standard microscope slide thickness is 1mm.

Cat.#	Description	Pack
72250-01	Slide, 1" x 1" (25 x 25 mm)	each
72250-02	Slide, 2" x 1" (50 x 25 mm)	each
72250-03	Slide, 3" x 1" (75 x 25 mm)	each
72250-04	Slide, 2" x 3" (50 x 76 mm)	each
72250-05	Slide, 10mm x 10 mm	each

These slides have all of the same properties of the ones above with the only difference is these are 0.5mm thick:

72250-06	1" x 1" (25x25mm)	each
72250-07	1" x 2" (25 x 50mm)	each
72250-08	1" x 3" (25x76mm)	each

For Quartz Coverslips, see page 569 >>>>

► Excell™ Adhesion Slides

The Excell slide was developed with superior adhesion and wettability properties, and has been shown to perform very well in most applications.

■ **Excell™ Adhesion Surface for Heat Induced Epitope Retrieval** – Excell™ was developed for use in the HIER methods that require high pH antigen retrieval solutions, including EDTA. Formalin fixed paraffin embedded tissue demonstrated more consistent attachment when performing these procedures on the Excell™ surface.

■ **Automated Staining** – Excell™ has a uniform hydrophilic surface that works extremely well with automated staining equipment.

■ **Cell Culture** – Excell™ surface technology conditions the surface to enhance the attachment of anchorage dependent cell lines, including many fastidious lines, such as primary neuronal cells. Attachment and proliferation is increased so cells achieve a confluent monolayer sooner

■ **Plastic** – Excell™ works well for both Epon and Methyl Methacrylate sections. Its uniformly hydrophilic surface allows the sections to spread well during initial attachment. Section adherence is maintained throughout lengthy staining procedure.

■ **Laser Capture Microdissection** – Excell™ gives you the advantage of excellent tissue adherence of all tissue types, yet it easily releases those area of interest identified for Laser Capture Microdissection.

► Retriever Tissue Slides

Retriever Tissue Slides are high adhesive glass microscope slides for paraffin-embedded tissue section, including tissue arrays. The slides were designed and optimized for the EMS Antigen Retriever (62700 series) to preserve the section attachment and tissue morphology during heat-induced epitope recovery in Retriever in pH6 (Low), pH9 (High), or Universal Retriever buffer.

Slides can also be successfully used in any other epitope-recovery technology (autoclave, microwave, proteolytic) and show superior performance over positively charged or polylysine-coated slides, especially in high pH buffers and recovery buffers containing EDTA.

► Adhesion Slide – TruBond™

Adhesive slides with proven performance under high temperature and pH conditions

These adhesive, including the hydrophilic TruBond™ 360, slides work well with automatic IHC applications. EMS is confident that the quality of these slides will exceed your expectations. For problems with tissue loss try our TruBond™ 380.

Available colors: White, Blue, Green and Yellow.

General Properties

- Retriever Tissue Slides are made from soda lime glass
- Dimensions approximately 76 x 26mm, Thickness 1.0mm.
- 90° ground edges
- Colored or white marking area 20mm, at one end, on one side
- Pre-cleaned, ready for use

- Autoclavable
- Supplied in plastic boxes of 72 pieces (call for carton price, 20 boxes in a carton)
- Carry recommended best before date and batch number for comprehensive information and traceability

For more information on the Retriever, see pages 612-613 >>>>

► Poly-L-Lysine Coated and Silane Treated Microscope Slide

Our premium glass slides with a frosted end are now available pre-coated with either Poly-L-Lysine or Silane (aminoalkylsilane). These slides improve the adhesion of tissues to the slide.

63410-01	Poly-L-Lysine Coated Slides	72/bx
63410-02	Poly-L-Lysine Coated Slides	144/bx
63411-01	Silane Coated Slides	72/bx
63411-02	Silane Coated Slides	144/bx

TECHNICAL TIP

Poly-L-Lysine Coating Of Slides

Poly-L-Lysine with a molecular weight greater than 150,000 (150,000-300,000) should be used. To make a stock solution: Take 0.1% Poly-L-Lysine in distilled water and store it in a dispensing vial and freeze it at -20°C. A drop (10-15ml) is dispersed at the end of a clean glass slide and smeared along its length with the end of another clean glass slide in the same way as blood film. Make sure that the film of Poly-L-Lysine is thin enough for interference colors to be seen as it is being smeared. The slide is ready to use within minutes of drying. If the Poly-L-Lysine is properly applied, it will not affect immunostaining, but it may cause precipitation in some silver impregnation methods. Therefore, it should be avoided if immunogold-silver methods are to be used.

► Polysine™ Microscope Adhesion Slide

The permanent bio-adhesive material on our Polysine™ slide attracts frozen and paraffin embedded sections, centrifuge preparation and cytology smears.

Cat.#	Description	Qty
63412-01	Polysine™ Adhesion Slide	72/bx
63412-02	Polysine™ Adhesion Slide	2x72/bx

► Permanox™ and Polystyrene Microscope Slides

Permanox™ is a strong, biologically inert material resistant to non-chlorinated hydrocarbons, acetone, and other EM reagents. Permanox™ slides allow you to do cell fixation and staining on the slide; they can be cut with scissors. Permanox™ has not been shown to be autofluorescent. All of the microscope slides are 1" x 3".

NOTE: Long exposure to solvents will cause the slide to warp. Xylene and Toluene based mounting media should be avoided. Glycerol, gelatin, and other aqueous based media are recommended.

71885	Permanox™ Microscope Slide	20/pk
71886	Permanox™ Microscope Slide	100/pk
71888	Polystyrene Microscope Slide	20/pk
71889	Polystyrene Microscope Slide	100/pk

► Borosilicate Capillary Micro Glass Slide

Made from Corning® 7740 borosilicate, low expansion, type I glass.

Micro glass slides are precision rectangular glass capillary tubes for use in microscopic viewing of liquid samples. Capillary action instantly collects the sample and the thin glass walls minimize evaporation. The design of these cells eliminates the needs for cover glass and the hanging drop method. These micro glass slides can withstand heat up to 500°C. Samples can be retained for future reference by sealing or cementing open ends. Micro glass slide are packaged in plastic vials.

I.D. tolerance ± 10%, Wall tolerance ± 20%

TECHNICAL – CORNING® GLASS 7740

Common Names – Borosilicate, Low Expansion, Type I Glass.

Standards – Type I, Glass A

Borosilicate conforming to federal specification DD-G-541b and ASTM E-438. Also meets the U.S. Pharmacopodia specs for Type I Borosilicate Glass.

Composition:	% Approximate
SiO ₂	80.6
B ₂ O ₃	10
Na ₂ O	4.0
Al ₂ O ₃	2.3
Misc. Traces	0.1

Properties:

Coeff. Of Exp.	32.5 x 10 ⁻⁷ cm/cm/°C
Strain Point	510 °C
Anneal Point	560 °C
Softening Point	821 °C
Density	2.23 g/cm ³
Youngs Mod	6.4 x 10 ³ Kg/mm ²
Refract Index	1.74 @ Sodium D Line
Temp Limits	490°C (Extreme service)
	230°C (Normal Service)
Max. Thermal Shock	160 °C

► BrightSlide™ D and BrightSlide™ DB

Fluorescence Enhancing Slides and Versatile, (bio)-functionalized coatings for Glass, Metal Oxides and ITO

Fluorescence Enhancing Slide

Fluorescence systems (e.g. microscopes) are today widely used in the life science research. For many applications an increased sensitivity compared to existing glass slides is required. The BrightSlide™ technology uses a proprietary dielectric coating to significantly enhance the signal intensity of fluorescence molecules from the surface. It can be read out with all systems that illuminate and detect from the top. The technology makes use of purely optical principles and substitutes conventional glass substrates.

The BrightSlide™ D (Dielectric) provides a bare SiO₂ surface.

Benefits

- Better signal to noise ratio
- Less sample material can be used
- More genes can be detected
- Existing instrument platform can be used
- Purely optical amplification of fluorescence signal
- Dielectric, high quality SiO₂ surface ready to apply AziGrip4™ or customer bio-functional coating (use your own bio-functional coating, no change of chemical protocol required)

Applications

- Universal detection platform for fluorescence detection on planar surfaces, e.g. fluorescence detection of ultra thin samples
- Differential gene expression using Cy3 and Cy5 labels simultaneously
- Gene expression using Cy3 or Cy5 labels independently

The BrightSlide™ D (Dielectric) comes standard as a bare SiO₂ Surface. However you may also have the slide with the Biofunctional coating (AziGrip4™)

The following is the standard configurations of the slides

1. BrightSlide™ D

Specification

Fluorescence Enhancing Slide optimized for 488nm and 590nm excitation wavelengths (other wavelengths on request)

Both polarizations (s and p-polarization) can be used for excitation and emission

0° - 3° angle of incidence for excitation light

Ultralow fluorescence background

Durable and chemically resistant label with a unique serial number

Suitable for most of commercially available fluorescence microscopes with illumination and detection from the top

Substrate material

D263T eco (other materials on request)

Substrate format

75 ±0.05mm x 25 ±0.05mm x 1.1 ±0.1mm (other formats on request)

Active area

63mm x 22mm

Cosmetic

5/2x0.4; C2x0.4; E1.0 according to DIN ISO 10110

Chemical composition of the top surface

Clean, dielectric, SiO₂ surface (ITO and/or AziGrip4™ bio-functional coating on request)

Environmental stability

Stable against temperatures up to 200°C
All strongly oxidizing cleaning protocols can be used
All organic solvents can be used
Chemical reagents which etch SiO₂ (HF, NaOH, KOH) can destroy the enhancement effect of the BrightSlide™

Storage

Store in clean environment at room temperature

2. BrightSlide™ DB

Specification

Fluorescence Enhancing Slide with Bio-functional coating on the top

Suitable for most of commercially available fluorescence microscopes with illumination and detection from the top

Versatile, (bio)-functionalized coatings for Glass, Metal Oxides and ITO

The AziGrip4™-Bio-functional coating platform is a versatile tool for functionalizing surfaces for Life Science, Fluorescence and Medical Applications. Glass, metal oxides, ITO and plastics can be treated in order to bind different amounts of macromolecules, tune specific cell-adhesion, reduce non-specific binding background, provide better signal-to-noise ratios and patterned surfaces with multi-functionalities.

Benefits

- Provides amino or carboxy functionalized surfaces for high density binding of biomolecules through standard procedures (EDC/NHS)
- Enables direct linking of macromolecules without further functionalization
- Improves adhesion of cells by use of specific binding sequences
- Simplifies depositions of phospholipid by-layers
- Reduces unwanted, non-specific binding to improve signal-to-noise
- Provides patterned surfaces with multi-functionalities

Applications

- Diagnostics
- Bio-analytics
- Lab-on-a-chip
- Fluorescence microscopy
- Cell culture
- Support for lipidic membranes and other emerging application

► BrightSlide™ D and BrightSlide™ DB (continued)

Durable and chemically resistant label with a unique serial number

Optical coating

Optimized for 488nm and 590nm excitation wavelengths (other wavelengths on request)

Both polarizations (s and p-polarization) can be used for excitation and emission

0° - 3° angle of incidence for excitation light

Ultralow fluorescence background

Bio-functional coating

Full surface monolayer with integrated functionality (patterned coating on request)

1-2 nm dry coating thickness

Robust and chemically stable (increased stability in comparison to aminopropylpolysiloxane)

Substrate material

D263T eco (other materials on request)

Substrate format

75 ±0.05mm x 25 ±0.05mm x 1.1 ±0.1mm (other formats on request)

Active area

63mm x 22mm

Optical coating

5/2x0.4; C2x0.4; E1.0 according to DIN ISO 10110

Chemical composition of the top surface

Optical coating

Clean, dielectric, SiO₂ surface (ITO coating on request)

Bio-functional coating

AziGrip4™ with Amine functional group (other AziGrip4™ bio-functional coatings, e.g. brush-like hydrophilic, brush-like non-fouling, hydrogel-like,

with Carboxy, Epoxy, Biotin, NTA, NHS, Cholesterol, ss-DNA or Peptide bio-functionality on request)

Environmental stability (optical coating only)

Stable against temperatures up to 200°C

All strongly oxidizing cleaning protocols can be used

All organic solvents can be used

Chemical reagents which etch SiO₂ (HF, NaOH, KOH) can destroy the enhancement effect of the BrightSlide™

Storage

Store in clean environment at room temperature

Technical Data

- Substrate material D263T eco, other materials on request
- Substrate format 75mm x 25mm x 1.1mm, other formats on request
- Active area 63mm x 22mm
- Fluorescence enhancement optimized for one to three customer specific dyes on one slide
- Both polarizations (s and p-polarization) can be used for excitation and emission
- 0° - 3° angle of incidence for excitation light
- Ultralow fluorescence background
- Ultraclean SiO₂ surface
- Laser scribed, durable and chemically resistant label with a unique serial number
- Suitable for most of commercially available fluorescence microscopes with illumination and detection from the top
- Stringent batch to batch reproducibility
- Packed under clean-room (class 100) conditions

Enhancement of the fluorescence on BrightSlide™ Image of 150nm thick section of biological material using BrightSlide™

Fluorescence signal on standard, glass slide Image of 150nm thick section of biological material using standard, glass slide

► Microscope Slide-Wells

Disposable Liquid-Holding Wells

Convenient Pre-cut, twin adhesive well stickers (1cm diameter) firmly adhere to microscope slides. Examine specimens with or without cover slips. Available in depths of 0.25mm and 0.50mm.

Multiple Applications Examine or count tissue culture cells, yeast, bacteria and other microorganisms. Piggy-back with Microscope Slide-Grids to facilitate counting and sizing.

Versatile - Compatible with different styles of microscopes (conventional, inverted or dissecting).

Chemically Inert - Made from polyester with an acrylic adhesive.

Microscope Slide-Wells are inert and stable under most laboratory conditions.

70366-12	Slide Wells, 0.25mm thick	25/pk
70366-13	Slide Wells, 0.50mm thick	25/pk

► Microscope Slide-Grids

Disposable Adhesive Grids

Convenient - Easy-to adhere stickers having side-by-side twin grids (20mm x 20mm each with 1mm line spacing) for microscope slides. Count or measure cells and estimate the size or length of microscopic or semi-micro objects

Versatile - Compatible with different styles of microscopes (conventional, inverted or dissecting). Virtually all cells and specimens placed on top of Slide-Grids can be counted and/or sized.

Dry Or Wet - Use with dry specimens or suspended specimens such as cells held in buffer under cover slips. Separate cover slips can be placed over each Slide-Grid.

Chemically Inert - Made from polyester with an acrylic adhesive. Slide-Grids are inert and stable under most laboratory conditions.

70366-14	Slide Grids, 20mm x 20mm	40/pk
-----------------	--------------------------	-------

► Gridded Microscope Slides

These 3 x 1" slides have an indexed grid on the reverse side of the frosted end. The ink is resistant to stains and common laboratory solvents. Each square grid fills one low-powered-field (approximately 100X

magnification). These slides make it easy to locate an organism or cell every time. There are 64 squares in total. The slides are available with coatings of Poly-L-Lysine or Silane, or they can be purchased plain (uncoated). Packaged 72 slides/box.

The grid measures 2 mm square-16mm total. Numbers 1-8 and alpha A-H.

► 1. Gridded Microscope Slides without hydrophobic coating.

63405-01	Grid Slides, Uncoated	72/pk
63405-02	Grid Slides, Uncoated	144/pk
63406-01	Grid Slides, Poly-L-Lysine	72/pk

► 2. Gridded Microscope Slides with hydrophobic coating.

63408-01	Grid Slides, Round well	72/pk
63409-02	Grid Slides, Square well	72/pk

► Lovins Micro-Slide Field Finder

Marking a microscope slide to identify a particular field of interest for future reference has always been a difficult problem for many microscopists.

The Field Finder has a precision rectangular-coordinate grid pattern, which is accurately positioned on a special microscope slide. The slide has been carefully edge ground to provide straight edges and square corners to ensure repeatable results

Lovins Micros-Slide Field Finder helps you to index points of interest on a microscope slide the same way you find them on a road map. A standard 75 x 25mm glass slide has a photo etched grid pattern of 1mm squares, subdivided into 0.1 mm intervals. Each square is marked with a letter and a number. You center the detail in the field of the microscope, replace the specimen slide with the field finder, and read the coordinates. Note reading on slide, and you can find that detail immediately by reversing procedure.

The pattern is imaged in vacuum deposited chrome for durability.

Cat.#	Slide Size	Qty
72266-01	Micro-Slide Field Finder, 75 x 25 mm	each

► PTFE Printed Slides

PTFE Printed Slides, are extremely hydrophobic, acetone proof, chemical resistant and autoclavable. They are perfect for controlling cross-contamination in staining, immunolabeling and immunofluorescence tests. All printed slides are precleaned. The well surface is 100% wettable, which enhances cell attachment and increases its spreading capabilities within the well. These slides minimize the use of expensive purified antigens and antibodies. The slides measure 3x1" (76x26x1mm).

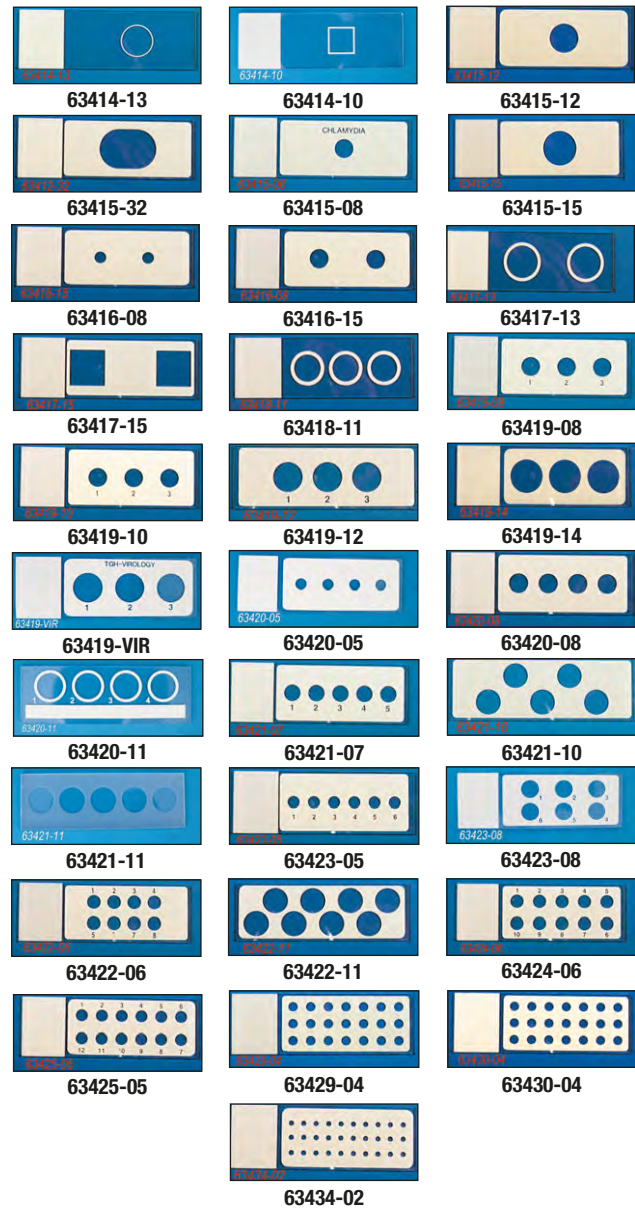

EMS Printed Slides are manufactured to order offering maximum shelf life. The shelf life of PTFE Printed Slides range from 18 months to two years. However, it is recommended that all glass slides (Printed or Un-printed) be used in a timely manner to avoid glass "weathering", (slides becoming cloudy or hazy even with proper storage. All of our Printed Slides are autoclavable and have a frosted end. They are intended for one time use only.

All EMS printed slides are printed with White PTFE other colors are available upon request.

FEATURES:

- Super Hydrophobic Mask
- Clean, Wettable Wells
- A Bioadhesive Surface Treatment to Enhance Cell and Tissue Attachment

For the handling of glass slides, see pen vac; grid section page 150 >>>>

► Micro Cover Glasses

Manufactured from clear white, borosilicate glass. They offer super clarity, are perfectly flat, and corrosion resistant. All cover glasses are uniform in size and thickness.

72195-25	25 mm	#1 (.13 - .16 mm)	160	1 oz

► Round Cover Slips, German Glass

- For neural cell cultures
- Shown to be more effective with hard to attach cells
- #1 thickness (0.13 to 0.16mm)
- Packed 1 oz (28g) per case.

Cat. #	Diameter	Thickness	Pieces/oz	Pack
72196-12	12 mm	#1 (0.13 to 0.16mm)	650	1 oz
72196-15	15 mm	#1 (0.13 to 0.16mm)	378	1 oz
72196-25	25 mm	#1 (0.13 to 0.16mm)	160	1 oz

► Round Cover Slips – German Glass

These coverglass which are made from German glass can be used for growing and culturing cells that normally have poor adhesion to plastic or regular glass surfaces. The 5mm size will fit inside the 96 well plates and still have enough room to pick up from the bottom of the well with forceps. The 8 mm size fits inside the 24 well plates. Available with #1.5 (0.16 – 0.19 mm) thickness. Packaged in convenience size: 100 per box

Cat.#	Description	Qty
72296-05	5 mm Round Coverglass, #1.5 Thickness	100/bx
72296-08	8 mm Round Coverglass, #1.5 Thickness	100/bx

► Quartz Microscope Slides and Coverslips

There are many applications that require slides and coverslips that have absolute UV transparency, and high temperature properties. EMS now is introducing the highest quality, clear fused quartz microscope slides and coverslips to meet all of these requirements.

- The window of highest transparency to UV is between 0.15µ to 5µ.
- Typical flatness measured 2 to 4" bands per inch.
- Soften point is about 1250°C (2282°F).
- Standard microscope slide thickness is 1 mm.
- Standard coverslip thickness is 0.2 mm.

Quartz Microscope Slides

Cat.#	Description	Pack
72250-01	Slide, 1" x 1" (25 x 25 mm)	each
72250-02	Slide, 2" x 1" (50 x 25 mm)	each
72250-03	Slide, 3" x 1" (75 x 25 mm)	each
72250-04	Slide, 2" x 3" (50 x 76 mm)	each
72250-05	Slide, 10mm x 10 mm	each

These slides have all of the same properties of the ones above with the only difference is these are 0.5mm thick:

72250-06	1" x 1" (25x25mm)	each
72250-07	1" x 2" (25 x 50mm)	each
72250-08	1" x 3" (25x76mm)	each

Quartz Coverslips

Cat.#	Description	Pack
72255-02	Round 1" (25 mm) dia.	each
72256-02	Square 1" x 1" (25 x 25 mm)	each
72256-03	Round, 18mm (0.71") x 0.2mm Thick (#2)	each
72256-04	Round, 25.4mm (1") x 0.2mm Thick (#2)	each
72256-05	Round, 33.02mm (13.0") x 0.2mm thick (#2)	each
72256-06	Round, 25mm (0.984") x 0.15-0.18mm thick (#1)	each
72256-07	Square, 25.4mm (1") x 0.2mm thick (#2) thick	each
72256-08	Square, 25.4mm (1") x 0.15-0.18mm thick (#1)	each
72256-09	Square, 25mm (0.984") x 0.075-0.125mm thick (#0)	each

► Superslip® Micro Glasses

Finally, your automated coverslipper has the right coverslip to allow it to run smoothly.

These "Superslip®" coverslips are designed to work in automatic coverslip machines and humid environments without sticking or jamming up in the middle of a run.

These new superslips combine specialized production procedures with our unique moisture-resistant packaging which brings you superior coverslips.

72236-40	Superslip, 24x40mm, #1	1 oz

72236-60	Superslip, 24x60mm, #1	1 oz
72236-61	Superslip, 24x60mm, #1	10x1 oz

► Cover Slips; Thermanox®; TMX Coverslips

NUNC™ Brand Thermanox®, or TMX coverslips are made from a polymer (in the polyolefin family) that is highly resistant to most chemicals. Thermanox® plastic is resistant to alcohols, aldehydes, hydrocarbons, dilute acids (<10%) and dilute

alkalis (<2%). TMX has limited resistance to chlorinated hydro-carbons, however, it is not resistant to concentrated acids or bases. Thermanox® plastic is a flexible, trans-parent polymer that can be sectioned using a microtome and is able to withstand high temperatures (temperature range -70°C to +150°C). Thermanox® Coverslips are culture treated on one side for enhanced cell attachment and growth. The treated side is packaged face up toward the label.

FEATURES:

- Flat and remain flat
- 0.2mm (No. 2) thickness
- Resistant to commonly used solvents
- Safe and easy to handle
- Auto fluorescent in the range 380 to 545 nm
- Thermanox® cover slips can be autoclaved at 20 minutes steam, 20 minutes dry at 120°C

Thermanox® is Nalge/Nunc product.

► Disposable Rinzl Plastic Micro Slides

- Made from optical clear vinyl with a refractive index of glass.
- Ideal for wet mount, urines, etc.
- Economical, they can be used and discarded.
- Available standard size 3 x 1" and packaged 144 per box.
- Will not break, scratch or cut fingers.
- Not auto-fluorescent.
- Thickness 0.0180 to 0.022" or 0.46 to 0.56mm.

71890-12	Rinzl Plastic Micro Slides (A)	12/bx
71890-01	Rinzl Plastic Micro Slides (B)	144/bx
71890-10	Rinzl Plastic Micro Slides (B)	10x144/bx

► Rinzl Plastic Coverslips

- Made from clear vinyl plastic.
- Unbreakable, will not scratch or cut fingers.
- Used in Biological and Medical labs, etc.
- Thickness 0.01" or 0.28mm.
- Refractive index of glass.
- Economical and half the price of glass.
- Not autofluorescent.

Cat.#	Description	Pack
72261-18	Rinzl Plastic Coverslips, Size 18 x 18mm	100/pk
72261-19	Rinzl Plastic Coverslips, Size 18 x 18mm	1000/pk

72261-60	Rinzl Plastic Coverslips, Size 24 x 60mm	1000/pk
72261-100	Rinzl Plastic Coverslips, Size 24 x 100mm	1000/pk

TECHNICAL TIP

Permanox plastic is nonfluorescent and may be used with most fluorescent labels. Permanox has better chemical resistance to fixation and staining solvents than polystyrene. An aqueous based mounting medium must be used when cover slipping to prevent warping.

TECHNICAL TIP

A simple method to determine which side of the coverslip is treated is the "droplet" test. A drop of water or culture medium will spread on the hydrophilic, treated side. - If the droplet forms a bead, then the side of the coverslip is not treated. - If the droplet spreads evenly over the coverslip, the side is treated.

► Plastic Cover Slips

Unbreakable .007" (1.57mm) flexible cellulose acetate, square 22x22mm. Trusal, L., Baker C., & Guzman, A., Stain. Tech., 54,2 pg. 77.

72260 Plastic Cover Slip 100/bx

► Photoetched Coverslips

These coverslips are made from pure white glass and photo etched on the surface for a permanent gridded pattern.

- Using No. 2 (.17 -.24mm) thickness cover slips.
- Grid contains 520 alphanumeric coded squares, each square 600 x 600µm (0.6mm x 0.6mm). Numbered 1–200.
- Used to facilitate mounting of micromanipulated cells or chromosome spreads.

► Correlative Microscopy Coverslips®

EMS introduces a simple coverslip with a grid image that allows cells to grow and later be analyzed under brightfield or fluorescence microscopy before being further processed and sectioned for EM or other analysis. These unique coverslips do all that.

Applications

Light Microscopy, Fluorescence, Scanning Electron Microscopy (SEM), Transmission Electron Microscopy (TEM), High-Pressure Cryofixation

Features

- Reticle film has been thoroughly tested with cell culture
- Good growth of cell culture (equivalent to conventional media)
- Good adhesion to the substrate without cell polylysine
- Resistant to normal chemicals used in electron microscopy
- No oxygen retention, compatible resin LR White
- Good optical quality in bright-field & UV fluorescence
- Excellent transparency
- Does not deform at temperatures (positive 100C and negative liquid N₂)
- Rigid, does not float in the middle of culture
- Easy to handle and cut with a knife or micro-punch
- Simple sterilisation using alcohol or UV
- Detaches easily from resin after polymerisation
- Low cost

66108-01 10x10 grids of 0.1mm squares at 5 positions. Indexed 1-10 along top, A-J down side

66108-02 20x20 grid of 0.5mm squares. Indexed 1-20 along top, A-T down side and centre cross

66108-03 10x10 grids of 1mm squares. Each square individually indexed 0-99

► Combination Scales

All of the PS-XO series of Calibration Slides is Green Float Glass, Bright Chrome Image

1. PS300-XO

High definition 300mm scale in 0.1mm divisions with extended 0.5mm, 1.0mm and 5.0mm lines to allow calibrations in those increments too. Series of dots and crosses, at 10mm intervals, included for calibrations where these shapes are preferred. Supplied in polished wooden case.

Features

300mm high definition scale in 0.1mm divisions with additional dot and cross series at 10mm centers

2. PS150-XO

High definition 150mm scale in 0.1mm divisions with extended 0.5mm, 1.0mm and 5.0mm lines to allow calibrations in those increments too. Series of dots and crosses, at 10mm intervals, included for calibrations where these shapes are preferred. Supplied in polished wooden case

Features

150mm high definition scale in 0.1mm divisions with additional dot and cross series at 10mm centers

3. PS100-XO

High definition 100mm scale in 0.1mm divisions with extended 0.5mm, 1.0mm and 5.0mm lines to allow calibrations in those increments too. Series of dots and crosses, at 10mm intervals, included for calibrations where these shapes are preferred. Supplied in polished wooden case.

Features

100mm high definition scale in 0.1mm divisions with additional dot and cross series at 10mm centers

► Microscope Slide Dispenser

Molded from attractive gray ABA plastic. This dispenser provides a method of releasing clean, dust free 1"x3" slides, one at a time. Comes with a clear molded plastic cover to allow for visual checking of unused slides. Measurements: 4 $\frac{3}{8}$ "x4 $\frac{7}{8}$ "x5 $\frac{1}{2}$ ". Holds approximately 72 slides.

71300 Glass Slide Dispenser

each

► Levered Micro Slide Dispenser

- Holds a full box of 72 slides.
- Get a clean, fingerprint-free slide every time
- Avoid breakage
- Loading is simple
- Made from stainless steel and has suction cup feet to keep the unit in place.

Measures 3"(L)x5"(W)x4"(H) (8x13x10cm)

71298-01 Levered Slide Dispenser

each

► Slide Holder Block

Made from solid high density polypropylene blocks with 13 slanted channels (on a 10° angle), $\frac{7}{16}$ "(1.5mm) (W) x $\frac{3}{8}$ " (9mm) (D). It is made to hold 3x1" (75x25mm) slides during cleaning, draining excess immersion oil, and even drying. They are white in color and are chemically resistant. Available in 40 or 90 capacity (vertically held).

71532-40 40-Slide Holder Block, 4"(W)x12"(L)(10x30.5cm) each

71532-90 90-Slide Holder Block, 7"(W)x12"(L)(18x30.5cm) each

► View-Pack™ Microscope Slide Holder With 3-Ring Binder

For the orderly visual display and safe transport of microscope slides. This loose-leaf binder has ten vinyl View-Pack™ pages (hold 160 slides). Each page holds 16 slides 3x1" (75x25mm) in individual pockets with a white back and clear front. A flap in the center keeps slides from falling out. Simply fold the page at the center crease to retrieve slides. The 8 $\frac{1}{2}$ " x 10 $\frac{1}{2}$ " (22x27cm) View-Pack pages comes with a standard 9"x12" (23x30cm) 3-ring binder.

71544-01 View-Pack With 3-Ring Binder each
71544-50 Refill View-Pack 10/pk

► Slide Stand

Made from stainless steel. Stand consists of four rails, which supports various microscope slides almost vertically. Accommodates 68, 3x1" slides

71533-01 Slide Stand, 455x100mm (18x4") each

► Compact Glass Slide Storage Box; The Mini Box

Made from rigid polystyrene, with a removable lid. This 25 capacity slide box measures only 3.625" (92mm)(L) X 3.25"(83mm)(W) X 1.25"(32mm) (H). The box is available in either white, red, or blue.

71455-W 25-Compact Slide Box, White each
71455-B 25-Compact Slide Box, Blue each
71455-R 25-Compact Slide Box, Red each

► Secured Hinge Microscope Slide Boxes

Made from durable polystyrene (with heavy walls). This material is unaffected by humidity and is thoroughly insect proof. Each box is secured with a rust-resistant nickel-plated clasp and hinge pin. The cork lining prevents damage to the stored slides. To ensure proper slide identification, each slot is numbered to correspond to the slide inventory sheet on the inside cover of the box. To save space the boxes are stackable. Each box stores up to 100 3x1" or 25x75mm microscope slides. Available in 5 color coded boxes making the boxes easy to identify Each box measures: 210x162x33mm (8 $\frac{1}{4}$ x 6 $\frac{1}{2}$ x 1 $\frac{1}{4}$ ")

► Molded (Living Hinge) Microscope Slide Boxes

Molded one-piece polypropylene construction with an integral living hinge. Numbering in the base corresponds to the printed index in the covers for slide identification purpose. Boxes are designed to be stackable to save space. The tensioned clasp insures a secure closure. Available in 25 or 100 capacity. Fits 1 x 3" (25.4x75mm) microscope slides.

Cat.	Description	Outside Dimensions L x W x H" (mm)	Pack
71472	Molded 100-Slide Box	8 3/4" x 6 3/4" x 1 1/2"	each
71473	Molded 100-Slide Box	(220x175x38mm)	10/pk

► Carolina™ Blue Box

Molded from blue high-impact styrene, the Carolina™ Blue Box is manufactured to our exacting specifications. Compared to conventional wooden boxes, the Carolina™ Blue Box is smaller in size, lighter in weight, and held to closer dimensional tolerances. The 75x25mm (3x1") slides fit the slots and will not slip out once in place. A shoulder on each box excludes dust and identifies the top of the box. The boxes are available in two sizes: 3 1/4" x 4 1/4" x 1 1/16" (for 25 slides) and 3 1/4" x 2 1/4" x 1 1/16" (for 12 slides).

71461	Slip-on Cover 25-Slide Box	10pks/lot (20 bxs)

► Large Glass Slide Storage Box

These storage boxes are available in two sizes.

1. 100-Slide Capacity:

Durable, wood frame, covered with heavy black embossed paper. The hinges and latches are Nickel plated. A numbered plastic insert provides spacing for the handling of the slides. The box accommodates 100 of 3x2" slides. The box measures 9 3/4" (L) x 2 1/4" (H) (24.7x19.7x5.7cm).

71480-01	100 Slide Box, 3x2" Slides	each
71480-10	100 Slide Box, 3x2" Slides	10/pk

2. 25 Slide Capacity:

Made from wood with numbered partitions which correspond to the index card. Very durable and has a detachable lid. The box accommodates 25 of 3x2" slides. The box measures: 9 3/4"x3 3/4"x2 5/8" (174x92x67mm).

71481-01	25 Slide Box, 3x2" Slides	each
71481-10	25 Slide Box, 3x2" Slides	10/pk

► Large Slide Microscope Slide Boxes

Specially designed for the 3 x 2 slides

This reinforced ABS material is rugged and designed not only for storage but transport of slides as well.

- Grooved slots hold individual slides in place
- A soft cork liner ensures that slides will not slip
- Identification card, lining and grooved slots are numbered
- Stackable . The box measures 208mm (L) x 175mm (h) x 60mm. They have a capacity of 100 slides and they are blue in color

► mBox® in Microarray Slide Handling

Using mBox – microarray handling without removing slides!

- Immerse 20 slides in liquid during blocking, denaturing, and post-arraying.
- It separates and prevents slide damage during shipping and processing.
- Optimally designed rack spacing for easy slide removal.
- Fits standard microtiter plate formats for centrifuging.
- Manufactured to prevent slide contamination.
- A convenient removable handle available.

Technical

- Material: Polypropylene
- Maximum continuous use temperature: 220°F (104°C)
- Melting point: 334°F (168°C)
- mBox withstand boiling water without softening
- Measures 5" L x 3½" W x 1½" H (127mm x 89mm x 38mm)

71530	12-Slide Holder	6/pk
-------	-----------------	------

► Microscope Slide Folder

Made from heat resistant injection molded plastic

The Slide Folder™ will hold up to twenty standard microscope slides 75 x 25mm (3x1") and is made of two parts: a base holding the slides horizontally offering numbered space for easy identification, and transparent doors which can either cover the slides or be swung behind the SlideFolder™ for space conservation while using the tray. The base is available in 5 different colors, offering color-coding for each job. Each slide location is identified with a number from 1 to 20. Removal of the slides is made easy by simply pressing on one end, which will lift the other end up. The two transparent hinged covers offer a full view of each stored slide, even bar codes can be read without removing of the slide. All units are stackable and will resist temperatures between -80°C and +100°C. They are not autoclavable.

Measures 7¾ x 11¾".

► LockMailer™ - Microscope Slide Jar

This is tamperproof multi purpose container for mailing, staining or storing microscope slides.

Constructed of extra strong and opaque clear polypropylene, and high density polyethylene leakproof tamper evident screw cap (The LockMailer can also be used without the tamper evident feature by not used the lock tab), it will hold up to 4 standard 3 x 1" or 25 x 75mm slides vertically. Inside chambers are slotted to keep slides safely separated. For color coding purposes, use Capinsert™ (#61805-series) that may be inserted on top of closure.

This LockMailer™ can be used as small staining vessel. This unit is designed for maximum stability on a bench top with liquid volume only 14 ml. Each standard volume of one slide is 2 ml, therefore when you want to stain 4 slides in this vessel you need only 6 ml of staining solution.

Dimensions: 35 x 87mm H (1⅜" x 3⅜"H). Packaging: 100 per pack.

► The UniMailer™

Following many suggestions made to us from our customers in the labs—The UniMailer™ is a truly versatile new model mailer which can easily be used for handling and shipping one or as many slides as needed with one type of mailer.

Made from high impact polystyrene, the UniMailer™ is a one-slide tray. Not only do they fit snugly on top of each other but they are also secured by an innovative locking mechanism. You may also want to insert a tamperproof tie or attach an ID label. Each tray allows for the placing of slide in a horizontal position for full visibility. Slides can be easily inserted or removed. As well UniMailer™ can also be used to provide safe storage for those valuable slides you want to protect.

It accommodates 25 x 75 mm (1" x 3") slides with or without cover glass. The mailer measures 89 mm x 29 mm x 6 mm (3½" x 1½" x ¼").

Identification can be made on three sides or on top. The mailer is available in many popular pastel colors for easy identification. Packaging: 50 per box, 200 per case.

Place slide in tray.

Place another tray on top and slide forward until a click is heard.

► The SlideFile™

The most convenient, organized and versatile way of storing 3" x 1" (75 x 25 mm) microscope slides vertically. This impact resistant SlideFile™ Storage System can hold up to 400 slide per unit in just 1720 cm³ (105 cu. in.) and are stackable for space saving.

Each SlideFile System includes a slide box and two removable trays. A transparent hinged cover makes it easy to see at a glance the content of the box.

Features:

- SlideFile™ System is a removable tray inside the storage box having 100 numbered slots. All slides are stored vertically for easy insertion and removal.
- In the upright position, one is able to read bar codes without having to remove the slide from the box.
- For space saving purposes, you can double the amount of slides simply by storing two slides side-by-side per slot. And for maximum storage space—long-term storage—simply remove the SlideFile Tray and line up 400 slides in three rows.
- Six drain holes incorporated into the tray ensure complete emptying of the liquid when using the slide holder for drying purposes.
- Two index cards numbered from 1 to 100 are included to allow for slide recording titles.

Dimensions: 86 mm x 248 mm x 83 mm high (3³/₈" x 9³/₄" x 3¹/₄" high)

The SlideFile™ System is available in five colors: White, Blue, Green, Pink and Yellow

► SlideFile™ Jr. – Storage System

Similar to the SlideFile™, the junior model can hold up to 200 slides per unit in just 860cm³ (53 cu. in.), and it is stackable to save space. Each SlideFile™ Jr. includes a slide box and a removable tray. A tinted hinged cover makes the contents of the box easy to see at a glance.

Removable tray inside the storage box having 50 individual numbered slots. All slides are stored upright for easy insertion and removal as well as reading the bar codes without removing the slides.

To save space, you can double the amount of the slides simply by storing 2 slides per slot. And for maximum storage space, simply remove the tray and line up 200 slides in 3 rows for long term storage. This system is not autoclavable. The system measures: 82mm x 140mm x 86mm(H). (3¹/₄" x 5¹/₂" x 3³/₈"H)

71448-P10	Pink	10/pk			

► Drain Rack™

Made from high impact polystyrene.

This rugged tray used as a drain rack can hold up to 200 microscope slides in 100 individual numbered slots. All slides are stored upright for easy insertion and removal. A unique feature with the DrainRack™ is the ability to read bar codes without having to remove the slides from the rack. For space saving purposes, you can double the amount of slides simply by storing 2 slides per slot, giving you a capacity of 200 slides per tray instead of 100. The racks are not autoclavable.

They measure: 75mm x 231mm x 25mm H (3" x 9" x 1" H)

71445-Y	Yellow	10/pk

► Slide Tray Racks & Aluminum Slide Trays

Stainless Steel slide tray racks that accept aluminum slide trays. The rack allows air to circulate over the slides and both sizes of racks hold up to 100 slides. The aluminum slide trays have elevated ridges to separate 76 x 26mm slides and finger holes for easy removal. Ideal for drying fresh mounts. THE Aluminum slide trays are available in two configurations: 10 slide position and 20 slide position.

71506-10	Aluminum Slide Tray, 10-Slide – 13"L x 4" W (330 x 100mm). Accommodates 10 slides	each
71506-20	Aluminum Slide Tray, 20-Slide – 13"L x 7½" W (330 x 190mm). Accommodates 20 slides	each
71508-10	Stainless Steel Slide Tray Rack for 10-Slide Tray Accommodate 10 Aluminum Slide Tray, 10-Slide - 13"L x 8¾"W x 4¼"H (330 x 212 x 112mm)	each
71508-20	Stainless Steel Slide Tray Rack for 20-Slide Tray Accommodate 5 Aluminum Slide Tray, 20-Slide - 13"L x 7¾"W x 4¼"H (330 x 197 x 112mm)	each

► Slide Tray for 100 Slides

Made from tough, resilient ASB plastic which offers long life. Holds 100-standard 1 x 3" slides positioned vertically for easy insertion in pre-numbered grooves allowing for simple identification and retrieval. Dimensions: 14¼"L x ¼"W x 3¾"H (360 x 38 x 100mm). A cover which is optional is made from clear polystyrene offering full visibility and it protects the slides from dirt and dust when they are not in the drawer.

► Specimen Mailers

1. Single Mailing Container, These fiberboard screw cap mailing cases meet all US Postal Regulations in mailing biological specimens. It also meets IATA regulations regarding shipments of infectious substances. They are constructed of heavy duty fiberboard and have crimped metal rims and seamed metal bottoms. The metal screw caps are autoclavable and offer a secure closure.

Available in several sizes:

61003	SM2, size 1¼"ID x 7"L	12/pk
61004	SM3, size 2¼"ID x 5½"L	12/pk

2. Double Mailing Container

The set consists of an inner aluminum screw cap container and an outer fiberboard screw cap mailing tube. This double type unit is required by US Postal for mailing of etiologic agents or biohazard specimens. Each aluminum container is autoclavable and the cap is lined to prevent leakage.

61011	DM2, tube size 1¾" x 7" Alum. can size 1½" x 6"	12/pk
61015	DM4, tube size 2¾" x 6¼" Alum. can size 2½" x 6"	12/pk

► Histology Containers

- Designed for the storage and transport of histology specimens in fixatives.
- Made from durable polypropylene (except 8L size, which is made of polyethylene)
- Leak-proof self-seal caps

All of the containers (except the 5ml size) have graduated markings on three sides. 2L to 8L sizes are supplied with snap-top lids and carrying handles, and has no graduations.

► Sectioning For Histology

► Microtome Blade Holders

Stainless Steel, Disposable Microtome Blade Holders which fit most microtomes and cryostats. If you are looking for a system that combines the quality cutting characteristics of reusable blades with the convenience and consistency of disposable ones our blade holders are your answer.

Our blade holders are:

Versatile - The holders are designed to readily accommodate blades of differing thicknesses. Such adaptability allows the histologist maximum flexibility especially when difficult tissues are encountered.

Durable - Because we use the highest quality stainless steel and the most advanced manufacturing processes, these blade holders are less susceptible to nicks and normal wear and tear.

Convenient - Insert, clamp, adjust the angle, and cut. That's all it takes.

Universal - For the first time, the quality and convenience of disposable blades are available for all rotary microtomes and cryostats - Even the popular Miles Tissue Tek™ (adapter required).

Order information:

Cat.#	Description	Pack
63050	Standard Microtome Blade Holder – 100% stainless steel construction. 2 years warranty. For use with our blades #63060-01 and #63061-01. The holder measures: 6" (152mm) L x 1½" (38mm) W x 7/16" (10mm) T	each
63050-E	Blade Holder w/Extended Handle – Same as #63050, but with an Extended Handle to eliminate the knife guard interference. 6¾" (160mm) long	each
63050-LP	Blade Holder for Low Profile Blades – Same as #63050 but designed for use with any Low Profile (LP) Microtome Blades, #63063, #63065-LP, #63068-LP	each
63050-LPE	Blade Holder for Low Profile Blades, w/Extended Handle – Same as #63050-LP, but with an Extended Handle to eliminate knife guard interference.	each
63050-HP	Blade Holder for High Profile Blades – Same as #63050 but designed for use with any High Profile (HP) Microtome Blades, #63062-01, #63065-HP, #63068-HP	each
63050-HPE	Blade Holder for High Profile Blades w/Extended Handle – Same as #63050-HP, but comes with an Extended Handle to eliminate knife guard interference.	each
63050-LH	Universal Blade Holder – Patented SHUR/Sharp™ blade holder designed for interchangeable use of Low and High profile blades.	each

► Cryostat Adapter

With this device, you can adapt all the above Blade Holders (63050-) to the Sakura Tissue-Tek® Cryostat. The adapters simply screw onto the back of the blade holder for mounting directly to the Cryostat. Guaranteed to improve the quality of your sections.

Cat.#	Description	Pack
63050-CA	Cryostat Adapter for using Our Blade Holders (63050-) in Tissue-Tek Cryostat	each

► Tissue-Tek® Accu-Edge® Rotary Microtome Blade Holders

Sakura Finetek - The Original One-touch and Heavy-duty holders. The one-touch holder offers easy and quick clamping of disposable blades. The heavy-duty holder has no internal parts to clean or maintain, making it virtually maintenance-free. These holders fit any rotary microtome, including Leica, Shandon, Leitz, Surgipath and Tissue-Tek. Each set includes a blade holder, one dispenser of Accu-Edge® Disposable Blades (63068-LP), maintenance tools, replacement parts and a storage case.

Cat.#	Tissue-Tek	Description	Pack

► Sectioning For Histology (continued)

► Tissue-Tek® Accu-Edge® Cryostat Disposable Blade Holders

Sakura Finetek

1. For Tissue-Tek II® Cryostat

Designed for use with Tissue-Tek II® Microtome/cryostat. Long lasting, easy-to-maintain. This stainless steel blade holder provides easy access to the blade and the tissue section. A anti-roll device keep sections from curling. Built-in magnets facilitate blade positioning.

2. For AO/Reichert Cryostat

Designed for AO/Reichert cryostat microtome. It has a right mounted plate to accommodate its off-center blade position and anti-roll device and fits older AO/Reichert cryostat models.

3. Universal Cryostat Holder

Designed to fit IEC, Bright, Leitz, Shandon-Lipshaw and other models. It features a centered blade fixing plate, an anti-roll device. All the above Holders comes with a black resin coated faceplate which offers better visualization of specimens. Each set includes a blade holder, one disposable blade (#63068-LP), maintenance tools, replacement anti-roll plate and storage case.

Cat.#	Tissue-Tek	Description	Pack
63046-02	4682	Tissue-Tek II Blade Holder	each
63046-10	4680	AO/Reichert Blade Holder	each
63046-20	4681	Universal Blade Holder	each

► Anti-Roll Device

An Anti-Roll (A/R) Device which may be used with all our blade holders. It snaps on or off by a unique magnetic attachment system. Its clear plastic plate which is positioned above the sectioning blade prevents any sample curling.

63051-10	Anti-Roll Device	each
63051-12	Extra Plate	each

► EMS Ultra-Microtome Aid

Made from hard plastic (Delrin) with a beautifully machined finish to handle many of your instruments that need to be at your fingertips during sectioning.

This EMS Ultra-microtome Aid is a safe place to rest your diamond knife, diamond trimming tool, tweezers, hair curl or eye lash, diamond knife cleaning rods, perfect-loop for picking up sections.

Note: This unit is not a safe device to store your sectioning knives, such as diamond or glass knives, after you're done the sectioning.

70612	EMS Ultramicrotome Aid	each
-------	------------------------	------

► Tissue-Tek Object Holder Mechanism

The Tissue-Tek Object Holder Mechanism is a unique device which conveniently fits into existing Miles Tissue Tek cryostats and permits X,Y and Z orientation of ball end chucks. It speeds up the process of cutting frozen sections. The Object Holder also enables the histologist to orient the specimen at any plane making sectioning of the correct portion of the specimen much easier. The holder comes complete with clamp and three ball end chucks.

63055-10	Tissue-Tek Object Holder	each
63055-12	Extra Ball End Chucks	each

► Leica® Disposable Microtome Blades

Made from high quality stainless steel. High and low profile disposable blades for use with all Leica microtomes as well as the Cryocut and Cryostat. A PTFE-fluorocarbon resin-coated edge allows sections to slide off the edge without distortion. They minimize compression. Comes 50 blades in a dispenser box.

Low profile blade measures: 2.98"(L) x 0.318"(W) x 0.010"(T) (75.74 x 8.09 x 0.27mm)

High profile blade measures: 2.98"(L) x 0.557"(W) x 0.012"(T) (75.74 x 14.14 x 0.32mm)

Cat.#	Description	Leica #	Pack
63065-LP	Low Profile Leica Blade	819	50/bx
63065-HP	High Profile Leica Blade	818	50/bx

► Disposable Microtome Blades; Stainless Steel

The quality of sectioning depends on the quality of the blade being used. With sharp durable edges, our blades represent a new standard in sectioning quality.

Our blades are available in three different types:

Standard Blade

For routine tissue samples, the standard blade offers an unsurpassed level of quality at an affordable price.

Premium Blade

When more difficult specimens are encountered, simply switch to our premium type- a heavy duty blade which allows you to achieve ribbons of unsurpassed quality.

The Edge

Years of research went into choosing the optimum stainless steel and edge combination. Repeated testing was performed by histologists to assure that SHUR/SHARP blades represent the ultimate in consistency for sectioning technology. Chatterless and compression free ribbons will become routine no matter what the tissue is.

➤ Tissue-Tek® Quick Ray™

Tissue Microarray System: Building Superior Results

The Tissue Microarray are a collection of multiple tissue cores that are arranged in an XY fashion inside of a paraffin block allowing for histological analysis

The Tissue-Tek® Quick-Ray™ technique produces superior quality TMA's in less time than with traditional methods, and accomplishes finished products at a fraction of the cost. The Tissue-Tek® Quick-Ray™ uses a hollowed tip to remove tissue cores as small as 1 mm from paraffin-embedded tissue (donor block). The extracted tissue is then inserted into a preformed recipient block—the Quick-Ray™ System is the only system available that uses a preformed paraffin recipient block.

The finished block is sectioned using a microtome; the sections are mounted on glass slides and then stained. Each TMA block can be cut into 300-400 sections at 4-5 μ, which can then be subjected to independent tests. Common tests include immunohistochemistry and fluorescent in situ hybridization.

Compact design and versatility make building a Tissue-Tek® Quick-Ray™ TMA astoundingly simple. The construction of a TMA block can be done on any clean counter, and does not require a dedicated space.

The Quick-Ray system is the only system available that uses a preformed paraffin recipient block. There is no other system or instrument that provides a ready to use paraffin recipient block. The finished block is then sectioned using a microtome; the sections are mounted on glass slides and then stained. Each TMA Block can be cut into 300-400 sections at 3-4 microns.

FEATURES:

- Ready-to-use paraffin recipient block
- Compact design and versatility
- No dedicated space required for TMA block formation

The Tissue-Tek® Quick-Ray™ Tissue Microarray System consists of:

- One puncher
- Four paraffin recipient blocks (1 mm, 2 mm, 3 mm, and 5 mm)
- One basemold
- Four punch tips (1 mm, 2 mm, 3 mm, and 5 mm)
- One 1-mm punch guide

► Sakura Processing Reagents & Tissue Processor Supplies

Tissue-Tek® VIP™ Fixative

Eliminate the need for routine warm water flushing with the Tissue-Tek® VIP™ Fixative. Using the unique Neutra-pHase™ technology, the Tissue-Tek® VIP™ Fixative produces no precipitates in the presence of alcohol, contrary to all other 10% neutral buffered formalin products. The Tissue-Tek® VIP™ Fixative will not promote formation of salts within the tissue processor lines which can cause costly damages to any brands of tissues processors unless regular maintenance is performed. Since the base ingredient is formalin, it is fully compatible and can replace 10% NBF without any adjustments to your procedures. The product is offered in three convenient package sizes: 1 gallon, 2.5 gallons and 5 gallons.

Tissue-Tek® Processing/Embedding Medium

Tissue-Tek® VIP™ Paraffin – its unique composition allows reduced compression sections as thin as 2µm. The low melting point (56°C) protects samples from heat damage. Will not dis-color under normal processing conditions. Leaves no plasticizer residue to clog paraffin lines in tissue processors and embedding centers. Supplied in small pellets for rapid melting. Eight convenient 1 kg bags per case.

Tissue-Tek® Filter Carbon

Tissue-Tek® VIP™ Vacuum Infiltration Processor Filter Carbon Replacement activated filter carbon, 3.25 lb carton. For use with VIP™ Tissue Processor: 1000, 2000, 3000 series

► Tissue-Tek® TEC™ 5 Tissue Embedding Console System

The Tissue-Tek® TEC™ 5 System provides a compact, single workstation that enable both specimen orientation and paraffin embedding. It can be customized to

user preferences by placing the TEC™ 5 modules in a left-to-right or right-to-left arrangement for optimal workflow.

Other included advances that optimized operations include a finger touch-plate and optional foot pedal for precise control of paraffin flow, a dispensing tower knob to adjust the flow rate to specific tasks, and an automatic ON/OFF switch that allows manual override for greater flexibility. The TEC™ 5 also offers other advances for heightened performance, like temperature control over key areas for uniform regulation (all heated areas from 50°C to 75°C in 1°C increments; Cryo Module plate from -10°C to 0°C in 1°C increments) individual temperature control for left and right Thermo Storage Compartments to allow use as either paraffin baths or warming caddies for base molds, and an efficient cooling system to maintain temperature levels even when the plate is full.

More TEC™ 5 features includes six easy-to-reach forceps wells, an ample chilling area for approximately 60 specimens blocks, a panel display of temperatures in all heated and cooled areas and easy-to-clean surfaces with no hidden corners to catch paraffin debris. Electrical forceps are optional.

FEATURES:

- **Two module configuration option (left-to-right or right-to-left)**
- **User control over paraffin**
 - Paraffin flow control via finger touch-plate and optional foot pedal
 - Adjustable gravity feet paraffin dispenser
- **Temperature control**
 - 50°C to 75°C in 1°C increments in all heated areas
 - -10°C to 0°C in 1°C increments in Cryo Module plate
 - Efficient cooling system
 - Individual temperature control over left and right Thermal storage Compartment (can be used as a paraffin bath or warming caddy for base molds)
 - Panel temperature display for all heated/cooled area
- **Fully programmable ON/OFF control**
 - Automatically starts up and shuts down
 - Allows manual override to bypass timer operation
- **Environmentally safe refrigerant**
- **Six forceps wells**
- **Optional electrical forceps available**
- **Chilling area for approximately 60 cassette specimens**

SPECIFICATIONS

Application:Modular system aid in embedding histology specimen
 Product Codes:#5100 Complete System
(Modular, including 1 Embedding Module
[#5101] and 1 Cryo Module [#5102])
 Dimensions
 (complete system):.....35.6"W x 25.3"D x 14.8"H
(90.4 x 64.2 x 37.7 cm)
 Embedding Console: 22.6"W x 25.3"D x 14.8"H
(57.5 x 364.2 x 37.7 cm)
 Cryo Console: 13.0"W x 24.3"D x 14.8"H
(33.0 x 61.7 x 37.57cm)
 Weight:
 Embedding Console:26kg (57 lbs)
 Cryo Console:22 kg (48 lbs)
 Power Requirement:115 VAC, 60Hz
 Paraffin Chamber Capacity:..... 4 Liters
 Left and Right Thermal Chamber capacity:1.5 Liters each
 Temperature Ranges:
 Paraffin Chamber:50°C to 75°C (122°F to 167°F)
 Thermal chambers:50°C to 75°C (122°F to 167°F)
 Heating Forceps Wells:50°C to 75°C (122°F to 167°F)
 Cooling Plate: -10°C to 0°C (23°F to 32°F)
 Optional:Electric Forceps: 1 to 5
 Cooling Plate:Up to 60 blocks
 Working Area:Insulated warm area holds up to 20 cassettes

► **ACCU-CUT® SRM™ 200 Rotary Microtome**

The Accu-Cut® SRM™ 200 Rotary Microtome is designed to work with the Accu-Edge® Blade System to offer unparalleled performance. This manual microtome features a smooth-running hand-wheel helps minimize stress on the operator's hands and optimize both efficiency and productivity, three-axis specimen orientation, specimen retraction, lateral displacement of the Blade Holder and trimming functions.

The SRM™ 200 was designed with blade compatibility in mind, maximizing the performance of the Accu-Edge Blades.

Dimensions:16"W x 18.5"D x 12"H (40 x 47 x 29.5 cm)
 Weight: 29 kg (64 lbs)
 Thickness setting range:.....0.5 – 60 microns.
 Available two models: retracting and non-retracting.

FEATURES

- The universal cassette clamp ensures that the specimen block is held securely in place, while the orienting clamp allows the user to precisely position the specimen surface to the blade.
- Specimen retraction not only protects the specimen surface, it helps ensure that the microtome blade remains sharp and effective.
- A trimming lever allows the user to advance the specimen 10 or 50 microns to facilitate accurate and fast trimming of the specimen block
- The micron thickness setting is an adjustable visual display, which ensures accuracy with each rotation of the handwheel. For ease of use, the handwheel brake engages in any position.
- For added convenience and safety, the Universal Blade Holder base has a lateral displacement feature. This allows the operator to utilize the full length of the microtome blade without having to release the blade clamping mechanism or directly manipulate the blade.
- Cleaning and maintenance is easy, thanks to the sliding cover that protects the inside of the instrument from sectioning debris. (Waste Tray #63318-01 and Bag #63318-25 are available separately)
- Accessories included for use with low- and high-profile.

► **Tissue-Tek® Film® Coverslipper**

Tissue-Tek®Film® Coverslipper is designed to automate the manual task of permanently mounting a histology or cytology stained slide. The Film® Coverslipper has the ability to link with Prisma Slide Stainer which makes this instrument a fully integrated system offering complete walk away convenience. Coverslips up to twenty slides per minute with a cellulose tri-acetate film coated with a xylene-activated resin on the lower surface. The flexible film, with optical clarity equal to glass, is automatically applied to the slide, eliminating the use of sticky mounting media and extended xylene contact. Selectable mounted film length and batch or single slide operating capabilities.

SPECIFICATIONS

Dimensions:28.3" W x 23.2" D x 27.1" H (72 x 59 x 69 cm)
 Weight:165 lbs (75 kg)
 Electrical:115VAC, 60 Hz
 Coverslipping Capacity:Continuous loading of 60 slides at a time
 Throughput:Coverslips 1 slide every 3 seconds,
 up to 1,080 slides per hour
 Operational Temperature:10°C to 40°C

► **Tissue-Tek® Film® Coverslipper Accessories**

Link System (6134) – The Link System combines the Prisma® and the Film® into one fully integrated system offering complete walk away convenience. The Link performs an automatic robotic transfer of slide basket from stainer to coverslipper

Solvent Bottle (4745) – 500 ml glass bottle holds xylene for use in the Film™ Coverslipper

Solvent Bottle Caps (4746) – The xylene bottle cap is positioned on the xylene bottle to prevent excess fumes. The cap is designed with a hole to fit into the xylene dispensing area.

Waste Bottle (4748) – 200 ml glass bottle used to collect excessive xylene drained from the dispensing area of the Film® Coverslipper

Waste Bottle Cap (4749) – The Waste Bottle Cap is positioned on the waste bottle to prevent excess fumes. The cap is designed with a hole to fit into the waste area.

Exhaust Duct Adapter (4750 & 4751) – The Tissue-Tek® Film® Coverslipper offers an optional Duct Connection Adapter which connects to an external exhaust system, for added protection. Two sizes are available, 38 mm and 75 mm.

► Tissue-Tek® Film® Coverslipper Accessories (continued)

Stainer & Coverslipper Slide Basket (4768) - Basket for Tissue-Tek™ Stainers and Coverslipper for use with the Film® and SCA™ Coverslippers, the Prisma®, DRS-601™ Histology/Cytology Slide Stainers and the RSG-61™ Hematology Slide Stainer. The special basket design reduces cross contamination and carry-over. The basket can also be used in a microwave oven. The slide baskets are available in case quantity.

Coverslipping Film (4770) – Cellulose tri-acetate film coated with a xylene-activated resin on the lower surface. The flexible film, with optical clarity compatible to glass, is automatically applied to the slide, eliminating the use of sticky mounting media and extended expose to xylene. Selectable mounted film length and batch or single-slide operating capabilities. The Film is available 5 rolls per case, each roll can coverslip 1,000 slides.

Coverslipper Film Cutter Blades (4772) – Blades are used inside the Film® Coverslipper to precisely cut each roll of film to the precise dimensions of the slide. The Coverslipper Film Cutter Blades are available 5 blades per case.

Fume Filter (6160) – The fume filter for the Film® Coverslipper is sufficient in removing fumes that are generated during routine use. It is recommended that the filter be replaced once a month. Fume Filter are packaged 2 to a case.

Activated Carbon Filter Block (4775) – Activated Carbon Filter Block for use with Tissue-Tek® SCA™ Coverslipper Fume Controller. This Filter Block is easily installed to provide fume filtration during operation, coverslipping 5,000 slides.

► Tissue-Tek® Glas™ g2 Coverslipper

Elevate Traditional Glass Coverslipping With Tissue-Tek® Automation

Introducing Tissue-Tek® Glas™ g2 – the premier automated glass coverslipper that link to the Tissue-Tek® Prisma® Stainer to provide a true walkaway system

The Tissue-Tek® Glas Coverslipper is a state-of-the-art instrument automated coverslipping procedures to a new level. With a throughput of up to 400 slides per hour, the Tissue-Tek® Coverslipper provides clean bubbles-free slides fast and consistently. The flexibility design accommodates both histology and cytology specimens. Mounting medium volume is easily and adjustable for all type of specimens. Coverglass size 40, 50, 55 and 60 mm can be changed easily and the speed of coverslipping can be modified for specimens more difficult to coverslip. This Coverslipper is enabled to be used with xylene or xylene substitutes.

FEATURES:

- Links with Tissue-Tek™ Prisma® Stainer
- Unloading station accommodates 12 slide baskets (240 slides)
- Continuous loading
- Low mounting medium alert
- 500 ml mounting medium capacity
- Slide gripper accommodates slides with paper labels
- Programmable drying time
- Independent operation and loading when linked to Prisma® Stainer
- Up to 9 programs accommodate 8 different sizes of glass coverslips
- 2 drying fans on top and bottom of slides
- Advanced filtration system for safe, comfortable

SPECIFICATIONS

Application:Histology, cytology specimens
 Products:#6500 - Tissue-Tek® Glas™ g2 Automated Coverslipper
 #6168 – Link System to Tissue-Tek® Glas g2 Coverslipper with Tissue-Tek® Prisma® Automated Slide Stainer #6130
 Dimensions:29.53" W x 24.41" D x 29.53" H (75 x 62 x 75 cm)
 Electrical:115 VAC, 1.7 Amps, 60 Hz
 Weight:242 lbs (110 kg)
 Alarm:Audible beeps, including low mounting medium alert and screen display messages
 Process Mode:Continuous loading – intelligent loading
 Slide Retrieval Speed:Variable – 5 speeds
 Process Capacity:Up to 20 slides per basket
 Mounting Medium:500 capacity
 Fume Controls:Exhaust fan and activated carbon

Tissue-Tek® Glas™ Mounting Medium is designed specially to be used on the Glas™ Coverslipper to maximize performance, producing clean, bubble-free slides. This xylene-based mounting medium is medium viscosity and can be opened and placed directly onto the mounting medium area of the coverslipper, no pouring needed. Each 16 oz bottle coverslips up to 10,000 slides.

Link System combines the Prisma® Stainer and the Glas™ g2 into one fully integrated system offering complete walk away convenience.

► TISSUE-TEK® GLAS™ COVERSLIPPER SUPPLIES

► **Tissue-Tek® Glas™ Mounting Medium (6419)** – Is designed specially to be used on the Glas™ Coverslipper to maximize performance, producing clean, bubble-free slides. This xylene-based mounting medium is medium viscosity and can be opened and placed directly onto the mounting medium area of the coverslipper, no pouring needed. Each 16 oz bottle coverslips up to 10,000 slides.

Loading Drawer (6421) – This loading drawer for the Tissue-Tek® Glas™ Coverslipper is for holding slides prior to coverslipping. The loading drawer is divided into three sections, accommodating up to three slide basket per section, holding total of 60 slides. Xylene or xylene substitute may be added to the loading drawer to prevent slides from drying out prior to coverslipping. The drawer may be removed from the loading area and covered to prevent evaporation when not in use.

Drawer Cover (6422) – The drawer cover is used to cover the Loading Drawer, which helps prevent evaporation of solvent when the instrument is not in use.

Nozzle Reservoir (6423) – The nozzle reservoir consists of small plastic bottle and lid which is sealed inside a metal housing. The nozzle reservoir is used for keeping the mounting medium nozzle tip from drying out during use. It should be filled with xylene or a compatible solvent. The mounting medium tip is positioned inside the reservoir when the instrument is in the stand by mode or not in operation.

Coverglass Holders (6425, 6426, 6427 & 6428) – The coverglass holders is used for holding coverglass which will be used for application during coverslipping operations. Three standard sizes are available for use on the Glas™ Coverslipper, 40 mm, 50 mm, and 60 mm. Each holder can hold up to 200 coverglasses at one time. These holders are seated on the coverglass stage of the instrument and are removable for ease of loading.

Receiving Rack (6429) – This receiving rack is for retrieve slides which have been completed by the coverslipping process. Each metal rack is grooved and capable of holding up to 20 slides. As each slide enters the rack, the rack is advanced to the next position, anticipating receiving the next slide. Rack are easy to remove and replace with the convenient handle.

Plastic Waste Tray (6430) – The plastic waste tray is seated in the metal housing next to the nozzle reservoir. The purpose of the waste tray is to collect any mounting medium waste that may be generated during coverslipping operations. The plastic tray is removable and disposable. It should be replaced periodically as necessary.

Priming Bottle (6433) – The priming bottle is used only during set up procedure prior to normal operation of the instrument. The priming bottle has a narrow tube extending from the bottle, which is used to connect to the mounting medium tube located on the instrument. This priming bottle should be filled with xylene and manually pumped through the mounting medium line to remove any trapped air or air bubbles which may be present in the line before operation.

Waste Bottle (6435) – The purpose of the waste bottle is to collect xylene waste which was generated during priming procedures. This plastic waste bottle and lid are used only during set up procedures.

Exhaust Hose (6439) – The DRS 200 exhaust hose can be used to externally vent off the instrument fumes if desired. The DRS 2000 is equipped with an internal fume exhaust system

Stainer and Coverslipper Slide Basket (4768) - Basket for Tissue-Tek™ Stainers and Coverslipper for use with the Film® and SCA™ Coverslippers, the Prisma®, DRS-601™ Histology/Cytology Slide Stainers and the RSG-61™ Hematology Slide Stainer. The special basket design reduces cross contamination and carry-over. The basket can also be used in a microwave oven. The slide baskets are available in case quantity.

► Tissue-Tek® Prisma® Slide Stainer Automatic Slide Stainer

Suitable for high volume laboratories which do not want to sacrifice quality. The Prisma® has the ability to be linked with the FilmCoverslipper (by use Link System for Connectivity with Prisma® Stainers #62666) which makes this instrument a fully integrated system, offering complete walk away convenience. Continuous loading of baskets enables high throughput and the intelligent loading feature allows Prisma® to handle as many as 360 slides per hour. The Prisma® is compatible with histology and cytology staining protocols. Reagent reservoir configurations allows for simultaneous runs of H & E and special stains.

ADDITION FEATURES:

- Ability to set multiple loading and unloading stations based on slide volume
 - Program up to 3 stations for continuous loading
 - Program up to 5 stations for efficient unloading
- 2 drying stations to reduce potential bottlenecks
- 2 optional heating stations for special stains like PAS, Giemsa stain, and Mucicarmine stain
- Compatible with histology and cytology protocols, including PAP and non-gyn
- Touch sensitive color menu screens

SPECIFICATIONS

Dimensions:49.2" W x 28" D x 24.8" H (125 x71.3 x 63 cm)
 Weight:330 lbs (150 kg)
 Electrical:115VAC, 60 Hz
 Process Capacity:Continuous Loading of up to 60 slides in three baskets
 Throughput:Up to 500 slides per hour (method dependent)
 Operational Temperature:.....10°C to 40°C

► PRISMA® ACCESSORIES:

Tissue-Tek® Prisma® Slide Stainer with Special Stains (6131)
 – The Prisma® complete with all option for use with special stains like PAS, Giemsa, Mucicarmine stain.

Link system for Connectivity with Film® Coverslipper (6134)
 – The Link System combines the Prisma® and the Film® into one fully integrated system offering complete walk way convenience. The Link performs an automatic robotic transfer of slide baskets from stainer to coverslipper

Link System to Tissue-Tek™ Glas g2 Coverslipper (6168) – The Link System combines the Prisma® and the Glas g2 Coverslipper (Tissue-Tek #6500) into one fully integrated system.

Stainer and Coverslip Slide

Basket (4768) – Basket for Tissue-Tek™ Stainers and Coverslipper for use with the Film® and SCA™ Coverslippers, the Prisma®, DRS-601™ Histology/Cytology Slide Stainers and the RSG-61™ Hematology Slide Stainer. The special basket design reduces cross contamination and carry-over. The basket can also be used in a microwave oven. The slide baskets are available in case quantity.

20-Slide Basket Load/Unload

Adapter (6135) – The 20-Slide basket load/unload adapter allows users to align the slide baskets in the middle position of the start station when the expanded reservoir are being used.

20-Slide Basket Adapter (6136) – 20-Slide Basket Adapters are to be used in conjunction with the Slide Baskets on the Tissue-Tek® Prisma® Slide Stainer.

10-Slide Basket, Special Stain

(6137) – Basket for the Tissue-Tek® Plasma® Slide Stainer. For use with the Tissue-Tek® Plasma® Slide Stainer with special stain capability. The basket has a 10 slide capacity and is specifically designed to reduce carry-over and contamination

10-Slide Basket Adapter (6138)

– Slide Basket Adapters are to be used in conjunction with the Slide Baskets on the Tissue-Tek® Plasma® Slide Stainer with Special Stain.

10-Slide Basket Load/Unload

Adapter (6139) – The 10-Slide basket load/unload adapter is used with the special stain setup to accommodate the 10-slide basket. When the adapter is placed in a start station the Tissue-Tek® Plasma® recognizes the 10-slide basket and prepares to run it in the special stain mode.

► Tissue-Tek® Prisma® Slide Stainer (continued)

Special Stain reservoir 180 ml (6140) – The Special Stain Reservoirs can be combined with the standard or expanded solution configuration. The special stain configuration includes eight solution reservoirs. The special stain reservoirs can accommodate a volume of 160 - 180 ml of solution

Heated Solution Reservoir 180 ml (6141) – The heated Solution Reservoir works in conjunction with the special stain setup. The two independent heated stations can be programmed to heat special stains to 30 – 70°C.

Special Stain Reservoir Lid (6144) – The Lid for the Special Stain Reservoir is a single lid used to cover the special stain reservoir when not in use.

Small Solution Reservoir, 285 ml (6145) – The Small Solution Reservoir can be used with the standard solution reservoir. With the expanded configuration there are a total of 54 stations and are arranged with 6 station in the front row and eight station in the other six rows> The small solution reservoirs can accommodate 255 – 285 ml of solution.

Small Solution Reservoir Lid (6146) – The Lid for the Small Solution Reservoir is a single lid use to cover the small solution reservoirs when not in use.

Standard Solution Reservoir, 820 ml (6147) – The Standard configuration of standard solution reservoirs is a total of 30 stations with six stations in the front row and eight stations in the other three rows. The standard reservoir accommodates 680 – 820 ml of solution

Load/Unload Reservoir, 830 ml (6148) – This is a Standard Solution Reservoirs with handles are placed in the front row of the instrument. These reservoirs have a handle for easy removal and are used as the start/end stations. The reservoir volume is 830 ml.

Wash Reservoir, 850 ml (6149) – The Wash Reservoir is a specially designed reservoir to be used exclusively with the Tissue-Tek® Prisma® Slide Stainer that contains openings positioned for maximum water flow. Each reservoir has an 850 ml volume.

820/830 ml Reservoir Lid (6151) – The Lid for the Standard Solution is a single lid used to cover the reservoirs when not in use.

3 Position Reservoir Tray (6152) – The solution reservoirs are arranged in a one level configuration and are positioned in either a 3 or 4 position reservoir tray. These trays can hold multiple solutions to allow for easy placement into and removal from the instrument. The trays are designed to ensure proper orientation when placed into the instrument.

3 Position Reservoir Tray Lid (6153) – This 3-Position Reservoir Tray Lid is a one piece lid to cover all reservoirs located in the 3-position reservoir tray.

4 Position Reservoir Tray (6154) – Same as 3-position reservoir tray but has 4-position.

4 Position Reservoir Tray Lid (6155) – Same as 3-position reservoir tray lid but designed for 4-position reservoir tray.

Special Stain Reservoir Tray (6156) – This special stain reservoir tray is a 8-position tray that holds the special stain reservoirs inside the Prisma® Slide Stainer.

Fume Filter (6160) - The fume filter for the Tissue-Tek® Film® Coverslipper and Tissue-Tek® Prisma® Stainer is sufficient in removing fumes that are generated during routine use. It is recommended that the filter be replaced once a month. Fume filters are packaged 2 to a case.

Start & End Labels (6161) – The station labels are designed to be attached to the Start, End or PE station for reservoir identification.

Basket Adapter Labels (6162) – Color coded basket adapter labels are positioned on the basket adapters for easy stain identification

Screen Protection Sheet (6163) – This accessory is for use exclusively with the Tissue-Tek® Prisma® Slide Stainer, to protect the control panel from scratch.

Compact Flash Card (6164) – The compact flash card allows data to be transferred to the PC. This accessory is for use exclusively with the Tissue-Tek® Prisma® Slide Stainer.

Exhaust Duct Adapters (6165 & 6166) – The Tissue-Tek® Prisma® Slide Stainer offers an optional Duct Connection Adapter which connects to an external exhaust system for added protection. Two sizes are available, 38 mm and 75 mm,

► Tissue-Tek® CryO3® Microtome/Cryostat

The Tissue-Tek® CryO3® Microtome/Cryostat is the redefining state-of-the-art, the next generation of excellent, with 3 different models to meet your laboratory needs and budget demands: select motorized sectioning, or automated dissection, or both. But no matter which model of CryO3® you choose, you'll also benefit from time-proven features, operating simplicity and reliability, minimal maintenance.

FEATURES

- Safe, integral disinfection and productivity-enhancing features
- Rapidly disinfect the chamber without exposure to liquid toxic chemical or residue
- Stable ±10° (Z) and 360° (Y) specimen orientation – better control for precision sectioning
- 12 configurable Cryobar® positions
 - Round specimen holder in 3 sizes
 - Round biopsy and standard Cryomold® position offer standardized specimen orientation
 - Cryo® area cools to -20°C below chamber temperature; down to -50°C

Orient specimen in Cryomold® with Tissue-Tek® O.C.T. Compound

Place specimen on Cryobar®

Obtain a standardized, flat-surface frozen block with the specimen precisely oriented to speed up sectioning

- Menu-driven software; all digital control

- 240 x 60 pixel graphic LCD display

► Smooth precision, reliable performance

- Ball-bearing microtome, computer controlled
- Precise sectioning – from 1 µm to 99 µm
- Motorized advance/retract – with limit protection
- Easy-to-use anti-roll-rack – simplifies specimen transfer to the slides.
- Manual or optional motorized trimming and sectioning
- Blade holder accepts both Accu-Edge® low-profile and high-profile
- Maintenance-free microtome located outside the chamber
- 12 Cryobar® specimen positions, including 4 Cryo+® position that enable rapid cooling to -50°C
- Easy to operate, yet sophisticated
- Preconfigured memory settings allow rapid recall of the parameters specific to a specimen type
- Streamlined, all-digital control panels; multilingual
- Easily customized parameters to operator and/ or procedure

continued >>>>

► Tissue-Tek® CryO3® Microtome/ Cryostat (continued)

- Easily programmed setup menu
- 12- or 24-hour format time setting
- LCD contrast adjustment allows adaptation to various light conditions.
- ON/OFF settings for
 - Key sound
 - Audible alarms (though always displayed)
 - Auto disinfect after defrost
- Chamber temperature: 0°C to -35°C ±1°C
- Section thickness: 1 µm to 99 µm ±1 µm
- Retract/advance speed: 500 µm/sec or 800 µm/sec.
- Retraction: no retraction or retraction distance from 1µm to 99 µm ±1 µm
- Defrost start time: one cycle per day.
- Automated defrost may be programmed to run at night or on-demand as desired
- Innovative ozone disinfection Models #5801 D & #5802 DM) designed for maximum safety in routine operation
- Disinfection performed within 75 minute
- Abort sequence takes less than 15 minutes
- Defrost cycle not required prior to initiating disinfection cycle
- No residue inside chamber: by-product is O2
- Password-secure chamber access
- Chamber window is interlocked and sealed until all ozone is catalyzed into oxygen
- Chamber also can be locked at any time to minimize accidental exposure to pathogens
- User –selectable warning messages alert of potentially hazardous conditions
- Dynamic debris removal system

Application:Cryotomy
 Models:#5800 Basic – Standard features: High- & Low-profile blade holders, specimen orientation; motorized advanced/retract#5801 – Standard features plus ozone disinfection and vacuum debris removal system#5802 – Standard features plus ozone disinfection, vacuum debris removal system, plus motorized sectioning
 Dimensions:23.5" W x 29.5" D x 46.5" H (60 W x 75 D x 118 cm H)
 Weight (with microtome):387 lbs (176 kg)
 Electrical:115 VAC @ 11 amps, 50/60 Hz.

► TISSUE-TEK® MICROTOME/CRYOSTAT Cryo3® ACCESSORIES

Cryomold®, Round , Standard (4728) – Clear plastic with handling tab, measures 22mm diameter x 5mm deep

Cryomold®, Round , Biopsy (4730) – Clear plastic with handling tab, measures 15mm diameter x 5mm deep

Specimen Holder, Small (5807, 5808 & 5809) – Tissue-Tek Cryo3® specimen holders are used for mounting specimens with O.C.T. Compound, which will be frozen for sectioning. Three sizes are available. The small holder can accommodate a specimen size up to 25 mm. In addition, Tissue-Tek® Cryomolds™, standard and biopsy sizes, can be used to create a uniformly shaped flat surface to aid in trimming and sectioning. An O-ring is positioned around perimeter of the holder for added protection while handling. An etched marking at the base of the post can be used for positioning if the specimen holder is removed from the chuck.

Heat extractor, Standard (5811 & 5815)– This flexible heat extractor is used to aid in rapidly freezing specimens for frozen sectioning technique. The flat side of the heat extractor allows for positioning directly on top of the specimen. Changing the surface orientation allows for the indented side of the extractor to be used with the Cryomold technique. The extractor may be mounted on left side of the chamber, above the cryobar for easy access. Using the heat extractor greatly reduces the rate of freezing specimens.

Cryobar Insert, 4-Cavity (5819) – These unique inserts enable flexibility in configuring the Cryo3 cryobar to meet the needs of each laboratory. Each insert is easily removed and replaced. The 4-cavity insert is used to accommodate the specimen holder post, which can be positioned directly into each well for freezing

Cryobar Insert, 4-Post (5820) – These unique inserts enable flexibility in configuring the Cryo3 cryobar to meet the needs of each laboratory. Each insert is easily removed and replaced. The 4-post insert is used to accommodate cryomolds, which can be positioned directly into each well for freezing. Cryomolds create a uniformly-shaped, that surface, which make trimming and sectioning easier and faster.

Utility Tray (5824) – This removable utility tray is positioned inside the Cryo chamber to the right of the Microtome. It provides ample space to accommodate miscellaneous items such as OCT Compound, disposable blades, brushes etc. The four holes may be used to store extra specimen holders for future use.

Waste Bottle (5825) – This 2-liter waste bottle is a plastic container which is positioned on the lower left front side of the Cryo3 instrument. The waste bottle is responsible for collecting residual moisture and debris generated from the defrost cycle or manual disinfection procedures.

Vacuum Filter Set (5826) – This set is used with Cryo3 models 5801 and 5802, consists of a microbial filter, a coarse debris filter and a corrugated vacuum hose. The filter is connected to a port located inside the chamber and the other end is connected to the blade holder port. When the vacuum system is on, debris and unwanted trimmings generated during sectioning are collected and contained in the filter. The filter is disposable and should be removed and replaced every 2 months or as often as necessary.

Vacuum Hose attachment (5827) – This vacuum hose attachment is used in conjunction with the vacuum filter set and can be attached to the corrugated vacuum hose, which connects the microbial filter. When the vacuum system is powered on, the hose attachment can be used to remove debris from the base of the chamber or other areas inside the instrument. Tissue-Tek® Cryo3® models 5801 & 5802 come standard with the vacuum debris removal system.

Ozone Lamp Assembly (5828) – The ozone lamp is responsible for generating ozone inside the chamber for the purpose of automatically disinfecting the cryo chamber. Ozone disinfection is standard in both CryO3 models, 5801 & 5802. The ozone lamp assembly should be replaced every 1000 cycles. The instrument software provides a reminder message when the useful life is nearing its end.

Foot Pedal (5829) – The optional foot pedal is designed to be used for hand-free automated sectioning when using CryO3 model 5802, which comes standard with motorized sectioning. It can be used to take the place of using the control panel to operate the motorized function of the instrument. The foot pedal is an optional item.

Anti Roll Rake (5831) – The newly designed anti-roll rake is a unique anti-roll device mounted above the microtome chuck, which is used to easily and consistently obtain sections from frozen specimen blocks. The grooved edge of the rake attaches to frozen O.C.T., preventing the section from curling to produce a clean flat section to mount on a microscope slide. The anti-roll rake can be easily adjusted by manipulating the back knob located on the left side of the rake. This technique independent method is ideal when using Cryomolds®.

► Tissue-Tek® CryO3® Microtome/Cryostat (continued)

Anti Roll Plate (5832) – The anti-roll plate is used on the CryO3 to assist in stopping tissues from rolling while performing microtomy.

Steel Knife Holder (5833) – The steel knife holder is an adapter which holds a steel knife in place on the Cryo3.

Drain Cleaning Brush (5834) –

This device is used to periodically clean the drain hole inside the instrument, located at the bottom left-side of the chamber. The drain is responsible for channeling residual fluid generated from the defrost cycle into the waste bottle.

Ozone Port Screen (5835) – The ozone port screen is a small, round mesh screen used to protect the ozone port from debris. It should be placed over the ozone port located at the base of the chamber on the right side.

Fluorescent Lamp (5836) – The fluorescent lamp is mounted inside the chamber and is used to light the chamber while sectioning. The light is illuminated each time the chamber window is open. A function key located on the display can be pressed to illuminate or turn off the lamp manually.

➤ **Cyto-Tek® Centrifuge and Accessories; Sakura Finetek**

Enhance Your Cell Preparation - Proven Reliability

➤ **CYTO-TEK® Cyto-centrifuge**

Three Chamber sizes for samples from 0.1 to 12 ml:

- 1, 6, and 12 ml disposable chambers accommodate a wide range of sample sizes.
- One size fits all: the 1 ml filter combines versatility with convenience; handles all routine specimens up to 1 ml with only one set of accessories.
- User-selectable, rectangular viewing/target areas: 49, 196, and 420mm² essentially eliminates the need for multiple slides.
- Viewing area up to 14 x 30 mm.

Place acceleration, automatically controlled:

- Ensures specimen integrity through automatic, microprocessor-controlled, optional acceleration.
- Paced acceleration is "Always On", eliminating operator bias in assessing cell fragility.
- Accommodates fragile cells requiring delicate handling.
- Speed adjusts from 500 to 2,500 rpm in 100-rpm increments.
- Programmable times range from 1 to 60 minutes in 1 minute increments.

Digital controls:

- Speed and time settings are retained in memory with a battery backup.
- Streamlined touch pad and 2 digital displays control and monitor all functions.
- Easy to use, easy to train.

Forced airflow control:

- Unique design, no rotor cover to sterilize.
- Eliminates aerosol for greater operator safety.

Reliable:

- Manufactured with the same quality care as all other Tissue-Tek® instruments.
- Enjoy years of trouble-free operation with virtually no maintenance required.

Efficiently silent:

- Even at maximum speed, the Cyto-Tek runs smoothly and quietly.

Superior clinical performance:

- A consistently high rate of cellular recovery is extremely important for accurate morphological evaluation of cerebrospinal fluid.
- Well-defined rectangular target area for optimal results.
- Better preservation of cellular structure.
- With a G force of up to 735, the Cyto-Tek can handle low molecular weight organisms such as microbacteria and viruses.
- Operates on 115 VAC, 60 Hz.

Dimensions

36.0cm(W) x 23.0cm(H) x 38.0cm(D) (14.2" x 9.1" x 15.0")

Weight: 154.5 kg (32.0 lb)

➤ **Cyto-Tek® Centrifuge Funnel Chambers**

Enhance your cell recovery up to 100%

- Highly polished specimen chamber that minimizes cell attachment.
- 33% thicker clamp wall (for greater clamping tension) that provides paced fluid absorption.
- Window ledge to help secure filter and keep cells in target area.
- "V" cutout to add rigidity helping to hold funnel chamber in place.

EMS ROR (Residual Oil Remover)

EMS is proud to introduce the ROR-It is not a lens cleaner in the usual sense-it goes far beyond what a routine cleaner does. ROR is specifically designed to emulsify and remove microscopic oil residues- a by product of environmental pollution -from the surface and pores of glass and plastic.

For more information, see page 736. >>>>

► Histology Ralph Knife-Maker Model EMS-2

Precision designed, easy to use, reliable knife maker to produce 25.5mm (1") or 38 mm (1-5/16") wide Ralph glass knives when used with EMS histology grade microtomy glass or any other 5.8mm to 6.2mm thick quality glass strips. This glass knife maker will automatically compensate for changes in thickness of the glass strips (typically 5.8mm to 6.2mm thick).

Cat. #	Description	Qty
90051-06	Ralph Knife Maker EMS-2 for 25.4mm Knife Edge	each
90051-38	Ralph Knife Maker EMS-2 for 38mm Knife Edge	each

► Histology Glass Ralph Knife Maker Model EMS-1

Rugged designed, easy to use, reliable glass knife maker to produce 25.4mm (1") wide Ralph glass knives when used with EMS histology grade of microtomy glass or any other 6 mm thick quality glass strips. These Ralph glass knives can be used on Rotary or Retracting Microtomes, for sectioning paraffin, JB-4 or methyl methacrylate specimen blocks.

90050-06	Ralph Knife Maker EMS-1 for 25.4mm Knife Edge	each
90050-38	Ralph Knife Maker EMS-1 for 38mm Knife Edge	each

► The EMS 3030 Histo Pro H and E Slide Stainer

The new EMS slide stainer offers the end user the ability to have a stainer with 30 stations and a continuous load option with multiple protocols. This state of the art stainer which is only 32" long has a built in fume extraction as well as the ability to connect to a lab fume hood.

Specifications of Slide Stainer

1. Capacity

- Number of Stations: 30
- Number of Rinse Stations: 5 (user selectable)
- Rinse Water Flow Control: Software programmable for 1 station individually adjustable for 5 stations
- Number of Load Station: 1
- Number of Unload Station: 1
- Reagent Container Volume: 350 ml
- Slide Carrier Capacity: 30 slides
- Drying Station Temp. Range: 40–70° C

2. User Interface:

- Display: Active matrix TFT 6.5" display
- Touch Screen: Resistive touch pad
- Number of programs: 50
- Number of steps in a program: 50
- Programmable Flow Rates: 500, 1000, 1500, and 2000 ml/min, programmable for individual step.

3. Physical Characteristics

- Width: 32" (80 cm)
- Depth: 25" (63 cm)
- Height: 18" (45 cm)
- Weight: 65 lbs (30 kg)

4. Electrical Characteristics

Voltage: Available for 115 Volts AC or 230 volts AC

► **Histo-Tek® SL Slide Stainer**

Automated Slide Staining for Low Volume Labs

Introducing Histo-Tek® SL, an automated slide stainer that offers a new level of convenience and standardization for low-volume labs.

The Histo-Tek® SL provides reliable automated slide staining with countertop convenience. Able to stain up to 100 slides per hour, the Histo-Tek® SL eliminates labor-intensive manual staining while standardizing the process for optimal quality and error reduction. The

Histo-Tek® SL features 15 programmable staining protocols with up to 35 steps each for maximum flexibility. Protocols can be saved and shared across multiple devices via USB drive for complete slide staining standardization.

Key Features and Benefits

- Stains ~100 slides per hour
- Eliminates labor intensive hand staining
- Smaller footprint fits most countertops
- Standardizes the staining process for optimal quality error reduction
- 22 Stain Reservoirs for many staining protocols
- Bi-directional robotic arm allows for progressive and regressive staining protocols
- Two plumbed rinse stations for wash flexibility
- 30 slides per arm movement for small batch control
- Charcoal filter or optional vent kit
- 15 easily programmable staining protocols with 1 - 35 steps each for maximum staining flexibility
- Optional special stain reservoirs
- Save staining programs onto a USB drive for multiple Histo-Tek® SL Stainers
- Tinted fume cover to protect from UV light

Specifications

Dimensions:.....Centimeters (W x D x H): 81 X 79 x 41
Inches (W x D x H): 32 x 31 x 16

Vibrating Microtomes

Our top-of-the-line high precision, vibrating microtomes, are the finest slicers in the world for all specimen preparation

Features at a Glance

- Z-axis blade adjust minimizer
- Custom blade holder with angle set to user requirement
- Set START and STOP position for blade travel
- Vibration speeds from 50 to 120 Hz
- Amplitudes from 0.5mm to 2.25mm
- Controlled blade advance at 10 microns per sec.
- Ice water bath easily removed for cleaning
- Optional LED light source
- Optional magnifier for clear observation
- Optional stereoscope, choice of x5-x10 fixed or x10-40 zoom for optimal observation

On the 7000smz-2 additional features:

- Includes a Z-axis calibration device
- Choice of manual or automatic operation
- Auto programming by storage of the first slicing speed and distance profile

EMS is proud to introduce the HistoPro 200

► HistoPro® 200

Paraffin Infiltration Processor

HistoPro® 200 offers unique reagent / paraffin infiltration capability with programmable processing time, temperature, agitation and vacuum in an easy to use, compact, cost conscious package.

- Up to 100 Cassettes
- 2.0 Liter Reagent / Paraffin Capacity
- Compact Footprint: Only 9" wide x 20" depth
- Programmable Processing Time
- Programmable Processing Temperature
- Programmable Vacuum Cycle

Designed and Made in U.S.A.

Specifications

Capacity

Number of Cassettes:100 max in a basket
Paraffin Capacity2.0 Liters (without samples)
.....1.5 Liters (with samples)

Processing Parameters:

Reagent Temperature:37 deg C – 65 deg. C
Temperature Accuracy +/- 2 Deg C at Sensor Location
Vacuum:5 PSI (25 cm) below ambient
Vacuum Cycle0 – 100% in 20% increments
.....over 5 Minute Cycle Time
Agitation:Stir Bar Agitation

User Interface:

Display:16 Characters x 2 lines LCD display
Membrane Keypad6 Keys
AlarmAudible Beeper

Physical Characteristics

Width:9" (23 cm)
Depth:20" (51 cm)
Height:15" (38 cm)
Weight:13 lbs (6 kg)

Electrical Characteristics

Voltage:100 - 230 volts AC, 50/60 Hz
Power150 watts max.

62596-10	HistoPro® 200 Paraffin Infiltration Processor	each

► Tissue Embedding Center

Introducing a new Tissue Embedding Center with the latest in circuit board and component technology. Uniquely designed with microprocessor temperature sensors, a single console which maximizes space utilization, high-contrast viewing areas and multifunctional work stations. The entire unit is encased in a durable, non-heat conductive housing.

Features:

- Microprocessor controlled for dependability and performance.
- Single module design.
- Low and flat work-surface which facilitates operator efficiency.
- User friendly membrane switches.
- 4-liter capacity paraffin reservoir which minimizes refilling frequency.
- Heated forceps warmer and illuminated paraffin dispenser enhance user friendliness.
- Warming oven with removable shelf and double hinged lid for convenient access to preheated base mold.
- Wax bath complete with drainage shelf, debris screen, and hinged lid.
- Heated work area which provides a flat working surface with the excess paraffin draining under the surface into the wax bath; complete with a hand and foot switch for activating the dispensing head.
- Generous illumination.
- The cold plate offers 170 sq. in. (1100cm²) of compressor cooled working surface with removable stainless steel drainage tray beneath.
- Tactile membrane touch-pad for easy temperature setting and monitoring.
- Full one year warranty.

SPECIFICATIONS:

Dimensions:

Overall23.75"(L)x31.5"(W)x11"(H) (60x81x28cm)

62300 Tissue Embedding Center each

► THE EMS Tissue Embedding Center

The Histo-Pro 150 offers superior operating convenience for tissue embedding processes in a modular ergonomic design.

FEATURES AND BENEFITS:

- Two Module system.
- All stainless steel work surfaces
- User friendly proprietary PAT interface
- Large cold plate and cassette bath.
- Fully programmable time and temperature
- Adjustable paraffin flow rate
- Self draining forceps holder.
- Auto Defrosting cold plate
- Four Liter paraffin tank.
- Ability to turn on automatically

System Specifications: Histo Pro 150H Hot Module

Capacity:

Paraffin Tank:	4 liters
Mold Oven:	7" (17.5 cm) Wide x 7" (17.5 cm) Deep x 2.25" (5.7 cm) Tall
Cassette Bath:	8" (20 cm) Wide x 11" (28 cm) Long x 2.1" (5.3 cm) Deep

User Selected Temperature Ranges:

Paraffin Tank:	40-70° C
Mold Oven:	40-70° C
Cassette Bath:	40-70° C
Forceps Holder:	40-70° C
Work Surface:	40-70° C

Physical Characteristics:

Width:	20" (51 cm)
Depth:	22.5" (57.2 cm)
Height:	12.5" (32 cm)
Weight:	35 lbs (16 kg)

Electrical Characteristics:

Voltage:	115 Volts AC or 230 Volts AC
Power:	800 Watts Max

Histo Pro 150CS Cold Module

Capacity:

Cold Plate Area:	15.8" (40 cm) x 14" (35 cm)
Temperature Range	-10°C - +10°C

Physical Characteristics:

Width:	16" (40 cm)
Depth:	22.5" (57.2 cm)
Height:	12.5" (32 cm)
Weight:	35 lbs (16 kg)

Electrical Characteristics:

Voltage:	115 Volts AC or 230 Volts AC
Power:	200 Watts Max

► CryoJane™ The Cryostat Frozen Sectioning Aid System

The CryoJane® Tape-Transfer System creates frozen sections as thin as 2 microns with the same quality as sections cut from paraffin blocks. Sections are wrinkle-free, uncompressed, and fully intact when bonded to the microscope slide. The CryoJane uses adhesive coated slides and adhesive tapes to capture sections instead of using an anti-roll plate or brush. CryoJane is suitable for routine cryosections and is indispensable for sectioning difficult tissues including fatty breast and undecalcified bone.

- Preserves sample morphology
- Increases quality, reduces repeats and streamlines workflows
- Allows fast and virtually effortless serial sectioning

With the CryoJane Tape-Transfer System, thin tissue sections remain unflawed even after mounting. This makes CryoJane ideal for applications that require perfectly thin sections to clarify structural relationships and reveal morphological detail. The CryoJane Tape-Transfer System is adaptable to most cryostats on the market.

- Sections can be fixed "anhydrously" to preserve virtually all fine structures present in the snap-frozen block of tissue
- Water-soluble enzymes, antigens and nucleo-proteins are preserved in situ
- With appropriate fixation and staining, true localization of enzyme and antigen activity can be visualized
- The bond between the section and the slide is solvent resistant and permanent, preventing section loss during staining

APPLICATIONS

- Histological stains
- Immuno stains
- In situ hybridization
- Laser Microdissection and Laser Capture Microdissection
- Frozen tissue arrays and other molecular diagnostic studies

ADVANTAGES

- Ideal for fatty tissues - Keeps fatty tissues such as skin, breast & undecalcified bone together. Excellent for serial sections of brain.
- Consistent results - Consistent results help operators maintain productivity and preserve tissue samples
- Safe for protocols - 8 millisecond, long-wave UV (360 nm) is safe for protocols such as In situ Hybridization
- 2-60 um - Sections can be cut between 2-60 um in thickness
- Temperature controlled - Temperature controlled pad for optimal section transfer conditions

CryoJane® System Includes the Following:

The Leica CryoJane Tape-Transfer System includes the control unit, (ECU) with a power cord, UV Flash Unit with Temperature Controlled Pad, Hand Roller and Mounting, Bracket, Door Bar, five Cable Clamps, one Slide Storage Shelf, 125 1X Adhesive Slides, 10 1/2X Adhesive Slides, 10 4X Adhesive Slides, one roll of Tape Windows (400 tapes per roll), a manual, one set of Replacement Fuses, Knife Facet Wipers and a one year Parts Warranty from date of install.

Note: System does not include: Snap Freezer, oil bath or oil embedding accessories

Products required by the CryoJane System:

► Protective Oil Accessories Kit

Oil in the bath is maintained at -8°C inside the cryostat and will not melt the tissue when brushed on the frozen block-face. Frozen blocks coated with this protective oil can be stored for up to one year in a freezer without dehydration.

The Protective Oil Accessories Kit includes the following: Temperature controlled Oil Bath, 4 oz Bottle of Protective Oil, and Oil Brush. Please note that when purchased separately from the CryoJane system, installation of the Protective Oil Bath Accessory requires that the CryoJane® system be returned to Electron Microscopy Sciences.

► Cryogenic-Gel

- Replaces the messy "runny" embedding media.
- Easy to use.
- Stick to where you want it.
- Will not run – No waste.

It is a highly viscous, water-soluble embedding medium for frozen sections that "stays put". The gel is packaged in a pump-dispenser bottle that can instantly dispense the gel in any position. The dispenser has a built-in "guillotine" that cleanly severs the gel from the pump spouts and prevents any "stringy" medium from pulling away when the bottle is removed. Simply dispense gel on room temperature blockholder. Use cold heat extractor to form a base layer. Dispense additional gel. Place the tissue on top of gel. Use cold heat extractor to freeze tissue and form block. Each bottle contains 4.3oz (128ml), 12/case

Cat.#	Description	Pack
62806-01	Cryo-Gel™, 4.3oz (128ml) per Dispenser	Each
62806-06	Cryo-Gel™, 4.3oz (128ml) per Dispenser	12/cs

► CureMount™ - Mounting Medium

CureMount™ is a UV curable mounting medium of low viscosity for use with all dehydrated sections. CureMount™ is a polymer that cures to a refractive index of 1.55. It closely matches the refractive index of dehydrated tissue. The coverslip can be optimally positioned and cured under UV fluorescent illumination. The coverslipped slide is "dry" in less than 30 seconds. The coverslip can easily be removed by heating the slide briefly, soon after curing or after a longer time by immersing in xylene. All unstained tissue elements and the cured polymer will be invisible, making the stained elements stand out in exquisite detail. Comes in brown glass dropping bottle, 60 ml.

The CureMount™ Starter Kit contains: One CureMount™ Curing Lamp and two bottles of CureMount™

Cat.#	Description	Pack
62804-02	CureMount™ II, Mounting Medium for Paraffin Section	60ml

► Accessories for Paraffin Tape-Transfer System – Paraffin Sectioning Aid (PSA)

The Paraffin Tape-Transfer System is not available. Kit components are available for purchase.

Cat.#	Description	Pack
62820-1X	Regular Adhesive Slide, 1x	100/pk
62820-4X	Adhesive Slide for Bone and Fatty Tissue, 4x	100/pk
62820-35	TPC Solvent, 1 pt (473 ml)	each
62820-36	TPC Solvent Can	each
62800-72	Tissue Tape Window, 400/Roll	each
62800-46	Hand Roller	each

► Forceps Warmer

This forceps warmer is indestructible: An all metal, space saving unit. Three heated wells prevent wax build-up and allow for easy tissue orientation at the embedding centers.

Features and Benefits:

- 80°C warming temperature provides consistent and constant heat to forceps
- Angled forceps wells make retrieving and replacing the forceps easy
- Heat resistant housing is constructed for safety to prevent burns
- Three convenient wells provide ample space for different forceps
- Small compact size to maximize laboratory bench top space
- Portable for easy accompany to Embedding Station area
- Select switch – Light indicator and fused for safety, ON/OFF
- Switch protector casing prevents paraffin wax contamination

Cat. #	Description	Qty
63201-10	Forceps Warmer, 100-120 VAC, 50/60Hz, 0.5A; 5"W x 3 3/4"D x 3" H	each

► Paraffin Wax Dispenser

ELECTROTHERMAL

The most reliable Wax Dispenser on the market

- Provides immediate 'Wax-on-Tap.'
- For use in Pathology laboratories, etc.
- Thermally insulated tap heater with independent temperature control eliminates wax solidification.

Product Description

- Anodized black interior, stove enamel black and white aluminum exterior with a black metal lid which is durable and easy to clean.
- 1 gallon Capacity (4.5 liters).
- Built-in controller provides temperature control from ambient to 75°C.
- A non-drip swivel lever with replaceable filter makes the dispensing of wax easy.
- Tap heater maintains temperature within the tap to keep the wax molten.

SAFETY

- Safety over-temperature at 105°C.
- Non-resettable thermal fuse.

► Histo Orientator

The convenient 2"x2" (51x51mm) heated surface can be used for either "de-wrinkling" of paraffin sections or for the "rapid attachment" of fresh frozen sections. A quick touch of the slide to the hot plate will remove wrinkles and bubbles on your sections.

You can also keep a unit on your cryostat to ensure solid attachment of frozen sections to the slide which prevents loosening of the tissue during agitation in hand staining.

The unit measures: 4 1/2"x2 3/4"x 3 1/4" (114x70x82mm). 120 Vac, 60 Hz, 12 Watts. Temperature range: Ambient to 65°C.

63205	Histo Orientator	each
-------	------------------	------

► Large Paraffin Wax Dispenser

6.25 Gallons of Liquid Paraffin on Demand!

Holds 6.25 gallons of paraffin wax with clear lexan lid permits easy viewing of paraffin without contamination. High spigot accommodates large transfer vessels. The unit comes with microprocessor temperature regulation, built-in clock. Ambient to 65°C. Dimensions: 14" W x 15"D x 23"H (35.6 x 38.1 x 58.4 cm), weight 45 lbs (20.5 kg).

- Microprocessor controlled – Accurate and uniformity temperature control
- Security – Advanced software & mechanical devices assure safety. The Paraffin Dispenser have been tested by a registered independent body to rigorous international quality and safety standards, and, have been found to be in compliance with UL, CSA and CE.

EMS #	Description	Qty.
62840-10	Large Paraffin Dispenser, 100-120VAC, 50/60Hz, 4.5 Amp	each
62840-20	Large Paraffin Dispenser, 220-240VAC, 50/60Hz, 2.25 Amp	each

► Paraffin Block Trimmer – Wax Trimmer

Our Wax Trimmer is an appliance for removing excess paraffin from embedding tissue cassettes.

It is compact, tabletop design fits easily in any histology lab. Melted paraffin is shaved away. Collection tray stays in place by magnetic contact with the unit. The convenient PE disposable tray liner allows easy disposal of the runoff wax. No need to scrape out the collection tray.

FEATURES:

- Multiple blocks may be trimmed simultaneously
- Grooved surface for proper wax drainage
- Two temperature settings – Low setting is approx. 80°F and high setting is 90°F
- UL listed power cord
- Includes 5 pieces disposable drip tray liner
- Dimensions: 11 1/4" (including tray) W x 5"D x 8"H (15x23x18 cm). 8 lbs (3.6kg)
- Electrical 115VAC, 50/60Hz, 4 Amp

62850-10	Wax Trimmer, 115VAC	each
62850-50	Replacement Plastic Liner	50/pack
62850-51	Replacement Plastic Liner	6packs/cs

► Flotation Bath & Flotation Workstations – Made in the USA

Helps your tissue preparation easier, safer and more efficient.

The unit comes with conveniently removable glass dish, scratch and chemical resistant plastic housing, microprocessor controlled electronics and a high contrast background for optimum specimen viewing combined with the HISTO Orientator™ for flattening sections and a Slide Dryer, all in one compact unit. The systems are now available in Low Profile 8"x 8" x 2 ¼" deep dish versions as well as for those labs wanting to float larger ribbons, 8"x 11" x 2".

- Magnetic non-contact switch function for years flawlessly
- Microprocessor-controlled heating, ambient to 65°C
- Flat membrane switches for safety and simplicity
- Fluorescent white lighting positioned for improve tissue viewing glare-free

- Heat-resistant plastic housing maintains cosmetic appearance
- Removable glass dish for easy cleaning
- 2" x 6" or 2" x 8" Convection Slide dryer & 2" X 2" HISTO Orientator™ for eliminating wrinkles.

For those flotation bath applications not requiring the add convenience of Slide Dryer and HISTO Orientator™, the basic Flotation Bath provides all the functional need of the Flotation Workstation at the affordable price. The baths again come in two sizes , 8x8x2 ¼" or 8x11x2" .

The Flotation Bath and Flotation Workstation have been tested by a registered independent body to rigorous international quality and safety standards, and, have been found to be in compliance with UL, CSA and CE.

EMS #	Description	Qty.
63214-53	Slide Drying Rack, Front mounted, for 8 x 11 dishes holds 39 slides, a 13" x 1" space is available for placing blotting paper	each
63214-54	Slide Drying Rack, Front mounted, for 8 x 8 models, holds 39 slides, a 13" x 1" space is available for placing blotting paper	each
63214-55	Slide Drying Rack, Side mounted, for all 8 x 8 and 8 x 11 models; Can be mounted on left or right side, older models may require some assembly; holds 34 slides, a 13" x 1" space is available for placing blotting paper	each
63214-51	Fluorescent Light Bulb Replacement	2/pk

► SHUR/Dry™ Slide Dryer III– Forced Air

This is the most up-to-date technology apply to slide drying method. This new design allows users to increase their productivity while maintaining super results. Adjustable shelf accepts an assortment of slide racks with and/or without coverslipper adapters. Chamber dimensions: 19"W x 9"D x 14" H (48x23x36 cm). Overall dimension: 22"W 16"D x 20"H (56x41x51 cm)

- Temperature from ambient to 70°C ± 1°C
- Adjustable air flow
- 51 CFM of air flow
- Digital programming
- Microprocessor controlled
- Recessed 9 W fluorescent lighting
- Four 3,200 rpm fans

Cat. #	Description	Qty.
63224-10	SHUR/Dry Slide Dryer III, 100-120VAC, 50/60Hz, 2 Amp	each
63224-20	SHUR/Dry Slide Dryer III, 220-240VAC, 50/60Hz, 1 Amp	each
63224-50	Addition Shelf	each

► Forced Air Slide Dryer

The dryer is designed to rapidly dry slides by blowing warm air over the surface of the slides. The slide dryer accommodates two slide racks directly from a stainer and allows the slides to be stained in approximately 20-30 minutes.

FEATURES:

- A temperature control dial which allows the user to set the temperature from ambient to 75°C.
- A hinged lid made from durable stainless steel.
- A glass front for see-through viewing.
- A zinc coated steel casing with a stoved epoxy finish.
- A self-resetting thermal switch to protect the unit from electrical surges.

The unit measures: 11"(L) x 9¾"(W) x 5"(H) (27x25x 13cm)

Power: 110 VAC, 60 Hz, 2 Amps.

Cat. #	Description	Qty.
63223	Forced Air Slide Dryer	each
63223-20	Force Air Slide Dryer, 220-240VAC, 1 Amp	each

► Portable Slide Warmer

With precision temperature control and a PTFE coating on the surface for easy cleaning this rugged portable warmer is perfect for many applications .

Its design allows for slides, coverslips and glassware to keep them at the optimum temperature for motility testing. The aluminum heating surface measures 7" x 11" The unit features a simple solid state temperature control that is calibrated at 37°C (98°F) and it is housed in a durable plastic case with a great carrying handle. The hinged lid may be closed when not in use and the power cord is detachable and it stores in the box. The Slide warmer comes in 115 volt and 220 Volt .

Cat. #	Description	Qty.
71318-01	Slide Warmer, Portable Kit, 115 Volt	each
71308-02	Slide Warmer, Portable Kit, 220 Volt	each

► STEP UP™ SLIDE WARMER

Our Step Up™ Slide Warmer's unique patent pending design helps you save space while still meeting a busy lab's needs.

The Step Up™ holds twice as many slides as a flat unit of the same size and also makes retrieving your slides easier since the end of the slide is not on the flat surface.

Model XH-2003

- Anodized black surface provides contrast with samples
- Removable tray for easy cleaning
- Digital LED temperature display and temperature setting

Capacity40 3" x 1" slides

► Slide Warmers

Our Large Size Economical Slide Warmer

- Temperature range from slightly above ambient to 65°C
- Two sizes – Accommodates up to 66 slides
- Large slide capacity with space-saving design
- 2 years warranty
- CE Certified

These Slide Warmers are designed for cytology, histology, pathology, and other biological applications in industrial and clinical lab environments.

- Uniform heat transfer over entire heating surface
- Black Anodized heavy gauge aluminum worktop for maximum specimen contrast.
- Model 26025 features LED display and a dust cover

- Model 26007 and 26022 are CE certified.
- Model MH6616: Temperature ranges slightly above ambient to 100°C, with dry slides across the drying bars, angled on the bar or lying flat without bars.

► Oven/Incubator

This Oven/Incubator with an aluminum inner chamber, and venting is up to the task of providing many years of long service in busy labs. The cast aluminum chamber provides for dependable temperature uniformity and the vent efficiently expels moisture and vapors. The unit comes complete with a removable shelf.

FEATURES:

- A magnetic latch assures positive door closure.
- An aluminum chamber provides excellent temperature uniformity.
- A thermometer port at the top of the oven accommodates any partial immersion thermometer.
- The chamber is vented through the top to allow for the removal of moisture and other vapors.
- Heats up rapidly. (56°C in 9 minutes).

- The aluminum chamber is easy to clean and it provides excellent temperature uniformity.
- Oven works on the gravity convection heating method.
- The unit comes complete with one removable metal shelf, three-wire cord, and plug.

PathScan Enabler IV

Low Cost Digital Histology Slide Scanner

Obtain ultra high resolution images from a glass tissue slide in about a minute without a microscope.

Overview

The PathScan Enabler IV, is designed to allow scanning of an entire whole mounted histology sample attached to standard 1 x 3 inch cover slipped glass slide. The PathScan Enabler IV solves low power, large field of view, high resolution imaging problems. This fourth generation histology scanner scans an area of 1.42 x 0.85 inches (36.14 x 21.59 mm), resulting in useable images up to 10,248 x 6,120 pixels, uninterpolated. File size can be as large as 188 megabytes. Produces image files which can be saved in a variety of formats including TIFF, PICT, BMP, GIF, etc. Compatible with PC Windows based computers.

Key Features

- Low cost histology slide scanner
- One button control, scans, saves and (if available) opens image in Adobe Photoshop
- Typical scan times is under a minute
- Holder accepts two 1 x 3" slides
- 7200 dpi resolution, 3.5 microns per pixel
- Single pass scan mode
- 16/8 bits per color sampling rate
- Dynamic range up to 4.2 O.D
- Real time sharpening, automatic color correction
- Rapid accurate fixed focus
- SilverFast Ai Studio Software
- USB2 interface
- Fourth generation, 1000's sold!

► Storage

► Held Secure™ Slide/Cassette Storage System

A durable corrugated filing box kit for the proper filing, identification, and storage of glass slides or cassettes. The complete set comes unassembled in packages of 10.

- Designed to hold up to 2,000 slides or 500+ cassettes per box
 - Partitioned Drawers for easy retrieval
 - Double tabbed in back for additional safety
 - Printing on box front designed for easy inventory identification
 - Internal corrugated construction designed for multiple stacking
 - Sold in unassembled cases of 10 boxes
 - 50 In/Out Cards come with each
- Slide/Cassette case for slide retrieval documentation
 - 25 Index Cards come with each Slide Kit for slide retrieval documentation
 - Additional cards and removable tray labels available for bulk purchase
 - Internal corrugated construction supports up to 250 lbs and the tray remains easily accessible
 - Manufactured in the USA

63280-50	File System Set for Slides	10 bx	63280-53	Cassette In/Out cards	1000/cs
63280-51	File System for Cassettes	10 bx	63280-54	Slide Index Cards	500/cs
63280-52	Slide in/Out Cards	1000/cs	63280-55	Removable Tray Labels	500/roll

► Slide/Cassette Filing System

Our moisture resistant, plastic covered corrugated boxes interlock to stack ten high, each supporting up to 500 lbs of overhead cassette and slide weight. Each box accommodates 2000 slides or 500 tissue blocks to meet your varied storage requirements. Come unassembled; boxes require minimal storage space and can be easily assembled as needed

Slide storage File with four compartments, each has one drawer, drawer inside measures 10½"L x 2 "W x 1½"H (267 x 60 x 40mm), each drawer has one center divider, each division is 1½" wide, accommodates up to 250 slides or 500 slides per drawer, or 2000 slides per file, 10 stackable files per case or 20,000 slides.

When these boxes are used as a cassette storage file, each compartment has two drawers, one on top of the other. Four compartments or eight drawers, each drawer accommodates 63 cassettes or 500 cassettes per file. 10 stackable files per case or 1500 cassettes.

Overall dimension of each file is 11½"(L) x 12"(W) x 4"(H) (295 x 300 x 100mm)

► HistoPrep Modular File Drawers

Individually, self-contained, stackable drawers. They hold approximately 250 Histo cassettes or embedding rings. Supplied in economical two-drawer packages with interlocking ridges on the top and the bottom for easy stacking of as many cabinets as you want. Each drawer is encased in a rugged, high impact plastic sleeve, so your cassettes are completely enclosed and protected. They come with color decals which allow you to organize each by function. Cassettes are not included. The unit measures: 15¾"(L)x9"(W)x2"(H) (40x23x5cm).

63284	HistoPrep Modular File Drawers	2/pk
--------------	--------------------------------	------

► Tissue File Cases

A histological embedment block cataloging and storage system. This file system incorporates the necessary features offering embedment block protection, simplified cataloging, reduction of filing error and facilitation of retrieval. All of this while conserving space and being very affordable. The tissue files come with 100 partitioned compartments arranged 10 deep and 10 across. By removing alternating partitions, each compartment can be doubled or quadrupled in size. For other storage needs, the partitions may also be removed. For cataloging, each compartment is numerically indexed on a permanent chart inside the lid which also provides space for detailed information.

Tissue files are made from solid fiberboard with a protective, attractive, scuff-resistant exterior green covering. Its hinged lid lifts open and with a cloth stay support the lid can be kept in the open position.

Tissue File Specifications:

- Embedment Block Capacity: 100–200 per file.
- Compartments: 100 of 1½" x 1 x 2¼" (38 x 25 x 57mm)
- Compartment Arrangement: 10 across x 10 deep
- Dimensions: Outside: 15¾"x10½"x2½" (387x267x60mm) Inside: 14⅞"x9⅞"x2¼" (378x251x57mm)
- Approximate Shipping Weight: 2 lbs. (0.9Kg)

► Storage (continued)

► Micro Slide Files

A prepared Microscope Slide Cataloging and Storage System. The slide files contain 48 partitioned compartments which will hold an estimated 10 of 1x3" glass slides per cell (480 slides per case) or 10 of 3x2" slides per cell (240 slides per case) by removing two alternate long partitions. A 3/8" (100mm) cushioning space surrounding the partitioned compartment serves as a protective barrier against damage to the stored slides. For other storage needs, all or alternate partitions are removed for conversion to larger size compartments.

For cataloging and slide retrieval, each compartment is numerically indexed to a permanent chart on the underside of the lid which also provides space for information.

The files are constructed from solid fiberboard with a protective and attractive, scuff-resistant green exterior. The reinforced hinged lid conveniently lifts open with a cloth stay support and keeps the lid in the open position for easy slide filing and retrieval.

Slide File Specifications:

■ **Microscope Slide Capacity:** 480 25x75mm (1x3") or 240 76x51mm (3x2") slides per Slide File

■ **Compartments:** 8 2.9x1.6x7.6cm (1 1/8x5/8x3")

■ **Compartment Arrangement:** 4 across x 12 deep
- Partitions are removable to enlarge each cell.

■ Dimensions:

Outside: 24.1x15.2x8.3cm (9 1/2x6x3 1/4")
Inside: 23x14.1x7.8cm (9 1/16x5 5/16x3 1/16")

■ **Approximate Shipping Weight:**
0.45kg (1 lb) per unit

► Space Saver - Steel File Cabinet System

1. Slide Cabinet System

■ **Store up to 54,000 slides in only 2 square feet of space.**

■ **Low cost slide storage.**

■ **Ideal for use in Pathology, Cytology, Hematology, Histology, Dermatology, Research, Education.**

■ **Sturdy - Built to last.**

Our newly introduced cabinets for filing 3x1" slides is the most effective system available to the ever-growing problem of slide storage and retrieval.

They are compact, sturdy and economical!!!

The cabinets are stackable and are secured by interlocks. The base (order separately) lifts the cabinets 4 3/4" off the floor. All units are constructed from heavy gauge reinforced cold rolled steel, electrostatically finished in dura-baked enamel in an attractive green color. Drawers are easily removable and interchangeable. They have rolled edges on each side for added strength. The riveted card holder on the front of the drawer speeds up slide retrieval.

Each cabinet has 6 drawers, with two compartments per row, so you can store as many as 750 slides per drawer. The outside walls and center divider are lower than the slides, allowing for easy removal of any slide.

Each drawer has an exclusive built-in hand grip at the rear and a full sized handle at the front which allows the drawers to be removed and used as trays.

Each cabinet comes with a package of **Memorandum Markers**, and a set of movable **Compressor Blocks**.

The cabinet measures: 15 1/2"(W)x18 3/4"(D)x4 3/4"(H)
(40x47x12cm)

74780-10	EMS Cabinet System Base	each
74780-20	EMS Micro-Slide Cabinet	each

2. 35mm Slide Cabinets

For 2x2 Slides and Kodachrome Transparencies.

These slide cabinets have the same construction and features as our Micro-Slide Cabinet (Cat# 74780-20). Each file comes with three drawers and can store up to 2,250 slides.

35mm Slide Cabinets interlock with themselves and with Micro-Slide Cabinets, for total flexibility and storage convenience. The depth and width dimensions are the same as (Cat#74780-10) shown above; the height is about 1" (25cm) lower and uses the same base as our (Cat# 74780-10).

74780-30	EMS 35mm Slide Cabinet	each

► Storage (continued)

► Tissue-Tek® Lab Aid®

► A. Slide Filing System

Allows for the convenient storage and retrieval of microscope slides or transparencies. Two different vertical filing drawer sections can be stacked in any combination. Each 1" drawer section has 14 drawers and holds 465 (1" x 3") slides per drawer. Each 2" drawer section has 7 drawers and holds 271 (3" x 2") slides or 271 (2" x 2") transparencies per drawer.

- Requires only 19 x 19" of floor space.
- Slide backstops easily attach inside drawers to hold slide in place.
- Constructed from welded steel for easy stacking and durability.
- Two colors choices: olive green or beige.

► B. Block Filing Cabinet

Allows for the organized storage of blocks that have been embedded using: Tissue Cassettes, Biopsy Cassettes, Mesh Cassettes, Mega Cassettes, Processing/Embedding Cassettes and Embedding Rings

- One-piece construction eliminates hinges and doors for dust-free storage.
- Six impact-resistant plastic drawers feature generous space for identification.
- Compact in size (17" x 9½" x 15") and stackable.

► C. Lab-Aid® Ultra™ Storage Cabinets

Safe, Secure, and Trusted

Security and capacity are the primary characteristics of the Lab Aid® Ultra™ Cabinet for slides or cassettes. This modernized system offers large capacity storage with integrated security features. A sturdy steel construction ensures long-term use and a drawer lock prevents tampering guaranteeing specimen safety. Each drawer front has a plastic covered labeling tab assuring positive identification. Inside, convenient removable slide and block trays accommodate up to 82,000 microscope slides or 21,000 tissue blocks. Coding strips can be used to separate slides or blocks by numbers. Filing cabinet can be bolted together and stacked two high for maximum storage capacity.

► Storage (continued)

► Electropolished Stainless Steel Freezer Racks

*High Quality, Ultra-Durable Freezer Racks
for Long Term Sample Storage*

No Sharp Edges - All edges have been ground down to remove the sharp surfaces that plague standard freezer racks

Electropolished - This step cleans up all weld points that, over time, may be the starting points for corrosion.

Superior Construction - Superior construction and design have created a more sturdy rack than what is currently available on the market

Durable - Racks are designed and finished to last longer in the demanding freezer environment where samples are housed

Surgical Finish - Electropolishing leaves racks ultra-shiny and free from any surface contaminants

Multiple Sizes - Several vertical and horizontal options are available to fit a variety of freezer configurations

- A superior design was chosen to increase structural integrity.
- All weld points have been ground down to eliminate sharp points and areas where corrosion can occur.
- Structural edges and shelves have been ground and racks have been electropolished to remove sharp edges.

The Solution for Antigen Unmasking

► The Retriever

Our Unique Retriever solves the problem of staining formalin fixed tissues. This is an affordable solution to all known major problems with immunohistochemistry on paraffin sections. Ease of use combined with high reproducibility of the results will give you the best quality immunostaining.

The Retriever is a bench-top model for thermally processing slides of formalin-fixed, paraffin embedded tissues prior to immunostaining. The model has been designed to ensure identical processing of all the samples during a processing cycle, as well as the identical processing of the samples in individual sessions. The retriever preserves processed tissues.

Now you can:

- Run antigen unmasking in 6 various buffers at once.
- Perform gentle antigen retrieval that does not damage the tissue morphology.
- Get identical results every time.
- Compare series of slides treated in independent sessions.

How does the Retriever work?

Basically it is a pressure cooker. However, a pressure cooker specially designed to unmask the antigen on tissue sections. The core principle is heating of the chambers with the slides at high temperature (>120°C) and high pressure. Sensors control the heating profile for the temperature and pressure to be reached at certain pace and over certain time. We did a lot of tests to find the optimal settings. When the required temperature is reached, it will be kept for several minutes. After that the slides will be cooling over 2 hours. Specially designed thermal walls of the unit control the speed of cooling of the inner chamber and slides

Who would benefit from using our Retriever?

- Investigative Pathology, where the high quality of staining (a picture may be published!) is required.
- Any labs that is short on technical personnel: any student or post-doc can process slides for the staining without using much time
- Small routine pathology labs, where a limited number of slides should be processed daily
- Anyone who uses highly valuable samples, such as tissue arrays or unique tissue samples: Simplicity and reliability of the unit ensures the safety of your sample, and a high quality antigen unmasking

Slide Chamber

Chamber Rack

Technical Specifications of Retriever:

Height	335 mm
Capacity	9 litres
Max. Instrument length	228 mm
Width	340 mm
Net Weight	4.5 kilos
Internal Chamber Dimensions (d/h)	210/230 mm
Max. Load Weight	3.0kg

How To Use:

Step 1.

Deparaffinized sections on slides are placed into the Processing (Tissue Slide) Chambers. Retriever can accommodate simultaneously from 1 to 6 Chambers, which allows you to process a series of slides in up to 6 different antigen unmasking buffers within the same session. Fill the chambers with a buffer of your choice.

Step 2.

Place the Chambers into the Rack.

Fill the Retriever with 750 ml of deionized/distilled water. Place the Rack into Retriever.

Close the lid by a simple twist.

Step 3.

Push the Start button. The tissues will be processed automatically. In about two hours (depends on the load) you can open the lid and proceed immunostaining.

Other Specifications:

Fuses - Located under the control module, fuses F1 0A, 32 x 6.3mm, ceramic sand filled, Mains plug top fuse (User replaceable), F1 3A to BS1362 UK ONLY.

Rating - Models are rated continuously for intermittent use.

Body- Deep drawn aluminium. Lid - Aluminium.

Heater- Externally surface mounted mechanically fixed electric element.

Temperature Cut Out - Thermal fuse.

Pressure - Calibrated pressure release valve.

Max. Single Fault Temperature - 133.3°C

Environment Conditions - indoor use - temperature 5°C to 40°C - altitude up to 2000m - maximum relative humidity 80% for temperatures up to 31°C decreasing linearly to 50% relative humidity at 40°C. - mains supply voltage fluctuations not to exceed +10% of the nominal voltage

Input Connections - Mains inlet socket 'hot' format conforming to IEC 302.

Safety Shut Down - See "Temperature Cut Out".

Choosing A Buffer:

If you already know the buffer that can be used for Microwave treatments of sections in order to unmask you antigen of interest, the high chances are that the same buffer may be used in Retriever.

To improve the morphology of tissue of the processed sections, use one of our supplied ready-to-use buffers by choosing them according to pH.

We have commercially available the following buffers:

- R-Buffer A pH 6.0
- R-Buffer B pH 8.0
- R-Buffer C pH 4.5
- R-Buffer U pH 6.0
- G variants of the same buffers for a more gentle processing of the tissues.

To successfully retrieve the antigen of interest on fixed sections, please remember that two factors define the choice of buffer:

- The nature of the antigen/epitope and of the antibody used for its detection
- The fixative used and the degree of fixation.

Correction for Fixative & Degree of Fixation

The suggested protocol for processing tissues is optimized for routinely formalin-fixed and paraffin embedded material. If the tissue used for sections was insufficiently fixed, overfixed (was left in formalin for too long), or other fixative was used, the protocol may require some modifications. The easiest correction is to use EMS's own specially formulated buffers for a gentle (G) tissue processing. Use them instead of the basic buffers. For overfixed material try using U buffer or run the additional cycle in the same buffer.

Fixative Used on Tissues	Buffer
Formalin, buffered	R-Buffer A, B, C or U
Formalin-Zn	R-Buffer A, B, C or U
Mirsky fixative	Under testing
Boonfix I	Under testing
Boonfix II	Under testing
PLP	R-buffer AG, BG, or CG

Examples of Staining

PCNA (Nuclear antigen)

Sections of formalin-fixed, paraffin embedded tissue of human duodenum were deparaffinized and processed in Retriever to unmask the antigen. We used one cycle in R-Buffer C (pH 6.0) with cooling of the slides overnight. Antibody PC-10 against proliferation marker PCNA (nuclear) was used together with R-Detect HRP detection system for immunostaining of sections.

E-cadherin (Membranous, extracellular domain)

Sections of formalin-fixed, paraffin embedded tissue of human cervix were deparaffinized and processed in Retriever to unmask the antigen. We used one cycle in R-Buffer C (pH 6.0) with cooling of the slides overnight. Antibody HECD-1 against cell adhesion molecule E-cadherin was used together with R-Detect HRP detection system for immunostaining of sections.

Choosing Buffer: Correction for the Nature of the Antigen and Epitope.

The choice of the buffer depends on the nature of the antigen and the location of the epitope of interest. We advise you to first run the test for the most appropriate buffer using the tissues where the expression of the antigen does occur. General guidelines for choosing the buffer:

Most of the nuclear antigens (apoptosis-related, survival-related, proliferation-related) R: Buffer A (or AG).

Cell adhesion molecules, cell membrane antigens (extracellular domain) R: Buffer A (or AG)

Cytoskeleton and cytoskeleton-associated molecules – R: Buffer A (or AG)

Intracellular domain of some adhesion molecules and surface receptors – R: Buffer B (or BG)

Intracellular domain of some adhesion molecules and surface receptors – R: Buffer C (or CG)

Most of antibodies raised against a linear peptide – R: Buffer U (or UG)

Examples of Staining

Ki-67 (Nuclear antigen)

Sections of formalin-fixed, paraffin embedded tissue of human sigmoid were deparaffinized and processed in Retriever to unmask the antigen. We used one cycle in R-Buffer C (pH 6.0) with cooling of the slides overnight. Antibody MIB-1 against proliferation marker Ki-67 (nuclear) was used together with R-Detect HRP detection system for immunostaining of sections.

CD8 (Membrane)

Sections of formalin-fixed, paraffin embedded tissue of human sigmoid were deparaffinized and processed in Retriever to unmask the antigen. We used one cycle in R-Buffer A (pH 8.1) with cooling of the slides overnight. Antibody #4B11 against T-cell marker CD8 (cell membrane) was used together with R-Detect HRP detection system for immunostaining of sections.

Retriever Tissue Slides

Retriever Tissue Slides are high adhesive glass microscope slides for paraffin-embedded tissue section, including tissue arrays. The slides were designed and optimized for the EMS Antigen Retriever (62700 series) to preserve the section attachment and tissue morphology during heat-induced epitope recovery in Retriever in pH6 (Low), pH9 (High), or Universal Retriever buffer.

Slides can also be successfully used in any other epitope-recovery technology (autoclave, microwave, proteolytic) and show superior performance over positively charged or polylysine-coated slides, especially in high pH buffers and recovery buffers containing EDTA.

General Properties

- Retriever Tissue Slides are made from soda lime glass
- Dimensions approximately 76 x 26mm, Thickness 1.0mm.
- 90° ground edges
- Colored or white marking area 20mm, at one end, on one side
- Pre-cleaned, ready for use
- Autoclavable
- Supplied in plastic boxes of 72 pieces (call for carton price, 20 boxes in a carton)
- Carry recommended best before date and batch number for comprehensive information and traceability

ImmunoSaver Antigen Retriever

ImmunoSaver allows for Immunostaining with quick and easy activation of cell membranes and the nucleus. Immunosaver provides efficient antigen retrieval for successful immunostaining of a wide variety of antigens under optimized conditions.

Protocols for both Light and Electron Microscopy may be found with this reagent.

R-UNIVERSAL Epitope Recovery Buffer (10x stock)

Why the Universal Buffer?

Epitope recovery on formalin-fixed, paraffin embedded tissue sections, requires heat-induced treatment in buffer or, sometimes, proteolytic treatment of the deparaffinized tissue section. Which buffer to use, greatly depends on the exact antibody and the properties of the recognized epitope, therefore, one can find in literature and practice use of many buffers, including Citrate pH 3.4, Citrate 6.0, EDTA 8.0, Tris 9.0- 10.0, Tris-EDTA, etc.

Moreover, for individual antigens also the time of recovery in the individual buffer should be defined, as this may be different, and the treatment often destroys the epitope.

EMS offers a novel (patent-pending) technology for epitope recovery, primarily based on reversing the fixation effects of formaldehyde, which created links primarily between μ -amino groups of lysine and other amino-groups.

The buffer was extensively tested in pathology Departments in United Kingdom, and has shown excellent results when used with different antibodies, including those that normally require for successful staining treatment only in Low, or only High pH buffers, or require proteolytic treatment.

The EMS Universal Buffer may be used in any heat-induced epitope recovery system (the time and temperature of treatment should be tested), but was specifically adjusted for tissue sections processing in our Antigen Retriever (62700 Series).

Using our Universal Buffer in our Retriever guarantees the highest rate of success in recovering epitope for any antibody, especially one that was never previously used on formalin-fixed sections.

Properties

Clear, non-toxic solution.

Presentation

R-Universal Buffer is supplied as 10x concentrate. For epitope recovery dilute 1 part of stock with 9 parts of deionized water.

Application

For epitope recovery dilute 1 part of stock with 9 parts of deionized water.

Stability and Storage

The preparation is stable for 1 year when stored unopened at +4°C. Every lot is issued with a certificate indicating the expiry date.

After opening, store at +4°C in the refrigerator and use within 6 months.

Certification

Each lot is certified for compliance to specifications. The product is produced under DIN EN ISO 9001 :2008 Quality Management system for the products in Immunoassay Development and Measurement, Products for Bioanalytics and Immunoassays.

Reduce The Background, Not The Specific Staining

Reliable time tested solution to unmask antigen on formalin-fixed sections

Any antibody preparation has some potential to produce non-specific reaction in the assay. This originates from:

- non-specific antibodies that are present in some proportion in any polyclonal antibody preparation, including affinity purified ones (often "affinity purified" means only isolation of IgG fraction on Prot A/G column, not the purification on the antigen column under very stringent conditions)
- low specificity antibodies among specific ones in polyclonal
- fragments of fallen apart IgGs in stored preparations, including monoclonal
- separate heavy and light chains of specific antibodies, produced by most hybridomas

All these are capable of binding non-specifically to molecules on tissue sections, blots, fixed cells and other objects for immune detection. In case of retrieved formalin sections the risk of non-specific reaction is even increased, since to active the epitope recovery the proteins comprising the tissue sections are denatured during HIER, thus making accessible many domains that are charged and are capable of binding the test immunoglobulins on non-specific manner.

The standard means to block non-specific binding of specific antibody preparation is to add some irrelevant protein, such as BSA, other serum, casein, etc. However, everyone who tried to do this knows that increasing (for effective blocking) concentration of such blocking agent leads to a great reduction of specific reaction as well. This is due to large blocking molecules binding to accessible sites on section and thus sterically blocking access of specific antibodies to epitopes of interest (schematically represented in the figure on the left, top). All our buffers developed for immune assays contain instead short (0.6-2 kD) peptides that are capable of block effectively non-specific reaction while not affecting the specific binding of antibody.

The presented collection of Immunohistochemistry buffers has also some other benefits (see below) and allows you to achieve the best quality IHC result without compromising the antigen detection. The buffers can also be used in other immune assays, such as immunofluorescence on sections, flow cytometry on fixed cells, western blot, hybridization of sections with antibody detection.

The Retriever IHC buffers empower you to control non-specific staining on every step of immunohistochemistry. They are especially highly recommended for research pathology where, in contrast to diagnostics, many polyclonal and/or low-affinity antibodies are used.

All buffers available in 50 ml, 125 ml and 500 ml package. Ready to use.

➤ Section Block

A new class of blocking solutions based on chemically modified and fragmented ultra-pure casein. Effectively reduces unwanted binding of primary antibody and conjugates you use to charged surface of the slide and tissue section. Greatly reduces non-specific binding while preserving the specific reaction, by saturating potential non-specific protein-protein interactions. Moreover, in contrast to BSA-based, IgGm casein or serum-based blocking solutions there is no interaction of specific antibody and blocking protein itself. or oth ls not comparable to other commercially available or home-made blocking solutions. Recommended for research and diagnostic pathology, especially for retrieved sections and polyclonal antibodies..

➤ Antibody Diluent

Buffer for diluting your primary and secondary antibodies, especially if they were stored for a while, even at -20 in glycerol, or in refrigerator. Nonspecific binding of the antibodies, negative effects of disturbing substances and low or medium affinity cross-reactivities of the antibodies will be minimized, making your result more reliable. Excellent for IHC (frozen and formalin sections), flow cytometry on fixed cells, Western Blot and other immune assays.

When used in pathology, in also greatly reduces non-specific reactivity of human serum components and immunoglobulins in tissue, vessels and cells with mouse antibodies used on section.

For especially "trouble"-giving antibodies, as well as for in situ PCR applications, this diluent may also be used as a washing buffer, preventing secondary binding of your analystes during washing.

➤ HRP-Conjugate Diluent

Specifically designed for preparing solution of your HRP-conjugate used as the detection reagent. It is the Antibody-diluent buffer with additional component for stabilizing your HRP-conjugate. Allows you to further standardize the assay preparing ready-to-use conjugate solutions in advance and store them in refrigerator without loss of activity.

EMS is proud to introduce a broad selection of Antigen Retrievers in IHC...

► I. Trypsin Reagent

Description: Trypsin is used for proteolytic digestion of formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin; mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. Trypsin digestion improves immunoreactivity of some antigens in FFPE tissue sections. For cytokeratin clone AE3 and AE1/AE3, this enzyme works much better than boiling the tissue with citrate buffer.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: Use as antigen retriever for some antibodies in IHC. Please refer to primary antibody protocol for IHC.

Reagent: This enzyme is supplied as concentrated form along with buffer. The kit comes in 2 sizes. Small: Reagent B (Buffer) is 15 ml and the Reagent E (Enzyme) is 2 ml

Large: Reagent B (Buffer) is 100 ml and the Reagent E (Enzyme) is 10 ml

Cat. #	Description	Qty.
64142-01	Trypsin Kit Small	Kit
62142-02	Trypsin Kit Large	Kit

► II. Pronase Reagent, Ready To Use

Description: Pronase is used for proteolytic digestion of formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. Pronase digestion of FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: Use as antigen retriever for some antibodies in IHC. Please refer to primary antibody protocol for IHC.

Reagent: Ready-to-use Pronase reagent available in 2 sizes: 15 and 100 ml.

Cat. #	Description	Qty.
64142-03	Pronase Reagent	15 ml
62142-04	Pronase Reagent	100 ml

► III. Pepsin Reagent, Ready To Use

Description: Pepsin is used for proteolytic digestion of formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. Pepsin digestion of FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: Use as antigen retriever for some antibodies in IHC. Please refer to primary antibody protocol for IHC.

Reagent: Ready-to-use Pepsin reagent available in 2 sizes: 15 and 100 ml

Cat. #	Description	Qty.
64142-05	Pepsin Reagent	15 ml
62142-06	Pepsin Reagent	100 ml

► IV. Citrate Buffer pH 6.0 (10x)

Description: This buffer is intended for heat-induced antigen retriever on formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. The use of this buffer on FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: 1X buffer solution is intended for heat-induced antigen

► IV. Citrate Buffer pH 6.0 (10x) (continued)

retriever in IHC. Please refer to primary antibody protocol.

Reagent: 10 X, pH 6 antigen retriever solution.

Preparation of Working Solution: Dilute this 10X buffer as needed (e.g. 90 ml of deionized or distilled water + 10 ml of this buffer), mix well, 1X buffer can be stored at 2–8°C

Cat. #	Description	Qty.
64142-07	Citrate Buffer pH 6.0	100 ml
62142-08	Citrate Buffer pH 6.0	1000 ml

► V. EDTA Buffer pH 8.5 (10x)

Description: This buffer is intended for heat-induced antigen retriever on formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. The use of this buffer on FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: 1X buffer solution is intended for heat-induced antigen retriever in IHC. Please refer to primary antibody protocol.

Reagent: 10 X, pH 8.5 antigen retriever solution.

Preparation of Working Solution: Dilute this 10X buffer as needed (e.g. 90 ml of deionized or distilled water + 10 ml of this buffer), mix well, 1X buffer can be stored at 2–8°C

Cat. #	Description	Qty.
64142-09	EDTA Buffer pH 8.5	100 ml
62142-10	EDTA Buffer pH 8.50	1000 ml

► VI. Tris Buffer pH 10.0 (10x)

Description: This buffer is intended for heat-induced antigen retriever on formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. The use of this buffer on FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: 1X buffer solution is intended for heat-induced antigen retriever in IHC. Please refer to primary antibody protocol.

Reagent: 10 X, pH 10 antigen retriever solution.

Preparation of Working Solution: Dilute this 10X buffer as needed (e.g. 90 ml of deionized or distilled water + 10 ml of this buffer), mix well, 1X buffer can be stored at 2–8°C

Cat. #	Description	Qty.
64142-11	Tris Buffer pH 10.0	100 ml
62142-12	Tris Buffer pH 10.0	1000 ml

► VII. ImmunoHistoZyme™, Ready-to-Use

Description: ImmunoHistoZyme is used for proteolytic digestion of formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. ImmunoHistoZyme digestion of FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: Use as antigen retriever for some antibodies in IHC. Please refer to primary antibody protocol for IHC.

Reagent: Ready-to-use ImmunoHistoZyme Reagent.

Cat. #	Description	Qty.
64142-13	ImmunoHistoZyme	15 ml
62142-14	ImmunoHistoZyme	100 ml

► Scintillators

► P47 Scintillators

They are coated with a thin layer of well selected P47 phosphor ($Y_2Si_2O_7:Ce^{3+}$; yttrium silicate activated with cerium), and have a high signal output and a good working life. They need not be coated with aluminum prior to use unless cathodoluminescence studies are required.

► YAG Single Crystal Scintillator Discs

ADVANTAGES:

- Low Phosphor Noise.
- High Resistance to Radiation Damage.
- Long Working Life.
- Possible Application in Ultrahigh Vacuum Conditions.

YAG (Yttrium Aluminum Garnet activated by Ce^{3+}) has a very fast response time of 50-60ns and they do withstand well to the bombardment by electrons or ions far

better than plastic or phosphor scintillators. Light emission peaks at about 560nm which means that S20 photocathodes are most suitable for detecting the emission. YAG is suited for high current operations. The response is better than for the P47 discs below 5kV and again at higher accelerating voltages, where the performance of powder scintillators fall off while the response of the YAG continues to increase linearly. The crystal should be coated with 50nm of aluminum prior to use. If the layer becomes damaged it can be removed with sodium hydroxide. The crystals are mounted with the matt surface in contact with the light pipe as this has shown to increase the efficiency.

► YAP Single Crystal Scintillator Discs

YAP (Yttrium Aluminum Perovskite activated by Ce^{3+}) shares the same advantages as YAG but is more efficient in terms of light output than YAG crystals. As well, the emission spectrum peaks at about 378nm, and this corresponds closely to the maximum sensitivity of the S11 photocathode which in general is used in most scanning electron microscopes. (There would be more improvement in signal by using a YAP crystal rather than YAG in these microscopes). The decay time of YAP (40ns) is faster than YAG (80ns) so its overall performance is superior to YAG. YAP crystals should be coated with 50nm of aluminum prior to use.

Note: P-47 is usually in-stock. YAG and YAP delivery time is 6-8 weeks.

► Light Pipe Scintillators

The light pipe is the connection between the scintillator and the phosphor multiplier tube (PMT). It transfers the photons produced by the scintillator for detection by the PMT. We coat the scintillator material directly on the light pipe which improves the signal. Light Pipes are available in optical quality quartz and optical grade acrylic. Cambridge reduced-tip models are only available in acrylic. High voltage wire and corona ring are included. JEOL pipes include a flange. Price includes one Re-coating Certificate. Re-coating is typically needed twice per year.

► Specimen Mounts

We have now expanded our Specimen Mount section due to the increased demand for us to offer more of a variety. To make your SEM work easier and save you a great deal of time searching for the right mount, we now offer you a complete line of specimen mounts.

Aluminum Mounts - Made from ultra-pure aluminum. The more popular mounts are available in two grades of finish: standard and polished (luster). Standard finish: lathe finish; economically priced. Polished finish: A cloth polished finish which produces a smooth and luster surface.

Carbon Mounts - Spectroscopically pure.

► PYROID® Pyrolytic Graphite Product Line – Vitreous Carbon Substrate

Our PYROID® pyrolytic graphite is a very light weight, 5'9's pure, solid crystal composition, with no granular components, extremely smooth surface, capable of withstanding cryogenic temperatures as well as temperatures in excess of 3000°C

The material is extremely anisotropic, meaning it conducts heat and electricity in the a-b plane like cooper but acts like a ceramic in the normal direction. In an annealed state, the thermal and conduction properties increase up to four to eight times that of aluminum and cooper respectively.

The material has zero porosity making it extremely stable and exhibits no outgassing. It is ideal for use in corrosive environments including acids and chlorine, and is highly transparent to organic samples and electrons, for analytical work, such as x-ray investigation, metallurgical, crystal growth, medical imaging technology etc.

Pyroid® is trade mark name of MINTEQ

Physical Properties of PYROID® Pyrolytic Graphite

Property	Direction*	Metric Units	English Units
Density	----	2.22 g/cc	1.37 lb/ft³
Flexual Strength

► Sample Stub Vacuum Desiccators

Precision machined from a block of aluminum – anodized black - this Sample Stub Vacuum Desiccators accommodates 18 SEM Mounted Sample Stubs, pin style, under vacuum for year long.

- Compact and sturdy – will last as long as you own them
- Prevents oxidation from occurring to the sample during long term storage
- All pin stubs are kept secure inside the chamber by a built in "O" ring in each position
- Very simple to use - Just need small vacuum pump to evacuate air out of the chamber

- Acrylic Clear top for easy viewing the contents
- Interlock when stack together to safe space
- Ideal for transport and storage samples for SEM, TEM, FIB, AFM, etc.

Measures: 13 cm x 13cm x 4.5cm High. Chamber cavity is 10.4cm diameter x 18mm deep. Lid is made with 10mm thick clear acrylic.

76550 SEM Stub Vacuum Desiccator each

SEM for Forensics (continued)

EMS is pleased to now offer these specialized products for forensic investigation.

► Forensic Gunshot Residue Field Kits

Our comprehensive line of high-quality GSR field sampling kits includes certified SEM pin stubs with double-coated adhesive carbon tabs in plastic tubes. The certified SEM pin stubs have very low amounts of Pb, Sb and Ba, not detectable by SEM/EDX. The caps securely hold the GSR sample disc for easy GSR collection. Pre-labeled discs and tubes are both ready-for-sampling. A sturdy, sealed tamper evident transport box is also included.

Kit contents:

- Certified SEM pin mounts with adhesive carbon discs in pre-labeled tubes
- Powder-free nitrile gloves
- Evidence label
- Chain of custody label on box
- Tamper-evident cardboard transport box (4-1/2"W x 3-3/4"D x 3"H)
- Tamper evident seal
- Instruction sheet

Product Details

- 3-Disc GSR Field Kit**, with two sampling discs plus a control disc to enhance certainty of the analysis.
- 4-Disc GSR Field Kit**, is useful for sampling palm and back separately on both hands.
- 5-Disc GSR Field Kit**, is compatible with FBI requirements, with four discs plus a control disc.

Cat. #	Description	Qty.
76480-11	3 Disc Forensic Gunshot Residue Field Kit	kit
76480-13	4 Disc Forensic Gunshot Residue Field Kit	kit
76480-15	5 Disc Forensic Gunshot Residue Field Kit	kit

► Forensic Collection Kit

These kits are suitable for field work and gunshot residue in the lab or out. Manufactured from a special – certified aluminum alloy, containing only trace amounts of Barium (~0.00010%), Copper (~0.0139%), Zinc (~0.0094%), Nickel (~0.00309%), and Antimony (~0.00080%). These sample mounts are suitable for typical forensic sample studies. The kit consists of 10 pin mounts (12.74mm diameter) 10 carbon adhesive tabs, 10 storage vials, and one plastic tweezer. Two styles of glass vials are available as well as one in plastic.

Cat. #	Description	Pack
76480-01	Kit with Glass Shell Vial, size 23.7mm Dia x 37mmH	kit
76480-02	Kit with Glass Shell Vial, size 23.5mm Dia x 74mmH	kit
76480-03	Kit with Plastic Vial, size 23.5mm Dia x 52.5mmH	kit

► Numbered Gunshot Residue Sampler

Numbered, certified aluminum mount with a double-coated adhesive carbon tab applied to secure the sample in a clean, glass vial 25mm OD x 55mm high (1" x 2.17"). Packaged in a box of 100. Numbers can be specified as 100 consecutive numbers between 0 and 9999 (greatest numbers). Please inform customer service about the numbering sequence when ordering this product.

Cat. #	Description	Qty.
76480-16	Numbered Gunshot Residue Sampler	100/pk

► Forensic Gunshot Residue Lab Kit

Includes ten 12.7mm SEM pin mounts in clean, glass storage tubes (25mm OD x 55mm high) secured in a compact transport box with labels. This Kit is designed to avoid any contamination of GSR samples. Choose from either standard 12.7mm pin mounts with 8mm pins or with shorter 6mm pins. Also available as a sample kit without mounts and tabs.

Cat. #	Description	Qty.
76480-18	Forensic Gunshot Residue Lab Kit: 10 each 12.7mm SEM pin mounts (8mm pin), with mounted carbon tabs (12mm; 0.47 dia.) in capped glass tubes, 12 blank labels	kit
76480-19	Forensic Gunshot Residue Lab Kit: 10 each 12.7mm SEM short pin mounts (6mm pin for ZEISS/LEO), with mounted carbon tabs (12mm; 0.47 dia.) in capped glass tubes, 12 blank labels	kit

Sample Kit without pin mounts and tabs:

76480-22	Forensic Sample Kit: 10 capped glass sample tubes, 12 blank labels	kit

► Forensic Field Sampler

Glass specimen vial (25mm OD x 55mm high) with a high-purity certified 12.7mm SEM pin stub specimen mount (see below), both with and without an adhesive carbon conductive tab, mounted into the plastic cap. Our Forensic Field Sampler has been designed to collect forensic evidence with minimum interference and/or contamination from the sampler. Three versions are available: without adhesive carbon tab, with ready-to-use adhesive carbon tab, or with covered carbon tab (plastic cover needs to be removed prior to use). Choice of standard 12.7mm SEM pin mount with 8mm pin or 12.7mm SEM pin mount with shorter 6mm pin (ZEISS/LEO)

Investigation Applications for SEM or Light Microscopy:

- Gunshot residue (GSR)
- Powder samples
- Fiber samples
- Paint chips
- Particle sampling
- Glass fragments

Ideal for SEM specimen preparation on the most frequently used SEM pin stubs, facilitating easy carbon coating for SEM/EDX investigation.

The Forensic Field Sampler can be securely stored in the glass specimen vial and easily shipped with the cap holding the sampler stub in place. Adhesive carbon tabs secure the evidence material.

Cat. #	Description	Qty.
76480-31	Forensic Field Sampler without Adhesive Carbon Tab	100/pk
76480-32	Forensic Field Sampler with Adhesive Carbon Tab, ready to use	100/pk
76480-33	Forensic Field Sampler with Adhesive Carbon Tab, and clear plastic cover	100/pk
76480-34	Forensic Field Sampler without Adhesive Carbon Tab, Short Pin	100/pk
76480-35	Forensic Field Sampler with Adhesive Carbon Tab, ready to use, Short Pin	100/pk
76480-36	Forensic Field Sampler with Adhesive Carbon Tab, and clear plastic cover, Short Pin	100/pk

SEM for Forensics (continued)

EMS is pleased to now offer these specialized products for forensic investigation.

Forensic Certified Mounts

This mount is made from a special certified Aluminum alloy which does not contain any of the objectionable elements that may interfere with samples collected for GSR. These mounts are available with an 8mm pin, or 6mm pin.

Cat. #	Description	Qty.
76475-05	Forensic Certified Mount, with 8mm Pin	10/pack
76475-10	Forensic Certified Mount, with 8mm Pin	100/pack

Circular Cover Glass – GOLD SEAL®

GOLD SEAL® cover glass is made from pre-selected, pre-cleaned silicate glass. It is packaged with desiccants in a lint free box. Both cover glass cases and slide boxes convert to convenient slide storage files.

Metal Specimen Discs for use with the Atomic Force Microscope

These are high quality metal discs with smooth edges and flat surfaces for use in Atomic force Microscopy.

Cat. #	Description	Qty
75010-10	10 mm Specimen Metal Discs for AFM	50/pk
75010-12	12 mm Specimen Metal Discs for AFM	50/pk
75010-15	15 mm Specimen Metal Discs for AFM	50/pk
75010-20	20 mm Specimen Metal Discs for AFM	50/pk

SEM for Forensics (continued)

EMS is pleased to now offer these specialized products for forensic investigation.

► Mica Sheets and Disks

The Highest Quality (V-1 or V-2) for AFM Applications to the Medium Quality (V4 to V-6) for Replication, Thin Film Deposition

EMS Mica Sheets offer a clean surface for E.M. applications, carbon filming and particle spraying, as well as for AFM applications.

There are two types of mica: muscovite and phlogopite. Generally, one differs from the other by color (Muscovite is Ruby, Green or White; Phlogopite is Amber, Yellow, or Silver) The maximum operating temperature for Muscovite is about 500 – 600°C and for Phlogopite is about 800 – 900°C.

Our line consists of High Quality Muscovite Mica. This mica peels off very thin up to 0.0001" uniform layers, exposing "virgin" mica upon splitting.

For more information on our Mica Sheets and Disks, please see page 284-285.

► Conductive Carbon Adhesive Tabs

Standard Carbon Conductive Adhesive Tabs – Tabs are formed by two sides of thick conductive adhesive (45 µm on each side) with the center conductive core film (35 µm). With the total thickness of 125

µm, these tabs will offer reasonably firm, smooth surfaces for a variety SEM applications, including gunshot residue analysis. Tabs are protected by white liners, which do not have to be removed when samples are ready to be mounted.

- No out-gassing
- Conductive adhesive is carbon filled acrylic glue
- Solvent free
- Adhesive can be removed by ethyl acetate, ethanol, isopropyl alcohol or alcohols
- Service temperature is up to 60°C (140°F)

Tabs contain some traces of Si, Sb, S, Fe, Mg, Na.

Thick Carbon Conductive Tabs or Image Tabs – The stiff and smooth surface conductive tabs are 260 µm thick, including 200 µm thick conductive carbonate base, coated 30 µm thick on each side with conductive adhesive. However, these tabs are not as conductive and sticky as the Standard Carbon Conductive Tabs. Thick Carbon Conductive Tabs are used for photographic background as well as for Jet Scan applications, where the tabs must be removed and filed away.

Ultra-Thin Carbon Conductive Adhesive Tabs – These tabs have Core material which is nonconductive cloth (70 µm) with Carbon Filler Conductive Adhesive (2 x 45µm). Total thickness is 160 µm.

Spectro Grade Carbon Adhesive Tabs – High purity conductive carbons for less interference signals, such as X-Ray analysis.

Ultra-Smooth Carbon Adhesive Tabs – Carbon adhesive tabs that eliminate issues with rough surfaces, insufficient tackiness, and hardness with significantly lower contaminant levels under EDS. Tabs are made in USA and very popular, and may be used in place of other conductive adhesive in many applications in conventional and field emission microscopes. They are also widely used in forensic laboratories for study of gunshots residues. Without the addition of conductive coating, small nonconductive particles can often be imaged and X-Ray analyzed, cutting down your analysis time. These tabs are composed of a thin film of strong adhesive approximately 1/2" diameter. Over 99% transparent to EDS, with a very small amount of nickel (0.6%) and copper (< 0.3%).

Refrigeration will increase shelf life but tabs need to be warmed up to room temperature before use (usually more than one hour)

Muscovite Mica V-1 Quality:

Cat.#	Mica Size	Quality	Thickness (mm)	Pack
71855-01	50 x 75mm	V-1	0.15 – 0.21	each
71855-05	25 x 75 mm	V-1	0.26 – 0.31	each
71855-10	25 x 25 mm	V-1	0.15 – 0.21	10/pk
71855-11	25 x 25 mm	V-1	0.26 – 0.31	10/pk
71855-15	15 x 15 mm	V-1	0.15 – 0.21	10/pk
71856-01	9.5 mm Diameter	V-1	0.15 – 0.21	10/pk
71856-02	12 mm Diameter	V-1	0.15 – 0.21	10/pk
71856-03	15 mm Diameter	V-1	0.15 – 0.21	10/pk
71856-04	20 mm Diameter	V-1	0.15 – 0.21	10/pk

Muscovite Mica V2 Quality:

Cat.#	Mica Size	Quality	Thickness (mm)	Pack
71857-01	50 x 75mm	V-2	0.15 – 0.21	each
71857-05	25 x 75 mm	V-2	0.26 – 0.31	each
71857-10	25 x 25 mm	V-2	0.15 – 0.21	10/pk
71857-11	25 x 25 mm	V-2	0.26 – 0.31	10/pk
71857-15	15 x 15 mm	V-2	0.15 – 0.21	10/pk
71858-01	9.5 mm Diameter	V-2	0.15 – 0.21	10/pk

Muscovite Mica V4 Quality:

Cat.#	Mica Size	Quality	Thickness (mm)	Pack
71853-01	50mm x 75 mm	V-4	0.26 – 0.31	10/pk
71853-05	25mm x 75mm	V-4	0.26 – 0.31	10/pk
71853-10	25mm x 25mm	V-4	0.15 – 0.21	10/pk
71853-11	25mm x 25mm	V-4	0.26 – 0.31	10/pk
71853-15	15mm x 15mm	V-4	0.15 – 0.21	10/pk
71854-01	9.5mm Diameter	V-4	0.15 – 0.21	10/pk
71854-15	12.7mm Diameter	V-4	0.15 – 0.21	10/pk

Muscovite Mica V5 Quality:

Cat.#	Mica Size	Quality	Thickness (mm)	Pack
71850-01	50mm x 75 mm	V-5	0.15 – 0.21	10/pk
71851-05	25mm x 75mm	V-5	0.26 – 0.31	10/pk
71850-10	25mm x 25mm	V-5	0.15 – 0.21	10/pk
71850-11	25mm x 25mm	V-5	0.26 – 0.31	10/pk

► Specially Designed Specimen Holders for SEM

Our specimen holders are designed to improve your productivity and allow you to view more than one sample at a time. You will save pump down time, keep your chamber cleaner and get more work done. All mounts are machined from solid aluminum and come with spring clips/or set-screws to hold your specimens securely. All mounts are made to fit onto your stage and are designed to fit through all standard specimen exchange ports, and have a center-threaded port to accept the Adapter Pins. Be sure to order the Adapter Pin that fits your instrument. For this reason, we offer three different types of pin adapters, which are threaded and ready to screw on to the base of the holders.

Adapter A: Overall measurement: 28mm long x 3.1mm diameter (step-up portion is 6.25mm L x 4.8mm diameter),

Adapter B: Overall measurement: 28mm long x 6mm diameter,

Adapter C: Overall measurement: 34.5mm long x 16mm diameter
All adapters have a threaded portion 5mm in length.

► 1/ Universal SEM Sample Holder

Adapter Pins

75910

This holder will hold almost any sample from 3mm to 29mm in diameter plus various odd shaped samples, which one of their dimensions is not greater than 29mm. The samples are easily inserted or removed from the holder. The holder is made from aluminum and is supplied with four removable sample arms so that it can hold very small samples as well, and it provides good electrical contact to the stage. The AMRAY base is the standard base and it measures: 48mm x 42mm x 12mm Thick

For all other makes and models you can choose an Adapter Pin to screw on to the AMRAY base holder.

Cat. #	Description	Qty
75910	Universal SEM Holder – AMRAY Base	each
75910-01	Universal SEM Holder – AMRAY Base with Pin A	each
75910-02	Universal SEM Holder – AMRAY Base with Pin B	each
75910-03	Universal SEM Holder – AMRAY Base with Pin C	each

► 2/ Vertical Mounts for Thin Samples

This holder is designed to hold thin samples vertically in the SEM or any microscope. It is 25mm in diameter and 10mm thick. Each of the two jaws can hold up to 3mm thick samples. The spring loader is gentle and strong enough to keep thin and fragile samples vertical so that cross sections can be studied. This holder is very useful for cross sections of silicone wafers or multiplayer capacitors.

This holder can be adapted to any adapter pin listed above to accommodate your instrument.

75915

Cat. #	Description	Qty
75915	Thin Sample/Vertical Mount Holder, Flat Base	each
75915-01	Thin Sample/Vertical Mount Holder, with Adapter Pin A	each
75915-02	Thin Sample/Vertical Mount Holder, with Adapter Pin B	each
75915-03	Thin Sample/Vertical Mount Holder, with Adapter Pin C	each

► 3/ Multi Pin Holder

The multi Pin Holder is designed to save time. It accommodates 3 or 5 of 1/2" (12.5mm) diameter surface, 1/8" (3.1mm) diameter pin.

75920

Cat. #	Description	Qty
75920	3-Pin Holder, 25mm Dia x 10mm H, Flat Base	each
75920-01	3-Pin Holder, 25mm Dia x 10mm H, with Adapter Pin A	each
75920-02	3-Pin Holder, 25mm Dia x 10mm H, with Adapter Pin B	each
75920-03	3-Pin Holder, 25mm Dia x 10mm H, with Adapter Pin C	each
75921	5-Pin Holder, 32mm Dia x 10mm H, Flat Base	each
75921-01	5-Pin Holder, 32mm Dia x 10mm H, with Adapter Pin A	each
75921-02	5-Pin Holder, 32mm Dia x 10mm H, with Adapter Pin B	each
75921-03	5-Pin Holder, 32mm Dia x 10mm H, with Adapter Pin C	each

► 4/ ISI DS 130 and 150 First Stage Sample Mounts

This is a 10mm in diameter, 5mm high, copper sample holder to fit the stage of the ISI DS 130 and 150 SEM's. The inner cylinder is height adjustable so that you can adjust the sample to the correct working distance

79525

75925	ISI First Stage Holder	each
-------	------------------------	------

► SEM Sample Holders Set

For your convenience, we now offer a SEM Sample Holder Set for the above SEM Holders in a solid wooden box and finely finished. Set consists of one Universal Holder, one Thin Sample/Vertical Mount Holder, one each 3-Pin and 5-Pin Holders with a hex key and Adapter Pin A.

75930	SEM Sample Holder Set	each
-------	-----------------------	------

► Pin Mount Stub Adapters

Made from aluminum, used to adapt 1/8" (3.1mm) pin diameter SEM stubs. Available in 10, 15 and 16mm diameters.

75940-10	Pin Stub Adapter 10mm(H)x10mm(D)	each
75940-11	Pin Stub Adapter 15mm(H)x10mm(D) with M4 Tapered hole on one side	each
75940-15	Pin Stub Adapter 38mm(H)x15mm(D) with M4 Tapered hole on one side	each
75940-16	Pin Stub Adapter 38mm(H)x16mm(D)	each

► Specially Designed Specimen Holders for SEM (continued)

► Cross Sectional Holder

Made from non-magnetic stainless steel with 3.1mm (1/8") diameter pin and adjustable angle turn-screw. Just insert specimens edge-on and observe the cross section directly.

75942-01 Cross Sectional Holder

each

► Four-Pin Stub Holder

It accommodates four pin types, up to 12.5 (1/2") surface specimen stubs, with 1/8" (3.1mm) diameter pin.

75944-04 Four-Pin Stub Holder

each

► Five 10mm Stub Holder

Accommodates five 10mm diameter specimen stubs, with 1/8" (3.1mm) diameter pin.

75945-05 Five 10mm Stub Holder

each

► Thin Sample Holder

Ideal for the examination of cross sections of thin samples, such as wafers, multi-layer of capacitors, plastics, metals, etc.

1. For most AMRAY: 1/2"

diameter (12.7mm), 1/8" (3.1mm) diameter pin (3.1mm) with split openings up to 1/4" (6.4mm). Available with either 8mm (5/16") pin height or 15mm (9/16") pin height.

2. For ISI, JEOL, TOPCON:

Double set screw for a secure holding of the specimen during observation. 15mm(9/16") (dia). x 10mm(3/8") (H), 6.4mm (1/4") split.

75948-08 Thin Film Holder, 8mm(L) Pin each

75948-15 Thin Film Holder, 15mm (L) Pin each

75948-10 Thin Film Holder, 15x10mm Stub each

► Universal Vise

A single set screw loading vise for fast and easy to hold specimens for SEM. The jaws are 1" (25mm) long, 1/16" (1.1mm) wide and 3/16" (8mm) high. 1/8" (3.1mm) pin.

75950-01 Universal Vise each

► Metallurgical Mount

Accommodates up to 31.8 mm (1 1/4") diameter of a metallurgical specimen with at least 0.8 mm (1/16") clearance. Pin 3.1 mm (1/8"), depth is 8 mm (5/16").

75952-01 Metallurgical Mount each

► Variable Tilt Mount

This mount which is made from aluminum is used for the mounting and tilting of samples from 0° – 90° as well as for SEM investigation with small working distances. The mount is marked for 30°, 45°, 70° and 90°. The table measures 11 x 11mm (0.46" x 0.46") and the overall size is 14 x 14 x 12.7mm (0.55" x 0.55" x 0.5").

75952-05 Variable Tilt Mount holder, For Pin each

75952-05H Variable Tilt Mount, M4 Hitachi Each

► TEM Grid Holder on a Pin

This EMS new release allows for the holding of up to 4 grids. Made from Aluminum with a brass Screw this holder allows you to image and analyze specimens on TEM Grids in the SEM. The Overall diameter of the holder is 1" (25mm) with a 1/8" Pin (3.2mm) and a longer pin 0.6" (15mm). The Grid locations are all numbered

75949-03 TEM Grid Holder on Pin each

► Multi Holder for 4 Pin Stubs

This multi pin stub adapter for JEOL 32x11mm is designed to save time It is made from vacuum aluminum with stainless steel set screws. It accommodates up to four standard 12.7mm (1/2") pin stubs with 3.2mm (1/8") pin.

75953-02J Multi Pin Stub Adapter, Jeol each

► Multi Holder for 6 Pin Stubs

This 42mm in diameter multi pin holder is designed to save time It is made from machined aluminum with stainless steel set screws. It accommodates up to six standard 12.7mm (1/2") pin stubs with 3.2mm (1/8") pin.

75953-25h Multi Holder for 6 Pin Stubs, Hitachi, M4 each

► Multi Pin Holder for 8 Pin Stubs

This 50mm in diameter multi pin holder is designed to save time It is made from machined aluminum with stainless steel Allen wrench screws. It accommodates up to eight standard 12.7mm (1/2") pin stubs.

75952-08	Multi Pin Holder for 8 Pin Stubs, 3.2mm (1/8")	each
75952-08H	Multiple Holder for 8 Pins Hitachi, M4	each

► Multi Pin Holder for 12 Pin Stubs

This 62 mm in diameter multi pin holder is designed to save time It is made from machined aluminum with stainless steel Allen wrench screws. It accommodates up to twelve standard 12.7mm (1/2") pin stubs

75952-12	Multi Pin Holder for 12 pin stubs, 3.2mm(1/8")	each
75952-12H	Multi Holder for 12 Pin Stubs, Hitachi, M4	each

► Multi Holder for 29 Pin Stubs

This 90 mm in diameter multi pin holder is designed to save time It is made from machined aluminum with 302 stainless steel springs that hold the pin stubs in place. It accommodates up to twenty nine standard 12.7mm (1/2") pin stubs

75952-29	Multi Holder for 29 pin Stubs, Hitachi, M4	each
75952-29H	Multi Pin Holder for 29 pin stubs, 3.2mm (1/8")	each

► Multi Holder for 49 Pin Stubs

This 117 mm in diameter multi pin holder is designed to save time It is made from machined aluminum with 302 stainless steel springs that hold the pin stubs in place. It accommodates up to forty nine standard 12.7mm (1/2") pin stubs

75952-29	Multi Holder for 29 pin Stubs, Hitachi, M4	each
75952-29H	Multi Pin Holder for 29 pin stubs, 3.2mm (1/8")	each

► 45° Pin Stub Holder

This 45 degree pin stub holder allows for a higher SE signal without having to tilt the specimen stage and it accommodates any standard 12.7mm (1/2") pin stubs with 3.2mm (1/8") pin.. Grooved aluminum with stainless steel Allen set screw.

75952-45	45° Pin Stub Holder, 3.2mm (1/8") pin	each
-----------------	---------------------------------------	------

► 45° Multi Holder for 3 Pin Stubs

This 25.4 mm in diameter 45 Degree multi pin holder is designed to save time. It allows for a higher SE signal without having to tilt the specimen It is made from machined aluminum with stainless steel Allen set screws. It accommodates up to three standard 12.7mm (1/2") pin stubs with 3.2mm (1/8") pin.

75952-60	45° Multi Holder for 3 pin stubs,	each
-----------------	-----------------------------------	------

► 45° Multi Holder for 6 Pin Stubs

This 35 mm in diameter 45 Degree multi pin holder is designed to save time. It allows for a higher SE signal without having to tilt the specimen It is made from machined aluminum with stainless steel Allen set screws. It accommodates up to six standard 12.7mm (1/2") pin stubs.

75952-70	45° Multi Holder for 6 pin stubs, 3.2mm (1/8")	each
75952-70H	450 Multi Holder for 6 pin stubs, Hitachi, M4	each

► Set Screw Vise

This set screw vice which is made from machined aluminum with stainless steel allen set screws has an open slot that is 4mm (.157") wide x 5mm (.197") deep. It measures 12.7mm (1/2") dia. x 17.7mm (0.70") high. And has a 3.2mm (1/8") dia. pin.

75941-01	Set Screw Vise, 12.7mm	each
-----------------	------------------------	------

► Large Set Screw Vise

75941-03

75941-03H

This set screw vice which is made from machined aluminum with stainless steel allen set screws has an open slot that is 10mm (.394") wide x 5mm (.197") deep. It measures 25mm (1") dia. x 17.5mm (0.69") high.

75941-03	Large Set Screw Vise, 25mm, 3.2mm (1/8") Pin	each
75941-03H	Large Set Screw Vise, 25mmx10mm (H), M4	each

► Double Slot Mini Vise

Double-slot set screw vise with (2) 1mm wide x 3mm deep slots. Clamp thin specimens or cross sections. Effectively holds wafers and thin samples up to 1mm (.039") thick.

Dimensions: 15mm dia x 6mm H.

Material: Aluminum with 2 stainless steel allen set screws.

Includes allen wrench.

75943-H Double Slot Set Screw Vise, M4, 15 x 6mm H each

► Large Double Slot Vise, 25mm

Large Double-Slot Set Screw Vise with (2) 2.5mm X 5mm deep slots. Clamp thin specimens and cross sections without conductive paint or tape.

Dimensions: 25 x 10 mm (1 x 0.4").

Material: Machined aluminum with 2 stainless steel allen set screws.

Includes allen wrench.

75947-H Large Double Slot Set Screw Vise, 25mm x 10mm H, M4

each

► Large Double Slot Vise, 32mm

32mm Large double slot set screw vise with (2) 2.5mm wide X 5mm deep slots.

Clamp thin specimens and cross sections without conductive paint or tape.

Dimensions: 32 X 10mm (1-1/4" x 0.394")

Material: Machined aluminum with 2 stainless steel allen set screws.

Includes allen wrench.

75947-HH Large Double Slot Set Screw Vise, 32 x 10mm, M4

each

► 45° Pin Mount and 90° Profile, Combination Holder

For Hitachi S-800, S-4000, S-4100, S-4200, S-4300, S-4500, S-4700 and S-3600N SEMs.

For cross sections up to 6.35mm (1/4"). Available in aluminum or brass with stainless steel allen set screws.

Includes allen wrench.

75950-07-A 45°/90° Combination Holder, Aluminum each

75950-07-B 45°/90° Combination Holder, Brass each

► Thin Specimen Split Mount on Pin Stub

12.7mm (1/2") dia., 3.2mm (1/8") dia. pin

For examination of thin samples from paper, plastics, metals, textiles, plants, etc., in cross section. Features a wide opening up to 6.4mm (1/4"). Grooved head.

Height of head is 7.4mm (0.29").

Pin Length: 8mm (.314"). Pin is centered.

Material: Machined aluminum with stainless steel allen set screw.

Includes allen wrench.

75950-08 Thin Specimen Split Mount, 1/2", 8mm L pin each

► Thin Specimen Split Mount (AMRAY), 15mm

15mm (0.59") dia., 3.2mm (1/8") dia. pin

Opens to 3.75mm (3/8").

Pin length: 14.3mm (9/16")

Height of head: 10.2mm (0.4"), centered split.

Pin is off-center.

Material: Machined aluminum with two stainless steel allen set screws.

Includes allen wrench.

75950-09 Thin Specimen Split Mount, AMRAY each

► Double Slot Mini Vise, 15mm

Features (2) 1mm wide X 3mm deep slots. Clamp thin specimens and cross sections without tape or conductive paint.

Pin Length: 3.2mm (1/8").

Material: Machined aluminum with 2 stainless steel allen set screws.

Includes allen wrench.

75951-03 Double Slot Set Screw Vise, 15mm each

► Large Double Slot Vise, 25mm

Features (2) 2.5mm by 5mm deep slots. Clamp thin specimens and cross sections without conductive paint or tape.

Dimensions: 25 x 8 mm (1 x 0.32") with 3.2mm (1/8") pin.

Material: Machined aluminum with 2 stainless steel allen set screws.

Includes allen wrench.

75951-04 Large Double Slot Set Screw Vise, 25mm each

► Metallurgical Mount Holder, 1" and 25mm

This mount holder which is made from machined aluminum with stainless steel Allen screws is specifically for 1" or 25mm metallurgical mounts.

75941-05	Metallurgical Mount Holder, 1" and 25mm, 3.2mm ($\frac{1}{8}$ ") x 8mm (D)	each
75941-05H	Metallurgical Mount Holder, 1" and 25mm, Hitachi, M4	each

► Metallurgical Mount Holder, 1-1/4" and 30mm

This mount holder which is made from machined aluminum with stainless steel Allen screws is specifically for 1 1/4" and 30mm metallurgical mounts.

75941-06	Metallurgical Mount Holder, 1-1/4" and 30mm, 3.2mm ($\frac{1}{8}$ ") x 8mm (D)	each
75941-06H	Metallurgical Mount Holder, 1-1/4" and 30mm, Hitachi, M4	each

► Metallurgical Mount Holder, 1-1/2" and 40mm

This set screw vice which is made from machined aluminum with stainless steel allen set screws has an open slot that is 10mm (.394") wide x 5mm (.197") deep. It measures 25mm (1") dia. x 17.5mm (0.69") high.

75941-08	Metallurgical Mount Holder, 1 1/2" and 40mm, 3.2mm ($\frac{1}{8}$ ") x 8mm (D)	each
75941-08H	Metallurgical Mount Holder 1 1/2" or 40mm, Hitachi, M4	each

► Metallurgical Mount Holder, 2" and 50mm

This mount holder which is made from machined aluminum with stainless steel Allen screws is specifically for 2" and 50mm metallurgical mounts.

75941-09	Metallurgical Mount Holder, 2" and 50mm, 3.2mm ($\frac{1}{8}$ ") x 8mm(D)	each
75941-09H	Metallurgical Mount Holder, 2" and 50mm, Hitachi, M4	each

► Geological Thin Section Holder

This thin section holder is made from aluminum with copper clips and brass screws. The unit measures 55x30x8mm and holds a standard geological thin section or slide measuring 47 x 27mm. The holder comes complete with 2 clips to insure nothing moves. The holder has convenient tweezer inserts which allow for easy loading.

75941-15	Geological Thin Section Holder, 9.5mm	each
75941-15H	Geological Thin Section Holder, Hitachi M4	each

► Dual Geological Thin Section Holder

This thin section holder made from aluminum with copper clips and brass screws. The unit measures 55 x 58 x 8mm and it holds two standard geological thin sections or slides of 47 x 27mm. The holder has convenient tweezer inserts which allow for easy loading. Tweezer inserts enable easy loading. Clips are provided for secure holding.

75941-18	Dual Geological Thin Section Holder, 9.5mm Pin	each
75941-18H	Dual Geological Thin Section Holder, Hitachi M4	each

► Variable Size Geological Thin Section Holder

This thin section holder is made from vacuum grade aluminum with copper clips and brass screws. The unit measures 51x32x8mm and holds either standard thin sections of 47 x 27mm or smaller or larger thin sections. Smallest size would be 40x20mm. The holder comes complete with 2 clips to insure nothing moves. The holder has convenient tweezer inserts which allow for easy loading.

75941-16	Variable Size Geological Thin Section Holder, 9.5mm Pin	each
75941-16H	Variable Size Geological Thin Section Holder, Hitachi M4	each

► Quadruple Geological Thin Section Holder

This thin section holder made from aluminum with copper clips and brass screws. The unit measures 107 x 58 x 8mm and it holds four standard geological thin sections or slides of 47 x 27mm. The holder has convenient tweezer inserts which allow for easy loading. Tweezer inserts enable easy loading. Clips are provided for secure holding.

75941-19	Quadruple Geological Thin Section Holder, 8.5mm Pin	each
75941-19H	Quadruple Geological Thin Section Holder, Hitachi M4	each

► Small FIB Grid Holder

Holds up to 2 FIB grids of the same thickness. Handy FIB grid holder on a standard 12.7mm (1/2") pin stub. Can also be used to safely store FIB grids with thin sections attached.

Overall Dimensions: 12.7mm (1/2") x 7.8mm (0.3mm) H w/o pin.

Pin: Standard 3.2mm (1/8").

Material: Vacuum grade aluminum with brass screw. Includes Philips screwdriver #0.

Cat. #	Description	Qty
75950-02	Small FIB Grid Holder, 12.7mm, Pin	each

► Single 1/2" FIB Sample and Grid Holder

Holds a FIB sample mounted on standard 1/2" (12.7mm) pin stub for FIB milling and lift-out procedures. Conveniently holds two FIB grids close to the sample to mount prepared TEM lamellae on the FIB grid for TEM imaging. Cost-effective holder suitable for all FIB/SEM systems which accept pin mount holders, including the FEI, ZEISS and Tescan systems. For the JEOL and Hitachi systems, use a pin mount adapter.

Overall Dimensions: 22.4 x 12.7 x 11.7mm (0.88" x 0.5" x 0.46").

Pin: Standard 3.2mm (1/8").

Material: Vacuum grade aluminum with brass screws. Includes Philips screwdriver #0.

Cat. #	Description	Qty
75950-03	Single 1/2" FIB Sample and Grid Holder, Pin	each

► Double 1/2" FIB Sample and Grid Holder

Holds FIB samples mounted on two standard 1/2" (12.7mm) pin stubs for FIB milling and lift-out procedures. Conveniently holds two FIB grids close to the sample to mount prepared TEM lamellae on the FIB grid for TEM imaging. Cost-effective holder suitable for all FIB/SEM systems which accept pin mount holders, including the FEI, ZEISS and Tescan systems. For the JEOL and Hitachi systems, use a pin mount adapter.

Material: Vacuum grade aluminum with brass screws.

Overall Dimensions: 36.5 x 12.7 x 11.6mm (1.44" x 0.5" x 0.46").

Pin: Standard 3.2mm (1/8").

Philips screwdriver #0 included.

Cat. #	Description	Qty
75950-04	Double 1/2" FIB Sample and Grid Holder, Pin	each

► Multiple FIB Grid Holder

Larger size enables this FIB grid holder to handle multiple FIB grids of the same thickness. Can also be used to safely store FIB grids with thin section (lamellae) attached. Convenient brass thumbscrews make loading and unloading easy.

Overall Dimensions: 22.5 x 29 x 13.5mm (7/8" x 1-1/8" x 5/8").

Pin: Standard 3.2mm (1/8").

Material: Vacuum grade aluminum with brass thumbscrews.

Cat. #	Description	Qty
75950-05	Multiple FIB Grid Holder	each

► 1" FIB Sample and Grid Holder

Holds an FIB sample mounted on a standard 25mm (1") pin stub for FIB milling and lift out procedures. Can also be used to hold FIB grids of the same thickness to mount the prepared lamellae on an FIB grid for TEM imaging. This cost-effective and versatile holder is suitable for all FIB/SEM systems which accept pin mount holders, including the FEI, ZEISS and Tescan systems. For the JEOL and Hitachi systems, use a pin mount adapter. Convenient brass thumbscrews make loading and unloading easy.

Overall Dimensions: 50 x 29 x 13.5mm (2" x 1-1/8" x 5/8").

Pin: Standard 3.2mm (1/8").

Material: Vacuum grade aluminum with brass screws.

Cat. #	Description	Qty
75950-06	1" FIB Sample and Grid Holder, Pin	each

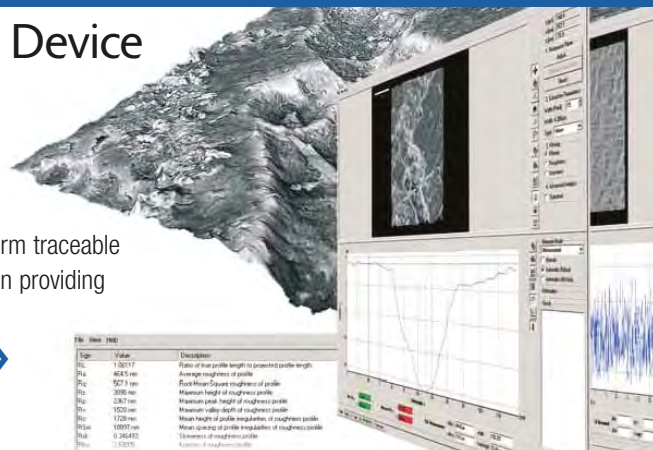

Turn Your SEM into a 3D Measurement Device

MeX 3d Surface Metrology With The SEM

MeX is a stand alone software package that turns any SEM with digital imaging into a true surface metrology device.

Using stereoscopic images the software automatically retrieves 3D information and presents a highly accurate, robust and dense 3D dataset which is then used to perform traceable metrology examination. The results are obtained irrespective of the SEM magnification providing metrology at macro and micro levels.

For more information, see pages 670-675. >>>>

► Bulk Holders

► SEM Bulk Specimen Holder

For clamping irregular, bulky samples

Opening: 15.9mm (5/8") wide X 25.4mm (1") long X 9.5mm (3/8") deep.

Pin Diameter: 3.2mm (1/8").

Material: Machined aluminum with stainless steel allen set screws.
Allen wrench included.

75951-06 SEM Bulk Specimen Holder each

► Large Bulk Specimen Holder

Opening: 32mm (1-1/4") wide X 32mm (1-1/4") long X 13mm (1/2") deep.

Pin Diameter: 3.2mm (1/8").

Material: Machined aluminum with stainless steel allen set screws.
Allen wrench included.

75951-07 Large Bulk Specimen Holder each

► X-Large Bulk Specimen Holder

Holds up to 2" specimens

Opening: 52mm (2") wide X 40mm (1-1/2") long X 13mm (1/2") deep.

Pin Diameter: 3.2mm (1/8")

Material: Machined aluminum with stainless steel allen set screws.
Allen wrench included.

75951-08 X-Large Bulk Specimen Holder each

► XX-Large Bulk Specimen Holder

Holds up to 3" specimens

Opening: 80mm (3-1/8") wide X 48mm (1-7/8") long X 13mm (1/2") deep.

Pin Diameter: 3.2mm (1/8").

Material: Machined aluminum with stainless steel allen set screws.
Allen wrench included.

75951-09 XX-Large Bulk Specimen Holder each

► SEM Clamps

► Mini SEM Clamp, 12.7mm

Mini SEM Clamp on a standard 12.7mm (1/2") pin stub. Suitable for holding flat or thin specimens such as silicon chips, foil, wires, and small tubes.

Material: Vacuum-grade aluminum with brass screw.

75954-01 Mini SEM Clamp 12.7mm, Pin each

► Small SEM Clamp, 15 x 10mm

15mm (0.6") long with 10mm (0.4") wide clamping area and standard pin stub 3.2mm (1/8"). Suitable for holding samples up to 7mm overall thickness. Perfect for small tubes, strips, wires, and smaller flat samples.

Overall Dimensions 23 x 20 x 9mm (0.9"x0.78"x0.35")

Material: Machined aluminum with brass screws.

75954-02 Small SEM Clamp 15 x 10mm, 3.2mm (1/8") Pin each

► Medium SEM Clamp, 25 x 15mm

25mm (1") long with 15mm (0.6") wide clamping area. Features standard pin stub 3.2mm (1/8"). Suitable for holding samples up to 7mm overall thickness. Perfect for small tubes, strips, wires, and smaller flat samples.

Overall Dimensions: 33 x 25 x 9mm (1.3"x1"x0.35")

Material: Machined aluminum with brass screws.

75954-03 Medium SEM Clamp 25 x 15mm, 3.2mm (1/8") Pin each

► Recessed SEM Clamp, 25 x 15mm

Achieve background-free imaging and no contact with sample surface in imaging area with this 5mm recessed clip

Clamping Area: 25mm (1") long X 15mm (0.6") wide.

Maximum Thickness: 7mm under the clamping strips.

Overall Dimensions: 33 x 25 x 11mm 1.3"x1"x0.43").

Material: Machined aluminum with brass screws.

75954-05 Recessed SEM Clamp 25 x 15mm, 3.2mm (1/8") Pin each

► SEM Clip Specimen Mounts

Specially designed for easy, quick and clean mounting of any type of thin specimen on specimen stubs.

These spring-loaded clips accommodate samples of up to 2mm thickness. Samples are held securely by small spring-loaded clips and allow for easy change of samples. Adhesives are not required, eliminating possible outgassing issues and saving time

■ Available with single and multiple clips

■ Ideal for holding silicon chips, paper, wire, threads, thin films, sheet metal, etc.

■ SEM Clip Mounts with multiple clips can hold larger samples or multiple smaller samples.

► 18mm Dia., Pin Mount

For FEI/Philips, ZEISS/LEO, Cambridge, Leica, Amray, CamScan and Tescan SEMs. Made in USA. Mount with one clip

75923-10 SEM Clip, 18mm Pin Mount, 1 clip each

Shorter version for ZEISS/LEO SEM/FIBs with 6mm pin height

75923-11 SEM Clip, 18mm Pin Mount, 6mm pin height, 1 clip each

► 25mm Dia., Pin Mount

Available with one, two or three clips

75923-12

75923-13

75923-14

side view

75923-12 SEM Clip, 25mm Pin Mount, 1 clip each

75923-13 SEM Clip, 25mm Pin Mount, 2 clips each

75923-14 SEM Clip, 25mm Pin Mount, 3 clips each

Shorter version for ZEISS/LEO SEM/FIBs with 6mm pin height

75923-15 SEM Clip, 25mm Pin Mount, for ZEISS/LEO SEM/FIBs 6mm pin height, 1 clip each

75923-16 SEM Clip, 25mm Pin Mount, for ZEISS/LEO SEM/FIBs 6mm pin height, 2 clips each

75923-17 SEM Clip, 25mm Pin Mount, for ZEISS/LEO SEM/FIBs 6mm pin height, 3 clips each

► 32mm Dia., Pin Mount

Available with one, two, or three clips

75923-18

75923-19

75923-20

side view

75923-18 SEM Clip, 38mm Pin Mount, 1 clip each

75923-19 SEM Clip, 38mm Pin Mount, 2 clips each

75923-20 SEM Clip, 38mm Pin Mount, 3 clips each

► SEM Clip Replacement Clips and Screws

Clips are made from spring grade beryllium-copper alloy. Thickness: 0.25mm (0.01"), overall length: 12.7mm (1/2"), width at tip: 1.6mm (1/16"), hole diameter: 2.2mm (0.087").

75954-06 SEM Clips pkg/10

75954-07 SEM Screws, Brass, M2 x 3mm length pkg/10

► 38mm Dia., Pin Mount

Available with one, two or three clips

75954-35 SEM Clip, 50x6mm x M4 Cylinder Mount, 4 clips each

75954-40 SEM Clip, 50x6mm x M4 Cylinder Mount, 8 clips each

► Special Grids for SEM

Finder grids for SEM; a valuable tool for analytical studies. The grids are available in 10mm diameter and they can be placed directly on the stub surface and used to identify the area of interest in which the studies are performed.

80100-Cu SEM, Finder Grids, Copper 25/vial

► SEM Finder Grids

These new SEM grids are designed to aid in the identification and localization of SEM specimens when placed on standard SEM stubs.

The SEMF1 has several features that are incorporated for easier location of the specimen and identification of areas of special interest

- Referring to the annular rim identifies north, south, east and west.
- The four quadrant markers are tapered towards the center.

Type SEMF1

Referring to the annular rim identifies north, south, east and west. The four quadrant markers are tapered towards the centre. 100 Radial sectors are identified by reference to decimal numbers in the annular rim and alphabet letters in the four quadrants.

Overall Diameter:10 mm
 Overall Thickness:~50 µm
 Material:Copper, Nickel or Gold

Type SEMF2

The larger cells are identified using numbers from 1 – 57. Each large cell is sub-divided into 4, making a total of 228 identifiable cells by reference to their number and geographical location.

Overall Diameter:10 mm
 Overall Thickness:~50 µm
 Material:Copper, Nickel or Gold

- 100 Radial sectors are easily identified by reference to decimal numbers in the annular rim and alphabet letters in the four quadrants.
- A matt surface on one side is for correct positioning – matt side up.

The SEMF2 allows for easy characterization and analysis of particles and suspensions.

The SEMF3 uses an alpha-numeric index, allowing up to 25 predetermined specimens to be fixed and then located in a SEM.

Type SEMF3

25 cells are identified by reference to their alpha-numeric position. The large asymmetric cut-out feature in the rim enables the right view to be easily obtained when placing on a SEM stub.

Overall Diameter:10 mm
 Overall Thickness:~50 µm
 Material:Copper, Nickel or Gold

Ordering:

80101-Cu	SEMF1, Copper	10/vial
80101-Ni	SEMF1, Nickel	10/vial
80101-Au	SEMF1, Gold	5/vial
80102-Cu	SEMF2, Copper	10/vial
80102-Ni	SEMF2, Nickel	10/vial
80102-Au	SEMF2, Gold	5/vial
80103-Cu	SEMF3, Copper	10/vial
80103-Ni	SEMF3, Nickel	10/vial
80103-Au	SEMF3, Gold	5/vial

► Beryllium Planchets

These planchets are prepared from high purity beryllium (min. 98.5%) by electro-fusion to provide vacuum tight (~1x10⁹atm-cm²/sec) and ±10% dimensional tolerances.

Notes:

1. Beryllium is a hazardous substance. Care should be taken seriously when working with this material.
2. Beryllium is a strategic commodity that is controlled by the U.S. government for reasons of nuclear non-proliferation and anti-terrorism. Its' ECCN No is 1C230. If you export this material, you must follow the Export Administration Regulations. Diversion contrary to U.S. Law is prohibited.
3. Following is the typical Specification Limits of our Be that supply by us:

Carbon Rods, Cord, and Fiber, See Vacuum Pumps, Acc., & Evaporation Supplies, page 960 >>>>>

Gel-Pak Storage/Carrier Boxes, page 236, 377 >>>>>

Characteristic	Unit	Value	Specification Limits	
			Lower	Upper
Lot Identification: Lot Number		5077		
Chemistry Composition				
Beryllium Assay	%	99.00	98.5	—
Beryllium Oxide	%	0.90	-	1.50
Iron Content	%	0.1000	-	0.1300
Aluminum Content	%	0.04	-	0.10
Magnesium Content	%	<0.0100	-	0.0800
Silicon Content	%	0.0300	-	0.0600
Carbon Content	%	0.13	-	0.15
Other Metallic – each	%	<0.0400	-	0.0400

► Holders & Accessories

► SampleSaver™

► Portable Storage Containers

Our custom storage container for the storing and transporting of samples for SEM, TEM, FIB, AFM, etc. This device is different from a vacuum storage unit or from desiccators. The unit allows you to evacuate and backfill or purge with dry nitrogen. You can then pressurize the container to eliminate the possibility of diffusion into the container. It is ideal for shipping or storing sensitive samples from lab to lab.

Cat. #	Description	Qty
76540-01	Small Portable Storage Container, SS100	each
76540-02	Large Portable Storage Container, SS200	each

► Sample Racks for the SS100 Sample Saver™

These sample racks are designed to fit into the SS100 Sample Saver™ for the storage of TEM grid boxes or aluminum stubs that needed to store in safe environment.

Cat. #	Description	Qty
76541-10	Model SS100-TEM – TEM Grid Box Holder. Consists of 3 vented TEM grid boxes and storage rack to fit into SampleSaver™ SS100	set
76541-20	Model SS100-125 – 1/8" SEM Stub Holder. Consists of 3 tiers sample rack. Each shelf holds 5 SEM stubs with 1/8" pin. (SEM stubs not included)	set
76541-30	Model SS100-375 – 3/8" SEM Stub Holder. Consists of 3 tiers sample rack. Each self holds 3 SEM stubs with 3/8" pin (SEM Stub not included)	set
76541-40	Model SS100-125-1 – 1/8" SEM Stub Holder. Consists of 3 tiers sample rack. Bottom shelf holds 1" dia sample mount and top two shelves each hold 5 SEM stubs with 1/8" pin (SEM stubs not included)	set
76541-50	Model SS100-375-1 – 3/8" SEM Stub Holder. Consists of 3 tiers sample rack. Bottom shelf holds 1" dia sample mount and two top shelves each hold 3 SEM stubs 3/8" pin (SEM stubs not included)	set

► Sample Racks for the SS200 Sample Saver™

These sample racks are designed to fit into the SS200 Sample Saver™ for the storage of TEM grid boxes or aluminum stubs that needed to store in safe environment.

Cat. #	Description	Qty
76542-00	Model SS200-FIB – FIB Sample Holder to store SBT CastleGuard™ Holders (CastleGuard™ holders not included)	set
76542-20	Model SS200-125 – 1/8" SEM Stub Holder. Consists of 5 tiers sample rack. Each shelf holds 5 SEM stubs with 1/8" pin. (SEM stubs not included)	set
76542-30	Model SS200-375 – 3/8" SEM Stub Holder. Consists of 5 tiers sample rack. Each self holds 3 SEM stubs with 3/8" pin (SEM Stub not included)	set
76542-40	Model SS200-125-1 – 1/8" SEM Stub Holder. Consists of 5 tiers sample rack. Bottom shelf holds 1" dia sample mount and top four shelves each hold 5 SEM stubs with 1/8" pin (SEM stubs not included)	set
76542-50	Model SS200-375-1 – 3/8" SEM Stub Holder. Consists of 5 tiers sample rack. Bottom shelf holds 1" dia sample mount and four top shelves each hold 3 SEM stubs 3/8" pin (SEM stubs not included)	set

► FIB Sample Holder

Fortress™ FIB Holder with CastleGuard™ Protection

Fortress™ FIB Holders are reusable holders that secure FIB sample that are held in a specific orientation without the use of adhesives, adhesive tabs, or conductive paints. Fortress™ FIB Holders can be used to position a thin, whole or cut TEM grid / disk in an orientation such that either in-situ or an ex-situ. FIB lift-out technique can be used to attach a FIB-prepared sample. Physical protection of the mounted sample on the grid is provided with the CastleGuard™ protection design. Up to 30 Fortress FIB Holders can be stored in a single SS200 Sample Saver™ storage container.

Features:

- Unique clamping mechanism secures sample without over tightening
- Standard 1/8" pin mount fits most FIBs and SEMs
- Peripheral support structure protects specimens during handling and transport
- Economical design enables user to prepare and store samples on the same holder
- Compatible with Sample Saver™ Storage containers for secure storage and transport in an inert environment

► Fortress™ FIB Holder – Low Profile

Low Profile Fortress™ FIB Holder to hold either a standard FIB lift out specimen on a grid or an H-Bar cut Sample.

► Fortress™ Sample Loader

Securely holds the Fortress™ Low Profile holder under a stereomicroscope and permits viewing from 2 angles without changing focus on the microscope.

Cat. #	Description	Qty.
75956-01	FIB sample Holder for Low Profile	each
75956-50	Fortress™ Sample Loader for Low Profile	each

► Fortress™ FIB Holder – High Profile

High Profile Fortress™ FIB Holder to hold a standard FIB lift-out specimen on a grid.

► Fortress™ Sample Loader

Securely holds the Fortress™ High Profile holder under a stereomicroscope and permits viewing from 2 angles without changing focus on the microscope.

Cat. #	Description	Qty.
75957-01	FIB sample Holder – High Profile	each
75957-50	Fortress™ Sample Loader for High Profile	each

Storage Boxes

Specimen Mount Holders

1) Box with insert and lid; holds 4 of 1/2" dia. (12.5mm) surface and 1/8" dia. (3.2mm) pin mounts

76600	Mount Holder Box, Pin Type	each
76610	Mount Holder Box, Pin Type	10/pk
76620	Mount Holder Box, Pin Type	100/pk

2) Box with insert and lid; holds 4 of 10mm x 10mm mounts

76700	Mount Holder Box for Jeol	each
76710	Mount Holder Box for Jeol	10/pk
76720	Mount Holder Box for Jeol	100/pk

3) Box with insert and lid; holds 4 of 12.5mm x 12.5mm mounts

76730	Mount Holder Box for Jeol 840	each
76732	Mount Holder Box for Jeol 840	10/pk
76734	Mount Holder Box for Jeol 840	100/pk

4) Universal Reversible Mount Holders

Box with insert and lid; holds 12 of 10 and 15mm diameter mounts or 12 of 3.2mm (1/8") pin mounts

76500	Universal Mount Holder	each
76510	Universal Mount Holder	10/pk
76520	Universal Mount Holder	100/pk

5) Sample Mount Storage Box

A soft silicone base in a hinged plastic box; the base has 9 cavities, each 1" (25mm) in diameter and 1/4" (6mm) deep. The box accommodates up to 9 mounting stubs of either 1" (25mm) in diameter or a 1/8" diameter pin. Overall measurements: 4 3/4" (L) x 3 3/8" (W) x 1 1/4" (H) (12cm x 9.5cm x 3cm)

76525	Mount Holder	each
-------	--------------	------

SEM Single Mount Storage Tube

A plastic tube and plug. The pin mount 1/8" (3.1mm) in diameter is inserted securely to the plug and protected by the tube. Ideal for storage or mailing.

76530-01	SEM Single Mount Storage Tube	10/pk
76530-05	SEM Single Mount Storage Tube	50/pk
76530-10	SEM Single Mount Storage Tube	100/pk

SEM Single Mount Storage Tube and Mailer, for Hitachi

A plastic tube and plug for M4 threaded Hitachi mounts. 15mm in diameter Tube. A 15 mm Hitachi mount can be inserted securely to the plug and then protected by the tube. Ideal for storage as well as mailing. The internal diameter of the tube is 0.83" (21mm). The Outer measurements of the tube are: 0.9" (23mm) x 2.05" H (52mm)

76535-01	SEM Hitachi Single Mount Storage Tube	10/pk
76531-05	SEM Hitachi Single Mount Storage Tube	50/pk

EMS Specimen Storage Boxes for Hitachi Mounts

SEM Paper Storage Box for Pin Mounts

An inexpensive solution for storing Pin Mounts

With a Pop Up box which stores up to 8 mounts: 1/2" (12.7mm) head, 1/8" (3.2mm) diameter pin.

Box Dimensions: 7cm long x 3.8cm wide x 3.5cm high (2 3/4 x 1 1/2 x 1 3/8")

76505	SEM Paper Storage Box	50/Pack
-------	-----------------------	---------

Wooden Storage Box

EMS offers a high end wooden storage box for the storage of 12.7mm (1/2") pin mounts. The box can store up to 128 mounts in rubber foam with complete indexed sides

76507	Wooden Storage Box for Pin Mounts	each
-------	-----------------------------------	------

EMS18 Pin Mount Storage Box and Holder

The EMS Specimen mount Box and holder is a unique storage box for Pin mounts with 3.2mm (1/8") Pins. The box is numbered 1-18 and it can accept mounts ranging in size from 6.4mm to 50 mm. With the ability to hold as follows: 18 of 12.7mm; 8 of 25mm; 2 of 32mm and even 38 or 50 mm The maximum specimen height between mount surface and closed lid is 16mm (5/8").

-------	-------------------------------------	------

EMS- Hitachi SEM Mount Storage Box

EMS introduces a unique box for Hitachi SEM mounts with M4 threaded hole in the base. The box is numbered 1 - 10 to accommodate Hitachi mounts from 15 to 32mm diameter. The box can hold the following:

- 10 x 15mm mounts
- 8 x 25mm mounts
- 2 x 32mm mounts

► Certified Conductive Adhesives

EMS introduces a new reliable line of conductive adhesives which are certified by the Bureau Veritas Quality International. **Quality Standards:** ISO 9001; EN29001; ANSI/ASQC Q91

► Silver Conductive 18DB70X

Silver Conductive Coating 18DB70X is a direct substitute for Silver Conductive Fluid 416, which is no longer available. This material was specially formulated for use in geographic areas that demand the use of low VOC (Volatile Organic Compounds) products. It provides low ohms at very thin dry film thickness on almost any surface, and exhibits excellent long term shielding and grounding properties.

Typical Properties:

■ As supplied (Liquid)

PigmentSilver
BinderAcrylic
Solids content by weight50.8% ± 5%
Density13.9 lb/gal (1.67kg/l)

■ As applied:

VOC0.5 lb/gal (59.6g/l)
DiluentAcetone (1:1 ratio by volume)

Drying time

5 minutes air dry to touch/10 minutes to handle then 5 minutes at 180°–225°F (82° – 107°C) or air cure for 24 hrs.

■ When dried:

Service temperature300°F (150°C)
Sheet resistance0.015 ohms/sq. in./mil (25µm)
Attenuation.....75 dB

RT 12684-15 Silver Conductive Coating 15 g

► Silver Conductive Adhesive Paste 478SS

Our adhesive 478SS is a conductive, silver-based polymer which is used for thick film coatings where liquid silver is not an option. Once cured, it offers a very high Tg (glass transition temperature) 153°F (67°C) to prevent blocking, and offers superior adhesion to polyester film. Adhesive 478SS can be cured at 200°F (93°C) within 15 minutes. Higher temperatures will reduce the time needed to achieve a final cure.

■ Typical Properties (as supplied):

PigmentSilver
BinderPolyester
ColorSilver
DiluentCarbitol Acetate
ConsistencyPaste (13,000-28,000 cps)
Solid content.....72.5-75.5%
Flash point230°F (110°C)
Shelf life6 months under original seal

■ Typical Properties (as cured):

ColorSilver
Sheet Resistance ..<0.025 ohm/square inch @1 mil

RT 12685-15 Silver Conductive Adhesive 478SS 15g

RT 12685-25 Silver Adhesive 478SS Thinner 25ml

► Silver Conductive Adhesive 503

A High Temperature Conductive Paint

Silver paint 503 is a flexible, high temperature conductive material designed for a wide variety of uses, and adheres to most substrates.

Advantages:

- Withstands ambient temperatures of over 500°F (260°C)
- Remains flexible over temperature range of –40°F to 500°F
- Highly conductive – good adhesion to substrates
- Dries at room temperature
- Ready to use – easy to apply

■ Typical Properties (as supplied):

PigmentSpecially Treated Silver 56%
Binder.....Fluoroelastomer
CarrierMethyl Isobutyl Ketone (MIBK)
ColorSilver - Consistency: fluid
Density.....14.6 lbs/gal (1.75kg/L)
Solid content by volume18%
Weight solids62%
Viscosity.....1700cps

Shelf life for this product is two years under original seal. Store in cool place

■ Typical Properties (as cured):

Color.....Silver
Service temperature525°F (275°C)
Sheet resistance0.05 ohms/sq. in./1 mil dry film

Drying

Air dry coated part approximately 10 minutes (depending on humidity) before carrying out resistance checks. Air dry to touch in 30 seconds and it is ready for use in 2 minutes.

RT 12686-15 Silver Conductive Adhesive 503 15g

► Carbon Conductive Adhesive 502

A High Temperature Conductive Paint

Conductive Adhesive 502 is a combination of specially processed carbon particles in a fluoroelastomer resin system designed to provide high resistance values. In its cured form, it exhibits both high and low temperature flexibility and moisture resistance.

Advantages:

- Withstands ambient temperatures of over 500°F (260°C)
- Remains flexible over temperature range of –40°F to over 500°F (260°C)
- Cures at room temperature
- Good adhesion to a variety of substrate
- Excellent oxidation resistance
- Ready to use - easy to apply

■ Typical Properties (as supplied)

PigmentSpecially Processed Carbon
Binder.....Fluoroelastomer
DiluentMethylEthylKketone (MEK)
ColorBlack
ConsistencyFluid
Density7.2lbs/gal (0.87 kg/l)
Solid content by weight13%
Viscosity600 ± 200 mPas
(Brookfield RVT @ 20rpm)
Flash point.....23°F (-°5C)

Shelf life for this product is one year under original seal. Store in cool place

■ Typical Properties (as cured)

ColorBlack
Maximum service
Temperature:525°F (275°C)
Sheet resistance.....130 ± 100 ohms/sq.in./1 mil dry film

Drying

Air drying of the product is adequate for most applications. To assure complete solvent loss, the coating can be baked for 15 minutes at 302°F (150°C)

RT 12684-30 Carbon Conductive Paint 502 30 g

➤ **Certified Conductive Adhesives (cont.)**

➤ **Graphite Conductive Adhesive 154**

Adhesive 154 is an easy-to-apply resistance coating designed to provide high lubricity, conductivity, and excellent release properties to many non-conductive substrates, including most plastics. It is made from a dispersion of colloidal graphite in an isopropanol base which quickly air-dries, forms an uniform thin film adherent layer. Air dries to touch in 5 minutes and is ready for use in 30 minutes. After air drying, bake for 5 minutes at 167°F (75°C) to achieve optimum coating qualities in a shorter curing cycle.

■ **Typical Properties (as supplied)**

Pigment	Graphite
Color	Black
Binder	Cellulosic resin
Carrier	Isopropanol
Diluent.....	Isopropanol or equivalent
Consistency	Liquid
Weight solids	20%
Volume solids.....	14%
Flash point	52°F (11°C)
Shelf life	6 months under original seal

■ **Typical Properties (as cured)**

Color	Matte black
Service temp.	150°F (65°C)
Sheet resistance	1.2 K ohms/sq inch
.....	@ 1 mil dry film

RT 12691-30 Graphite Conductive Adhesive 154 30g

➤ **Graphite Conductive Adhesive 112**

Adhesive 112 is an air drying graphite coating of unusually high conductivity. It provides excellent static bleed properties and acts as a protective energy absorbing layer. It also offers good shielding performance (30-50 db over 50-450 MHz) at a coating thickness of 2 mils. It is water based and useful in solvent prohibited applications.

To use: Air dry until all water has flashed off. Air dries to touch in 20 minutes, to handle in 25 minutes. It will continue to harden for 24 hours. It can be forced dried at temperatures up to 160°F (71°C).

■ **Typical Properties (as supplied)**

Pigment	Graphite
Binder	Acrylic
Diluent	None
Color	Black
Solid content	34%
Shelf life	6 months under original seal

■ **Typical Properties (as cured)**

Color	Black
Service temp.....	350°F (190.8°C)
Sheet resistance:	20 ohms/square inch
.....	@ 1 mil dry film

RT 12693-30 Graphite Conductive Adhesive 112 30g

➤ **Colloidal Compounds and Conductive Adhesives**

➤ **A) Silver Adhesives**

Liquid; Colloidal Silver: 1-Methoxy-2-propanol base. Fast drying. Average grain size less than 1 µm and Silver content is 60%. Sheet resistance is 0.02 ohm per square inch @ 1 mil thickness. Comes with a brush attached to the cap. Service temperature is 30 minutes at 200°C.

RT 12630 Silver Liquid 15g

RT 12641 Colloidal Silver Extender 25ml

Paste; Colloidal Silver: Clear Lacquer base. Thick base — ideal for non-flowing requirements. Easily applied with micro-spatula or wooden toothpick. Particle size ranging from 0.4–1 µm. 80% are less than 1 µm. Cure in 16–20 hours at room temperature or 30 minutes at 125–150°C

RT 12640 Silver Paste 25g

RT 12641 Colloidal Silver Extender 25ml

Wooden Picks, See Specimen Prep. page 366 >>>>

➤ **B) Graphite Adhesives**

Water Base: Flat surface texture. The average flake size is 1µm. Service temperature: 200°C.

RT 12650 Graphite, Water base 50g

Isopropanol base: Flat surface texture. The average flake size is 1µm. Service temperature is 65°C.

RT 12660 Graphite, Isopropanol base 30g

RT 12661 Graphite Extender 30ml

➤ **C) CCC Carbon Adhesive**

An electrically Carbon Conductive Cement for specimen mounting in all SEM work. After drying of the cement, immediate investigation of conductive specimens is possible. Non-conductive specimens need only to be coated with carbon or metal. Thinner is available if the cement viscosity is too thick.

RT 12664 CCC Adhesive 30g

RT 12665 CCC Thinner 30ml

➤ **D) Leit-C-Plast**

A special adhesive with very high electrical conductivity and permanent plasticity for the preparation of big specimens in SEM work.

RT 12667 Leit-C-Plast 15g

➤ **E) Tempfix Adhesive**

A thermoplastic adhesive for mounting powder specimens and small particles for SEM. It does not contain any solvents and it is stable in high vacuum. It is not sticky at room temperature but becomes adhesive at 40°C and melts at 120°C. Tempfix may also be used as an embedding medium.

RT 12668 Tempfix Adhesive Set each

TECHNICAL TIP

Mounting Powders, Granules, And Fibers

The thermoplastic adhesive, Tempfix (EMS Cat.# 12668), is an excellent smooth embedding medium for stabilizing powders, granules and fibers. Tempfix becomes sticky at 40°C and melts at 120°C. To use: spread a thin layer over a sample support disc and allow to cool. The sample is then sprinkled on the hard surface and the temperature is raised to 40°C for 30-60 seconds and allowed to cool again to room temperature. Excess particles are then removed by gentle brushing or compressed air. At room temperature Tempfix has a smooth featureless surface that allows specimens to be imaged and clearly distinguished from the support media. Silvio Marchese-Ragona, Renee Jobe, Aleda Jacobs. "AFM Preparation Techniques for Bulk and Powder Samples". EMSA Bulletin 22:3 Nov., 1992.

► Certified Colloidal Compounds

► EMS Conductive GOLD Paste

► EMS Conductive Epoxy Gold-Paste

This EMS one part Epoxy Gold Paste is a gold-filled conductive bonding, exhibiting high electrical conductivity and bond strength. This Gold Paste is used in preference to silver-epoxy or other silver preparations to avoid silver migration problems, or when a higher signal is required.

This Gold Paste is well suited to all SEM work, and it bonds well to alumina ceramic substrate, phenolic circuit boards, and transistor headers. It is also useful in a variety of applications in solid state and hybrid circuits including attachment, bonding semiconductor devices, heat sinks, capacitor chips.

Properties of Epoxy Gold-Paste:

Composition:	88% Gold
System:	One-part epoxy
Viscosity:	175,000 cps
Pot Life (25°C):	6 months
Cure:	15 hrs. @150°C, or 1 hr. @ 150°C plus 2 hrs. @200°C
Elec. Resist (Ohm-cm):	4 x 10 ⁴
Bond Shear Strength:	1000 psi
Outgassing (postcure):	0.70% 1000 hrs @125°C
Thinner:	Butyl carbitol acetate or butyl cellosolve acetate
Serv. Temp. Range:	-65°C to +200°C

12640	Gold Epoxy Paste	2 g
12685-25	Gold Thinner(Butyl Carbitol Acetate)	25 ml

► EMS Conductive Gold-Paste

This EMS Conductive Gold-Paste is a one part adhesive. Fast drying – dries at room temperature. Maximum service temperature is 65°C. This adhesive is not for permanent use, useful for testing and temporary work where a high signal is required from the adhesive.

Gold content is ~75%, including sphere sizes < 2 µm, and flake size <10 µm, in organic binders and a solvent. Keep refrigerated for good shelf life.

Sheet resistance is 0.02 to 0.05 ohm-cm @ 1 mil thickness.

12642	EMS Conductive Gold-Paste	2 gm
12643	Conductive Gold-Paste Extender	25ml

► Two Part Conductive Silver Epoxy

This electrically conductive silver epoxy is used for adhering samples as well as solderless

connections such as bonding in electric design, prototype and repair work, circuit board repair, surface mount connections, static discharge, shielding and grounding. It is also ideal for the bonding of heat sensitive components. Its curing time is within ten minutes at 100°F (38°C), or at room temperature. Conductivity is 0.001 ohm/cm.

12642-14	Two Part Silver Epoxy	14g/kit
-----------------	-----------------------	---------

► Conductive Silver Pen

This pen is designed for making instant conductive

silver traces. It is ideal for applying samples to SEM stubs. A unique valve tip allows for very smooth flow with normal writing pressure and it is spring loaded to prevent clogging. For conductivity traces, solderable terminations are possible using a 250°F cure for 15-20 minutes. Tin, lead, or silver solder can be used (Do not exceed 350°F for more than 5 seconds). Each pen is filled with approximately 100 feet of traces. Silver content: 39-45% with less than 10 micron diameter. The thinner that is used for this pen is Butyl Acetate.

12644-01	Conductive Silver Pen, Standard Tip	each
12644-02	Conductive Silver Pen, Micro Tip	each

► Flex Conductive Pen

This micro-tip pen is used for drawing flexible conductive silver traces on Mylar® and any flex

circuitry. Dries in minutes. 8.5g (0.3oz)

12645-01	Flex Conductive Pen	each
-----------------	---------------------	------

► Opaque White, Extra Fine Pen

Permanently mark on nearly any surface in white color and the marking is waterproof. This pen is ideal for SEM, marking sample identification on carbon tabs, aluminum stubs, conductive tape or any similar surface. The pen contains xylene.

72168-01	Opaque White Pen	each
-----------------	------------------	------

► Graphite Spray

An easy to use graphite spray to coat small samples. Its electrical resistance is 1-2 Kohm/sq" at 1 mil thickness. It is fast drying and produces a very flat, thin, and uniform graphite film. Its service temperature is up to 204°C.

12648	Graphite Spray	450g
--------------	----------------	------

► EPO-TEK – Epoxy Conductive Adhesive

► EPO-TEK® EE129-4

Epo-Tek® EE129-4 is a room temperature cure, silver-filled epoxy, designed for making electrical connection in SEM mounting sample, circuit assembly, semiconductor, LCD applications.

Epo-Tek® EE129-4 comes with two parts: A & B and mixing ratio is 1:1. Shelf life is one year at room temperature

Works well with surface like Au, Ag-Pd, Cu, brass, Kovar, stainless steel, as well as ceramic, PCB, solder masks, most plastic and glasses

- Low temperature cures capable from 23°C to 80°C.
- Suggested for cryogenic cooling applications
- Works well in SEM, microscopy applications
- Works well in aerospace hybrid circuits and ITO electrodes in LCD packaging and assembly
- Reasonable pot life of 3 hours, allows for preparation.
- Smooth thixotropic paste allows for many way of application

Maximum Bond Line Cure Schedules:

100°C.....	15 minutes	23°C.....	24 hours
80°C.....	1 hour	Pot Life.....	3 hours
70°C.....	2 hours		

Typical Properties *(to be used as a guide only, not a specification)*

Physical Properties:	
Color:	Part A – silver; Part B – silver
Consistency:	Smooth, thixotropic – 4000 cPs
Viscosity (@ 100 RPM / 23°C):	2,000 – 4000 cPs
Thixotropic Index:	4.6
Glass Transition Temp (Tg):	≥ 45°C (Dynamic cure 20 – 200°C / ISO 25 Min; Ramp -10 – 200°C @20°C/Min)
Coefficient of Thermal Expansion (CTE):	Below Tg: 30 x 10 ⁻⁶ in/in/°C Above Tg: 227 x 10 ⁻⁶ in/in/°C
Shore D Hardness:	63
Lap Shear Strength @ 23°C:	1,110 psi
Die Shear Strength @ 23°C:	≥ 5 kg / 1,700 psi
Weight Loss:	@200°C: 0.18%; @250°C: 0.54%; @300°C: 2.06%
Degradation Temp (TGA):	303°C
Operating Temp:	Continuous: -55°C to 150°C Intermittent: -55°C to 250°C
Storage Modulus @ 23°C:	156, 318 psi
Ion:	Cl ⁻ 223 ppm; Na ⁺ 26 ppm NH ₄ ⁺ 22 ppm; K ⁺ 12 ppm
Particle Size:	≤ 45 microns
Electrical Properties:	
Volume Resistivity @ 23°C:	≤ 0.0003 Ohm-cm
Volume Resistivity @ 23°C (23°C/24 hour cure):	0.01 Ohm-cm
Thermal Properties	
Thermal Conductivity:	1.60 W/mK

► EPO-TEK® H20E

Epo-Tek® H20E is a two component, 100% solid silver-filled epoxy system, silver-resin paste and liquid hardener, mixing ratio is 1:1.

- Epo-Tek H22E features high thermal conductivity, and is very well suited for extensive high temperature applications (300 – 400°C)
- Epo-Tek H20E is also a conductive adhesive of choice for old or new applications.
- Its applications include: chip bonding and electronic bonding as well as SEM mounting.
- H20E contains no solvents and will not outgas.
- When cured, H20E is resistant to solvents, resin and moisture
- Long Pot life (2½ days)
- Shelf life is one year when store at 23°C

Maximum Bond Line Cure Schedules:

175°C.....	15 minutes	120°C.....	2 hours
150°C.....	1 hour	80°C.....	24 hours

Typical Properties *(to be used as a guide only, not a specification)*

Physical Properties:	
Color:	Part A – silver; Part B – silver
Consistency:	Smooth, thixotropic
Viscosity (@ 100 RPM / 23°C):	2,200 – 3,200 cPs
Thixotropic Index:	3.69
Glass Transition Temp (Tg):	≥ 80°C (Dynamic cure 20 – 200°C / ISO 25 Min; Ramp -10 – 200°C @20°C/Min)
Coefficient of Thermal Expansion (CTE):	Below Tg: 31 x 10 ⁻⁶ in/in/°C Above Tg: 158 x 10 ⁻⁶ in/in/°C
Shore D Hardness:	75
Lap Shear Strength @ 23°C:	1,475 psi
Die Shear Strength @ 23°C:	≥ 5 kg / 1,700 psi
Weight Loss:	@200°C: 0.59%; @250°C: 1.09%; @300°C: 1.67%
Degradation Temp (TGA):	425°C
Operating Temp:	Continuous: -55°C to 200°C Intermittent: -55°C to 300°C
Storage Modulus @ 23°C:	808, 700 psi
Ion:	Cl ⁻ 73 ppm; Na ⁺ 2 ppm; NH ₄ ⁺ 98 ppm; K ⁺ 3 ppm
Particle Size:	≤ 45 microns
Electrical Properties:	
Volume Resistivity @ 23°C:	≤ 0.0004 Ohm-cm
Thermal Properties	
Thermal Conductivity:	2.50 W/mK
Thermal Conductivity:	29 W/mK Based on Thermal Resistance Data: R=L x K-1 x A-1
Thermal Resistance:	(Junction to Case): TO-18 package with nickel-gold metallized 20 x 20 mil chips and bonded with Epo-Tek H20E (2 mil thick)

Thermal Properties	
Thermal Conductivity:	3.25 W/mK

► EPO-TEK® H22

Epo-Tek® H22 is a two component, silver-filled epoxy system. Mixing ratio of silver resin paste and liquid hardener is 100:4.5. Pot life 16 hours, and shelf life is 6 months at room temperature.

- Smooth, free-flowing, slightly thixotropic paste
- High Tg allows it to be used for high temperature applications ≤300°C)
- Contains no solvents – It is a NASA approved low outgassing epoxy.
- Excellent resistance to solvents, chemicals and moisture
- Extended pot life and fast curing at low temperature <100°C
- Designed for die bonding and sealing hybrid circuit. Recommended for SEM small angle cleavage and wafer bonding.

Maximum Bond Line Cure Schedules:

150°C.....	5 minutes
120°C.....	10 minutes
100°C.....	20 minutes
80°C.....	45 minutes

Typical Properties (to be used as a guide only, not a specification)

Physical Properties:

RT 12673-22 Epo-Tek® H22 Adhesive 1 oz

► Loctite Adhesives

Loctite 409™ Super Bonder®

For a general-purpose gel adhesive, clear, gap fills 0.010"; surface insensitive Ethyl, tensile shear strength 3,200 psi, and temperature range -65°F to 180°F. Cure speed: fixture - 75 seconds, full - 24 hours.

Loctite 454™ Prism®

For use with porous surfaces, clear, gap fills 0.010", surface insensitive Ethyl, gel type, tensile shear strength 3200 psi, temperature range -65°F to 180°F. Cure speed: fixture - 15 seconds, full - 24 hours.

Loctite 4861™ Prism®

For use with flexible surfaces, clear, gap fill 0.008", surface flexible Alkyl, viscosity 4,000 cP, tensile shear strength 2465 psi, temperature range -65°F to 212°F. Cure speed: fixture - 25 seconds, full - 24 hours.

Loctite 349™ Impruv®

For bond glass/metal, appearance: clear/straw, cure type: UV, viscosity: 9,500cP, shore hardness: D70, temperature range: -65°F to 266°F

Loctite 4011™ Prism®

Designed for the assembly of difficult-to-bond materials, such as wood, paper, leather and fabric. Suitable for use in the assembly of disposable medical devices. The product provides rapid bonding of a wide range of materials, including metals, plastic and elastomers. Cure speed: 2 to 20 seconds depending on the material.

Chemical type: Ethyl cyanoacrylate, transparent, colorless to straw colored fluid. One part required no mixing. Low-viscosity (100 cP). Cure by humidity, and temperature range -65°F to 180°F

RT	72570-09	Loctite Super Bonder 409	3 g Tube
RT	72571-54	Loctite Prism 454 Adhesive	3 g Tube
RT	72572-61	Loctite Prism 4861 Adhesive	20 g
RT	72582-01	Loctite 349 Impruv Adhesive	50 ml
RT	72573-11	Loctite Prism 4011 Adhesive	20 g

Loctite 404 Quick Set Tissue Adhesive

This adhesive is perfect for those applications where a quick-curing adhesive is needed. Comes in an applicator-tipped bottle, 0.33 oz. (10ml).

RT 12687-01 Loctite 404 Quick Set Tissue Adhesive 10ml

Loctite™ 460 Adhesive

Our Loctite™ 460 is a quick curing low viscosity glue that can be used for mounting samples to any substrate (glass, metal and/or plastic). It is soluble in acetone. Comes in an applicator-tipped plastic bottle — 20 g.

RT 12646-08 Loctite™ 460 Adhesive each

Loctite® Fixmaster® Poxy Pak™, Fast Cure Epoxy

This fast cure, general purpose epoxy bonds virtually any material. It will also fill or seal cracks and rebuild worn surfaces. Comes in a 1 oz. syringe with a built-in plunger for easy dispensing without equipment. Working time is approximately 4 minutes. Includes nozzle and mixing stick. This unique adhesive may be made electrically conductive with the addition of any conductive powder (Silver, Carbon etc.)

RT 12646-09 Loctite® Fixmaster® Poxy Pak™, Fast Cure Epoxy each

► Krazy Glue™ Pen

The one we all know and have used. Ready to use. Requires no mixing or preparation. This pen contains cyanoacrylate. Clear in color and bonds immediately. Comes in a 3g tube.

RT 12646-05 Krazy Glue™ Pen each

► Mikrostik™ Adhesive, Non-Conductive

Fast drying, ultrathin clear adhesive suitable for mounting small particles which can be submerged in other adhesives. It can be diluted with methyl ethyl ketone. Quick-drying. Comes in a bottle with an applicator brush. 14 ml.

12646-01 Mikrostik™ Adhesive, Non-Conductive 14ml

► SEM Specimen Preparation Stand

Specimen mounts of different sizes are placed in the outer ring of the holder base. The center hole of the base will hold a bottle of conductive adhesive. One side of the base takes 10 of the 1/8" pin mounts; reverse side takes 10 of 10 to 15mm diameter mounts.

76750 1/8" SEM Preparation Stand each

► Adhesive Tabs

Press these self-sticking adhesive tabs to the surface of an SEM mount, then lift off tab for applying the sample. Each box contains 72 sheets of 36 tabs each. Tab measures 12mm in diameter. Non-conductive.

76760 Adhesive Tabs 2592 tabs/box

► Conductive "Lift-N-Press" Adhesive Tabs

This 1/2" (12mm) diameter conductive tabs are similar to our adhesive tabs, but they work like carbon adhesive tabs. Just remove tab from the roll, press onto surface where you want the film, lift "tab" and peel it off. The tabs can be cut to desired size before being removed from its backing, for use on smaller samples.

FEATURES:

- Smoother background – Over 99% transparent to EDS
- High strength adhesive
- Better particle detection
- Adhesive only 0.002" thick
- Content a traces of nickel (<0.6%) and copper (<0.3%)
- 250 tabs per roll.
- An affordable double-sided conductive tab for all SEM samples.

76762-01 Conductive Adhesive Tabs 250/roll

► Conductive Carbon Adhesive Tabs

Standard Carbon Conductive Adhesive Tabs – Tabs are formed by two sides of thick conductive adhesive (45 µm on each side) with the center conductive core film (35 µm). With the total thickness of 125 µm, these tabs will offer reasonably firm, smooth surfaces for a variety SEM applications, including gunshot residue analysis. Tabs are protected by white liners, which do not have to be removed when samples are ready to be mounted.

- No out-gassing
- Conductive adhesive is carbon filled acrylic glue
- Solvent free
- Adhesive can be removed by ethyl acetate, ethanol, isopropyl alcohol or alcohols
- Service temperature is up to 60°C (140°F)

Tabs contain some traces of Si, Sb, S, Fe, Mg, Na.

Thick Carbon Conductive Tabs or Image Tabs – The stiff and smooth surface conductive tabs are 260 µm thick, including 200 µm thick conductive carbonate base, coated 30 µm thick on each side with conductive adhesive. However, these tabs are not as conductive and sticky as the Standard Carbon Conductive Tabs. Thick Carbon Conductive Tabs are used for photographic background as well as for Jet Scan applications, where the tabs must be removed and filed away.

Ultra-Thin Carbon Conductive Adhesive Tabs – These tabs have Core material which is nonconductive cloth (70 µm) with Carbon Filler Conductive Adhesive (2 x 45µm). Total thickness is 160 µm.

Spectro Grade Carbon Adhesive Tabs – High purity conductive carbons for less interference signals, such as X-Ray analysis.

Ultra-Smooth Carbon Adhesive Tabs – Carbon adhesive tabs that eliminate issues with rough surfaces, insufficient tackiness, and hardness with significantly lower contaminant levels under EDS. Tabs are made in USA and very popular, and may be used in place of other conductive adhesive in many applications in conventional and field emission microscopes. They are also widely used in forensic laboratories for study of gunshots residues. Without the addition of conductive coating, small nonconductive particles can often be imaged and X-Ray analyzed, cutting down your analysis time. These tabs are composed of a thin film of strong adhesive approximately 1/2" diameter. Over 99% transparent to EDS, with a very small amount of nickel (0.6%) and copper (< 0.3%).

Refrigeration will increase shelf life but tabs need to be warmed up to room temperature before use (usually more than one hour)

Cat. #	Description	Qty.

► Low Temperature Hot Glue Gun

This low temperature mini glue gun is safe and allows for the easy application of the melt glue to the aluminum stub for the mounting of bulk or irregular shaped specimens for SEM. Comes complete with a 40" cord, and two glue sticks. Accepts 3/16" diameter all temperature or low temperature glue sticks. 110 volt, 10 watts.

72171-00	Low Temp Hot Glue Gun	each
72171-10	Low-Temp Glue Sticks	10/pk

► Rubber Cement

Excellent adhesive for all paper pasting and mountings of drawings and photographs. It is also used to adhere specimens to SEM Stubs. Any excess cured cement can be easily removed. A 4 oz bottle comes with a brush in the cap.

72170	Rubber Cement	each
-------	---------------	------

TECHNICAL TIP

THE MOUNTING OF SPECIMENS FOR SEM WITH THE COMMON GLUE GUN

Specimens are usually attached to SEM stubs by means of either sticky tape, adhesives, or melt adhesives.

- Sticky tapes are very convenient and fast; but the bonds formed are not strong or stable. In addition, it is difficult to attach large, bulk, and irregular shaped specimens with tape.
- Adhesives, usually solvent based, can form strong bonds, however, for the satisfactory operation of the coater and the SEM, the solvent must be evaporated completely which can take a considerable amount of time.
- Melt adhesives can set up strong bonds very quickly, however, the procedure for its use is cumbersome.

Mounting with melt adhesives using a common glue gun is quicker and more convenient. Several glue guns were examined and tested. The temperature at the nozzle of conventional glue guns was found to be between 180-195°C which could cause damage to heat-sensitive specimens.

However, now there is a so-called low temperature glue gun and adhesive (see New Products, Section III in this N/V) that overcomes this problem. The nozzle temperature measures only at 106°C. The general procedure is very simple: the melt is dispersed from the nozzle directly onto the surface of a stub. While the adhesive is still molten or soft, the specimen is applied to it, forming a strong bond quickly. The specimen can be repositioned by softening the adhesive with the hot nozzle of the glue gun.

There is no evidence of any degassing of the melt adhesive in either the sputter coater or the SEM. The glue gun can also be used in mounting granular or powdered specimens. A drop of melt adhesive is deposited and smeared onto the stub. The granular or powdered specimen is adhered to the adhesive by either sprinkling or dipping it.

G.W. Bailey, and J.A. Small, Editors, Proc. 50th Annual Meeting of the EMSA/MAS/MSC/SMC. (1992) pg. 410-411.

► Conductive Adhesive Tapes

► 1) Scotch Conductive Tapes:

We offer two types of foil: Aluminum foil tape (Scotch 1170) and copper foil tape (Scotch 1181) with conductive adhesive. 3" core, 1/4" (6.35mm) width x 54 ft (16.5m) long

Technical Data	Copper	Aluminum
Foil Thickness, mils	1.4	2
Total Thickness, mils (mm)	3(.076)	4(.102)
Adhesion oz/In (N/10mm)	35(3.81)	35(3.81)
Electrical Resistance		
Through Adhesive ohm/in(ohm/cm)	.005(.032)	.01(.07)
Continuous Long Term °C	155°	155°
Functional Days-Weeks °C	175°	175°

77800	Aluminum Tape, Single Sided 1/4" x 18yds	1 roll
77799	Aluminum Tape, Single Sided 1/2" x 18yds	1 roll
77798	Aluminum Tape, Single Sided 1" x 18yds	1 roll
77801	Copper Tape, Single Sided 1/4" x 18yds	1 roll
77802	Copper Tape, Single Sided 1/4" x 18yds	1 roll

Double Sided Copper Conductive Tape

With the same technical properties of our 77802 shown above this conductive tape is 12.7mm(W)x16.4m(L).

77802-22 Copper Conductive Tape, Double Sided each

► 2) SEM Conductive Tapes:

Technical Data	Cu Contained Nickel Tape	Al Contained Nickel Tape
PAD	Pressed thin Cu	Pressed thin Al
Overall Thickness	0.075mm	0.09mm
PAD	0.035mm	0.05mm
Adhesive	0.040mm	0.04mm
Conductive resistivity	0.004ohm/sq. Inch	0.008ohm/sq. Inch
Adhesive Power/25mm width	920 gf	840 gf
Capacity after 60 min	0.1mm	0.1mm

We now offer a new line of conductive tapes, that are electrically conductive and offer a clean background. They were developed especially for SEM.

77810	Copper/Nickel Tape	each
77811	Copper/Nickel Tape	5 Rolls/pk
77813	Aluminum/Nickel Tape	each
77814	Aluminum/Nickel Tape	5 Rolls/pk

► 3) Double Sided Carbon Tape

With carbon double-sided tape, small particle sizes, such as 15-20 microns, can be mounted on the adhesive and produce good background structure. Our Double sided Carbon tape is also available in five widths to accommodate varying specimen mount surface sizes and applications.

Double sided Carbon Tape	
PAD	Isolate unwoven cloth
Overall Thickness	0.16mm
PAD	0.07mm
Adhesive	0.045mmx2
Conductive resistivity	50ohm/sq. Inch
Adhesive Power/25mm width	1,000 gf
Capacity after 60 min	0.2mm

77816	Double Sided Adhesive Carbon Tape 8mm(W) x 20m(L) (5/16" x 65)	each
77817	Double Sided Adhesive Carbon Tape 8mm(W) x 20m(L) (5/16" x 65)	5 Rolls/pk
77817-05	Double Sided Carbon Tape, 5mm(W)x20m(L)	each
77817-12	Double Sided Carbon Tape, 12mm(W)x20m(L)	each
77817-20	Double Sided Carbon Tape, 20mm(W)x20m(L)	each
77817-50	Double Sided Carbon Tape, 50mm(W)x20m(L)	each

Same as above however with Aluminum base as opposed to the unwoven base above. Offers a smoother surface

77817-05-AI	Double Sided Carbon Tape, 5mm(W)x20m(L)	each
77817-08-AI	Double Sided Carbon Tape, 8mm(W)x20m(L)	each
77817-12-AI	Double Sided Carbon Tape, 12mm(W)x20m(L)	each
77817-20-AI	Double Sided Carbon Tape, 20mm(W)x20m(L)	each
77817-50-AI	Double Sided Carbon Tape, 50mm(W)x20m(L)	each

► 3a) Carbon Conductive Tape, Double Coated

EMS introduces this unique double sided carbon tape which is 260 microns in thickness. The base which is Polycarbonate and 200 microns thick has on both of its sides 30 microns of conductive glue giving it a total thickness of 260 microns. The tape has one transparent liner on one side and a white thicker one on the reverse which protects the tape in shipping.

Specifications:

Core Diameter:	3" (76mm)
Adhesive:	Carbon Filled Acrylic Glur
Remover:	Ethyl acetate, ethanol, isopropanol and or alcohol
Temperature:	60°C(140°F)-Maximum
Impurities:	Cu, Si, Sb, S, Na, P, Fe and Mg*

* These are considered to be small impurities but they may be present

77819-12	Double sided Carbon Conductive Tape, 12mm (W) x 5m (L)	each
77819-25	Double Sides Carbon Conductive Tape, 25mm (W) x 5m (L)	each
77819-65	Carbon Conductive Tape in sheet form, 65mm (W) x 300mm (L)	each

► 4) Double Sided Conductive Cohesive Sheets

Features:

- Minimum impurities - Maximum conductivity.
- Produces minimum gas under vacuum conditions.
- Easy handling.

These conductive cohesive sheets offer good adhesion to the specimen and yield good conductivity and background structures, even with particles as small as 15 microns.

Sheet size: 5cm(W)x12cm(L)

Technical Data	Thickness	Adhesive Power	Conductive Resistivity
Silver Sheet	0.13mm	880 gf/25mm	0.00ohm/5mm ²
Carbon Sheet	0.16mm	1,100 gf/25mm	4,000ohm/5mm ²
77820	Silver Cohesive Sheet		5/pk
77822	Carbon Cohesive Sheet		10/pk
77822-01	Carbon Cohesive Sheet (Technical Grade)		10/pk

► XYZ-Axis Electrically Conductive, 3M™ Double Sided Tape 9712

3M™ XYZ-Axis Electrically Conductive Tape 9712 is an isotropically conductive pressure sensitive tape. The tape consists of a 3M adhesive loaded with conductive fibers. The result is a double-sided tape providing both good adhesion and good electrical performance with very high conductivity.

The 9712 Tape is an excellent choice when needing to bond your samples for all SEM work.

Specification:

Adhesive Type:	Filled Acrylic
Filler Type	Conductive Fibers
Release Liner	Silicone treated PolyCoated Kraft Paper
Remover:	Acetone
Thickness Approximate:	Tape Only; .005" (.127mm) Release Liner; .004" (.010mm)
Temperature Range:	Short Term Exposure; 250°F (121°C) Long Term Exposure; 158°F (70°C)

Electrical Properties: Contact Resistance

Substrate Tested			
Aluminum/ Aluminum	Aluminum/ Stainless Steel	Copper/ Aluminum	Copper/ Copper
<24Ω	<21.5Ω	<16Ω	<.66Ω

Based upon four wire (Kelvin probe) resistance measurements made with crossed pieces of Foil/Type 9712 or 9713/Rigid plate construction using a 1.0" x 1.0" square piece of 3M tape Type 9712 or 9713. The rigid metal surface was prepared with a Scotch-Brite™ pad to roughen the surface and cleaned with isopropyl alcohol.

Adhesion Properties:

Substrate	Adhesion in oz./in(g/cm)			
	20 Min at 72°F (22°C)	24 Hours at 72°F (22°C)	20 Min at 158°F (70°C)	24 Hours at 72°F (22°C)
Stainless Steel	>41(457)	>42(468)	>43(479)	>53(590)
Aluminum	>35(390)	>33(367)	>36(401)	>43(479)
Copper	>47(412)	>39(434)	>43(479)	>55(613)

The tape is available in 3 sizes and it comes on a 3" Core(76mm)

Cat. #	Description	Qty
77808-63	XYZ-Axis Electrically Conductive, 3M™ Double Sided Tape, 9712, 6.35mm (W) x 32.9m (L)	each
77808-12	XYZ-Axis Electrically Conductive, 3M™ Double Sided Tape, 9712, 12.7mm (W) x 32.9m (L)	each
77808-25	XYZ-Axis Electrically Conductive, 3M™ Double Sided Tape, 9712, 25mm (W) x 32.9m (L)	each

► XYZ-Axis Electrically Conductive, 3M™ Double Sided Tape 9713

3M™ XYZ-Axis Electrically Conductive Tape 9713 is an isotropically conductive pressure sensitive tape. 3M tape 9713 conducts electricity through the thickness (Z-axis) and in the plane of the adhesive (X, Y planes) and is ideal for EMI/RFI shield and EMI/RFI gasket attachment to metal surfaces.

The tape consists of a high performance 3M adhesive loaded with conductive fibers. The result is a double-sided tape providing both good adhesion and good electrical performance. The conductive fibers in 3M tape 9713 also provide improved handling characteristics. The 9713 Tape is an excellent choice when needing to bond your samples for all SEM work

Specification:

Adhesive Type:	Filled Acrylic
Filler Type	Conductive Fibers
Release Liner	Silicone treated PolyCoated Kraft Paper
Remover:	Acetone
Thickness Approximate:	Tape Only; .0035" (.0889mm) Release Liner; .004" (.010mm)
Temperature Range:	Short Term Exposure; 250°F (121°C) Long Term Exposure; 158°F (70°C)
Outgassing:	Total Mass Loss (TML); 1.60%
(ASTM E-595)	Collected Volatile Condensed Materials (CVMC); 0.03%
	Water Vapor Recovered (WVR) 0.36%

Electrical Properties: Contact Resistance

Substrate Tested			
Aluminum/ Aluminum	Aluminum/ Stainless Steel	Copper/ Aluminum	Copper/ Copper
<2.5Ω	<2.0Ω	<1.0Ω	<0.5Ω

Based upon four wire (Kelvin probe) resistance measurements made with crossed pieces of Foil/Type 9712 or 9713/Rigid plate construction using a 1.0" x 1.0" square piece of 3M tape Type 9712 or 9713. The rigid metal surface was prepared with a Scotch-Brite™ pad to roughen the surface and cleaned with isopropyl alcohol.

Adhesion Properties:

➤ Z-Axis Electrically Conductive, 3M™ Double Sided Tape, 9703

3M™ Electrically Conductive Adhesive Transfer Tape 9703 is a pressure sensitive adhesive (PSA) transfer tape with anisotropic electrical conductivity. The PSA matrix is filled with conductive particles which allow interconnection between substrates through the adhesive thickness (the "Z-axis") but are spaced far enough apart for the product to be

electrically insulating in the plane of the adhesive. The PSA tack properties and lack of any thermal curing make tape 9703 easy to use in all applications requiring a conductive tape.

Specification:

Adhesive Type: Filled Acrylic Pressure Sensitive
 Release Liner: Silicone treated PolyCoated Kraft Paper
 Remover: Acetone
 Temperature Range: Short Term Exposure; 250°F (121°C)
 Long Term Exposure; 158°F (70°C)
 Outgassing: Total Mass Loss (TML): 0.7%
 (ASTM E-595)

The tape is available in 2 sizes and it comes on a 3" Core (76mm)

Cat. #	Description	Qty
77809-70	Z-Axis Electrically Conductive, 3MTM Double Sided Tape 9703, 6.35mm x 32.9m (1/4" x 36yds)	each
77809-80	Z-Axis Electrically Conductive, 3MTM Double Sided Tape 9703, 12.7mm x 32.9m (1/2" x 36yds)	each

➤ Scotch Double Sided Tape:

➤ 1) Without backing paper: Scotch 665

This is a non-conductive transparent tape with adhesive on both sides. There is no liner to remove and it is long lasting for permanent applications. 3" (77mm) core.

Cat. #	Description	Qty
77100	3M® 665, Double Sided, 1/4" W x 36yds (6.4mm x 32.9m)	each
77110	3M® 665, Double Sided, 1/4" W x 36yds (6.4mm x 32.9m)	5/box
77101	3M® 665, Double Sided, 3/8" W x 72yds (9.5mm x 65.8m)	each
77102	3M® 665, Double Sided, 3/4" W x 36yds (19mm x 32.9m)	each

➤ 2) With paper liner: Scotch 666

This is a non-conductive transparent tape with adhesive on both sides and white paper as a liner, which is slit in the center to facilitate its removal. This produces good adhesion and cleanliness. Comes 3 rolls inside a protective box, 3" core, 1/4" (6.35mm) W x 36 yds (32.9m) L.

Cat. #	Description	Qty
77115	3M® 666, Double Sided, 1/4" W x 72yds (6.4mmx32.9m)	each
77116	3M® 666, Double Sided, 1/4" W x 36yds (6.4mmx32.9m)	5/pk
77117	3M® 666, Double Sided, 3/8" W x 36yds (9.5mmx32.9m)	each
77118	3M® 666, Double Sided, 3/4" W x 36yds (19mmx32.9m)	each
77119	3M® 666, Double Sided, 1" Wx36yds (25.4mm x 32.9m)	each

➤ Disc (Tab) Punches

Produces discs (tabs) from sheet materials. Ticket punching type. Comes with adjustable side gauge for centering hole, 2" maximum reach. Weight 10 oz., 6 1/2" long. Useful for punching adhesive tabs for specimen mounts, or producing circle cover slips from ACLAR® films (EMS #50425 or #50426) for growing cells. Maximum thickness for punching is up to 67-mil (1.7 mm). Disc size available: 5/16", 3/8", 1/2" and 1". Complete unit includes one punch handle and one punching die.

77850-08	Punch, 5/16" (7.94 mm) Circle	each
77850-09	Punch, 3/8" (9.54 mm) Circle	each
77850-12	Punch, 1/2" (12.7 mm) Circle	each
77850-25	Punch, 1" (25.4 mm) Circle	each

Targets, See Vacuum Pumps, Acc. & Evaporation Supplies, page 962 >>>>

➤ X-Checker™

The X-Checker was the first and remains the only complete calibration aid for SEM/EDS Systems. When time is short but you want to know how well your system is performing you need the X-Checker. Each X-Checker comes with the following:

- Manganese to measure full width at half max detector resolution
- Aluminum and copper to perform spectral calibration.
- Carbon to monitor calibration at the low end of the spectra for thin window detectors.

You also get two grid sizes for checking the accuracy of your image analysis software and an easy test for monitoring the amount of vacuum pump oil contamination on your detector window.

- The X-Checker™ BN comes with boron nitride for those who need a more sensitive monitor of low end performance on thin window and windowless detectors.
- The X-Checker™ Extra is the ultimate performance monitor for the latest state of the art X-ray detectors. In addition to the standard features and boron nitride, there is a fluorine source to test resolution at the fluorine K-alpha peak (industry standard for measuring low end resolution). As well it comes with a beryllium grid for the ultimate test of detector performance.

80058-ST	X-Checker™, Standard	each
80058-BN	X-Checker™, With Boron Nitride	each
80058-EX	X-Checker™, Extra	each

QUANTOMIX™

- Attain EM-level imaging of wet samples
- Eliminate artifacts & time-consuming sample preparation
- Achieve reliable, reproducible & quantifiable results
- The biggest breakthrough is coming in a nano-package

QuantomiX WETSEM™ – A Technological Breakthrough

Introduction

Electron Microscopy Sciences and Quantomix have joined forces here in The United States to market and sell the breakthrough solutions of Quantomix's proprietary WETSEM™ Technology. This technology enables scanning electron microscopes (SEM) to image and analyze wet samples such as cells, tissue biopsies, foods and ink, in their native environment. Eliminating the need for time-consuming preparation procedures, the WETSEM™ Technology ensures that sample integrity is not compromised by artifacts. QuantomiX innovative technology opens new opportunities for application specific tools to improve drug discovery, and advances treatment and diagnostic solutions for the medical and pharmaceutical markets.

WETSEM™ Technology

Electron Microscopy (EM) is a prime tool for high-resolution imaging, which has been the cornerstone of our understanding of living organisms and our material environment.

Because EM requires samples to be placed in a vacuum, it does not lend itself for use with wet samples. In the 50 years since its development, this drawback has been a major impediment in the use of EM for biomedical research, and for many clinical and industrial applications.

Light Microscopy, on the other hand, requires only minimal sample preparation. However, the resolution of light microscopy is limited to a few hundred nanometers.

The revolutionary technology of QuantomiX solves the problem of preparing wet samples for high-resolution imaging. It closes the resolution gap between conventional electron microscopy and light microscopy and offers the convenient sample preparation of light microscopy.

For the first time, rapid and routine EM imaging of biological samples in a wet environment is now possible without the artifacts normally associated with sample preparation.

Concept

The New QX capsule completely isolates wet samples from the vacuum in the microscope chamber. This makes possible the imaging of fully hydrated samples- including food, cosmetics, ink, human, animal, plant, and microbial cells, tissues, and fluids-at resolutions unachievable with light microscopy. The QX capsule fits the standard SEM specimen stage.

The capsule combines the function of a specimen holder, cell culture dish, or a tissue specimen holder with an electron transparent, vacuum tight window. This unique receptacle permits electron microscopy of samples held in water or any other liquid medium at atmospheric pressure.

Imaging of samples in the QX capsule can be accomplished with backscattered electron detection, x-ray detection, or light detection, to reveal structure as well as material composition.

Advantages

- Artifacts associated with sample preparation techniques are eliminated.
- Sample preparation time drastically reduced or completely eliminated.
- Direct imaging of wet samples (food, cosmetics, inks, cells, tissues).
- Compositional analysis of wet samples by X-ray microanalysis.
- Wide spectrum of staining and labeling capabilities for cells and tissues.
- Ability to image unstained or unfixed cells and tissues.
- Imaging of both adherent and non-adherent cells.
- High resolution histopathology.
- Intracellular imaging in a scanning EM.
- Imaging the entire cell surface.
- Excellent preservation and imaging of lipid structures.
- Easy-to-automate sample processing and imaging.
- Ability to work with a variety of sample consistencies (pastes, foam, creams, emulsions, etc.).

Features

- Direct imaging of all types of wet samples, including suspensions, emulsions, creams, cells, and tissues.
- Rapid and simplified sample preparation.
- Compositional analysis of wet samples by X-Ray analysis.
- Excellent preservation and imaging of lipid structures.
- Easy to automate sample processing and imaging.
- Utilizes SEM backscattered electron imaging based on atomic number difference.
- Compatible with light microscopy for comparative studies.
- Single use.

WETSEM™ Product Listings

► QX-102 Capsules

The QX-102 Capsules are used for imaging various wet materials and biological samples, such as liquid samples (foods, cosmetics, oils, paints, etc.), particles in solutions, adherent and non-adherent human and animal cells, and microorganisms. The samples can be visualized either directly or by following appropriate contrast enhancement staining or labeling procedures. The capsule serves as a cell culture dish, specifically designed for the SEM. No coating or embedding of the sample are required, enabling electron microscopy imaging with easy sample preparation comparable to light microscopy.

The QX-102 Capsules are supplied sterile for single use in boxes of 24.

Cat. #	Description	Pack
QX-102-24	Cell biology and general liquid	24/pkg

ACCESSORIES FOR THE QX-102 CAPSULES:

► MP-10 Multi-well Plate

The Multi-well Plate is designed to enable parallel handling of multiple QX-102 Capsules. It serves as a well plate for holding the capsules during various manipulations, for culturing cells in QX-102 Capsules, and for inspection in an inverted light microscope. The Multi-well Plate is specially designed to maintain humidity of the samples during incubation,

and is compatible with standard laboratory equipment.

The Multi-well Plates are supplied sterile for single use in boxes of 2.

Cat. #	Description	Pack
MP-10-2	Multi-well Plate	2/pkg

► MA-4 Multi-well Aspirator

The Multi-well Aspirator system is designed to safely and conveniently aspirate liquids from the QX-102 capsules, and is required for applications that need liquid exchange in capsules during sample preparation or cell culturing.

The multi-well aspirator drains liquids simultaneously from up to four capsules placed in a row in the MP-10 Multi-well Plate.

Cat. #	Description	Pack
MA-4	Multi-well Aspirator	each

► QX Aspirator Tips

The QX Aspirator Tips are used to safely and conveniently aspirate liquids from an individual QX-102 capsule with a pipette. The tips fit on any standard pipette, and are designed to ensure safe liquid removal. In cases where multiple capsules will be used or multiple liquid exchanges are required, it is recommended to use the MA-4 Multi-well Aspirator, which drains liquids simultaneously from multiple capsules.

The QX Aspirator Tips are supplied sterile in boxes of 60.

Cat. #	Description	Pack
AT-60	QX Aspirator Tips	60/pkg

► QX Imaging Buffer

QX Imaging Buffer is a solution optimized for imaging samples in an SEM with QX-102 capsules and is formulated to minimize damage to the samples by the electron beam. It is applied on samples in the QX-102 capsules prior to SEM imaging.

The QX Imaging Buffer is supplied sterile and lyophilized.

Cat. #	Description	Pack
IB-64	QX-102 Imaging Buffer	each

► QX-102 Calibration Capsule

The QX-102 Calibration Capsule is a QX-102 Capsule that has been specially designed to assist first time users in finding optimal imaging conditions for WETSEM™ imaging in their SEM. The Calibration Capsule contains nanoparticles of two different sizes; 40 and 500 nm. The particles are easily visualized in an SEM and provide a convenient means to calibrate the parameters for optimal wet imaging conditions.

Cat. #	Description	Pack
RT-56	QX-102 Calibration Capsule	each

► PI-24 Particle Imaging Kit

When imaging particles with WETSEM™ Technology, image quality is dependent on the proximity of the particles to the QX-capsule membrane. The closer the particles are, the higher the resolution. Coating the membrane with a suitable charged polymer will attract particles to the membrane and improve the resulting image.

The particle imaging kit provides the WETSEM™ Technology user with the tools and reagents necessary to coat the QX-capsule membrane. Poly-L-Lysine is a positively charged polymer which will attract negatively charged particles. Poly [sodium 4-sulfonate] (PSS) is a negatively charged polymer which will attract positively charged particles. Aspirator tips are designed to safely aspirate the QX-102 capsules, without damaging the capsule membrane. Aspirator tip should be used with a standard calibrated pipette to aspirate liquids from the QX capsule liquid dish. To apply liquids into the liquid dish use conventional tips. The supplied distilled water is used to wash the membrane from residual reagents.

The kit contains:

- Aspirator Tips (24 units)
- Poly-L-Lysine 1% WT (1ml)
- Poly [sodium 4-styrenesulfonate] 0.3%WT (1ml)
- Distilled water (4ml)

Cat. #	Description	Pack
PI-24	Particle Imaging Kit	each

► QX-302 Capsules

The QX-302 Capsules are used for imaging various thick, non-adherent samples, such as tissue biopsies, plants and material specimens, in their natural wet state. The capsule is suitable for variable sample sizes, with a maximum diameter of 3mm and thickness of up to 1mm. No coating or embedding of the sample are required, enabling electron microscopy imaging with easy sample preparation comparable to light microscopy.

The QX-302 Capsules are supplied sterile for single use in boxes of 6.

Cat. #	Description	Pack
QX-302-6	QX-302 Capsules	6/pkg

ACCESSORIES FOR THE QX-302 CAPSULES

► MP-12 Multi-capsule Plate

The Multi-capsule Plate is designed to enable parallel handling of a number of individual QX-302 Capsules. It serves for holding the capsules during specimen preparation, and for storage.

The Multi-capsule Plates are supplied sterile and intended for single use.

Cat. #	Description	Pack
MP-12-2	MP-12 Multi-capsule Plate	2/pkg

► QX-302 Imaging Buffer

QX-302 Imaging Buffer is a solution optimized for imaging samples in an SEM with QX-302 capsules and is formulated to minimize damage to the samples by the electron beam. It is applied on samples in the QX-302 capsules prior to SEM imaging. The QX-302 Imaging Buffer includes spacers that are used during sample preparation.

The QX-302 Imaging Buffer is supplied sterile and lyophilized.

Cat. #	Description	Pack
IB-74	QX-302 Imaging Buffer	each

► QX-302 Calibration Capsule

The QX-302 Calibration Capsule is a QX-302 Capsule that has been specially designed to assist first time users in finding optimal imaging conditions for WETSEM™ imaging in their SEM. The Calibration Capsule contains nanoparticles of two different sizes; 40 and 500 nm. The particles are easily visualized in an SEM and provide a convenient means to calibrate the parameters for optimal wet imaging conditions.

Cat. #	Description	Pack
RT-58	QX-302 Calibration Capsule	each

► QX-202 Capsule

QX-202 capsules are used for in-situ SEM imaging of various dynamic hydration processes. They can be used for imaging the hydration process of cement, gypsum and other materials. The unique design of the QX-202 capsules allows extended studies to be performed inside the SEM vacuum chamber - the dynamic process can be followed for up to 24 hours, removing the need for multiple-sample imaging or repetitive venting of the SEM. There is no need for coating, drying or freezing of the samples. Simply place the sample in the capsule, seal it and image. The samples can be visualized directly using a BSE detector.

The QX-202 capsules are intended for single use and are supplied in boxes of 24 and 48 units.

Cat. #	Description	Pack
SK-202-24	QX-202 Capsules	24/pk
SK-202-48	QX-202 Capsules	48/pk

ACCESSORIES FOR THE QX-202 CAPSULES:

► MP-12 Multi-capsule Plate

The Multi-capsule Plate is designed to enable parallel handling of a number of individual QX-202 capsules. It serves for holding the capsules during preparation, and for storage.

Cat. #	Description	Pack
MP-12	MP-12 Multi-capsule Plate	2/pk

► QX Imaging Buffer

QX Imaging Buffer is a solution optimized for imaging the Calibration Capsule in an SEM. It should be applied into the Calibration Capsule prior to SEM imaging.

The QX Imaging Buffer is supplied lyophilized.

Cat. #	Description	Pack
IB-64	QX-202 Imaging Buffer	each

► Calibration Capsule

The Calibration Capsule is a capsule that has been specially designed to assist first time users in finding optimal imaging conditions for WET-SEM™ imaging in their SEM. The Calibration Capsule contains nanoparticles of two different sizes; 40 and 500 nm. The particles are easily visualized in an SEM and provide a convenient means to calibrate the parameters for optimal wet imaging conditions.

Cat. #	Description	Pack
RT-56	QX-202 Calibration Capsule	each

► Applicator (Microman M25 and tips)

Gilson Microman® pipette is specially designed to accurately displace small quantities of viscous solutions and mixtures. Also supplied is a box of single-use capillaries and pistons which are used in conjunction with the Microman M25.

Cat. #	Description	Pack
MM-25	Microman M25 and Tips	set

Applications

- Lipid Imaging and Analysis.
- Imaging lipid bodies in fully-wet cells and tissues.
- Airborne Particles.
- EDS of wet samples with QX capsules.
- Imaging particles in their fully-wet environment.
- Experimental Biology.
- Pathogen characterization.
- Subcellular organelles, cytoskeleton and motility, cell contacts, receptor distribution, extracellular matrix, tissue analysis.
- Industrial applications: food, oils, dyes, pharmaceuticals.
- Clinical diagnosis: Histopathology, cytology, oncology.
- Tissue engineering, implants and prostheses.
- Quality Control/Quality Assurance.
- Life Sciences and Medicine: Cultured and primary cells/Tissue histology/ Nerve cells and myelin imaging/ Microbiology/Viruses/ and Plants.
- Environmental and toxicological applications.
- Nanotechnology and Bio nanotechnology.
- Industrial and R & D:

► Starter Kits

► Starter Kits for the QX-102 Capsules

► QX-102 Starter Kit

The SK-102-24 Starter Kit includes QX-102 Capsules and all the necessary accessories to get started with the QuantomiX WETSEM™ technology.

The kit contains:

- QX-102 Capsules (24 units)
- MP-10 Multi-well Plates (2 units)
- MA-4 Multi-well Aspirator
- QX Imaging Buffer
- RT-56 QX-102 Calibration Capsule
- User Manual, Applications Manual, Instructional Training Movie, Imaging Quick Guide

Cat. #	Description	Pack
SK-102-24	QX-102 Starter Kit	each

► QX-102 Starter Package (w/o aspirator)

The SP-102-24 Starter Package includes QX-102 Capsules and all the necessary accessories to get started with the QuantomiX WETSEM™ technology, when minimal liquid aspiration is required. It is recommended to add the Particle Imaging Kit to enhance particle imaging.

The kit contains:

- QX-102 Capsules (24 units)
- MP-10 Multi-well Plates (2 units)
- QX Imaging Buffer
- RT-56 QX-102 Calibration Capsule
- User Manual, Applications Manual, Instructional Training Movie, Imaging Quick Guide

Cat. #	Description	Pack
SP-102-24	QX-102 Starter Package (w/o aspirator)	each

► Q-102 Assessment Kit

The kit contains:

- QX-102-6 (6 capsules)
- MP-10-1 (1 Multi-well plate)
- AT-60 (24 Tips)
- IB-64
- RT-56

Cat. #	Description	Pack
SK-102-6	Q-102 Assessment Kit	each

► Starter Kits for the QX-302 Capsules

► SK-302-12 Starter Kit

The SK-302-12 Starter Kit includes QX-302 Capsules and all the necessary accessories to get started with the QuantomiX WETSEM™ technology.

The kit contains:

- QX-302 Capsules (12 units)
- MP-12 Multi-capsule Plates (2 units)
- QX-302 Imaging Buffer
- QX-302 Calibration Capsule
- User Manual, Graphic User Guide, WETSEM™ Imaging Quick Guide

Cat. #	Description	Pack
SK-302-12	QX-302 Starter Kit	each

► SK -302 Assessment Kit

The kit contains:

- 3 QX-302 Capsules
- MP-12 Capsule Plate (1)
- IB-74 Imaging Buffer (1)
- RT-58 Calibration Capsule (1)

Cat. #	Description	Pack
SK-302-3	Assessment Kit	each

► Starter Kits for the QX-302 and QX-102 Capsules

The SK-102-302 Starter Kit includes QX-102 Capsules and QX-302 Capsules, and all the necessary accessories to get started with the QuantomiX WETSEM™ technology for all types of samples.

The kit contains:

- QX-102 Capsules (12 units)
- QX-302 Capsules (6 units)
- MP-10 Multi-well Plates (2 units)
- MP-12 Multi-capsule Plates (2 units)
- MA-4 Multi-well Aspirator
- QX Imaging Buffer
- QX-302 Imaging Buffer
- QX-102 Calibration Capsule
- User Manuals, Applications Manual, Instructional Training Movie, Graphic User Guide, WETSEM™ Imaging Quick Guide

Cat. #	Description	Pack
SK-102-302	QX-102 & QX-302 Combined Starter Kit	each

► Starter Kits for the QX-202 Capsules

The SK-202-24 Starter Kit includes QX-202 Capsules and all the accessories necessary to get started with the QuantomiX WETSEM™ technology.

The kit contains:

- QX-202 Capsules (24 units) for the -24 and 48 capsules for the -48
- MP-12 Multi-well Plates (2 units)
- IB-64 QX Imaging Buffer
- RT-56 QX Calibration Capsule
- Calibration Capsule Insert
- MicroMan Pipettor
- M-25 Tips
- M-25 Plungers
- User Manual, Training CD, Imaging Quick Guide

Cat. #	Description	Pack
SP-202-24	QX-202 Starter Kit	24/pk
SP-202-48	QX-202 Starter Kit	48/pk

Frequently Asked Questions about WETSEM™ technology

This section covers the most frequently asked questions.

Topics:

- SEM & imaging
- Applications
- Handling the capsules
- Sample treatment in QX capsules
- Cell biology with QX-102 Capsules

SEM and Imaging

Q Will the QX capsules fit my SEM?

- A** The QX capsules are designed to fit into the specimen stage of most types of SEMs. The QX capsule works with SEMs equipped with BSE (Back Scattered Electrons) detectors. Either variable pressure or high vacuum mode can be used. Adapters are available for different stub holder dimensions. Following is a partial list of SEM models compatible with WETSEM™ technology:

QX-102 Capsule (dimensions in mm)

- FEI (XL30ESEM, XL30ESEM FEG, Quanta series, Quanta FEG)
- JEOL (5600, 5900, 6000 series)
- ZEISS/LEO (1450, 1500 Series, EVO, Supra, Ultra)
- Hitachi (2600, 3000 series, 4000 series)
- Camscan (CS3000 range, MV2300 range)

For suitability of other models and availability of Adapters, please contact us.

Q Can the capsules be used in high vacuum mode?

- A** The QX capsules are compatible with high vacuum as well as low vacuum mode. The capsules are designed to withstand a pressure difference of up to 1 atmosphere, therefore no restrictions exist on vacuum levels, and they can also be used at 1×10^{-6} Torr.

Q Will the sample in a QX capsule remain fully wet during imaging in a SEM?

- A** Yes. The membrane of the QX capsule is impermeable to water and the capsule completely isolates the sample from the vacuum. No drying of the sample occurs during imaging or storage.

Q Why is it necessary to dehydrate the sample in conventional SEM imaging, and why is no drying needed with WETSEM™ technology?

- A** In traditional SEM, the sample is placed directly in high vacuum. A wet sample exposed to vacuum will lose its water in an uncontrolled dehydration process, which often distorts or destroys the structure of the sample. To preserve the structure in vacuum, the sample must be dehydrated in a controlled manner. The sample in the QX capsule is completely isolated from the vacuum and remains at atmospheric pressure. Therefore, there is no loss of water and no drying of the sample is needed.

Q What is the resolution with WETSEM™ technology?

- A** In general the resolution is about the same as dry SEM samples, depending on the specific sample and the SEM model used. (see: Thiberge et al. PNAS Vol.101, No.10, March 9, 2004. 3346-3351 and Review of Scientific Instruments, Vol. 75 No. 7, July 2004)

Q How deep below the membrane can imaging be performed?

- A** The beam penetration depth depends on the acceleration voltage. For a sample in a water-based medium imaged with a 30 kV beam, information is retrieved from a depth of approximately 2-4 micrometer. At 10 kV this depth is reduced to a few hundred nanometers. By varying the acceleration voltage it is possible to obtain unique 3D information from your sample.

Q Does the membrane interfere with imaging?

- A** The capsule membrane is very thin and flat. It is made of material transparent to electrons with energies above a few keV. Thus, the membrane induces minimal scattering of the beam and of the back scattered electrons detected by the BSE detector. The membrane itself is flat and hence does not interfere with the imaging process. In X-ray mode, the membrane produces a constant background that can be subtracted.

Q Does the electron beam cause damage to my sample?

- A** Fluids are very good conductors of heat. Therefore, the damage by the electron beam is very small. The QX-102 Imaging Buffer is specially formulated to minimize the damage caused by the beam and should be used whenever applicable. Also, to minimize the damage it is recommended to work with lower beam currents (i.e. reduced spot size).

Q Are there any restrictions to the electron beam current?

- A** There are some considerations to the choice of beam parameters and the recommended parameters can be found in the QX-102 User Manual. Generally, higher beam currents result in stronger signals, but increase the possibility of damage to the sample and affect the resolution. Lower beam currents minimize the damage and result in better resolution at high magnifications, but may give a signal that is not satisfactory. The optimal beam current depends on the sample and is determined empirically.

Q Is there a problem of charging with QX capsules?

- A** No. Since the sample inside the QX-102 capsule is wet, and the capsule itself is conductive, there is no charging.

Q Are the QX-102 capsules compatible with light microscopes?

- A** Yes. The membrane of the QX-102 capsule, as well as the MP-10 multi-well plate, are transparent to light and allow imaging of samples with a light microscope. The imaging should be done only with the QX-102 capsules properly placed in the MP-10 multi-well plate, which is especially designed for holding the capsules during various manipulations. The plate fits into a microscope stage for standard multi-well plates.

Q Can I perform EDS with WETSEM™ technology?

- A** Yes. QX capsules can be used for EDS (energy dispersive spectroscopy) analysis of samples using a SEM equipped with anEDS system. In fact, the QX-technology uniquely suits EDS of wet samples. Note, the presence of the metal grid and polymer membrane will be taken into account in the analysis.

Q What imaging parameters should be used in WETSEM™ technology?

- A** SEM imaging with QX capsules differs from standard SEM imaging in some aspects. Also, the factors that affect imaging vary among applications. Recommendation for parameters and guidelines for optimization are found in the QX-102 User Manual. Optimization of the imaging conditions is best done using the Calibration Capsule (cat no. RT-56).

Q Can the liquid sample leak from the capsule and contaminate the detector of my SEM?

- A** The membrane of the QX capsule is vacuum-tight and impermeable to liquids and gases. Thus, when the capsule is handled correctly there is no leakage of the sample and no contamination. Correct handling relates to both physical handling during sample preparation stages and to the parameters used during imaging. All care must be taken to prevent physical contact with the membrane. Any contact (e.g. with the tip of the pipette or with the hand) can potentially tear the membrane. Imaging of capsules must begin with a low probe current (small spot size). Initial probe current should be no higher than 200 pA. If the obtained signal is not sufficiently strong, probe current can gradually be increased until the desired image is obtained. Probe current should not exceed 1nA. Initial magnification should also be low. Magnification should be increased gradually until the desired image is obtained. Probe current should not exceed 1nA.

Applications

Q Can I image any liquid with the capsules?

- A** QX capsules are suitable for imaging various types of wet samples and liquids, including cells, tissues, bacteria, emulsions, oils, food samples, cosmetics, inks, particles in solutions, etc. For solvents that should be avoided, please consult the QX-102 User Manual.

Q Are the QX capsules compatible with acidic and basic solutions?

A The QX capsules have been validated for compatibility with commonly used organic and inorganic acids and bases (5 hour exposure). Results are shown in the following table:

Solution Concentration PH Compatibility

NaOH 0.1M- 0.1mM 13 - 10 positive

NaOH >0.1M >13 negative

Tris (hydroxymethyl) aminomethane base 0.05M 10-7 (adjusted by HCl) positive

Acetic Acid <0.01M >3.5 positive

Acetic Acid >0.01M <3.5 negative

HCl 1M- 0.1mM 0 - 4 positive

Q Can I image live cells with QX-102 capsules?

A Cells can be introduced live into the SEM and short time imaging of live cells may be possible. However, the radiation absorbed by the cells during image scanning is expected to cause structural changes and to affect the viability of the cells. Also, the contrast between different constituents of native cells may be too low for high-resolution imaging, and some staining or labeling may be required. Live cells or microorganisms can be imaged either in their growth medium or in PBS.

Q Can I image lipid rich structures with WETSEM™ technology?

A WETSEM™ technology allows analysis of lipid structures in an unperturbed state. The ability to image wet samples with SEM avoids the problem of lipid extraction that occurs due to dehydration with organic solvents during lipid imaging with conventional techniques. Many lipid structures are visualized without any enhancement. If staining is required, Osmium tetroxide is well suited for lipids; for detailed protocols, see the QX-102 User Manual.

Q Can I image foams with WETSEM™ technology?

A Yes. QX-102 capsules can be used for imaging cosmetic, food or other foam samples.

Q I would like to image untreated food samples. What details can I see with QX-102 capsules?

A The imaging contrast in QX-102 capsules is created from variations in atomic numbers of sample constituents. Thus, constituents and structures that have a significant difference in atomic numbers can be visualized without any enhancement. The contrast between water and fat is especially well visualized in QX-technology, enabling analysis of fat structure and content in food, cosmetics and other samples.

Q I want to look at cosmetic cream, which has a paste-like structure. Can I do this with QX-102 capsules?

A Yes. Notice that the field you image is that closest to the capsule membrane. Therefore, the sample has to be in direct contact with the membrane.

Q If I have a sample that releases gas inside the capsule, will the membrane of the capsule withstand the pressure?

A As long as the internal pressure does not increase significantly above 1 atmosphere, the membrane will withstand the pressure.

Handling The Capsules

Q I can hear noise of loose parts inside an unopened package of capsules. Does this mean the capsules have been damaged during the shipment?

A No. The packaging of the capsules is designed to prevent the capsules from moving around and to protect them from damage during shipment. To keep the capsules in a dry environment, the package contains two cylinders of desiccants, which can cause this noise.

Q Can I use only part of the capsules from the package and store the remaining unused capsules?

A Yes. In order to maintain sterility of the capsules, open the package in a sterile environment, such as laminar flow hood. Take out the desired number of capsules, close the box and seal the top cover with tape. Store the package in a clean, dry place.

Sample Treatment In QX Capsules

Q Can I store my samples in QX capsules?

A Yes. Samples can be stored in sealed QX capsules and they remain wet. The samples can also be stored in open capsules (liquid dishes), when properly sealed in the MP-10 multi-well plate. For sealing of liquid dishes and for storage of biological samples, please refer to the QX-102 User Manual.

Q How do I apply liquids to the QX capsules?

A Liquids and samples are applied onto the liquid dishes of the capsules using standard lab pipettes. When treating multiple samples, a repetitive dispensing pipette is most convenient. It is important to apply the liquid carefully, not to touch the capsule membrane with the pipette tips.

Q How do I remove liquids from the QX capsules?

A The liquids are removed using the MA-4 multi-well aspirator designed for safe aspiration of liquids from the capsules. Other means should not be used, since they may lead to rupturing of the capsule membrane. For detailed instructions of working with the MA-4 multi-well aspirator, refer to the instructions accompanying the product. See also the QX-102 User Manual for recommendations for proper liquid handling during staining and labeling procedures.

Cell Biology with QX-102 Capsules

Q Will my cells grow on the QX-102 capsule membrane?

A The QX-102 capsule is designed to be compatible with growth of cells, including established cell lines, as well as primary cultures. Our recommendation is to coat the membrane with a suitable attachment factor prior to cell seeding.

Q Can cells be grown in the QX-102 capsules for more than one day?

A Yes. The MP-10 multi-well plate holder for the capsules is designed to maintain CO₂ and humidity levels so that the capsules can be used as standard cell culture dishes for long-term growth of cells. During long incubations, ensure that the wells on the sides of the MP-10 plate stay filled with water. Also, it is recommended to change the growth medium of the cells to fresh medium every 2 days.

Q What attachment factor should I use for my cell line?

A The QX-102 capsule membrane can be coated with various attachment factors such as Fibronectin, Collagen, Laminin, Gelatin, poly-L-lysine or with a combination of them. The factors that provide best attachment and growth will depend on the cell type. Fibronectin has been found to support growth of many types of cells, and thus in many cases will be the recommended first choice. Please consult QX-102 User Manual for coating protocols.

Q Can I use QX capsules for non-adherent cells?

A Yes. Cells in suspension, such as blood cells, bacteria and protozoa, can be attached to the capsule membrane coated with attachment factor such as poly-L-lysine or gelatin. The cells can be attached to the coated membrane by incubating or by centrifuging. For detailed protocols, see the QX-102 User Manual.

Q Are there specific stains for different cellular compartments?

A Since the imaging contrast in WETSEM™ technology is based on variations in atomic numbers, heavy metal stains give the best contrast when imaging biological samples. Due to different affinities of heavy metals to various molecules, some cellular structures stain more strongly and can be visualized. For example, osmium tetroxide has a high affinity for lipids, and can be used for staining lipid vesicles. Most of the heavy metals stain the nuclei, and some of them, such as gold chloride, can be used for staining chromosomes. However, since the heavy metal stains are usually quite non-specific, for detailed localization studies immunogold labeling may be required.

Q Can I carry out intracellular immunolabeling with WETSEM™ technology?

A Yes. Colloidal gold particles are well visualized with WETSEM™ technology and intracellular antigens can be labeled on fixed, permeabilized cells using commercially available gold conjugates. Generally, smaller gold particles (less than 10 nm) are better suited for intracellular labeling. Particles less than 10 nm need to be Silver enhanced for imaging.

Q How do I choose the fixation protocol for immunogold labeling?

A The fixation protocols generally used in immunocytochemistry are also applicable to WETSEM™ technology. The correct choice, optimal concentration and time of fixation depend on the nature of the antigen and the antibody. Optimal conditions may be established based on your prior experience with the application or by performing preliminary experiments using immuno-fluorescence labeling.

APPLICATION NOTE #1: MATERIAL SCIENCE

Energy Dispersive X-Ray Spectroscopy (EDS)
of Wet Samples with QX Capsules

EDS is most often used for qualitative elemental analysis to determine which elements are present, and to conclude their relative abundance. One of the challenges facing this technique is the ability to apply it on wet samples. The QX capsule, based on QuantomiX proprietary WETSEM™ technology, provides the solution by enabling qualitative EDS measurement and analysis of wet samples such as creams, solutions and other liquid containing specimens.

In **Figure 1**, a sample of pesticide is imaged and analyzed by EDS. The elemental composition of the particles in the sample is determined by selected area EDS. Until now, specimens such as these could not have been analyzed by EDS in their native form, and other wet chemical methods had to be used. In **Figure 2**, the image and EDS spectrum of a gel deodorant are clearly seen. The different phases are visualized and the different phases are visualized and the chemical composition is directly determined from the EDS spectrum.

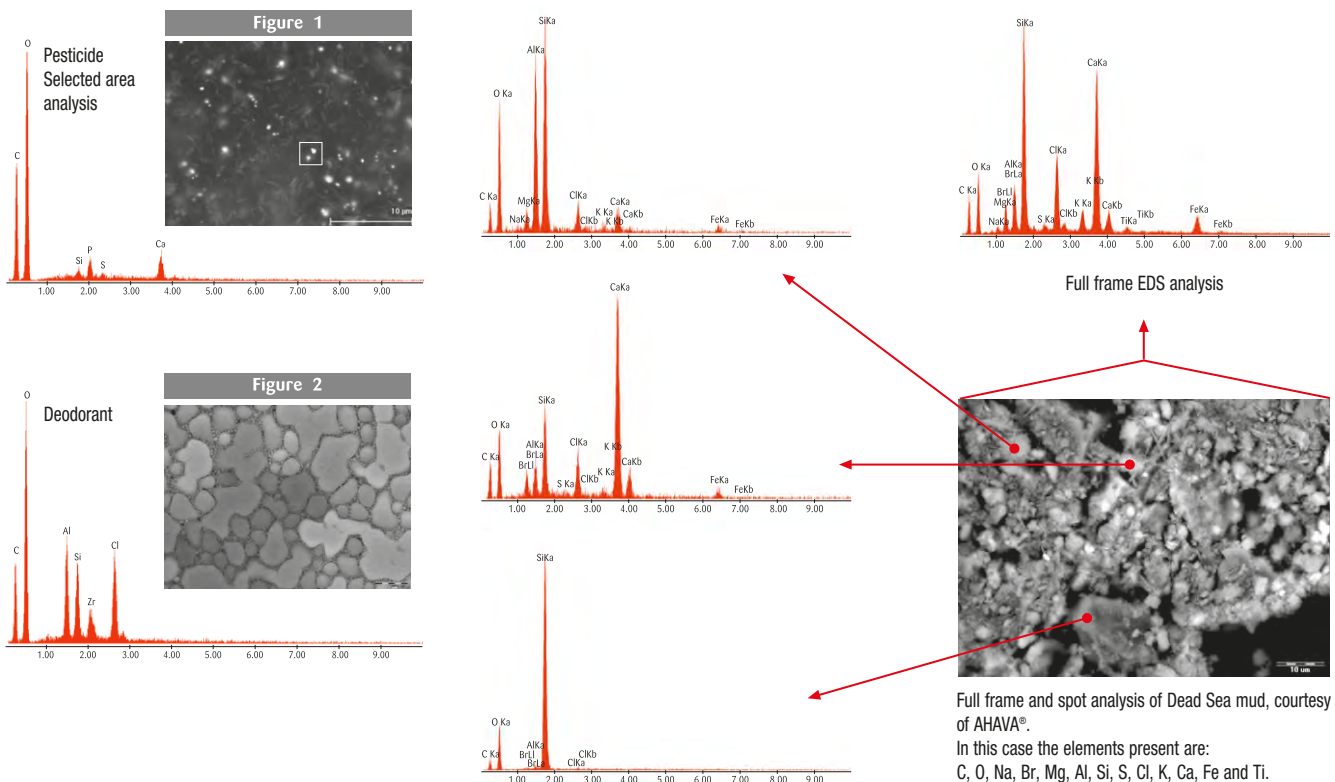

EDS with WETSEM™ Technology –
Stretching Science to New Extremes

Wet EDS provides the opportunity to image and analyze the final product without assuming homogeneity. In wet EDS, sample natural heterogeneity is retained and adjacent structures can be directly compared (see analysis below).

The QX capsules eliminate the need to dry the sample, and ensure that artifacts accumulated as a result of drying processes do not compromise sample integrity. WETSEM™ technology presents a tangible solution for formulation and quality control processes in industrial field.

Applications Include:

- Cosmetics
- Inks/Paints
- Ceramics
- Agriculture
- Pastes
- Food

APPLICATION NOTE #2: LIFE SCIENCE

Imaging Lipid Bodies in Fully Wet Cells and Tissues

High resolution imaging of lipid bodies in biological samples is a known challenge. Preparation of tissue samples for microscopy examination typically wipes lipids off sample, making observation and interpretation of lipid bodies difficult. Lipids in cells are observed only indirectly, requiring special labeling. This has led QuantomiX to develop the QX capsules, based on WETSEM™ technology, designed for immediate and quantifiable high resolution lipid imaging. The QX capsules present a new opportunity to overcome the limitations of current methods for a better assessment of lipid in cells and tissues.

Direct Lipid Visualization with WETSEM™ Technology

The QX capsule, based on QuantomiX proprietary WETSEM™ technology, enables direct imaging of lipids in fully hydrated samples using standard scanning electron microscopes. In the pictures to the right, lipid bodies are clearly visualized in the cellular cytoplasm of 3T3-L1 pre-adipocyte cells

Lipid body visualization in differentiating 3T3-L1 pre-adipocyte cells.

Lipid Research with QX Capsules

WETSEM™ technology is particularly suitable for lipid visualization, resulting in high signal-to-noise ratio, tailored for lipid imaging. The sample, placed in a sealed capsule, is separated from the vacuum by a thin electron-transparent membrane, allowing imaging of wet, un-embedded cells and tissues.

The direct, immediate, and reliable visualization of lipids with QX capsules is a major step forward for lipid research.

Intramyocellular lipids in diabetic skeletal muscle in rodent (unstained). In collaboration with Dr. N. Kaiser, Hadassah Medical school.

Cross-section of a mouse spinal cord. The myelin rings are shown in black (unstained). In collaboration with Teva Pharmaceuticals.

Benefits

- High-resolution imaging of wet samples
- Minimal sample preparation
- Quantifiable
- Artifact-free
- Optimal signal-to-noise ratio
- Lipid visualization

Lipid bodies in cultured HeLa cells (stained with Osmium tetroxide).

Lipid bodies in human polymorphonuclear cells of peripheral white blood cells (stained with Osmium tetroxide).

APPLICATION NOTE #3: MATERIAL SCIENCE

Imaging Particles in Their Fully Wet Environment

One of the most valuable parameters in the study of materials is particle characterization. Until today, particle imaging in Scanning Electron Microscopes was limited to dry samples only. As a result, valuable information on particles in their native state was lost due to the drying process. Furthermore, characterization of particle shape, size and dispersion in their native wet environment was not feasible at all.

WETSEM™ Technology – Revealing new perspectives in Material Science Research

WETSEM™ technology presents a breakthrough in imaging and analysis of particles in their native wet state. The QX capsule, based on QuantomiX proprietary WETSEM™ technology, enables SEM imaging of particles in suspensions, pastes, gels, emulsions, creams and liquids of all kinds.

The QX capsules eliminate the need for time-consuming preparation procedures, and ensure that artifacts accumulated as a result of drying processes do not compromise sample integrity. WETSEM™ technology presents a tangible solution for formulation and quality control processes in industrial fields.

Meeting the Needs

The QX capsules can be used for dispersion characterization of particles in liquids (including degree of aggregation, homogeneity) as well as shape characterization. They also permit imaging of emulsions, suspensions and other liquids, core shell type materials, pastes, gels, creams, foams and powders.

Research has shown that the capsules can provide the scientist with information regarding chemical composition by EDS of wet samples. Important information required for formulation processes in various industries, can also be obtained.

By using the QX capsule, scientists avoid potential problems of film formation and particle aggregation during the drying process. The capsules also function as isolation compartments for imaging of air- and humidity- sensitive materials

Advantages:

- Quick and easy to use
- Requires minimal sample preparation
- Enables shape, size and dispersion characterization
- Enables imaging of particles in nano and micro scales
- Allows chemical composition identification by EDS of wet samples

The QX line of capsules are already in use in biological research, and play a major role in the pharmaceutical, food, detergent, paint and ink industries.

APPLICATION NOTE #4: LIFE SCIENCE

Imaging Wet Cells

Bridging the Gap between Light and Electron Microscopy

The need to dehydrate and prepare samples before imaging in an electron microscope has long been a serious limitation for cell biology research. Biological specimens are hydrated in their natural state, but current methods of imaging these specimens under high resolution require dehydration and extensive preparation. On the other hand, samples can be viewed in their native state in light microscopes, but those are limited to low resolution viewing. QuantomiX proprietary WETSEM™ technology brings together the immediate viewing capabilities of light microscopes and the high resolution capacity of electron microscopy, and provides an ideal solution for high resolution imaging of fully wet cells.

Viewing Wet Samples in Their Native State with WETSEM™ Technology

The solution offered by WETSEM™ technology enables high-resolution imaging of samples without lengthy preparation and with no dehydration artifacts. The QX capsules, based on WETSEM™ technology, are used for holding biological samples in the electron microscope. The samples are kept in a sealed, vacuumresistant capsule during the imaging process. This method has been used successfully for many types of biological samples, including nonadherent cells, and has enabled the collection of valuable information.

Mitochondria visualization in C2C12 cells that were fixed and stained with 2% PTA. Mitochondria are easily identified. Their pleomorphic forms and structural variations are clearly seen.

QX Capsules – Empowering Imaging Capabilities

Fig 1. HeLa cells cultured in the QX capsule in growth medium, were fixed with paraformaldehyde and stained with uranyl acetate. Cell-cell contact between two neighboring cells as well as filopodia are clearly visible. Clear marking of fine intracellular cytoskeletal structures is also seen.

Fig 1: HeLa Cells

Fig 2. Wet mast cells were fixed with 4% paraformaldehyde and 0.125% glutaraldehyde and stained with uranyl acetate. High resolution imaging with WETSEM™ enables visualization of individual secretory granules which appear as dark holes. Some granules show high electron density.

Fig 3. Epidermal growth factor receptor (EGFR) labeling of A431 cell. Anti-EGFR antibodies were visualized with 40nm colloidal gold particles. Note the very precise visualization of individual gold beads on the cell surface. This application is suitable for a variety of intracellular and extracellular immunogold labeling.

Fig 3: A431 Cells

Dr. J.Schlessinger, Dept. of Pharmacology, Yale University School of Medicine, New Haven, CT.

Fig 4. Lipid bodies in human white blood cells. After separation, cells were plated on the QX Capsule membrane. Efficient attachment and spreading of the population of interest were achieved. Fixation and consequent uranyl acetate and osmium staining enhanced visualization of cellular organelles, and highlighted the lipid bodies.

Fig 4: White Blood Cells

Advantages:

- High resolution imaging of wet samples
- Visualization of intra- and extracellular structures
- Molecular immunolabeling
- Imaging of adherent and non-adherent cells
- Minimal sample preparation
- Artifact-free

QuantomiX Lipid Imaging That Counts

New opportunities for quantitative analysis in metabolic syndrome research

Lipid accumulation in differentiating 3T3-L1 pre-adipocyte cell line (days in culture)

IMAGINE BEING ABLE TO PRODUCE MEANINGFUL IMAGES OF LIPIDS IN CELLS AND TISSUES. THE POSSIBILITIES ARE ENDLESS. QUANTOMIX WETSEM™ TECHNOLOGY ENABLES POWERFUL IMAGING AND ANALYSIS OF HYDRATED LIPIDS IN CELLS AND TISSUES – FOR FAST AND RELIABLE QUANTIFICATION.

Monitor lipid accumulation in cells

By examining hydrated cell samples, you can set up cell-based assays that mimic metabolic processes that enable reliable mapping of cell differentiation. Your lipid accumulation cell assays do not have to be modified in any way, resulting in unprecedented accuracy.

EM scanning of hydrated fat cells and tissues for:

- Fast implementation with minimal preparation requirements
- Reliable, reproducible and quantifiable results
- High resolution imaging

Image fat in tissues

Fat cell size distribution and lipid droplet examination in tissues have never been so clear and easy to do. Just apply the sample in the QX-capsule and expand the horizons of advanced obesity and diabetes research.

Lipid droplets in rat skeletal muscle

Lipids in porcine white adipose tissue

Lipids in multilocular brown adipose tissue (with Prof. S. Cinti, Italy)

Electron microscopy – right from the cell culture dish

The QuantiMiX QX-capsule product line enables direct imaging of fully hydrated samples in conventional scanning electron microscopes (SEMs). Wet samples can be examined, eliminating the need for arduous preparation, such as, critical point drying, coating, embedding, and sectioning. Simply place tissue samples directly in the QX-capsule, or grow cells inside it, to achieve high-resolution imaging and analysis.

QX-Capsule Walk-through

1. Prepare multi-well plate for QX-capsules /
2. Apply sample via conventional pipetting /
3. Quick seal the single-use QX-capsule /
4. Place the QX-capsule in the SEM chamber

A new approach to cell and tissue imaging and analysis

QuantiMiX WETSEM™ technology leads to a better understanding of biomedical and metabolic processes, for more effective medical, chemical, biological and industrial research. An ultra-thin membrane completely isolates hydrated samples from the microscope chamber's vacuum. This unique receptacle permits electron microscopy of samples held in a liquid medium. By combining the functionality of a cell culture dish or tissue specimen holder with an electron-transparent, vacuum-tight window, QX-capsules enable high resolution imaging of fully hydrated samples of human, animal and plant cells, tissues and fluids, microbial cells and other types of fluids.

QUICK USE GUIDE FOR IMAGING

Important Notes

- WETSEM™ images can be obtained with various detectors. With most SEM configurations, best images are obtained with a BSE detector positioned at the end of the SEM column (located under the pole piece).
- High probe currents, especially when scanning at high magnifications, may damage the QX capsule membrane and sample. To prevent damage, avoid scanning the same area at high magnifications for prolonged periods. See Table 1 for the maximum recommended probe current for your SEM configuration.

Table 1: Suitable Parameter Range for WETSEM™ Imaging

Parameter	Recommended Range	Comments
Acceleration Voltage	15 - 30 kV	Not lower than 10 kV
Probe Current (based on source type)		
Tungsten filament	0.4 - 1.0 nA	Not higher than 1.0 nA
FEG	0.1 - 0.5 nA	Not higher than 0.5 nA
Working Distance (based on detector type)		
Semiconductor (BSE)	6 - 10 mm	Acceptable: 4 - 15 mm
Robinson (BSE)	10 - 20 mm	Better efficiency at high keV
Scintillator (BSE)	6 - 10 mm	Acceptable: 6 - 10 mm
Everhart-Thornley (SE)	8 - 12 mm	Acceptable: 6 - 15 mm
In-lens/Through the lens (all detectors)	2 - 4 mm	Manufacturer dependent

Calibration Capsule Use

Figure 1

Figure 2

Figure 3

Figure 4

FOR FIRST TIME IMAGING, ALWAYS USE THE CALIBRATION CAPSULE.

01. Reconstitute the Imaging Buffer with 1ml of double distilled water.
02. Place the Calibration Capsule in the Multi-well Plate, and remove the sealing stub.
03. Apply 15ml of Imaging Buffer into the Calibration Capsule, and seal with the stub.
04. Place the hydrated Calibration Capsule in the SEM.
05. Set the acceleration voltage to 30kV.
06. Set the spot size at 35% of the spot size range.
07. See Table 1 for a working distance suitable for your SEM configuration.
08. Initially, use the SE detector and focus on the metal support grid (see Figure 1).
09. Once focused, change to the BSE detector.
10. It is recommended to start sample imaging with a slow scan speed (a few seconds per frame).
11. Increase contrast drastically. The grid should give a strong, white signal (see Figure 2).
12. Move from the grid to one of the windows.
13. Increase magnification until the 500nm silica beads are visible (see Figure 3).
14. If no beads are visible, increase the contrast further.
15. If no beads are visible yet, gradually increase the spot size. (Note that spot size correlates to probe current. See Table 1 for the maximum probe current that should be used for WETSEM™ with your SEM configuration).
16. Once the silica beads are visible, improve the focus and zoom in.
17. Identify the 40nm gold beads, focus and correct astigmatism. The gold beads should appear perfectly round after the correction (see Figure 4).
18. Obtain a slow-scan image and save.

SAMPLE IMAGING

01. Apply steps 1-12 in the above procedure to your sample.
02. Adjust contrast and brightness until features of interest are visible.
03. If no features are visible, gradually increase spot size.
04. Once features are identified, focus, adjust contrast and brightness, and obtain the required images.
05. Zoom in as required, adjusting focus and correcting astigmatism.

► Magnification Reference Standards – SPM, AFM, SEM Calibration Standards

EMS offers a series of calibration standards with one and two dimension calibrated patterns. The standards come in two grid spacings – 300 nanometers and 700 nanometers. These standards are created utilizing holographic interference of a particular laser frequency. They are typically accurate to <1% across the entire surface of the standard.

Background

EMS MXS "CE" and "BE" Series SEM magnification reference grating and grids set new standards for sub-micron accuracy and ease-of-use. Designed to meet the requirement for a reasonable cost, accurate sub-micron reference standard, "CE" Series Reference Standards can be tailored to meet a variety of needs. They are ideal for student practice and instruction, testing new ideas or applications, or other uses where you need a good quality standard but don't want to put an expensive sample at risk. **Exceptional accuracy, repeatability, and uniformity are assured since each individual standard is an original or master produced directly from a holographic interference pattern.** These reference standards are remarkably durable under typical operating conditions. The surface contamination behavior is also very good. There are no better submicron reference standards available in this price range.

"One test site indicated that on a scale of 1 to 5 with respect to ease of use, contrast/brightness, durability, and accuracy, "CE" Series Reference Standards earn a 4.7 in comparison to other available standards. Comments from various other test sites included "very good contrast/brightness levels at all voltages used," "easy to use," and "could become my secondary standard of choice."

Application

EMS's MXS "CE" Series Reference Standards provide a calibrated dimension of either 300 or 700 nm nominal length. ("BE" series available only 300 nm).

- The larger dimension provides accurate, multiple period measurement from about 5000X to over 45,000X, while
- The smaller dimension is useful from about 10,000X to over 100,000X.

Throughout this magnification range, these standards provide excellent image contrast, an enormous useful calibration area, and a 3-sigma accuracy of at worst 3%, with typical values around 1%. MXS "CE" and "BE" Series Reference Standards are available as un-mounted 3x4 mm pieces to be mounted by the microscopist. Mounting one of these calibration standards is easy. The front surface of the sample and the

White area material: Tungsten.

Black area material: Tungsten or other metal.

Materials: The calibration specimen consists of a silicon chip with a thin (100nm) thick polymer layer containing the pattern and a thin tungsten film over-coating the entire surface. The tungsten film varies from 20nm to 60nm in thickness, depending on the particular model.

This structure has been proven under a wide variety of beam conditions, from 30kV to sub 12 kV. Dimensions: 300nm or 700nm nominal (exact dimension will be provided with sample).

Measurements are made from leading edge to leading edge, etc. Width of individual bars and spaces is not calibrated.

silicon substrate are conductive. Experience indicates that there is, in general, no need to make a special effort to ground the front surface. The use of conductive silver or carbon-loaded paint, conductive epoxies, conductive tape, etc. has all been used to successfully mount "CE" Series standards.

With EMS's MXS "CE" and "BE" Series Reference Standards, you can:

- Quickly check dimensional measurements by mounting one on your specimen stage;
- Perform periodic calibration and performance checks of your microscope;
- Obtain high magnification, sub-micron scale dimensional accuracy for the first time;
- Accurately determine dimensions from 0.3µm to 30µm all with one calibration artifacts;
- Analyze your images for pincushion distortion, small-scale vibration, or small magnetic field distortions.

The accuracy of the "CE" Series allows the microscopist to use them as a secondary standard. Their accuracy and uniformity make it easy to obtain and document traceability of measurements without placing an expensive, hard to obtain, difficult to use primary calibration standard at risk of contamination or damage.

Certification and Accuracy

MXS "CE" Series Reference Standards provides a calibrated dimension of either 300 nm or 700 nm nominal lengths. The actual dimensions of the artifact as delivered will generally not be exactly these values. Both the fabrication process determines the actual dimension and by a second, independent measurement after the calibration artifact is manufactured. The expected accuracy of

the holographic technique used in the manufacturing process is ±0.1%. Unfortunately, subsequent processing steps degrade this initial accuracy, leading to the 3-sigma accuracy of 3% for the finished product. The second, independent measurement technique has an expected 3-sigma accuracy of 1% or better. Our experience is that the two measurements technique applied to a particular artifact will agree with each other to within 0.5mm.

It is important to remember that the certified dimension in an MXS "CE" and "BE" Series Reference Standard is not just at one unique position on the artifact, but is known at all locations on the standard.

Durability and Charging Effects

EMS MXS "CE" and "BE" Series have been tested and evaluated over a broad range of operating conditions, from those found in a tungsten filament system to the highest resolution FEG system. These standards have been found remarkably durable during use, with no beam-induced distortion in the calibrated pattern after as much as one-half hour of imaging time at 50,000X and 20 kV. Charging is minimal to nonexistent, though edge effect can be seen under some conditions. The high contrast and brightness, which can be obtained using these reference standards guarantees good contamination tolerance.

► Magnification Reference Standards – SPM, AFM, SEM Calibration Standards (continued)

► 1. 301CE and MXS 701CE

The calibrated dimension is the spatial period of a series of parallel ribs running across the sample. The significant height of the ribs (>100nm) provides excellent image contrast. The top surface of the rib structures is somewhat rounded rather than completely flat. The edges of the ribs are readily discernible, with over 75% of the 3mm by 4mm sample area exhibiting an edge location variation, which is less.

Use and Imaging

The exceptionally clean and uniform pattern provided in an MXS 301CE and MXS 701CE standard displays few imperfections, which can be used as focusing and stigmation aids. For this reason, taking care in setting up the image before measurement is important. To assist in the set up process, an instruction sheet is provided with each standard. This sheet provides several example images, which can be used to determine if the image of the sample is correctly set up. Especially with the MXS 301CE and MXS 701CE line-space pattern standards, obtaining the proper stigmation is crucial since improper stigmation is not readily apparent when imaging a pattern of straight line. Once a proper focus and stigmation are obtained, the image can be shifted to an appropriate area and the desired measurements made.

► 2. MXS 302CE and MXS 702C

The calibrated dimension is the spatial period of a series of a 2-dimensional grid spread across the surface of the sample. This grid consists of a series of cylindrical posts rising from the surface of the sample. The significant height of the ribs (>100nm) provides excellent image contrast. The top surface of these posts is somewhat rounded rather than flat and there are also slight departures from a perfect circle in the shape of some posts. Measurement techniques must be used which take these characteristics into account. The center-to-center distance of any pair is the most accurate measurements.

Use and Imaging

The exceptionally clean and uniform pattern provided in an MXS "CE" series 2-dimensional calibration standard displays few large scale imperfections. For this reason, taking care in setting up the image before measurement is important. To assist in this process, an instruction sheet is provided with the standard. This sheet provides several example images, which can be used to determine if the image of the sample is correctly set up. *The characteristics of the MXS 302CE and MXS 702CE standards make them easier to image than the 1-dimensional standards.* The 2-dimensional grid facilitates setting the stigmation of the image properly. Once proper focus and stigmation are obtained, the image can be shifted to an appropriate area and the desired measurements made. Since the pattern covers the entire sample area, it is possible to make over 1,000,000 measurements utilizing the standard without using the same area twice.

Cleaning for "CE" Series

Cleaning is possible using dry air or other clean gases, high purity distilled or deionized water, and soft brushes. **Rubbing with soft tissues, or any other firm physical contact, or the use of solvents, such as acetone or alcohol will damage the surface of the reference standard.**

► 3. MXS 301BE

The calibrated dimension is the spatial period of alternating lines of Titanium and Silicon. The use of two different elements provides excellent image contrast, and the titanium layer thickness is kept to 20 nm to control edge distortion effects in the SEM image. These physical characteristics make the edges sharp and readily discernible. The calibrated pattern covers the entire sample, providing over 1,000,000 measurement sites. Because the pattern is a direct recording of a laser-generated interference pattern which has been transferred into the 20 nm thick Titanium film, these calibration samples are the most accurate available.

Imaging and Applications

The exceptionally clean and uniform pattern provided in a EMS MXS "BE" series calibration standard displays few imperfections. For this reason, taking care in setting up the image before measurement is important. To assist in this process, an instruction

sheet is provided with each standard. This sheet provides several example images, which can be used to determine if the image of the sample is correct. Once a proper focus and stigmation are obtained, the image can be shifted to an appropriate area and the desired measurements made.

The full screen image provided by a EMS calibration sample provides a unique advantage. Most calibration standards really verify accuracy of one portion of the image, while the entire screen is part of the measurement tool. With an image that fills the screen, you can quickly diagnose all types of image distortions, including problems due to vibrations, external fields, etc. A common problem is distortion caused by miss-adjusted CRT's or scanners in which the magnification in one part of the image is different from another part of the image. Such problem are easily found and corrected using these calibration samples.

Cleaning for "BE" Series

Titanium on Silicon produces a very durable calibration pattern. The calibration standard can be cleaned using common solvents such as acetone or alcohol, detergents, deionized water, etc. Gentle physical rubbing with soft tissues, brushes, etc., should not damage the sample. In extreme cases, cleaning by oxygen plasma is possible.

Specifications

Product Data	301CE & 701CE	302CE & 702CE	301BE**

► SPM Calibration Specimens

Features and Benefits:

- Easier testing of your SPM.
- Improved accuracy of critical dimension measurements.
- Accuracy: 0.5% (1 std. dev.).
- Holographic fabrication - assures high accuracy and precision.
- Pattern height > 100nm - provide excellent image contrast.
- Uniform coverage of entire chip - save time (can image anywhere).

Description:

Nominal calibrated dimensions: 300 or 700nm.

Calibration certificate: supplied with each sample, stating the dimension to the nearest 1nm.

Pattern types: 1- or 2-Dimensional. The calibrated dimension is the same for both axes for the 2-D standard.

Feature geometry:

- parallel ridges (1-D, 300 or 700nm)
- cylindrical posts (2-D 300nm)
- diamond-shaped posts (2-D 700nm)

Physical Size: 3 mm x 4 mm x 0.5mm

Substrate: Silicon wafer

Top Surface: Tungsten film

The 1-D standards can be scanned using any AFM mode, including contact mode. The 2-D standards can be scanned using modes such as Tapping Mode™, intermittent contact, and non-contact.

Model 150-1D

► Model 150-1D

Accurate measurements of sub 0.5 micron features are increasingly important as nanotechnology develops and as conventional microfabricated structures (semiconductors, magnetic data storage devices, optical data discs) shrinking. The model 150-1D with a nominal period (pitch) of 150nm, one dimensional, fabricated on a transparent substrate (Aluminum lines on glass) is the new tool to support this work.

Model 750-HD

► Model 750-HD

High Durability Calibration Reference Specimen for AFM and STM

Each specimen is supplied with a calibration certificate.

Can be used for AFM, STM and SEM. Has been used successfully in a hot water AFM.

Nominal pattern dimensions:Pitch 750 nm
 Height 100 nm
Nominal specimen dimensions:6.35 m diam.,
 0.3 mm thick
Composition:Solid Nickel

► Model PT

Phase Imaging Test Specimen (verify Tapping-Mode™ phase contrast and resolution). Phase Imaging is a sharp probe, which is brought into proximity with the specimen surface. The probe is oscillated vertically near its mechanical resonance frequency. As the probe lightly taps the surface, the amplitude of oscillation is reduced and the AFM uses this change in amplitude in order to track the surface topography. In addition to its amplitude, the probe motion can be characterized by its phase relative to a driving oscillator. The phase signal changes when the probe encounters regions of different composition. Phase shifts are registered as bright and dark regions in phase images, comparable to the way height changes are indicated in height images.

1 um Phase Image

Phase images often show extraordinary contrast for many composite surfaces of technological and scientific interest. These include contamination deposits, discontinuous (i.e. defective) thin films, devices built of composite materials (e.g. magnetic recording heads), and cross-sectional specimens of composite materials. Both inorganic and organic materials can be examined. We have found that phase imaging is more convenient and gentler than other methods, which are based on contact mode operation. It routinely achieves lateral resolution of 10 nm.

► Models 300-2D, 300-1D, 700-2D and 700-1D

All mounted on 15 mm steel disk.

► SPM Calibration Specimens (continued)

► Model 150-2D — Very High Reference and Traceable Standard for Resolution Calibration AFM, SEM, Auger, and FIB

General Purpose – High Precision

A precision, holographic pattern provides accurate calibration in the horizontal plane for very high resolution, nanometer-scale measurements.

Period: 144 nm pitch, two-dimensional array. Accurate to ± 1 nm. Refer to calibration certificate for actual pitch.

Surface: Aluminum bumps on Silicon, 4x3 mm die. Bump height (about 90 nm) and width (about 75 nm) are not calibrated.

For AFM, use in contact, intermittent contact (TappingMode™) and other modes with image sizes from 250 nm to 10 mm. Available un-mounted or mounted on 12 mm steel disks.

For SEM, an independent analytical lab has tested this specimen in a FE-SEM (field emission scanning electron microscope). They found that the pattern was very uniform and the specimen was easy to image. No significant charging was observed in the voltage range 1-20 kV.

Usability: the calibrated pattern covers the entire chip. There is sufficient usable area to make tens of thousands of measurements without reusing any areas altered or contaminated by previous scans.

► MODEL 150-2D:

This Calibration Reference specimen comes with a non-traceable, manufacturer's certificate. These states the average period, based on batch measurements.

► MODEL 150-2DUTC:

This traceable, Certified Standard is a select grade. Each standard is individually measured in comparison with a similar specimen calibrated at PTB. (PTB, Physikalisch-Technischen Bundesanstalt, is the German counterpart of NIST). The uncertainty of single pitch value is typically $\pm 1,4$ nm (95% confidence interval). Multi-pitch measurements provide the usual square-root of N improvement in precision.

Easy to use

We recommended Model 150-2D because of its unique characteristics which make it especially easy to use. The specimen is durable and it allows you can scan in contact mode, offering you faster calibration and measurements. This is the only high resolution 2D calibration specimen we have seen that offers the following characteristics:

- 2-dimensional array for simultaneous calibration of X and Y axes.
- Pitch <500 nm.
- Array of pumps mean the image contrast is high even when the probe tip is slightly dull.
- High contrast in contact mode scans.
- The pattern covers the entire die so that you don't have to hunt for the scan area.

Ordering for Calibrator only:

Available in the following ways: unmounted, 15mm steel disk(for AFM), SEM pin stub, or any other type of SEM stub.

ASM Model#	EMS Part#

AFM Tapping Mode Scan

The bump height is about 90 nm. This specimen is not recommended as a height reference because it is not easy for the standard AFM probes to reach the substrate level between the pumps.

SEM High Magnification

The following image was captured with a magnification setting of 100kX and accelerating voltage 10 kV

SEM Medium Magnification

At 5 kX, the individual bumps were still well resolved. Large fields of view show how few defects are present. The most common defects are single missing bumps or a single extra bump inserted between lattice positions. Two vacancies are present in the image shown here.

► Very High Resolution Calibration Reference and Traceable Standard for AFM, SEM, Auger, and FIB

For General Purpose and Metrology Microscopes

A precision pattern providing accurate calibration in the horizontal plane for very high resolution, nanometer-scale measurements.

Period: 70 nm pitch, one-dimensional array. Accurate to +/- 0.25 nm. Refer to calibration certificate for actual pitch.

Surface: Silicon Oxide ridges on Silicon, 4x3 mm die. Ridge height (about 35 nm) and width (about 35 nm) are not calibrated.

For AFM, use in contact, intermittent contact (TappingMode™) and other modes with image sizes from 100 to 3000 nm. Available unmounted or mounted on steel disks.

For SEM, this specimen works well at a wide range of accelerating voltages (1 kV to 20 kV have been tested) and calibrates images from 25 kX to 1000 kX. Normally supplied unmounted. Can be mounted on a stub of your choice.

Usability: The calibrated pattern covers a 1.2x0.5 mm area. There is sufficient usable area to make thousands of measurements without reusing any areas altered or contaminated by previous scans.

► Model 70-1D.

This Calibration Reference specimen comes with a non-traceable, manufacturer's certificate. This states the average period, based on batch measurements.

► Model 70-1DUTC.

This Traceable, Certified Standard is measured in comparison with a standard calibrated at PTB. (PTB, Physikalisch-Technischen Bundesanstalt, is the German counterpart of NIST. The standard is "NIST-Traceable" by virtue of the mutual recognition agreement between NIST and PTB.) The uncertainty of single pitch values is typically +/- 0.5 nm (95% confidence interval). Multi-pitch measurements provide the usual square-root of N improvement in precision.

AFM Tapping Mode Scan

The ridge height is about 35 nm. This specimen is not recommended as a height reference because the standard AFM probes may not always reach the substrate level between the ridges. Nevertheless, the image contrast is high, even when the probe tip is slightly dull. You can scan in contact mode, which means you can calibrate and measure faster.

Easy to find Patterned area

The patterned area is easy to find. The three rectangles shown in the sketch below are visible in reflected light, with either the unaided eye or an optical microscope. In a low magnification SEM image, the contrast is reversed. The central rectangle, which is the grating pattern, is relatively bright. The grating lines are parallel to the long side of the rectangle, as suggested by the high magnification SEM image.

Die and location of pattern within die:

Low magnification SEM image:

SEM High Magnification Image

Magnification= 200 kX
Voltage= 5 kV.

Ordering for the Very High Calibration and Traceable Standard:

Available in the following ways: unmounted, 15mm steel disk (for AFM), SEM pin stub, or any other type of SEM stub.

Cat.#	Description	Qty
80127-1D	Calibration Standard, Model 70-1D Unmounted	each

► MeX – Turn Your SEM Into a 3D Measurement Device

3d Surface Metrology With The SEM

MeX turns any SEM into a measurement device

MeX is a stand alone software package that turns any SEM with digital imaging into a true surface metrology device. Using stereoscopic images the software automatically retrieves 3D information and presents a highly accurate, robust and dense 3D dataset which is then used to perform traceable metrology examination. The results are obtained irrespective of the SEM magnification providing metrology at macro and micro levels.

The software is self installing and is extremely easy to use. The modular design of the package allows flexibility in use; it also permits users, with a single repetitive task to perform, to purchase modules according to requirements. The analysis modules allow measurement of profile, roughness, area, volume and "Z" height. All measurements are traceable, can be calibrated and conform to ISO standards.

The performance of MeX has been proved by many customers in leading companies and universities throughout the world providing imaging and analysis previously unobtainable with SEM images.

Unique Features Allow New Applications

Robust and highly accurate at any magnification

The core of MeX is formed by its innovative 3D reconstruction algorithms. The research and development team of Alicona Imaging have invented methods that generate highly accurate, dense and robust results. This unique performance becomes obvious in images of complex structures with steep edges and drop offs in addition to demanding samples with low texture and signal-to-noise-ratio. This high quality is achieved irrespective of image magnification.

Automatic calibration allows traceable 3D measurement

Conventional approaches rely on the use of two images. This comes with the major drawback that the overall accuracy of the 3D measurement is partly dependent on the accurate reading of the tilt angle. It is also commonly known that this reading maybe error-prone and can only be achieved to a certain level of accuracy. Latest developments of Alicona have extended this stereoscopic approach to a third image. As a result the user defined parameters, such as the tilt angle, are automatically calculated. This omits the influence of the user and allows, for the first time, traceable 3D measurement in the SEM.

Easy to use, easy to install

No additional hardware is necessary to run MeX. As a pure software solution MeX can be operated with any SEM requiring only images in common formats. The software is self-installing and works completely independently of any third party drivers or components. The user interface of the overall package is very user friendly and self-explanatory. Data is obtained quickly and effectively. A wizard guides the user through the reconstruction process which then automatically converts the information to a 3D data set. The consecutive analysis is again intuitive and the user is not confronted with unnecessary functionality. The user finds exactly what is expected from a 3D metrology package.

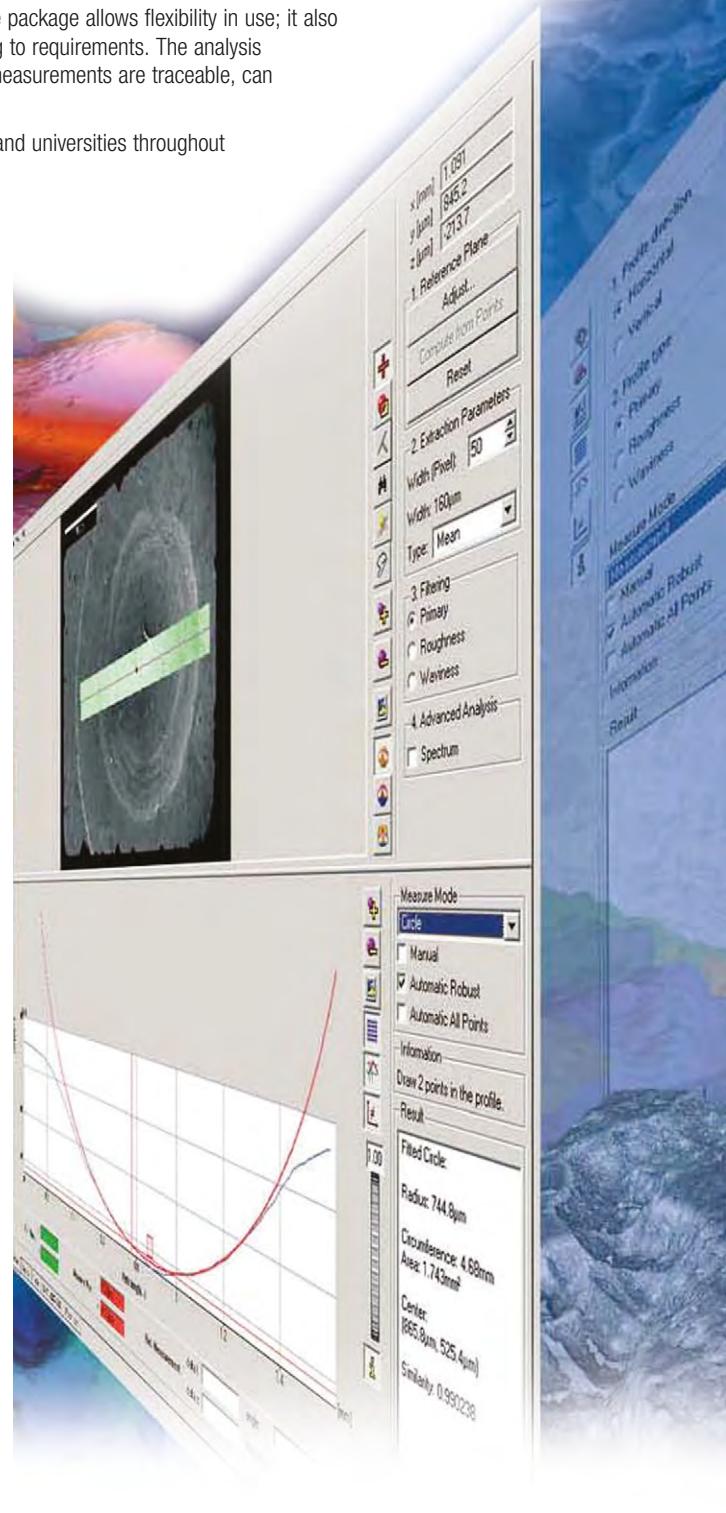

Comprehensive depth analysis

The uniqueness of MeX is in its accuracy and robustness. But in order to perform appropriate measurements, beyond conventional visualization, analysis following international standards must be available. In MeX, the easy to use, roughness and area analysis are provided to EN/ISO standards. Measurements are performed directly on the SEM image. Printing and exporting the actual representations of an image are a one-click operation. The visual link between

► MeX – The Technical Principle Of MeX

the surface and the image enable precise and flexible measurements. Even volumetric analysis is conveniently feasible. Therefore MeX is the only software package that turns a SEM into a true 3D metrology device.

3D measurement based on stereo images

The image formation process in the SEM is based on perspective projection. Similar to a conventional light microscope the three dimensional object is projected onto a two dimensional image plane and information about the third dimension is lost. Note, the large depth of focus in SEM provides full depth of focus images, but does not allow to measure depth. Only two dimensional measurements in the image plane are feasible.

An eucentric tilting of the stage, meaning that the intersection of the primary electron beam with the specimen define the centre of tilting, yield a second image of the specimen observed from a different viewpoint. A so called stereoscopic image is generated. Overlay techniques such as red-green coloring provide anaglyph viewing and thus depth perception but again no quantitative analysis. The leading technology of Alicona now automatically identifies points in each of the images that belong to the same point on the specimen. From these so called homologous points the true three dimensional coordinates of the homologous point can be recovered. This demanding task is robustly solved for each pixel in each of the images and thus a dense 3D model of the specimen is obtained. An additional third image captured from a third tilt position allows to automatically refine given calibration data. Thus traceable results are obtained.

Automatic Calibration

Verification of measurements through height step

Height measurements with the AutoCalibration can be verified using a micro-contour-artefact that is calibrated by the PTB (Physikalisch Technische Bundesanstalt, Braunschweig). The depth measurement standard from the PTB contains grooves of different depth (from 240nm to 50µm).

Micro- contour-artefact, calibrated by PTB

- The unique AutoCalibration works fully automatically. Alicona is the only supplier able to offer this technology.
- MeX is the only real metrology package that allows numerically accurate measurements independent on the magnification.
- MeX allows extended analysis features such as ISO conform roughness analysis and extended form analysis.

Reconstructions And Analysis In The SEM

Input image, 3D reconstruction and height measurement with the AutoCalibrator. The AutoCalibrator refines the calibration data and allows more accurate measurements.

Measurement results in comparison		
PTB	Stereo Creator	AutoCalib
24.04µm ±0.07µm	25.3µm	24.10µm

Angle refinement with AutoCalibration Stereo Creator		
	-9,5°	9,5°
AutoCalib	-10,05°	10,00°

Verification of measurements through radius measurement

Measurements of the pure software solution MeX can be verified using a micro-contour-artefact that is calibrated by the PTB (Physikalisch Technische Bundesanstalt, Braunschweig). The artefact contains different regions including steep flanks, height steps and cylindrical elements.

PTB calibrated micro artefact with steep flanks, height steps and cylindrical elements.

The following measurements can be verified:

- Circle measurements
- Steep flanks
- Depth measurements

Reconstructions And Analysis In The SEM

Verification of circle measurements. One of the input images (SEM) obtained from the region with the cylindrical valleys. The radius of the circle was measured with MeX – AutoCalibration.

Measurement results in comparison		
PTB	Stereo Creator	AutoCalib
80µm ± 2µm	75.11µm	81,14µm

Angle refinement with AutoCalibration Stereo Creator		
	-10°	10°
AutoCalib	-10,86°	11.01°

► MeX – Comprehensive Analysis Capabilities For Surface Measurement And Characterization

Height & Roughness Analysis

Profile measurement enables virtual cutting of specimen. The user defines a path on the optical image and receives the corresponding 3D profile. Roughness and contour measurements conform to recognized EN ISO 4287/4288 international standards. The profile analysis also allows the fitting of primitives such as circles, angles or others. Further, manual and semi automatic measurement possibilities are provided.

- Profile extraction with different width
- Filtering of the profile with selectable Lc value with ISO 4288 conformity information
- Manual cursor measurement
- Automatic measurements of lines, parallel lines, single height steps, double height steps, ISO 5436 conform height steps, angles, 2 line angles and circles
- ISO 4287 conform calculation of the following primary parameters: Pa, Pq, Pz, Pp, Pv, Pc, PSm, Psk, Pku, Pdk
- ISO 4287 and ISO 11562 conform calculation of the following roughness parameters: Ra, Rq, Rz, Rp, Rv, Rc, RSm, Rsk, Rku, Rdk
- ISO 4287 conform calculation of the following waviness parameters: Wa, Wq, Wz, Wp, Wv, Wc, WSm, Wsk, Wku, Wdk
- Calculation of fourier spectrum of profiles
- Calculation of bearing ratio curve
- Calculation of statistical parameters of profiles

Area Analysis

Area analysis provides the determination of Ra, Rq and Rz. Parameters like roughness, waviness and the fractal dimension of user defined surface patches are achieved. The user defines a region of interest such as a rectangle or polygon and MeX automatically calculates the values. For the visual representation of the surface a grey scale or pseudo colored depth map can be used. It is also possible to display ISO-lines to highlight depth variations.

- Calculation of surface parameters like Sa, Sq, Sz, Sp, Sv
- Calculation of fractal dimension
- Extraction of horizontal and vertical profiles
- Filtering of profiles
- Calculation of mean of the primary, roughness and waviness values of the horizontal and vertical profile
- Calculation of the primary, roughness and waviness parameter of the mean horizontal and vertical profile
- Calculation of bearing ratio curve
- Calculation of bearing area curve

Volume Analysis

Volume analysis calculates the volume of voids and protrusions. The measurement area is defined directly on the optical image. The volume is determined throughout the computation of a soap film model. For the 3D boundary of the selected area MeX calculates a covering surface that behaves like a soap film.

- Selectable area for volume measurement
- Selectable reference surface (plane, minimum spanning surface, top and bottom cover)
- Automatic calculation of reference plane from 3D points

2D Image Analysis

2D image analysis allows the performance of manual and semi automatic measurement of simple primitives. Also, the ability to write on the images as well as saving measurement results in a comprehensive and easy to use database is provided.

- Manual measurement of lines, parallel lines, arcs, circles, ellipses, polygons, polylines, freehand, marker
- Automatic measurement of lines, parallel lines, circles, arcs
- Statistical calculation of results such as mean, standard deviation, minimum, maximum, median
- Automatic search of equally shaped structures on the image

► MeX – Practical Solutions With MeX

Fracture Analysis

Quantitative surface analysis with the SEM is often used to investigate damage evolution in materials in addition to assisting in the design of more fracture resistant materials. The optimization of materials is complicated by the fact that the material properties may need to vary locally within the component. An example of this is cutting tools that need to be very hard at the cutting edge but be tough in the interior of the material. MeX is used to study deformation and fracture behaviour to optimize the performance of inhomogeneous materials. Dense, robust and accurate 3D reconstructions are created to allow measurement of fracture surface profiles, roughness parameters and fractal dimensions.

3D measurement results computed by MeX lead to significant understanding of parameters such as fracture toughness, crack growth and propagation or fracture resistance.

Steel Production

Modern high-tech steel is one of today's most important materials in all kinds of industries, transportation or medicine. The surface characteristics can relate to appearance, conductivity, corrosion resistance, wear or many other properties. MeX is an essential tool to assist with surface characterization for quality assurance and failure analysis. The 3D measurement capabilities provide robust and accurate results on properties such as fracture and compression strength, notch bar impact value or creep strength.

MeX is also used to evaluate faults in steel production. The overall quality of steel is dependent on the topography of the roller used in its production. As soon as the roller exhibits any kind of surface defects the surface of the steel will show dimples and inclusions. Using the measurement capabilities of MeX these faults can be analysed and the source of the defect traced.

Forensic Studies

Every gun leaves distinctive marks and traces on the bullet cartridge and projectile, similar to fingerprints. These traces on a gun, found at a crime scene, can be instrumental to prove guilt of suspects. Conventional methods are based on the analysis of 2D images to identify which bullet has been fired from which weapon. However, the 3D visualization and measurement of the firing pin and cartridge indentation is far more precise. It is here that MeX offers unique capabilities providing a highly accurate, dense and robust 3D reconstruction with full depth of focus taken over a large field of view. Using MeX a user can, for example, measure the volume of a firing pin impression along with profile that can be related directly to the firing pin. This leads to a numerical evaluation independent from any subjective point of view, providing rapid and understandable analytical data for interpretation.

Crater Shape Measurement

MeX can be used for the measurement of diameters, depths, angles of slope and volumes of craters created by impact of mineral grains on metals. This is part of the calibration work that has been done to help interpret cometary dust impacts on the stardust spacecraft, which returned to earth recently, carrying the first comet samples ever collected.

MeX has been used as a measurement tool to interpret the size, density and composition of particles responsible for making micrometre-scale craters. The ease of use of MeX, with its intuitive graphical interface, has enabled the quick and simple measurement of the required parameters. Data input and the range of easily interpreted reconstructions make MeX to a most suitable tool for quantified reconstruction of crater shapes from tilted stereo-pair electron micrographs.

Cancer Research In Life Science

MeX turns any SEM, in biological and non biological applications, into a full 3D measurement device.

Until MeX, the biological user has had limited methods that could provide accurate and robust measurements of surface texture, volumes and area of bulky irregular samples. In recent research MeX has been used to characterise the topography of the extracellular matrix (ECM) underlying colon cancer cells at various stages. Also, the enhanced visualization and roughness measurement capabilities of MeX has provided additional information, not previously available, about the cancers' behaviour. These findings have implications not only for improving the general understanding how colon cancer and metastasizes grow, but, also lead to a better understanding of the role of the ECM topography in cancer.

► MeX – Requirements for Sample Images for Mex 3D Software

Mex is a very easy to use package for the creation of 3D images for subsequent measurement with the SEM. The software will do nothing to correct faulty images nor will it allow you to see features that are not on the sample. But by following a few simple procedures the results will be both spectacular and contain significant data, these simple procedures are shown below.

- 1) All images must be in TIFF or BMP format
- 2) The magnification chosen must reflect the size of the features to be viewed; the software will not allow features to be measured that are not visible.
- 3) Tilt Angle: Mex will take either 2 or 3 images and these are divided by tilt angle, the choice of 2 or 3 images is specimen dependent. In the first case please supply a pair of images which have a differential tilt angle of 5 degrees.
- 4) Eucentric Tilt: Please ensure that the images are eucentric, this means that a single chosen spot on the image should be in the same position on each image (see note)
- 5) Tilt Direction: Please ensure that the tilt direction, when viewed on the SEM screen runs East to West and not North South or diagonal. If images run at an angle this will result in image rotation which will reduce the size of the image that can be viewed.
- 6) Working Distance. To construct the image we need to know the working distance
- 7) Calibration: Please ensure that a scale bar is on the image.

Note:

To take images for MeX it is necessary to have Eucentric Images, it is not necessary to have a Eucentric Stage to take Eucentric Images. What is also important is that when tilt is applied the image moves east to west (or west to east) and not north to south or any diagonal from that.

A simple method without a Eucentric Stage is

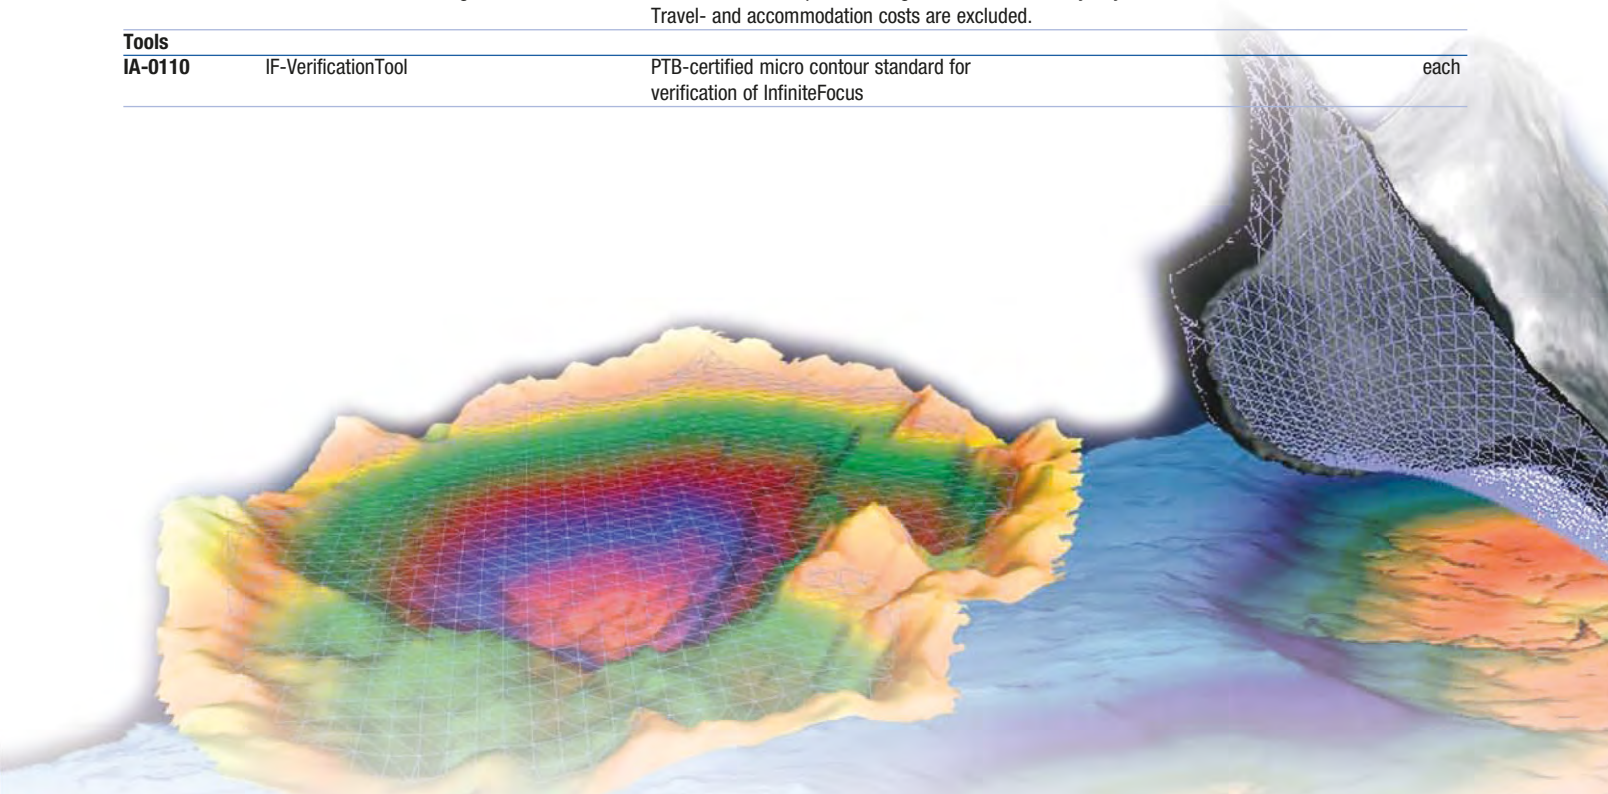

- 1) Find and identify a feature on the image that can be used as a reference
- 2) Either turn on the cross wires built into the SEM or stick a corner of a post it note on the feature
- 3) Decide which magnification the image is to be taken at, then go 2 magnification steps above that and align the feature
- 4) Drop the magnification down and take the image
- 5) Reduce magnification to a level where the bulk of the feature is still visible (this makes it easier to track when tilt is applied)
- 5) Apply tilt bringing the feature back into the frame with X or and Y
- 6) Either turn on the cross wires built into the SEM or stick a corner of a post it note on the feature
- 7) Then go 2 magnification steps above the magnification selected in #3 and align the same feature
- 8) Drop the magnification down and take the second image

If a third image is required simply repeat the process

► MeX – Ordering Information

Cat#	Product Name	Description	Qty.
Packages			
MP-0101	MeX-Standard	MeX-Database, MeX-3DViewer, MeX-Creator, MeX-AutoCalibration, MeX-Profile, MeX-Area, MeX-Volume, MeX-SCS for one year	Package
MP-0102	MeX-Professional	all available MeX modules: MeX-Database, MeX-3DViewer, MeX-Creator, MeX-AutoCalibration, MeX-Profile MeX-Area, MeX-Volume, MeX-StereoComparator, MeX-3DReader inclusive two years of e-mail support and free updates	Package

► Scanning Electron Microscope Digital Imaging

► SEM Digi-CAM 2

The easy, inexpensive way to upgrade your scanning electron microscope or STEM to digital imaging just got better with an increase in camera resolution to 14 MP!!

By now you've heard: Polaroid is no longer producing film for it's cameras. With the existing supply of Polaroid film decreasing every day, the price has been skyrocketing. How will you document the samples you are imaging in the future? Sure, you could digitize your entire SEM but these conversions are time consuming and can cost in the range of \$15,000 or more!

Originally designed to solve our own in-house digitization needs, the **SEM Digi-CAM 2** is easy to set up and is less expensive than a frame grabber and higher resolution in most cases. If you want us to supply a dedicated mini PC an additional charge will apply, but to the best of our knowledge almost any PC or MAC will suffice.

But what about quality? You be the judge! The image at right is an actual images taken using the SEM Digi-Cam 1 with 6.1 MP.

SEM DIGI-CAM FEATURES:

- 14 MP Nikon SLR Digital Camera - Custom Configured for this application!
- Images can be transferred wirelessly to the PC, or MAC, without need to use WiFi or any other in house network. This overcomes restrictions many customers had regarding security issues when using their normal Institutions network. This has an ad hoc system. You will need an internet connection for initial setup or registration.
 - A USB cable is also included if you do not wish to transfer images wireless
- Remote Controlled Shutter Operation - accommodates even the longest CRT searl times
- Includes software or use your own imaging program such as Photoshop, iPhoto, etc.
- One year warranty on camera. Ext. warranty available.
- AC Adapter for Digital Camera
- Mounting hardware for your particular instrument

Advantages over other digital imaging acquisition systems:

- Resolution is actually better than many more expensive frame grabbers!
- Much lower cost!
- Easily setup & installed - No Service Technician needed!
- Camera can be removed from adapter and used as you like!
- Works on STEM's and slow scan instruments.
- Free One Year Technical Support included!

► EMS UVC3 Ultraviolet Cryo Chamber

The EMS UVC3 Cryo Chamber has been specifically designed to provide an economical yet precisely controlled low temperature environment for polymerization of polymers and resins for cryo specimen preparation. It can also be used for dehydration and infiltration of cryo specimens. This simple and functional unit has a large insulated chamber and comprises fully automatic temperature control for the polymerization process of embedding resins and polymers.

FEATURES:

- Liquid crystal display and PLC control
- Fan cooled electronic ballast for UV lamp tubes
- Temperature range can be set from -10°C to -40°C (14°F to -40°F)
- Includes memory function for Min/Max temperatures during any run
- 365nm ultraviolet lamps thermally shielded by dual pane Plexiglas®
- Holds up to 66 samples with BEEM® Cryo Capsule Holders
- Perfect for Unicryl, LR White, LR Gold, Lowicryls, JB-4, Quetols and all other resins cured by 365nm UV radiation
- Universal voltage

OPERATION

- Add dry ice to the chamber
- Set temperature (-10°C to -40°C / 14°F to -40°F)
- Turn on UV lamp and cure embedding resins

SPECIFICATIONS

UV Light Source....Two 15-watt self-filtering long wavelength tubes
1600 µW/cm² of 365nm UV radiation at 15cm (6")

Temperature Control-10°C to -40°C (14°F to -40°F)
Typically +/- 1.5 °C

Control Type.....LCD Display with PLC with function buttons

Exterior Dimensions.....64.1 L x 36.8 W x 48.9cm H
.....(25.25" L x 14.50" W x 19.25" H)

Interior Dimensions.....56.5 L x 30.5 W x 33.7cm H
.....(22.25" L x 12" W x 13.4" H)

Power Requirements110 - 240VAC, 50/60Hz (240V-0.5A, 110V-1A)

Weight11.4 kg (25 lbs.) / Shipping weight: 18.2kg (40 lbs.)

70445-10	EMS UVC3 Cryo Chamber, 120 VAC	each
70445-20	EMS UVC3 Cryo Chamber, 220 VAC	each

► Specimen Pins; Ultra Microtomy

Aluminum specimen mount pin for mounting samples for cryoultramicrotomy.

Available in two types:
Slotted Screw and Bulls Eye.

70446	Aluminum Specimen Pins; Bullseye	50/pk
70447	Aluminum Specimen Pins; Slotted Screw	50/pk

► Tissue-Tek® O.C.T. Compound

Sakura Finetek - This is a well known water soluble glycol's and resins compound that provides an excellent specimen matrix for cryostat sectioning at temperatures of -10°C and below. It leaves no residue during the staining procedure.

Cat. No.	Tissue-Tek	Description	Pack
62550-01	4583	O.C.T. Compound	4 oz
62550-12	4583	O.C.T. Compound	12/cs

► Tissue Freezing Medium; TFM™

An embedding matrix for frozen sections. TFM™ is an ultra pure formulation of water-soluble glycols and resins that provides a solid bond between the tissue and the object holder with the following features:

- **Less Ice Artifacts:** TFM's reduced water content minimizes freeze-fracturing.
- **Less Curling:** TFM allows you to pick up flat serial sections with ease.
- **Freezes Faster:** TFM freezes very fast and offers better turn-around time.
- **Completely water soluble:** TFM reduces tissue dislodging.
- **Now available in 5 colors:** clear, yellow, green, red and blue.

► Cryogenic-Gel

- Replaces the messy "runny" embedding media.
- Easy to use.
- Sticks to where you want it.
- Will not run – No waste.

It is a highly viscous, water-soluble embedding medium for frozen sections that "stays put". The gel is packaged in a pump-dispenser bottle that can instantly dispense the gel in any position. The dispenser has a built-in "guillotine" that cleanly severs the gel from the pump spouts and prevents any "stringy" medium from pulling away when the bottle is removed. To use, simply dispense gel on a room temperature block-holder. Use a cold heat extractor to form a base layer. Dispense additional gel. Place the tissue on top of the gel. Use a cold heat extractor to freeze tissue and form a block.

Cat. #	Description	Pack
62806-01	Cryo-Gel™, 4.3oz	each
62806-06	Cryo-Gel™, 4.3oz	12/cs

► **Quick Freeze; Shur/Freeze, Environmentally Safe**

A high purity 1,1,1,2 - Tetrafluoro-ethane (R134a) that you can rely on to solidify paraffin sections or fresh tissue without disrupting cellular structure. A short spray burst will instantly freeze small area to -45°C/-5°F. Environmentally Safe and non-flammable.

72595	Quick Freeze	10 oz
72596	Quick Freeze	12x10 oz

► **CytoCool II**

For the Flash freezing of tissue specimens in the Cryostat as well as being used to harden difficult to cut tissue on a microtome during the sectioning. CytoCool II is an aerosol that does not contain any ozone depleting (CFC'S). Controlling the tissue freezing is simply done by varying the finger pressure on the trigger nozzle. This unique feature helps to prevent over cooling of the specimen.

72597	CytoCool II Aerosol	11 oz
72597-12	CytoCool II Aerosol	12x11 oz

Frostbite® Rapid Coolant

Ozone-safe but just as effective

Frostbite Rapid Coolant contains no CFCs yet maintains the ability to rapidly cool paraffin blocks and tissue. Two quick bursts will ensure deep penetration into both paraffin blocks and fresh tissue specimens.

- The trigger nozzle and needle tube help to localize spray, reducing excess coverage and eliminating waste

■ **Nonflammable**

Cat. #	Description	Pack
72594-01	Frostbite® Rapid Coolant 10 oz. (300ml) Can	each
72594-10	Frostbite® Rapid Coolant 10 oz. (300ml) Can	6/case
72594-20	Frostbite® Rapid Coolant 10 oz. (300ml) Can	12/case

► **LV CryoOil™**

Oils are widely used in crystallography – as cryoprotectants when samples are flash cooled, and as barriers to the dehydration, solvent evaporation, and oxidation, that may occur in air near and above room temperature. LV CryoOil™ is the best solution to your oil needs. It has the lowest viscosity of any available perfluoropolyether oil (1/10 that of Paratone oil and compatible to that of vegetable oil) and very low surface tension (less than 1/3 that of water). Consequently, a dip in this oil followed by gentle tapping to shake off excess can yield protective oil films on your crystals of as little as 10 µm thick.

LV CryoOil™ has extremely low vapor pressure, excellent chemical inert and excellent thermal stability.

LV CryoOil™ comes in each vial 1.5 ml, enough to protect hundreds of crystals.

For more information, see page 840-843 >>>>

60166	LV CryoOil™	1.5 ml

► **Cryo Gloves**

We now offer cryogenic personal protective garments of the highest quality. Cryo-Gloves®, Waterproof Cryo-Gloves®, Cryo-Aprons®, and Cryo-Industrial® are essential accessories for those working in ultra cold environments. Providing effective protection in a wide variety of applications .

FEATURES:

- Protection from -135°C to 150°C
- Superior thermal protection
- Water-resistant
- Comfortable/Lightweight/Excellent dexterity
- Breathable/Stay-dry lining.

APPLICATIONS:

- Ultra low and Blast freezers
- Cold rooms
- Dry ice handling
- Liquid Nitrogen, liquid oxygen, liquid helium

ENVIRONMENTS

- Clinical Laboratory
- Bio-Medical
- Blood Banks
- Frozen food processing
- Pharmaceutical

► CryoVial®

Specially Formulated Polypropylene, is certified RNase-free, DNase-free, Pyrogen-free, and DNA-free.

- Designed for storage of biological material, human or animal cells, at temperatures as low as -190°C.
- The cap features a long skirt for one hand aseptic technique. A super fast thread design that allows tightening or removal with a mere 1/4" turn, and an inside thread design that will not contribute to possible contamination.
- Tubes are provided with white marking area for sample identification, and can be color-coded by the use of a CAPINSERT®.
- These CRYOVIALS® are compatible with most storage systems.
- Vials are sterilized by gamma irradiation, and are packaged in unique tempered-proof, reseal-able, safety-lock-bags of 100, and 10bags to a case.
- The closures and tubes are both manufactured of polypropylene having the same coefficient of expansion, which further enhances the leak-proof qualities of these vials at changing temperatures.

Tubes are available in three series:

► Series T309

- LIP-SEAL DESIGN TUBE
- TUBE WITH EXTERNAL THREADS

► Series T310

- SILICONE WASHER SEAL
- TUBE WITH EXTERNAL THREADS

► Series T311

- SILICONE WASHER SEAL
- TUBE WITH INTERNAL THREADS

Ordering: All Cryovials® are sold by case quantity (10x100 per case)

61805-Y	Yellow	61805-O	Orange

Wide Mouth Cryogenic Vial

A wide mouth vial with 15 ml capacity. Useful for the storage and retrieval of solid specimens, such as bone, tumor, and organ samples. Made from polypropylene with high-density polyethylene screw closures. Self-standing. Radiation sterilized, non-cytotoxic, non-pyrogenic. Caps are attached in 15 bags of 5 vials each or 75 per case.

61850-15 Wide Mouth Cryogenic Vial 75/case

Cryo-Lok Cryogenic Vials

CYO-LOK vials are ideal for storage or transport of material of extremely low temperatures. The vials have external threads, providing a smooth and uniform inner surface. This eliminates the problem of air born contamination and/or sample loss so common when vials with internal threads are used. The screw top incorporates a molded-in sealing ring, which assures a tight leak-proof seal.

- Graduated in 0.5ml increments
- Conical bottom with slotted skirt
- For use in vapor phase of liquid nitrogen
- Color Caps also Available*

*Cap color Red, Yellow, Orange and Green are available upon request.

Cryogenic Vial Rack

Made from durable polycarbonate. Its unique design with slotted cavities accepts vials with slotted skirts. When placed in the holes the vials become locked in position, enabling the user to attach or remove the cap with one hand. It accommodates up to 50 vials (1/2" or 13.5mm diameter) in a 4x10 array with alphanumeric indexing. Autoclavable at 121°C.

Measures: 7½"x4¼"x¾" (190x108x22mm)

62015-01	Cryogenic Vial Holder	each
62015-04	Cryogenic Vial Holder	4/pk

Cryostore® Boxes

Made from strong Polycarbonate, these durable cryogenic storage boxes are designed to be used at temperatures between **-190°C and +121°C** and are auto-clavable. Different models are available to accommodate either **81 or 100 Cryovial® tubes** from 1ml to 5ml.

A **transparent cover** allows the user to see the contents of the box, and is keyed to the base to prevent misalignment. Being printed with a series of squares (numbered from 1 to 81, or from 1 to 100), the surface accepts writing with markers for better inventory control.

A unique **color-coding** system uses color plastic grids inserted to separate the cover from the base of the 81-place box. Boxes are made to accept 100 tubes have a colored base instead of grid. A choice of four popular colors is available: blue, green, red and yellow.

Removal of vials is facilitated by an innovative tool called the **Vial Picker**, which is supplied with each storage box.

- 1) Writing surface has numbered squares for easy sample identification
- 2) Stackable
- 3) Vials readily visible through transparent cover
- 4) Four colors available for better color-coding
- 5) Cover and base are keyed to prevent misalignment
- 6) Drain holes under base
- 7) Made to fit freezer metal racks
- 8) Writing surface for identifying base and/or cover
- 9) Autoclavable at 120°C, 15 psig (1 bar) for 20 minutes
- 10) Numeric identification of each vial
- 11) Air vents minimizing condensation

► Cryo Storage Boxes

Made from heavy-duty chip-board. These boxes store vials neatly and fit most standard rack systems. They come with dividers and are slotted for cross-ventilation. The small box is 5¼" (132mm) square, 2" (50mm) high and contains divided spaces for up to 81 2ml vials. The medium box is 5½" square, 3" high and contains divided spaces for up to 81 2.5 and 3.5ml vials. The jumbo storage box is 6" (152mm) square, 3" high, and contains divided spaces for up to 100 vials.

62010-10 Small Cryo Storage Box 4/pk

► Cryo Transport Box

Made from high impact polystyrene

- Ideal for transporting Cryo Vials
- Durable construction
- Organizes small amounts of Cryo Vials
- Holds 1.0 – 2.0ml Cryo Vials

Catalog #	Description	Qty
62004-05	Cryo Transport Box for 5 Tubes	20/pk
62004-10	Cryo Transport Box for 10 Tubes	10/pk

► Cardboard Cryogenic Vial Boxes and Partitions

Economical storage solutions in a box

Store cryogenic vials in liquid -nitrogen, or in mechanical freezers in our freezer storage boxes. Box footprint is 133 x 133 mm. Select a box and a partition that fit the size and number of vials for your needs. Colored cardboard boxes are ideal for identification and sorting purposes. Choose blue, red, yellow or assorted pack (four each of blue, red, and yellow).

► NovaRack™ and NovaChamber™

Unique Cone-Shaped Storage Racks For Easy Sample Viewing

Organize – Easily view, organize and track up to 46 tubes including 24 - 0.5 to 2.0ml tubes, 14 tubes up to 8ml in size including cryovials and 12x75mm culture/blood collection tubes, 7 - 15ml tubes and 1 - 50ml tube

Durable – Constructed of durable polypropylene and autoclavable

Stackable – Use the Stacking Adapter to double available bench space

Freezable – Turn the rack over and fill with water for freezing. A non-slip rubber bottom (included with each NovaChamber) keeps the water/ice contained for a portable ice chamber rack.

Molded numbers – For easy sample tracking each rack rack has molded numbers.

► 4-Way Microtube Racks

Create as large a rack as you need by linking together multiple racks.

Heavyduty polypropylene racks feature a unique system of tabs and slots, that facilitate easy connection and sturdy fit. Autoclavable. Assorted colors or natural.

Measurements: 174 x 95 x 52 mm

Cat #	Description	Qty
61615-00	4-Way Microtube Rack, Assorted	5/pk
61615-20	4-Way Microtube Rack, Natural	5/pk

▶ Work2Store™ Expanding Storage Rack

Single rack, double function

Reduce sample handling time and the need for several racks when working with samples for cold temperature storage with the Work2Store expanding storage rack.

The opening and closing mechanism allows the rack to expand, creating needed room for sample manipulation. Then simply collapse the rack back to its compact form and it is ready for the freezer. Temperature range -80 to 121°C.

U.S. PATENT PENDING.

- Holds up to 64 x 1.5/2.0 mL micro-centrifuge tubes and/or most standard cryogenic vials up to 2.0 mL
- Clear lid locks the rack together for safe handling and transportation
- Wells have a center depression to stabilize conical tubes and a cryogenic vial lock for one handed cap removal
- Stackable, autoclavable and with alphanumeric well identification
- Will fit into standard 2" (52 mm) freezer racking
- Open dimensions 310 x 128 x 33.5 mm
- Closed dimensions (with lid in place) 133 x 133 x 53 mm

Cat No.	Wells	Open L x W x H, mm	Closed L x W x H, mm	Qty
41002	64	310 x 128 x 33.5	133 x 133 x 53	each

▶ Rota-Rack™ Tube Racks

Connect up to 4 interlocking racks. Twist and turn to suit your application!

Rotate each of the four modules independently. Use several sizes of test tubes, culture tubes, centrifuge tubes, or microcentrifuge tubes at the same time. Click each module into place, load with tubes, and carry! Rack maintains its orientation until you twist it again. Comes fully assembled.

Autoclavable. Each module of the Rota-Rack for large tubes holds two 50 ml tubes, eight 15 ml tubes, six 20 mm tubes, or ten 10-13 mm tubes. Each module of the Rota Rack for microtubes holds six 15 ml tubes, nine 1.5/2.0 ml tubes, twelve 0.5/0.6 ml tubes, or thirty-two 0.2 ml PCR* tubes or four 8-tube strips.

61604-10	Rota-Rack for Large Tubes	each
61604-20	Rota-Rack for Microtubes	each

▶ 80-Well Microtube Rack

Popular fraction-collector-plate style rack. Rack holds 1.5 to 2.0 ml microtubes in a 5 x 16 array. Tubes sit in large wells with conical bottoms. Polypropylene rack is ideal for freezer storage. Autoclavable. Rack measures 8.875 x 2.625 x 1.125".

▶ One-Rack® Test Tube Racks

These durable racks are molded in a single, continuous piece - no assembly required and no detachable pieces. Racks are made of Delrin® fiberglass-reinforced polyoxymethylene, an engineered polymer developed by DuPont to have exceptional chemical and heat resistance. Molded index coordinates and flat labeling areas keep samples organized. Delrin® is a registered trademark of E.I. du Pont de Nemours and Company

Temp. Range: -40°C to 140°C

► 96-Well Reversible Rack

Polypropylene rack has 96 wells to accommodate 0.5 ml micro centrifuge tubes on one side, or 96 wells for 1.5 to 2.0 ml micro centrifuge tubes on the other side. Arranged in standard 8 x 12 array. Handy lid snaps into place in the tabs on each end of rack. Grid lines are molded on the side of the rack that accommodates the smaller tubes making it easier to see the wells. Raised rings are molded on the opposite side of the rack making it easier to replace the 1.5 to 2.0 ml tubes from those wells. Rack measures 9.75 x 4.75 x 1.875".

► True North™ Slide Box

These purple unique boxes which are made from durable polycarbonate and rugged stainless steel will protect your slides in ultra-low temperatures (as low as -80° C). These boxes provide for safe storage and transport of 25x75mm and 1x3" Slides. With temperature

sensitive foam lining and grooved slide slots which separate the slides there is always protection for slide contact.

For easy slide retrieval, identification sheet, lining, and grooved slots are numbered. These boxes are stackable and autoclavable. They measure 208x175x34mm.

► **Electropolished Stainless Steel Freezer Racks**

High Quality, Ultra-Durable Freezer Racks for Long Term Sample Storage

No Sharp Edges - All edges have been ground down to remove the sharp surfaces that plague standard freezer racks

Electropolished - This step cleans up all weld points that, over time, may be the starting points for corrosion.

Superior Construction - Superior construction and design have created a more sturdy rack than what is currently available on the market

Durable - Racks are designed and finished to last longer in the demanding freezer environment where samples are housed

Surgical Finish - Electropolishing leaves racks ultra-shiny and free from any surface contaminants

Multiple Sizes - Several vertical and horizontal options are available to fit a variety of freezer configurations

- A superior design was chosen to increase structural integrity.
- All weld points have been ground down to eliminate sharp points and areas where corrosion can occur.
- Structural edges and shelves have been ground and racks have been electropolished to remove sharp edges.

► **Cardboard Freezer Boxes and Dividers**

For Use With Stainless Steel Freezer Racks

Store cryogenic vials in liquid nitrogen or in mechanical freezers in our freezer storage boxes. Box footprint is 133 x 133 mm. Select a box and a partition that fit the size and number of vials for your needs. Cardboard boxes can be labelled with Cryo-Tags for easy identification. Both the boxes and dividers are available in packs of 12.

► The CoolSafe™

The World's Most Versatile and Effective Benchtop Cooling and Storage System

Complete CoolSafe Systems

Versatile – Designed for 0.2ml tubes (strips or trays), 96- well and 384- well microplates, 0.5ml, 1.5ml, 5ml tubes

Specially Formulated – Cool Bricks maintain a constant temperature (1°C or -10°C) for up to 10 hours

Quality Engineering – Each aluminum Cool Chamber surrounds tubes to guarantee sustained cold temperatures

Durable – The CoolSafe box is made of triple

density expanded polystyrene and molded under extreme pressure creating a durable container that guarantees temperature stability.

Easy to Use – Easily interchange Cool Chambers and Cool Bricks for different sized tubes.

No Mess – Messy ice buckets are now a thing of the past!

"Surround-a-Tube" Engineering

Super temperature-conducting solid metal surrounds the vast majority of the surface area of the microtube, keeping the entire sample or tray of samples cool.

Ordering the Complete CoolSafe Systems

Each complete CoolSafe System includes:

- 1 CoolSafe box with lid
- 1 Cool Chamber
- 2 Cool Bricks (1°C & -10°C)

Cat. #.	Description	Holes	Unit
61950-10	For 0.2ml PCR plates or tubes	96**	kit
61950-20	For 0.5ml tubes	91	kit
61950-30	For 1.5ml tubes	48	kit
61950-40	For 1.5ml Cryogenic tubes	55	kit
61950-50	For 384-well plates	384**	kit
61950-60	For 5ml tubes	32	kit
61950-70	For 0.2ml, 0.5ml, 1.5ml tubes	79	kit
61950-80	For flat-bottom microplates	None**	kit

**These Chambers also include 4 holes for 1.5ml tubes and 6 holes for 0.5ml tubes

► CoolSafe Individual Components

► Cooling Chambers

Each Cooling Chamber is a solid aluminum block that surrounds inserted tubes to guarantee sustained hot or cold temperatures.

Cat. #	Dimensions	Ideal Use
61951-10	6 1/8"(L) x 3 1/8"(W) x 1"(H)	0.2ml tubes
61951-20	6 1/2"(L) x 3 1/8"(W) x 1 1/4"(H)	0.5ml tubes
61951-30	6 1/8"(L) x 3 1/8"(W) x 1 1/2"(H)	1.5ml tubes
61951-40	6 1/8"(L) x 3 1/8"(W) x 1 1/2"(H)	1.5ml Cryogenic tubes
61951-50	6 1/8"(L) x 3 1/8"(W) x 1"(H)	384-well microplates
61951-60	6 1/8"(L) x 3 1/8"(W) x 2 1/2"(H)	5ml tubes
61951-70	6 1/2"(L) x 3 1/8"(W) x 1 1/2"(H)	multi-tube format
61951-80	6 1/8"(L) x 3 1/8"(W) x 1"(H)	Microplate Chamber

► Cool Bricks

Each Cool Brick allows up to 10 hours of benchtop temperature stability. Two temperature zones are available: 1°C and -10°C.

Cat. #.	Ideal Use	Temp	Qty
61952-10	For 5ml tubes	1°C	each
61952-20	For 0.2ml, 0.5ml, 1.5ml & 5ml tubes	-10°C	each
61952-30	For 0.2ml, 0.5ml & 1.5ml tubes	1°C	each

► CoolSafe Box

The CoolSafe Box is made of triple density expanded polystyrene and is molded under extreme pressure to create a durable container that guarantees temperature stability.

► CoolBag

The CoolBag is an insulated cooler for added coolness of critical samples. Use the shoulder strap for easy transporting from lab to lab.

Cat. #.	Description	Qty
61953-01	CoolSafe Box	each

► The CoolSafe™ (continued)

► The CoolSafe™ Deluxe

- Additional sample protection
- Improved portability
- Smaller bench-top footprint
- Clear lid for sample visibility

Each complete CoolSafe Deluxe system includes:

- 1 CoolSafe Deluxe box
- 1 Cool Chamber
- 2 Cool Bricks (1°C & -10°C)

**These Chambers also include 4 holes for 1.5ml tubes and 6 holes for 0.5ml tubes

61954-40	For flat-bottom microplates		Kit *
61954-55	CoolSafe™ Deluxe box	None**	each

► Stand Alone Specialty Cooling Chambers

Ideal for Ice Pans, Ice Buckets, and Cold or Hot Plates

Multiple Uses – Ideal for use on hot or cold plates or for temperature sensitive liquid transfers

Durable – Anodized aluminum blocks will not rust or corrode

Ideally Sized – A variety of options are available to accommodate PCR tubes and trays, 1.5ml tubes, 15ml and 50ml conical tubes

A variety of Specialty Chambers are available to keep samples cool and on ice while you work. Freeze these Chambers overnight for added cooling convenience.

These Chambers do not fit the CoolSafe system; use separately (*61955-30 not pictured)

► 15ml & 50ml

Chambers

Each Chamber is an anodized aluminum block. Excellent temperature conductors. Use with hot plates or with our Ice Pans & Ice Buckets.

Cat. #	Dimensions	Ideal Use	Holes	Qty
61951-10	6 1/8" (L) x 3 1/2" (W) x 1" (H)	15ml tubes	6	each
61955-21	3 1/2" (L) x 3 1/2" (W) x 3 1/2" (H)	15ml tubes	12	each
61955-40	3 1/2" (L) x 1 3/4" (W) x 3 1/2" (H)	50ml tubes	2	each
61955-41	3 1/2" (L) x 3 1/2" (W) x 3 1/2" (H)	50ml tubes	4	each

► Double Chamber for 0.2ml tubes

The Double Chamber fits two 96-well PCR trays or individual tubes and strips. Each edge can accommodate up to (12) 0.5ml and (8) 1.5ml tubes.

Great for temperature sensitive liquid transfers. It measures 6 3/16" x 1 1/2" x 1".

Cat. #	Dimensions	Ideal Use	Holes	Qty
61955-10	6 3/16" (L) x 6 3/4" (W) x 1" (H)	0.2ml PCR Plates, tubes	192	each

► 64-Place Step Chamber

Description: Anodized aluminum block sized to fit 64 1.5ml microtubes (16 holes per 'step') for easy viewing of samples when in the freezer, on the bench-top or in an ice pan or ice bucket.

Cat. #	Dimensions	Ideal Use	Holes	Qty
61955-30	8 1/4" (L) x 3" (W) x 2 1/2" (H)	1.5ml tubes	64	each

► 80-Well Chamber

The 80-well Chamber is a solid, anodized aluminum block sized to fit 1.5ml microtubes. An excellent temperature conductor for use with hot plates and ice buckets. It measures 8.25" x 2.625" x 1.25".

Cat. #	Dimensions	Ideal Use	Holes	Qty
61955-80	8 1/4" (L) x 2 5/8" (W) x 1 1/4" (H)	1.5ml tubes	80	each

► Cooling Chambers and Ice Baths (continued)

► CryoVial® Cooling Chamber

Each well in the Chamber contains locking ridges that do not allow the cryovial to turn.

This unique feature allows for one handed cap removal.

"Locks In" CryoVials For Easy Cap Removal

One-Hand Operation – Locking base holds vial in place as cap is removed

Universal – Fits most major cryogenic vial brands

Preserve Cells – Minimize cell loss from exothermic reactions by preparing samples inside chambers

Quality Engineering – Each aluminum CryoVial Cooling Chamber surrounds tubes to guarantee sustained cold temperatures

Durable – Each Chamber is anodized clear to protect from rust and corrosion ensuring longevity

Versatile – Use with Cool Bricks to maintain a constant temperature (1°C or -10°C) for up to 10 hours

Cat. #	Dimensions	Ideal Use	Holes	Unit
61956-1	6½" x 3½" x 1"	1.2ml cryovials	32	each
61956-2	6½" x 3½" x 1½"	2.0ml cryovials	32	each
61956-3	6½" x 3½" x 2½"	3.0-4.0ml cryovials	32	each

Complete CryoVial CoolSafe System includes:

- 1 CoolSafe box with lid,
- 1 CryoVial Cooling Chamber and
- 2 Cool Bricks (1°C & -10°C)

61956-31	CryoVial CoolSafe System* (1.2ml cryovials)	each
61956-32	CryoVial CoolSafe System* (2.0ml cryovials)	each

► Mini-Cooling Chambers

Ideal for Ice Pans and Ice Buckets

Ideally Sized - For use when only a small number of microtubes are required.

Maximize Work Area - Each Mini-Chamber will fit in our 1L Glacierbrand™ Ice Pan(6.13" x 6.13" x 3.61").

Minimize Ice - Less Ice is needed to cool these chambers. Less ice means less mess.

Same Great Engineering - Mini-Chambers are anodized aluminum and utilize our "Surround-A-Tube" cooling technology.

Cat. No.	Dimensions	Ideal Use	Holes	Qty.
68600-10	3" x 1½" x 1½"	1.5- 2.0ml Tubes	6	each
68600-20	4" x 2½" x 1½"	1.5- 2.0ml Tubes	15	each
68600-30	4 11/16" x 4" x 1½"	1.5- 2.0ml Tubes	30	each

► GLACIERbrand™ Ice Pans

No Sweat – Thick pan walls will not sweat or leave puddles of condensation on the benchtop

Durable – Made of triple density expanded polystyrene creating a durable container that is virtually unbreakable

Super Insulating – Preserves ice up to 30% longer than conventional ice pans

Stackable – Designed with an inner edge enabling the pans to stack on top of one another for easy storage and to minimize bench-top space

Lightweight – Ice pans are extremely lightweight (1.1oz, 4.7oz. and 11.4oz) and easy to handle. They feature a molded lip around the edge for carefree moving and carrying

Chemically Resistant – Resistant* to mild chemicals as well as ice-alcohol slurry, dry ice and liquid nitrogen.

(*Not recommended for long-term exposure to harsh chemicals or corrosives)

► GLACIER brand™ Ice Buckets

Excellent Insulation - Made of the same triple density expanded polystyrene as our popular Ice Pans. Preserve ice 30% longer!

Won't Sweat - Thick insulating walls will not sweat.

Easy Grip - Robust handles make buckets easy to carry.

Includes Lid - Use the supplied lid to maximize cooling.

Heavy Duty - Solidly constructed to be unbreakable under normal laboratory conditions.

Resistant to mild chemicals* as well as ice-alcohol slurry, dry ice and liquid nitrogen.

(*Not recommended for long-term exposure to harsh chemicals or corrosives)

► True North® Cool Containers

These rigid single mold polyurethane provides durability for chilling your temperature sensitive samples. Excellent insulation properties for ultra cold--use with ice, LN₂, ice-salt slurries, and more.

They come with a convenient lid which nests beneath bucket or pan. They are available in either a bucket or pan and come in a multiple size assortment.

Rigid single mold polyurethane provides durability for chilling your temperature sensitive samples. Excellent insulation properties for ultra cold--use with ice, LN₂, ice-salt slurries, and more. Minimize evaporation loss with snug fit lid. Easily remove with comfortable recessed knobs. Keyed lid and base fit together to conveniently store lid under base. Use handy pour spout with melted ice, water, and solutions. Ergonomic handles safely transport bucket or pan from work area to sink. Deep internal cavity has enough room to add one of your racks. Tapered sides make stacking and storage compact.

Cat. #	Capacity	Style	Color	Units

► Liquid Nitrogen-Cooled Mortar

A stainless steel mortar is suspended by three brackets above a stainless steel bowl which holds the liquid nitrogen. The bowl is nested in a well insulated poly-ethylene housing. The 4" (102mm) insulated handle is removable for saving space. The housing measures 6½" (165mm) in diameter x 4½" high and has 3 suction cup-feet. Now frozen tissue samples can be ground without the hazard of liquid nitrogen droplets flying onto personnel.

64470	Liquid Nitrogen-Cooled Mortar	set
64471	Spare mortar bowl	each
64472	Ceramic pestle only, 180 mm Long	each

► True North® Mini Coolers

Protect temperature-sensitive samples at the bench or in the freezer

Ideal for keeping PCR® reagents, enzymes and other biochemical reagents cool while working at the bench. Filled with insulating gel, the Mini Coolers can also be used for controlled freezing of samples longer temperature retention.

- Polycarbonate construction with rubber non-slip feet
- Gridded and keyed one-position lids for easy sample identification
- 0.5 mL tube adapters supplied as standard with the 0.5–2.0 mL tube size versions

- Temperature-retention graph supplied with each of the 7 styles available
- Versions available for 0.5 and 1.5/2.0 mL microcentrifuge tubes and cryogenic vials and a 96-place version for 0.2 mL tubes and assay plates

► Tru North® Chilling Jar

Quick freeze samples at -1°C minute rate

Designed to rapidly chill cryogenics vials in freezer –alcohol filled jar speeds freezing rate. Fill jar to visible level with isopropanol. Sample vials are not in contact with liquid – insert provides barrier while alcohol is securely contained. When samples are removed from freezer, the insulating foam holder decreases warming rate and extends working time.

Holds eight 1.2 to 2.0 ml cryogenic vials, fits most brands. Lift with arrow tab to remove insert from jar- float insert in water bath to warm samples after freezing if needed. Unit includes polycarbonate jar, high density polyethylene lid and insert, and polyurethane foam jacket. Measures: 123 mm (dia) x 105 m (H).

64475	Tru North™ Chilling Jar	each
-------	-------------------------	------

► ChillDown

Rapidly Cool Agarose Mixtures and Other Solutions

Quick - Chill molten agarose down to 60°C in minutes

Improve Results - Rapid cooling of agarose prevents an early-polymerized layer on top of the solution, which interferes with results

Versatile - Use ChillDown whenever cooling of solutions is desirable

Universal - Fits any 250ml beaker

Easy-To-Use - Simply leave your ChillDown in the freezer overnight and it will be ready for you when you need it

77518-01	ChillDown	each
----------	-----------	------

► Cryogenic Workstation

Coming® Cryogenic Workstation features a reusable cryogenic vial rack with a removable storage tray. Rack holds 30 vials. The tray can be used to hold water or crushed ice. The racks and trays are made of auto-clavable polycarbonate. Overall measurement: 14½"(L) x 6"(W) x 3"(H)

► Cryogenics Liquid Nitrogen Transfer Vessels

Bench-top Storage!

- For Clinical, industrial, or educational applications
- Different sizes and styles to fit your needs
- Light-weight design is ideal for everyday laboratory use.

The Thermo-Flask® features inner vessels of borosilicate glass evacuated to 1×10^{-5} mm Hg to provide maximum coolant retention and

excellent extended temperature retention for samples stored in liquid nitrogen or solid CO₂. These flasks are available in stainless steel, enameled steel or plastic exteriors – select models feature vented, clamped lids, carrying handles, and rubber cushioned bases.

► 1. Stainless Steel Thermo-Flask® with Handle and Lid

- Durable, corrosion-resistant stainless steel exterior construction with carrying handle and vented lid secured by toggle clamps.
- Recommended for the safe transport of liquid nitrogen.

► 2. Shallow Wide Mouth Flasks

- Convenient dish-shaped design is ideal for bench top use with crushed ice, dry-ice, or alcohol.
- Also great as a hot liquid container.
- Stainless steel jacket and cushioned base (lids not included) will provide years of trouble-free use.
- Excellent for use as a cold trap.

► **CryoFlex® Tubing**

CryoFlex® is a hollow tube from polyethylene which is useful for encasing and sealing cryo vials, when storing samples immersed in liquid nitrogen. The tubing measures ¾" diameter x 19 1/8" long (1.4 x 50cm)

Cat #	Description	Pack
61083-10	CryoFlex® Tubing	15/pk

► **CryoSleeve®**

Clear polyvinyl chloride. Ideal for enclosing Cryo Storage Canes (EMS #61080-10) for extra security during handling and storage. Fits over most other canes. Will not become brittle during freezing or thawing. Will not shred or tear after repeated use like cardboard. Length: 10 3/8" (27.5cm L).

Cat #	Description	Pack
61082-10	Cryo Sleeve®	100/pk

► **Cryogenic Vial Canes**

Organize cryogenic samples in Dewars

Aluminum canes hold vials for freezer storage or immersion in LN₂ Dewar. For use in liquid phase, use approved vials only. Canes bend to fit all major cryogenic vial brands.

Cat. #	Length	Number of Vials	Vial Size	Qty.
61067-03	290 mm	5	Up to 2.0ml	12/pk
61067-13	300 mm	6	Up to 5 ml	12/pk

► **Tissue-Tek® Cryomold®; Sakura Finetek**

These disposable plastic Cryomolds produce a uniformly shaped flat surface specimen block with tissue freezing medium (O.C.T.) for frozen sectioning. Standard Cryomold fits directly into Cryobar® freezing wells of the Tissue-Tek® II microtome/cryostat. Use a Cryomold® adapter to adapt smaller biopsy and intermediate Cryomold® molds to freezing wells on the Cryobar® unit.

► EMS Freeze Substitution Kit

Overview

Freeze Substitution is a process for low temperature dehydration and fixation of rapidly frozen cells that usually takes days to complete. With the amazing work of K.L. McDonald and R.I. Webb¹ they have now introduced a new method for freeze substitution with a basic kit that we are proud to offer.

With this unique kit researchers are now able to achieve excellent freeze substitution results in as little as 90 minutes for cells of small volume such as bacteria and tissue culture cells. For those cells of greater volume or that have significant diffusion barriers such as cuticles or thick cell walls, one can extend the time to 3 hours simply by putting a lid on the box.

Kit Features

EMS 111 Platform Shaker
 EMS 002 Ice Chest
 EMS 003 Heater Block
 EMS 004 Temperature Probe
 EMS 005 Cryo Tubes
 EMS 006 Data Logger

EMS 111 Platform Shaker

EMS 002 Ice Chest

EMS 003 Heater Block

EMS 004 Temperature Probe

EMS 005 Cryo Tubes

EMS 006 Data Logger

Tobacco leaf prepared as above showing details of the cell wall (CW) and chloroplast (Ch) and cell membranes. Bar = 100 nm.

A BHK cell processed in 90 minutes by the quick FS method. Abbreviations: CCP = clathrin-coated pit, Cav = caveolae, EE = early endosome, IF = intermediate filaments, LE = late endosome, M = mitochondrion, MT = microtubule. Bar = 1 µm. Modified from McDonald and Webb (2011).

Process of Freeze Substitution

- Cool the metal block by submerging completely in liquid nitrogen in the ice bucket. Leave for 5 minutes or until the "boiling" stops.
- In a separate box, transfer samples into cryovials with frozen fixative, keeping everything at liquid nitrogen temperatures. Seal tightly and be very sure that there is no liquid nitrogen trapped in the vial. Trapped liquid can cause the vials to explode upon warming. It is best to use a room temperature lid when sealing the tube.
- Put the vials with samples into holes in the cooled metal block.
- Go to a PC (Macs won't work) that has the Lascar datalogger software installed and name and start the program.
- Pour off the liquid nitrogen from the block and box, making sure not to let the cryovials come
- out of the holes in the block.
- Arrange the block so the cryovials are horizontal and put the tops of the vials against one side of the foam box. Use a piece of foam or wadded up paper behind the block so it keeps the vials from falling out of the block during shaking.
- Turn on the shaker at 100-125 rpm and allow it to gradually warm until the temperature is at least 0°C before removing the vials for rinsing and resin infiltration. This operation should take place in a fume hood in case there is any leakage of osmium-acetone from poorly sealed vials. Freeze substitution will take about 2 hours with the lid off, and about 3 hours with the lid on (though this may vary from lab to lab).
- Remove the vials from the metal block and place them onto a rocker at room temperature and wait until they come to about 20°C, then

stop the datalogger and save the files.

- Rinse out the fixative with 3-4 rinses in acetone and proceed to infiltration and embedding. Take care opening the vials as pressure built up inside can cause a spray of the freeze substitution media.

**NOTE: No dry ice is required for this procedure

Why does it work?

- In well-frozen samples the water molecules are not likely to move around very much, even as the temperatures rise to a point where you would expect hexagonal ice (Dubochet, 2007).

Warming Curve With and Without Use of Lid

Typical temperature curves using the EMS Freeze Substitution Kit. With the lid OFF the time to 0°C is about 2 hours. With the lid ON the time is about 3 hours. Results may vary depending on the particular setting of the shaker. For example, hood air flow can have a definite influence on the shape of the curves.

C. elegans Cross-section through nerve cells in the head of *C. elegans*. A BHK cell processed in 90 minutes by the quick FS method. Abbreviations: CCP = clathrin-coated pit, Cav = caveolae, EE = early endosome, IF = intermediate filaments, LE = late endosome, M = mitochondrion, MT = microtubule. Bar = 1 µm. Modified from McDonald and Webb (2011). yeast Mitotic spindle microtubules and spindle pole bodies in the budding yeast, *Saccharomyces cerevisiae*.

► **EMS Freeze Substitution Kit (continued)**

- Agitation should speed up the substitution of acetone for water molecules in much the same way that agitation speeds up development of film.
- Water in the substitution mixture does not appear to slow down substitution as was once believed. In fact, it is known to help membrane contrast (Buser and Walther, 2008)..

Does it work for all samples?

If a sample can be successfully freeze substituted by the old methods, then the quick FS method should work just as well.

McDonald and Webb have used this procedure with complete success for over a year and a half for all the samples they have freeze substituted.

If samples show evidence of ice damage then it is because they were damaged during freezing and not during freeze substitution.

Safety Reminders

The equipment should be used in a fume hood in case there is a leak of osmium-acetone during a run. We suggest doing a trial run with acetone only in the cryovials to make sure that they are sealed correctly.

When sealing cryotubes that contain frozen fixative and sample, use a warm cap so that the O-ring is flexible and gives a good seal.

Take care when removing the caps after a FS run because there is some pressure built up inside the cryotubes and you can spray osmium/acetone on your hands if you are not careful. Cover the cap with a piece of lab tissue when removing and wear gloves.

► **Frigimat® – Dry Ice Maker**

US. Patent Des. 220,454

Produce the Dry Ice You Need Right in the Lab

The Frigimat® Dry Ice Maker eliminates the need to buy large quantities of dry ice when only a few blocks are needed. It employs the Joule-Thomson effect to produce a solid 454 gm (16 oz.) block of dry ice in one to two minutes. A brass relief valve safely vents excess gas. Removing the dry ice block requires just 30 seconds. Each 50 lb. cylinder of liquid CO₂ will make 8 to 9 blocks of dry ice, each measuring 8.5cm (3 1/8") x 11cm (4 3/8"). The unit is made from epoxy-coated steel with an aluminum ice chamber and brass valves with four non-skid rubber feet. Dimensions are 30 x 17 x 13 cm H (12" x 6 1/2" x 5"). Shipping weight: 5.5kg (12 lbs) and includes a 1.8m (6 ft) nickel-plated copper connecting tube with standard GCA 320 (0.830" – 14) thread couplings for easy attachment to an LCO₂ cylinder.

Cat. #	Description	Qty.
62056-10	Frigimat® Dry Ice Maker (US Model)	each

62056-22	Frigimat® Dry Ice Maker (Japan Model)	Each

Frigimat® CUB – Dry Ice Maker

Economical Block Dry Ice Maker for On-Demand Use

In only a few minutes, this compact device can be attached to a liquid CO₂ cylinder and will produce a ready-to-use 250 – 300 gram block of dry ice. (Each 50 lb. cylinder makes from 10 to 16 blocks of dry ice). Set-up and use is safe and simple. Dry ice production can be viewed through the transparent polycarbonate body that secures without clamps or screws or tools ensuring easy removal of the solid block of dry ice and connection from the CO₂ cylinder. A rugged nickel plated "pigtail" connects the Frigimat® Cub – Dry Ice Maker to the CO₂ cylinder valve. The system operates at very low pressure (displayed on the built-in dial gauge) and incorporates multiple pressure relief safeguards. Cylinder Connection: 1.8m (6 ft) nickel-plated copper connecting tube with standard CGA 320 thread coupling for easy attachment to a CO₂ cylinder.

FreezGuard™ Alarm

Alarm will Sound for Up to Three Days

Prevent costly, time consuming sample loss with this practical battery operated system. The FreeGuard™ Alarm monitors freezers and coolers and detects any variance from temperatures between -20°C and 13°C (-5°F to 55°F), ±1°C, which are preset by the user. The resonant alarm will continue to sound for up to three days if the temperature falls out of the pre-set range. Should the temperature correct itself, an LED will indicate that a variance has occurred. The alarm can be reset manually. A beep will signal when the 9V battery (not included) is low. For added protection, and extra life, a second battery can be connected. The unit mounts with self-adhesive tape or screw. Unit comes with a 3 meter probe lead, and measures 86W x 35D x 26mmH (3 5/16 x 1 1/2 x 5 1/16). The weight without the battery is 144 g (5.1 oz).

► Laser Cryo-Babies® & Cryo-Tags™ Labels for Cryogenic Storage†

Temperature-Resistant – From -196°C to 150°C. Cryo-Babies and Cryo-Tags withstand freezer temperatures down to -196°C (liquid and vapor phase nitrogen), boiling water baths (100°C), autoclaving and moderate oven temperatures (150°C).

Tough – Chemically inert labels resist most organic solvents and caustic agents. They adhere to most plastics*, glass and metals without cracking, peeling or degrading.

Specially Designed – Label sheets are specially top-coated to readily accept laser printing. Heat-resistant, stay-flat sheets will not jam in laser printers.

Innovative – Made with a flexible, polyolefin* label material and acrylic adhesive. This unique combination expands and contracts together with temperature fluctuations resulting in a strong adhesive bond.

Packs are available in Individual Colors or in *Rainbow Packs (4 sheets of each color)

► Cryo-Babies® & Cryo-Tags® On a Roll

Convenient – Dispensing box assists in labeling individual tubes used in small experiments.

Easy to Write on – PVC labels accept writing from most lab markers including our Solvent Resistant Pens and Teeny Writers.

1. Cryo-Babies on a Roll 1.28" x 0.50" (33mm x 13mm) Ideal use: 1.5ml tubes

Cat. #	Color	Labels per Roll
77550-W	White	1,000
77550-B	Blue	1,000
77550-G	Green	1,000
77550-O	Orange	1,000
77550-R	Red	1,000
77550-Y	Yellow	1,000

2. Cryo-Babies on a Roll 0.94" x 0.50" (24mm x 13mm) Ideal use: 0.5ml tubes

Cat. #	Color	Labels per Roll
77551-W	White	1,000

3. Cryo-Tags on a Roll 1.50" x 0.75" (38mm x 19mm) Ideal use: General Purpose

► Cryo-Clear™ Laser Labels

Clear Cryogenic Storage Labels for Use with Laser Printers

"The Choice is CLEAR" – Contents of vials beneath labels remain visible.

Temperature-resistant – From -196°C to 70°C. Cryo-Clear labels remain fully adhered down to -196°C (liquid and vapor phase nitrogen).

Durable – Chemically inert labels resist most organic solvents and caustic agents. Labels adhere to plastics*, glass and metals without cracking, peeling or degrading.

Laser Printable – Label sheets are specially top-coated to accept laser printing and other markings. Heat-resistant, stay-flat sheets will not jam in laser printers.

Innovative – Made with a flexible, vinyl label material and permanent acrylic adhesive. This unique combination expands and contracts together as temperatures fluctuate resulting in a strong and sustained adhesive bond.

Cryo-Clear Laser Labels - Sizing Guide

1. 1.28" x 0.50" for 1.5 - 2.0ml tubes	2. 0.94" x 0.50" for 0.5ml tubes
--	--------------------------------------

Cat. #	Color	Tag Size (Inches / Millimeters)	Sheet layout	Labels/Sheet	Ideal Use	Qty.
1. 77575-C	Clear	1.28" x 0.50" / 33mm x 13mm	5 Across - 17 Down	85	1.5ml tubes	1,700/pk.
2. 77576-C	Clear	0.94" x 0.50" / 24mm x 13mm	7 Across - 17 Down	119	0.5ml tubes	2,380/pk.

* NOTE: Siliconized surfaces should be avoided. Apply to clean, dry tubes at room temperature. Tubes made of 100% virgin polypropylene are recommended.

► Direct Thermal CryoTags®

Temperature-Resistant – From -196°C to 70°C and also freezable in liquid nitrogen.

Tough – They adhere to most plastics, glass and metals without cracking, peeling or degrading. Also resistant to scuffing and smearing.

Compatible – Tubes labeled with Direct Thermal CryoTags easily slide in and out of centrifuge rotors without binding.

Specially Designed – Labels accept printing from direct thermal printers such as Dymo LabelWriters.

Barcoding – Print popular barcode formats for fast and easy sample identification.

Effortless – Printer setup and use is easy and user friendly

Economical – Limit label waste by printing only the quantity required

New Format – Labels are now oriented vertically and are compatible with the new LabelWriter 450

Same Great Product – Users of Direct Thermal Tough-Tags will be happy to know we've expanded the temperature range of Tough-Tags and made them Cryo-Tags

Online Support –

Email us at sgkcck@aol.com to request new definition files for the LabelWriter 450

* NOTE: Prolonged exposure to alcohol may cause material discoloration.

► Cryo Labels And Markers

► **Labels:** A specially formulated material for use at ultra-low temperatures and in cryo storage conditions, such as liquid nitrogen and liquid oxygen. They are durable and adhere well to plastic as well as cardboard cryogenic storage boxes. They will not peel or shrink. Ten sheets of labels: five pre-printed, five plain. Twenty labels/sheet. Label measures: 2.5cmx5cm.

62046	Cryo Labels	200 labels/pk
62047	Cryo Labels	10pk/lot

► **Markers:** For permanently marking cloth, cardboard, and plastic. It will not fade at ultra-low temperatures. Smudge-proof. Package consists of four, extra fine point pens in assorted colors (red, green, blue and black).

62050	Cryo Markers	4/pk
62051	Cryo Markers	6pk/cs

► Micro Tube Label; Tough-Tags™

Pre-cut, peel-off, pressure sensitive labels. They are sized to fit microcentrifuge tubes, cryo tubes and many other containers.

- They can be boiled, froze, and autoclaved.
- They are chemically resistant.
- They are thin and will not jam in the centrifuge rotor.
- They will not dry out, fall-off, or tear.

Available in two sizes: 1.28"x.5" (33x12mm) and .94x.5" (24x12mm). They are ideal for use with 1.5-2.0 ml and 0.5-0.56ml microtubes respectively. The labels are either clear (for sample visibility) or white.

62044-10	Tough-Tags Clear Label, 24x12mm	1,000/bx
62044-20	Tough-Tags White Label, 24x12mm	1,000/bx

62045-20	Tough-Tags White Label, 33x12mm	1,000/bx

► Bake Tough-Tag®

1.50" x 0.75" (38 x 19mm) Ideal Use: Oven Sterilization

Bake Tags are oven-safe marking labels that withstand conventional oven-sterilization (typically 180°C) or heating to inactivate RNase, DNase and other enzymes. Bake Tags will withstand autoclaving, cryogenic freezer storage conditions and boiling baths, without peeling or falling off.

Cat #	Color	Labels/roll	Qty/pk
77540-W	White	250	1

► Thermal Transfer Tough-Tags & Cryo-Tags

Pre-cut, Peel-Off Labels Designed for Use in Thermal Transfer Printers

Thermal Transfer Tough-Tags and Cryo-Tags are a reliable and convenient way to identify samples with text or a barcode on microtubes, microplates, bottles and other laboratory containers.

- Unique solvent-resistant, acrylic-based adhesive provides excellent cold temperature performance
- Print crisp, clear, professional quality labels
- Resists degradation from scuffing, chemicals, moisture and wide temperature fluctuations
- Specially coated for use with a resin ribbon that provides the best performance under extreme conditions
- Print as little as one label at a time, eliminating label waste and saving time and money

TECHNICAL TIP

Cryo Sectioning and the Use of Diamond Knives

1. Electron Microscopy of vitrified ultrathin sections allows the cell structure to be studied in the hydrated state.

Richter, Karsten., Gnagi, Helmut., Dubochet, Jacques. (1991). A Model for Cryosectioning Based on the Morphology of Vitrified Ultrathin Sections. J. of Microscopy 163, 19-28.

2. It is demonstrated that cryosectioning with a diamond knife in conjunction with an ionization electrode can produce good cryosections by optimizing the cutting parameters (i.e. sectioning temperature, mechanical stability of the sample, and sectioning velocity).

Reference: Michel, M., Gnagi, H., Muller, M. (1992). Diamonds are a Cryosectioner's Best Friend. J. of Microscopy 166, 43-56.

For a complete line of all of our labels see pages 1126-1144 >>>>

► Wet Grip

Labels for Moist, Frosty or Frozen Tubes

- “GRIPS” to wet, frost-covered and frozen surfaces
- Temperature resistant to -40°C
- Compatible with centrifuge rotors
- Resistant to chemicals and solvents
- Adheres to plastics, glass, metals and even paperboard boxes
- Print on sheets with Laser printers or use rolls for Direct Thermal printers

ALL LABELS ARE CLEAR, ON 1" I.D. CORES WITH 1,000 LABELS/ROLL.

Dymo and LabelWriter are registered trademarks of the Dymo Corp., an Esselte Office Products Co.

► Direct Thermal (Temp. Range: -40°C to 70°C)

► Cloth-Textured Hi/Lo Temperature Tape

These tapes mold tightly to any container, withstand acids, alkalis, oils and greases. It's will not crack peel or fall off in 550°F dry oven temperatures. Hi/Lo Temperature tape also sticks tightly in the dry ice, liquid gases and deep freeze of cryogenic temperatures. Tape is available in widths of $\frac{1}{2}$ ", $\frac{3}{4}$ " and 1" on 250" roll. (This tape must be cut with scissors)

Cat.#	Description	Pack
77012-05	Hi/Lo Cloth Tape, $\frac{1}{2}$ " wide	each
77012-07	Hi/Lo Cloth Tape, $\frac{3}{4}$ " wide	each
77012-10	Hi/Lo Cloth Tape, 1" wide	each

► Cryogenic Labels

These labels are made from top quality materials, a wide range of sizes, designed specially for cryogenic use.

1. DuraStick Labels (KDS-series) For Temperature of -40°C and Below

These labels feature a smudge resistant surface. They are available in rolls for thermal transfer printing or in $8\frac{1}{2}$ " x 11" sheets for laser printing. All accept handwritten notations with cryo markers.

2. CryoStick Labels (FCS-series) For Temperatures of -80°C
Ideal for use with cryotubes, these labels are best used with thermal transfer printers or cryo marker pens. Available in a wide range of sizes on sheets or rolls, they are not recommended for laser printing.

3. LiquiStick Labels (LSC-series) For temperatures of -195°C
Labels feature a synthetic surface that accepts crisp bar codes from thermal transfer printers or handwritten notations cryo markers. Supplied in sheets or rolls, these labels are not recommended for use with laser printers.

4. Satin Cloth Labels (SC-series) For temperature of -60°C
These textured labels withstand dry ice, deep freezers and liquid gases. Supplied in sheets or rolls. They are easily marked with cryo markers, not for use with automated printers.

5. Wrap-Around Labels (WA-1) For Freezers and Cryogenic Use

These unique labels are for sub-zero use, measures $\frac{1}{16}$ " x $2\frac{3}{8}$ ". They feature a $\frac{1}{16}$ " x $\frac{1}{16}$ " area, frosted for thermal printing or marking with cryo markers. The remainder of the label is clear. It wraps around the cryo-tube to provide a protective cover for printed information while leaving a clear space for viewing the tube contents.

**DEAR CUSTOMER,**

DiATOME Diamond Knives: development, manufacturing and customer service since 1970

What have we achieved in this period?**ultra 45**

the first diamond knife with an absolutely score-free, hydrophilic cutting edge.

semi

the first diamond knife for alternating sectioning ultrathin/semithin.

cryo

the diamond knife for sectioning at low temperature.

histo

the first diamond knife for semithin sections for light microscopy.

ultra 35

the diamond knife for optimized sectioning results in almost all applications.

STATIC LINE II

the ionizer for eliminating electrostatic charging in ultramicrotomy.

cryo-P

a cryo knife with a patented platform for section pick up.

cryo immuno

the optimized cryo diamond knife for the Tokuyasu technique.

ultra sonic

the oscillating diamond knife for room temperature sectioning.

cryotrim

45 and 25 optimizing trimming with diamond blades.

ultra afm & cryo AFM

the first diamond knives for AFM at room and low temperatures.

cryo 25

for sectioning frozen hydrated specimens.

histo and ultra jumbo

for room temperature

trimtool

45° and 20° trimming tools for both room and cryo temperatures.

manipulator

for easy handling and mounting of section ribbons

These developments were possible by the cooperation with you, our valued customers. We are convinced that our future developments will allow diamond knives to be used for many new applications.

What services can we offer you?

- Technical assistance in all fields of ultramicrotomy.
- Free sectioning tests for all types of samples.
- Make use of our many years of experience in perfecting our knives.
- With a telephone call, an e-mail or a fax message we can inform you of any details you require.

We are looking forward to hearing from you soon!

YOUR DiATOME TEAM

Manufacturing

The Raw Material:

The manufacturing of high quality knives, like ours, begins with the selection of the highest possible purity diamonds with a regular crystal structure, which are pale yellow in color. The crystal orientation of the diamond that we have chosen permits a final polishing parallel to the cutting edge, which gives you an extremely sharp, scorefree, durable cutting edge.

Precision in Grinding and Polishing:

Our precise pre-grinding and polishing techniques assure you the perfection in a diamond knife that you expect. Each one of our stones is ground strictly in accordance with its structure, with an accuracy of +/- 2 degrees being maintained in the crystal axis. Loss of weight during this preliminary grinding amounts to 80%. In contrast to the methods of others our diamond knives are ground parallel to the cutting edge.

Some of the reasons for doing so are as follows:

1. The cutting edge life of a diamond tool used for processing a tough metal such as beryllium bronze can be appreciably lengthened, if the diamond is oriented in such a way, that the grinding direction is at a right angle to the subsequent working direction. If we wish to apply this knowledge to the manufacturer of diamond knives, then the grinding direction will be parallel to the knife cutting edge. This is crucial in the cutting of bone or metals, for example.
2. The diamond knife cutting edge is formed from the polished surface which is turned towards the trough and the ground surface which forms the clearance angle with the block. Since the sections pass over the side turned towards the water, this surface is subject to much greater use than the clearance angle surface, and if it has been badly polished, the areas with polishing ridges in the cutting edge give rise to stripes and streaks in the sections, some more visible than others.

The same thing would occur if we turned the ground surface towards the water and its grinding ridges were not exactly parallel to the cutting edge. It has been demonstrated that the steeper the grinding ridges are to the knife cutting edge, the more pronounced is the formation of stripes in the sections. According to this, grinding or polishing at right angles to the cutting edge would represent an extreme case. The streaks in the sections can be seen in the stereomicroscope of the ultramicrotome or in the electron microscope. In the course of time the effects of irregularities in the cutting edge can be increased through polymerized embedding material. Knives that have been supplied by us in perfect condition have come back to us after complaints and have been found to be cutting with streaks, even though there was no damage visible under the microscope.

The Cutting Edge:

The sharpness of a DiATOME knife edge can not fully be shown in a light microscopy photograph, however, it has been shown that the radius of curvature of our knives is less than 2nm.

Quality Control/Optical Checking and Section Testing:

The final step before any of our knives leave the plant is our own extensive testing that each knife, new or resharpened, is put through. Only if these knives perform successfully will they be sold. During the polishing process the edges of the knives are inspected at 500 to 1000x magnification. Very small irregularities that could not be found by light

microscopy are detected during the sectioning test in accordance with the range of the different knife types (sections are checked by light and electron microscopy). Only knives that cut perfectly over this range are accepted for delivery to the customer.

Characteristics of **DiATOME** Diamond Knives:

- DiATOME knives are compatible with all ultramicrotomes.
- The boat is designed in such a manner that the water surface is horizontal when the clearance angle is set. This results in a stationary water surface and good reflection.
- The shape of the boat offers you the advantage of easy pick-up of the floating sections.
- The surfaces of the DiATOME diamond knives are hydrophilic. This property allows an easy wetting of the cutting edge, even with a very low water level (important for sectioning Lowicryls and other hydrophilic embedding media, as well as for water sensitive samples.)
- The diamond is fastened in a metal shank which is securely screwed into the boat.
- The cementing material seals boat and knife. It is hydrophilic and aids the easy wetting of the cutting edge.

Quality Guarantee of **DiATOME** Diamond Knives:

Before delivery, each knife, new or resharpened, is subject to extensive testing. We can therefore guarantee perfect sectioning (in the respective thickness range) over the entire cutting edge.

Our goal has always been to assure our customers' satisfaction. Therefore, in the unlikely event that you experience difficulties, or for any reason are unhappy with the performance of your new or resharpened knife, contact us immediately. You can be sure that any problem with your knife will be corrected.

WE STAND BY OUR COMMITMENT TO QUALITY AND CUSTOMER SATISFACTION.

The different knife types and their applications

Knife	Angle	Sizes	Cutting Range	Application
ultra	35°	1.5-4.0mm	30-200 nm	Standard applications
		1.5-4.0mm	10-30 nm	Electron Spectroscopic Imaging (ESI), 3D Reconstruction, etc.
ultra semi	35°	3.0mm	50-500 nm	Alternating ultra-thin/semi-thin sectioning
ultra (dry)	35°	1.5-4.0mm	100nm-2µm	Dry sections for element analysis and SIMS
ultra	45°	1.5-4.0mm	30-200 nm	Standard applications
		1.5-4.0mm	50nm-1µ	Alternating ultra-thin/semi-thin sectioning

► DiATOME ultra

These knives are available in 35, and 45 degree angles. The optimal thickness range for cutting with these knives is between 30-150nm. They are available in sizes ranging from 1.5mm-4.0mm as a standard. Other sizes are available upon request. All of these knives are tested within a thickness range of 30- 150nm. Whether your needs are biological or materials related, in EM or LM, we have a knife to suit your needs.

► ultra 45°:

Recognized as the knife for routine sectioning. It is a good compromise between section quality and durability.

The 45° knife is recommended for the sectioning of extremely hard and brittle materials such as ceramics. In this domain it has replaced the formerly recommended 55° knife.

► ultra 35° Wet:

The capabilities of the 35° diamond knives have been shown in two publications by J.Jésior (Ref 3, 4). He proved markedly reduced compression, smoother section surfaces and better structural preservation with the use of our 35° diamond knives.

In the meantime a great number of scientists have noticed and recognized the advantages of the 35° knives for the sectioning of Lowicryls, inhomogenous samples such as undecalcified bone, dental materials, etc.

The 35° knives have proved advantageous in the sectioning of soft industrial samples such as metals and polymers, as well as for hard and brittle samples, for example semiconductors (Si, GaAs, etc), superconducting oxides, nanocrystalline ceramics.

The use of 35° knives leads to reduced compression in soft samples and to less breaking in hard and brittle samples.

We can claim that the 35° diamond knife has proved it's capability as a routine knife for many applications.

► ultra 35° Dry:

The ultra 35° knife (in the triangular holder) with a cutting range of 100nm - 2µm is used for dry sectioning of epoxy or acrylic resin embedded biological samples, which need to be investigated by element analysis (Ref. Edelmann) and SIMS (Ref. Guerquin-Kern). The gliding of the sections on the dry knife surface is facilitated with the use of our Static Line II ionizer.

► ultra Jumbo

Perfect for serial sectioning for 3D reconstruction STEM.

The Ultra Diamond knife is now available in Jumbo with 35° and 45° angles and in 2.0mm and 3.0mm sizes.

► DiATOME ultra sonic

The oscillating diamond knife for room temperature ultramicrotomy. It was developed in collaboration with Dr Daniel Studer, Lab. of Anatomy, University of Berne.

A piezo actuator produces an oscillation of the knife at a desired frequency and amplitude, parallel with the cutting edge. A depression in the foot of the knife allows the oscillation parallel to the cutting edge. The depression is rigid in the north/south direction and guarantees stability in the cutting direction.

The new knife produces ultrathin sections almost free of compression. The sections become thinner at the same thickness setting: since the volume of the section remains the same, the increased length leads to a decrease in thickness.

The theoretical considerations and first results of this invention were presented in the Journal of Microscopy (Ref 13). Results with polymers using the oscillating knife were shown at the M&M 2002 meeting in Quebec (Ref 14).

We have tested the oscillating knife with the following samples:

- Biological samples in Epon, Araldite, EM Bed, etc.
- Biological samples in acrylic resins (Lowicryls, LR White).
- Rigid polymers such as PS, PMMA, ABS, HIPS, modified PP, etc.

Specifications

- Knife angle: 35°
- Knife cutting range: 10-80nm
- Knife cutting edge length: 3.0mm

Control Unit

- Frequency: 25-45kHz, or automatic setting of the resonance
- Amplitude: variable (Voltage 0-30V)
- Mains voltage: 230V, 110

Polycarbonate modified with rubber.
Jens Sicking, Bayer Technology Services, Leverkusen.

ABS, stained with OsO₄, sectioned at room temperature with the ultra sonic knife, section thickness 50nm. Note the almost perfect spherical shape of the large rubber particles and the preservation of the inclusions inside. Also the smaller dense rubber particles are well preserved. B.Vastenhout, Dow Benelux N.V. Terneuzen, The Netherlands.

Peripheral nerv (rat), HP frozen, freeze substituted, Epon embedded, cut with the ultra sonic knife, section thickness 50nm. W. Graber, Institut of Anatomy, University of Bern, Switzerland

► DiATOME cryo

The Low Temperature Ultra-Thin Collection

Available for wet or dry sectioning with a 25°, 35° or a 45° angle. Section thickness range 30nm - 500nm. Cutting edge sizes 1.5 - 4mm.

Diatome cryo diamond knives may be used for all low temperature situations such as sectioning of cryo-protected specimens, frozen hydrated specimens and industrial samples such as polymers and rubber.

There are numerous advantages to our cryo diamond knives as opposed to glass knives:

- They produce thinner sections.
- Ultrathin and semithin sections with the same knife.
- Less compression and greater uniformity of sections.
- Easy to produce long ribbons of sections.
- You gain time. No knife manufacturing, no knife changing, hence no waiting for temperature equilibration.

► cryo 25°

The cryo 25° knife is designed for sectioning frozen hydrated specimens. The 25° angle results in the least possible compression and the best structure preservation.

► cryo 45° cryo 35°

The 45° knife is well suited for routine cryo sectioning.

The 35° knife allows you to section with considerable reduction of mechanical damage to the specimen (up to 20% less compression as compared to the 45° knife) and, in turn, better structural preservation of most frozen samples (Ref 6, 7, 8).

The triangular holder for dry sectioning and the boat for the sectioning with a liquid (DMSO/water and others) are made of a special copper/nickel alloy. They both guarantee excellent cold or heat transmission.

The seal is made of a cold-resistant epoxy resin.

Fusion of late endosome/lysosome with the Mycobacteria tuberculosis phagosome. Aldehyde fixed cryo-section labeled with anti-CD63 and protein-A gold 10nm. Scale bar = 100nm. Nicole van der Wel and Peter J. Peters, Netherlands Cancer Institute, Amsterdam.

► DiATOME cryo immune

The first cryo knife with a diamond platform, guarantees the best possible sectioning for cryo-immuno-chemistry.

The diamond platform guarantees easy and gentle section collection. Sections are collected directly from the diamond surface using a loop and a sucrose/methylcellulose droplet (Refs. Liou, Peters).

The 35° cutting angle leads to a considerable reduction in mechanical stresses and therefore to improved structure preservation in sucrose-protected samples.

In the Diatome special brochure "Diatome Static Line II" you will find detailed information about technical data, the applications and the handling.

► DiATOME trimtool 20 and trimtool 45

Finally, one trimming tool for all of your trimming needs, be it at room or cryo temperatures. The trimtool series supercedes the cryotrim and ultratrim lines of trimming tools. Resharpener is still available for these lines.

For successful ultramicrotomy in biology and materials science, precise trimming is mandatory.

The Diatome trimming blades trimtool 45 and trimtool 20 will fulfil all your trimming requirements, allowing quick, easy and accurate trimming at both room and cryo-temperatures.

Due to the extreme sharpness of our diamond blades, less mechanical damage is applied to the sample during trimming. Very shiny sample faces and precise sides are the result.

The trimtool 45 produces pyramidal sides with an inclined angle of 45° and the trimtool 20 produces pyramidal sides with an inclined angle of 20°.

Area of Application

Room Temperature:

- Epoxy or acrylate resin embedded biological samples
- Metals
- Polymers
- Nanoparticles in polymers
- Non-embedded brittle samples

Cryo Temperatures:

- Sucrose infiltrated and frozen hydrated biological samples
- Soft polymers

Polyethylene x120'000
Ronald Walter, BASF Aktiengesellschaft, Polymer Physics,
D-67056 Ludwigshafen.

SiC, SiO₂, TiO₂ and AlO₃ nanoparticles in polymer matrix.
Claudia Mayrhofer, TU Graz.

The Trimming Procedure

1. Trim the sample surface with the front facet

2. Trim the pyramidal side with one edge

3. Trim the second side with the outer edge

4. Rotate the sample 90°

5. Trim the two remaining sides

► DiATOME AFM

For Ultra and Cyro

Extremely smooth sample surfaces.

Best possible structure preservation.

The high quality Diatome diamond knives are not just perfect for producing ultrathin and semi-thin sections, but also for surfacing sectioning of all kinds of biological and industrial specimens for AFM investigation. Instead of a section as for TEM, the specimen surface is investigated using AFM. In order to achieve the best results for AFM investigation, only the highest quality diamond knives should be used. Diatome ultra AFM and cryo AFM knives are specially tested to ensure that they meet the increased quality requirements of AFM investigation. They produce extremely smooth sample surfaces and guarantee the best possible structure preservation. Available in 35° with a cutting range of 10-100 nm in 2mm and 3 mm sizes.

Sectioned with an ultra AFM knife, section thickness 15nm. Scan 40x40μm, average roughness 1.28nm. Robert Ranner, Leica Microsystems GmbH, Vienna.

Superconducting Oxide $\text{Bi}_2\text{Sr}_2\text{Ca}_1\text{Cu}_2\text{O}_8$ (BSCCO)

AFM amplitude image of the muscle of cat's mite *Otodectes cynotis*. The contrast covers amplitude variation in the 1-3nm range. Size of the whole image equals 4.6microns. Nadejda Borisovna Matsko, Institut für angewandte Physik, ETH Zürich

Trade In

When you need to sharpen your DiATOME Knife we will accept trade in knives from any knife manufacturer and apply the appropriate discount to your new purchase. The size of the knife that is being traded will determine your discount. Please note that there is a limit of one trade in per resharpened knife.

The diamonds that we receive as trade ins are absolutely never used for any of the products that we manufacture or sell.

► DiATOME histo and histo Jumbo

For Room Temperature:

Knives are available with a 45° angle.

Section thickness range 0.2 - 10µm.

Cutting edge length 4, 5, 6, 8, and 10mm.

The knife is designed for the sectioning of hard and soft biological and industrial materials, non embedded or embedded in methacrylate or epoxy resins.

The histo knife may be used on all ultramicrotomes and microtomes with a retraction of the specimen in the return phase.

For the production of our histo knives we use natural diamonds of highest quality. They guarantee the best quality and durability of the cutting edges.

Some of the advantages of our histo diamond knife as compared to glass knives are as follows :

- Perfect sections, free of scores or compression.
- Serial sections without knife change.
- Thinner sections.
- Extreme durability of the cutting edge.
- No knife making procedure.
- Lifetime Guarantee.

For 3D reconstruction it is imperative not to lose a single section (Ref. Blumer).

The large Jumbo boat as well as the adhesive (Pattex compact by Henkel) applied to the side of the sample block increase the distinct advantages of our histo knives.

They allow:

- Easy production of section ribbons (0.5-2µm)
- No section loss
- No folding
- The same orientation of all sections
- Easy collection of section ribbons
- Multiple ribbons on one glass slide
- Perfect for Immuno-histo-chemistry

E. B. Hunziker M. E. Müller Institute for Biomechanics, University of Bern. Rabbit joint, calcified cartilage/bone. X760

E. B. Hunziker M. E. Müller Institute for Biomechanics, University of Bern. Rabbit joint, calcified cartilage/bone. X760

► DiATOME histo-cryo

For Cryo Temperatures:

Knives are available in 45° angle.
Section thickness range 0.2 - 5µm.
Cutting edge length 4 and 6mm.

The histo-cryo knives are delivered in boats (for wet cryo sectioning) and triangular holders (for dry cryo sectioning), made of a special copper/nickel alloy, which guarantees the best heat/cold transmission.

► DiATOME manip

For easy handling and mounting of section ribbons.

The mounting of the manipulator is easy. The original plate on the cryochamber is removed, the manipulator is fixed in 5 minutes.

Applications

- Frozen hydrated biological samples (CEMOVIS)
- Room temperature sectioning of water sensitive samples
 - Dry resin sectioning of biological samples for chemical analysis
 - Dry sectioning of industrial samples such as polymers

Functionality

The left manipulator moves a conductive fibre on which the sections are attached by electrostatic force; the growing ribbon is guided.

The right manipulator guides the grid very precisely below the section ribbon, the sections are attached to the carbon film with electrostatic force.

Compatibility

Leica cryochambers FC6 and FC7 equipped with a Crion ionizer/charger adaption on other cryochambers upon request

Ordering Information

The cryosectioning approach is described by Struder et al.:

Struder, D., Klein A., Iacovache, I, Gnaegi, H., and Zuber B. (2014). A new tool based on two micromanipulators facilitates the handling of ultrathin cryosection ribbons. *Journal of Structural Biology*, 185, 125-128.

A section ribbon attached to a fibre is depicted emerging from a diamond knife edge (left) beneath the ribbon the grid attached to a holder touches the section ribbon.

A cryosection showing vacuole, mitochondria and filopodium of a cultured cell. C. Peitsch and I. Iacovache, Inst. of Anatomy, Bern. Bar 100 nm

► The Static Line II Ionizer

The Static Line II ionizer is an antistatic device which emits negative and positive ions, neutralizing the electrostatic charging in the cryochamber.

The sections no longer stick to the knife edge, or bunch up one on top of the other, but float in a nice ribbon over the knife surface. The pick-up of the sections can be done easily.

We recommend the use of the Static Line II ionizer for trimming, sectioning and section collection.

The range of applications:

- Sucrose protected specimens.
- Cell cultures in elatine/ sucrose.
- Frozen hydrated specimens.
- Dry cut Lowicryls at room temperature.
- Polymers and rubber.

Special **DiATOME** Diamond Knife Programs:

Dear Fellow Researcher,

We thank our loyal customers for allowing us to do what we do. All of us here at Diatome would like to make your job just a bit easier and we are pleased to announce we shall continue to offer some special programs and discounts to help in your scientific research needs especially in these economic tough times. We thank you for your loyalty and look forward to continuing to work together.

Program #1: The Ultra Exchange Program

This program allows you to exchange any old diamond knife you have for a brand new ultra thin diamond knife and pay almost half the price of a new knife. It does not matter what size you trade in, you may choose any size Diatome Ultra knife and pay the reduced price of the knife size you choose.

Program #2: The Multiple Purchase and Give-Away Program

For your convenience we have set this program up in three different ways.

- Buy any 2 Ultra room temperature or cryo knives at the full price and get the third knife at 50% off.
- Buy one Diamond knife for full price and get the second knife at the exchange price.
- Resharpen 2 knives and the third knife have resharpened for free.

Program #3: The EMS Tool Give-Away Program

This program allows you to buy any New or Exchange Diatome knife and receive an EMS #5 Biology Grade Tweezers.

Program #4: The DiATOME Rebate

This program allows you to purchase any new Diatome Diamond Knife at its regular price and receive a \$250.00 coupon towards the purchase of chemicals, accessories and supplies from Electron Microscopy Sciences, the leader in Microscopy consumable items.

If you would like to receive Catalog or a separate brochures on our Diamond knives and tools please complete the online request form, call, write, e-mail, or fax us. We will be more than happy to fill any and all of your requests.

We look forward to hearing from you and fulfilling all of your microscopy and research needs.

Sincerely,

Stacie Kirsch

Heart (rat), fixed with 2.5% Glutaraldehyde, OsO₄ stained, Spurr's embedded, cut with the ultra sonic knife, section thickness setting 15nm. J. Nebesarova, Institut of Parasitology, Ceske Budejovice, Czech Republic. Imaged by Petr Stepan in LVEM 5 at 5kV, DeLong Instruments, Brno, Czech Republic.

Impact modified PP, stained with RuO₄, sectioned at room temperature with the ultra sonic knife, section thickness 50nm. The EP-rubber particle is built from tiny agglomerated particles. The original particles have a more crystalline core (brighter with lamellae) and a more amorphous shell (dark). B.Vastenhout, Dow Benelux N.V. Terneuzen, The Netherlands.

W. Graber, University of Bern, Inst. of Anatomy.

DiATOME Services:

A. Resharpener and Exchange Service of DiATOME Diamond Knives:

Resharpener DiATOME knives undergo the same stringent optical checking and sectioning test as new knives.

A diamond knife resharpener by DiATOME is the same high quality as a new one!

During resharpener a knife may be reworked into another type (ultra to cryo, 45° to 35°, etc).

We let you choose: You may have your knife resharpener, or exchanged against a new one. In the exchange service a type change is possible (ultra to cryo, 45° to 35°, small knives to large ones, etc). This, of course includes changing the boat to your desired style.

When we resharpener our diamond knives we restore it to its original condition.

Your resharpener DiATOME knife will have the same length, the identical cutting edge and carry the same exact guarantee of quality as the day it first left our factory.

We are the only manufacturer that guarantees that after a resharpener, the knife will be the same flawless quality as the knife you originally purchased. Other manufacturers state that during their resharpener process the diamond may become smaller (up to 5% of its original length). With our advanced techniques in resharpener you will never, and we mean never, lose any diamond length.

Other companies "CAN NOT SUCCESSFULLY" resharpener a DiATOME Knife. We have found that when other companies try to resharpener our knives, the original parameters of our knives are either altered significantly or totally lost; returning to you an inferior diamond knife. Many times we have also found that other manufacturers ruin our diamonds during their resharpener process and end up replacing our diamond with one of inferior quality.

Any DiATOME knife can be resharpener an "UNLIMITED" number of times due to the following reasons:

1. The cutting edge of the diamond knife is on the narrow side of the rectangular cut diamond, leaving the large part of the stone as a resharpener reserve.
2. Special attention is given to minimizing the amount of grind off to the diamond during the resharpener process.

When you send a knife to us for resharpener we will automatically replace your boat at no charge if it is either damaged, discolored, or at your request.

Each DiATOME Diamond Knife, whether new or resharpener, is subjected to extensive testing for its ability to cut accurately without scoring or compression. Only if its performance passes our tests will we ship it to you.

B. Sample Testing Service of DiATOME Diamond Knives:

The great experience obtained during long years of development, manufacturing and application of diamond knives allows us to offer a unique service:

You send us biological or industrial samples of any nature and let us know what you would like to obtain. The more information you give us the better results you will receive. We perform a sectioning test and send you the resulting ultrathin section (ie. the sample face for SEM, AFM, STM investigation), a report of how the results were obtained and recommendations for the most suitable knife. This service is free of charge as long as the number of samples is reasonable. You may take it for granted that we treat your "secret samples" with absolute discretion.

Please allow us to help you choose the appropriate knife from our large range for your specific application.

C. Custom Diamond Knives and Boats:

* Upon request, we can supply you with different color (Black) and shaped boats (Huxley for instance) at no extra cost to you.

Certain applications require special knives and or tools outside of the standard knives and tools that are available. For years DiATOME has been manufacturing custom diamond blades, tools, and knives for customers meeting all of their specific needs.

If you already have in mind the type of diamond knife or tool that you require, please submit a diagram of it to us as well as your sample blocks or specimens. We, in turn, will manufacture a prototype knife for you and test it in accordance to your requirements with your blocks. Only if the knife or tool passes all of our extensive testing will we send it to you for your evaluation and approval.

If you are not quite sure how to attack your sectioning problems but you believe that you may be a candidate for a custom diamond knife or tool please send us your sample blocks and a complete description of the work that you are doing and what you would like to achieve with your diamond knife. We will take it from there. We will manufacture a prototype knife, evaluate and test it, and then send it to you for your evaluation and approval.

There is absolutely no charge for this service outside of the regular cost of purchasing the blade once you have approved it.

D. Delivery Time and Shipping:

All new knives as well as exchange knives are in stock for immediate delivery. For our resharpening service our turn around time is no longer than 4 weeks from date that the knife is received by us. In most instances the service usually only takes 2-3 weeks. All of our knives, new or resharpened, are shipped by UPS Blue (2 day air service). When you send knives back to us we recommend that you use either UPS or Federal Express and insure the knife for its original value.

DiATOME Unique Characteristics & Justifications:

A. Characteristics:

1. DiATOME offers incomparable durability of the diamond edge. DiATOME knives have been known to last for many years without resharpening.
2. All DiATOME diamonds are of the highest possible quality diamonds with a regular crystal structure. The crystal orientation of the diamond that we have chosen permits a final polishing parallel to the cutting edge, which gives you a perfect nick free edge.
3. Uniform sections are easily reproducible.
4. DiATOME knives are guaranteed for an unlimited amount of resharpenings.
5. When we resharpen our diamond knives we restore them to their original condition. Your resharpened DiATOME diamond knife will have the same length, the identical cutting edge and carry the same guarantee of quality as the day it first left our factory.
6. Our diamonds are fastened into a metal shank which is securely screwed into the boat and then sealed. The sealing material is hydrophilic, allowing for easy wetting of the cutting edge, and has no effect on the stability of the knife.
7. For our cryo knives we use a special epoxy resin for sealing which is chemical and temperature resistant.
8. Before delivery each knife, new or resharpened, is subjected to extensive testing for its ability to cut accurately without scoring or compression. Only if its performance passes our tests will we ship it to you.
9. The DiATOME boat is designed in such a manner that the water surface is horizontal when the clearance angle is set. This results in stationary water surface and good reflection.
10. DiATOME's universal knife boats are designed to fit all brands of ultramicrotomes without the need for an adapter.
11. The shape of the DiATOME boat offers you the advantage of easy pick up of the floating sections.
12. For 40 years DiATOME has been the innovator in the manufacture of diamond knives covering the entire microtomy spectrum.
13. DiATOME offers special testing services without charge. If you are having problems sectioning a particular specimen or you are not sure which knife will perform the best in your specific application, just submit a sample block to our testing division. We, in turn, will do all of the necessary testing for you and make our recommendations to you.

B. Justification:

The DiATOME knives are the only knives that can cut all types of materials from biological to materials (hard and soft alike). The DiATOME diamond knives are the only diamond knives that are constantly mentioned in all professional journals and books and are the only knives that are proven to work consistently for any type of sectioning specifications.

Much research has been done that supports the claim that the DiATOME knife is the only knife that can be relied on. Testing of other knives on the market proved to be futile and it was impossible to achieve success with them. The DiATOME was the only knife that was able to successfully cut all types of materials and allowed us to achieve the desired results like no other knife did.

The specific characteristics and properties of the DiATOME diamond knives that support the above claims are as follows:

DiATOME is the only manufacturer to use a 2-point diamond edge with a radius of curvature less than 2nm. This specification allows the DiATOME knife to be far superior than any of the other manufacturers and affords the knife a much longer life than any other knives on the market.

However, the main reason to buy a DiATOME diamond knife is that in the long run it is less expensive. The reason for this is that the durability of the DiATOME diamond is far longer than any other knife. That is to say that once a DiATOME knife is purchased it is good for a lifetime with the need for resharpening only every 2-3 years with proper use. All other manufacturer's knives must be resharpened much more frequently. Within a very short time the DiATOME knife becomes half of the price of all others on the market and on top of this it does a far superior job in your research.

High resolution electron micrograph of vitreous section of keratin intermediate filaments in the midportion of stratum corneum of human epidermis. The fine structure of the keratin filaments is well resolved and their molecular organization is seen in favorable cases (inset).

Scale bar = 100nm. Scale bar inset = 20nm.

DiATOME Diamond Knife Handling & Use Manual:

A. Diamond Knife Handling:

Contrary to popular belief a diamond knife is not as fragile as you might think. Taking into account the vast array of specimens that it is able to cut successfully from soft to hard, the diamond edge is quite durable. With proper care and handling, the DiATOME diamond knife can withstand a great deal of use.

However, with all of this said, in order to avoid any unfortunate mishaps, the following precautions should be taken when receiving the knife:

1. Make sure that the seal on the outside of the knife box has not been tampered with.
2. Insure that the receiving department of your institute or facility does not open the plastic box for they can cause damage.
3. When unpacking the knife, care should be taken not to disturb the knife edge.
4. Once the knife is unpacked it is ready for use*; just place it in the stage and begin sectioning.

*During our final inspection before packaging, the cutting edge is thoroughly cleaned. Only knives that pass our high inspection standards are released for shipping. Therefore, no cleaning is required by you for your initial use.

WE DO NOT RECOMMEND THE TESTING OF KNIVES WITH BLANK BLOCKS BECAUSE THEY CAN NOT SHOW THE KNIVES TRUE CUTTING ABILITY.

B. Preparation Prior To Sectioning:

A perfect section ribbon can only be obtained from a well trimmed block. The upper and the lower side of the block must be parallel to the knife edge. The block should not be too wide because this would substantially increase the cutting pressure. This may result in chatter. (see troubleshooting)

Possible Block Forms

We have found that the best trimming results with plastic embedded specimens are obtained with our Diamond trimming tools. For the trimming of frozen specimens, biological as well as industrial, our cryo diamond trimming blade offers the best results. If trimming is done with a razor blade, always use a fresh degreased blade. Before the final few cuts of your block are made, we highly recommend that you change to a new blade.

Caution: If the razor blade is old or the cutting of the block is too thick, the blade does have a tendency to leave steel particles (shavings) on the block. Upon sectioning, these particles will cause damage to the diamond's edge.

If the block face is precut with glass knives, use only a clean new portion of the edge. This will avoid glassy particles sticking on the block.

C. Sectioning:

1. Room Temperature

The following are factors that will determine, in part, the quality of your sections. These points should be checked prior to you beginning your sectioning.

1. Alignment of the block: it must be parallel to the cutting edge.
2. Adjustment of the hardware: All of the screws should be tightened in the block holder, the knife holder, etc.
3. Knife parameters: The clearance angle and the cutting speed should be set as indicated on the cutting card. (see all exceptions in Troubleshooting).
4. Trough liquid: the water should be level with the cutting edge and give a good reflection. (see all exceptions in Troubleshooting.) The boat should be filled until the cutting edge is moistened. Then the left and right hand sides of the boat are wetted with the tip of a toothpick without touching the knife edge or the cement mounting material.

To avoid difficulties during sectioning and extend the life of your diamond knife, the following tips should be kept in mind:

1. Do not add solvents to the distilled water in the boat (ie, acetone) for the following reasons:
 - a. They may dissolve the sealing material between the knife and the boat.
 - b. Solvents will reduce the surface tension of the water.
 - c. Solvents may also dissolve and destroy the cellular materials of your specimen.
2. Avoid cutting thicker than the limits given for each specific knife
3. The block should be fully cured and should not be too wide.
4. Exercise care when picking up sections. Do not touch the cutting edge with any solid object (grids, loops, tweezers).
5. Do not allow the sections to dry on the cutting edge.

2. Cryo temperatures:

Cryo sections have a tendency to stick to the knife edge, curl, bunch up one on top of the other, and fly away. These problems in large are caused by electrostatic charging in the cryo chamber. The lower the temperature is the more pronounced these problems become.

To eliminate these problems and make cryo sectioning as easy as sectioning at ambient temperatures, we highly recommend that you use our "Static-Line" II Ionizer in conjunction with our cryo diamond trimming tool and knife.

It has been proven that diamond knives produce higher quality cryo sections than that of glass knives. With a diamond knife it is possible to cut thinner sections and these sections have less compression and greater uniformity than those cut on glass knives.

The most widely used technique in cryo sectioning is the Tokuyasu technique. For this technique we have found that the optimum results are achieved when using a diamond knife at the following temperatures:

- For trimming and semi-thin sections: -80°C
- For ultra-thin sectioning: -110°C to -120°C

For all other techniques the temperature range will be dependent on your specimen that needs to be cut. (see our separate catalog on the Static Line Ionizer II).

D. Cleaning Procedure:

Method 1

Immediately after picking up the sections, remove all unused sections with a hair curl or an eyelash. Then proceed to clean the knife edge as follows:

- Empty the boat and remount it in the ultra microtome support stage.
- Take one of our polystyrol rods and bevel it to an angle approximately 45° using an oil free razor blade.
- Dip the rod into 100% ethyl alcohol and shake off the excess.
- Pass the rod over the cutting edge without applying pressure *
You may repeat this procedure, if necessary, until the edge is clean.

This procedure has been used for many years by us and we have recommended it to all of our customers; the results have been exceptional with no evidence at all of knife damage.

* It is important not to contact the shaded (cemented) areas as this will damage the edge of the polystyrol rod and transfer dust to the cutting edge of the knife.

Mechanical cleaning as explained above is absolutely necessary after cutting poorly polymerized blocks.

Method 2

If you do not feel comfortable using the method described in procedure 1, there is an alternative. Immediately after picking up the sections proceed as follows:

- Remove all unused sections with a hair curl or an eyelash.
- Rinse the knife thoroughly with distilled water.
- Take a can of clean pressurized air and blow the water off of the knife.

If the knife is tended to immediately after sectioning, there is no need for any elaborate cleaning.

Method 3:

If sections or debris dry on the knife edge we recommend the following procedure be followed:

- Place the knife in distilled water.
- Add one or two drops of mild liquid dishwashing detergent to the distilled water.
- Let it sit overnight.
- Remove the knife and rinse it with distilled water only.
- Now proceed to clean the knife using method 1. For the cleaning of our cryo knives proceed as follows:
 - Remove the knife from the cryo chamber (before heating the chamber up).
 - Rinse the knife under tap water to warm it up.
 - Then proceed to clean using method 1. (Please note: for our cryo knives we recommend a 50% solution of ethanol in place of 100%.

E. Troubleshooting

The following is a brief summary of the difficulties that can be experienced while sectioning with a diamond knife and what to do if it occurs.

1. PROBLEM: Difficulty wetting the knife edge

SOLUTION:

- Clean the knife edge with alcohol (100%) and a DiATOME cleaning rod.
- Fill the boat with distilled water until the water level is a little too high, wait a few minutes, and then carefully remove the excess water.
- A DiATOME cleaning rod is passed over the cutting edge (the boat being full and mounted in position) using the same motion as the cleaning method.
- A hair or eyelash is drawn over the tongue and then passed over the cutting edge of the knife while the boat is full and clamped in place.

If the cementing material is damaged and you suspect that this is the reason you can not wet the knife edge, please contact us immediately so we may arrange to get your knife back and recement it for you.

2. PROBLEM: Block face is getting wet

CAUSES:

- a. For epoxy resins:** Block faces may get wet due to electrostatic charging (low room humidity and or transportation).
- b. For methacrylates:** Some of these embedding materials are hydrophilic and tend to wet the block surface because they attract water (Lowicryl, LR White, etc.).

SOLUTION:

a. For epoxy resins:

- Increase the room humidity.
- Lower the water level ever so slightly.
- Dry the block face with filter paper.
- Eliminate electrostatic charging with an antistatic device.

b. For methacrylates:

- Lower the water level to a concave shape.

Two problems will become pronounced by lowering the water level.

- You will have difficulties wetting the edge.
 - To combat this just follow the steps outlined above in edge wetting.
- You will have difficulties with reflection.
 - To alleviate your reflection problem you should adjust the light source to the appropriate angle.

If your ultramicrotome does not allow for adjustment of the light source proceed as follows:

- Tape a small piece of aluminum foil to the light source.
- Slowly bend the foil until you reach your desired reflection.

3. PROBLEM: Chatter

CAUSES:

Chatter manifests itself in many ways and is caused by different reasons.

- External vibrations.
- A faulty microtome.
- Screws are not fully tightened (block, block holder, and knife).
- Cutting pressure is too big.
- Clearance angle is too small (may cause friction between the block face and the diamond face).

SOLUTION:

- Change the location of the microtome.
- Have the microtome checked by a service engineer.
- Make sure all of the screws are tightened.
- Reduce the block width.
- Increase the clearance angle by 1-2 degrees.

4. PROBLEM: Compression

CAUSES:

- The block is too soft.
- The knife angle is too big.
- The knife is dull.
- The clearance angle is too big and or the cutting speed is too high.

SOLUTION:

- Make the blocks harder.
- Switch from the 45 to the 35 degree angle knife.
- Send the knife back to us for evaluation and possible resharping.
- Reduce the clearance angle by 1-2 degrees and reduce the cutting speed from 1mm/sec to 0.5mm/sec.

5. PROBLEM: Knife marks

The majority of all diamond knives that are in need of resharping are due to knife marks. They are found in the cutting edge and cause very fine lines in your sections.

CAUSES:

- Touching the edge with your fingers or any solid object.
- Remnant particles in your block from trimming.
- Hard particles in your block and specimen.
- Normal use of the diamond knife that over time and depending on the different types of specimens will all cause nicks.

SOLUTION:

Some of the causes are easily prevented while others are more difficult to prevent.

- Keep all hard objects as well as fingers away from the cutting edge.
- Follow our recommendations under the trimming section for best results.
- Most blocks have hard particles in them. (continued) These inclusions can be controlled, to an extent, by keeping to the highest possible purity during the entire block making procedure from fixation through sectioning. It is impossible to avoid some inclusions but keep in mind that the knife marks produced are so small that they are not even detectable in a light microscope but only through the sectioning test.
- Normal wear and tear is inevitable. You can extend the periods between resharping by using a different knife for each of your different types of specimens.

6. PROBLEM: Striations

Whereas nicks are found on the knife edge, striations are found in the sections itself.

CAUSES:

- Very fine imperfections in the cutting edge.
- Poorly polymerized blocks.
- Inhomogenous blocks.

SOLUTION:

- Make sure the blocks are fully polymerized.
- Change the block.
- Try another portion of the cutting edge.

Photography: Film and Supplies

Kodak Film including Electron Microscopy Film
Instant Films and Film Holders from Fujifilm
Photographic Papers from Ilford
Photographic Chemicals from Ilford and Kodak
Darkroom Exhaust Fans and Louvers
Mohr Automatic Film and Print Processor
Developing Tanks, Film Racks, Tongs, Squeegees,
and Dryers
Cutters and Rotary Trimmers
Easels and Enlargers
Enlarging Focusing Aids, and Light Gathering
Magnifiers
Film Safes, Film Cleaner, and Static Eliminators
Tapes, Sprays, and Adhesives for Photo Mounting

► Kodak Films

For a complete user's guide to produce high quality images with our Kodak Electron Micrography products, please call or write us today.

► Kodak Electron Microscopy Film 4489

- 7mil Estar Thick Base.
- Microfine Grain.
- Blue Sensitive Emulsion.

Kodak has reverted to film type 4489 as the standard emulsion for EM. It is coated on a sheet film .007" Polyester base (for high dimensional stability and rapid pump down). Its fine grain, blue sensitivity emulsion is characterized by intermediate speed. Use safelight filters No. 1A, OA or OC and Kodak Developer D-19. Available in boxes of 100 sheets, supplied as two units of 50 sheets each in heat-sealed foil packages or in bulk pack.

74100	Kodak EM Film 4489, 3 1/4"x4"	100/bx
74102	Kodak EM Film 4489, 3 1/4"x4"	20 bxs/cs
74104	Kodak EM Film 4489, 3 1/4"x4"	250/pk
74107	Kodak EM Film 4489, 3 1/4"x3 1/8"	12 bxs/lot
74112	Kodak EM Film 4489, 6.5x9cm	250/pk
74113	Kodak EM Film 4489, 7x7cm	10 bxs/lot
74114	Kodak EM Film 4489, 6 1/2"x9cm	100/bx
74115	Kodak EM Film 4489, 6 1/2"x9cm	10 bxs/lot

► Kodak T-MAX 100 Professional Films

Especially useful for detailed subjects when maximum image quality is needed. Recommended for copying black and white photographs, for use in photomicrography, and in making black and white prints from color transparencies.

- Medium speed (EI-100).
- Extremely high sharpness, fine grain.
- Very high degree of enlargement, expanded exposure latitude.
- Recommended Kodak Developers: T-Max, D-76, HC-110, Microdol-X, Duraflo RT.
- Total darkness.

1) T-MAX 100 Roll Film:

74160	T-MAX 100, 35mmx100ft	roll
--------------	-----------------------	------

2) T-MAX 100 Cut-to-Size:

74162	T-MAX 100, 135/24	roll
74164	T-MAX 100, 135/36	roll
74172	T-MAX 100, 4X5 (Substitute for Kodak 4127)	50/bx
74173	T-MAX 100, 4X5 (Substitute for Kodak 4127)	10 bx/lot

3) Due to the discontinuation of Technical Pan Film 6415 (the most used for Zeiss 109 TEM), we recommend T-Max 100/120 as a direct replacement.

74157	T-Max 100, 120	each
74158	T-Max 100, 120	5/Lot

► Fujifilm Instant Films and Film Holders Replacement film for Polaroid SEM films.

► FP-100C Color Instant Film

Fujifilm FP-100C is a "peel-apart-type" instant color daylight film that performs extremely well under varied lighting conditions.

FP-100C works in any Instant Film camera with an image size of 3.25" x 4.25". FP-100C45 works in any Instant Film camera with an image size of 4" x 5".

Its fine grain and rich tonal gradation make it ideal for passport photos, commercial test shots, presentations, ID photos, and direct printing.

- Exceptional image quality and color reproduction.
- Superb tonal gradation from highlights through shadows.
- Wide applicable temperature range.
- Enhanced resistance to light-induced discoloration.
- Photos can be laminated.

74681	Fujifilm Professional Instant FP Series FP-100C, 3.25x4.25	10/pk
74682	Fujifilm Professional Instant FP Series FP-100c, 4x5	10/pk

► Film Pack Holder

74683	Fujifilm Professional Instant Film 4x5 Pack Holder	each
--------------	--	------

Kodak T-MAX 400 Professional Films

Especially useful for: dimly lighted subjects, fast action, extending the distance range, and flash pictures. Used in scientific and biomedical work, especially where fluorescence photography is required.

- High speed (EI 400).
- Very high sharpness; extremely fine grain, high resolving power.
- High degree of enlargement.
- Shorter push-processing development time.
- Recommended Kodak Developers: T-Max, D-76, HR-110, Microdol-X.
- Total darkness.

T-MAX 400 Roll Film

74166	T-Max 400, 35mmx100ft	roll

T-MAX 400 Cut-to-Size

74168	T-Max 400, 135/24	roll
74170	T-Max 400, 135/36	roll

► Kodak T-MAX P3200 Professional Film/TMZ

A multispeed panchromatic negative film that combines very high to ultra-high film speeds with finer grain than that of other fast black-and-white films. Allows you to take photographs in many situations where photography was previously impossible.

- Film speed: EI 800 to 25,000 with push processing
- Wide exposure latitude
- Excellent sharpness and shadow detail, fine grain
- Suggested applications:** Fine Art • Law Enforcement • Medical/Science • Military/Instrumentation • Photojournalism • Sports
- Recommended KODAK Developers:** T-Max, T-Max RS, XTOL, D-76, HC-110
- Total darkness (no safelight recommended)

74171-10	T-MAX P3200 /TMZ , 135-36	1 roll
74171-20	T-MAX P3200/TMZ/651, 35mm-100ft	1 roll

► Kodak Electron Image Film SO-163

- Fine grain, blue sensitive emulsion.
- Slightly faster than Electron Image Plates.
- Twice as fast as EM film 4489.
- 7mil ESTAR base.
- May use anti-fog.

74142	Kodak SO-163 Film, 3 1/4"x4"	250/pk
74144	Kodak SO-163 Film, 6.5x9cm	100/bx
74145	Kodak SO-163 Film, 6.5x9cm	10 bxs/lot

► **Kodak Chemicals for Photography:**

► **EMS Kodak Developer D-19® Replacement; Powder**

A high contrast developer for EM films.

Kit contains pre-weighed amounts of:

- Distilled Water (48°C/125°F)
- Metal
- Sodium Sulfate
- Hydroquinone
- Sodium Carbonate (monohydrate)
- Potassium Bromide

to make 1 liter or 1 gallon of developer.

74205	EMS Developer D-19 Rep. Kit (makes 1 liter)	each
74200	EMS Developer D-19 Rep. Kit (makes 1 gallon)	each
74210	EMS Developer D-19 Rep. Kit (gallon-sized)	20/pk

► **Kodak Dektol Developer; Powder**

Each pack makes one gallon (3.8L). For photographic paper and projector slide plates.

74220	Dektol Developer	1 pack
74230	Dektol Developer	20 pack/cs

► **Kodak T-MAX Developer; Liquid**

For use with T-Max Film, Tri-X Pan. A liquid concentrate for easy mixing. Each pack makes 5 liters.

74245	T-Max Developer	each
--------------	-----------------	------

► **Kodak Polymax T Developer**

Tray processing. Liquid developer-concentrate for use with cold-tone papers.

■ **Medium contrast, high capacity, fast acting.** ■ **Dilute 1:9 for use.**

74232-01	Kodak Polymax T Developer	1 qt
74232-12	Kodak Polymax T Developer	12qt/cs

► **Kodak Fixer; Powder**

Each pack makes one gallon. A general purpose fixer for film and paper.

74300	Fixer	1 pack
74310	Fixer	20 pack/cs

► **Kodak Rapid Fixer**

A rapid-acting hardening fixer for automated and tray processing Complete fixer: Kit makes 1 gal: 32oz solution A and 3.6 oz solution B.

74312	Kodak Rapid Fixer	1 gal kit
74313	Kodak Rapid Fixer	5 kit/lot

► **Kodak Polymax T Fixer**

Single solution hardening fixer for papers. Designed for use with Kodak Polymax T Developer.

74290-01	Kodak Polymax T Fixer	1 gal
74290-12	Kodak Polymax T Fixer	3X 1 gal/cs

► **Kodak Hypo Clearing Agent**

It promotes fast washing of films and prints without emulsion swelling or softening.

74256	Hypo Clearing Agent	5 gal
--------------	---------------------	-------

► **Kodak Stop Bath Indicator; Liquid**

For general use with films, plates, or papers.

■ **Built-in color indicator to signal exhaustion.**

■ **Dilutes 1:64.** ■ **Each package makes 8 gallons.**

74340	Stop Bath Indicator	16oz
74341	Stop Bath Indicator	12x16oz

► **Kodak Photo-Flo Solution**

It decreases water surface tension and minimizes water marks and drying streaks on film; speed dries.

74257	Photo-Flo 200 Solution	16oz
--------------	------------------------	------

► **Kodak Developer System Cleaner and Neutralizer**

This cleaner removes build up of silver and tar deposits from developing tanks, recirculation systems, and on the racks and rollers of the processors. One package will make 10 gallons.

74270-01	Developer System Cleaner & Neutralizer	each
-----------------	--	------

► **Kodak Developer System Cleaner**

Removes calcium-silver scale from developer tanks, rollers, and recirculation systems.

74271-01	Liquid Developer System Cleaner	3.75 gal.
-----------------	---------------------------------	-----------

► **Kodak Fixer/Wash System Cleaner**

Removes chemical buildup. One package will make 2½ gallons.

74274-01	Fixer/Wash System Cleaner	each
74274-10	Fixer/Wash System Cleaner	10/cs

► **The Kodak Ektatherm XLS Media Products:**

We are offering a full range of media products for outstanding image stability and near-photographic quality continuous tone thermal prints. Our media products feature excellent color reproduction, including superior flesh tones and durability. The unique Kodak XtraLife Ribbon overcoats prints with a rugged transparent layer which prevents destructive dye transfer as well as it resists fingerprints and fading.

Kodak Ektatherm XLS Ribbons:

Cat. #	Description	Max. Image Size	# Images
89050	Kodak Ektatherm XLS Three-Color Ribbon	8.5x10"	100
89051	Kodak Ektatherm XLS Oversize Three-Color Ribbon/CMY	8.5x12"	100
89052	Kodak Ektatherm XLS Three-Color Ribbon XtraLife Media/CMY*	8.5x10"	100
89053	Kodak XLS Black Ribbon/XtraLife Media*	8.5x12"	150

*NOTE: Only laminates to paper. When printing transparency material with the XTRALIFE Ribbons the laminate patch is bypassed.

**For use with the 48MB Printer only.

Kodak XLS Print Paper:

Cat. #	Description	Max. Image Size	Sheets
89056	Kodak Ektatherm XLS Print Paper 8.5x11"	8.0x8.93"	100
89057	Kodak Ektatherm XLS Print Paper 8.5x12"	8.0x10"	100
89058	Kodak Ektatherm XLS Print Paper 8.5x14"	8.0x12"	100
89059	Kodak Ektatherm XLS Print Paper 9.5x14"	8.5x12"	100

► Ilford Products

► Ilford Multigrade IV RC Deluxe

This is a direct replacement for the Kodak Polycontrast IV RC B&W Papers. Neutral tone – Variable contrast.

MULTIGRADE IV RC Deluxe has the standard weight of (190g/m²) with a resin coated base.

- Resin Coated – Black & White
- Non-Developer Incorporated
- 12 Contrast Grades with MULTIGRADE Fibers
- Glossy Surface
- Compatible with the Kodak OC Filter
- Dish/Tray Processing
- Developer: Mutigrade, Bromophen or PQ Universal
- Fixer: Ilford Rapid Fixer or Hypam

EMS #	Sheet Size In. x In.	Sheets per Package
83020-10	5 x 7	100/pk
83020-25	5 x 7	250/pk
83021-10	8 x 10	100/pk
83021-25	8 x 10	250/pk
83021-1M	8 x 10	1000/pk

► Ilford Multigrade RC Express PF Paper

This is a direct replacement for the Kodak Polycontrast IV RC B&W Papers. Neutral tone – Variable contrast for high speed printing applications. MULTIGRADE RC Express PF has the standard weight of (190g/m²) with a resin coated base. It is especially designed for high speed printing applications, where automatic and semiautomatic printers, printer-processors and minilabs are used.

- Non-Developer Incorporated
- Short Exposures, Cool Image Tone & Cool White Base
- Recommended for high-Speed Printers and Murals
- Glossy Surface
- Available in Rolls only with Emulsion Wound Out (EWO)
- Ilford 2000RT developer/replenisher & Ilford 2000RT fixer/replenisher are designed for machine processing
- Ilford Mutigrade developer, Ilford Iflostop-Pro stop bath and Ilford Rapid Fixer or Ilford Hypam Fixer are used for Dish/Tray processing.

EMS #	Roll Size In. x Feet	Emulsion Wound	Case Qty.
83024-08	8" x 250'	EWO	each
83024-10	10" x 250'	EWO	each

► Ilford Multigrade RC Warmtone Paper

This is a direct replacement for Kodak Polycontrast IV RC B&W Papers. Premium Quality, Warm Tone – Variable Contrast.

MULTIGRADE RC Warmtone Paper has the standard weight of (190g/m²) with a resin coated base. It is equally suitable for printing conventional black and white and XP2 SUPER negatives.

- Rich, Warm Blacks; Creamy Whites
- Excellent Toning Characteristics
- Developer: MULTIGRADE, or BROMOPHEN, or PQ UNIVERSAL
- Stop Bath: ILFOSTOP, or ILFOSTOP PRO
- Fixer: ILFORD RAPID FIXER or HYPAM
- For ILFORD processor: ILFORD 2000RT developer/replenisher & fixer/replenisher are recommended
- Glossy Surface

EMS #	Sheet Size In. x In.	Sheets per Package
83027-25	8 x 10	25/pk
83027-1C	8 x 10	100/pk

► Ilford Multigrade RC Cooltone Paper

This is a direct replacement for Kodak Polycontrast IV RC B&W Papers. Premium Quality, Cool Tone – Variable contrast.

MULTIGRADE RC COOLTONE Paper has the standard weight of (190g/m²) with a resin coated base. It is equally suitable for printing all black and white negatives including chromogenic negatives, such as ILFORD XP2 SUPER.

- Cooler Image Tone with Cool White Base Tint
- Non-Developer Incorporated
- Easy to Tone in a Variety of Toners
- Glassy Surface
- Developer: MULTIGRADE, or BROMOPHEN, or PQ UNIVERSAL
- Stop Bath: ILFOSTOP, or ILFOSTOP PRO
- Fixer: ILFORD RAPID FIXER or HYPAM
- For ILFORD processor: ILFORD 2000RT developer/replenisher & fixer/replenisher are recommended

EMS #	Sheet Size In. x In.	Sheets per Package
83030-25	8 x 10	25/pk
83030-1C	8 x 10	100/pk

► Ilfospeed RC Deluxe Paper

This is a direct replacement for Kodak Kodabrome II RC B&W Papers. Premium Quality Graded Paper on a Resin Coated Base.

MULTIGRADE RC COOLTONE Paper has the standard weight of (190g/m²) with a resin coated base. It is suitable for a wide range of applications including commercial, press, industrial, advertising, and display work.

- Can be used with virtually all safelights for B&W papers
- Neutral Tone Graded RC
- Can be either Dish/Tray Processed or Machine Processed
- Latent Image Ability
- Developer: Ilford MULTIGRADE, or BROMOPHEN, or PQ UNIVERSAL
- Stop Bath: ILFOSTOP, or ILFOSTOP PRO
- Fixer: ILFORE RAPID FIXER, or HYPAM
- For ILFORD processors: ILFORD 2000RT developer/replenisher & fixer/replenisher are recommended

SURFACE: Glossy – Grade 2 (ISO Range 100)

EMS #	Sheet Size In. x In.	Sheets per Package
83032-10	8 x 10	100/pk
83032-25	8 x 10	250/pk

SURFACE: Glossy – Grade 3 (ISO Range 80)

EMS #	Sheet Size In. x In.	Sheets per Package
83033-10	8 x 10	100/pk
83033-25	8 x 10	250/pk

► Ilford MultiGrade IV FB Fiber

This is a direct replacement of Kodak POLYMAX Fine Art Paper - Premium Quality Variable Contrast Paper on a Fiber Base. Ilford MUTIGRADE IV FB Fiber is a premium quality variable contrast black and white paper on a 255g/m² fiber base.

- Available in a Glossy Surface – Double Weight
- May be used with the most Common Safelights for B&W Papers
- Processed in the same way as other fiber base papers

EMS #	Sheet Size In. x In.	Sheets per Package
83040-10	8 x 10	100/pk
83040-25	8 x 10	250/pk

➤ **Iford Products**

➤ **Iford Photochemical Range**

➤ **Paper Developer**

The range of Iford paper developers includes products that cover all the general purpose black and white paper processing applications.

➤ **ILFORD MULTIGRADE Dish/Tray Developer**

MULTIGRADE is a liquid developer which is concentrated and it is suitable for all black and white papers. It can be used at a standard dilution of 1+9 or at 1+14 for greater development control and economy. MULTIGRADE developer is clean working and has excellent keeping properties and gives a neutral image tone with most papers. MULTIGRADE is designed for use at ambient room temperatures, normally 20° C/68° F. We do not recommend its use for high temperature or machine processing applications. It is not suitable for film developing.

Cat. #	Description	To Make	U/M
83050-05	MutiGrade Paper	5 L	500ml
83050-50	Developer	50 L	5 L

➤ **ILFORD Developer**

PQ UNIVERSAL developer is designed for use at ambient room temperatures, normally 20° C/68° F. We do not recommend its use for high temperature or machine processing applications.

Cat. #	Description	To Make	Sale Unit
83052-50	Developer	50 L	5 L

➤ **ILFORD 2000RT MACHINE DEVELOPER**

2000RT is a liquid concentrate developer/replenisher recommended for use with all types of black and white RC photo paper processors. It is easy to use as no starter solution is required. The recommended dilution for both the tank and replenisher solution is 1+4. It is a robust, economical, clean working developer with a long tank life. It can be used at a wide range of developing temperatures, 20 – 40° C (68 – 104° F). With most papers it gives a print image tone just slightly cool of neutral.

Cat. #	Description	To Make	Sale Unit
83056-05	2000RT Developer/	25 L	5 L
83056-10	Replenisher	50 L	10 L

➤ **Iflostop Stop Bath**

ILFOSTOP is a low acid stop bath that stops development immediately; it contains an indicator dye that changes color from yellow to purple as the stop bath becomes exhausted. It is specifically recommended for dish/tray processing of paper where it helps to maintain the activity of the fixer bath.

Cat. #	Description	To Make	Sale Unit
83080-05	Iflostop Stop Bath	10 L	500ml

➤ **Paper Fixer**

The range of Ilford paper Fixers includes products that cover all general-purpose black and white film and paper processing applications.

➤ **ILFORD RAPID FIXER**

Iford Rapid Fixer is a non-hardening rapid fixer supplied as a liquid concentrate for fixing black and white film and paper in all manual and machine processing applications. It is easy and convenient to use in the temperature range of 18 – 40° C (64 -104° F). ILFORD RAPID FIXER must not be used with fix hardeners

Cat. #	Description	To Make	Sale Unit
83060-10	Iford Rapid Fixer	5 L	1 L
83060-50		50 L	5 L

➤ **ILFORD HYPAM FIXER**

HYPAM is a non-hardening liquid rapid fixer that can be used with the fix hardening agents that are needed for some film processing applications. Without the addition of a hardener it is suitable for all black and white film and paper, manual and machine processing applications in the temperature range of 18 – 40° C (64 -104° F). HYPAM is the recommended fixer for all ILFORD scientific products and other X-ray films, plates and cineradiography films. If the addition of hardener is required, use ILFORD HYPAM HARDENER.

Cat. #	Description	To Make	Sale Unit
83062-50	Iford Hypam Fixer	25 L	5 L

➤ **ILFORD 2000RT MACHINE FIXER**

2000RT is a non-hardening, liquid fixer concentrate specially designed for the rapid fixing of resin coated paper in processing machines complementing the 2000RT developer. It can be used at a wide range of fixer temperatures, 20 – 40° C (68 – 104° F). 2000RT Fixer must not be used with fix hardeners.

Cat. #	Description	To Make	Sale Unit
83066-05	2000RT	25 L	5 L

EMS ROR (Residual Oil Remover)

EMS is proud to introduce the ROR-It is not a lens cleaner in the usual sense- it goes far beyond what a routine cleaner does. ROR is specifically designed to emulsify and remove microscopic oil residues- a by product of environmental pollution –from the surface and pores of glass and plastic.

For more information, see page 736. >>>>

► Darkroom Fans and Louvers:

With all of the toxic chemicals and fumes which are released during film processing, the need for adequate ventilation in darkroom work areas cannot be over emphasized. Improperly ventilated space can be harmful to the health of workers. Now available is our "Air-No-Lite" 100% light tight darkroom exhaust fans and louvers which insure healthy ventilation continuously.

Each fan is one piece molded body and five sections molded louver. Different sizes of fresh air supply louvers are available. Each size is designed to supply just the right amount of air to a particular model exhaust fan.

(Exhaust fans work best in a darkroom that is equipped with fresh air supply louvers or some other kind of air supply. If there is no air supply to the darkroom, the fan will be working against a vacuum and can do nothing).

Electrical: 110 V AC, 60 Hz. 3-wire grounded cord.

► 1. Exhaust Fan:

► Darkroom Ventilation

■ **A1212 Fan:** Housing measures 12" x 12" x 4". Airflow is from 400 –800 CFM. Good for room up to 12 x 12 feet. One piece-molded body and 5 section molded louver.

► Mini-labs and Photo finishers

■ **Pro-Lab SL/PS:** Comes with 6" Exhaust Pipe Starter. Used to exhaust air out of the darkroom using a 6" diameter galvanized pipe through the ceiling and roof to a roof rack. Airflow is from 600 –900 CFM. It requires 18 x 18" supply louver (L1818). Good for room size from 15 x 15' to 20 x 20'.

■ **Pro-Lab SL/WC:** This is similar to SL/PS fan but suited for exhaust air out of the room through a thick cinderblock wall or stud partition dry wall. Comes with Outside Exhaust Wall Cap, which has an anti-back-up-flap against air coming in when the fan is off, and a grill to keep out small wild life. All units come with 3 feet three wire grounded power cord.

► 2. Darkroom Louver:

Different sizes of fresh air supply louvers are available.

► MohrPro 14-ST Automatic Print and Film Processor

The MohrPro 14 can process a wide variety of B&W RC papers, high contrast B&W line films and RA-4 color papers. The processor will accept material as small as a 5 x 7 with no modification and 3 1/4 x 4 "(with the Dryer Modification).

The MohrPro 14 is a 14 inch wide processor with a **straight through or ST** roller transport design capable of processing 60-8x10 RA-4 color prints (8 inches per minute) or 120-8x10 B&W RC prints (16 inches per minute) dry to dry, per hour. The chemical capacity requires a minimum of 3/4 of a gallon of developer and fixer with a maximum of 5 gallons.

The chemicals are not stored inside the processor tanks but below in auxiliary 2 or 5 gallon containers. From these containers, the chemical solutions are automatically pumped into the processor whenever the solutions are heating or during processing of paper. Once the preset temperature is reached or when in the energy saving standby mode, the chemicals automatically drain into the auxiliary containers.

This unique feature keeps the solution racks and tanks cleaner than in a traditional processor where the racks and tanks are in contact with solution continuously. This processor is self cleaning. Just remove the chemical containers and replace them with containers filled with water.

Turn the process switch to the heating mode. Water is pumped up into the processor through the solution racks into the tanks and overflows down into the containers. Once the processor reaches the preset temperature and shuts off, the processor is clean.

The temperature is adjustable from room ambient to 115 degrees. Development time is adjustable from 20 seconds to 2 minutes. The dryer and solution temperatures are adjustable and very accurate. The drive motor is variable speed DC controlled by an electronic PC board. The straight through roller drive system all but eliminates jamming.

STANDARD FEATURES

- **STRAIGHT LINE PROCESSING PATH.** Process with confidence. The straight paper path eliminates many problems that cause jamming.
- **EASILY CLEANED.** Operator will be delighted with the ease of cleaning this processor. Roller assemblies lift right out, tank corners are all rounded.
- **FULL ACCESS TO COMPONENTS.** Maintenance is so simple that any part can be changed in minutes.
- **NO PLUMBING NECESSARY.** The Mohrpro 14 may be located anywhere as a stand-alone unit.
- **MATERIAL UP TO 14" IN WIDTH MAY BE PROCESSED.** Minimum length required is 7 inches.
- **VARIABLE TEMPERATURE CONTROL.** Chemical temperature can be adjusted for proper processing of paper or film.
- **VARIABLE SPEED CONTROL.** Speed may be varied for proper processing of paper or film.
- **STANDBY MODE.** Saves equipment wear, electrical and plumbed water expenses, when not processing.

MohrPro 14-ST Processor Specifications

Materials.....resin coated B&W paper, RA-4 color paper,graphic arts film & paper (either rolls or sheets) and EM Film (4489)
Processing WidthUp to 14 inches
Transport SpeedUp to 4.5 feet per minute
Solution Temperature82-115° F
Solution Tank Capacity3/4 gallon minimum
Warm-Up Time10-30 minutes
Power Requirements115 volt, 60 Hz, 15 amps
Drain TypeGravity
Dimensions12" H, 30" L, 22" W, with Shelf & Exit basket 50" L
Dry Weight.....90 pounds
Warranty12 months on all parts

The MohrPro is also available in a 22" model.

- **MOHRPRO 20 model** is a 22 inch (56cm) wide processor with a "Deep Tank" roller transport design capable of processing 240 - 8x10 RA color prints (18" (54.7cm) /minutes) or 480 - 8x10 B&W RC prints (36"/minute) dry to dry per hour.

► Bamboo Print Tongs

These rubber tipped bamboo tongs are ideal for handling films during processing. 9"(L).

74818 Bamboo Print Tongs 3/set

► Paterson® Print Tongs

These tongs have textured side panels which offer a firm grip and deeply notched "shoulders" which avoid slippage into the tray. The tongs are all plastic and chemically resistant. Tongs are color-coded in light and dark gray to help minimize the risk of cross-contamination.

74817 Paterson® Print Tongs 2/set

► Paterson Chemical Mixer

This ergonomically designed mixer is specially shaped for efficient stirring and incorporates a particle crusher. It is invaluable when making up solutions either from liquid concentrates or from dry powdered chemicals.

74394 Paterson Chemical Mixer each

► Paterson Force Film Washer

This quick and efficient film washing system fits most domestic taps. It is designed for the Paterson Super System 4 tanks. (Cat. #74342-)

74336-01 Paterson Force Film Washer set

74394

► Paterson Super System 4 Developing Tanks

The super System 4 is simpler to load, faster to fill, and easier to clean than any other tank. It has a

large diameter one-piece lid and funnel, which clips into place positively and securely enabling the tank to be filled and emptied quickly. The Paterson 35mm tank takes a single 35mm film; the Paterson Universal tank takes two 35mm films or a single 120/220 film.

Supplied complete with one 35mm/120/220 Auto Load Reel, Watertight EVA cap prevents leakage during inversion agitation. Uses less than 300ml solution for a single 35mm film.

74342-14 Paterson 35mm Tank and Reel set

74342-15 Paterson Universal Tank and Reel set

► Paterson Auto Load Reel

Designed for use in the Paterson Super System 4 tank, the Auto Load Reel allows thru free flow of solutions. Paterson Reels have a smooth finish and use the unique twin ball ratchet system. Film loading just couldn't be easier!

74338-01 Paterson Auto Load Reel each

74338-06 Paterson Auto Load Reel 6/pk

► Paterson Water Filter

This filter may be disassembled and the filter reversed for flushing. This 20 microns filter removes most water borne dust and dirt and it fits most modern tap sizes.

74337-01 Paterson Water Filter set

PathScan Enabler IV

Low Cost Digital Histology Slide Scanner

The PathScan Enabler IV, is designed to allow scanning of an entire whole mounted histology sample attached to standard 1 x 3 inch cover slipped glass slide. The PathScan Enabler IV solves low power, large field of view, high resolution imaging problems.

► **Developing Tanks and Floating Lids**

Rectangular Film tanks are made of durable plastic to replace the Kodak Hard Rubber Tanks and Lids, which are no-longer available. Comes in 2 different sizes — 4x5 and 5x7. They feature floating lids.

► **(1) ½ Gallon Size (1.9L) Plastic Tank**

Measurements: Outside: 7¼"x5"x6"H (18.5x12.5x15cm); Inside: 5½"x3¾"x5¼"D (15x9.5x14cm)
74343 4x5 Developing Tank and Lid each

► **(2) Gallon Size (3.18L) Plastic Tank**

Measurements: Outside: 9"x5½"x7¼"H (23x14x18cm); Inside: 7¾"x4¼"x7"H (19.5x11x17.5cm)
 Accommodates: EMS film racks #74350; #74352; #74890-18; #74891-18; #74891-24; #74891-25; or #74895-12.
74345 5x7 Tank and Lid each

► **EMS Lucite® Film Racks**

Fabricated from genuine Lucite®; these racks fit into our 5"x7" and 8"x10" developing tanks (EMS Cat. #74345 and 74347). One end of the rack is extended in length with a cut-out hole to serve as a handle. The racks are designed to accommodate

a number of sheets per rack without changing the length of the rack (As the number of the films per rack increases, the space between them decreases).

■ **Racks for 3¼x4" (8.3x10.2cm) films or plates. Rack measures: 7½"(L)x3¾"(W)x7½"(H) (19.2cmx8.5cmx20cm).**

74890-18	EMS Lucite Rack for 18 Plates	each
74891-18	EMS Lucite Rack for 18 Films	each
74891-24	EMS Lucite Rack for 24 Films	each
74891-25	EMS Lucite Rack for 25 Films	each

■ **Rack for 4x5" (10.2x12.7cm) films. Holds 12 of 4x5" film, fits into the 5x7" tank. The rack measures: 7½"(L)x4½"(W)x7½"(H) (19.2x10.4x20cm).**

74895-12	EMS Lucite Rack for 12 of 4x5" Film	each
-----------------	-------------------------------------	------

► **EMS Film Racks**

Fabricated acrylic racks that are designed to fit with above developing tanks. Sheet film is firmly held in the slots in the side rails while solution is freely circulating inside the tank. **catalog #74350**, overall measurements 3½x6x6"H (8.9x17.5x15.2cm), holds 18 sheets of film 3¼x4" (8.3x10.2cm); **catalog #74352** overall measurements 4x6x8"H (10.2 x 15.2 x 20 cm), holds 12 sheets of film 4x5" (10.2x12.7cm).

74350	EMS Film Rack 3¼x4	each
74352	EMS Film Rack 4x5	each

► **Developing Trays**

Laminated styrene developing trays. Wide cross bars and perimeter ribbing provide rigidity and easy cleaning. 3" (76mm) deep.

74360	Size 8x10" Developing Tray	each
74361	Size 11x14" Developing Tray	each
74362	Size 16x20" Developing Tray	each
74363	Size 20x24" Developing Tray	each

Film Clips, See page 727 >>>>>

► **Air-Evac® Bottle**

For storing chemicals that are air and light sensitive. Suitable for use with all photographic chemicals. As chemicals are used, Air-Evac can be compressed forcing out extraneous air from the bottle contents. Cap is then replaced for an air tight seal.

74356	Air-Evac Bottle, 1 qt (0.95L)	each
--------------	-------------------------------	------

► **Graduated Pitchers**

Gracefully proportioned, molded pitchers with large comfortable handles and well designed pouring spouts. Metric graduations, and crystal clear to the eye (polymethylpentene). Resists heat to 175°C (374°F); it is shatter-proof and has excellent chemical resistance. Ideal for preparation of photographic chemicals.

74370	Graduated Pitcher, 1000ml	each
74371	Graduated Pitcher, 2000ml	each
74372	Graduated Pitcher, 3000ml	each

► Roll Film Washer

For complete washing of your roll film. The vacuum action will gently wash your film to archival standards. This conventional overflow washer lets water in from the bottom and the contaminated water out from the top. The vacuum action washer fills the water from the bottom, but quickly and automatically empties from the bottom by a vacuum syphon action, which discharges all contaminated water 2-3 times per minute. The vacuum action washer also protects your film from abrasions caused by high turbulence and unwinding of the reel, which happens in conventional washers. Holds 5: 35mm reels.

74386 Roll Film Washer each

► Rapid Print Washer

Water from 21 powerful jets runs constantly to separate and wash both sides of prints quickly and completely. Agitating water engages and dilutes the hypo, carrying it through the washer and out the opposite side quickly. The Rapid Print Washer accommodates 10 to 12 full-sized prints in one loading; all size films up to 11x14" (28x35.5cm). Internal measures: 13"x15½".

74387 Rapid Print Washer each

► Paterson® Auto Print Washer; Standard

Perfect for washing both RC and fiber-based papers. To use, prints are loaded into the cradle which is then lowered into the tank. Faucet pressure gently rocks the print cradle as water continuously exchanges. All prints remain separate and water freely circulates. The washer holds up to 12-8x10" or 24-5x7" prints. *

74353-10 Paterson® Standard Print Washer each

► Paterson® Auto Print Washer; Major

The Major Print Washer is similar to the standard one, but with a larger capacity and a built-in siphon for convenient emptying after use. The Major holds 12-11x14" or 24-5x7" prints. *

74353-20 Paterson® Major Print Washer each

* Note: For our international users: Standard and Major Print Washers will in fact accept prints to 10x12" (24x30cm) and 12x15" (30x28cm), respectively.

► Darkroom Thermometer

Precision Dial Thermometer: easy to read Fahrenheit and Centigrade scales. Hermetically sealed; water proof; will not fog; made from corrosion resistant stainless steel. Comes with an adjustable positioning clamp.

74388 Model A Thermometer each

74389 Model B Thermometer each

► Fluorescent Ruler

Fluorescent Scale in inches and centimeters. This metric/english plastic ruler is printed with a pink phosphorescent ink that glows in the dark. It is most useful for all fluorescent viewing and fluorescent photographic work. The scale will fluoresce visibly upon illumination with ultraviolet light and serves as a measure of nucleic acid mobility. The scale is 0 to 6" with 1/16" increments on one edge and 0 to 15 cm with 1mm increments on the other.

68137-01 Fluorescent Ruler each

► **Datamarker V Pens – Permanent Marker**

Write on anything. Perfect for every photo. Will not wash off even on resin-coated paper. Comes with a convenient pocket clip and it is permanent, smudge proof, and waterproof.

Catalog #	Description	Qty
72122-B	Datamarker, Fine Point, Black	each

► **Film Clip**

A stainless Steel Paper & Film Clip. Rust proof. Positive grip. Convenient for wall or wire hanging. Measurements: 3" (L) x 1 1/4" (W)

74385	Film Clip	2/pkg
-------	-----------	-------

► **Smoother Squeegees**

The Clean Sweep Squeegee that outperforms all other squeegees. Unbreakable handle – Soft rubber blade – Acid resistant – long life – Scratch free – Lock in place – Ideal for applying window film.

74820	Film Squeegee, Size 6" Long	each
74821	Film Squeegee, Size 8" Long	each

► **Yankee Film Squeegee**

Made from rugged high impact styrene with a 4" long and 1" wide cellulose sponge. Easy to handle and it accommodates all films up to 4x5".

74822	Yankee Film Squeegee	each
-------	----------------------	------

► **Paterson® RC Print Squeegee**

Extra soft rubber blades and a unique floating-action lower blade prevents any damage to the print surface. Suitable for both RC and fiber-based papers. The Print Squeegee handles prints up to 16x20" (40x50cm).

74823	Paterson® RS Print Squeegee	each
-------	-----------------------------	------

► **Paterson® RC Rapid Drying Rack**

For air drying up to 20 RC prints in 15 min. Its compact design permits maximum ambient air circulation and prevents trapping of water between the print and the rack. The rack is also suitable for use with fiber-based paper. Print capacity: 5-11x14"; 10-8x10"; 20-5x7". Rack measures: 13 1/2" L X 8" W X 12" H

74839	Paterson® RC Rapid Drying Rack	each
-------	--------------------------------	------

► **Thermostatic Dryer**

For RC and fiber base papers. It accommodates one 11x14", two 8x10" or eight 4x5" prints at once on each drying surface. Fast start; Quick drying; No over heating. Has maximum uniformity of surface heat. Made from a highly polished chrome Ferrotype metal. Drying surface: 12x17" (30.5x43.1cm)

74836	Thermostatic Dryer	each
-------	--------------------	------

► **RC Filter Flow Air Dryer**

This RC Filter Flow Air Dryer means 5 minutes to perfect flat, and spotless RC prints or films. A built in Air Filter eliminates dust. It is thermostatically controlled for optimal drying temperatures. Accommodates four 11x14" prints. Overall measurements: 19 1/2 x 14 x 7 1/4" (H) (49.5 x 35.5 x 18.5cm)

74838	Flow Air Dryer	each
-------	----------------	------

► EMS Professional M3 Series Trimmer

Durable, accurate, and easy to use

Our cutting head is made from die-cast alloy construction, which adds strength, maintains alignment, and guarantees years of service. It's molded to the shape of your hand with an exclusive Comfort Grip that makes repetitive work less fatiguing. Within the housing is a hollow-ground tool-steel rotary blade that is self-sharpening for a long life of clean, precise cuts.

Dual steel rails guide the cutting head with complete stability and precision for accurate, repeatable cuts. Four nylon bearings in the head further ensure quiet, effortless cutting. The extruded aluminum supports on each end lock in alignment. A transparent paper guide automatically holds material in place without risk of damage. An extruded aluminum alignment scale is factory-locked to be perfectly square to the blade edge. The alignment scale has measurements in inches and centimeters and accepts the Slide Guide for making repeatable cuts. The baseboard has a long lasting laminate finish that wipes clean in seconds. A durable, silk-screened registration grid, laid out in 1-inch increments, covers the baseboard for quick and easy measuring of any print or documents.

Designed for safety

The cutting blade is completely covered by the blade housing – making the M3 Series an ideal choice for schools, offices, darkrooms, selfservice print stations, and high volume production labs. The base rests on non-slip rubber feet.

Made in the USA. Backed by a five year limited warranty.

▶ Rotatrim® Mastercut; Quality Rolling Trimmers

The High End Cutters

1. Dualrail Cutters

For precision cutting. It can slice through tough materials like cardboard, litho plates, mount board, and even 1/16" hardboard; yet, Rotatrim® also has a delicate touch, trimming film, paper, and dry mount tissue to hairline tolerances. Known for its safe operation and best performance, the rotary blade is Sheffield tungsten steel, self-sharpening, and is completely shielded by a protective housing. Its self-sharpening blade assures consistent cutting quality. Exclusively from Rotatrim®, its **double steel tube** suspension guides the cutting head with the stability essential for accurate, repeatable cuts. An **extruded aluminum squaring arm** incorporates a combination inch/metric measuring scale and accepts the accessory side guide. A **Transparent clamping strip**, holds material in place without risk of damage.

Its durable, high pressure laminate in a handsome photogray finish keeps the baseboard warp-free, long lasting, and easy to clean.

Catalog#	Cut Size	Dimensions	Weight
74880-12	12" (31cm)	17.5x15" (46x39cm)	10lbs (4.6kg)
74880-15	15" (39cm)	21.5x15" (56x39cm)	11.5lbs (5.2kg)
74880-17	17.5" (45cm)	24x15" (64x39cm)	12lbs 5.6kg

74880-30	30" (77cm)	36.5x15" (96x39cm)	17.5lbs (8kg)
74880-36	36" (94")	42.5x15" (110x39cm)	22lbs (10kg)

2. Monorail Cutters

Designed for those applications that do not require the industrial rating of the Rotatrim® Mastercut Series. It accurately trims papers and lightweight boards up to 3/32" (2mm) thick. It also has a delicate touch, trimming mounting materials, laminates and films.

The Monorail has a strong, square rail which securely holds and guides the cutting head for accurate, precise results. The rotary blade is a hardened Sheffield carbon steel, spring-tensioned and self-sharpening. The Monorail Cutters feature the same baseboard, clamping strip, and squaring arm as the Dualrail Cutter.

Catalog#	Cut Size	Dimensions	Weight

► V-Track™ Professional Easel

The V-Track 4-bladed enlarging easel is a complex extruded outer frame designed to provide maximum strength, stability, and flawless alignment; inside the frame is the "V" shaped track which the four blade actuators glide. Each actuator, shaped to fit precisely into the track, rides on two spring-loaded, PTFE-filled bearings which are captive inside the V-track groove. The result is a blade actuator which precisely and automatically maintains alignment. A counter-balanced frame assembly with dual lift arms holds the easel open and frees your hands for paper loading.

- V-Track™ Easel size: 11x14". Guide slots for 5x7, 8x10, and 11x14 paper. Dimensions: 27¾ x 18½ x 1". Weight: 14.3 lbs.
- V-Track™ Easel size: 16x20". Guide slots for 5x7, 8x10, 11x14, and 16x20 paper. Dimensions: 27¾ x 23½ x 1". Weight: 27.6 lbs.

74860-14	V-Track™ Enlarging Easel, 11x14"	each
74860-20	V-Track™ Enlarging Easel, 16x20"	each

► Two-Band Enlarging Easel

This two-band enlarging easel eliminates slip ups. Bands have perfectly square margins. They will not shift once positioned, but they can be moved if desired by applying pressure to the control knobs.

74375	Easel Size 8"x10"	each
74376	Easel Size 11"x14"	each

► Saunders/SLP 670-Series Medium Format Enlargers

The 670-series enlargers accept all negative formats up to 2¼"x 2¼" (67cm) and share the same chassis assembly, negative carriers, and lensboards. The lamp-houses are interchangeable and their differences are noted under each catalog number.

All 670-Series enlargers have the following features:

- A massive, aluminum girder locks into a die-cast base-sturdy and vibration-free. It permits 18X magnification from 35MM. The anodized black girder comes with a reference scale.
- A counterbalanced, die-cast carriage with nylon bearings offers smooth and effortless travel.
- Precise focusing - through double rail, lash-free, adjustable friction drive controls. Left/Right-handed focusing knobs are standard. An extra long bellow facilitates small prints or reductions.
- A large baseboard allows you to print 16x20's. All surfaces are laminated and the edges are vinyl banded.
- Extremely high-quality, hinged negative carriers in both glass and glassless models.

Note: Easel shown is not included.

SPECIFICATIONS:

Maximum Format	2¼"x2¼" (6x7cm)
Base Dimensions	18"x23"x1"
Girder42"
Max. Height	48" (Carriage fully raised)
Electrical	120VAC, 50/60Hz
Magnification	17.6X (35mm neg., 50mm lens)
on baseboard	8.6X (6x6cm neg., 75mm lens)
Lens Mount	Standard 39mm thread on reversible, rotating, quick-change lensboard
Shipping.....	Supplied in two cartons

Carton	Contains	Dimensions	Weight
#1	Chassis/Head Assembly	45.5x9.5x12.5"	35.0 lbs
#2	Baseboard	26x20.5x3.5"	13.5

1. 670-MXL Dichroic Color Enlarger

- Dichroic lamphouse with stepless 0-200 (Cyan 0-170) continuously.
- Color-coded, illuminated filtration scales in 1cc increments.
- White light focusing and safety indicator.
- Converts in minutes to full-featured slide duper. An accessory kit is required (Cat#74867-40, sold separately).
- Supplied with 12V/100W Quartz-Halogen lamp (EEP) & 6x7 mixing chamber.
- Includes standard removable power supply; Leica-threaded.
- Negative carrier, red filter assembly and lens not included.

74865-10 670-MXL Dichroic Color Enlarger each

2. 670-CXL Triple Condenser Enlarger

- Triple condenser lamphouse with all glass optics.
- Condenser matched to all formats up to 6x7cm.
- Supply with 75W/120V opal lamp (PH140), safety filter and two-way lensboard.
- Negative carrier and lens not included.

74865-20 670-CXL Triple Condenser Enlarger each

3. 670-VCCE Dichroic Auto Variable Contrast

- Dual filtration channels in one head. Channel one is calibrated for Kodak Polycontrast III RC paper(grade 0-5); Channel two is calibrated for Ilford Multigrade III RC paper and compatible papers (grade 0-5).
- Memory-Lock™ white-light system for easy focusing.
- It has variable contrast/contrast exposure printing capabilities. The channels have built-in neutral density, which allows for consistent exposure for the full range of paper grade selections.
- Has a continuous variable dial for desired paper grades. Filtration is achieved with cut-off dichroics. For new Kodak Polymax RC papers, supplementary filters are supplied to cover the expanded -1 to +5 range.
- 12V/100W Quartz-Halogen lamp & 6x7 mixing chamber supplied.
- Negative carrier and lens not included.

74865-30 670-VCCE Dichroic Enlarger each

► **Components for 670-Series:**

74866-10	Dichroic Head and Power Supply Only	each
74866-15	Triple Condenser Head Only	each
74866-20	VCCE Head Only	each

*Owners of the 670-CXL Triple Condenser Enlarger who wish to purchase the 670-VCCE, will need to order the Standard Dichroic Power Supply (Cat. #74866-35). Those whom already own the 670-DXL or MXL should purchase the head only.

74866-30	Chassis and Baseboard only (Becomes a heavy-duty camera copy stand with the addition of Cat# 74869-20 Copy Camera Adaptor)	each
74866-35	Standard Dichroic Power Supply (Replacement part)	each

► **Negative Carriers**

- Professional quality, with black, anodized aluminum construction.
- Hinged for quick handling.

1. Glassless, Sandwich Type Negative Carriers

74867-10	35mm Full Frame Format	each
74867-20	126 Format	each
74867-30	2¼ x 2¼" (6x6cm) Format	each
74867-35	2¼x 2¼" (6x7cm) Format	each
74867-40	Mounted 35mm Slide	each

2. Universal Glass-Type Masking Negative Carriers

- Features four individually adjustable masking blades and removable glass inserts.
- Accepts accessory anti-Newton glass.
- Top and bottom glass can be removed to convert it to a single-size glassless carrier by means of lock-in inserts.

74868-10	Universal Glass-Type Carrier	each
74868-20	Insert for 35mm Negatives	each
74868-25	Insert for 110 Negatives	each
74868-30	Insert for 126 Negatives	each
74868-40	Anti-Newton Top Glass	each
74868-45	Replacement Standard Glass	each

► **Accessories & Replacements For 670-Series:**

A double-stage, 5:1 geared fine-focusing knob which replaces the standard knob for very critical focus control.

74869-10	Fine Focusing Attachment	each
----------	--------------------------	------

An extra-heavy, machined camera stage that replaces the lamphouse projection assembly to convert the enlarger into a heavy-duty camera copy stand; single knob conversion; no tools required.

74869-20	Copy Camera Adapter	each
----------	---------------------	------

Complete tools which are needed to turn the 670-MXL enlarger into a professional, full-featured slide duplicator.

74869-30	Slide Duping Kit for 670MXL	kit
----------	-----------------------------	-----

A pair of L-shaped supports for printing long rolls of film. It prevents damage to the film.

74869-35	Film Hanger Kit	kit
----------	-----------------	-----

74869-50	Quartz-Halogen Lamp For 670-DXL & VCCE	each
----------	--	------

74869-55	Opal Lamp For 670-CXL	each
----------	-----------------------	------

► Saunders/LPL 4x5" Enlargers:

► Series 4550XLG and 4500-II

These enlargers have common a lamphouse and chassis configuration with different slide-in filtration modules, depending on the model. 4x5" enlargers accept all film formats from 35mm to 4x5".

The 4550XLG has a longer column and an extended chassis, a larger baseboard, and a higher output lamp.

All Saunders/LPL 4x5" Enlargers Feature:

- A massive oversized column assuring strength, rigidity, and a vibration free environment.
- A factory-aligned carriage and column for perfect alignment and elevation.
- A convenient elevation system with a hand grip for rapid lifting and a drive knob for finer changes. It has a separate locking knob.
- Voltage-stabilized, solid-state power supply with US electronics
- Diffusion illumination.
- An Interchangeable Diffusion Chamber and Light Multiplier (4x5" supplied), and rotating lens boards.
- Built-in, vibration-free, noiseless blower and a heat sink.
- A fully counterbalanced carriage.
- Geared, dual-range, fast-fine focus control.
- Dual stainless steel focusing rails.
- Extra-long, heavy-duty extruded girder.
- A fully laminated, oversized, neutral gray baseboard with a vibration-dampening double plate.

Supplied with: Quartz-Halogen lamp. Regulated solid-state power supply. Swing away combination red safety filter and under-the-lens-holder.

Does not include: A negative carrier, lens or lens mount (see accessories list).

Ordering:

► Model 4550XLG Enlargers

These models come with the following additional features:

- Supplied with 250 watts, 82 volt EVW quartz-halogen lamp for 25% greater light output.
- Improved ventilation.
- A Whisper Tone™ muffling fan system for quiet operation.
- The fan is mounted on shock-dampening bearings to eliminate vibration.
- Extra-long column and oversized baseboard allows 20x24" enlargements of 35mm negatives (using 50mm lens).
- An extended carriage increases the distance from the column to the lens axis by 2½" which allows for use of a larger easel (20x24").

Available in three models:

1. Model 4550XLG Color Dichroic

- As described. Includes Dichroic Filtration Module with 0-200 yellow, 0-200 cyan, and 0-170 magenta stepless and continuously variable filtration.
- Permanent, fade-free dichroic filter. Color coded, illuminated filtration scale calibrated in 1cc increments.
- Memory-Lock™ while light focusing.
- Two f-stop light attenuator.

74870-10 4550XLG Color Dichroic Enlarger each

Note: Easel shown is not included.

2. Model 4550XLG Variable Contrast/Constant Exposure (VCCE)

- As described. Includes a special Dichroic Filtration Module calibrated for the filtration requirements of Ilford Multigrade III variable contrast paper.
- Instantly set for the Ilford filter equivalent (conversion chart supplied for Kodak papers).
- Automatic neutral density (ND) filter keeps exposure times constant throughout the contrast range.

74870-20 4550XLG VCCE Enlarger each

3. Model 4550XLG Black & White Diffusion

- As described with same quartz-halogen/diffusion system for fast B&W printing and the scratch and dust suppression characteristics of diffusion-type light sources.

74870-30 4550XLG B&W Diffusion Enlarger each

► **Model 4500-II Enlargers**

This is a valuable 4x5" enlarger, with all of the features listed.

1. Model 4500-II Color Dichroic

- As described. Includes Dichroic Filtration Module with 0-200 yellow, 0-200 cyan, and 0-170 magenta stepless and continuously variable filtration.
- Supplied with 200watt/82volt (EYA) Quartz-Halogen lamp with integral dichroic reflector.
- Permanent, fade-free dichroic filters. Color-coded, illuminated filtration scales calibrated in 1cc increments.
- Memory-Locks™ instant while light focusing.
- Two f-stop light attenuator.

74871-10 Model 4500-II Color Dichroic each

2. Model 4500-II Contrast/Constant Exposure (VCCE)

- As described. includes a special dichroic filtration module calibrated for the filtration requirements of Ilford Multigrade III variable contrast paper.
- Instantly set for the Ilford filter equivalents (conversion chart supplied for Kodak papers).
- Automatic neutral density (ND) filter keeps exposure times constant throughout Multigrade contrast range.

74871-20 Model 4500-II VCCE Enlarger each

3. Model 4500-II Black & White Diffusion

- As described with same quartz-halogen/diffusion system for fast B&W printing and the scratch and dust suppression characteristics of diffusion-type light sources.

74871-30 Model 4500-II B&W Enlarger each

► **Components for Series 4 X 5 Enlargers**

Interchangeable Slide-in Filtration Modules.

Fits all Saunders/LPL 4550XLG and 4500-II enlargers. Both models are easily converted by switching the modules.

74872-10	Color Dichroic Module	each
74872-20	VCCE Dichroic Module	each
74872-30	Black & White Module	each

► **Negative Carriers For Both 4550XLG and 4500-II**

- All aluminum precision carriers.
- Hinged sandwich design for fast handling and loading.
- Guide pins automatically position negatives in line with carrier aperture.
- Offset tabs permits rapid opening of carrier.
- All 4500 Carriers can be used on Omega D5 Enlarger.
- Both glass and glassless are available as follows:

Glassless, Hinged, Sandwich-Type Carriers

74873-20	35mm Full Frame Carrier	each
74873-21	Mounted 35mm Slide Carrier	each
74873-22	2¼ x 1½" (6x4.5cm) Carrier	each
74873-23	2¼ x 2¼" (6x6cm) Carrier	each
74873-24	2¼ x 2¾" (6x7cm) Carrier	each
74873-25	2¼ x 3¼" (6x9cm) Carrier	each
74873-26	4x5" Carrier	each

SPECIFICATIONS:	4550XLG	4500-II
Baseboard	31½x23¾x1"	23¾x23¾x1"
Girder	53x4¼x3½"	47x4¼x3½"
Carriage fully raised, Hgt	59"	53"
Max. bellows extension	9"	9"
Bellows	6½x6½"	6½x6½"
Net weight (inc. Power supply)	61 lbs	61 lbs
Electrical: Input	120VAC, 50/60Hz	120VAC, 50/60Hz
Output	82V	82V

Shipping: Supplied in 3 cartons:

#1 (Lamphouse/Carriage)	35 lbs	35 lbs
#2 (Girder Column)	18 lbs	15 lbs
#3 (Baseboard)	22 lbs	20 lbs

Important Note: The column and carrier of these enlargers are factory matched. Carton #1 and #2 have been marked with a serial number at the factory. The head and column themselves are also numbered. It is mandatory that the customer receive cartons with matching serial numbers.

► **Lensboards for All 4550XLG and 4500-II Enlargers**

1. 39mm Threaded (Leica) Lensboard

- For 40/60/80mm, Rogonar 50mm, Rogonar SC 50/75mm, Rogonar S 25/35/50/90/105mm, Rodagon 28/35/50/60/80/105/135, APO Rodagon 50/90mm, SCHNEIDER Componon W/A 40/60/80mm, Comparon 50/75/135mm, EL NIKKOR 50/63/75/80/105/135mm.

74874-39 39mm Threaded (Leica) Lensboard each

► **Accessories & Replacement Parts for 4 X 5" Enlargers**

Extension Tube/39mm Thread

Accepts Leica-threaded (39mm) lenses to permit 1:1 size printing of 4x5" negatives.

74875-10 Extension Tube/39mm Thread each

Four-Bladed Masking Attachment

- Mounts on the negative stage in place of standard negative stage plate to provide masking with optional 4x5" glass (universal) carrier.
- Cab can also be used with the standard glassless carriers.

74875-20	Four-Bladed Masking Attachment	each
74876-10	4x5" Enlarger Power Supply	each
74876-20	200W/82V Quartz-Halogen Lamp (EYA) (for 4500-II only)	each
74876-30	250W/82V Quartz-Halogen Lamp (EVA) (for 4550XLG only)	each
74876-40	Glass, Standard, 4x5" (Bottom replacement for 4x5" carrier)	each
74876-50	Glass, Anti-Newton, 4x5"	each

► Enlarging Focusing Aids

1. Mini-Sight Grain Focuser

A 12X power grain focuser without a high power price tag. Comes with a high power viewing lens. A Mikodot Mirror makes the Mini-Sight a high focusing device. Made from all metal construction, the Mini-Sight, makes dark negatives appear lighter and focusing is easier. The focuser comes complete with the mirror and lens cap. Stands only 5-3/4" high.

74856-12

2. Micro-Sight Grain Focuser

A 25X power grain focusing magnifier for absolute critical sharpness. The Micro-Sight has a large, high quality triple element achromatic lens and a suspended hair-line reticule. As well it possess a Mikodot Super-bright Mirror for brightness and sharpness of the images. With its large flat-field viewing area it can be used to test for enlarger vibration and auto-focus tracks as well as checking the resolving power of lenses and the accuracy of the negative carrier and whether the negative carrier is absolutely parallel to the easel.

74856-25

3. PEAK Model I Enlarging Focuser

This focuser ensures sharp focusing of your photoenlarger not only at the picture center portion, but also at any position within the picture area. Features a 10X eyepiece in 2-groups, 3-elements. It's angle of acceptance is 30°. Mirror size: 86mm x 26mm. Includes a BG filter for use with black and white films.

74857-10

ORDERING:

74856-12	Magnasite Mini-Sight Grain Focuser	each
74856-25	Magnasite Micro-Sight Grain Focuser	each
74857-10	Peak Model I Enlarging Focuser	each

► Light-Gathering Magnifiers

Made from solid grounded acrylic (not molded) and polished like a glass lens. Crystal clear and pre-focused. There are no bulbs or batteries needed. Available light is nearly four times brighter in the subject area. Available in three sizes:

1. Magnabrite™ 90mm 4X Light-Gathering Magnifier

FEATURES:

- Magnifies the viewing area by 4X, while intensifying available light and focusing it on the subject area.
- An "Infinite eyepoint" eliminates the need to keep the eye close to the magnifier. Can be viewed from any distance, at any angle. It reduces eye strain and allows several people to view the same object at once.
- Its 90mm base is concave which reduces the risk of scratching the film.
- The light comes with a drawstring storage pouch.

74393-90 Magnabrite™ 90mm each

2. Magnabrite™ 64mm 4X Light-Gathering Magnifier

FEATURES:

- Same features as (Cat.# 74393-90), but with a 64mm diameter base.

74393-64 Magnabrite™ 64mm each

3. Magnabrite™ 51mm 4X Light-Gathering Magnifier

FEATURES:

- Same features as (Cat.# 74393-90), but with a 51mm diameter base.

74393-51 Magnabrite™ 51mm each

► PEAK Achromatic Magnifier; 4X

Uses high-resolution achromatic lenses whose chromatic aberration has been corrected. With its wide square Field-of-View (45x45mm) and its interchangeable semi-transparent black skirt, this unique magnifier offers you a variety of uses for precision work. Fine focus adjustment with multi-groove screw helicoid system gives you very smooth operation. Neck strap is included.

- Magnification: 4X
- Size: 51x65x51mm
- Field of View: 45x45mm
- Net Weight : 80g

68128-04 4X Achromatic Magnifier each

► **Standard Paper-Safe**

Light proof protection for film and paper. No more fussing with frayed cardboard boxes. Exclusive "Tilt and Tap" feature for easy single sheet removal. Holds 200 Single Weight sheets. Measures 8½"x11" for 8x10" paper.

74377 Standard Paper Safe each

► **Testrite® Print Rollers**

These rollers are lightweight and sturdy, offering fine smooth action, yet they have ample strength to efficiently remove surplus water from prints and distribute an even pressure.

74844-04 Testrite Print Roller, 4" Wide each
74844-06 Testrite Print Roller, 6" Wide each
74844-08 Testrite Print Roller, 8" Wide each

► **Blotter Books**

Chemically pure lintless blotting paper. It dries prints without staining or scratching.

74805 Blotter Book, Size 9x12" each
74806 Blotter Book, Size 12x18" each
74807 Blotter Book, Size 18x24" each

► **Mottler Brush**

Brush, fine goat hair. For dusting negatives before printing.

74366 Mottler Brush, 1" (25mm) Wide each
74367 Mottler Brush, 2" (50mm) Wide each

► **Cutting Mats**

Cutting Mats will protect all table-top surfaces from knife cuts. Its smooth surface permits straight, even cutting and the cut mark heals instantly. Each mat is printed with both ½" and 1" grid patterns to aid in measuring and aligning work. Available in translucent white, which allows for cutting and trimming on a light box surface.

77621-12 White Translucent 8-1/2"x 12" Mat each
77621-18 White Translucent 12"x 18" Mat each
77621-24 White Translucent 18"x 24" Mat each

► **Kodak Lens Cleaner**

For quick, safe removal of foreign matter from the surface of all optical glass.

74315 Lens Cleaner, 1½ oz. each
74316 Lens Cleaner, 16 oz. each

► **Lens Cleaner**

Newly introduced! An anti-fog and anti-static lens cleaner, with action up to 7 days. It is safe for glass and plastic lenses.

74314-04 Anti-Fog/Static Lens Cleaner 4 oz

► **Film Cleaner**

It cleans positives & negatives. It removes tape-marks, grease, pencil, ink, dirt, smudges, and fingerprints. Leaves no residue.

74317 Film Cleaner, 16 oz can each

► **Lint and Dust Remover**

Recommended for the removal of microscopic dust from magnetic tapes and heads, optic and camera lenses, general microscope areas, computers, etc.

74318 Lint & Dust Remover, 12 oz can, 7 fl oz each

► **Specialty Film Cleaner**

Cleans diazo film, silver film, color trans-parencies, screen tints, scanner drums, contact screens, etc. Non-flammable, and will not leave any residue.

74319 Specialty Film Cleaner, 20 oz can, 9.5 fl oz each

► EMS ROR (Residual Oil Remover)

EMS is proud to introduce the ROR-It is not a lens cleaner in the usual sense-it goes far beyond what a routine cleaner does. ROR is specifically designed to emulsify and remove microscopic oil residues- a by product of environmental pollution –from the surface and pores of glass and plastic.

When you clean an optical surface with ROR you will observe a measurable difference in brightness and clarity. For the first time, you will experience pollution free, unimpeded vision. Because ROR removes microscopic oil residues, dust has nothing to adhere to allowing the surface to remain cleaner longer.

ROR is safe and versatile for all delicate surfaces. It has been tested and used on everything from multicoated lenses to beryllium surfaced contacts and has proven time and again to be the finest and safest optical cleaning treatment on the market today.

Invented 25 years ago with professional and amateur photographers in mind, ROR is used today by the military, NASA, astronomers, scientists, hospitals, laboratories and universities.

Protect your investment through regular ROR cleaning and maintenance and your equipment will endure and perform excellently for years to come.

The cleanser is available in either a Dropper bottle or a Pump style bottle

Instructions for Use:

The most likely source of damage to glass surfaces and sensitive optical coatings is abrasion caused by rubbing the fine particles that are resting on the surface. Never “dry clean” a lens because that will guarantee scratching and abrading of the coating.

ROR recommends:

- Use a can of compressed air or a camel hair blower brush to remove any particles that may be resting on the surface.
- Place a few drops or spray a little ROR on the surface, let the solution settle for a few moments then wipe gently with a lens cleaning cloth or tissue making sure that you use as much of the clean area of cloth or tissue, each time you wipe. If you are working on a small surface, squeeze a few drops or spray some ROR onto the applicator that you are using and commence the cleaning as described above.
- Apply enough pressure to effectively clean the optical surface.
- Use a clean cloth or tissue to do a final wipe of the surface, again using sufficient pressure for each additional motion.
- Use a professional task wiper to apply and remove ROR with. These soft, chemical free, non abrasive tissues offer great absorbency and streak free cleaning on sensitive surfaces. If you have to use a generic variety of tissues, make sure it is untreated.
- Untreated micro-fiber cloths also work well as long as you wash them frequently and keep them dust free in a pouch or container. Be sure to check the make-up of your micro-fiber cloth before using with ROR. Treated micro fiber cloths can integrate poorly with ROR, leaving a residue on the surface. We recommend you wash and dry the cloth before proceeding with your application.

► Ultra Brush

The ULTRA BRUSH is totally different than standard camel hairbrushes. Its unique fibers are ultra-soft allowing for the cleaning of delicate surfaces of camera lenses, binoculars, telescopes and other fine optics. The ULTRA BRUSH fully retracts within the base to completely protect the brush ends. Guaranteed to be the softest lipstick style brush you can buy.

60611 Ultra Brush each

Applications:

ROR has many uses for your business, home and hobbies.

It is one of the most versatile cleaning agents available. We are constantly amazed to hear from our customers about yet another use for our product. Just recently we were contacted by a church pipe organ technician who told us that nothing cleans keyboards and organ parts better than ROR! The list goes on and on.

Ordering Information

Cat. #	Description	Qty.
74319-30	ROR Lens Cleaner 1 oz., Dropper style	each
74319-35	ROR Lens Cleaner 2 oz., Pump style	each

► Formula MC; Multi-Coated Filter And Lens Cleaner

A unique cleaner that handles the delicate cleaning requirements of multi-coated filters as well as lenses.

- No smear, no residue.
- Cleans standard or multi-coated optics.
- Handy 1 oz. dispenser bottle.

74314-01 Formula MC Lens Cleaner each

➤ **Static Eliminators:**

➤ **Anti-Static Spray**

It stops static build-up on optics, disc drives, photographic materials, lenses, metal rollers; any where that static may generate.

60615 Anti-static spray, 20 oz can, each
14 fl oz

For more Static Eliminators, See page 947 >>>>

➤ **Zerostat Anti-Static Gun**

This device operates on a piezoelectric effect to emit positive (trigger squeeze) and negative (trigger release) charges to neutralize static on virtually any surface. The gun emits no radioactivity and it does not require electricity or batteries. The unit measures 4 x 6".

60610 Zerostat Anti-Static Gun each

➤ **Anti-Static Brushes**

Eliminates static electric charges and removes dust, lint and other particles from negatives and lenses with one quick operation. These non-chemical, non-radioactive, synthetic brushes use the natural principle of resistance flow to obliterate dust and the static electricity that attracts it. They are absolutely safe on all photographic surfaces and emulsions, great for computer monitors and glass screens as well. They can be cleaned with soap and rinsed with water. They never need "recharging" and will last a lifetime with proper care. Short: A 4" (10.5cm) long carbonized plastic handle, 4" brush. Weight 1oz (28g).

60612-04 Short Anti-Static Brush each

➤ **StaticMaster Brushes:**

Eliminate static electric charges, and remove dust, lint and other foreign particles in one quick operation. StaticMaster contains Polonium210 element' which emits low energy alpha particles. Alpha particles are non-penetrating, stopped completely by a thin sheet of paper or a few inches of air. By ionizing the air in the immediate vicinity of the film, lens, etc., a conductive path is provided through which the static charge is safely and effectively grounded.

➤ **1. StaticMaster 1C200**

This 1" model cleans negatives, mounted or unmounted transparencies, cameras, and smaller enlarging lenses. It is ideal for use with 35mm or 2 1/4" x 2 1/4" film formats. In addition, this model is perfect for removing static and dust from the inside of cameras as well as other equipment. Brush of soft, natural hair removes dust and lint.

60613-1C StaticMaster 1C200 each

➤ **2. StaticMaster 3C500**

The 3" model cleans large areas quickly and effectively. Its brush is retractable to just a desired length making it perfect for use with 4 x 5 or smaller film formats. It is also handy for cleaning enlarger condenser lenses, film holders, and other large surfaces. While the active element is 2" wide, in one stroke it actually eliminates static across a 4" area. For cleaning very large areas, such as 8x10" films, two or more 3" StaticMaster may be joined together with easy-to-install StaticMaster Connectors are available separately.

60613-3C StaticMaster 3C500 each

➤ **3. StaticMaster Replacement Cartridges**

The StaticMaster has a useful life of at least one year. The element gradually loses its power to neutralize static and should be replaced. For this reason, StaticMasters are stamped with an expiration date. You can easily install a new cartridge without returning the brush to the factory.

60613-1R 1" Replacement Cartridge each
60613-3R 3" Replacement Cartridge each

► Photo Mounting Tapes Sprays and Adhesives:

► Scotch C-25 Heavy Duty Dispenser

Durable and economical; high impact resistant plastic dispenser. It features a permanently attached tape drum to eliminate loss. A rubber base prevents slipping. Two tone brown and beige. Holds tape up to 1" wide. 3" core.

77000 Tape Dispenser each

Scotch 665 and 666 Double Coated Tape, See Scanning Section, page 649 >>>>>

► Scotch 811 Removable Magic Tape

This transparent tape can be removed as easily as it goes on. Ideal for taping before photocopying, leaving notes and memos, taping transparencies onto frames, etc., 3" core.

77200 Removable Magic Tape $\frac{3}{4}$ " x 72 yds each
77210 Removable Magic Tape $\frac{3}{4}$ " x 72 yds 5bx/lot

► Scotch 810 Magic Tape

The ever popular tape that is invisible when applied. Can be written on. Resists yellowing, cracking, and moisture. Ideal for mending, slicing, and many other permanent applications. 3" core.

77300 810 Magic Tape, $\frac{1}{2}$ " x 72 yds each
77310 810 Magic Tape, $\frac{1}{2}$ " x 72 yds 5bx/lot

► Scotch 235 Photographic Tape

Black, crepe paper, pressure-sensitive tape that is designed for use in commercial as well as private photography. It can be used for making negatives, positives, and transparencies. Conformable, opaque, and it has low light reflectance. 3" core.

77400 235-Photographic Tape, $\frac{1}{2}$ "x60 yds each
77410 235-Photographic Tape, 1"x60 yds each

► Scotch 616 Lithographer's Tape

This ruby-red transparent tape is for use in opaquing, stripping, and edging on film materials. 3" core.

77500 616-Lithographer Tape, $\frac{1}{2}$ "x72 yds each
77510 616-Lithographer Tape, $\frac{1}{2}$ "x72 yd 5roll/lot

► Scotch 850 Tape

Good for making glass knife boats as well as for hanging, protecting and stripping. 3" core.

77700 Silver Tape $\frac{3}{8}$ " x 72 yds each
77701 Silver Tape $\frac{1}{2}$ " x 72 yds each
77710 Gold Tape $\frac{3}{8}$ " x 72 yds each
77720 Black Tape $\frac{3}{8}$ " x 72 yds each

Write-On™ Color Coded Label Tape, See Tape section, page 1144 >>>>

Write-On™ Tape Dispenser, See Tape section, page 1144 >>>>

Multi-Roll Write-On™ Tape Dispenser, See Tape section, page 1144 >>>>

► Photo Gloss Spray

Photo-gloss spray adds high gloss finish and permanent protection to the photo. It enhances highlights, increases contrast, protects prints from dust, fingerprints, and water.

77601 Photo Spray, 16 oz each

► Photo Matte Spray

It offers surface protection. Eliminates glare and hotspots in photographs.

77602 Photo Matte Spray, 16 oz. can each

► Rubber Cement

Excellent adhesive for all paper pasting and mountings of drawings and photographs. It is also used to adhere specimens to SEM Stubs. Any excess cured cement can be easily removed. 4 oz bottle comes with a brush in the cap.

72170 each

➤ **Repositionable Adhesive**

1. DryBond™ Pads
DryBond Pad Adhesive Sheets eliminates the need for messy and noxious adhesives. The dry adhesive composition is clean and easy to use.

DryBond creates a strong effective bond while the artwork remains completely repositionable. Use DryBond in place of cements, spray glues, and wax adhesives for mounting all types of art work. Available in 25 sheets/pad; size 11"x17" (28cm x 43cm).

77612-25 DryBond Pad, 25 sheets 25/pk

➤ **Repositionable Dry Mounts (RDM)**

This is a pressure-sensitive mounting material. RDM is a microthin, clear Mylar® film coated on both sides with an adhesive; specially formulated for photographic purposes. This "delayed-set" adhesive allows for repositioning of prints before providing a permanent bond. Low temperature 185° F is needed. The Mylar® base will not absorb moisture or change its characteristics through time; thereby it eliminates the common mounting problems that are experienced with other mounting materials. RDM sheets are made ¼" oversize which eliminates alignment problems and makes it easier to use.

77604 RDM, Size 8"x10" (20.3x25.3cm) 6/pk
77606 RDM, Size 11x14" (28x35.5cm) 6/pk

➤ **Dust-Off®/Luminex™; Microfiber Cleaning Cloth**

For superior cleaning of delicate surfaces. Based on advanced microfiber technology, the Dust-Off/Luminex Microfiber Cleaning Cloth is a superior cleaning product. It actually gets under dirt and oily films and lifts them away, leaving the surface clean, polished and lint free. Ideal for: Camera, Lenses/Filters, Microscopes, Computer, Eyeglasses, Plastic, Metal. Any smooth surface...

UNSURPASSED FEATURES:

- Environmentally responsible - Lifts away oily film and dirt with no chemicals.
- Will not streak or smear surfaces.
- Non-abrasive and 100% lint-free.
- Reusable - Machine or hand washable - Long lasting.

Size: 7½"x7½" (19x19cm).

71716-01 Luminex Cleaning Cloth each
71716-12 Luminex Cleaning Cloth 12/pk

➤ **Lens Tissue – EMS (Ross)**

EMS (Ross) Lens tissue does not lint or scratch and it is free from mineral or vegetable filler.

71700 Lens Tissue, 4½" x 5" 1000 sheets/box

➤ **EMS Lens Tissue**

EMS Lens Tissue is the world's finest optical tissue. It's extremely soft and virtually lint-free. Safe for any optical surface such as camera lenses, microscopes, telescopes, and eye-glasses. Each tissue is perforated for easy removal from the booklet.

Tissue size: 4"x6", 50 sheets/bk

71712-01 EMS Booklet Lens Tissue 50/bk
71712-10 EMS Booklet Lens Tissue 10 bk/lot

➤ **Micro Fiber Cleaning Cloth**

Chemical free. Safely and easily removes finger-prints and smudges from all glass and plastic lenses. The advanced technology of the Micro Fiber Cleaning Cloth makes it ideal for cleaning any high gloss surface such as:

- Camera Lenses
- Scopes & Binoculars
- Eye Glasses
- Jewelry
- Photographs
- Scanners
- Computers
- Copy Machines
- TV Screens
- Mirrors & Chrome
- Compact & Laser Discs
- Musical Instruments

Care of the Cloth: Machine or hand wash and dry. The unique properties will not change. May be ironed with cool iron, if desired.

71717-01 Micro Fiber Cleaning Cloth each
71717-12 Micro Fiber Cleaning Cloth 12/pk.

► Photographic Darkroom Timer

A new improved Model 300 Darkroom Timer. Shows minutes and seconds in total darkness. The 60-minute time range can be set in minutes for developing and seconds for enlarging control. Two hands permit quick setting by seconds, minutes, or combinations of seconds and minutes. Two separate outlet receptacles control an enlarger or printer and safelight by a combination time/focus switch. Each outlet has a 750-watts capacity. This model also can be used with a relay for heavier loads. Easy to read numerals on a large 6½" diameter face. Luminated by phosphor- fluorescence. Input voltage: 100 to 130 VAC, 50 or 60 Hz (U.S. and Canada); 210 to 250 VAC, 50 or 60 Hz for use in other countries.

74395	Darkroom Timer	each
74395-22	Darkroom Timer (210/250 volt)	each

► Pro-Size 10"X12" Safelight

The large format flooding darkroom with safe, workable light. Easy filter change is possible to accommodate a standard 10x12" filter for specialized applications. Can be used as a table top unit, mounted on the wall, or hung from the ceiling. Comes complete with a 25 watt bulb, 6 foot cord with "On/Off" switch, and a filter and chain. Baked enamel finish.

74320-R	Safelight	each
74320-OC	Safelight	each
74322-R	Filter only, Red	each
74322-OC	Filter only, Amber	each

► Paterson Safelight

Perfect for small darkrooms. It is designed to stand on a bench, hang on the wall, or suspend from the ceiling. The safelight measures 4" diameter x 6½" high. Ready to use with bulb, choice of cover dome color and molded mains plug. Red/Orange dome "A" (general purpose use). The unit comes with 15W bulb, 120VAC, one dome and 3-prong cord.

74327-10	Paterson Safelight, "A" Dome	each
74327-16	Replacement Bulb, 15W	each
74327-18	Replacement "A" Dome	each

► Kodak Safelight Filters

Scientifically designed for safelight lamps. Provides maximum safe illumination, when used as directed, plus offers protection from white light when using sensitized materials.

0A / greenish yellow - For black-and-white contact and duplicating materials and projection films. Available in 5½" dia.; 3¼x4¾"; 5x7"; 8x10" and 10x12".

0C / light amber - For contact and enlarging papers. Available in 5½" dia.; 3¼ x4¾"; 5x7"; 8x10" and 10x12".

1 / red - For some blue-sensitive materials, most phototypesetting materials, KODAGRAPH Projection, and some KODAK LINAGRAPH Papers. Available in 5½" dia.; 5x7"; 8x10" and 10x12".

1A / light red - For slow orthochromatic materials. KODALITH and KODAGRAPH Orthochromatic Materials, and High Resolution Plates. Available in 5½" dia.; 5x7"; 8x10" and 10x12".

2 / dark red - For fast orthochromatic materials, some green-sensitive x-ray films, KODAK EKTALINE Papers, and KODAK ortho-chromatic LINAGRAPH Papers. Available in 5½" dia.; 8x10" and 10x12".

3 / dark green - For some panchromatic materials. Available in 5½" dia.; 8x10" and 10x12".

10 / dark amber - For KODAK VERICOLOR Slide Film 5072, KODAK VERICOLOR Print Film 4111 (ESTAR Thick Base) KODAK PANALURE* Papers. Available only in 8x10".

11 / appears opaque; transmits infrared radiation - For use with infrared scope and similar inspection devices. Available only in 5½" diameter.

13 / amber - For all KODAK EKTACOLOR*, all KODAK PANALURE, and KODAK RESISTO Rapid Pan Papers. Available in 5½" dia.; 8x10" and 10x12".

*Requires reduced bulb wattage.

DARKROOM SAFETY

Darkroom Safelights*

In photography, the term "safelight" describes darkroom illumination that does not fog or otherwise cause a visible change to light-sensitive material when it is correctly handled and processed. The word "safe" is relative. Most sensitized materials will become fogged if you expose them to safelight illumination for an extended period of time. Because photographic materials vary in speed and sensitivity to different colors of light, the recommended bulb wattage and colors of safelight filters also vary.

Important facts about safelights:

- No safelight provides completely safe exposure for an indefinite period of time.
- Safelight filters are designed for specific types of film and paper.
- Safelight filters fade with use.
- Some photographic materials require handling in TOTAL darkness.
- Poor safelight conditions can produce a loss in photographic quality before actual fogging is visible.

Therefore, you should:

- Test your safelight conditions regularly.
- Replace your safelight filters when necessary.
- Follow all safelight recommendations for your film or paper. See product instructions for recommended safelight filter, bulb wattage, and minimum safelight distance.

Ideally, safelight filters should transmit only what is outside the color-sensitivity (wavelength) range of the photographic materials for which they are recommended. The safelight filters recommended by Kodak provide maximum transmission of colors to which the film or paper emulsion is relatively insensitive. However, the color sensitivity of most emulsions does not end abruptly at a particular wavelength in the spectrum. Most emulsions are somewhat sensitive to colors outside their intended range. This means that most films and papers have some sensitivity even to the colors of light transmitted by the recommended safelight filters. Therefore, always minimize the exposure of photographic materials to safelight illuminations. The apparent color of a safelight filter is only a partial indication of its transmission characteristics. Colored bulbs or other improvised safelights may appear to be the right color, but they may actually emit light (or other forms of radiant energy) that will fog a photographic emulsion. Kodak Safelight Filters are made to precise light-transmission and absorption standards that relate to the spectral sensitivities of photographic materials. Safelight filters gradually fade with use. This means that they transmit more and more light of the colors that they absorb when they are new. You should plan to change safelight filters periodically. For example, if you use safelight lamps for 8 to 12 hours a day, you may need to change the filters every three months. Bulbs eventually blacken and produce less light. We recommend that you change bulbs before running safelight tests. To keep the illumination level consistent, change bulbs periodically too. Noting the replacement dates on a sticker on the safelight housing will help you keep track of bulb and filter changes.

Safelight Precautions

Many factors can cause unsafe illumination: an incorrect safelight filter, a faded or cracked filter, incorrect bulb wattage (too high), safelight location, or too many safelights. You can also experience light fogging from other sources, such as light escaping from an enlarger head, lighted dials on equipment controls, or non-opaque darkroom construction materials. For example, pinholes between the darkroom space and lighted areas can admit visible light, or plywood that appears opaque may admit infrared illumination. Even when you use the correct safelight filter and bulb, and observe the recommended safelight distance for the product, you should still test your darkroom conditions to be certain that they are safe for the length of time that the photographic material will be under the safelight. Using an exposure test series that is described in Kodak Publication K-4, How Safe is Your Safelight?, you can determine a safe time for your darkroom conditions, and limit your safelight exposure to that time. This publication is available by writing to Eastman Kodak Company, Department 412L, Rochester, NY 14650-0532. Excessive exposure to safelight illumination may show up only in the image area of your negative or print, because that area receives additional exposure from TEM or enlarger. This means that you may not recognize a change in image quality caused by excessive safelight exposure unless you perform a safelight test.

Note: Safelight tests that involve partially covering a piece of photographic material with an opaque object (such as a coin) and then exposing the material to safelight illumination can be misleading. They test only for fog - not for the added effects of safelight, TEM and enlarger exposures. Always keep safelight exposure to a minimum. Store film and paper in light proof containers, and make a habit of handling paper with the emulsion side down (away from the safelights). Place your enlarger so that the easel area receives very little safelight illumination. When you develop prints, insert the paper into the developer with the emulsion side down; turn the paper emulsion side up when experience tells you that the image has become visible. Let the results of your safelight test and your own practical experience guide you in determining how much time you have in handling photographic materials.

* Courtesy of Eastman Kodak

► Light Boxes:

For viewing and editing slides, transparencies, negatives, micrographs, etc. They also serve as a base for orientation of embedding specimens when observing tissues using a magnifier. Scientifically designed to provide even distribution and uniformity of light. All metal welded construction with a white baked-enamel finish. The viewing surface is a translucent acrylic that is break resistant. It can be used flat on a table, inclined, standing, or hung on the wall. It comes with a ANSI standard 5000K fluorescent lamp, 10 feet cord, on-off switch. Four models to choose from.

(1) Model A:

Viewing surface measures: 8 $\frac{3}{4}$ "x11 $\frac{1}{2}$ " (22x29.2cm)

Overall measurements: 9 $\frac{1}{2}$ "x12 $\frac{1}{2}$ "x2"H (24.1x31.6x5cm)

It is compact and can be used on a desk. Small enough to carry in a briefcase or store in a drawer. Weight 4.5 lbs.

71650	Light Box, Model A	each
71650-RB	Replacement Light Bulb	each

(2) Model B:

Viewing surface measures: 12"x17" (30.5x43.18cm)

Overall measurements: 14 $\frac{1}{2}$ "x18x3 $\frac{1}{2}$ " (36.7x45.2x8.8cm)

Portable with a vinyl cover and heavy duty strap handle. 5000K fluorescent lamp. Weight: 11 lbs.

71652	Light Box, Model B	each
71652-RB	Replacement Light Bulb	each

71650

71652

► Illuminated Slide Viewing Box

Sorting and viewing 2x2" slides easily and quickly is made possible with this slide sorter unit. All metal frame; its baked white enamel finish reflects light for perfect viewing of slides. Translucent styrene viewing panel. Folds flat for storage. Uses standard 60-watt household bulbs (Bulb not included).

Model S-40: Holds 40 slides, 12x16"; Viewing surface: (30.4x40.6cm)

71660	Slide Viewing Box, Model S-40	each
--------------	-------------------------------	------

► Tru-View Light Box

Battery operated "Tru-View" light box. Portable unit uses 6 "C" cell batteries (not included) and a Daylight fluorescent tube to achieve an extremely bright, evenly illuminated surface. Can operate on AC current with an AC adapter (included). Unit easily fits into a brief case or stores in a drawer and has a translucent acrylic surface of 5 $\frac{1}{2}$ "x9 $\frac{1}{2}$ " (140x240mm). Built-in flip-up stand provides a comfortable 10° working angle. It comes with a clamping bar for holding sheet film and keyhole slots for wall mounting. Its overall size is 12 $\frac{1}{4}$ "x8 $\frac{3}{4}$ " (312x202mm). Weight: 3 lbs (1.35kg)

71648	Tru-View Light Box	each
71648-RB	Replacement Light Bulb	each

► Slim-Edge Light Pad

For viewing and editing slides, transparencies and negatives. Now with a larger (11 $\frac{1}{2}$ " x 16") viewing surface, and only $\frac{3}{8}$ " thin. New technology provides bright, even illumination of viewing area. Has 2-5400K color-corrected lamps with 20,000-hour life. Viewing panel has opening to display transparencies. The unit can be used on a table, standing on an incline, or hung on the wall. Powered by 12VAC adapter. Overall size is 14" x 19 $\frac{1}{4}$ " x $\frac{3}{8}$ ". Weight: 7 $\frac{1}{2}$ lbs.

71649-3A	Light Pad, Model A-3A	each
-----------------	-----------------------	------

► **Mini Light Box**

These small and compact light boxes save space and can be stored in your desk drawer. Ideal for viewing and inspecting cell culture plates, slides, petri dishes, multiwell plates, embedding orientation, colony counter and much more. A mini 1.75X magnifier (as an option) facilitates your viewing. The unit has a 4"x5" (10.2x12.8cm) lighted area that is operated by four "C" batteries (not included). There is a built-in 6V DC adapter jack. The unit comes with one counting grid. It measures: 5 7/8"(L)x6 1/4"(W) x1 1/4"(H) (13.8x16x4.5cm). Weight:9 oz. without batteries.

71664-10	Mini Light Box	each
71664-12	1.75X Mini Magnifier	each
71664-15	Counting Grids	5/pk
71664-20	AC Adapter for Mini Light Box	each

► **Ultra Thin Light Box - Light Pad**

Very thin - only 1/2" thick (14 mm). Modern technology provides extremely even, bright illumination. 8"x10" viewing surface, with two 5400 K color corrected lamps with 20,000 hour life. The unit can be used flat on a table, standing at an incline, or hung on a wall. The Light Pad is also designed to display photo transparencies held under a clear plastic panel. Fits in a briefcase or stores in a desk drawer. It is powered by a 12V, DC adapter. The overall size is 12 1/4"x9 1/4"x 1/2". Weight: 2 lbs

DUST-OFF; The Photography Cleaning Tool, See Cleaning Section, pages 945-946 >>>>

► **Burnishers**

These burnishers are especially designed for dry transfer products. They are pressure adjustable allowing you to set and maintain the proper pressure for any burnishing style. For maximum adhesion, place the backing sheet over the newly transferred letters and reburnish with the "bone end." The rolling tip burnisher is ideal for large transfers, the standard tip is ideal for standard work, and the fine tip for detail work.

77615-01	Standard Tip Burnisher	each
77615-02	Fine Tip Burnisher	each
77615-03	Rolling Tip Burnisher	each

► **Frisket Knife**

Designed for easy handling. The frisket Knife is lightweight and disposable. It comes with a fixed #11 scalpel blade, and a locking safety cap when it is not in use.

77618-01	Frisket Knife	each
77618-03	Frisket Knife	3/pk
77618-12	Frisket Knife	12/pk

► **Correction Transfer Sheets**

Correction sheets are used in place of ink pens or brushes to touch up black and white prints. They are used to sharpen corners, smooth out edges, add or subtract lines or whole areas. To use simply position the symbol or shape which is desired and burnish down.

84054-01	Correction Symbols, White	each
84054-10	Correction Symbols, White	10/pk

Dry Transfer Sheet Cabinet

This cabinet offers protection as well as organization for dry transfer sheets. Each cabinet has 12 drawers and holds up to 600 sheets, sizes are 8 1/4" x 1 1/4" (20.5cm x 28.2cm). The overall cabinet measures: 10" (W) x 11 3/4" (D) x 16 1/4" (H). (25.4 cm x 29.8cm x 41.3cm). Available in red only.

► Negative Storage

► Glassine and Kraft Paper Envelopes

Note: Actual size of Glassine and Kraft envelopes: 3¼"x4" = 3½"x4½"; 4x5" = 4½"x5½"; 8x10" = 8½"x10½"; 35mm = 1½"x9½"; 7x7cm = 2½"x3"; 6.5x9cm = 2½"x3½"

A. Glassine Envelopes:

Glassine envelopes, acid free for negative storage. Open end, thumb-cut, side-seamed.

74050	For 3¼"x4" Films, Plain	100/pk	74074	For 35mm Strips, Plain	1000/pk
74052	For 3¼"x4" Films, Plain	500/pk	74080	For 6½"x9cm Films, Plain	100/pk
74054	For 3¼"x4" Films, Plain	1000/pk	74081	For 6½"x9cm Films, Plain	500/pk
74058	For 3¼"x4" Films, Imprinted	1000/pk	74082	For 6½"x9cm Films, Plain	1000/pk
74060	For 4"x5" Films, Plain	100/pk	74085	For 7x7cm Films, Plain	100/pk
74062	For 4"x5" Films, Plain	500/pk	74086	For 7x7cm Films, Plain	500/pk
74064	For 4"x5" Films, Plain	1000/pk	74087	For 7x7cm Films, Plain	1000/pk
74068	For 4"x5" Films, Imprinted	1000/pk	74090	For 8"x10" Films, Plain	100/pk
74070	For 35mm Strips, Plain	100/pk	74092	For 8"x10" Films, Plain	500/pk
74072	For 35mm Strips, Plain	500/pk			

B. Kraft Paper Envelopes:

Thumb cut, imprinted.

74056	For 3¼"x4" Films, Imprinted	500/pk
74066	For 4"x5" Film, Imprinted	500/pk
74094	For 8"x10" Film, Imprinted	100/pk

C. Polypropylene Film Sleeves

Archival quality, crystal clear. Specially formulated 3-mil polypropylene has a physical density that is less than other sleeving materials, making it more pliable and gentle to the film and inhibits it from becoming brittle.

73950	Polypropylene Sleeve for 3¼ x 4" Films	100/pk
73952	Polypropylene Sleeve for 4 x 5" Films	100/pk
73953	Polypropylene Sleeve for 6 x 35mm Strips	100/pk
73954	Polypropylene Sleeve for 6.5 x 9cm Film	100/pk
73956	Polypropylene Sleeve for 7 x 7cm Film	100/pk

D. Polyethylene Storage Sheets; Polyview Pages

Completely transparent. Fits all U.S. standard 3-ring binders: 8½"x11½". Convenient. Offers good protection for your valuable negatives and prints.

120 film strips, 3 strips of 4 per page

74010	Polyview Sheets, 120 size	25/pk
74012	Polyview Sheets, 120 size	100/pk

E. CD's / DVD's Storage (Polyethylene Storage Sheets; Polyview Pages)

Store 4 CD's / DVD's to one page, 2 for each side. Fits any 3-ring binder or just hanging from the current Print File Spinner rack.

- Protects from dust, scratches, and fingerprints.
- Archival quality NO PVC – safe for long-term storage.
- Self-closing, non-stick polypropylene.

74031-25	CD / DVD Storage	25/pk
74031-50	CD / DVD Storage	100/pk

► **Polyview Page Storage Box**

Made from archival polypropylene.

■ **Accepts all Format Pages.**

■ **Lifetime hinge for most secure closing**

The contents are kept completely safe from dust, water, and any other possible contaminants.

74698-01 Polyview Page Storage Box each

► **Lineco Archival Collectors Album**

Your most treasured photographs, letters, tech-notes, formula sheets, clippings or other collectibles are safe in Lineco's collector album. Made completely from acid-free materials. It is your best choice for long lasting storage and protection. The optional Mylar Page Protection with Blue/Gray inserts are acid-free envelopes on the inside back cover which offers safe temporary storage prior to mounting. The album comes without the Mylar pages.

74697-01 Lineco Collectors Album each

74697-50 Mylar Page With Blue/Gray Inserts 50/pk

► **Polyguard Polypropylene Film Sleeves**

Polyguard Polypropylene film sleeves are the finest archival quality material, and are guaranteed to give you ultimate protection for your most important film negatives. Polyguard is 100% acid free, as well as being free from optical distortion. It is resistant to water, grease, oil, alkalis, and organic solvents. Polyguard is durable, yet pliable and gentle to the film and will not become brittle, crack, or abrade the film. All sizes are available in a clear open flap, clear front with frosted backing, and sealed flap. Available in the following configurations:

A. Sheet Film Sleeves

73900	Size 4x5", Clear Open Flap	100/pk
73901	Size 4x5", Clear Open Flap	500/pk
73902	Size 4x5", Clear Open Flap	1000/pk

B. Roll Film Sleeves

Cut Lengths

73930	135mm/20 exp., Clear Open Flap	100/pk

Roll Dispensed: Clear, Open Flap:

73944	135mm, Unperforated, 3 mil	1000ft/roll
73946	120/220mm, Unperforated, 3 mil	1000ft/roll
73948	70mm, Unperforated, 3 mil	1000ft/roll

► **Digital Output Sleeving – PRO-LINE Archival Sleeving**

Our specially formulated 3-mil archival polypropylene has a physical density that is less than other sleeving materials, making it more pliable and gentle to your film. Strong and durable, PRO-LINE won't become brittle or abrade film. PRO-LINE sleeving is optically clear, neutral in color, and has a unique anti-Newton ring surface that reduces distracting Newton ring as well as minimizing the actual surface area that is in contact with your film. All sleeving is available in clear both sides and clear front with frosted back for even light distribution.

DIGITAL OUTPUT SLEEVING BENEFITS

- Protects inkjet & Thermal Prints from moisture, fingerprints, scratching, dirt etc. Offers a Professional Presentation.
- Allows Safe Viewing Through Crystal Clear Archival Sleeve.
- Eliminates Prints from scratching each other during shipments.
- Available in all Inkjet Format and Clear-Open Flap (COF) or Clear-Sealed Flap (CSF).

► CDs Storage Shell and Envelope

For years, the hard plastic jewel case was the only product available for the protection and storage of compact disks (CDs), which are very brittle, easily broken, and too bulky for storage. Now we are able to introduce alternatives: the C-Shell™ and Paper Sleeves.

► C-Shell™

C-Shell™ is designed to provide filling, storage, and protection for compact disks or DVDs during shipping. The C-Shell™ is an ultra slim (only 4.5 mm thick), one-piece polypropylene shell with a living hinge.

- Durable and completely protect the contents
- Lightweight and ultra thin

- Open and close with a simple center snap
- Impact resistance—protect contents during shipping

► Paper Sleeves

- Economical—cost per sleeve is far less than plastic jewel case
- Space saving
- Durable
- Clarity

74006-10	C-Shell™ CDs Storage	10/pk.
74006-50	C-Shell™ CDs Storage	50/pk.
74008-10	Paper Sleeve CDs Storage	100/pk.
74008-50	Paper Sleeve CDs Storage	500/pk.

► Space Saver - Steel File Cabinet System

1. Slide Cabinet System

- Store up to 54,000 slides in only 2 square feet of space.
- Low cost slide storage.
- Ideal for use in Pathology, Cytology, Hematology, Histology, Dermatology, Research, Education...
- Sturdy - Built to last.

Our newly introduced cabinets for filing 3x1" slides is the most effective system available to the ever-growing problem of slide storage and retrieval.

They are compact, sturdy and economical!!!

The cabinets are stackable and are secured by interlocks. The base (order separately) lifts the cabinets 4¾" off the floor. All units are constructed from heavy gauge reinforced cold rolled steel, electrostatically finished in dura-baked enamel in an attractive green color. Drawers are easily removable and interchangeable. They have rolled edges on each side for added strength. The riveted card holder on the front of the drawer speeds up slide retrieval.

Each cabinet has 6 drawers, with two compartments per row, so you can store as many as 750 slides per drawer. The outside walls and center divider are lower than the slides, allowing for easy removal of any slide.

Each drawer has an exclusive built-in hand grip at the rear and a full sized handle at the front which allows the drawers to be removed and used as trays.

Each cabinet comes with a package of Memorandum Markers, a set of movable Compressor Blocks and four No-Mar Feet.

The cabinet measures: 15¾"(W)x18¾"(D)x4¾"(H) (40x47x12cm).

74780-10	EMS Cabinet System Base	each
74780-20	EMS Micro-Slide Cabinet	each
74780-25	Micro-Slide Memorandum Markers	100/pk

2. 35mm Slide Cabinets

For 2x2 Slides and Kodachrome Transparencies.

These slide cabinets have the same construction and features as our Micro-Slide Cabinet (Cat# 74780-20). Each file comes with three drawers and can store up to 2,250 slides.

35mm Slide Cabinets interlock with themselves and with Micro-Slide Cabinets, for total flexibility and storage convenience. The depth and width dimensions are the same as (Cat#74780-10) shown above; the height is about 1" (25cm) lower and uses the same base as our (Cat# 74780-10).

74780-30	EMS 35mm Slide Cabinet	each
74780-35	35mm Slide Memorandum Markers	100/pk

➤ Scanning Electron Microscope Digital Imaging

➤ SEM Digi-CAM 2

The easy, inexpensive way to upgrade your scanning electron microscope or STEM to digital imaging just got better with an increase in camera resolution to 14 MP!!

By now you've heard: Polaroid is no longer producing film for it's cameras. With the existing supply of Polaroid film decreasing every day, the price has been skyrocketing. How will you document the samples you are imaging in the future? Sure, you could digitize your entire SEM but these conversions are time consuming and can cost in the range of \$15,000 or more!

Originally designed to solve our own in-house digitization needs, the **SEM Digi-CAM 2** is easy to set up and is less expensive than a frame grabber and higher resolution in most cases. If you want us to supply a dedicated mini PC an additional charge will apply, but to the best of our knowledge almost any PC or MAC will suffice.

But what about quality? You be the judge! The image at right is an actual images taken using the SEM Digi-Cam 1 with 6.1 MP.

SEM DIGI-CAM FEATURES:

- 14 MP Nikon SLR Digital Camera - Custom Configured for this application!
- Images can be transferred wirelessly to the PC, or MAC, without need to use WiFi or any other in house network. This overcomes restrictions many customers had regarding security issues when using their normal Institutions network. This has an ad hoc system. You will need an internet connection for initial setup or registration.
 - A USB cable is also included if you do not wish to transfer images wireless
- Remote Controlled Shutter Operation - accommodates even the longest CRT searl times
- Includes software or use your own imaging program such as Photoshop, iPhoto, etc.
- One year warranty on camera. Ext. warranty available.
- AC Adapter for Digital Camera
- Mounting hardware for your particular instrument

Advantages over other digital imaging acquisition systems:

- Resolution is actually better than many more expensive frame grabbers!
- Much lower cost!
- Easily setup & installed - No Service Technician needed!
- Camera can be removed from adapter and used as you like!
- Works on STEM's and slow scan instruments.
- Free One Year Technical Support included!

95200	SEM Digi-CAM	each
95210	SEM Digi-CAM with PC included	each

► Infinity Digital Microscope Cameras

Electron Microscopy Sciences is proud to announce the release of a complete line of Digital Microscope Cameras by "Lumenera". **For a complete brochure on each of the individual types of cameras or for more information please call or contact us today.** Lumenera offers a wide range of cameras based on high performance sensors, providing a variety of unique capabilities to satisfy all of your imaging applications.

► INFINITY1 CMOS Cameras

HIGHLIGHTS

- 2, 3 and 5 megapixel resolution
- Perfect for documentation and archiving applications
- Fast frame rates

APPLICATIONS

Brightfield, Darkfield, DIC, Live Cell Imaging, Histology, Pathology, Cytology, Defect Analysis, Semiconductor Inspection, Metrology

Lumenera's INFINITY1 digital cameras are designed to be a cost-effective, versatile solution for clinical, life science, materials science and educational professionals. The camera is available with 1.3 to 5 megapixel resolution.

The INFINITY1-2C is the newest camera in the series and features a unique color sensor with 1600x1200 resolution and on-board processing. This camera delivers outstanding image quality and excellent value.

The INFINITY CMOS USB 2.0 cameras are designed to be a cost effective, versatile solution for a variety of microscopy imaging applications. Features include auto white balance, full exposure control, programmable gain, sub-windowing and region of interest. It is an excellent fit for documentation and archiving applications.

For camera software and specifications, see page 754 >>>>

Cat #	Description	Qty.
95000	INFINITY1-2C 2.0 Megapixel CMOS Color Camera	each
95100	INFINITY1-1M 1.3 Megapixel CMOS Monochrome Camera	each
95102	INFINITY1-3 C 3.1 Megapixel CMOS Color Camera	each
95103	INFINITY1-5 C 5.0 Megapixel CMOS Color Camera	each

► INFINITY2 CCD Cameras

HIGHLIGHTS

- 1, 2 and 3 megapixel resolution
- Higher dynamic range for quantitative analysis
- Fast frame rates
- Low noise electronics

APPLICATIONS

Brightfield, Darkfield, DIC, Live Cell Imaging, Histology, Pathology, Cytology, Defect Analysis, Semiconductor Inspection, Metrology, Gel Documentation, Moderate Light Fluorescence

Equipped with a high-quality, Sony CCD sensor, INFINITY CCD USB 2.0 cameras offer excellent sensitivity, high dynamic range and a 12-bit digital output. Features include binning, auto white balance, full exposure control, programmable gain, sub-windowing and region of interest. It is ideal for higher-end scientific, medical, ophthalmic and life science applications.

For camera software and specifications, see page 754 >>>>

95108	INFINITY2-2M 2.0 Megapixel CCD Monochrome Camera	each			

► **NEW INFINITY 3-3UR Research-Grade Microscopy Camera**

2.8 MP USB 3.0 Camera Offering Low Noise and High Sensitivity

Highlights

- 53 fps at 2.8 megapixel, 66 fps at full HD (1936 x 1456)
- Industry leading Sony EXview HAD II sensor technology
- Color or monochrome ICX674 CCD sensor with 2/3" optical format
- High-speed USB 3.0 interface for ease of installation on any computer
- 128 MB of onboard memory for frame buffering results in reliable image delivery for demanding systems
- Select 8 and 14-bit pixel data modes

Applications

- Brightfield
- Darkfield
- Histology, Pathology, Cytology
- Live Cell Imaging
- Semiconductor Inspection, Metrology
- Gel Documentation
- Whole Slide Imaging
- Low Light Fluorescence
- Quantitative Analysis

The new INFINITY3-3UR uncooled scientific digital camera features a Sony ICX674 CCD sensor, offers 53 fps at full 2.8 megapixel resolution via a high-speed USB 3.0 interface. Designed for use in scientific and industrial applications requiring optimal color reproduction, extreme sensitivity, increased resolution and high speed. Cooled performance from an uncooled camera.

The INFINITY3-3UR provides unmatched light sensitivity needed for low light applications. Relying on Sony's EXview HAD II technology, this camera offers extremely high dynamic range, 4.54 x 4.54 µm pixels and very low noise. The INFINITY3-3UR delivers outstanding image quality and value for challenging low light applications such as fluorescence and NIR imaging.

The INFINITY3-3UR uses the latest USB 3.0 technology at 5 Gbits/sec to deliver the fastest image transfer - even at its highest resolution. Image captures can be synchronized using either a hardware or software trigger. 128 MB of onboard memory for frame buffering ensures dependable and reliable image delivery at full frame rate and highest resolution even in the most demanding systems.

INFINITY CAPTURE, an intuitive image capture program, and INFINITY ANALYZE, a full image analysis package offering camera control, measurement, annotation, tiling and post capture enhancement, are included with the camera. Camera and software combine to create a complete microscopy imaging solution for your application.

Technical Specifications*

Camera Sensor

Image Sensor	Sony ICX674 , CCD, color or mono
Optical Format	2/3"
Pixel Size	4.54 x 4.54 µm square pixels
Frame Rate	53 fps at 1936 x 1456, 66 fps at 1920 x 1088, 109 fps at 640 x 480
Bit Depth	8 and 14-bit
Binning Modes	2 x 2, 4 x 4, 8 x 8 (3 x 3 mono only)
Region of Interest Control	Any multiple of 16 x 16 pixels (quad tap mode)
Dark Current Noise	<1 e-/s (at 22 °C ambient, 41 °C internal)
Read Noise	6.2 e- (4 taps, 16 fps, 25 °C ambient, 41 °C internal)

Camera Controls

Mass	340 g
Power Requirement	External 5 V DC, 1.2 A, power supply (included)
Power Consumption	6 W maximum in full frame rate mode
Operating Temperature	0 to 50 °C
Operating Humidity	5 to 95%, non-condensing
Data Interface	USB 3.0
Dimensions	57.15 x 97.79 x 39.62 mm 2.75 x 3.85 x 1.56 inch
Lens Mount	Adjustable C-mount standard

*Preliminary specifications.

95123	INFINITY3-3URC — 2.8 Megapixel Uncooled CCD Color USB 3.0 Camera	each
95124	INFINITY3-3URM — 2.8 Megapixel Uncooled CCD Monochrome USB 3.0 Camera	each
95125	INFINITY Advanced Features Pack 2: Includes USB Key for extra INFINITY ANALYZE license +	each
95126	Advanced Features Module, additional 3 year warranty, 1 advance product replacement.	each
95127	Power Supply: 5 V DC, 12.5 W (included with camera)	each

Ilium Brownii 10x Objective, 10ms Exposure, 1.2x Gain, 1.0 Gamma

Tissue 40x Objective, 6.75ms Exposure, 1.5x Gain, 1.0 Gamma

Live Zebra Fish 10x Objective, Brightfield

► INFINITY3 Low Light CCD Cameras

Now available with and without cooling

For low light fluorescence applications the INFINITY cooled CCD USB 2.0 cameras offer cooling to 25° C below ambient. The Sony ICX285 ExView HAD sensor has very a high dynamic range, excellent sensitivity and a 12-bit digital output. Features include binning, auto white balance, full exposure control, programmable gain, sub-windowing and region of interest.

HIGHLIGHTS

- 1 megapixel resolution
- High signal to noise ratio for low light, long exposure applications
- Available with cooling to 25° C below ambient
- Fast frame rates
- Low noise electronics

APPLICATIONS

Brightfield, Darkfield, DIC, Live Cell Imaging, Histology, Pathology, Cytology, Defect Analysis, Semiconductor Inspection, Metrology, Low Light Fluorescence, Chemiluminescence, Bioluminescence, Flow Analysis, GFP, FISH, NIR, FRET

For camera software and specifications, see page 754 >>>>

Cat #	Description	Qty.
95110	INFINITY3-1C 1.4 Megapixel Cooled CCD Color Camera	each
95111	INFINITY3-1M 1.4 Megapixel Cooled CCD Monochrome Camera	each
95119	INFINITY3-1U 1.4 Megapixel CCD Color	each
95120	INFINITY3-1U 1.4 Megapixel CCD Monochrome	each

► INFINITY4-11 Large Format

The INFINITY4 camera series offers large format megapixel Kodak sensors for a wide field of view. The perfect choice for demanding high resolution imaging requiring excellent color rendition. Features include a 12-bit digital output, binning, progressive scan electronic shutter, full exposure control, auto white balance, programmable gain, sub-windowing and region of interest — ideal for high end ophthalmic, medical, clinical and life science applications.

HIGHLIGHTS

- 11 megapixel resolution
- Superior light sensitivity with high fidelity color reproduction
- Large format sensor
- Low noise electronics
- F-mount lens adapter

APPLICATIONS

Brightfield, Darkfield, DIC, Live Cell Imaging, Histology, Pathology, Cytology, Defect Analysis, Semiconductor Inspection, Metrology, Gel Documentation, Moderate Light Fluorescence

For camera software and specifications, see page 754 >>>>

95114	INFINITY4-11 10.7 Megapixel CCD Color Camera	each
95115	INFINITY4-11 10.7 Megapixel CCD Monochrome Camera	each

► INFINITYX-32 High Resolution Camera

Using patented pixel shifting technology, each CCD pixel captures full chromatic information resulting in increased color resolution with no degradation. The INFINITYX-32 is the first pixel shifting camera to utilize the highly sensitive SONY ICS274 sensor. Available at a fraction of the cost of competitive cameras, this complete imaging solution is an affordable, extraordinary tool for professionals in clinical, life and material sciences where megapixel resolution, color accuracy and light sensitivity are essential.

HIGHLIGHTS

- 32 megapixel pixel shifting camera
- 2, 8, 16 and 32 megapixel resolution on capture
- Highly sensitive, low noise CCD with remarkable color quality for the most demanding applications
- 12 fps at full 1616X1216 resolution, 25 fps at smaller regions of interest
- 8 & 12-bit selectable output format

For camera software and specifications, see page 754 >>>>

95116	INFINITYX-32C 32 Megapixel CMOS Color Camera	each
95117	INFINITYX-32M 32 Megapixel CMOS Monochrome Camera	each

► **NEW INFINITYHD 1080p60 HD Microscopy Camera**

Lumenera's INFINITYHD high definition CMOS color microscopy camera is a full featured, standalone, high definition scientific imaging solution offering full 1080p60 preview with superb color reproduction and extremely fast frame rates streaming direct to monitor.

Operate the camera by directly connecting to a monitor without connecting to a PC, or utilize the plug-and-play USB 2.0 image capture. With extremely fast response times, the INFINITYHD quickly reacts to lighting changes in any life science, clinical or material application. Video output over HDMI connector to either a DVI or HDMI monitor. 3 on-camera buttons allow easy access to power, white balance and image capture.

Superior Color Reproduction:

Years of experience in the microscopy market have allowed Lumenera to develop specialized color algorithms ensuring excellent color reproduction. This results in a sample preview on a monitor that closely matches the view on the microscope eyepiece.

Full Frame Rates:

The INFINITYHD camera provides the required 60 fps for true high definition, unlike many competitors professing to be HD but offering considerably lower frame rates. This allows for smooth manipulation on the preview without any lag.

INFINITYHD Software

The included INFINITYHD software allows for image capture. The software is intuitive and can be set up in minutes. Once the camera is initially installed, the camera can run independently or used via the high-speed USB 2.0 connection.

HIGHLIGHTS

- 1/3" (16:9) CMOS 2 megapixel sensor
- 1080p60 high definition format 1920 x 1080
- Direct output to HDMI monitor
- 3 on-camera buttons for power, white balance and capture
- Optional USB 2.0 output to PC
- INFINITYHD software compatible with Windows XP, Vista, Windows 7, 32 and 64-bit, for image capture

APPLICATIONS

Brightfield, Darkfield, Live Cell Imaging, Histology, Pathology, Cytology, Defect Analysis, Semiconductor Inspection, Metrology

For camera software and specifications, see page 754 >>>>

95128	INFINITY HD 2 MP HD Color Camera	each

► **NEW INFINITYlite 1.5 Megapixel CMOS USB 2.0 Camera**

The INFINITYlite is specifically designed for the educational market as well as entry level microscopy applications. It is a compact, affordable microscopy camera that delivers outstanding image quality and excellent value. Highlights include live video preview and focus for the efficient capture of optimal images, as well as full integration to popular third-party imaging applications through our TWAIN drivers.

HIGHLIGHTS

- Progressive scan 1.5 megapixel CMOS sensor
- Full color sub-windowing allows for rapid focus and scanning of samples
- Software compatible with Windows XP, Windows Vista and Windows 7, 32 and 64-bits
- Includes TWAIN and DirectX/Direct Show support

APPLICATIONS

All typical entry-level industrial, clinical and life science applications including: Teaching Labs, Brightfield/Darkfield, Histology, Pathology, Cytology, Defect Analysis, Veterinary Pathology, Geology, Histology, Semiconductor Inspection, Documentation, DIC, Live Cell Imaging

Technical Specifications:

Camera Sensor	
Image Sensor	1.5 Megapixel 1/2.5" CMOS format, color, 6.0 x 4.5 mm array
Resolution / Pixel Size	1440 x 1080, 4.2µm square pixels
Frame Rate	10 fps at full resolution
Dynamic Range	47.5 dB
Bit Depth	8-bits uncompressed
Read Noise	53 e-
Camera Controls	
Mass	245 g
Power Requirement	USB bus power
Power Consumption	~2.5 W
Operating Temperature	0 to +50 °C
Operating Humidity	5 to 95 %, Non-condensing
Exposure Range	81 µs to 339 ms (video), 81 µs to 339 ms (snapshot)
Region of Interest Control	Any multiple of 8 x 8 pixels, 32 x 32 pixels minimum
Exposure	Manual and automatic control
White Balance	Manual and automatic control
Gain	1 to 7.75 x
Interface Connector	USB 2.0 high-speed interface
Dimensions (L x W x H)	2.60 x 1.91 inch
Lens Mount	C-Mount lens adapter

Cat #	Description	Qty.
95129	INFINITYliteB 1.5 Megapixel CMOS Camera	each

INFINITY Software

All Lumenera INFINITY cameras include INFINITY ANALYZE software at no extra charge, allowing complete camera control and advanced image acquisition and analysis.

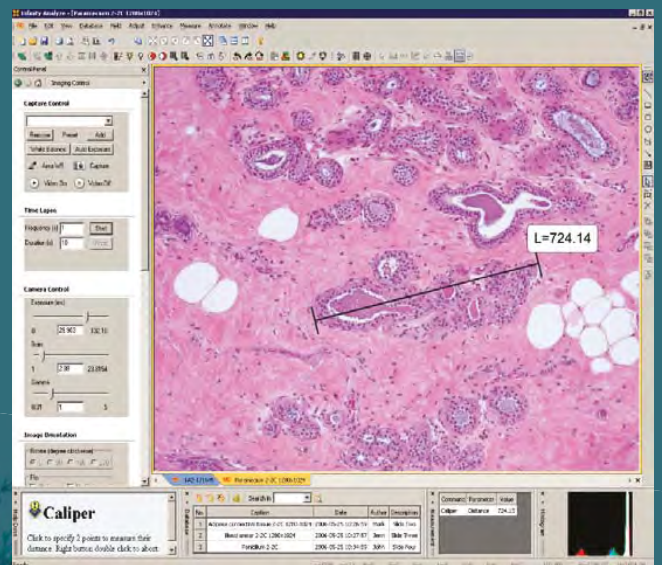

Also included is INFINITY CAPTURE, an intuitive user interface that contains all of the basic features needed to control the camera and capture images.

Easily integrate your INFINITY camera with 3rd party software applications through our TWAIN and DirectX/WDM interface (included) as well as 3rd party drivers for most image analysis packages.

An Advanced Features Model is available as an accessory to perform depth of focus and spherical aberration correction.

INFINITY ANALYZE Features Include:

- Real time video preview
- Measurement and annotation
- Archiving with search for date, author, description
- Fluorescent image composition including RGB Look-Up Tables (LUT)
- Single capture and time lapse
- Image stitching
- Automatic/manual exposure and white balance
- Hue, saturation, gain, contrast, brightness and gamma controls
- Advanced image processing
- Customize interface for specific applications
- Thumbnail worksheet
- Drag and drop measurement data to Microsoft Excel for analysis
- Save and restore camera settings
- Context sensitive help for all functions
- Optional focus enhancement
- Interactive color composition
- Available in 9 languages: English, Latin, Spanish, Castilian Spanish, Italian, Russian, Japanese, Chinese, Korean and French

Note: INFINITY ANALYZE not included with INFINITYHD, only the INFINITYHD software.

Specification Guide

- Auto/Manual Exposure
- Auto/Manual White Balance
- Programmable Gain, 1 to 10X Optimizable
- C-Mount Lens Adapter
- USB 2.0 High-Speed Interface (USB 480 MB/s vs. Firewire 400 MB/s)
- Power: INFINITY1 & 2 - USB Bus Power, INFINITY3 - External 5VDC - 500mA, INFINITYX - External 6VDC - 500mA
- Operating Temperature 0°C to +50°C
- Operating Humidity 5% to 95%, Non-condensing

Sciences**

► Tweezers: EMS, Dumont, and Rubis

For more than 36 years, Electron Microscopy Sciences has supplied the highest quality tweezers available from the finest manufacturers in the world. These high-quality tweezers are all available in a variety of materials and many different types, finished to the highest precision and finest quality.

► EMS's Personal Fine and General Purpose Tweezers

EMS proudly introduces a full selection of tweezers and forceps with all hand-crafted to a perfect tip symmetry and balance, high quality and innovative tweezers, that are well suited for many applications:

EM Labs – General Labs - Electronic – Aerospace – Precision assembly – Optic – Biotech – Chemistry – Surgery - etc.

MATERIALS USED:

- **Type SA low carbon austenitic steel** - non magnetic, generally used where corrosion resistance and toughness are primary requirements.
- **Super-Alloy Type NC:** Ni-Cr-Mo super-alloy. Excellent chemical resistance. Withstands temperatures up to 800°C. Fully non-magnetic with a very high shape retention and resistance to fatigue. Recommended for all precision work.
- **Aluminum alloy AL:** low density, high electrical and thermal conductivity, good corrosion resistance in common environments, lightweight – only used for the making of tweezers handle.
- **Titanium alloy TA:** relatively low density (4.5g/cm³), good mechanical properties and high use temperature (1600°F/870°C); good corrosion resistance and non-magnetic. Generally it is used in addition to the high heat and corrosion resistance, a very high strength-to-weight ratio is required.
- **PTFE coatings, TE:** superior anti-scratch, non-stick material. Insulation and very high corrosion resistance. Continuous use temperature 150°C (300°F)
- **Ceramic MZ:** zirconia toughened alumina (ZTA). Non-porous. Superior of hardness, corrosion, heat resistance, and insulation.
- **Conductive plastic CF (PA66/CF30):** polyamide 66 reinforced with 30% carbon fiber
- **Non-conductive plastic RF (PET'GF30):** polyethylene terephthalate reinforced with 30% glass fiber.
- **PEEK/CF30:** Polyetheretherketone reinforced with 30% wt% carbon fiber - High Performance Plastic Type CP. Very hard, high tensile and flexural strength, high wear resistance. High heat (260 -300°C) resistant. Excellent resistance to most chemicals. ESD safe, low surface resistivity (10² ohm). Directly substitute for all CF or RF
- **Soft ESD cushion grip** static dissipative (ESD safe). NBR vulcanized rubber
- **Synthetic fiber SV:** PVDF, polyvinylidene fluoride carbon fiber reinforced
- **Nickel plating: NP-** Superior corrosion resistance to saltwater, alkalies and organic acids.

► 1. NEW EMS High End Medical Tweezers

EMS is proud to introduce this new category of Tweezers. They are all handcrafted to perfect tip symmetry and balance and the surface has an electropolish finish. With high precision fine tips and Dot Serrated handles for a perfect grip. All of these tweezers can be sterilized and they are all made from Inox.

► 2. EMS High Precision and Ultra Fine Tweezers

- Very popular tweezers.
- Tweezers possess the highest quality.
- These tweezers have an anti-glare satin finish.
- All tweezers are antimagnetic/anti-acid steel-SA (otherwise, specified).

► Style 0

Flat edges, fine tips. Length: 4¾" (120mm)

78310-0	EMS 0, SA	each
78510-0	EMS 0, NC – Ultra-Fine	each

► Style 00

Flat edges, strong tips. Length: 4¾" (120mm)

78311-00	EMS 00, SA	each
-----------------	------------	------

► Style 000

Same as 00 with radiused edges. Length: 4¾" (120mm)

78312-000	EMS 000, SA	each
------------------	-------------	------

► Style 00B

Same as 00 with serrated grips. Length: 4¾" (120mm)

78313-00B	EMS 00B, SA	each
------------------	-------------	------

► Style 00D

Same as 00 with serrated tips and grips. Length: 4¾" (120mm)

78314-00D	EMS 00D, SA	each
------------------	-------------	------

► Style 0A

Straight point with radiused outside edges, fine tips. Length: 4¾" (120mm)

72919-0A	EMS 0A, SA	each
-----------------	------------	------

► Style 1

Fine, accurate, strong tips. Length: 4¾" (120mm)

78316-1	EMS 1, SA	each
78516-1	EMS 1, NC – Ultra Fine	each

► Style 10G

Fine tips, general purpose uses. Length: 4¾" (110mm)

78324-10G	EMS 10G, SA	each
------------------	-------------	------

► Style 15A

Sharp with 12mm flat cutting jaws. Carbon Steel. Length 4½" (115mm)

78360-15A	EMS 15A, SA	each
------------------	-------------	------

► Style 15ASW

10mm curved cutting jaws. Carbon Steel. Length: 4½" (115mm)

78360-15ASW	EMS 15ASW, SA	each
--------------------	---------------	------

➤ 2. EMS High Precision and Ultra Fine Tweezers (continued)

➤ Style 2

Strong, sharp tips. Length: 4¾" (120mm)

78317-2	EMS 2, SA	each
78517-2	EMS 2, NC – Ultra Fine	each

78317-2

➤ Style 2AZ

Same tip as 2 but 'Z' shape. Length 4¾" (120mm)

78317-2AZ	EMS 2AZ, SA	each
------------------	-------------	------

78317-2AZ

➤ Style 2AX

Flat, round tips with self-closing. Length: 4¾" (120mm)

78317-2AX	EMS 2AX, SA	each
------------------	-------------	------

78317-2AX

➤ Style 2A and 2 AB

Provides a larger flat gripping surface for better handling of small objects without puncturing them (membrane, wafer etc.). Available with either straight tips (style 2A) or curved tips (style 2AB). Length 4¾" (120mm)

72919-2A	EMS 2A, SA	each
72919-2ATe	EMS 2A PTFE Coating	each

72919-2A

72919-2ATe

72919-2ATA

72919-2AB

➤ Style 26

Very strong, sharp tips. Length: 5¼" (135mm)

78328-26	EMS 26, SA	each
-----------------	------------	------

78328-26

➤ Style 3

Very Fine Tips and superior finish. Length: 4¾" (120mm)

78318-3	EMS 3, SA	each
78518-3	EMS 3, NC – Ultra-Fine	each
78318-3GP	EMS #3 with Gold Plating	each

78318-3

➤ Style 3C

Shorter than style 3. Very fine tips and superior finish. Length 4¼" (110mm)

78318-3C	EMS 3C, SA	each
78518-3C	EMS 3C, NC – Ultra-Fine	each
78318-3CTa	EMS Titanium Alloy	each

78318-3GP

78318-3C

➤ Style 3CB

Very sharp, superior finish, bent tips. Length: 4¼" (110mm)

78318-3CB	EMS 3CB, SA	each
------------------	-------------	------

78318-3CB

➤ Style 3F

Tips are touching over 3mm (parallel tips), useful for handling tiny wires. Length: 4¾" (120mm)

78318-3F	EMS 3F, SA	each
-----------------	------------	------

78318-3F

➤ Style 3R

Very sharp, reverse action tweezers. Length is 4¾" (120mm)

78318-3R	EMS 3R, SA	each
-----------------	------------	------

➤ Style 3X

Very sharp tips, self-closing. Length: 4¾" (120mm)

78318-3X	EMS 3X, SA	each
-----------------	------------	------

78319-4R

► 2. EMS High Precision and Ultra Fine Tweezers (continued)

► Style 4

Extra fine tips. Superior finish. Length: 4¼" (110mm)

78319-4	EMS 4, SA	each
78519-4	EMS 4, NC – Ultra Fine	each

► Style 4A

Extra fine and strong tips. Length: 4¼" (110mm)

78319-4A	EMS 4A, SA	each
----------	------------	------

► Style 4R

78320-5Ti	EMS 5, SA, Titanium Alloy	each

78320-5

78320-5Te

78320-5GP

78320-5Ti

► Style 5A

Extra fine tips. Length 4½" (115mm)

78320-5A	EMS 5A, SA	each
78520-5A	EMS 5A, NC – Ultra Fine	each

► Style 5B

Extra fine, bent tips, maximum visibility. Length 4¼" (110mm)

78320-5B	EMS 5B, SA	each
----------	------------	------

► Style 5C

Extra fine, double bent tips. Length: 4½" (115mm)

78320-5C	EMS 5C, SA	each
78520-5C	EMS 5C, NC – Ultra Fine	each

➤ 2. EMS High Precision and Ultra Fine Tweezers (continued)

➤ Style 5AX

Extra fine tips, self-closing. Length 4½" (115mm)

78320-5AX	EMS 5AX, SA	each
------------------	-------------	------

➤ Style 5TTH

Anti-capillary, extra fine tips with locking ring. Useful for handling E.M. grids. Length: 4½" (110mm)

78320-5TTH	EMS 5TTH, SA	each
78520-5TTH	EMS 5TTH, NC – Ultra Fine	each

➤ Style 5X

Extra fine tips, self-closing. Length: 4½" (110mm)

78320-5X	EMS 5X, SA	each
78520-5X	EMS 5X, NC – Ultra Fine	each
78320-5XGP	EMS 5X, SA, with Gold Plating	each

➤ Style 51S

Extra fine, bent tips. Useful for handling EM grids. Length: 4½" (115mm)

78340-51S	EMS 51S, SA	each
------------------	-------------	------

➤ Style 52A

Crush proof, flat tips, smooth action design. Length: 4¾" (120mm)

78341-52A	EMS 52A, SA	each
------------------	-------------	------

➤ Style 6

Fine, angled tips. Length: 4½" (115mm)

78321-6	EMS 6, SA	each
----------------	-----------	------

➤ Style 62A

Flat, blunt tips. Ideal for handling coverglass. Length: 4¾" (120mm)

78350-62A	EMS 62A, SA	each
------------------	-------------	------

➤ Style 7

Fine Curved tips. Length 4½" (115mm)

78322-7	EMS 7, SA	each
78522-7	EMS 7, NC – Ultra Fine	each
78322-7Te	EMS 7, SA with PTFE Coating	each
78322-7GP	EMS 7, SA Gold Plating	each
78322-7Ta	EMS 7, Titanium Alloy	each

➤ Style 7B

Fine, curved and serrated tips. Length: 4½" (115mm)

78322-7B	EMS 7B, SA	each
-----------------	------------	------

➤ Style 7E

Fine, curved tips and flat edges. Length 4½" (115mm)

78322-7E	EMS 7E, SA	each
-----------------	------------	------

► 3. EMS Super Slim and Long Tweezers

These long and slender tweezers work well in multiple precision applications and are especially well suited for working near heat sources. Made from SA steel.

► Style 60

Sharp, relieve tips. Length: 5½" (140mm)

78348-60	EMS 60, SA	each
-----------------	------------	------

► Style 64A

Sharp, curve tips. Length: 5½" (140mm)

78351-64A	EMS 64A, SA	each
------------------	-------------	------

► Style 65A

Sharp, bent tips. Length 5½" (140mm)

78351-65A	EMS 65A, SA	each
78551-65A	EMS 65A, NC – Ultra Fine	each

► Style 66

Sharp, double bent tips allow more visibility. Length: 5½" (140mm)

78351-66	EMS 66, SA	each
-----------------	------------	------

► Style SS

Long and narrow straight tips. Length: 5½" (140mm)

72919-SS	EMS SS, SA	each
72919-SSUF	EMS SS, NC – Ultra Fine	each

► Style SSL

Long and narrow tips, ergonomic shape. Length: 6" (150mm)

78353-SSL	EMS SSL, SA	each
------------------	-------------	------

► EMS Tweezers Sets in Wooden Case

Set 1: For fine and precision work, this set includes one each of: Style 3 (#78318-3), style 4 (#78319-4), style 5 (#78320-5), Style 5A (#78320-5A), and style 7 (#78322-7)

78323-01	Fine EMS Tweezers Set 1	5/set
-----------------	-------------------------	-------

Set 2: For general fine and miniature work, this set includes one each of: Style 0 (78310-0), style OOB (&8313-00B), style 2 (#78317-2), style 2A (#72919-2A) and style 2AX (78317-2AX)

78323-02	EMS Tweezers Set 2	5/set
-----------------	--------------------	-------

► The Tweezer Repair Kit

This repair kit allows you to straighten, resharpen, and repair your tweezers that have been damaged or have become dull. Instructions are included with the kit

The kit includes:

■ 1 Sharpening stone ■ Ten O-rings ■ Instrument Oil, 50 ml ■ Chain nose pliers

Cat. #	Description	Qty.
72892-10	The Tweezer Repair Kit	Kit

► 4. EMS Ergonomic Tweezers

They are ultra lightweight and very soft tension. Provides extraordinary relief from hand fatigue and Carpal Tunnel Syndrome. The handle is made from Aluminum and SA (stainless steel low carbon austenitic steel) tips. These tweezers have 30% less weight and 50 % less tension.

► Style E00 SA/AL

Flat edges, thick and strong tips. Length: 5½" (136mm)

78380-E00 EMS E00 SA/AL each

► Style E2A SA/AL

Flat and round tips. Length: 5½" (136mm)

78382-E2A EMS E2A SA/AL each

► Style E3 SA/AL

Very sharp tips and superior finish. Length: 5½" (136mm)

78383-E3 EMS E3 SA/AL each

► Style E5 SA/AL

Extra fine tips and superior finish. Length: 5½" (136mm)

78385-E5 EMS E5 SA/AL each

► Style E7 SA/AL

Fine curve tips. Length: 5½" (136mm)

78387-E7 EMS E00 SA/AL each

► 5. EMS Flat-Tip Tweezers

Made from SA steel and they have serrated grips.

► Style 125

Smooth, flat, and no scratch tips. Length: 4¾"(120mm). Tip 4.4mm wide.

78332-125 EMS 125 each

► Style 125A

Same as #125 but with elongated tips. Tip 2.7mm wide.

78332-125A EMS 125A each

► Style 127 and Style 128

Thin and square tips, straight (Style 127), curved (style 128). Length: 4" (105mm)

72972-SP EMS 127 each

72972-AP EMS 128 each

72972-SP

72972-AP

► Style 33A

Flat round tips. Length 4½" (115mm). Tip 6.6mm wide.

78333-33A EMS 33A each

► Style 34A

Smooth and wide tips, good for handling delicate parts. Length: 4¾" (120mm) Tip 6.3mm wide

78334-34A EMS 34A each

► 5. EMS Flat Tip Tweezers (continued)

► Style 35A

Smooth and short wide tips. Length: 4¾" (120mm). Tip 6.7mm wide

78335-35A	EMS 35A	each
-----------	---------	------

► Style 35B

Same as Style 35A, but with curved tips. Length 118mm (4¾")

78211-01	Tweezers Style 35B	each
78211-06	Tweezers Style 35B	6/pk

► Style 574/A

Flat and tips bent upward, tip width: 6mm. Length 145mm (5¾")

78212-01	EMS Style 574/A Tweezers	each
78212-06	EMS Style 574/A Tweezers	6/pk

► Style 36A

Same as #34A but upward bent tips. Length 4¾" (120mm). Tip 6.2mm wide

78336-36A	EMS 36A	each
-----------	---------	------

► Style 50

Flat and narrow tips. Length: 4¾" (120mm). Tip 3.8mm wide

78337-50	EMS 50	each
----------	--------	------

► 6. EMS ESD Safe Tweezers

Soft ESD safe cushion grips (resistively 10E8 ohm). These tweezers are ergonomically designed.

► Style 00 SA/DR

Flat edges and strong tips. Length: 4¾" (120mm)

78390-00	EMS 00SA/DR	each
----------	-------------	------

► Style 2A SA/DR

Flat round tips. Length 4½" (115mm)

78392-2A	EMS 2A SA/DR	each
----------	--------------	------

► Style 3 SA/DR

Very sharp and superior finish. Length: 4¾" (120mm)

78393-3	EMS 3 SA/DR	each
---------	-------------	------

► Style 3C SA/DR

Very sharp and superior finish. Length: 4¾" (110mm)

78393-3C	EMS 3C SA/DR	each
----------	--------------	------

► Style 5 SA/DR

Very sharp and superior finish. Length: 4¾" (120mm)

78395-5	EMS 5 SA/DR	each
---------	-------------	------

► Style 7 SA/DR

Fine and curve tips. Length: 4½" (115mm)

78397-7	EMS 7 SA/DR	each
---------	-------------	------

► 7. EMS Ceramic Tweezers

General Information: The wide range of materials that falls within this classification includes traditional ceramics (clay minerals, cement and glass) and advanced ceramics (pure and partially modified ceramics compounds such as alumina or zirconia ceramics).

These materials are typically:

- Insulating to the passage of electricity and heat.

- More resistant to higher temperatures and harsher environments than metal and plastic tweezers.
- Ceramics are hard but usually very brittle.

Applications: For the production of our EMS precision tools, we have chosen an uniquely advanced ceramic compound; Zirconia Toughened Alumina (ZTA) It was chosen due to its fracture toughness and its high flexural strength.

MZ – Zirconia Toughened Alumina (ZTA):

- A superior combination of high strength (from zirconia) and extreme hardness (from alumina).
- Possesses relatively low density; no open porosity.
- Offers a very hard surface with good abrasion and wear resistance.
- Has good flexural strength and fracture toughness.

- Excellent thermal properties and high temperature stability.
- Extreme corrosion resistance, nearly chemically inert.
- Electrically insulating.
- Typically applications include soldering processes, handling of components during thermal and chemical processes. Generally these tweezers are used when very rigid tips are required.

Ceramic Tweezers are best suited for working with acids (except HF), for SDM, solders pot, and high temperature exposure. Clean room approved. Can be sterilized. Solder repellent.

► **Style 8501**

Straight, tips 1mm wide, serrated. Length: 5" (125mm)

78126 EMS Ceramic Tweezers 8501 each

► **Style 8501 FGG**

Straight, tips 0.3mm wide, smooth, very fine. Length: 5" (125mm)

78122 EMS Ceramic Tweezers 8501 FGG each

► **Style 8507**

Curved, tips 1mm wide, smooth. Length: 5" (125mm)

78120 EMS Ceramic Tweezers 8507 each

► 8. EMS Ceramic Tip Tweezers

These tweezers have Zirconia ceramic precision tips. Surface resistivity 10E12 ohm. Contamination free, high temperature (1000°C). Aluminum handles. Lightweight.

► **Style 2A MZ**

Ceramic tip length 35mm. Tip width: 2 mm. Length: 5¼" (134mm)

78127-2A EMS 2A MZ Ceramic Tip each

► **Style 71 MZ**

Ceramic tip length: 30mm. Tip width 0.3mm. Length: 5¼" (134mm)

78127-71 EMS 71 MZ Ceramic Tip each

► **Style 72 MZ**

Ceramic tip length: 30mm. Tip width 0.2mm. Length: 5¼" (134mm)

78127-72 EMS 72 MZ Ceramic Tip each

► **Style 73 MZ**

Ceramic tip length: 33mm. Tip width 0.3mm. Length: 5¼" (134mm)

78127-73 EMS 73 MZ Ceramic Tip each

► **Style 74 MZ**

Ceramic tip length 40mm. Tip width 0.5mm. Length: 5¼" (134mm)

78127-74 EMS 74 MZ Ceramic Tip each

► **Style 7 MZ**

Ceramic tip length: 43.5mm. Tip width 0.6mm. Length: 5¼" (134mm)

78127-7 EMS 7 MZ Ceramic Tip each

► 9. EMS General Purpose Tweezers

Very well made tweezers that serves a wide range of applications, from electronics to dentistry and anatomy. The tweezers have extremely accurate serration quality: different lengths and tip sizes, and they come either straight or curved.

► Style 119

Fine and extremely accurate serration tips. Length: 6" (150mm)

78354-119 EMS 119 each

► Style 119L

Long, and strong tips. Length: 7" (180mm)

78354-119L EMS 119L each

► Style 120

Strong and dull tips. Length: 6" (150mm)

78355-120 EMS 120 each

► Style 120A

Short, fine and sturdy tips. Length: 4¼" (110mm)

78355-120A EMS 120 each

► Style 122

Fine, bent, serrated tips. Length: 6" (150mm)

78357-122 EMS 122 each

► Style 123

Fine, double bent tips. Length: 6" (150mm)

78358-123 EMS 123 each

► Style 124

Same as 122 but stronger and blunt tips. Length: 6" (150mm)

78359-124 EMS 124 each

► Style 321

Flat and elongated tips. Length: 4¾" (120mm)

78362-321 EMS 321 each

► Style 646

Curved, serrated tips with guide pin. Length 6" (150mm)

78365-646 EMS 646 each

► Style 775

Bent and fine tips with PVC coated handle. Length: 6½" (155mm)

78369-775 EMS 775 each

► Style 61A

Curved tips with slits on both tips. Used for handling thin discs. Length: 4¼" (110mm)

78349-61A EMS 61A each

► Style GG

Long and strong tips. Length: 5" (130mm). Nickel Plated

78372-GG EMS GG each

► 10. EMS Fiber Tip Tweezers

The handles are made from Antimagnetic Steel (SA), Tip from Synthetic Fibers.

Synthetic Fibers

High-performance Plastic type CP - PEEK/CF30 (Polyetheretherketone reinforced with 30 wt% carbon fiber)

- Very hard, high tensile and flexural strength.
- High heat- 260 – 300°C – resistance to thermal ageing.
- Excellent chemical resistance.
- ESD safe – low surface resistivity (10^2 Ohm).

Engineering Plastic type CF - PA66/CF30 (Polyamide 66 reinforced with 30 wt% carbon fiber).

- Heat stable(-40°C to 190°C).
- Rigidity, excellent tensile strength and flexural strength.
- Good chemical resistance (oils, greases, fuels, non-polar solvents); not resistant to strong acids, alkalis and hot water or steam.
- ESD safe, (avoids dust attraction, sparks, ignition sources).
- Good conductivity.

► Style 00

A = 5" (130mm); B = 0.04" (1.0mm); C = 0.08" (2.0mm)

78080-CP	EMS 00 PEEK	each
78080-CF	EMS 00 CF	each

► Style 2A

78084-CP	EMS 2A PEEK	each
78084-CF	EMS 2A CF	each

► Style 2AB

A = 5" (130mm); B = 0.07" (1.8mm); C = 0.04" (1.0mm)

78085-CP	EMS 2AB PEEK	each
78085-CF	EMS 2AB CF	each

► Style 3

A = 5" (130mm); B = 0.03" (0.8mm); C = 0.05" (1.3mm)

78090-CP	EMS 3 PEEK	each
78090-CF	EMS 3 CF	each

► Style 5

A = 5" (130mm); B = 0.02" (0.5mm); C = 0.025" (0.6mm)

78092-CP	EMS 5 PEEK	each
78092-CF	EMS 5 CF	each

► Style 5X

A = 5" (130mm); B = 0.02" (0.5mm); C = 0.025" (0.6mm)

78094-CP	EMS 5X PEEK	each
78094-CF	EMS 5X CF	each

► Style 7

A = 5" (130mm); B = 0.025" (0.6mm); C = 0.025" (0.6mm)

78095-CP	EMS 7 PEEK	each
78095-CF	EMS 7 CF	each

► Style 259

A = 5" (130mm); B = 0.025" (0.6mm); C = 0.04" (1.0mm)

78010-CP	EMS 259 PEEK	each
78010-RF	EMS 259 RF	each

Non Conductive Plastic RF – PET/GF30 (Polyethylene terephthalate reinforced with 30 wt% glass fiber)

- High tensile and flexural strength.
- Good chemical resistance and low moisture absorption.
- Electrically insulation.
- High temperature capability.
- White in color.

► **Style 269**

A = 5" (130mm); B = 0.12" (3.0mm); C = 0.07" (1.8mm)

78012-CP	EMS 269 PEEK	each
78012-RF	EMS 269 RF	each

► **Style 248**

A = 5" (130mm); B = 0.4" (10mm); C = 0.07" (1.8mm)

78014-CP	EMS 248 PEEK	each
78014-RF	EMS 248 RF	each

► **Style 250**

A = 5" (130mm); B = 0.4" (10mm); C = 0.07" (1.8mm)

78016-CP	EMS 250 PEEK	each
78016-RF	EMS 250 RF	each

► **11. EMS Synthetic Fiber Tweezers**

These fiber tweezers are made from SV plastic which is based on polyvinylidene fluoride (PVDF).

Features:

- Good mechanical strength and toughness.
- Smooth surface.
- Continuous use temperature up to 150°C.
- High purity (clean room and medical devices approved, low extraction value).

- Excellent chemical resistance to most aggressive substances.
- Outstanding resistance to HF, HNO₃, HCl (all concentrations. 90°C).
- Resistant to UV and radiation (sterilization).
- ESD safe, very low surface resistivity.
- Typical applications include the handling of very soft and contamination sensitive materials as well as the handling of wafers during chemical processes etc.

► **Style 702A**

Flat tips. 4 5/8" (116mm)

78460-702A	EMS Fiber Tweezers 702A	each
-------------------	-------------------------	------

► **Style 705**

Flat tips. 4 1/2" (114mm)

78460-705	EMS Fiber Tweezers 705	each
------------------	------------------------	------

► **Style 707**

Pointed tips. 4 1/2" (114mm)

78460-707	EMS Fiber Tweezers 707	each
------------------	------------------------	------

► **Style 708**

Pointed and hook tips. 4 3/8" (110mm)

78460-708	EMS Fiber Tweezers 708	each
------------------	------------------------	------

► **Style 709**

Flat tips, 3mm wide. 4 1/8" (116mm)

78460-709	EMS Fiber Tweezers 709	each
------------------	------------------------	------

► **Style 710**

Flat tip, 8mm wide. 4 1/8" (116mm)

78460-710	EMS Fiber Tweezers 710	each
------------------	------------------------	------

Set of all six tweezers listed above:

78460-06	EMS Fiber Tweezers Set	6/set
-----------------	------------------------	-------

► 12. EMS Surface Mount & Optoelectronic Tweezers

Made from SA steel. They offer comfort and smooth handling. They are available in different tips and angles for specific jobs and they have a satin antiglare finish with an ergonomic design.

► Style SM 108 (formerly SMD10)

Tips are cut on a 45 degree angle with a 1.5mm perfect inside gripping groove. Ideal for positioning and gripping 1mm diameter components. Length: 4¾" (120mm)

78250-10 EMS SM 108 each

► Style SM 105 (Formerly SMD 40)

Tips are 'T' shaped with 2mm flat gripping edges. Length: 4¾" (120mm)

78250-40 EMS SM 105 each

► Style SM 103 (Formerly SMD 50)

Same as SM105, but with bent tips. Length 4¾" (120mm)

78250-50 EMS SM 103 each

► Style SM112 (Formerly SMD 60)

Tips are bent and cut on a 45 degree angle (2mm edge) and has a raised thickness inside for perfect control (anti-capillary). Length 4¾" (120mm)

78250-60 EMS SM 112 each

► Style SM115 (Formerly SMD 70)

Very fine rounded tips with groove inside on a 30-degree angle. Ideal for holding and positioning cylindrical devices (up to 1mm diameter). Length: 4¾" (120mm)

78250-70 EMS SM 115 each

► Style SM107 (Formerly SDM 90)

A perfect flat tip 60 degrees angle. The tips measure 1.2mm wide. For positioning all flat devices. Length: 4¾" (120mm)

78250-90 EMS SM 107 each

► Style SM110 (Formerly SMD 100)

Straight 'T' shaped tips with a vertical grooved inside for holding cylindrical objects up to 1mm diameter. Length: 4¾" (120mm)

78250-100 EMS SM 110 each

► Style SM 111 (Formerly SMD 110)

Same as SM 110, but the tips are bent on a 45 degree angle. Length: 4¾" (120mm)

78250-110 EMS SM 111 each

► 13. EMS Wafer Tweezers

These tweezers are especially designed for the handling of delicate and fragile silicon wafers, scintillation discs, glass slides, coverslips etc. Made from antimagnetic/anti acid steel with a very smooth surface and a non-glare finish.

► Style 2W

A: 6.5mm (0.25"); B: 5.0mm (0.20"); C: 2.5mm (0.10"); D: 4.0mm (0.15")

78410-2W EMS 2W each

► Style 2WFCPR

Tips are made of PEEK/CF30. These tips offer gently holding wafers. Replacement tips are available. A: 0.25" (6.6mm); B: 0.41" (2.0mm); C: 0.08" (2.0mm); D: 0.14" (3.5mm); E: 0.18" (4.5mm)

78410-2WFC EMS 2WFCPR each

78410-2WFR Replacement tips set set

► Style 35B

A: 12.0mm (0.47"); B: 13.0mm (0.51"); D: 2.5mm (0.10")

Dumont:

Fine and Accurate Tweezers

Developed in 1875 by Arnold Dumont in La Sagne, Switzerland. Dumont produces high quality handmade tweezers, and has gained the popularity of all researchers over the years. There is a variety of material which is used to make Dumont tweezers, as is shown in the list below:

- **Biological Grade:** Made from Dumoxel steel, the highest quality steel that is available. These tweezers have very fine points, they are non-magnetic, and anti-corrosive. They are the most reliable for all of your precision work.
- **High Precision Grade:** Made from (Inox) stainless steel, these tweezers have fine points and they can be used as a substitute for Biological Grade when non-magnetic tweezers are not required.

- **Epoxy Coated:** Made from non-magnetic steel with an epoxy covered handle (tips are not coated); ideal for working in conductive environments.
- **Medical Grade:** These tweezers are made from stainless steel and they are anti-magnetic and come with a clamping ring, which slides easily into a locking or release position. The tweezers have serrated handles.

Carbon Steel is an extremely hard alloy (> 59 HRC) composed of C, Mn, and Si. While Carbon ensures strong tips, it will nevertheless easily rust. This alloy is magnetic and cannot be sterilized.

Inox 02 is a standard magnetic stainless steel composed of C, Mn, Cr and Si. This alloy is not as hard as carbon steels because it contains Chromium. Inox 02 will resist temperatures of around 400°C (DIN 50 914), but cannot be sterilized.

Inox 08 is a medical stainless steel composed of C, Mn, Cr, Mo and V that provides an excellent resistance to corrosion and a good resistance to salt. Although not as hard as Carbon steels, Inox 08 offers excellent resistance to corrosion. This magnetic alloy supports temperatures of around 400°C (DIN 50914) and is suitable for autoclave sterilization at 180°C.

Dumoxel is composed of C, Cr, Ni, Mo and Cu and is the most popular alloy among our customers. This alloy was developed and patented by Dumont to offer the best in resistance to corrosion thanks to its high concentration of molybdenum and chromium. Dumoxel also guarantees an excellent resistance to sulphuric environments, hydrochloric acid, as well as to all other mineral and organic acids. Dumoxel is 95% antimagnetic, resistant up to temperatures of around 400° C (DIN 50 914) and is suitable for autoclave sterilization at 270°C.

Dumostar — This Dumont patented alloy is composed of C, Cr, Mo, Mn, Co, Ni and Si. Dumostar is more elastic and more resistant to corrosion than the best stainless steels. It is also perfectly compatible with human tissues and is resistant to mineral and organic acids as well to salt. Although slightly more expensive than other alloys, Dumostar is 100% antimagnetic and is resistant to sterilization temperatures of up to 500°C. This is the most cost effective and appropriate alloy for laboratory use.

Antimagnetic is composed of C, Cr, Ni and Mo. It offers a good resistance to corrosion thanks to its high concentration of molybdenum and is 80% antimagnetic but is not as hard as Inox. Antimagnetic is resistant up to temperatures of around 400°C (DIN 50 914) and is suitable for autoclave sterilization at 270°C.

Titanium is an alloy composed of C, Fe, O, H, N and Ti. It is totally resistant to corrosion from nitric acid, chloride, salt water, and the like. This alloy is not as hard as Inox 08 but is 40% lighter and more flexible. Titanium 100% antimagnetic and resistant up to temperatures of around 430°C.

Nickel is a 100% antimagnetic alloy composed of Cu, Ni, Mn and Zn. It is widely appreciated as it does not damage the components handled by it.

Black Ceramic — Ceramic ZrO₂ is even harder than stainless steel and does not contain carbon or other metal additives. It offers good resistance to chemicals and is Electro Static Discharge safe. Black Ceramic is antimagnetic (Zero residual magnetism) and microwave-sterilization compatible. It does not produce metallic contamination and offers good thermal isolation for soldering; solder will not adhere to its surface. Black ceramic is clean room safe and is available in antistatic versions for CMOS.

White Ceramic — Ceramic ZrO₂ is even harder than stainless steel and does not contain carbon or other metal additives. It offers good resistance to chemicals and is Electro Static Discharge safe. White Ceramic is antimagnetic (Zero residual magnetism) and microwave-sterilization compatible. It does not produce metallic contamination and offers good thermal isolation for soldering; solder will not adhere to its surface. White ceramic is clean room safe and is available in anti-static versions for CMOS.

Brass is composed of Cu, Pb, Sn, Ni and Zn. This alloy is 100% antimagnetic and is widely used for handling delicate components, especially in watch-making.

► E. Dumont Diamond Tweezers

Dumont Stainless Steel tweezers coated with an extremely fine diamond dust on the inside tips. They are essential in applications where a tight grip is necessary. They are also available with an improved locking system. They are 5½"(150mm) long. They may not be suitable for use with EM grids.

► Fine Points Diamond Tweezers

78100 Tip measures 0.25 x 0.25mm each

► Medium Points:

78106 Tip measures 0.50 x 0.50 mm each

► F. Electronics and Micro Electronics Tweezers, Dumont

Electronic Grade: These tweezers have a slightly larger tips than the High Precision grade. These tweezers are made from carbon, stainless, and antimagnetic steel.

► Straight Positive Action

► Style 0

Geneva pattern, thin tips.

► Dumont Tweezers Set in Wooden Case

Dumont tweezers in a fine wood display case.

Dumont Tweezers Set 1:

This set includes all of the fine tip Dumont tweezers made from Dumoxel steel (biological grade): specifically used in the field of microscopy for all delicate and precise work. The kit includes one each of a Dumont style 3C (72680-D), style 3 (72690-D), style 5 (72700-D), style 5/15 (72708-D) and style 7 (72800-D).

72890-01 Dumont Fine Tips Tweezers Set 1 5/set

Dumont Tweezers Set 2:

This set includes one each of : style #3C epoxy coated (72682-D), Style 5A (72720-D), style 5/45 (72703-D), style 5AC (72730-D) and style N5AC (72856-D).

72890-02 Dumont Fine Tips Tweezers Set 2 5/set

► DUMONT Tweezers Set

Made from lightweight plastic and padded with protective foam inside, this tweezers storage box offers you the safe place to store your delicate and valuable tweezers, but keeps them at your reach when you need them.

Set of 7 DUMONT Dumoxel/Biology quality tweezers, includes styles #3 (72690-D), #5 (72700-D), #5/45° (72703-D), #5/15° (72708-D), #5AC (72730-D), #N5 (72854-D) and #7 (72800-D), This set is ideal for ultramicrotomy work.

72891-01 DUMONT Box & Tweezers Set each

72891-Bx DUMONT Tweezers Box Only each

► Wooden Tweezers Holder Case

Made from solid wood, with brass double hinges and an elegant latch. Comes with a foam padded top and bottom to protect stored tweezers. The inside measures 5 3/4" x 4 1/8" (145 x 124 mm) and it holds 5 tweezers with a maximum length of 140mm.

72898-01 Wooden Tweezers Holder Case each

► Tweezer Boxes

Box for 3 Tweezers

Cat #	Finish	Material	Unit

Innovations from Rubis with a clear focus on cutting-edge laboratory instruments

► High-Tech Tweezers for Laboratory Requirements

Evolution is what the Rubis development engineers call it when they harmonize ultra-modern technology and traditional Swiss precision engineering in their ground-breaking precision instruments. Continuous innovation in recent years has enabled the premium label//brand to ready its classic tweezers to meet new and exacting demands. With three new developments at once, the experts from South Switzerland are back on the pioneering track: exclusive high-tech surfaces offer substantial added utility and clear customer benefits.

Ultra-modern nanotechnology closes even the tiniest of pores on the surface of the Nano tweezers. The instrument itself, as all Rubis tweezers, is made from extremely high-grade surgical stainless steel. The Lotus effect, engineered by the nanotechnology, causes dirt, oil, water and other liquids to simply pearl off the steel. This keeps the tweezers perfectly clean, a beneficial feature particularly in a sensitive laboratory setting.

However, the need for hygiene is no longer limited to what the eye can see. Rubis has come up with a unique solution to meet just such exacting requirements in the form of the Ion tweezers. The innovative special coating of the Ion model releases silver ions, which act as an antimicrobial to reliably neutralise bacteria, germs and other pathogens. Unlike other methods, the use of ion technology does not give rise to any resistance. Consequently, it represents a risk-free method of guaranteeing hygiene, even at workstations where instruments are used by several different people.

The third innovation really does "get a grip" on things. The special soft coating of the new Grip tweezers not only provides a non-slip grip, it also improves the handling perceptibly. The easy-grip, soft-touch coating prevents hand fatigue, provides isolation and protects against the influence

of heat.

The latest innovation aims for a considerably longer service life. Durax™ tweezers with a tip as hard as 616HV Vickers-hardness are 6 x harder than the tip of a standard stainless steel tweezers. Even with intensive use Rubis Durax™ tweezers retain their original precision. The advanced material properties guarantee higher resistance against normal wear and tear.

The Nano, Ion, Grip and Durax™ tweezers are available exclusively from Rubis. Already operating globally in the watch-making and electronics industries and in the medicine and cosmetics sectors for the past 60 years, these innovations give Rubis a strong point of departure to enter the laboratory products market. "We are highly specialised, possess unique expertise and offer our customers a product programme tailor-made to suit their exacting requirements," explains Fides Baldesberger, proprietor of Rubis. "And this goes for the laboratory products segment now, too." To constantly guarantee the first-rate quality of the products, each hand-made precision instrument and all its details are meticulously checked under magnifier glasses before leaving the workshop. In typical Swiss style, of course: As Fides Baldesberger puts it, "Only tweezers that pass this test carry the Rubis quality label//brand".

The company

Rubis is a leading international manufacturer of hand-made precision instruments. The Swiss premium label//brand has been manufacturing and developing high-grade precision instruments in the tradition of Swiss precision engineering at its workshops in Stabio for more than 60 years. Besides boasting an extensive product portfolio, Rubis also makes tools to its customers' own specifications. Although Rubis tweezers were initially manufactured exclusively for the Swiss watch industry, the products are now employed across the globe in a wide range of applications in the electronics industry, in R&D labs, in medicine and in cosmetics. Rubis products are regularly honoured with international awards for the quality of their materials, finish and design. Elaborate handwork, ultra-modern technology, the best raw materials, functional precision and aesthetic form put Rubis in a class of its own.

► Hand Crafted Precision Tweezers

More than sixty years ago, the first precision tweezers were developed to place ruby stones into watch movements. Since then the brand Rubis has continued to represent precision tools made to authentic Swiss quality standards.

The quality of Rubis product is the result of applying a combination of the latest technology with speed and superior traditional workmanship. Each tweezers is finished by hand under a loupe, to guarantee perfect tips alignment and Swiss top quality. Ideal span, high stability, an ergonomically correct form and resilience of material - best surgical stainless steel, antacid and non-magnetic - accounts for effectiveness and precision.

State-of-the-art technologies and novel materials have been studied for the development of new, extraordinary and innovative products. Tweezers are a simple tool - yet demanding in their specifications. They require continuous engineering and development to keep pace with their applications for the newest and ever changing technologies.

Electron Microscopy Sciences is proud to offer the complete line of Rubis laboratory tweezers:

■ Standard SA Steel Tweezers
■ Rubis Reinforced Plastic Tweezers

■ Rubis Wafer Tweezers
■ Nano-Tweezers

■ Ion Tweezers
■ Grip Tweezers
■ Durax

■ Axal

► **A. Axal™ Tweezers from Rubis**

EMS is happy to announce the Axal line of Tweezers from Rubis. These tweezers are a direct replacement for the discontinued Taxal line of Tweezers that we used to carry from Fontax prior to them going out of business.

The Axal™ line is made from High Cobalt Chromium-Molybdenum Alloy. With a high Vickers hardness, 100% antimagnetic and acid resistant, these tweezers supply long lasting durability and are practically wearproof.

► B. Durax™ Tweezers from Rubis

The resistant tweezers.

With a 616HV Vickers-hardness, the tip of Rubis DURAX™ tweezers is six times harder than the tip of a standard steel tweezers. Even with intensive use, Rubis DURAX™ tweezers retain their original precision. The advanced material properties guarantee higher resistance against normal wear and tear, providing a considerably longer service life. Their specially-hardened chrome-magnesium steel is also used in the manufacture of surgical instruments.

(Rubis continued)

► C. Standard SA Steel Tweezers – General

► Style 00B

Thick and flat, medium sharp and strong tips. Ideal for heavy-duty use. Serrated handle. Length 110mm (4½")

78130-01	Rubis #00B Tweezers	each
78130-12	Rubis #00B Tweezers	dozen

► Style 00D

Same as #00B above with serrated tips and handle. Length 120mm (4¾")

78131-01	Rubis #00D Tweezers	each
78131-12	Rubis #00D Tweezers	dozen

► Style #3L

Very sharp, well-groomed points with fine finish. Comes with a unique finger actuated locking device. Length 110mm (4½")

78135-01	Rubis #3L Tweezers	each
78135-12	Rubis #3L Tweezers	dozen

► Style #5

Super fine points. Length 110mm (4½")

78138-01	Rubis #5 Tweezers	each
78138-12	Rubis #5 Tweezers	dozen

► Style #5L

Same as #5 but comes with finger actuated locking device. Length 110mm (4½")

78139-01	Rubis #5L Tweezers	each
78139-12	Rubis #5L Tweezers	dozen

► Style #5B

Same as #5, but with 35 degree curved tips. Length 110mm (4½")

78140-01	Rubis #5B Tweezers	each
78140-12	Rubis #5B Tweezers	dozen

► Style #5C

Same as #5, but with round curved tips. Length 110mm (4½")

78141-01	Rubis #5C Tweezers	each
78141-12	Rubis #5C Tweezers	dozen

► Style H

Short and wide with fine tips. Length 90mm (3½")

78150-01	Rubis H Tweezers	each
78150-12	Rubis H Tweezers	dozen

(Rubis continued)

► Style Oc9

Short, flat and fine points. Length 90mm (3½")

78152-01	Rubis Oc9 Tweezers	each
78152-12	Rubis Oc9 Tweezers	dozen

► Style 3M

Pointed, thin and fine mini-tweezers. Length 70mm (2¾")

78154-01	Rubis 3M Tweezers	each
78154-12	Rubis 3M Tweezers	dozen

► D. Rubis Reinforced Plastic Tweezers

Rubis reinforced plastic tweezers with many unique features:

- Material: PBTP (Polybutylenterephthalate) with 20% fiber-glass.
- Good resistance to chemicals and acids.

- Highly isolating.
- Withstands temperatures up to 200°C.

► Style K2a

Flat tips. Length: 120mm (4¾")

78190-01	Rubis K2a Plastic Tweezers	each
78190-12	Rubis K2a Plastic Tweezers	dozen

► Style K6

Fine, strong hook tips. Length: 120mm (4¾")

78191-01	Rubis K6 Plastic Tweezers	each
78191-12	Rubis K6 Plastic Tweezers	dozen

► Style K7

Pointed, flat-contact-tips. Length: 120mm (4¾")

78192-01	Rubis K7 Plastic Tweezers	each
78192-12	Rubis K7 Plastic Tweezers	dozen

► Style K35a

Flat, strong tips. Length: 120mm (4¾")

78193-01	Rubis K35a Plastic Tweezers	each
78193-12	Rubis K35a Plastic Tweezers	dozen

► Style KR

Flat and thin, flat-contact- tips. Length: 120mm (4¾")

78194-01	Rubis KR Plastic Tweezers	each
78194-12	Rubis KR Plastic Tweezers	dozen

► E. Rubis Wafer Tweezers

Made from SA steel with serrated handles. These tweezers are specially designed to handle different fragile and delicate materials of gallium or silicon wafers. They have a smooth polished non-glare surface with a satin finish. The tweezers have stopping pins turned up on lateral edges and graduated lower paddles prevent the wafer from slipping. The tweezers are also available in Peek material. Peek: An ESD Safe, $10^9\Omega \times \text{cm}$. Soft, conductive fiber, with heat resistance up to 250°C (short exposure 300°C). (Not compatible with nitric and sulfuric acids.)

► Style 2LB/4

No teeth. Length: 128mm (5"). B = 12.5mm ($\frac{1}{2}$ "), C = 8mm ($\frac{1}{8}$ "), D = 3mm ($\frac{1}{8}$ "), E = 2mm ($\frac{1}{2}$ "), F = 4mm ($\frac{1}{8}$ "), M = 9mm ($\frac{1}{8}$ "), N = 2mm ($\frac{1}{2}$ "), R = 48mm ($1\frac{3}{4}$ "), S = 42mm ($1\frac{3}{8}$ ")

78220-01 Wafer Tweezers, Style 2LB/4 each

► Style 39S-4

4 teeth, lower part perforated. Length: 128mm (5"). B = 12.5mm ($\frac{1}{2}$ "), C = 10mm ($\frac{1}{8}$ "), E = 2mm ($\frac{1}{2}$ "), F = 6mm ($\frac{1}{4}$ "), M = 9mm ($\frac{1}{8}$ "), N = 1.5mm ($\frac{1}{16}$ "), R = 48mm ($1\frac{3}{4}$ "), S = 4mm ($1\frac{1}{8}$ ")

78225-01 Wafer Tweezers, Style 39s each

► Style 41LB-2

2 teeth. Flat lower paddle. Length: 128mm (5"). B = 6mm ($\frac{1}{4}$ "), C = 7.0mm ($\frac{1}{4}$ "), E = 2mm ($\frac{1}{2}$ "), F = 3mm ($\frac{1}{8}$ "), M = 9mm ($\frac{1}{8}$ "), N = 1.5mm ($\frac{1}{16}$ "), R = 52mm (2"), S = 42mm ($1\frac{3}{8}$ ")

78226-01 Wafer Tweezers, Style 4 each

► Style 41LB-5

5 teeth. Flat lower paddle. Length: 132mm ($5\frac{1}{4}$ "), B = 16mm ($\frac{5}{8}$ "), C = 9mm ($\frac{1}{8}$ "), E = 2mm ($\frac{1}{2}$ "), F = 3mm ($\frac{1}{8}$ "), M = 11mm ($\frac{1}{2}$ "), N = 2mm ($\frac{1}{2}$ "), R = 52mm (2"), S = 42mm ($1\frac{3}{8}$ ")

78229-01 Wafer Tweezers, Style 41LB-5 each

► Style 42LB6

6 teeth. Step up lower paddle. Length: 130mm ($5\frac{1}{8}$ "), B = 19.5mm ($\frac{3}{4}$ "), C = 8mm ($\frac{1}{2}$ "), D = 3mm ($\frac{1}{8}$ "), E = 3mm ($\frac{1}{8}$ "), F = 4mm ($\frac{1}{8}$ "), M = 11mm ($\frac{1}{2}$ "), N = 2mm ($\frac{1}{2}$ "), R = 52mm (2"), S = 42mm ($1\frac{3}{8}$ ")

78237-01 Wafer Tweezers, Style 42LB 6 each

► Style 43LB-8-Peek

Clean-room compatible. Length: 138mm ($5\frac{1}{2}$ "). B = 27mm ($1\frac{1}{16}$ "), C = 21mm ($\frac{3}{4}$ "), D = 4mm ($\frac{1}{8}$ "), E = 6mm ($\frac{1}{4}$ "), F = 5mm ($\frac{1}{8}$ "), M = 11mm ($\frac{1}{2}$ "), N = 1.5mm ($\frac{1}{16}$ "), R = 61mm ($2\frac{1}{8}$ "), S = 35mm ($1\frac{1}{8}$ ")

78239-01 Wafer Tweezers, Style 43LB-8 Peek each

► Style 43LB-4-Peek

Clean-room compatible. Length: 138mm ($5\frac{1}{2}$ "). B = 13mm ($1\frac{1}{16}$ "), C = 21mm ($\frac{3}{4}$ "), D = 4mm ($\frac{1}{8}$ "), E = 6mm ($\frac{1}{4}$ "), F = 5mm ($\frac{1}{8}$ "), M = 11mm ($\frac{1}{2}$ "), N = 1.5mm ($\frac{1}{16}$ "), R = 61mm ($2\frac{1}{8}$ "), S = 35mm ($1\frac{1}{8}$ ")

78240-01 Wafer Tweezers, Style 43LB-4 Peek each

► Style 43LB-10

10 teeth. Flat lower paddle with opening controller. Length: 190mm ($7\frac{1}{2}$ "). B = 33.5mm (2"), C = 20mm ($\frac{3}{4}$ "), D = 7mm ($\frac{1}{4}$ "), E = 2mm ($\frac{1}{2}$ "), F = 3mm ($\frac{1}{8}$ "), M = 13mm ($\frac{1}{2}$ "), N = 2mm ($\frac{1}{2}$ "), R = 77mm (3"), S = 42mm ($1\frac{3}{8}$ ")

78241-01 Wafer Tweezers, Style 43LB-10 each

► F. Rubis Nano-Tweezers

Ultra-modern nanotechnology closes even the tiniest of pores on the surface and this innovation has resulted in the cleanest tweezers surface ever produced. Made from the finest stainless steel grade, the Lotus effect repels dirt, oil, water and other liquids. These tweezers are a perfect companion in the clean room or any sensitive laboratory areas where contaminant free tools is required.

78148-7 Nano-Tweezers, Style 7 each

► G. Rubis Ion Tweezers

Antimicrobial Tweezers

This innovation has resulted in a special coating surface on the tweezers which releases silver ions. These ions act as an anti-bacterial agent which helps the user from contamination of any pathogens. Unlike other methods, the use of ion technology does not give rise to any resistance. Consequently, it represents a risk-free method of guaranteeing hygiene, even at workstations where instruments are used by several different people.

Made from finest stainless steel grade, these tweezers are perfect companions for your daily use in the laboratory. (We recommend that safety gloves still be used whenever handling any infectious materials)

78146-5 Ion Tweezers, Style 5 each

► Style 5A

115 mm (4 $\frac{1}{2}$ ") Long. M = 10 mm ($\frac{1}{2}$ ") N = 1.5 mm ($\frac{1}{16}$ ") P = 34 mm (1 $\frac{1}{8}$ ")

78146-5A Ion Tweezers, Style 5A each

► Style 7

120 mm (4 $\frac{3}{4}$ ") Long. M = 11 mm ($\frac{1}{2}$ ") N = 1.5 mm ($\frac{1}{16}$ ") P = 34 mm (1 $\frac{1}{8}$ ")

78146-7 Ion Tweezers, Style 7 each

► H. Rubis Grip Tweezers

This special soft coating provides a non-slip grip and improves the handling of the tweezers. The soft-coating prevents hand fatigue, and protects the hand from heat and cold. Made from the finest stainless steel grade

► Style SS

135 mm (5 1/3") Long. M = 8 mm (1/3")

N = 1.5 mm (1/16") P = 82 mm (3 1/4")

78144-SS Grip Tweezers, Style SS each

► Style 1

120 mm (4 3/4") Long. M = 10 mm (1/3")

N = 1.5 mm (1/16") P = 50 mm (2")

78144-1 Grip Tweezers, Style 1 each

► Style 3

120 mm (4 3/4") Long. M = 10 mm (1/3")

N = 1.5 mm (1/16") P = 50 mm (2")

78144-3 Grip Tweezers, Style 3 each

► Style 3C

110 mm (4 1/3") Long. M = 9 mm (1/3")

N = 1.5 mm (1/16") P = 43 mm (1 2/3")

78144-3C Grip Tweezers, Style 3C each

► Style O

120 mm (4 3/4") Long. M = 10 mm (1/3")

N = 1.5 mm (1/16") P = 51 mm (2")

78144-O Grip Tweezers, Style O each

► Style 00

115 mm (4 1/2") Long. M = 10 mm (1/3")

N = 2.5 mm (1/10") P = 46 mm (1 3/4")

U = 0.5 mm (1/20")

78144-00 Grip Tweezers, Style 00 each

► Style 2A

120 mm (4 3/4") Long. M = 10 mm (1/3")

N = 1.5 mm (1/16") P = 35 mm (1 3/8")

U = 2 mm (1/12")

78144-2A Grip Tweezers, Style 2A each

► Style 5

120 mm (4 3/4") Long. M = 10 mm (1/3")

N = 1.5 mm (1/16") P = 30 mm (1 1/16")

78144-5 Grip Tweezers, Style 5 each

► Style 5A

115 mm (4 1/2") Long. M = 10 mm (1/3")

N = 1.5 mm (1/16") P = 34 mm (1 1/3")

78144-5A Grip Tweezers, Style 5A each

► Style 7

120 mm (4 3/4") Long. M = 11 mm (1/2")

N = 1.5 mm (1/16") P = 34 mm (1 1/3")

78144-7 Grip Tweezers, Style 7 each

► I. Rubis Swiss Tweezer®; Precision

Made from austenitic, acid-proof stainless steel, 100% anti-magnetic (SA). Also resist to hydrogen fluoride (HF) and nitric acid. Melting point 1400°C

- These tweezers engineered for a NON-SLIP GRIP.
- Light weight –prevents hand fatigue.
- Sensuous touch and functional design.
- Ultra-fine precision tips.

► Model 1G, SA

120 mm (4¾") long. M=10 mm (½"), N = 1.5 mm (¼"), P= 50 mm (2")

78170-1G Rubis Tweezer Model 1G each

► Model 2AG, SA

120 mm (4¾") long. M=10 mm (½"), N = 1.5 mm (¼"), P= 50 mm (2"), U = 2 mm (¼")

78170-2AG Rubis Tweezer Model 2AG each

► Model 3G, SA

120 mm (4¾") long. M=10 mm (½"), N = 1.5 mm (¼"), P= 50 mm (2")

78170-3G Rubis Tweezer Model 3G each

► Model 3CG, SA

110mm (4½") long. M= 9 mm (⅜"), N = 1.5 mm (¼"), P= 43 mm (1½")

78170-3CG Rubis Tweezer Model 3CG each

► Model 4G, SA

110 mm (4½") long. M= 10 mm (⅜"), N = 1.5 mm (¼"), P= 30 mm (1¼")

78170-4G Rubis Tweezer Model 4G each

► Model 5G, SA

110 mm (4½") long. M= 9 mm (⅜"), N = 1.5 mm (¼"), P= 30 mm (1¼")

78170-5G Rubis Tweezer Model 5G each

► Model 5AG, SA

110 mm (4½") long. M= 9 mm (⅜"), N = 1.5 mm (¼"), P= 30 mm (1¼")

78170-5AG Rubis Tweezer Model 5AG each

► Model 5ARG, SA

115 mm (4½") long. M= 10 mm (⅜"), N = 1.5 mm (¼"), P= 34 mm (1⅓")

78170-5ARG Rubis Tweezer Model 5ARG each

► Model 7G, SA

115 mm (4½") long. M= 10 mm (⅜"), N = 1.5 mm (¼"), P= 34 mm (1⅓")

78170-7G Rubis Tweezer Model 7G each

Made from austenitic, acid-proof stainless steel, 100% anti-magnetic (SA). Also resist to hydrogen fluoride (HF) and nitric acid. Melting point 1400°C

► J. Rubis Specialty Tweezers

- These tweezers are long and strong.
- Knurled Handle – non slip
- Serrated tips and with or without guide pin.

► Model 232, SA

158 mm (6¼") long. M= 9 mm (⅜"), N = 2 mm (¼"), P= 80 mm (3⅛"), R = 58 mm (2⅔"), S = 44 mm (1⅞"), T = 17 mm (⅝"), U = 1.7 mm (¼")

78174-232 Rubis Tweezers Model 232 each

► Model 524, SA

137 mm (5½") long. M= 10 mm (⅜"), N = 1.5 mm (⅙"), P= 60 mm (2⅓"), R = 52 mm (2"), S = 35 mm (1⅜"), T = 15 mm (⅝"), U = 1 mm (⅒")

78174-524 Rubis Tweezers Model 524 each

► Model 615, SA

155 mm (6") long. M= 8 mm (⅝"), N = 2 mm (½"), R = 57 mm (2¼"), S = 41 mm (1⅝"), T = 15 mm (⅝"), U = 1 mm (⅒")

78174-615 Rubis Tweezers Model 615 each

► Model 616, SA

162 mm (6⅜") long. M= 9 mm (⅜"), N = 2 mm (½"), R = 66 mm (2⅝"), S = 45 mm (1¾"), T = 15 mm (⅝"), U = 1 mm (⅒")

78174-616 Rubis Tweezers Model 616 each

► Model B00, SA

140 mm (5½") long. M= 9 mm (⅜"), N = 1.5 mm (⅙"), P= 60 mm (2⅓"), R = 52 mm (2"), S = 35 mm (1⅜"), T = 17 mm (⅝"), U = 2.5 mm (⅙")

78174-B00 Rubis Tweezers Model B00 each

► Model L/Black, SA

158 mm (6¼") long. M= 10 mm (⅜"), N = 1.5 mm (⅙"), P= 65 mm (2½"), R = 45 mm (3¼"), S = 35 mm (1⅜"), T = 13 mm (½"), U = 1 mm (⅒")

78174-LB Rubis Tweezers Model L/Black each

► Model 6151, SA

140 mm (5½") long, with plastic insulated handle. M= 11 mm (½"), N = 1.5 mm (⅙"), T = 15 mm (⅝"), U = 2 mm (½")

78174-6151 Rubis Tweezers Model 6151 each

► Plastic Wafer Tweezers and Pliers

Designed for low cost and ease of use with the highest quality of materials.

78310-51

78310-51

78310-07

78311-4A

78314-P1

78314-P2

78310-04 Glass-filled Delrin for delicate, thin, and flat objects, 11.3cm long each

78310-41 Same as #78310-04 but made from linear polyethylene, acid resistant each

78310-05 Glass filled Delrin, useful for handling coverslips or glass slides 11.3 cm long each

78310-51 Same as #78310-05 but made from linear polyethylene, acid resistant each

78310-06 Glass-filled Delrin, good for glass slide, wafer handling, 11.3cm long each

78310-61 Same as #78310-06 but made from linear polyethylene, Acid resistant each

78310-07 Glass-filled Delrin with extra wide point, 11.3cm long each

78310-71 Same as #78310-07 but made from linear polyethylene, Acid resistant each

78311-4A Fluorocarbon, acid resistant, extra long with line up pin, 16.5cm each

78311-5A2 Linear polyethylene, acid resistant, 16.5cm long each

78314-P1 Glass-filled Delrin pliers. Serrated jaws, hold tubes securely, resistant to most solvents each

78314-P2 Glass-filled Nylon pliers, flat smooth jaws. Good for handling soft materials. Protected from damage. 15 cm long each

► Plastic Tweezers

Resist virtually any commercial solvents i.e. Nitric, Aqua-Regia, Acetic acid, Acetone, Alcohol, etc.

- Acid Resistant
- Gentle Positive Grip
- Non-Magnetic
- Non-Absorbent

Tips will not open when extra pressure is applied

Cat. No.	Description/Purpose	Qty.
78560-01	Semiconductors, Chips, Wafers Measurements: 4-9/16" x 7/16" body tapering down to .008" thick by 1/8" wide at Tweezer Tips.	each
78560-02	Made of Celcon static dissipative (ESD safe) Max. temp. 175°F. Measurements: 4-9/16" x 7/16" body tapering down to .008" thick by 1/8" wide at Tweezer Tips.	each
78560-03	Blue Styrene tweezers, designed for handling wax patterns Measurements: 115 mm long with 4 mm wide ribs	each
78560-04	Made of Ryton (PPS) when properly used, will withstand 425°F. Measurements: 4-9/16" x 7/16" body tapering down to .008" thick by 1/8" wide at Tweezer Tips.	each
78560-05	Angled tweezers, ideal for delicate wafers Measurements: 4-15/16" x 7/16" body tapering down to .004" by 3/16" wide at Tweezer Tips.	each
78560-08	Fluorocarbon (CTFE) for use in Chemical Processing of semiconductors. Withstands Hydrofluoric, other acid. Resists radiation Measurements: 4-1/2"x7/16" body tapering down to .011" by 3/32" wide at serrated Tips.	each

Cat. No.	Description/Purpose	Qty.
78560-09	For larger diameter wafers, etc. Measurements: 4-5/8" x 7/16" at body .007" thick by 9/32" wide at tips.	each
78560-10	Extra long tweezers feature unique alignment guide specially developed for wafers, ceramics & lenses Measurements: 6-3/8"x15/32" at body tapering down to .009" by 3/32" at Tweezer Tips.	each
78560-11	Wafers Measurements: 4-5/8" x 7/16" at body tapering down to .010 by 3/32" at Tweezer Tips	each
78560-12	Handling of precision micro-miniature parts in the instrumentation, watch-making, camera, electronic industries, etc. Measurements: 4-9/16" x 7/16" at body tapering down to a sharp point at Tweezer tips.	each
78560-13	Made of Celcon static dissipative (ESD safe). Max. temp is 175°F. Measurements: 4-9/16" x 7/16" at body tapering down to a sharp point at Tweezer tips.	each
78560-14	Narrow Tips, Glass-filled Delrin Measurements: 6mm, 11.3cm long	each
78560-15	Wide Tips, Glass-filled Delrin Measurements: 9mm, 11.3cm long	each
78560-16	Glass-filled Delrin Measurements: 11.3mm, 11.3cm long	each

► Plastic Tweezers (continued)

Cat. No.	Description/Purpose	Qty.
78560-17	Special 1cm wide flat points	

Measurements:
16-1/2cm long each

78560-18	Fluorocarbon (CTFE) for use in Chemical Processing of semiconductors. Withstands Hydrofluoric and other acid., Resists radiation. Extra long with line-up pin guide.

Measurements:
4-9/16" x 7/16" body tapering down to .009" by 3/32" at Tweezer Tips each

78560-07	Ryton (PPS) Heat Resistant up to 425° F.	
----------	--	--

Measurements:
4-9/16" x 7/16" body tapering down to .009" by 3/32" at Tweezer Tips each

► Tweezer Holder

Holds 6 tweezers. Keeps tips protected in an easy to reach position.

EMS EXCLUSIVE

72900	Tweezer Holder	each
-------	----------------	------

► EMS Tweezer Protection Box

Made from soft silicone; grooved properly to tightly hold all types of tweezers in place. The tip of the tweezer is always well protected from any damage. The silicone pad is held in a plastic box with a hinged lid that keeps the tweezers free from dust. Holds 7 tweezers.

Overall measurements: 6"(L)x4 1/8"(W)x1 3/8"(H);
Inside measurements: 6"(L)x4"(W)x1 1/4"(H)

72902	Tweezer Protection Box	each
-------	------------------------	------

► The Tweezer Repair Kit

This repair kit allows you to straighten, sharpen, and repair your tweezers that have been damaged or have become dull. Instructions are included with the kit

The kit includes: ■ 1 Sharpening stone ■ Ten O-rings
■ Instrument Oil, 50 ml ■ Chain nose pliers

Cat. #	Description	Qty.
72892-10	The Tweezer Repair Kit	kit

► Tweezers Protection Cap

These caps which are in the shape of the tweezer tip are made from Polyethylene and are used to protect the tweezers tips from damage.

72904-12	Tweezers Protection Cap	12/pk.
----------	-------------------------	--------

► O-Ring for Tweezers

This Neoprene O-Ring is used as a simple clamping device for tweezers.

72903-12	Tweezers O-Ring	12/pk.

► Dissecting Tools and Instruments

► The Meyco Diamond Dissecting Scalpel Blade

EMS
EXCLUSIVE

We are aware that in order to achieve the finest results in your work, you continually have to search for the highest quality instruments. The quality that will allow you to meet the high demands of your respected field. Here at **ELECTRON MICROSCOPY SCIENCES** we are dedicated to these needs. With this dedication in mind we have entered into an exclusive arrangement with our sister company, DIATOME Ltd., that enables us to offer you their experience in diamond instrument manufacturing.

For many years DIATOME has been the leading manufacturer-“The Innovators” in diamond instruments for a variety of applications including, but not limited to; ULTRAMICROTOMY, FIBER OPTICS, AND EYE SURGERY. DIATOME has now begun to manufacture for us diamond knives for microsurgery, dissection, and its related applications. The knives are of the same quality that DIATOME customers have become accustomed. Distinctive designs combined with DIATOME'S expertise in diamond technology and manufacturing assures you the best quality knife and being able to use it for many years.

► Freehand Diamond Knife

Characteristics and Specifications:

- Our ultra-sharp blade cuts with minimum pressure, without tearing or damaging the specimen and reduces the risk of specimen distortion.
- Our **UNIQUE PRESSURE MECHANISM** allows blade actuation with one hand
- The handle is made of titanium and is coated by high vacuum with titanium nitride to harden the surface.
- The knife is corrosion free and is completely resistant to saline solutions.
- It can be sterilized in an autoclave up to 200°C.
- Special tray for sterilization is available
- If your diamond is damaged or broken, we can sharpen it or replace it and guarantee that the repaired knife will be of the same standards of perfection as the original.

The following cutting forms are available:

1) Type M; angled; .50mm thickness

72024	Diamond Dissecting Knife, Type M	each
72024-R	Resharpener, Type M	each
72024-L	Replacement Blade, Type M	each

2) Type M-M; mini-angled; .20 thickness

For extremely fine work.

72025	Diamond Dissecting Knife, Type M-M	each
72025-R	Resharpener, Type M-M	each
72025-L	Replacement Blade, Type M-M	each

3) Type L; lancet; .50 thickness

72026	Diamond Dissecting Knife, Type L	each
72026-R	Resharpener, Type L	each
72026-L	Replacement Blade, Type L	each

4) Type M-L; mini-lancet; .20 thickness

For extremely fine work

72027	Diamond Dissecting Knife, Type M-L	each
72027-R	Resharpener, Type M-L	each
72027-L	Replacement Blade, Type M-L	each

5) Type DL; double-lancet; .50mm thickness

72028	Diamond Dissecting Knife, Type DL	each
72028-R	Resharpener, Type DL	each
72028-L	Replacement Blade, Type DL	each

6) Type M-DL; mini-double-lancet; .20 thickness

72029	Diamond Dissecting Knife, Type M-DL	each
72029-R	Resharpener, Type M-DL	each
72029-L	Replacement Blade, Type M-DL	each

7) Type DS; Tri-facet; .50mm thickness

72030	Diamond Dissecting Blade, Type DS	each
72030-R	Resharpener, Type DS	each
72030-L	Replacement Blade, Type DS	each

8) Type M-DS; mini-tri-facet; .20mm thickness

72031	Diamond Dissecting Blade, Type M-DS	each
72031-R	Resharpener, Type M-DS	each
72031-L	Replacement Blade, Type M-DS	each

9) Type R; round; .30mm thickness

72032	Diamond Dissecting Blade, Type-R	each

Forceps

Scissors

► Lighted Forceps and Scissors: Illuminated and Ergonomic

- Increases the visibility of the specimen
- Minimizers Floaters
- Allows for accurate orientation of tissue and specimen
- Reduces embedding and prep time

See your samples and your embeddings in a whole new light! These lighted forceps ease identification and location of otherwise undetectable tissue fragments, while reducing embedding time. Increases the visibility of specimen allowing for more accurate work. Made of German stainless steel, are submersible and light longevity approx. 20,000 hours.

(Each kit includes: one instrument, power pack & battery charger)

Introducing The Revolutionary New

➤ MicroPoint™ Surgical Scissors

A new concept in scissor technology. MicroPoint™ scissors can be used for suture or tissue, and they are manufactured without rings, therefore eliminating the problems with right handed or left handed users. Scissors do not cut by cutting. They cut by shearing.

FEATURES:

- They have three times the shearing angle to reduce "tissue crushing."
- They last far longer than ordinary scissors.
- O.R. Castro-Viejo quality at a floor-grade price.
- They offer consistent cutting at the tip.
- The contact between the blades remains constant.
- The blades cannot work loose.
- Ambidextrous: perfect in right and left hands
- Easy to pickup and use, no clumsy rings.
- Adjustable shearing contact.
- Lifetime Guarantee: All MicroPoint™ Scissors are guaranteed for life against rust, breakage and rivet loosening.

5 of the Most Common MicroPoint Blade Configurations

These scissors are available in two configurations: Uniband® and FeatherLite®

MicroPoint Unibands

Length: 5 inches
 Width: One Inch
 Height: 1/2 inch
 Blades: from 1/2 inches to 7/8 inches

MicroPoint FeatherLites

Micro model:
 Lengths of 5 1/4" and 7 1/4"
 Blades: 1/4" and 1/2"
 Standard:
 Lengths of 5 1/2" and 7 1/2"
 Blades: 3/8"

12 mm jaws with 1x2 teeth. Very fine finish. Length 140 mm (5½")

77898-C PCF-FX-1x2C Tissue Forceps, 1x2 Curved each

77894-S

► **Half Lunar Jaws Forceps W/ Diamond Dust – PCF-F**

8 mm jaws with fine diamond dust inside jaws to reinforce gripping capability. When the jaws are fully open the diameter is 8mm and when closed it is 2mm. Length 135 mm (5¼")

77894-S PCF-Haft Lunar W/Diamond Dust each

77893-LM2.5

77893-7LM2.5

► **LASNER-DaMAN Forceps**

Uncompromised slip resistant with automatic tissue manipulation.

Up until now, you were faced with two choices in tissue forceps: rat toothed forceps that hold by penetrating a small zone of tissue, or serrated forceps that grasp by inadvertently crushing a broader area. Somehow, both can lead to microvascular damage. Pressure controlled Lasner-DaMan Tissue Forceps virtually eliminates the penetration or crushing of fragile tissue while providing uncompromised slip resistance.

- Ergonomic Featherlite™ spring handle relieves excess pressure and mechanical stress for ideal compression in either hand.
- Patented twisted I-beam design with three point fixation that provides unparalleled stability.
- Micro cross-cut carbide jaws provide an extraordinary grip on tissue and suture needles.
- Adjustable auto-lock feature permits auto-retention of tissue.

77893-LM2.5 PCF Lasner-LaMan Tissue Forceps 5" each

77893-7LM2.5 PCF Lasner-LaMan Tissue Forceps, 7" each

► Micro Forceps

Micro Forceps/Tweezers are designed specifically for applications in the field of microscopic science.

► 1. Micro Forceps MF-1, Straight, Smooth or Serrated Jaws.

Features extra delicate tips for general precision work. 100mm (4.0") in length, tips 0.5mm wide.

62085-1S	Micro Forceps MF-1, Smooth Jaws	each
62086-1S	Micro Forceps MF-1, Serrated Jaws	each

► 2. Micro Forceps MF-2, Slightly Curved. Smooth or Serrated Jaws

Especially designed for precise handling in areas of limited access. Very delicate. 100mm (4.0") in length; 0.5mm width in tips.

62085-2S	Micro Forceps MF-2, Smooth Jaws	each
62086-2S	Micro Forceps MF-2, Serrated Jaws	each

► 3. Micro Forceps MF-3, Fully Curved. Smooth or Serrated Jaws

Design for optimum visibility in precision microscopic work. Very delicate. 100mm (4.0") in length; 0.5mm width in tips

62085-3S	Micro Forceps MF-3, Smooth Jaws	each
62086-3S	Micro Forceps MF-3, Serrated Jaws	each

► Micro Dissecting Instruments

Made from all stainless steel construction.

► Micro Dissecting Scissors

20 gauge stainless steel, with a 3 mm cutting edge.

Fig.	Cat.#	Description	Pack
1	77930-01	Horizontal Opening, Straight	each
2	77930-02	Horizontal Opening, Curved	each

77965-3

► Hand Held Cauteries

The cautery comes with fully changeable tungsten carbide tips and batteries. Dual power: 1 "AA" battery for lower power and 2 "AA" batteries for higher power.

Fully autoclavable. Stainless steel construction. Available in three versions:

► Low Temperature Cautery

Generates 300 to 350°C

Cat.#	Description	Pack
72976-10	Low Heat Cautery Set	each
72976-12	Replacement Tip, Straight	each

► Medium Temperature Cautery

Generates 500 to 520°C. Set includes cautery handle and tips.

Cat.#	Description	Pack
72976-20	Medium Heat Cautery Handle	each
72976-21	Medium Heat Cautery Set	each

► High Temperature Cautery

Generates up to 1000°C. Set includes cautery handle and tips.

Cat.#	Description	Pack
72976-30	High Heat Cautery Handle	each
72976-31	High Heat Cautery Set	each

► Replacement Tip for Medium and High Temperature Cauteries

Both medium and high temperature models take the same replacement tips.

Cat.#	Description	Pack
72976-50	Pointed Straight Tip	each
72976-51	Pointed Angle Tip	each
72976-52	Loop Tip	each
72976-53	Needle Tip	each
72976-54	Ball Tip	each

► Stainless Steel Instrument Sterilizing Tray

A perforated tray that comes complete with a silicone mat and a unique locking feature.

Cat.#	Description	Pack
66112-01	Tray 8½" x 5" x ¾"	each
66112-02	Tray 8" x 9¾" x ¾"	each
66112-03	Tray 16" x 9½" x ¾"	each

► Sterilizing Tray – Plastic

- Trays are perforated.
- Made from high strength Utem® Plastic
- Autoclave, Steam, Dry Heat, Chemical Sterilization is possible.
- Has an extended Life Cycle.
- Trays are stackable.
- Economical and Flexible Design

Has flexible silicone mats which offer flexibility to layout the instruments for sterilization. A unique "grid" system exists in the base, tray and lid, making it easy to install the mat required, protecting yours instruments properly. The trays are stackable and they have integral feet in base and corner ridges on lids which allow for easier handling in the autoclave and for storage.

All bases have pebble-type surface to keep mats from sticking.

Ordering:

Cat.#	Tray Size inch (mm)	Description	Pack
66114-01	6 x 2.5 x 1.25 (151 x 64 x 32)	Tray with Silicone Mat & Lid	each
66114-02	7.5 x 4 x 1.5 (191 x 102 x 38)	Tray with Silicone Mat & Lid	each
66114-03	10 x 6 x 1.5 (254 x 152.4 x 38)	Tray with Silicone Mat & Lid	each
66114-05	10 x 6 x 1.5 (254 x 152.4 x 38)	Deep Base/Insert Tray/ 2 Mats/Lid	each

► Sterilization Tray

A unique tray that allows you to place up to three diamond knives at one time in the autoclave. Protects the knives from any movement or damage.

72034	Sterilization Tray	each

> **Lab Set Forceps**

Made from stainless steel. The set consists of 6 heavy duty forceps that are mandatory in the lab.

72957-06	Lab Set Forceps	6/Set
----------	-----------------	-------

> **Plastic Forceps, with Guide Pin**

5" (12.7cm) long, molded, strong, durable, autoclavable up to 275°F (135°C), serrated tip.

72970	Plastic Forceps	6/pk
-------	-----------------	------

> **Plastic Forceps, with Jaw Grips**

All plastic. These forceps are excellent for handling hot, cold, corrosive or contaminated objects. Made from blue polypropylene with interlocking teeth. A catch locks tips tightly for use as a clamp. Scissor type handles with double action hinges makes this forcep a useful cryo tool, and great for handling stubs.

72971	Plastic Forceps with Jaw Grips	6/pk
-------	--------------------------------	------

> **Nickel-Plated Forceps with PTFE Coated Tips**

Straight, PTFE coated tips, corrosion-free. Offers a soft and good grip to handle delicate articles. Overall length 3 7/8" (98mm), medium points.

72973	Nickel-Plated, 38mm PTFE Tip	each
72975	Nickel-Plated, Full Length w/PTFE	each

> **Curved, PTFE Coated Forceps**

Full length PTFE coated, 98mm long, serrated, curved tips. No conductivity.

72976	Curved, PTFE-Coated Forceps	each
-------	-----------------------------	------

> **Cover-Glass Forceps, PTFE Coated**

Full length 4 1/2" (114mm) PTFE coated, straight, flat tip forceps. It offers a good grip and easy handling of cover glass and glass slides.

72977	Cover Glass w/PTFE Forceps	each
-------	----------------------------	------

> **Three Prong Holder**

This device is actuated by one thumb. Its three prong claw is handy in the picking up of small items up to 2 1/4" in diameter.

72905	Three Prong Holder, 4 3/4" long	each
-------	---------------------------------	------

78266-04

78266-05

78266-06

► Handling Forceps

With broad and strong tips. Serrated jaws. These forceps offer firm gripping action.

78266-06	Nickel-Plated Steel, Round Tips Slide Locking, 6" (152mm) Long	each
78266-04	Non-Magnetic Stainless Steel, Pointed Tips, 4½" (114mm) Long	each
78266-05	Nickel-Plated Steel, Round Tips	each

► Stainless Steel Forceps, with PTFE Tips

4" (100mm) overall length, 1½" (38mm) PTFE tips; corrosion resistant. Curved shape with a strong fork. Individually blister packed. Ideal for handling balance weights.

72978	Stainless Steel w/PTFE Tips Forceps	each
-------	-------------------------------------	------

► Curved Forceps

6" (152mm), Stainless Steel, Medium fine tips, curved smooth points.

72910	Curved Forceps	each
-------	----------------	------

► Micro-Adson Forceps

4¾" (121mm) long. Stainless steel with fine serrated jaws.

72912	Micro-Adson Forceps with 2:1 Teeth	each
72913	Micro-Adson Forceps w/o Teeth	each

► Forceps Jar

Made from stainless steel with wide base and polished finished.

Cat. #	Description	Qty
63313-03	Forceps Jar, 3" Dia x 3" High	each
63313-04	Forceps Jar, 4" Dia x 4" High	each

77937-30	12" (305 mm) Serrated Tips, Fine Grip	each

► **Adson Forceps**

Available in 4 styles. All feature a paddle-style, fine-grooved handle.

- Made of premium grade, hardened stainless steel
- Feature a protective coating for extra durability and protection from rust and corrosion
- Satin-matt finish reduces eye-fatiguing glare

Cat No.	Description	Qty.
77937-35	A. 4-3/4" (121 mm) Adson Tissue Forceps, Serrated	each
77937-36	6" (152 mm) Adson Tissue Forceps, Serrated	each
77937-37	7" (178 mm) Adson Tissue Forceps, Serrated	each
77937-38	B. 4-3/4" (121 mm) Adson Tissue Forceps, 1 x 2 Teeth	each

► **7" (178 mm) Ergonomic Paddle Handle Forceps**

Available with either smooth, serrated, needle tips, or with 1 x 2 teeth.

178mm versions are for those preferring a longer forcep and a wider variety of tip choices.

Curved styles are well suited for retrieving specimens from the inside perimeter of transport jars and tissue separation in the water bath.

- Made of premium grade, hardened stainless steel
- Feature a protective coating for extra durability and protection from rust and corrosion
- Satin-matt finish reduces eye-fatiguing glare

Cat No.	Description	Qty.
77937-44	7" (178 mm) Ergonomic Forceps, Paddle Handle, 3 mm Smooth Tips	each
77937-45	7" (178 mm) Ergonomic Forceps, Paddle Handle, 3 mm Serrated Tips	each
77937-46	7" (178 mm) Ergonomic Forceps, Paddle Handle, 3 mm 1 x 2 Teeth	each

-----------------	-------------------------	------

► Russian Tissue Forceps

Stainless steel 6" (155mm) long. With special cupped pattern for superior grip. Cup area is 6.5mm wide, 9mm long.

78260-06	Russian Tissue Forceps, 6" Long	each
78260-08	Russian Tissue Forceps, 8" Long	each

► Specimen Gripper

Stainless steel, long, serrated fine tips, for easy removal of specimens from deep containers. Scissor type.

72928	Specimen Gripper, 10¼" (258mm)	each
--------------	--------------------------------	------

► Kelly Forceps

Stainless steel hemostatic forceps with box lock joint and serrated jaw.

72930	Kelly Forceps, 5½"(140mm)L, Straight	each
72931	Kelly Forceps, 5½"(140mm)L, Curved	each

72930

72931

► Dissecting Scissors; Iris Scissors

Stainless steel. Fine points. High quality. Length 4½" (114mm)

72938	Scissors, Angular w/two fine points	each
72939	Scissors, Angular w/one probe point, one fine point	each
72940	Scissors, Straight w/two fine points	each
72941	Scissors, Curved w/two fine points	each

72938

72939

72940

72941

► Rubis Micro Scissors

High quality scissors, manufactured from hardened, anti-acid, stainless, surgical steel (CA) Handcraft with precision sharpened blades that provide a perfect cut. The Rubis Twist® grip scissors offer ergonomically, comfort and control.

► Model 1C300, CA

110 mm (4¼") long, Sharp pointed micro scissors. N = 5.4 mm (¼")

78180-1C3 Rubis Micro Scissors, 1C300 each

► Model 1C200, CA

146 mm (5¾") long, Long legged scissors with rounded tips. N = 6.4 mm (¼")

78180-1C2 Rubis Micro Scissors, 1C200 each

► Model 1K603, CA

90 mm (3¼") long, N = 5.4 mm (¼"), U = 2.8mm (⅛"). Precision tweezers engineered into a scissors' movement, offers firm and good grip.

78180-1K6 Rubis Micro Tweezers, 1K603 each

► Rubis Micro Scissors Set

Strong, slightly curved easily cut through small bones and cartilages

SET INCLUDING:

- 1 each Rubis Colibri fine scissors, light duty
- 1 each Rubis Classic medium fine scissors, medium duty
- 1 each Rubis Sauro medium strong scissors, heavy duty

78180-03 Rubis Micro Scissors Set 3/set each

► Rubis Personal Care Set

This kit is offered you tools for the personal care. Swiss quality and workmanship give you a long lasting quality and service.

78182-00 Rubis Personal Care Set Set each

► Castro-Viejo Scissors

Short, delicate stainless steel scissors with a spring handle.

72933	CV Scissors 4"(102mm), Straight Tips	each
72934	CV Scissors, 4"(102mm), Angled Sideways	each
72935	CV Scissors, 4½"(114mm), Curved on Flat	each

72956

► Utility Sheer

Multi purpose shear with stainless steel blades and plastic handle. One blade is serrated that allows you to cut materials from wire to bone. Autoclavable to 120°C.

72956	Utility Sheer	each
--------------	---------------	------

► Paper Cutting Scissors

Stainless steel sheer for cutting paper; black enameled handles.

72954	Paper Cutting Scissors, 8"(200mm)L	each
72955	Paper Cutting Scissors, 10"(250mm)L	each

Baby Metzenbaum Scissors

Dissecting T-Type Pins

Stainless steel, with T shapes head pin and pointed end.

Cat. #	Description	Qty
63307-60	Dissecting T-Type Pins,	6/pk

Mall Probe

6" long, Chrome plated with one blunt bent end and hexagonal shape handle

Cat. #	Description	Qty
63324-20	Mall Probe, 6" L,	each

Probe with Eye

Stainless steel, 5" long, 2mm diameter. Flat one end with eye.

Cat. #	Description	Qty
63324-30	Probe With Eye, 5" L	each
63324-32	Probe With Eye, 6" L	each
63324-33	Probe With Eye, 7" L	each
63324-34	Probe With Eye, 8" L	each

Huber Probe

63324-10

Chrome Plated. 6" long, one blunt bent end, and one chisel finish on the other end

Cat. #	Description	Qty
63324-10	Huber Probe 6" L	each

Combination Probe Set

Probe set include two-way handle and four probe heads. These probe heads (A, B, C, D) are easily screwed into the handle (H). This set is very convenient for field work or on the move.

All packed in a handy plastic zippered case. Handle is 6.5 inch long.

Cat. #	Description	Qty
63325-00	Combination Probe Set	each

Tweezers with Magnifier

The combination of high precision tweezers with magnifier offers you easy handling of small parts and become handy where a microscope or magnifier isn't at hand. Tweezers is 90 mm long, 100 mm total length with 3 3/4X magnifier.

78183-01	Tweezers with Magnifier	each
----------	-------------------------	------

Saws

Three styles of manual bone saws are available. The broad bladed Satterlee Saw (A), the thinner rounded tip Charriere Saw (B), and the solid handle Langenbech Metacarpal Saw (C). Each saw has serrated teeth.

Cat No.	Description	Qty.
70566-30	B. Charriere Saw 10-1/2" (267 mm)	each
70566-31	A. Satterlee Saw 11-1/2" (292 mm)	each
70566-32	Satterlee Saw Replacement Blade	each
70566-33	C. Langenbech Metacarpal Saw 9" (229 mm)	each

Autopsy Instruments

EMS now offers these premium grade, hardened stainless steel autopsy instruments, featuring a protective coating for extra durability and protection from rust and corrosion. Satin-matt finish reduces eye-fatiguing glare.

A. Brain Knife

Double-sided edged knife for precision brain sectioning.

B. Skull Breaker

Fracturing hammer for brain access. Available with chisel bottom or hook bottom.

C. Rachitome

Curved rachitome. For specific skull fracturing.

Cat No.	Description	Qty.
70566-10	A. Brain Knife, 9-1/2" (241 mm) Blade	each
70566-11	B. Skull Breaker 5-1/2" (140 mm), Hook End	each
70566-12	B. Skull Breaker 5-1/2" (140 mm), Chisel End	each
70566-13	C. Rachitome 8-3/4" (222 mm)	each

► Dissecting Needles

72946

72947

1) Stainless steel with spear shaped head, 5" (127mm) long.

72946	Needle, Single cutting edge	each
72947	Needle, Double cutting edge	each

72948

72949

2) Wooden handle, needle tip.

72948	Straight needle, 5 3/4" (146mm) long	12/pk
72949	Curved needle, 5 1/2" (140mm) long	12/pk

For our complete line of Inoculating Loops and supplies, See Histology section, pages 502-503 >>>>

► Dissecting Kit, 8 pieces, Stainless Steel

Kit including:

- 1 4 1/2" Dissecting forceps with curved and serrated tips
- 1 Curved dissecting needle
- 1 Glass pipette with rubber bulb
- 1 4 1/2" Dissecting forceps straight and serrated tips
- 1 Dissecting scalpel, 6" long, 1 1/2" cutting edge.
- 1 4 1/2" Dissecting scissors, sharp, straight points
- 1 Plastic ruler 6", 1/16" div., millimeter and centimeter.

72950	Dissecting Kit	each
-------	----------------	------

► Large Dissecting Kit

Kit including:

- 12 Scalpel Blades #11 with #3 Handle
- 6" (15mm) Clear Ruler
- 6" long Light Small Probe, Blunt
- 5 1/2" Kelly Hemostat, Straight
- 6 1/4" Kelly Hemostat, Straight
- 4 1/2" Iris Scissors
- 5 1/2" Dissecting Scissors
- Suture Hook
- Set of Dissecting Needle, one Straight and one Bent
- 4 1/2" Straight Fine Point Serrated Jaws Forceps
- 5 1/2" Straight Blunt tip Serrated Jaws Forceps
- 2 mm Diameter Stainless Steel Punch
- Large Wood Handle Spatula

72951-15	Large Dissecting Kit	Set
----------	----------------------	-----

For our complete selection of dissecting kits, see page 295 >>>>

Bone Saws; See Histology Section, page 506 >>>>

► Needle and Knife Interchangeable Handle

Made from stainless steel, pin-vise type Handle, which accepts either dissecting needles or a knife.

Handle: 92 mm (3 5/8") L x 6 mm (1/4") diameter

Needle: available with straight or bent, 60 mm (2 1/2") long

Knife: spear type with single or double edge, 75 mm (3") long

72953-HD	Handle	each
72953-10	Needle, Straight	36/pk
72953-11	Needle, Bent	36/pk
72953-20	Spear Shape Knife, Single Edge	36/pk
72953-21	Spear Shape Knife, Double Edge	36/pk

► Needle File Handle

Blue anodized aluminum handles are well knurled with an excellent grip. The length of the handle is 4" and features a steel easy-release chuck, which simply presses into the barrel and remains secure. Handle will last a lifetime Made in the USA.

Cat. #	Description	Tool length	Handle Dia.	Pack
62213-01	Small Handle	4"	3/8"	each
62213-02	Medium Handle	5 1/2" - 6 1/4"	1/2"	each

► Riffler File Set

A set of 10 double-ended rifflers with square handles for use in tight places and for filing odd shapes. Overall length: 7". Available in medium cut only.

62116	Riffler File Set	10/set
-------	------------------	--------

► Swiss Pattern Needle Files

A 12-piece file set which contains the most popular shapes in a handy plastic pouch. Files come with knurled handles. Excellent quality. Available in cut #2 only. Length 5 1/2".

62115	Swiss Pattern Needle Files	12/set
-------	----------------------------	--------

► Micrometer

Metric and English scale micrometers with friction stop; comes in a padded plastic case. Model A: Calibrated to read 0 to 25mm, in 0.01mm divisions. Model B: Calibrated to read 0 to 1", in 0.001" divisions.

62060	Model A Micrometer	each
62061	Model B Micrometer	each

► Vernier Caliper

Double scale vernier caliper. Nickel Plated Scale. Inch Scale: Reading from 0 to 5" in 1/64" divisions Metric Scale: Reading from 0 to 120mm in 1mm divisions. Readable on the vernier scale to 1/256" and/or to 0.1mm. Has a roller adjustment and it is packed in a plastic case.

62064	Vernier Caliper	each
-------	-----------------	------

► Digimatic Calipers – 6" Long

Provides a digital readout to 0.0005" / 0.01mm for error-free reading and can measure steps. Function: zero setting, data hold, low battery alarm and data output. Provided with a data saving output port for connection with the SPC system. Powered by a single SR-44 battery. Battery life: approximately two years under normal use.

Specifications: An all metal head with a plastic housing. Range: 0 – 6" / 0 - 150mm; LCD resolution: 0.0005" / 0.0; Accuracy: ±0.001

62062-10	Without SPC Output; with Thumb Roller	each
62062-20	Absolute Function Type with SPC Output	each

► Instant Read-out Precision Digital Caliper

This caliper is made from stainless steel and measures inside and outside in inches and millimeters. Read-out from 0 to 6 inches with 0.001" resolution, or 0 to 150 mm with 0.01mm resolution. Includes a zero set button, depth measuring rod and a fine adjustment thumb wheel. A protective carrying case and battery are included.

62065-40	Instant Readout Digital Caliper	each
----------	---------------------------------	------

► Vernier Calipers; Dial Type Metric/English Scales

These precision vernier calipers are molded in corrosion resistant fiberglass-filled super-polyamide nylon alloy. They are excellent tools due to their easy reading scale (black numbers on white background) and dials (light weight, fine adjustment thumb roller). Its parallel jaws are 1.57" (40mm) deep, and its reading scale does not create a parallax. Its inside-outside jaws and round metal rod depth gauge add to its value. Overall length: 8 3/4" (213mm).

B Dial type, 0.1mm dial, 1.3" (33mm) diameter, maximum reading 150mm, 10mm bar scale.

62065-B	Vernier Caliper, B Dial Type	each
---------	------------------------------	------

Sapphire Burnishing/Deburring Tool - 62160-00

▶ Sapphire Burnishing/Deburring Tool

This tool will out-perform any stone for the fine burnishing of soft or hard materials such as; miniature pivots, shafts, and pins that are made from hard steel, carbide and even ceramic.

This precisely ground sapphire blade is 1.5mm x 2.3mm, 14mm long (0.06x0.09x.56"). It is permanently mounted in a hexagonal gold anodized aluminum handle. Total length is 120mm (4.75").

62160-00 Sapphire Burnishing/Deburring Tool each

For Diamond Scribes, see page 838-839, as well as Materials Science section, pages 388-389. >>>>

Hardened Steel Deburring Tool Set - 62161-SD

▶ Hardened Steel Deburring Tool Set

Made from hardened steel, this tool has three razor sharp cutting edges ranging from a very sharp point to one that is approximately 10mm in length. These nickel plated triangular tools are mounted in red and black plastic handles. Tool length is 30mm by 2.1mm across (1.2"x.08"). The overall length of the tool is 154mm (5.7"). 2 tools/set.

62161-SD Hardened Steel Deburring Tool Set each

▶ Arkansas Sharpening Stones

These stones are natural with close density oil-tones, and excellent qualities that make them the stone unequalled for sharpening tools such as gravers, knives, etc. Comes in a cedar wood box and they are available in two types: translucent (extra fine); and hard (fine).

62082-00 - Arkansas Sharpening Stone

Catalog #	Description	
62082-00	Arkansas Sharpening Stone, Translucent, Size 4" x 2"x½" (102 x 51 x12.7mm)	each
62082-10	Arkansas Sharpening Stone, Hard (Fine), Size 6" x 2"x½" (152 x 51 x12.7mm)	each

▶ Diamond Sharpening Stone

Diamond Sharpening Stone

This patented process of heat treatment which bonds the highest quality industrial grade diamond particles in a stainless alloy to a precision matched metal substrate, has been imitated, but has never come close to being duplicated. Our stone which is set on a walnut pedestal with a cover is available in 3 grades: F- fine grit (600); M - medium grit (270), and C - coarse grit (180). Stone size is 2"x6" (51mmx152mm)

62082-50	Diamond Stone, Fine Grit	each
62082-51	Diamond Stone, Medium Grit	each
62082-52	Diamond Stone, Coarse Grit	each

▶ Diamond Stone

This diamond stone has millions of cutting edges to sharpen most any tool. Many times faster than dry or oil stones. May be used as a file or a stone. It cuts in all directions. Available in all purpose fine grit.

62120 Diamond Stone each

62118-02

62118-12

▶ Filing/Polishing Stick and Strips

A plastic handle, 10½" (267mm) long, holds strips of emery paper or cloth 11"x1" (279x25.4mm). Strips can easily be replaced. Comes complete with 2 strips/set, grit 120 and 240.

62118-02 Filing and Polishing Stick And Strips set
62118-12 Emery Refills in 12 Assorted Grits 12/pk

Flat Emery Sticks

▶ Flat Emery Sticks

Emery paper which is glued to a wooden handle. 11" long x ¾" wide (279x19.1mm). Very useful for filing excess resin of sample block tips. Grit size ranges from number 4/0 (finest) to 4 (coarsest).

62119-04	4/0 Grit	12/pk
62119-03	3/0 Grit	12/pk
62119-02	2/0 Grit	12/pk

► Abrasive Wheels - Finishing and Polishing Wheels

► 1. Pumice Wheels - 72 Assortment Wheels

For cleaning, polishing and finishing. Made from natural rubber with graded pumice grain distributed to assure uniform results. Kit includes 12 discs each of six styles and 3 mandrels with $\frac{1}{8}$ " (3.18mm) shanks.

62143-72 Pumice 72 Wheels Assortment 72/bx

► 2. Aluminum Oxide - Brightboy™ Assortment Wheels

The resilient rubber binder cushions the aluminum oxide abrasive and bridges the gap between grinding and polishing. 57 piece kit contains wheels cylinders, points, mandrels and chuck.

62144-57 Aluminum Oxide Abrasive Wheel 57/bx

► 3. Sanding Discs

Yellow abrasive with press on/flip-off center hole feature. Aluminum oxide grit in three grades, mounted on a thin backing, provides outstanding results in sanding and smoothing operations.

Individual Discs: Sold 100 discs in a tube.

Cat.#			Diameter	
Coarse Grit	Medium Grit	Fine Grit	(in)	(mm)

► 5. Diamond Finishing Discs

Offers extremely aggressive grinding action, yet leaves an exceptionally smooth finish. Discs have pressure sensitive adhesive backing for a secure fit on holder (Cat. #62146-01). $\frac{3}{4}$ " (19.1mm) diameter.

Cat.#	Grit	Color	Mesh	Pack
62146-10	Extra Coarse	Purple	220	6/pk
62146-15	Coarse	Brown	325	6/pk
62146-20	Fine	Red	600	6/pk
62146-25	Extra Fine	Blue	1200	6/pk

► 6. Final Polish Discs

No need for polishing compounds. These discs are ideal for final polish a surface. Fits on holders #72146-01. 3.4: (19.1mm) diameter. Pressure sensitive backing.

62146-40	Final Polishing Disc	6/pk
-----------------	----------------------	------

► 7. Disc Holder

Use with all diamond polishing discs and final discs. The surface is designed to hold disc securely and smoothly. With 1/8" (3.18mm) mandrel. Maximum 12,000 RPM.

62146-01	Disc Holder	each
-----------------	-------------	------

► 8. Diamond Points

All diamond points are mounted on 3/32" (2.35mm) shanks. Suitable for Flex Shaft machines. Exceptionally long lasting. Use at 10,000 RPM.

62155-24	2.4	024	(10) Cone
62155-73	7.3	073	(11) Tapered Wheel

► Small Bench Vises

New-improved vises which offer a choice of either clamping or screwing it onto the bench. An excellent tool and necessity for every lab.

62067-15	Bench Vise 1 1/2" Jaws	each
62067-20	Bench Vise 2" Jaws	each

► Mini Vise

This is the smallest vise ever. It comes complete with a clamp that allows for either table or bench-top attachment. Small 1" jaws. It weighs only 13 oz. The vise is made from cast iron with a heavy red enamel coating.

62066-00	Mini Vise, 1" Jaws	each
-----------------	-----------------------	------

► Portable Vacu-Vises

With a rubber suction base; you just flick off the Vacu-lever and the Vacu-vise firmly fastens to any clean, smooth surface. When you lift the Vacu-lever up, the Vacu-vise is released.

► Multi-Angle Swivel Vacu-vise

Can be tilted on any desired angle. Swivels 360°. 3" metal jaws and it is supplied with a slide-on rubber to hold delicate objects; opens up to 2 3/8"; 6 1/4" triangle base.

62068	Multi-Angle Vacu-Vise	each
62069	Slip-on Rubber Jaws	1 pr

► Double Clamp With Stand

Two adjustable arms with alligator jaws in a heavy base. A versatile tool which can be adjusted to any position and firmly hold small items of any shape.

62123-01	Double Clamp With Stand	each
-----------------	-------------------------	------

► Double Clamp with Magnifier

Same as (Cat# 62123-01,) but it has a 2 1/2" diameter magnifier attached.

62123-02	Double Clamp W/Stand & Magnifier	each
-----------------	--	------

62074- Precision Pin Vises

► Precision Pin Vises

These tool steel collets grip firmly when screw chucks are tightened. The chromium-plated handle is hollow which allows for the holding of long wires. The body is stepped, with the small portion knurled allowing for rotation between the fingers. The larger portion is smooth and it easily can be held firmly in lathes and drill presses.

Cat.#	Chuck Opening		Length	
	(in)	(mm)	(in)	(mm)
62074-01	0 to .040	0 to 1.02	3	76
62074-02	.025 to .062	0.6 to 1.60	3/4	83
62074-03	.050 to .125	1.3 to 3.20	3/4	98
62074-04	.115 to .188	2.9 to 4.80	4/4	108
62074-10	Set of all Four Precision Pin Vises		4/set	

► Hex Key Wrenches

Made from heat treated chrome nickel steel. Useful to have around the lab. Its sturdy handle, folds up just like a pocket knife. Can be used at any angle.

English Sizes

Cat.#	Hex Sizes, Inch			Handle Lgth.
62075-01	.050,	1/16,	3/64	3 3/8"
	3/32,	1/64,	1/8,	
	5/64,	3/32,	3/16	
62075-03	3/16,	1/32,	1/4	5 1/4"
	5/16,	3/8		

Metric Sizes

Cat.#	Hex Sizes, mm	Handle Lgth.
62076-01	1, 5, 2, 2.5, 3,	3 3/8"
62076-02	3, 4, 5, 6, 8, 10	5 1/4"

► Screwdriver Set

6-in-1 fold up screwdriver set that consists of 6 different screwdriver blades that folds up like a pocket knife and serves as a handle.

Blades are 1/8", 3/16" and 1/4" flat; T-15 Star Torx, #1 Phillips and Hole Punch awl.

62079 Screwdriver set set

► Phillips Screwdriver Set

A very handy set of Phillips screwdrivers which feature one of the smallest sizes available (1.20mm). A knurled body with hexagonal heads and tempered steel blades. All are 4 1/2" length. Sizes: 1.20mm, 1.50mm, 2.00mm, and 2.50mm

62077-00 Phillips Screwdriver Set each

Phillips Individual Screwdrivers:

62077-12	Phillips Screwdriver Size 1.2mm	each
62077-15	Phillips Screwdriver Size 1.5mm	each
62077-20	Phillips Screwdriver Size 2.0mm	each
62077-25	Phillips Screwdriver Size 2.5mm	each

► Precision Screwdriver Set

Precision European quality screwdrivers in 9 sizes: .60; .80; 1.00; 1.20; 1.40; 1.60; 2.00; 2.50 and 3.00mm. With hexagonal swivel heads to prevent rolling and knurled handles for a firm grip. Color identifier bands allow for easy selection and set screws hold the blades securely. Set contains 19 extra blades and 2 extra set screws. The set comes with a handsome revolving stand.

62078-00 Screwdriver Set w/Revolving Stand Set

Replacement Screwdriver Blades For #62078-00:

62078-06	Replacement Blade 0.6mm	3/pk
62078-08	Replacement Blade 0.8mm	3/pk
62078-10	Replacement Blade 1.0mm	3/pk
62078-12	Replacement Blade 1.2mm	3/pk
62078-14	Replacement Blade 1.4mm	3/pk
62078-16	Replacement Blade 1.6mm	3/pk
62078-20	Replacement Blade 2.0mm	3/pk
62078-25	Replacement Blade 2.5mm	3/pk
62078-30	Replacement Blade 3.0mm	3/pk

► Heavy Duty Wire Bending Pliers

These extra heavy-duty pliers are used for bending any metal wire at a 'V' shaped angle, allowing for the formation of filaments in accordance to your specification.

62185 Wire Bending Pliers, 6½" (165mm) Long each

► Wire Looping Pliers

Stainless steel wire looping pliers, enables the user to bend wire easily. The round jaws in one and the box-jointed for durability. Jaws are finely polished, one being round and the other concave

62186-10 Wire Looping Pliers, 5½" (145mm) Long each

► Master Coiler Pliers

This 'Master Coiler' is the painless pliers. It is designed to make loops and coils without nicking precious wire. Master Coiler allows one to hold the wire with the flat jaw while rotating the round jaw to form the perfect loop. Comfort grips, non-rust, highly polished stainless steel jaws and standard step-jaw for consistent loops and coils.

62186-20 Master Coiler Pliers, 5½" (145mm) Long each

► Power Max Cutters

Ergonomic compound cutters that offer the finest in compound leverage construction at an affordable price. Leverage combined with induction-hardened, high-grade steel jaws allows for extra close, flush cutting. The handles are shaped to be ergonomically and comfortably.

62187-10 Power Max Cutters, 6½" (165mm) Long each

► De-Crimper Pliers

Made from stainless steel offers one tool for both sizes: 13mm and 20mm serum vial de-crimper. An inexpensive and easy way to remove the seal from the serum vial, simply secure the seal between the jaws, squeeze the handle and twist the seal. Plastic coated handle offers comfort and ease of use.

62180-01	De-Crimper for Sizes 8 & 13 mm	each
62180-02	De-Crimper for Sizes 8 & 30 mm	each
62180-03	De-Crimper for Sizes 11 & 20 mm	each
62180-04	De-Crimper for Sizes 13 & 20 mm	each

► Magic Wands

Magic Wands are made from PEEK, a high performance plastic, with excellent chemical resistance and withstands high temperatures (up to 300°C).

Magic wand is ideal for use for electronic high-tech areas to laboratories, from preparation of samples to applying adhesives, using it as a stirring rod, or evendosing samples etc.

63323-01	Fine tip and Flat strong tip, 6" (150mm)	each
63323-02	Curved tip and flat strong tip, 6" (150mm)	each
63323-03	Flat fine tip and flat sharp tip, 5" (130mm)	each

► General Utility Repair Kit

A 25 piece tool kit. This sleek, versatile and compact general utility kit contains 25 of the most common tools to handle general utility repairs in the lab, office or in the field. Your quality kit is housed in a convenient vinyl, zipper case that folds to a convenient size of 7¾"W x 14"L x 2¾"H (O.D.)

62081 General Utility Repair Tool Kit 25 Tools Set

62080-20 - Deluxe Knife and Tool Set

► Deluxe Knife and Tool Set

A deluxe 28 piece set in a handsome wood case with molded storage trays. The set contains the following: a lightweight knife, medium weight knife, heavy-duty knife, awl, miter box, razor saw, sander, screwdriver and 20 assorted blades.

62080-20 Deluxe Knife and Tool Set set

► Professional Manual Micro Manipulator FX-117

This three axis micro-manipulator provides safe and efficient positioning of microtools.

All three vernier readings are graduated in 0.1mm increments. The X-axis, which holds the tool clamp with microtool, has an additional fine movement with 0.001mm graduations.

The FX117 employs rack and pinion drive, V-shaped guide ways and cross bearings, so movement is precise and repeatable. Contact parts are milled from hardened steel for optimum performance and long life. Design employs in-line control knobs clustered within a 8cm area in a single vertical plane resulting in quick and precise hand manipulation. The stand, the FX117-01 has a dovetail adapter and mounting post. The optional adapter FX115-03 (Microtool holder) can also be used.

Specifications:

Movements:	X axis fine	10mm travel	0.01mm graduations
	X axis	37mm travel	0.10mm graduations
	Y axis	20mm travel	0.10mm graduations
	Z axis	25mm travel	0.10mm graduations

Weight: 1.8 lbs (6.1 lbs with stand)

Dimensions: H 140mm (220mm with stand)
W 100mm (145mm with stand)
D 60mm (165mm with stand)

62100-15 Micro Manipulator FX-117 w/Stand each

► Stainless Steel Probes

These probes are scalpel sharp for fine probing. They are useful for many applications, such as micro positioning, solder probing, and band inspection.

62125-10	Stainless Steel Probes	4/set
62125-11	Stainless Steel Probes #1	each
62125-12	Stainless Steel Probes #2	each
62125-13	Stainless Steel Probes #3	each
62125-14	Stainless Steel Probes #4	each

► Micro Probe Handles and Interchangeable Micro Probe Tips

Micro probes are hand held microelectrodes that have been designed for the testing of the smallest micro circuits and micro miniature components.

Micro probes and handles are fully insulated and are made from black Delrin material.

Fitted to the handles are flexible electrical lead wires with standard banana plugs.

Available with red or black wire and plug termination.

Interchangeable micro probe tips are available in both a straight and bent configuration as well as in steel or tungsten with a standard 0.5mm (0.020") diameter.

62150-1B	Single Probe Handle, Black Termination	each
62150-1R	Single Probe Handle, Red Termination	each
62151-SS	Micro Probe Tip, Steel, Straight	each
62151-SB	Micro Probe Tip, Steel, Bent	each
62151-ST	Micro Probe Tip, Tungsten, Straight	each
62151-BT	Micro Probe Tip, Tungsten, Bent	each

► Mini-Tools; Micro-Tools

These tools are designed for anyone who is engaged in microscope work, miniature applications as well as specimen manipulation. Micro-Tools are the smallest known precision tools available for the laboratory and micro electronics industry. Micro-Tools are available in 32 different tip configurations with interchangeable handles. Micro-Tool consists of a threaded handle (MT1), and an interchangeable threaded base with tool tip. Tip material is hardened tool steel unless otherwise noted.

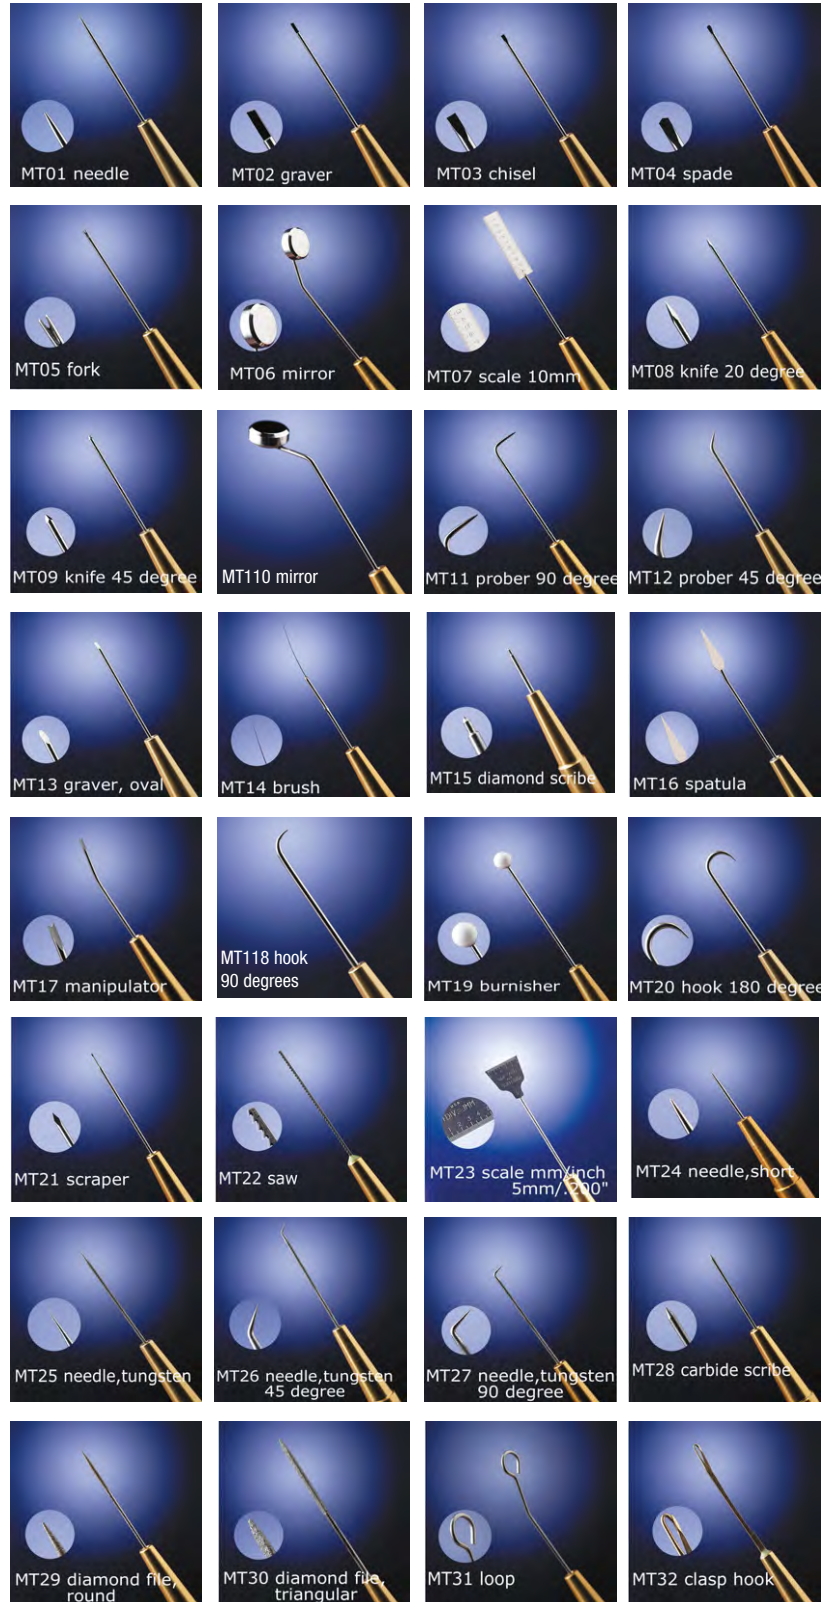

Ordering: Please specify Tip Size when ordering.

► Diamond Tip Scribers/Scribers

Sturdy scribers are in wide use throughout the laboratory. It leaves a permanent marking on virtually any surface, including metal, glass, or plastic. Each Scriber features a hexagonal aluminum pencil shaped body, mill finish, natural diamond tip and protective cap. Different styles are available to fit all of your needs.

► A. Straight Head:

Overall length 6", Shank Length 1/8", Handle 1/4" x 5 1/2", 60° tip finish.

70030	Straight Tip Scriber	each
70031	Straight Tip Scriber	6/lot

► B. Angled Head:

Overall Length 6 1/2", Shank 1/6" Dia. x 1/4" Long, Handle 1/8" x 6" Long, 75° tip finish.

70032	Angle Tip Scriber	each
70033	Angle Tip Scriber	6/lot

► C. Retractable Scriber:

This is a high quality chrome pen that features appearance as well as utility. The diamond is mounted in a stainless steel tip and refills are available. The tip is finished at a 60° angle.

70036	Retractable Scriber	each
70037	Retractable Scriber Refill	each

► High Precision Fine Diamond Scriber

This diamond scriber is the ultimate scribing instrument offering the most precision for the most delicate applications. It is available in straight or bent configurations.

APPLICATIONS INCLUDE:

- Fine scribing under the microscope - for silicon wafers and glass coverslips
- Precision scribing and repairing - for thin film circuits and microcircuits, etc.

These diamond mountings are 0.8mm diameter with a reduced shank size of 0.5mm or 0.25mm diameter, which holds the diamond stylus. The natural diamond has a 60° included angle and a 0.12mm tip radius. The integrated 6.35mm anodized hexagonal (non-rolling) aluminum handle has a positive finger grip in the form of grooves for easy control and non-slippage. Each diamond scriber is packaged in a protective plastic tube.

Cat. #	Configuration and Shank Size
62107-ST	Straight Mounting, 0.5mm diameter
62107-BT	Bent Mounting, 0.5mm diameter
62108-ST	Straight Mounting, 0.25mm diameter
62108-BT	Bent Mounting, 0.25mm diameter

► EMS Engraving Tool

Permanently be able to mark all of your important tools and samples. The Engraver comes with a Battery Pack and is operated on two "AA" Batteries

Our EMS Engraver Engraves Test Tubes, Bottles, Racks, Keys etc as well as anything made from glass, metal, stone as well as bone. Engravings are permanent and will not disappear in the presence of chemicals and solvents. The Engraver is 7" in Height (17.8cm)

We offer a Stand for the EMS Engraver that is made from polypropylene and it measures (3 1/2" x 3 3/8").

Cat. #	Description	Qty.
72096-01	EMS Engraver	Kit
72096-02	EMS Engraver Tool Stand	Kit

► The Glascribe® Pen

The Glascribe® Pen, with retractable tungsten carbide tip, lets you inscribe on glass, ceramics, and plastic. The pen has a pocket clip, so it is always handy when needed.

Cat. #	Description	Qty.
72151	Glascribe® Pen	each

► Tungsten Point Lab Pen

Permanently mark Glass Slides and all glass labware

These unique EMS pens have a sharp tungsten carbide tip which is able to etch glass, ceramic, and even plastic. The tip retracts for safe storage and it measures 9.8mm in diameter and the pen is 137mm long.

Cat. #	Description	Qty.
41148	Tungsten-Point Lab Pen	each

► Rotary Diamond Micro-Engraver Pen

An amazing tool that may be used to mark samples, engrave tools, indicate a sample area for finding in the SEM, deburring and so much more.

Easy to handle and control, this micro engraver is ideal for detailed engraving on almost any surface--wood, metal, ceramic, glass and more! The micro engraver features a contoured grip for comfort and control and a precision-ground stainless steel bit with a diamond point tip. This diamond-tipped ballpoint micro engraver is also as small as a pen, so it easily fits in your pocket or purse for easy transport.

- Contoured grip for comfort and control
 - Pen-type design fits in a shirt pocket or purse and goes anywhere
 - Precision-ground stainless steel bit with diamond point tip
 - Requires two AAA batteries, included
- Measures: 6 1/4" Product Weight 1.86 lbs.

Cat. #	Description	Qty.
50465-15	Rotary Diamond Micro-Engraver Pen	each

► High Precision Diamond Scribing Tools

A newly designed diamond scribing tool set containing eight precision natural diamond scribes in various sizes and configurations. This set is perfect for precision work in microscopy. The set consists of eight diamond tips, 3 mm in diameter and are mounted in interchangeable tool cones and an MT-1 tool handle. The tool and handle are all housed in a hardwood instrument case. Individual scribes can be purchased separately.

62105-S1	Straight tip, .02" (.50mm) dia. by .06" (1.5mm) tip length	each
62105-B1	Bent tip, .02" (.50mm) dia. by .60" (1.5mm) tip length	each
62105-S2	Straight tip, .01" (.25mm) dia. by .06" (1.5mm) tip length	each
62105-B2	Bent tip, .01" (.25mm) dia. by .06" (1.5mm) tip length	each
62105-SE	Straight extended tip, .02" (.5mm) dia. by .2" (5.0mm) tip length. Good for tight areas	each
62105-BE	Bent extended tip, .02" (.5mm) dia. by .2" (5.0mm) tip length. Good for hard to reach areas	each
62105-HS	Straight, heavy duty tip, .03" (.8mm) dia. by .12" (3.1mm) tip length	each
62105-HC	Bent, heavy duty tip, .03" (.8mm) dia. by .12" (3.1mm) tip length	each
62090-00	MT-1 Tool Handle, 4.75" (112mm) long, gold anodized	each
62105-00	High Precision Diamond Scribing Tools, (8 tools & handle)	set

► Precision Pin Vise Handle and Diamond Stylus

This high precision pin vise handle is machined from the finest material, non-rolling gold-anodized aluminum, which makes it lightweight and versatile. It comes complete with a precision drawbar for positive collets chuck clamping. It features an 8mm (0.31") hexagonal barrel dimension by 100mm (4") long (overall length is 115mm fully assembled) and it has a knurled finger-grip for positive precision control for handling and tool manipulation.

The vice is supplied with a standard collet chuck opening of 2mm (0.78") diameter and will hold a selection of our specially designed tools - and collets adapter 0.8mm (0.003") for diamond stylus chucking.

Cat. #	Description	
62140-00	Precision Pin Vise & Collets	each
62140-50	Diamond Stylus, 0.5mm	each
62140-25	Diamond Stylus, 0.25mm	each

Following are Diamond Scribing Tools, with a 0.80mm (0.003") diameter mounting shank, for use with above Precision Pin Vise and Collets:

Cat. #	Description and Configuration	
62140-02	Bent tip scriber, 0.010" (0.25mm) Diameter. 1.5mm tip length	each
62140-03	Straight extended tip scriber, 0.020" (0.50mm) diameter by 0.200" (5.0mm) tip length. This tool is a must for reaching into and in between high density components.	each
62140-04	Bent extender tip scriber, 0.020" (0.50mm) diameter by 0.200" (5mm) tip length. Use for tight places	each
62140-05	Straight tip scriber 0.020" (0.50mm) diameter by 0.60" (1.5mm) tip length.	each
62140-06	Bent tip scriber, 0.020" (0.50mm) diameter by 0.60" (1.5mm) tip length	each
62140-07	Straight tip scriber, 0.010" (0.25mm) by 0.60" (1.5mm) tip length	each
62140-60	Set of 6 Diamond Scribing Tools and Pin Vise	set

TOOLS FOR MICROSAMPLE MANIPULATION & MEASUREMENT

MicroTools for Crystallography

These patent-pending MicroTools™ have tips made from soft, flexible microfabricated polymer films. The curvature of the tips gives them rigidity, but they can still easily be flexed. Tools designed for use with samples from a few micrometers to millimeter in size. These tools will cause far less damage to fragile samples than metal tools, and they are optically and x-ray transparent.

Each tool is mounted on a 0.025"/0.64mm diameter non-magnetic stainless steel base. The base is fitted in a handle 0.7mm diameter, included in each kit. **General use:** for protein crystals, single cells and manipulating small samples.

► MicroTool™ Kit 1:

MicroTool Kit 1 contains 20 tools for sample manipulating and measurements.

MicroSpoon™: One each of Small, Medium, and Large sizes. Use to push, detach from surfaces, separate from a cluster, lift, and transfer. Push down to flatten tip and slide under your sample.

MicroChisel™: One each of Small, Medium and Large sizes. Use to push, detach from surfaces, separate from a cluster, lift and transfer. Push down to flatten tip and slide under your sample.

MicroLasso™: One each of Small and Large sizes. Use like a loop and lasso, pull and detach a sample from a surface.

MicroSieve™: One each of Small, Medium and Large sizes. Use to sieve samples out of solution, and to lift, transfer and soak.

MicroTip™: One 50µm diameter tip. Use to poke,

separate and lift samples. Use to reposition samples on a MicroMount or MicroMesh.

MicroGripper™:

One each of Small, Medium and Large sizes. Push down onto your sample to firmly capture it, or slide underneath your sample to delicately support it. Holds crystals rigidly without damaging them for room temperature x-ray measurements.

MicroRuler™: One 600µm wide ruler with 18µm graduation.

MicroSaw™: Two saws. Use in conjunction with a needle to cut and remove protein skins, gel, dense lipid phases and soft tissues from around your sample.

60100-01 MicroTool™ Kit 1, 20 Tools

Kit

► MicroTool™ Kit 2

We separated out of the sample manipulator tools in Kit 1, modified and made them more durable. The tips of these tools are 15µm thick, so they generate more background x-ray scatter in x-ray beam than the tool in kit 1, however, they still far less background compared to other source of tools making)

MicroTip™: Two each 25 and 50 micrometer diameter tips. Use to poke, separate and lift samples. Also use to reposition sample on a MicroMount or MicroMesh. Shape is designed to minimize disturbance of surrounding liquid, while not scarifying tip rigidity.

MicroSpoon™: Two Small and one Large sizes. Use to push, detach from surfaces, separate from a cluster, lift and transfer. Push down to flatten tip and slide under your sample.

MicroLasso™: Two Small and Large sizes. Use like a loop and lasso, pull and detach a sample from a surface.

MicroChisel™: Two Small and one Large sizes. Use to push, detach from surfaces, separate from a cluster, lift and transfer. Push down to flatten tip and slide under your sample.

MicroSieve™: Two Small, two Medium and Large sizes. Use to sieve samples out of solution, and to lift, transfer and soak.

MicroSaw™: Two saws. Use in conjunction with a needle to cut and remove protein skins, gel, dense lipid phases and soft tissues from around your sample.

60100-02 MicroTool™ Kit 1, 20 Tools

Kit

► MicroTool™ Kit 3

Contain 20 tools for sample measurements. Two tools designs allow measurement of linear sample dimensions, and two allow measurement of both linear and angular dimensions. Use these tools to accurately measure small and fragile samples with minimal change of sample damage. Tool tips are 10µm thick and are both optically and x-ray transparent.

Horizontal MicroRuler™: Five 500µm wide horizontal rulers with 25µm graduations.

Vertical Microruler™: Five 1000µm long vertical rulers with 25µm graduations.

Small MicroProtractor™: Five 320µm diameter

tools for measuring angles and radial distances/dimensions, with 30° and 20µm graduations.

Large MicroProtractor™:

Five 1000µm diameter tools for measuring angles and radial distances/dimensions, with 15° and 50µm graduations. Use to measure facet angles on crystals, the major and minor axes of ellipsoidal samples, or to specify the polar coordinates of multiple samples on a single tool.

60100-03 MicroTool™ Kit 3, 20 Tools

Kit

► MicroMounts™

MicroMounts™ are the highest performance tools for manipulating and mounting protein crystals, virus crystals, and small molecule/inorganic crystals, as well as all other small, fragile samples. They are ideal for both conventional and high-throughput X-ray crystallography applications.

MicroMounts™ consist of:

A thin (7.5µm thick) micro-fabricated polyimide film, attached to a solid non-magnetic stainless steel pin. Film is wrapped around the steel pin; provides excellent stiffness and convenient scoop-like action in retrieving and handling crystals.

Film Pattern:

Crystal Aperture sizes from 10 to 600µm, with minimal width around the aperture to minimize background scatter in all orientations.

Wicking Hole connected via drainage channel D to the crystal aperture. Hole size is compatible with size 15 or XF paper wicks. This 'fountain-pen'-like design, allows easier removal of excess liquid, without touching the crystals with the wick.

Alignment Cross located a fixed distance from the center of the crystal aperture. Allow easy automated alignment of the crystal aperture

Crystal Aperture Size Code around the alignment cross, allows automated recognition of Mount design, aperture, and crystal size, which determines boundaries of aperture (to be avoided), required alignment tolerance, and area of crystal available to be scanned for optimum diffraction. Initial beam size can then be automatically selected.

Aperture Size in µm can be read directly off the mount.

Orientation Mark allows the front and back of the mount to be automatically distinguished.

TOOLS FOR MICROSAMPLE MANIPULATION & MEASUREMENT

► MicroMounts™ (continued)

Pin:

Solid 316 non-magnetic stainless steel pins.

Pin is available in four standard lengths: 11 mm, 19 mm, 25 mm, and SPINE. The 11, 19, and 25 mm pin lengths, give pin base-to-crystal center distance compatible to those of nylon loops mounted on 10, 18 and 24 mm pins, respectively.

This solid pin will not suck up crystal and liquid. Pin is beveled at film end, allows good visibility of the crystals for wide range of pin orientation during crystal retrieval. Pin can be cut (with cutter pliers) to any desired length, or can be bent to place crystal in desired orientation. Pin is fitted to all standard bases

Features:

Easy manipulating and mounting of crystals from 700µm to less than 5µm.

- Rigid yet thin construction
- Convenient scoop-like design
- Gold hue – good mount crystal contrast
- Ideal for use at microfocus beamlines
- Complete optimization of cryoprotection and flash cooling
- Completely non-magnetic
- Low Thermal mass – rapid cooling
- Crystal aperture can be matched to crystal size and shape
- Easy removal of excess liquid
- Fully compatible with existing crystal mounting hardware

MicroMount™ Specifications

Pins

Length.....11, 19, 25 mm and SPINE lengths, marked in 2 mm intervals.
Diameter.....0.025" (0.64 mm) diameter
Material.....solid 316 non-magnetic stainless steel
Pin end.....beveled at 30° angle at each end

Crystal Holding Mount

Material.....polyimide
Crystal aperture sizes.....10, 20, 30, 50, 75, 100, 150, 200, 300, 400, 500 and 600µm
Thickness.....7.5, 10 and 12.5 µm
Distance from center of E to center of A.....870 µm
Distance from pin base to center of Crystal aperture.....12.1 mm (for 11 mm pins), 20.1 mm (for 19 mm pins), 26.1 mm (for 25 mm pins), 18.5 mm (for SPINE length pins)
Width of wicking hole.....250 µm (~ size 15 paper wicks)
Length tolerance.....0.5 mm for 11, 19, and 25 mm pins, 0.3 mm for SPINE pins

Ordering

1/ Assortment boxes: We recommend initially ordering of any assortment apertures listed below, so you can match the amount aperture to the size of your crystal. Then you order the size you use the most. You can choose pin lengths from 11, 19, 25, or SPINE. These pin pins can be cut to a desired length (using cutter pliers) or bent to your orientation.

- Small (A1), includes: 10, 20, 30 and 40 µm apertures
- Medium (A2), includes: 75, 150, and 200 µm apertures
- Large (A3), includes: 300, 400, 500, and 600 µm apertures

2/ Individual MicroMount™

■ Each box contains 20 MicroMount™ with your choice of size and pin length.

In general, we recommend ordering our 19 mm or SPINE length pins. If you like copper post style goniometer bases and have been using 10 or 11 mm pins with them, consider our B3 copper post base, which accepts full 19 mm length pins.

► MicroRT™ Room Temperature Mounting System

MicroRT™ is the answer for high-throughput room temperature diffraction screening and data collection. Go from crystal in a drop to crystal in the x-ray beam at room temperature in 2 minutes with 99% change of success.

You are now no-longer dealing with inadequate low temperature diffraction quality; no-longer painfully dealing with glass capillary mounting methods; and even can't easily retrieve crystal for low-temperature data collection.

Room temperature measurements are essential to determine whether the cause is poor as –grown crystal quality, damage caused by ligand and/or cryoprotectant soaks, and/or damage caused by the flask cooling process itself.

Our patent-pending **MicroRT™** system makes collecting data at room temperature as easy as at low temperatures, and allows you to collect room and low temperature data from the same crystal.

How does it work:

First, we've replaced the standard 10µm wall glass capillaries with ultra-thin-wall transparent polyester tubing that produces 60% less background scatter. Second, we use a tubing diameter that's much larger than your crystal and MicroMount, and a base that holds both the MicroMount and capture the tubing.

To prepare the sample, just inject stabilizing liquid down into the tube toward its sealed end, using a gel-loading pipette-tip. Mount your crystal on MicroMount and insert MicroMount into the base. Thirdly, pull the tubing down over the crystal and

mount onto the base.

No more cutting, crushing and breaking. No more cracking and shattering crystals on sharp capillary edges. No more swishing crystals back and forth to position them. No more fiddling with wicks. No more wax. No more alignment problem, caused by capillary/liquid lensing.

Once you have collected your room temperature frames, just pop off the tubing, plunge the MicroMount in your choice of liquid cryogen, and you're ready to collect a low-temperature data set. Or else, soak your crystal in the next solution, pop the plastic tubing back on, and repeat until you're checked out each solution or step in your protocol.

The only disadvantage is that polyester is somewhat gas permeable. You will want to keep a good sized plug of liquid in the tube and to measure your crystals within a day of mounting to make sure they do not dehydrate. If you want to store the crystals for longer, you can replace the polyester tube with any 2mm ID glass or thick wall plastic tubing.

TOOLS FOR MICROSAMPLE MANIPULATION & MEASUREMENT

FEATURES

- Ideal for both room-temperature structure determination and for diagnosing the cause of poor low-temperature diffraction
- Easy crystal mounting
- Easy collecting of both room and low-temperature data from a single crystal
- Significantly less background x-ray scatter
- Easier crystal visualization and alignment
- Accurate and reproducible crystal positioning
- Suitable for automated alignment and data collection
- One size tubing fits all.
- Tubing is reusable™.

MICRORT™ SPECIFICATIONS

Length1.5" (38 mm) (compatible with 11 – 25 mm pin lengths)
Diameter0.0800" ± 0.004" (2 ± 0.1mm)
Wall Thickness0.001" (25 µm)
Materialpoly(ethylene terephthalate)
PorosityWater evaporation rate through wall @ 22°Croughly 80 µg per hour

NOTES: Heat seal at one end. Optically clear. Some small optical distortion is due to the small thickness variations around the circumference.

Ordering

Each bottle contains 20 1.5" (37mm) long clear polyester tubes, sealed at one end, an extra –keen razor blade for cutting the tubes to a desired length, and a tiny tube of grease for lubricating the base (see our Goniometer Bases on the next page to order MicroRT compatible bases)

60130-T1 MicroRT™ Tubing Kit kit

► Goniometer Bases

These patent pending designs Goniometer Bases are unlike other bases available on market. Goniometer Bases tightly capture the MicroRT™ tubing to allow seamless room-temperature and low-temperature data collection.

B1 B1A B2/B3 B3A/B3S B4

TECHNICAL FOR GONIOMETER BASES

Materials416 magnetic stainless steel (B1, B2),copper (B2, B3) and brass (B4)
Base diameter at bottomB1 – B3: inside: 9.70 mm;outside: 11.95 mm; B4:3 mm
Dimension of Tubing capture regiondiameter: 1.93 mm, length: 5 mm (4mm for B4)
Central hole diameter0.81 mm
Central hole bottom-height above goniometer beadB1, B3: 0.043" (1.1mm); B2: 0.358" (9.1mm)
Height of MicroMount aperture above goniometer head magnetB1: 21 mm for 19mm pins; B2: 21mm for 11 mm pins;B3: 21mm for 19mm pins; 19.7mm for SPINE length pins

Ordering

We offer several different base styles that are compatible with our MicroRT™ tubing and with standard cryo-tools, cryo-vials, magnetic goniometer head mounts, and most automating hardware.

- Base B1 is available in two versions: B1 (with flat ledge) and B1A (without the ledge, for ALS-style grippers used at ALS, NSLS and CHESS)
- Base B2 is a copper post-style base that accepts 11/12 mm MicroMounts™. Available only with the flat ledge.
- Base B3 is available in three versions: B3 for 19 mm MicroMount™, with the flat ledge; B3A for 19 mm MicroMount™, without the ledge; and B3S for SPINE length MicroMount™, without ledge.
- B4 is a 3 mm diameter "brass pin" style base, with the smaller central hole to tightly hold MicroMount™ and an extension to capture MicroRT™ tubing.

Base B1 – B3 are available in package of 1, 3, 6, and 20.

Base 4 is available in package of 20 and 100.

NOTE: You must choose your Base when order these bases. Example: 60140-01, base B1 or base B2, or Base B3, or Base B1A, or Base B3A, or Base B3S. 60143-03, three bases, 1xB1 and 2xB3; or 1xB1, 1 xB2, and 1xB3; and so on...

► MicroMesh™ Mounts

MicroMesh™ Mounts are the tool of choice for microcrystal crystallography and diffraction experiments, especially at micro-focus beam-lines. They have been use in de novo protein structure determination from crystals as small as 5µm. They are excellent for rods shaped crystals, and are superior to mount with elliptical apertures, because the mesh provides continuous, gentle support for rods of all sizes.

MicroMesh™ produce the smallest background scatter of any commercial mount. Their sieve-like action allows easy retrieval of sub 30µm crystals.

We offer five different sizes MicroMesh™. All are 10µm thick, with curved around tip, mounted on non-magnetic stainless steel pin as the same way as MicroMount™, producing scoop like action.

- Three of 400 µm diameter mesh area with 10, 25, and 50 µm openings

■ One of 700 µm diameter with mesh area with 25 µm openings. These four are available as single-size boxes, or in an assortment. Multiple small crystals can be retrieved and mounted together, spread out over the mesh. The diffraction properties of each crystals can be separately interrogated using a small (<100 µm) X-ray beam, so crystal heterogeneity and maximum diffraction quality yielded by a given drop's conditions can be quickly determined. This is useful in early crystallization trials when showers

TOOLS FOR MICROSAMPLE MANIPULATION & MEASUREMENT

of crystals and precipitate are obtained.

When a drop contains many crystals, two or more crystallographic forms may be present which can differ dramatically in the quality of their diffraction. The regular grid of each MicroMesh makes it easy to match a diffraction pattern with a crystal and habit. Minimal crystals can be used.

Excess liquid can be removed using size #15 liquid wicks. Mounts can be cleaned using Medium or Fine liquid wicks.

■ **The fifth MicroMesh™ Mount has an 80 µm diameter mesh area with 15µm openings.**

This small head is designed to fit entirely within the 80µm and larger X-ray beams typical of standard synchrotron beam-lines and of focused laboratory sources. Consequently, you do not have to see your tiny crystal to align it, just center the 80 µm head in the beam, and your crystal will be within it.

The smaller head also makes it easier to mount a single crystal, and produces less background scatter when the beam is aligned along the plane of the film.

Ordering

Each box contains 20 MicroMesh™ Mounts

Assortment box contain 5 each of 400/10, 400/25, 400/50, 700/25, and 800/15 MicroMesh mounts, each attached to nonmagnetic stainless steel pin. Pins are marked in 2 mm intervals, and can be cut to your desired length.

EMS #	Description
60150-xx	Assortment Box, 20 Micromesh Mount
60151-xx	20 - 400µm Diameter, 10µm openings
60152-xx	20 - 400µm Diameter, 25µm openings
60153-xx	20 - 400µm Diameter, 50µm openings
60154-xx	20 - 700µm Diameter, 25µm openings
60155-xx	20 - 80µm Diameter, 15µm openings

NOTE: to specify the pin length, substitute xx with the Pin Length: 11mm, 19 mm, 25 mm, or SP for SPINE). Example: 60150-11 for pin length 11 mm; 60153-SP for SPINE pin length.

► Liquid Wicks

These paper wicks offer a great deal of absorbency with its small tip that foam-tipped or cotton-tipped applicators can not substitute. These wicks are available sizes: 15, extra fine (XF), fine (F), and Medium (M).

Size 15 wicks fit the wicking aperture of MicroMounts, and are ideal for removing residual liquid from your crystal and mounts.

Size Medium (M) and Fine (F) wicks are ideal for cleaning MicroMount

The thick end of these wicks fit into standard 0.7mm mechanical pencil.

Ordering

Each box contains 300, 28mm long high quality, tapered paper wicks.

Order size 15 and Extra Fine (XF) for removing liquid formed around your crystal.

Order sizes Fine (F) and Medium (M) wicks for cleaning MicroMounts.

EMS #	Description	Qty
60160-15	Size 15 Liquid Wicks	300
60160-XF	Size Extra-Fine Liquid Wicks	300
60160-F	Size Fine Liquid Wicks	300
60160-M	Size Medium Liquid Wicks	300

► LV CryoOil™

Oils are widely used in crystallography – as cryoprotectants when samples are flash cooled, and as barriers to the dehydration, solvent evaporation, and oxidation, that may occur in air near and above room temperature. The ice ring seen in the diffraction pattern of flash cooled protein crystals arise primarily from crystallization of the aqueous solution surrounding the crystal, not of the internal solvent. Oils can displace and replace this surrounding solution with little risk of damage due to osmotic shock.

Substantial dehydration-induced damage can easily occur between removed from a drop and flash cooling. Dehydration can be minimized by first transferring to an oil drop (using MicroSieve™, in MicroTool kit 1 and MicroTool Kit 2) before mounting the oil coated crystal on a MicroMount or Micromesh.

However, surrounding oil scatters X-rays, reducing diffraction signal-to-noise, and contributes thermal mass that reduces crystal cooling rates and increases the need for penetrating cryoprotectants. These problems are especially acute for the smallest crystals. When mineral oil, Paratone Oil and other high viscosity oils are used, the volume of surrounding oil can exceed the crystal volume by a factor of 10 or more., and can contribute excess drag that increases sample motion in a cryostream. For larger rod or plate shaped crystals, the surrounding oil exerts stresses when it freezes that can cause crystal cracking and mosaic broadening.

LV CryoOil™ is the best solution to your oil needs. It has the lowest viscosity of any available perfluoropolyether oil (1/10 that of Paratone oil and compatible to that of vegetable oil) and very low surface tension (less than 1/3 that of water). Consequently, a dip in this oil followed by gentle tapping to shake off excess can yield protective oil films on your crystals of as little as 10 µm thick.

LV CryoOil™ has extremely low vapor pressure, excellent chemical inert and excellent thermal stability.

Ordering

LV CryoOil™ comes in each vial 1.5 ml, enough to protect hundreds of crystals.

60166 LV CryoOil™ 1.5 ml

Disposable Tools: Earth-Friendly Sampling Tools

Minimize environmental impact with 100% plant-based PLA (polylactic acid) resin sampling tools. Commonly used in water bottles and food packaging, PLA resin has a proven lower carbon footprint than traditional plastic resins. Users truly do make a difference when they choose Earth-Friendly Spoons and Sticks for their work.

PLA resin is derived from naturally occurring sugar in fast growing plants like field corn. The growth of these plants and the manufacture of PLA resin uses up to 50% less nonrenewable energy and results in up to 60% less greenhouse gases than equivalent petroleum-based plastic resins.

Making everyday products with less environmental impact can benefit everyone now and in the future.

As part of a species that plans to be here for a long time, we think that's important, and hope you do too!

FEATURES:

- Made with 100% PLA resin, a material made from annually renewable plant resources
- Lower environmental impact from cradle to grave
- Offer multiple disposal options including industrial composting for biodegradability, incineration, recycling and landfill
- Help companies meet sustainability goals
- Non-sterile FDA grade material safe for food, drug and cosmetic contact
- Comparable strength and durability to polystyrene, polypropylene and other plastic resin sampling tools

► Earth-Friendly Long Handle Sampling Spoons

Long-handled spoons are ideal for acquiring samples from bottles, jars and other confined areas and helping to avoid personal contact with sample materials. A flat edge on the rim of each bowl allows fast leveling to collect and measure small amounts with accuracy. Available in three bowl sizes, each spoon is 17.8cm (7") overall length. Non-sterile and translucent in color.

Cat. #	Description	Qty.
72131	Sample Spoon 1.23 ml (¼ Tsp)	10/Pack
72132	Sample Spoon 2.46ml (1/2 Tsp)	10/Pack
72133	Sample Spoon 4.93 ml (1 Tsp)	10/Pack

► Earth-Friendly Wide Handle Sampling Spoons

Perfect for retrieving small, specific volume samples of powders or liquids. Wide handles let you grip firmly and provide just enough stiffness to easily sample packed powders and other firm materials. Their unique flat bottom shape allows convenient dual use as weighing boats to save time and assure accuracy. Non-sterile and translucent in color.

Cat. #	Description	Qty.
72134	Wide Handle Sampling Spoons 1.25 ml	10/Pack
72136	Wide Handle Sampling Spoons 2.5 ml	10/Pack

72143-10	Earth Friendly Sticks	100/Pack
72144-11	Earth Friendly Sticks	500/Pack

72988

72989

► Vibrating Spatula

A toothed wheel is turned by a finger making the spatula blade vibrate. This action allows for accurate adding of material. Plastic handle, stainless steel blade with PTFE coating. Style 1 is 7" (19cm) long, large blade.

Style 2 is 8¼" (21cm) long, small blade.

72988	Vibrating Spatula 1	each
72989	Vibrating Spatula 2	each

72983

► Balance Spoon

Stainless steel with PTFE coating. One end has a square trough, which holds about 1cc. 26.7" long.

72983	Balance Spoon	2/pk
-------	---------------	------

► Lab Spoon

5/32" (4mm) diameter stainless steel rod, flattened at one end to give a 8x51mm blade. The other end has a 13x25mm spoon. The blade as well as the spoon is coated with PTFE. Overall length 9" (229mm).

72987	Lab Spoon	each
-------	-----------	------

► Ellipso-Spoon® Samplers

Its unique shape means no more material loss!!!!

This utensil's specially curved shape permits contact with all corners of bottles and containers; therefore, no loss of material occurs. Crystals, powders, granulated and solid substances, and even thick liquids are easily retrieved and never fall back into the container. The Ellipso-Spoon® Sampler has a spoon end and a spatula end and is made from polished stainless steel.

Cat.#	Description	Length	Pack
72984-15	15x15mm Spoon, 5mm Dia Handle	15cm	each
72984-21	15x15mm Spoon, 5mm Dia Handle	21cm	each
72984-30	28x65mm Spoon, 8mm Dia Handle	30cm	each

► Flexible Spatulas

This is a sword type spatula, made from stainless steel with a wooden handle. This spatula is very thin and has bendability toward the end and very stiff towards the handle. It offers flexibility when working with soft materials, such as embedding waxes. The overall length is 6¾"

63321	Flexible Spatulas	each
-------	-------------------	------

► Mixing Spatulas

Made from polished stainless steel. They are ideal for applying wax to glass knives, colloidal adhesives to stubs, and for mixing embedding resins.

62127-10	Stainless Steel Spatula Set	4/set
62127-11	Stainless Steel Spatula #1	each
62127-12	Stainless Steel Spatula #2	each
62127-13	Stainless Steel Spatula #3	each
62127-14	Stainless Steel Spatula #4	each

For our complete line of Micro Tools and accessories, See Materials Science, pages 384-388 <<<<<

► Stainless Steel Spatulas

We offer a selection of stainless steel spatulas - a "must tool" when handling embedding wax.

63320-03	SS Spatula 3" Long x ⅞" Wide Blade	each
63320-04	SS Spatula 4" Long x 1½" Wide Blade	each
63320-05	SS Spatula 5" Long x 1¾" Wide Blade	each
63320-06	SS Spatula 6" Long x 7⁄8" Wide Blade	each
63320-08	SS Spatula 8" Long x 1⅞" Wide Blade	each
63320-10	SS Spatula 10" Long x 1⅞" Wide Blade	each
63320-12	SS Spatula 12" Long x 1½" Wide Blade	each

► Micro Spatula

PTFE coated nickel stainless steel wire with flat ends.

0.105" (2.7mm) dia.x8¼" (210mm) long. Tapered to ⅛" (3mm).

72980	Micro Spatula Tapered End	2/pk

72982	Micro Spatula Tapered End	2/pk
-------	---------------------------	------

► Micro Spoon and Spatulas

► Micro Spoon with Resin Coated Handle

A micro spoon and spatula made from nickel stainless steel and coated with a glazed finish resin on the handle. The wire is 0.103" (2.62 mm) in diameter. Overall length: 6½" (165 mm). The spoon end length: 1" (25 mm) x ¼" (6.35 mm) wide.

Cat.#	Description	Pack
62410-01	Micro Spoon with Resin Coated Handle	each
62412-01	Micro Spatula PTFE Coated End	each

► Micro Spoon Heyman Type A

A Heyman type micro spatula made from nickel stainless steel with a glazed finish. The wire diameter is 0.103" (2.62 mm). Overall length: 6¼" (159 mm). Flat end: 1¼" (31.35 mm) long. The spoon end: ½" (12.5 mm) long x ⅛" (3 mm) wide.

Cat.#	Description	Pack
62411-A	Micro Spoon Heyman Type A	each

► Micro Spoon Heyman Type B

A Heyman type micro spatula made from nickel stainless steel with a glazed finish. The wire diameter is 0.103" (2.63 mm). Overall length: 6¼" (159 mm). Sharpened bent end: 1½" (37.5 mm) long. V-Shaped formed other end: ½" long.

Cat.#	Description	Pack
62411-B	Micro Spoon Heyman Type B	each

► Heated Forceps/Tweezers System

This forceps warmer system is digitally controlled and allows for two pairs of forceps to be used simultaneously. The temperature of each pair of forceps can be set individually by an easy-to-read keypad. The unique design ensures that the arms of the forceps are always proportionately cooler than the tips, making them more comfortable to use.

The system consists of a low profile unit with an easy-to-read digital display and keypad and is powered by a multi-voltage power supply. The system and the forceps are supplied separately. The forceps are available in three sizes – 1 mm (red), 2 mm (yellow), and 4 mm (blue).

Specifications:

Dimensions:	125mm (W) x 200 mm (Depth) x 90 mm (H)
Temperature Range:	60 – 70°C
Power Supply/Rating:	100 – 240V, 50/60Hz
Weight:	750 g

Cat. #	Description	Tip Size	Length of Forceps
63202	Forceps/Tweezers System only	—	—
63202-01	Forceps/Tweezers	1 mm	150 mm
63202-02	Forceps/Tweezers	2 mm	150 mm
63202-04	Forceps/Tweezers	4 mm	150 mm

► Forceps Warmer

This forceps warmer is indestructible: An all metal, space saving unit. Three heated wells prevent wax build-up and allow for easy tissue orientation at the embedding centers.

63201-10	Forceps Warmer, 100-120 VAC, 50/60Hz, 0.5A; 5"W x 3½"D x 3" H	1
63201-20	Forceps Warmer, 220-240 VAC, 50/60Hz, 0.25A; 5"W x 3½"D x 3" H	1

► A Third Hand With Tweezers

These multi-positional self-closing tweezers allow both your hands to be free. It holds objects as if you had a third hand. Its heavy base prevents sliding. It is ideal for soldering.

62122-01	Third Hand With Tweezers	each
62122-04	Tweezers Only	each

► Demagnetizer

A Swiss made, powerful and compact demagnetizer unit. It demagnetizes tweezers and small tools within seconds. 110-120 VAC, 50/60 Hz. Measurement: 95x60x30 (3¾"x2½"x1½").

62083	Demagnetizer	each

► Pocket Reference Book

Compiled by Thomas J. Glover, 2nd edition. Sequoia Publishing Inc. A book with thousands of hours of research and hard work. This book contains almost every information that one needs to know, right on the fingertip, without searching hour after hour. Book measures 5½" x 3¼" x ⅝" thick with 542 pages and a soft cover.

31210	Pocket Reference Book	each
-------	-----------------------	------

► Measure for Measure

At last, a GREAT Conversion Factor Handbook!

- THE conversion factor handbook - 864 pages worth.
- Contains over 39,000 conversions for over 5100 different Units.
- Comprehensive SI reference (the International Standard)
- Thousands of foreign and ancient conversion factors.
- Accurate to 8 significant figures.
- Value listed in both standard and scientific notation.
- Handy 4"x6" size with a durable Lexotone cover.
- Nothing else like it on the market today
- A MUST for everyone!

31200	Measure for Measure Book	each
-------	--------------------------	------

► Scientific Calculator, Solar

Highly efficient solar panel requires only 50 lux, works with any available light. Will never need batteries. 10 digit LCD + 2 digit exponent. 15 levels of parenthesis. 67 functions including all the preprogrammed functions of Large Display Scientific Calculator 830003 plus; binary, octal decimal, sexagesimal, and hexadecimal conversion, and standard deviation. Comes with a soft carrying pouch, instructions and a button cell battery.

Dim: 5¼" x 2¼" x ⅞" (133 x 70 x 11 mm).

Weight: 2 oz (57 g).

70090	Solar Scientific Calculator	each
-------	-----------------------------	------

► Metric Converter

Automatically converts English to metric and metric to English for measurements of volume, area, length, temperature, or weight. Three programmable keys store any additional conversion factors that are desired. 8 digit LCD. Can function as a standard calculator. Comes with a compact hard folding case, full instructions and a button cell battery. Measurements: 4¼"x2½"x½". Weight: 2oz.

70092	Metric Converter	each
-------	------------------	------

► Checker®

Modern Substitute for Litmus Paper with Replaceable Electrode

The industry's latest electronic pH tester Checker® supplies you with fast and accurate readings on a large LCD. Unlike other pH testers, the Checker® electrode can be changed and any pH electrode of different shape or size can be used. Checker® is also suitable for checking electrodes in pipes and tanks and various laboratory applications. The Checker® pH testers now include standard gel-filled electrodes with built-in BNC or screw type connectors.

Features:

- Large and easy-to-read LCD.
- High accuracy with 0.01 pH resolution.
- Two point fast and accurate calibration.
- Usable with virtually any pH electrode.
- Battery life: 3,000 hours of continuous use.
- Wide range: 0.00 to 14.00 pH.
- Replaceable pH electrode.

Order your Checker® in accordance to your needs and the type of electrode which is most suitable for your application:

- Checker® 1: Stick model Checker®, with replaceable HI 1270 screw-type, combination pH electrode.
- Checker® 2: Stick model Checker®, with replaceable HI 1207 professional full-length gel-filled pH electrode and screw-type connector.

► Piccolo Plus pH Meter

A new Improved 0.01 pH Accuracy, Replaceable probe & Temperature Read-out

Piccolo is a revolutionary pH-meter with a 4-in-1 "Electrode + Amplifier" design. Conventional pH meters are susceptible to the weak high impedance signal which makes the electrode, connector, cable and meter delicate and vulnerable to noise, humidity and dirty environments. Piccolo has overcome these problems with a pre-amplified electrode delivering a strong signal to the meter.

Piccolo has the same precision as a lab-grade meter with a resolution and accuracy of ±0.01 pH, at a fraction of the price.

Piccolo Plus comes complete with a 4-in-1 Ph electrode, pH 4 and pH 7 buffer solutions, a small calibration screwdriver in a rugged carrying case.

Specifications:

Range:pH/°C 1.00 to 13.00 pH/0.0 to 70°C
Resolution:pH/°C 0.01 pH/0.1°C
Accuracy:pH/°C (@20°C/68°F) ±0.01 pH/ ±1°C
Typical EMS Deviation:pH/°C ±0.2 pH/ ±1°C
Calibration:Manual 2 points through trimmers
Battery Type/Life:3x1.4V/100 hours approx. continuous use
Environment:0 to 50°C (32 to 122°F); RH 95%
Dimensions:265 x29x15mm (10.4x1.2x0.6")
Weight400g (14.1 oz) with carrying case

Features:

- Easy to use: Battery operated and weighing only 100 grams.
- Replacement Electrode: The detachable electrode has sealed electrons to protect from humid and dusty environments.
- Automatic Temperature Compensation (ATC): A temperature sensor housed in the electrode provides ATC from 0 to 70°C (32 to 144°F)
- Temperature Read-out: A thermometer built inside a pH meter! Accurate temperature read-out directly on LCD.

► pH Indicator Papers - Test Papers

► 1. pH-Fix™ Universal Indicator Sticks

In contrast to conventional indicator papers, the indicator dyes of pH-Fix sticks are substantially bound to the cellulose fibers. As a result, the possibility of the color bleeding, even in strongly basic solutions, is avoided. Furthermore, there are the following advantages:

- Measurement of pH value is possible even in unbuffered or very weakly buffered solutions, since the sticks can be left in the solution until the final color change is completed.
- Test samples are not contaminated by the indicator dyes.
- Colors of the individual color fields cannot run into each other, thereby allowing for a more precise comparison with the color scale.
- Recently developed indicator dyes guarantee a sharp differentiation between the individual pH values and a clear and easy comparison to the color scale.
- Sample application - four different indicator papers 6x5 mm are sealed on to a plastic strip 6x85 mm. The strips are sufficiently long to avoid contact between the fingers and the test sample.

Cat.#	pH Range	pH Gradation	Pack
65510-10	0.0 - 14	1.0	100/bx
65510-15	0.0 - 6.0	0.5	100/bx

65510-60	7.9 - 9.8	0.2/0.4	100/bx

pH-Fix™ Indicator Sticks are packed in a box of 100 sticks 6x85 mm.

► 2. PEHANON® pH Indicator Strips

This is a series of pH indicator papers where the indicator and color scale are combined on a single strip. They permit a fast, convenient and accurate pH value determination since they eliminate the necessity to compare color against a separate scale. This presentation also permits the pH measurement of colored solutions and suspensions, since the color of the test solution acts on the comparison scale in the same manner as on the indicator field. The PEHANON® series covers the entire pH range from 0 to 12 with one universal paper and 13 narrow ranges which overlap to permit the user utmost selectivity for the range suited to each particular need.

The indicator zone (unprinted field) is in the center of the strip, the comparison fields above and below same. The strip is submerged in the solution for about three seconds so that all colors zone are wetted whereby the center field changes color according to the pH value of the solution and is then compared against the color field bearing the corresponding pH value imprint. An invisible hydrophobic barrier just above the top color field prevents capillary action of the test solution beyond that point and corrosive, toxic or otherwise noxious liquids do not come in contact with fingers which remain clean and dry.

Strips are packed in a plastic box, containing 200 strips.

Cat.#	pH Range	pH Gradation	Pack

► **Anemometer**

Perfect for use in fume hoods, environmental studies, or for air flow check. A highly accurate, hand-held unit, only 3 ozs. Allows you to select readout in knots, feet per minute, meters per second, or miles per hour. To insure maximum sensitivity and accuracy, the turbine is suspended on sapphire jewel bearings, and its rotation is sensed by an infrared light beam, which adds no friction. The resulting signal is processed electrically by an LSI (Large Scale Integrated) circuit. Powered by 3 "AAA" batteries included. Measurements: 4.5"x2.5"x1.5".

72082 Anemometer each

► **Humidity/Temp Monitor**

A dual monitor for temperature and humidity in one compact and large 3/4" digital display unit. Useful for desiccators, incubators, refrigerators, fume hoods, EM labs, stock rooms, clean rooms, chemical storage areas, warehouses, etc. Recalls min/max temperature and min/max humidity readings over any time period. Stand or wall mounted. Comes with two "AAA" batteries which last one full year. Temperature range 0/50°C and 32/122°F in 1°C or F resolution with an accuracy of +/-5%RH (at 59°F to 104°F). Dimensions: 3/4"x2 1/2"x1/2". Weight: 2.8 oz.

72085-01 Humidity/Temp Monitor each

Temperature Tester; Temp-Pen See page 851 >>>>

► **FreezGuard™ Alarm**

Alarm will Sound for Up to Three Days

Prevent costly, time consuming sample loss with this practical battery operated system. The FreeGuard™ Alarm monitors freezers and coolers and detects any variance from temperatures between -20°C and 13°C (-5°F to 55°F), ±1°C, which are preset by the user. The resonant alarm will continue to sound for up to three days if the temperature falls out of the pre-set range. Should the temperature correct itself, an LED will indicate that a variance has occurred. The alarm can be reset manually. A beep will signal when the 9V battery (not included) is low. For added protection, and extra life, a second battery can be connected. The unit mounts with self-adhesive tape or screw. Unit comes with a 3 meter probe lead, and measures 86 W x 35 D x 26 mm H (3 5/16" x 1 1/2" x 5 1/16"). The weight without the battery is 144 g (5.1 oz).

72092-10 FreezGuard, Celsius Each
72092-20 FreezGuard, Fahrenheit Each

► **Digital Radiation Meter**

Small, light weight; sensitive enough to detect miniscule amounts of gamma, beta, or X-rays. Excellent for scanning lab work areas and clothing for trace of radioactivity after clean-up or as a personal monitor in areas of potential radiation exposure. Uses a Geiger Mueller tube detector calibrated in accordance with NIST and NRC Standards and regulations. The meter registers from 0.1 to 10 mR/h (mili Roentgen). Audible clicking will increase with the amount of background radiation. Beeping begins at 20mR/h increasing in frequency in proportion to the radiation level. Powered by a 9-volt battery (included). Measurements: 6 5/8"x3 1/4"x1 3/8". Weight 8.5 oz.

72084 Digital Radiation Meter each

► **eCount**

Precise Electronic Counter and Sharpie® Marker Combined in One

- Save** - Power off button helps save battery life
- Verify** - Each count verified with a beep or LED flash
- Accurate** - Count up and then count down to verify count accuracy
- Easy To Read** - Display up to 32 counts
- Memory** - Keep up to 32 different counts in memory
- Secure** - Disable counter and use the marker to write notes and totals

Cat.#	Description	Unit
70309-01	eCount	Each

► **Count Up - Count Down Timer**

Count up or down for 100 hours in intervals of 1 second. In the count down mode its unique feature tells you how much time has elapsed after the alarm sounds. Its memory allows for the repeat of a cycle just completed. Alarm clock mode. It comes complete with a built in stand, pocket clip, button cell battery, and magnet. Dimensions: 2 3/4"x2 3/4"x1/2". Weight: 1.8 oz. The timer is also available with a N.I.S.T. traceable certificate of compliance.

72603	Count Up-Count Down Timer	each
72603-02	Count Up-Count Down Timer, Certified	each

► Time Tracker: Regular and Mini

The Standard unit makes it easy to monitor your process from a distance! Designed like a traffic signal so the meaning of each light is intuitive. Green light means less than half done, yellow means more than half done, and red means finished. Program the time and select from six different audible alerts. Two-line LCD with 8 mm high characters, 10 characters across. Operates on 110 VAC adapter (included). The unit measures 112 x 118 x 230 mm.

BASIC FEATURES:

- Programmable time
- Six different audible alerts with LCD display
- LCD with 8mm high characters, 10 characters across

The Mini unit is based on the original but it is more economical and easy to use

- Total alarm ranges from 5 to 120 minutes in 5 minute increments
- Visual indicator features lighted dome. Green Light during countdown; yellow for the designated "warming" time; red when time has expired
- Volume control and audible warning alarm
- Requires 3 AAA batteries, not included

The unit measures 83 x 83 x 121mm

Cat. #	Description	Qty.
41150-10	Time Tracker	each
41150-20	Time Tracker Mini	each

► Talking Timer

A unique timer featuring a clear human voice that makes announcements which can be heard from any where within the lab. In the count-down mode, Talking Timer will announce the remaining time every hour. In the final hour, it will announce the time remaining every 10 minutes, every minute in the final 10 minutes, and every second in the final 10 seconds. A choice of 6 distinctive final alarm sounds make it easy to identify which Talking Timer has alarmed should you wish to use more than one. In the dark, in the clock mode, you can touch any button and the Talking Timer will announce the time. You also have the option of turning the voice off.

Other features include a large $\frac{3}{4}$ " display with icons to indicate various modes, such as voice off/on, count-down/count-up, etc. Recalls the previous count-down setting for immediate reuse and memorizes other frequently used setting for reuse at any time. Counts up or down to 24 hours. Has a built in stand for bench top use, clips to a pocket, or sticks to any metal surface with a magnetic back. Button cell batteries are included. Measures: $3\frac{3}{4}$ "x2 $\frac{1}{2}$ "x1". Weight 2.2oz. The timer also available with a N.I.S.T. traceable certificate of compliance.

72601-01	Talking Timer	each
72601-02	Talking Timer Certified	each

► Desk Tally Counter – Lab Counters

A. One Counting Unit – A chrome plated with counter with a flange (2 $\frac{1}{2}$ " dia.) for desktop mounting. The recording lever is on the right side and the reset knob on the top. The counter is ideal for serial sectioning work. Four digit place.

70310 One Counting Unit Tally Counter each

B. Two Counting Units - A Counter with two counting keys each with 0 to 999 range with a single reset knob it comes with removable tabs for top identification.

70310-02 Two Counting Unit Tally Counter each

C. Six Counting Units - A counter with five keys and one totalize unit (0 to 999), which records the total number of strokes made on other keys. At 100 increments, totalizing unit rings bell. When totalizing unit records 100, each figure corresponding to individual keys automatically displays percentage. Two reset knobs, removable tabs on top of counter provide area for identification of classification being counted.

70310-06 Six Counting Unit Tally Counter each

► Stop Watch; Large Display

Very accurate with a click stop control button. Large LCD display. Rugged ABS plastic case. It counts up to 60 minutes in 1/100th second resolution. It also has a split interval clock and calculator functions. Comes complete with a leatherette case. Measures: 3"x2 $\frac{1}{2}$ "x $\frac{1}{4}$ ". Weight: 2.6 oz.

72091 Stopwatch each

► 5 Channel Timer

4 independent channels each of which counts up or down for any interval from 1 second to 100 hours. Its extra large display indicates channels that are in use. Each one has a distinctive 1 minute alarm. Automatically begins to count up to indicate time elapsed after count down reaches zero. Its memory recalls last timer setting for reuse. Also has a clock mode. Comes complete with a stand, pocket clip, and magnet. Dimensions: 2 $\frac{1}{8}$ "x2 $\frac{1}{2}$ "x $\frac{3}{16}$ ". Weight: 2oz. The timer is also available with a N.I.S.T. traceable certificate of compliance.

72600 Timer, 5-Channel each

72600-02 Timer, 5-Channel, Certified each

Darkroom Timer, see Photography Section, page 740 >>>>

► Temperature Tester; Checktemp 2

Checktemp 2 is a high accuracy thermometer with a folding 110mm long probe. The probe has been specially designed to fold at different angles for measurements in difficult places. Checktemp 2 utilizes a hightech NTC thermistor sensor to measure the temperature. Unlike most other electronic thermometers, Checktemp 2 has a unique Calibration Check feature. Simply open the battery compartment and turn the Cal-Check switch on. The display will show a value between -0°C and +0.3°C. This means your meter is still within specifications of +/-0.3°C. Checktemp 2 is destined to make glass thermometers obsolete. Glass thermometers contain lead and the measurement media is either mercury or alcohol. These materials are undesirable in today's work place.

Specifications:

Range:	50.0 to 150°C	Environment:	0 to 50°C, RH 95%
Resolution:	0.1°C	Dimensions:	150x30x20mm (5.9x1.2x0.8")
Accuracy at 20°C:	+/-0.3°C (-20-90°C)	Weight:	60g (2.1 oz)
Typical EMC Deviation:	+/-0.3°C	All Checktemp 2 comes with 1.4V battery.	
Probe:	Folding, 110mm (4.33") x3mm (0.12" dia.)	Factory Calibration Certificates: Checktemp 2 can be calibrated against NIST standards.	
Battery Type/Life:	1x1.4V/3000 hours		
.....Approx. continuous use			

72086-02	Checktemp 2 Complete	each
72086-2C	Checktemp 2 Complete w/certificate	each

► Microwave Leakage Detector

Evaluate the RF emissions of mobile phone, radio and TV transmission towers, wireless camera, Wi-Fi and LAN detection and installation, microwave oven leakage and other environmental safety concerns. Radio Frequency (RF) is the range of electromagnetic frequencies above the audio range and below infrared light. Features maximum and minimum hold, an audible alarm, and a zero adjustment to eliminate background EMF. The display also indicates overload and low battery. Comes with a soft carrying case and standard 9V battery, which provides approximately 100 hours of use.

Dimensions: 5¼" x 2¼" x 1¼" (130 x 56 x 38mm). Weight: 6oz (170g).

Specifications

Display:	3½ digits, maximum reading 3999	Accuracy:	±2dB @ 2.45GHz ±50MHz
RF Power Density:	0.003~2.700 mW/cm²	Axis:	Single
RF Frequency:	50MHz ~ 3.5GHz	Alarm:	@ readings >1mW/cm²
Microwave Frequency:	2450MHz	Operating Temp:	41°F ~ 104°F (5°C ~ 40°C)
Resolution:	0.001mW/cm²	Operating RH:	<80% RH

72083-00	Microwave Leakage Detector	each
----------	----------------------------	------

► Smart Tweezers

Smart tweezers is a LCR meter in a set of tweezers. The Smart Tweezers feature a unique, patented mechanical and electronic design that integrates a highly accurate digital multimeter with built-in high precision SMD probes and a display.

FEATURES:

- Light weight – 10 times lighter than conventional tools
- Flexible user interface that allows the user to configure default settings
- Continuity/Open testing-beeper sounds when a resistance reading is below a threshold or to indicate an open circuit
- Measures DC voltage up to 8 volts
- Measures AC voltage via an oscilloscope-like picture
- Measures inductance, and resistance.
- Ergo design convenient control
- Tips are made from gold-plated, non-magnetic stainless steel.

Smart Tweezers are available in two versions: straight and curved tips

72907-01	Smart Tweezers, Straight Tips	each
72907-02	Smart Tweezers, Curved Tips	each

► Vacuum Pick-Up System

Handle delicate miniature objects without scratching, breaking or pinching. The system avoids contamination of parts and performs functions that tweezers does such as sorting, picking up, holding, carrying, and trans-ferring. As well it is an alter-native way for handling cover slips without the use of forceps.

Features:

- Picks up grids faster and easier than tweezers –
- Good suction (produces 14" Hg vacuum and an air flow of 125 cubic inches/minute); Can pick up aluminum stubs.
- Quiet operation.
- Can be used as a tool to pick up glass slides, cover slips, wafers, thin film samples, etc.
- Eliminates all tweezer damage to grids.

Double-insulated (115–120V, 60Hz, 2-wire). Light weight, completely assembled and ready for immediate operation as soon as the proper tip is selected and installed. Vacuum is created at the tip by placing the finger over the control hole on the anodized aluminum vacuum pen. To break the vacuum, just remove your finger from the hole. The vacuum generator measures 4½" (H) x 2¼" diameter (114 x 70mm), and it has an adjustable vacuum pressure control from 1" Hg to 15" Hg.

Vacuum Pick-up System complete set: Vacuum Generator, Aluminum Vacuum Pen, Five Vacuum Tips, Set of eight Rubber Vacuum Cups (size ranging: ⅜", ⅙", ½", ⅞", ⅜", ⅝", ¼" and ⅜"), an In-Line Filter, and 4 ft (122cm) of Vacuum Tubing.

► Pen Vac™

Pen-Vac™ is a new improved way to handle small, flat surface objects. Beside the electronics assembly industry, jewelers, model builders etc. Pen-Vac is ideal for EM work as well. It can be used to handle grids, pick up stubs, align membranes, work with glass slides, cover slips and much more. Holds up to one minute.

Features:

- Lifts up to 50 grams.
- Totally self-contained vacuum.
- Light-weight, less than one ounce.
- Fits in your pocket like a pen.
- Brushed aluminum body.
- Optional storage compartment for vacuum tips and cups.
- No power supply needed.
- Available in various sizes.
- Interchangeable vacuum probes.

Pen-Vac™ comes with:

- A variety of Vacuum Probes, complete with a vacuum cup attached and it is available with plastic or aluminum hubs. Straight and angled to suit your applications. The stainless steel needle portion of the probes are one-half inch long.
- Vacuum Cups come in a wide range of materials. We offer the Static Dissipative and the Conductive Cups that provide ESD protection for electrostatic discharge of sensitive components. Cups comes in three sizes: ⅜" (3.17mm); ¼" (6.35mm); and ⅝" (9.52mm).

Set consists of:

One Pen with 6 Probes and Cups. (6 Probes: 3 angled, ⅜", ¼", ⅝" and 3 straight ⅜", ¼", ⅝")

Illuminators, Magnifiers, Microscopes, and Graticules

Electron Microscopy Sciences is proud to announce the introduction of the highest quality line of compound and stereo microscopes in the market place today. The microscopes incorporate advanced technology into a durable, cost effective solution. All of the microscopes have:

- A Modern frame with enhanced stability for image documentation
- An Ergonomic single hand stage/focus control to minimize fatigue
- A Robust stainless steel/brass focus mechanism endures high use
- Brilliant images resolved with superb optics
- Versatile performance — multiple techniques available, including polarization with First Order (Full Wave/Red) Retardation Plate, phase contrast, dark field and more

We are convinced that our Microscopes are the best in the marketplace and at the right price.

➤ Compound Light Microscopes: Upright and Inverted

➤ BC Series Upright Compound Microscopes

We listened to the needs of experienced researchers and designed the BC Series Upright Compound microscopes to perform in demanding environments. The BC Series incorporates advanced technology into a durable, cost effective solution.

KEY SPECIFICATIONS

- **Optical body** - Seidentopf design inclined 30°; 55 to 75 mm interpupillary adjustment, 360° rotation
- **Eye pieces** - 10X wide field; Focal Length 25mm, Field Number 22 mm.
- **Turret** - 4 position ball bearing, reversed, with positive click stops
- **Focusing** - 0.002mm markings, adjustable tension control & focus stop prohibits drift, protects specimen and objectives
- **Mechanical stage** - 8.25"(209mm) X 5.5"(140mm) with vernier scale; Range of motion 75x52mm; Low-positioned right hand coaxial control knobs for one hand focusing; slide holder
- **Condenser** - 1.25 N.A. 2 element Abbe with iris diaphragm and focusing
- **Kohler Illumination** - field diaphragm, 20W 6V Halogen with dimmer
- **Dimensions** - (WHD) (in/cm) 7.8 x 16.5 x 10.9 / 20.0 x 41.9 x 27.8 Gross Weight (lb/kg) 21/9.5

The microscope Includes: dust cover, immersion oil, two color filters, spare halogen lamp and fuse; phase centering telescope & green filter

➤ Inverted Microscope — A New Level of Inverted Microscopy

EMS introduces a high optical standard on a versatile frame at budget conscious levels. The long working distance condenser (55 mm) and objectives (six supplied) provide brilliant resolved images in both phase contrast and brightfield techniques. The condenser swings out to accommodate roller bottles or other large cultivation vessels.

- Affordable - EMS delivers exacting performance for routine research without consuming your budget
- Versatile - trinocular body for image documentation; condenser design for observation of virtually all vessel types; mechanical stage with inserts for well plates and petri dishes; three objectives each for phase contrast and brightfield
- Durable - an all metal frame with an all metal focusing mechanism ensures this instrument will perform well beyond the industry leading 5 Year Warranty

KEY SPECIFICATIONS

- **Optical body** - Seidentopf design inclined 30°; 55 to 75 mm interpupillary adjustment, 360° rotation
- **Nosepiece** - quintuple, ball bearing
- **Eye pieces** - 10X, Focal Length 25mm, FN 20 mm.
- **Focus mechanism** - adjustable tension control to prohibit drift and adjustable up-stop to protect objective lenses; dial markings at 0.002mm increments
- **Condenser** - 1.25 N.A. 2 element Abbe with iris diaphragm and rack and pinion focusing; 55mm optical working distance, swing out or bright field
- **Kohler Illumination**, field diaphragm, 30 watt, 6 volt Halogen bulb with electronic dimmer
- **Mechanical stage:** (WxD) (in/cm) 8.25 x 8.875 / 20.95 x 22.54; Right-hand Coaxial dropdown X-Y Control Knobs; Four Inserts for: well plates (13 x 8 cm and 8 x 5 cm) petri dish (6.8 cm diam.) and slides (7.5 x 3.5 cm and 7.5 x 2.5 cm)
- **Dimensions:** (WHD) (in/cm) 7.7 x 18.4 x 13.8 / 19.5 x 46.8 x 35; Gross Weight: (lb/kg) 25/55

working distance is 125mm or 5"

Microscope Includes: phase centering telescope and phase annulus sliders, dust cover, color filters (blue green and frosted), spare halogen lamp and fuse.

► Fluorescence Illumination for Live Cell Microscopes

The EMS Epi-fluorescence Inverted Microscope allows you to quickly locate fluorescent tagged items and save room in your budget. The BC Series Epi Inverted uses a single band filter cube and six objectives to deliver a brightly resolved image for identifying proteins and other specimens within a cell.

- Obtain sharp images through the bottom of a culture vessel because of the superior long working distance phase contrast objectives
- Examine large roller bottles or flasks with a swing out condenser - 7" (180mm) bright field working distance or 2" (55 mm) phase contrast working distance
- Custom filter sets available

KEY SPECIFICATIONS

- Optical Body - Seidentopf design inclined 30° with 55 to 75 mm interpupillary adjustment, 360° rotation
- Nosepiece - Quintuple ball bearing reversed
- Eye pieces - 10X; Focal Length 25mm, FN 20 mm.
- Focus mechanism has adjustable tension control to prohibit drift and adjustable up-stop to protect objective lenses; dial markings at 0.002mm increments
- Condenser - 1.25 N.A. 2 element Abbe with iris diaphragm and rack and pinion focusing
- Kohler Illumination, field diaphragm, 30 watt, 6 volt Halogen bulb with electronic dimmer
- Mercury Lamp and Electronic Power supply with elapsed time counter, Type: HBO 100W/2
- Fixed stage: (WxHxD) (in/cm) 8.25 x 0.59 x 8.875 / 20.95 x 1.5 x 22.54
- Optional Attachable Mechanical Stage: Right-hand Coaxial dropdown X-Y Control Knobs
- Dimensions: Trinocular: (WHD) 9 x 22.5 x 21.5 (16 on BC-2A1) / 22.86 x 57.15 x 54.61 (in/cm)
- Gross Weight: 60/27.27 (lb/kg)

Camera Systems

EMS offers three types of camera systems for documenting resolved microscopic images.

Each system is fully integrated with:

- software for image analysis
- optical adapters to obtain the image in the correct focal plane
- cables for connection to computers, monitors or projectors

All components are conveniently packaged under one part number for easy ordering

Description	Stereo	Upright Compound	Inverted Compound

EVOS®

Digital Microscopes

The ground-breaking design and revolutionary performance features of the EVOS® microscope line make high-quality imaging easier than ever before. Featuring LED illumination, integrated hardware/software, no bulbs, no alignment, no on-going costs or maintenance, EVOS® microscopes offer extraordinary comfort and ease of use. These instruments can be used in a hood or anywhere in the lab. The following three products are conveniently put together to offer the most common needs of most users. To top it off, you can also build a customized EVOS® microscope and order individual parts applicable to your unique needs!

change the way you work!

Small Footprint

Specially designed to fit nicely inside cell culture hoods and biosafety cabinets, EVOS makes delicate cell isolation and other sensitive procedures easier, safer, and more efficient. You can now work comfortably and effortlessly for extended periods of time inside controlled environments with precision and accuracy.

**See how it works...
Learn how to do it...**

We've added video content to our website to help you get to know our latest products even better!

Stop by and see what it's all about.

Patented LED Light Cubes

At the heart of EVOS is its unique patented LED light cube (US Patent 7,502,164) that outputs high intensity over a short light path (see light path at right) for maximally efficient fluorophore excitation.

- Precise digital illumination level controls
- Supports up to 4 fluorescence channels simultaneously
- 50,000+ hour lifetime
- Instant ON/OFF, no shutters
- Environmentally safe, non-hazardous, mercury-free LED bulbs
- 15X less power consumption than conventional fluorescence microscopes
- Easy installation and no maintenance

Applications and Software

EVOS microscopes are equipped with an integrated computer and imaging software that were designed and programmed for real-life imaging. Everything you need to acquire, manipulate, save, and transfer an image can be done right from the microscope in one place, with one instrument. A toolbar provides an ever-growing list of added features – time-lapse video, cell counting, image overlays, automated transfection images, scalebar, and the list continues to grow...

Time-Lapse

Set interval and duration of a time-lapse experiment

One channel per experiment, 10-seconds minimum acquisition interval

Stable, consistent LED illumination over the duration of the experiment

Pause during acquisition to review collected image sequence, adjust stage or illumination settings, etc.

Create AVI movie files that can be played on any computer with one click

Manual Cell-Counting

Count up to six cell types

Assign numbers for each cell type and place over each cell when counted

Numbers can be repositioned, deleted, hidden, and captured with each saved image

Place gridlines and results table with saved image

Transfection Analysis

Capture and overlay one transmitted light image and one fluorescent image with 1-click

Works with any one of the fluorescent light cubes installed on EVOS fi microscope

Allows users to adjust illumination intensity for both images prior to launching acquisition sequence

EVOS[®] fl

- » Fluorescence, brightfield, phase contrast
- » Patented LED fluorescence light cube technology
- » Supports up to 4 fluorescence channels at a time
- » 15-inch high-resolution LCD display
- » Monochrome and color camera options
- » Fits inside cell culture hoods and biosafety cabinets
- » Integrated computer and advanced imaging software/features

**Your science is hard.
Your microscope should be easy...**

Throw away the definition of “microscope”... and start over. Science needs tools that help set the pace, not hold it back. Isn't it time the equipment works for you – so you can get your data quickly and move on?

The ground-breaking design and revolutionary performance features of the EVOS fl microscope make high-quality fluorescence imaging easier than ever. Capture, overlay and save multi-channel fluorescence images in just seconds — in one place, with one instrument.

Dimensions	Operating height: 57.8 cm (22.75-in)		
	Storage/transport height: 32.4 cm (12.75-in)		
	Depth: 47.0 cm (18.5-in) Width: 35.5 cm (14.0-in)		
Weight	15.3 kg (33.7 lbs)		

**High-quality
fluorescence imaging
has never been easier!**

EVOS[®] xl core

- » Brightfield and phase contrast
- » Designed for repeated-use in routine tissue culture/live cell applications
- » LED illumination for transmitted light
- » 12-inch high-resolution LCD display
- » Fits inside cell culture hoods and biosafety cabinets
- » Embedded operating system with basic imaging features for capture and save to USB flash drive
- » Affordable, unmatched price-to-performance value

Comfort without Compromise

The EVOS xl core makes cell culture microscopy remarkably easy. Uncomfortable eyepieces have been replaced with a high-resolution camera and display, but not only that... the LCD display is up high for easy viewing and the stage and controls are placed low so your hands can rest on the table.

Need To Save Images?

With the EVOS xl core microscope, images can be saved with the push of a button to a USB flash drive - no need to wrestle with computers, cables or external software.

Need To Move It Around?

The all-in-one design is lightweight and boasts a small footprint. You can throw it in a hood or move it to an open space on the bench. Better yet, there is no alignment, no bulbs to change and the flip of one switch turns everything on.

EVOS xl core allows you to concentrate on what's important – your work. It's easy, affordable and powerful. Now, that's comfort without compromise!

- ALL-IN-ONE digital microscope workstation
- Eyepieces are replaced with a 12.1-inch high resolution display
- High performance phase contrast optics are integrated with a high-resolution digital camera
- Integrated imaging software runs everything via mouse or with fingertip controls
- Images can be saved to a USB flash drive

Technical Specifications EVOS xl core

Optics	Infinity-corrected optical system; RMS-threaded objectives with 45 mm parfocal distance

cell-culture imaging

EVOS[®] xl

- » Brightfield and phase contrast
- » LED illumination for transmitted light
- » 15-inch high-resolution LCD display
- » Fits inside cell culture hoods and biosafety cabinets
- » Integrated computer and advanced imaging software and features
- » More optics selection than EVOS xl core
- » Optional arm rest (on either side of microscope) for cell isolation procedures

Quality. Flexibility. Design. Capability.

The EVOS xl digital inverted microscope combines advanced ergonomic design, an on-board microprocessor, LED illumination, fully integrated color camera, and a highly streamlined user interface to deliver unprecedented flexibility and ease-of-use.

EVOS xl is designed to make cell culture microscopy as comfortable, reliable and effective as possible. Our commitment to this design is visible in every feature – from the high-resolution 15-inch LCD display to the compact footprint and integrated computer and imaging system.

► Compound Brightfield Microscopes

Clinics, Educators and Researchers Want These.

KEY SPECIFICATIONS

- Eye pieces - 10X wide field; Focal Length 25mm, FN 20 mm.
- Turret - 4 position ball bearing, reversed, with positive click stops
- Optical body - Seidentopf design inclined 30°; 360° rotation, 55-75mm interpupillary adjustment
- Mechanical stage – (in/cm) 5.25 / 13.5 x 5 / 12.5 with vernier scale; Range of motion 75x35mm; right hand coaxial control knobs; slide holder holds two slides; double plated for durability

- Focusing - 2µm markings, adjustable tension control prohibits drift, focus stop protects specimen and objectives
- Condenser - 1.25 N.A. 2 element Abbe with iris diaphragm and focusing
- Illumination - 20W 6V Halogen with dimmer
- Dimensions - (WHD) (in / cm) 7.5 x 15.4 x 12.4 / 19.2 x 39.2 x 31.6 Gross Weight (lb/kg) 13 / 5.9
- Microscope Includes: dust cover, immersion oil, two color filters, spare halogen lamp and fuse; on phase contrast: phase centering telescope & green filter

Designed for ease of use, this CP Series allows a novice to approach the microscope and quickly analyze their specimen. Void of complicated features, the CP Series offers pre-centered lenses and condensers, preventing operator confusion.

High eye point eye pieces, a rear facing turret for easy slide handling and a choice of lenses that provide large, flat fields of view offer brilliant images and outstanding resolution.

Built to take rough handling, the CP Series' frame, focusing and stage mechanisms are all metal construction because plastic wears over time. Spring loaded objectives protect against abuse but a focus stop control prohibits stage ramming accidents. Anti fungal protection and all glass light collectors ensure these microscopes will last.

► Education Microscopes

EMS keeps prices low, quality high.

These microscopes virtually eliminate down time and our optics deliver brilliant images.

Choose from the following options for the right equipment to meet your needs:

- **Illumination:** the popular rechargeable LED, or 20W halogen bulb or an incandescent bulb
- **Monocular or Binocular heads or Teaching heads.** Also, video systems are available to project images on a screen
- **Three objective system, Jenco CP135-M3, has 4X, 10X and 40X, or four objective system includes the 100X oil**

DIN Objective Magnification	Numerical Aperture (mm)	Field of View w/10X E.P. (mm)	Working Distance Brightfield DIN Achromatic (mm)
4x	0.1	4.5	27
10x	0.25	1.8	6.6
40x	0.65	0.45	0.57

► Upright Compound Microscope with Dual View Body

Body: Dual Optical Body allows two people to observe simultaneously, inclined 45°, able to rotate a full 360° with 55mm to 75mm interpupillary adjustment. Left Eye diopter adjustment of -5 to +5

Nosepiece: Quadruple ball-bearing nosepiece with positive click stops and smooth operation

Eyepieces: 10X wide field, Focal Length 25mm, Field F 18mm

Stage: Size 140mm X 135mm, range of motion 75mm X 50mm Integrated mechanical stage with vernier, Low-position Coaxial Control Knobs Removable spring clip slide holder

Focus Mechanism: All stainless steel and brass gear train system Adjustable Tension Control to prohibit drift; Adjustable Up- Stop to protect slides, specimen and lenses Coaxial coarse and fine adjustments with dial markings at 0.002mm increments

Condenser: 1.25 N.A. 2 element Abbe Condenser with iris diaphragm Rack and Pinion focusing Illumination: 20 watt, 6-volt Halogen bulb with electronic dimmer 120-volt operation, Fuse: ½ Amp, located in the base

Finish: Bone colored, baked-on enamel paint with "stipple" finish

Dimension: (WHD) (in/cm) 7 x 19 x 8.5 / 17.8 x 48.25 x 21.5

Body Weight: 20 lb. / 9 Kg.

Microscope Includes: Mold protection throughout the Optical body, Mirror assembly (for use where electricity is not available) dust cover, immersion oil, two color filters, spare halogen lamp and spare fuse.

► Fluorescence Microscope

Fluorescence Observation Brilliant and Affordable

Incorporating system versatility with outstanding Infinity-corrected optics, the JC Series of microscopes offers an affordable Fluorescence module to meet this specialized need.

- **Filters** - two cubes with single band exciters easily slide into place and combine with the HBO illuminator to deliver intense, high contrast images
- **Optics** - Infinity-corrected planachromat lenses guaranty brilliant, color corrected, high contrast images
- **Robust** - all metal frame and focus mechanism endure high use while providing a stable platform minimizing vibration

- **Mechanical Stage** – Unique Locking Stage remains at focus even when pressed, saves time in changing specimens
- **Versatile performance** - multiple techniques available, including brightfield, polarization, phase contrast with slot built into condenser for slider and dark field

KEY SPECIFICATIONS:

- **Optical body** - Seidentopf design inclined 30°; 48 to 75mm interpupillary adjustment, 360° rotation
- **Eye pieces** - 10X wide field; High Eyepoint, Field Number 22 mm.
- **Turret** - 5 position ball bearing, reversed for unrestricted access, with click stops
- **Mechanical stage** - 6.25"(156mm) X 5.4"(138mm) with vernier scale; Range of motion 76x54mm; right hand coaxial
- **Focusing** - 0.001mm markings, adjustable tension control & focus stop prohibits drift, protects specimen and objectives
- **Condenser** - 1.25 N.A. 2 element Abbe with iris diaphragm, slot for phase slider, color coding corresponds to objectives
- **Kohler Illumination** - field diaphragm, 20W, 6V Halogen with dimmer
- **HBO Illumination** – Mercury vapor high pressure arc-discharge lamp, increases depth dimension by 4 in., 10cm.
- **Dimensions** - (WHD) (in/cm) 7.7 x 16.5 x 11.0 / 19.5 x 41.8 x 28.0 Gross Weight (lb/kg) 25/11.4
- **Microscope Includes:** dust cover, two color filters, spare halogen lamp and fuse

► Stereo Microscopes for Education

- Affordable - Portable
- Durable - Easy to use
- Five Year warranty

Dissection and observation of macro specimens is more enlightening with these Stereo microscope. The large stage allows ample room for sample manipulation but still fits in a storage cabinet. Their illuminated stands let you choose light from three directions - above, below or both, to help observe opaque or transparent samples. Solid, all metal focusing mechanisms will endure student use well beyond the five year warranty.

The ST-800 series two power stereo helps students down the road because they select magnification by turning a knob on the head, replicating a process on more sophisticated zoom models. Teachers like them because the eyepieces are locked and don't walk, the all metal frames are built to last and the low voltage bulbs last for hundreds of hours and are easy to replace. Even models with rechargeable illuminators are available.

The ZM-500 Series allows infinite magnification changes throughout the range, making available a world of discovery for the student.

ZM-500 Series

Model	Illumination	10X Eyepiece		Working Distance

► Stereo Microscopes

► GL Series Stereo Microscopes – Superb Depth of Field and Contrast

Benefits Of All Of Our GL Series Stereo Zoom Optical Bodies:

- Save time - no need to refocus when zooming magnification, the GL Series is parfocal and its continuous zoom is available with detentes at 0.5X increments for precise measurements
- Accommodate all users - wide interpupillary adjustment (45 - 75mm) and diopters built in to the eyepieces allow virtually all individuals to work in comfort
- Minimize fatigue - side mounted zoom controls and low positioned focus control with tension adjustment reduce stress and let the user rest in a natural position
- Save Money for years to come - high contrast, flat images are now cost effective and EMS/Jenco's 5 year limited warranty protects your investment

The remarkably clear, non-distorted 3D image resolved by the GL Series optics is a result of advanced technologies in optical design. The GL Series Greenough design produces lifelike images in a large field of view and presents upright or erect images with astounding depth perception. A long (100mm) working distance facilitates observation.

Choose from 3 Zoom Ranges

	GL6 Series	GL7 Series
Zoom Ratio	6.5:1	7:1
Zoom Range	1.0X - 6.5X	0.65X - 4.5X

Versatility is a real advantage of the GL Series

With over thirty (30) combinations of stands and optical bodies from which to choose, the GL Series has a model to satisfy your application.

GL7 Optical Body - brilliance, clarity, parfocality, flatness and depth of field characterize this hard working model. Its wide magnification range, (7:1 or 0.65X to 4.5X) zooms in on your specimen without distortion, delivering a resolved image true to character. The detents at 0.5X allow exactly repeatable magnifications for documentation.

GL6 Optical Body - designed for those demanding applications where you are challenged with new and different specimens requiring absolute clarity at all powers, this model achieves high magnification (1.0X to 6.5X, 6:1 ratio) at a low price. Going beyond the standard for this class of microscope, total magnification ranges from 0.5X to 260X with optional auxiliary lenses and eyepieces.

The Illuminated Stand

Pictured here, the Illuminated stand allows observation of both opaque and transparent specimens because of individual controls for reflected and transmitted light. While reflected or incident light is a 15W Halogen with electronic dimmer, the transmitted light can be either a 15W Halogen with dimmer or a "cool" 5W fluorescent bulb for heat sensitive samples. Individual lighting controls provide ideal conditions for photographing images in a fully illuminated field.

Model Number		Illumination	Zoom Ratio	Magnification Range with 10X Eyepiece

► GL Series Stereo Microscopes (continued)

The Non-illuminated stands

The Post and Boom stands are heavy duty and designed to provide ample support for many years. Allowing freedom of movement in multiple directions over the work area to facilitate inspection of large samples, their rugged structure minimizes vibration and tipping, even on a Trinocular head with camera attached.

GL Series optical bodies and stands master Industrial environments

Superb resolution meets demands in semi-conductor/high tech industries, medical device assembly and life science research.

- **Comfort First Design** - long duration tasks are less fatiguing with accessible controls
- **Large Field of view** - the GL7 boasts a 35mm object field size
- **Bonders & Probers** - compact design/long working distance facilitate machine mounts
- **Large Zoom Range** - accurate reproduction of the sample up to 260X
- **Wide range of imaging functions** - fully integrated camera/software systems

Boom Stands, available in three styles (pictured below) feature heavy bases for stability and tilting/swiveling mounts to facilitate observation of even hard to get to areas, but differ as follows:

Standard Boom is economical and well-matched to applications where continuous horizontal movement is not required. Used in medical device assembly where work stations and repetitive actions are common

Smooth Boom got its name from the smooth gliding motion produced by the ball bearings in the horizontal movement. Ideal for scanning large parts, like a circuit board, simply with the touch of a hand

Articulating Arm Boom features a counter balanced arm that moves vertically as well as horizontally, making it ideal for tight spaces

GL7-205 Post Stand has a slim, 1.25" / 35 mm, streamlined base for easy manipulation of large specimens
Measures: 12" (w) (30cm) x 12" (h) (30cm) x 11" (d) (27cm)

GL7-206 Standard Boom extends over a work area to aid in assembly/analysis
Measures: 10" (w) (25cm) x 19" (h) (49cm) x 18" (d) (45cm)

GL7-207 Smooth Boom utilizes ball bearings for smooth movement on X axis
Measures: 10" (w) (25cm) x 19" (h) (49cm) x 18" (d) (45cm)

GL7-208 Articulating Arm is spring balanced to articulate along XYZ axis
Measures: 13" (w) (33cm) x 16" (h) (41cm) x 33" (d) (84cm)

► Z7 Series Zoom Stereo Microscope

Quality Optics and Illumination

Combine excellent optics with modern design for comfort/ease of use and you have the Jenco Z7 Series of Stereo Microscopes. Their affordability belies their performance: a zoom ratio of 7.6:1 produces a 6.6X to 50X magnification range. Durability to prevail beyond its 5 Year Warranty comes from the Z7 all metal focus mechanism and wide band coated optics. Welcome the Z7 into your analysis to unleash new discoveries without demolishing your budget.

- **Save Money** – economically priced with durable construction and LED illumination to help extend your savings
- **Save Time** - no need to refocus when zooming magnification, the Z7 is parfocal
- **Versatile** – Z7 suits multiple applications due to 4" working distance, wide field of view and cool LED lighting
- **Digital** – the built-in color camera model offers 3 Megapixel resolution and easy connection via USB 2.0

The Z7 Series has both Illuminated and Non-Illuminated Models

The Illuminated Stand - observe both opaque and transparent specimens using individual controls for the 5W upper LED and 3W lower LED lights. This bright cool light is good for heat sensitive samples and longevity of 10,000 hours.

► Polarized Microscope for Petrology

Polarized Investigations made Easy

The Polarizing Microscope is an excellent tool for Petrography and other mineral or earth science applications. Observation and analysis is easy with our strain-free optics and polarizing mechanisms that ensure concentric field of views and accurate identification. Built with user comfort in mind, the PL series is also built to last, with an all metal focusing mechanism, all metal frame and all glass condenser that will outlast the 5 year warranty. Key polarization features of models PL-211 and PL-311 Trinocular include:

- A rotatable (0-90°) Analyzer with slide in/out Bertrand Lens
- DIN standard full wave (first class red) and quarter wave compensators and quartz wedge with slide stops for positioning in the Analyzer
- A precision rotating stage graduated in 1° increments and a swing out polarizer
- Four strain-free objectives, each centerable, mounted on a rear facing four position turret

KEY SPECIFICATIONS

- Optical Body - Seidentopf design inclined 30° with 55 to 75 mm interpupillary adjustment, 360° rotation
- Nosepiece - Quadruple reversed
- Eye pieces - 10X; Focal Length 25mm, FN 18 mm. and one with crosshair and scale of 0.1mm.
- Objectives - Strain-free Achromat:
4X Working Distance 37.50mm NA 0.10 FOV 4.5mm
10X Working Distance 7.316mm NA 0.25 FOV 1.8mm
40X Working Distance 0.632mm NA 0.65 FOV 0.45mm
63X Working Distance 0.33mm NA 0.85 FOV 0.29mm
- Condenser - 1.25 N.A. 2 element Abbe with iris diaphragm and rack and pinion focusing
- Focusing - All metal mechanism with coaxial coarse/fine adjustment and markings at 0.002mm increments
- Illumination - 20 watt, 6 volt Halogen bulb with electronic dimmer
- Round stage - Diameter 145 mm., rotatable 360°, graduated in 1° increments, center adjustable
- Bertrand Lens- slides in and out of optical path
- Analyzer - Rotatable with 0-90° graduations
- Compensator- Full wave first class red and quarter wave and quartz wedge
- Polarizer - slides in and out of optical path
- Dimensions: (WHD) (in/cm) 8 x 15 x 9.5 / 29 x 61 x 38; Gross Weight (lb/kg) 19.8 / 9

Ordering Info

PL-211	Binocular, Polarizing Microscope	each
PL-311	Trinocular, Polarized Microscope	each

Analyzer with Bertrand Lens and Optical Compensators: full wave and ¼ wave

Round stage with 360° rotation and 1 mm. graduations

Polarizer slides in and out of light path above light collector

Camera Systems

EMS offers three types of camera systems for documenting resolved microscopic images.

Each system is fully integrated with:

- software for image analysis
- optical adapters to obtain the image in the correct focal plane
- cables for connection to computers, monitors or projectors

All components are conveniently packaged under one part number for easy ordering

Description	Stereo	Upright Compound	Inverted Compound
Digital Still Camera, 15 megapixel or better resolution, with memory card, USB cable, battery charger, optical adapter for microscope and Jenco Image Software	57-C15	59-C15	5A-C15
Digital Video Camera, USB 2.0, 5 Megapixel resolution for color imaging, optical adapter and measuring software	57-5M	59-5M	5A-5M
Digital Video Camera, USB 2.0, 3 Megapixel resolution for color imaging, optical adapter and measurement software	57-3M	59-3M	5A-3M
Adapter for Digital Still Camera	CM-0334-S	CM-0334-B	CM-0334-V
Adapter for Digital Video Camera, C-Mount	CM-0303	CM-0304	CM-0306

Note: CCD cameras and cooled CCD cameras for fluorescence available upon request.

► Metallurgical Microscopes

Materials Analysis and More

The Metallurgical Microscopes use long working distance objectives and reflected or incident illumination to deliver sharp, high contrast images of solid specimens. The large collector lens and light path combine with the specifically positioned diaphragms to allow more light for brighter images. A polarizer and analyzer and color filters are built-in to enhance observation. The Inverted model utilizes incident illumination for over size samples. The trinocular head allows for quick and easy attachment of cameras for documentation.

- Five long working distance objectives without cover slip correction for close specimen observation
- Transmitted illumination is facilitated with large glass inserts in the mechanical stage
- The polarizing analyzer is used in conjunction with the polarized filter cube, which is easily accessed via the push rod. The analyzer may also be placed on the lower light source and used with the polarized filter cube for transmitted light work.

KEY SPECIFICATIONS

- Optical body - Seidentopf design inclined 30°; 55 to 75 mm interpupillary adjustment, 360° rotation
- Nosepiece - quintuple, ball bearing
- Eye pieces - 10X, Focal Length 25mm, FN 18 mm.
- Focus mechanism - adjustable tension control to prohibit drift and adjustable up-stop to protect objective lenses; dial markings at 0.002mm increments
- Incident light system includes: condenser, iris diaphragm, color and polarizing filter. Transmitted illumination, 1.25 N.A. Abbe condenser with iris diaphragm; all systems use a 20 watt, 6 volt Halogen bulb

with dimmer

Image Software

Minimum System Requirements:

- 1) Microsoft Windows 98, ME, 2000, or XP. This software will not operate on Windows NT
- 2) A CD-ROM Drive to install the software.
- 3) An Ethernet Card for the license.dat file to identify (Software requires a License file to operate)

Jenco Image is a software tool for microscope image measurement. It captures or imports and archives database images and allows image annotation, Email links, or report generation. It can be used to measure point to point or multi-pointed lengths/distances and/or area of: lines, angles, circles, rectangles and ellipses in the captured image with calipers in metric, English or pixels. The system can also calculate a color area and percentage of color relative to the whole. The system can be calibrated to scale/magnification so the result of the measurements and virtual values will keep a 1:1 relation. All results can be saved in the computer for further research.

- Point-to-point linear measurement
- Radius and diameter on ellipse
- Area and perimeter for ellipse or rectangle
- Length of segmented lines
- Area and perimeter of irregular shapes
- Angle measurements
- Arc/Ellipse/Circle measurements including definition of center point, chord lengths, sweep angles, radii, and more

Jenco Image measurement software **JI-V1.2**

ProScope HR

high resolution handheld microscope

► The Wireless ProScope, ProScope HR and ProScope HR2 Digital Handheld Microscopes

► The Wireless ProScope Mobile

ProScope Mobile, the world's first handheld digital microscope, is now portable.

Powered by 3 AA batteries, ProScope Mobile creates its own Wi-Fi network. It can transmit images simultaneously to as many as 253 devices (iPad, iPod touch , or iPhone.) ProScope Mobile works on the free app called Airmicro (iPhone/iPod touch) and AirmicroPad (iPad) available from the iTunes App Store. With these apps, users can view live images, freeze and capture them to the photo album in their device. For Apple users, the photos will go directly into iPhoto when synced with a base computer.

Wireless offers new practical applications, which include:

- Field scientists can examine specimens on site without destroying them in transit to the lab
- Doctors can show patients live images and add them into practice management apps and software
- Teachers can simultaneously show images to a classroom of students using iPads
- Crime scene investigators can send images from the iPhone to a colleague in the lab or to a collaborative agency

Like the ProScope HR and HR2, ProScope Mobile users can select from a wide variety of lens magnifications from 1-10x, 30Nx, 50x, 100x, 200x and 400x. There are also adapters for analog microscopes and borescopes. ProScope Mobile is also sold in popular kits. See tables below for product specifications and comparisons.

► The ProScope HR and ProScope HR2 Digital Handheld Microscope

ProScope HR, the world's first handheld digital microscope, is now available in the original 1.3 mp imager and the **ProScope HR2**, adjustable 2.0 mp imager.

Since 2001 the ProScope HR has been a mainstay in science education, law enforcement, and manufacturing quality control worldwide. Included software for Windows and Mac will capture stills, video and time lapse. Lenses range 0-10X, 30X, 50X, 100X, 200X, 400X and 1000X. You can even connect the ProScope HR to your analog microscope, telescope or borescope. The ProScope HR is USB Video Class and needs no driver to run. You can even use the ProScope HR with programs like Skype or iChat to show others what your ProScope HR is seeing in real time over the internet!

Interchangeable lenses: 0-10X, 30N, 50X, 100X, 200X, 400X, 500X, 1000X, c-Mount and standard analog microscope adapters and borescope adapters

1.3 MP imager

ProScope HR

Interchangeable lenses: 1-10x, 30Nx, 50x, 100x, 200x and 400x c-Mount and standard analog microscope adapters

2 MP imager adjustable resolution up to 1600x1200

ProScope HR2

The ProScope HR Applications

Law Enforcement

Used by over 12,000 federal, state and municipal law enforcement agencies in 23 countries since 2001. Used by law enforcement for:

- Anti-Counterfeiting
- Ballistics examination
- Handwriting analysis
- Fingerprint Analysis
- Narcotics
- Crime Scene and Lab
- Blood Spatter
- Autopsy
- Interrogation Tool
- Court Room Presentations
- Iris and Dental Identification
- Explosives and Fire Investigations

Science Education

A few of the many applications in K-12 education are:

- Microbes
- Physical characteristics of soil
- Materials characterization
- Animal and plant structure
- Chemistry
- Minerals

Quality Inspections

- Inspection
- Detailed Measurements
- Image Analysis software and Screen Measurement software available

ProScope HR
high resolution handheld microscope

KEY FEATURES

ProScope HR:

- Accurate, repeatable measurement within 10 microns
- Modular lenses range from 1x to 1000x
- No driver needed. Just plug and play!
- Lead-free and RoHS compliant
- Attaches to other optics like Borescopes and analog microscopes
- Made in Oregon, USA
- 30-day no questions asked return policy
- Two year warranty

ProScope HR2:

The new ProScope HR2 features the new state-of-the-art, Aptina imager which was originally made for surveillance, with large pixels that take in more light than other imagers on the market. The Bodelin engineering team customized this imager to allow extensive imaging adjustment and LED intensity control. The most impressive feature is the ability to actually stream true pixels at higher resolutions. The ProScope HR2 is the only digital microscope in the world that can do this. Other imagers stream at 640X480 and only interpolate to simulate higher resolutions. The total effect in the ProScope HR2 is live video that appears to be 4 to 5 megapixels in clarity while only using an actual 2 megapixel imager. The new cobalt black handle says this is a serious tool yet the price point is equal to the previous ProScope HR, which will remain in the product line at a lower cost. The ProScope products are currently used in tens of thousands of schools, universities, law enforcement forensic labs, manufacturing quality control, medical and tele-medicine since 2001.

The ProScope HR and HR2 are made in Oregon, RoHS compliant (lead-free), UVC plug and play.

Software

ProScope HR software, for Mac OS X, Windows XP and Windows Vista, comes with every ProScope HR. The bundled software will capture stills, video and time lapse. Features include:

- Switch to any of three resolution settings: 320X240, 640X480, 1280X1024 with the ProScope HR and up to 1600X1200 with the ProScope HR2
- Show live views
- Still image capture
- Video capture
- Time lapse capture
- LED intensity control (HR2 only)
- Preview captured images
- Site license for use on your local network
- Standard images files can be saved in any folder

Mac System Requirements:

- OS 10.4.8 or later
- Quicktime 7 or later
- G4, G5 or Intel Mac
- Factory installed USB 2.0 or USB1.1 port
- USB 2.0 port recommended.

A USB 1.1 port may be used but only 640x480 (VGA) and 320x240 (QVGA) modes are supported and at a much reduced frame rate.

Windows System Requirements:

- Windows XP service pack 2 or later
- Quicktime 7 or later

DirectX 9 or later

- P4 or equivalent
- Factory installed USB 2.0 or USB1.1 port
- USB 2.0 port recommended.

■ A USB 1.1 port may be used but only 640x480 (VGA) and 320x240 (QVGA) modes are supported and at a much reduced frame rate. Works with both original ProScope and new ProScope HR. (High Resolution mode only works with ProScope HR software and ProScope HR)

Three types of optional measurement software are also available. The software is accurate to within 10 microns and pre-calibrated for all ProScope lenses.

▶ ProScope Wireless, HR, or HR2 w/ 50x Lens

The ProScope HR™ with the 50x lens is perfect for a wide variety of uses from science education, crime scene investigation, industrial inspection and more.

68350-50x	ProScope HR™ w/ 50x Lens	each
68350-50x-2	ProScope HR2™ w/ 50x Lens	each
68350-50x-M	ProScope Wireless w/ 50x Lens	each

▶ ProScope Wireless with 30n Lens

The ProScope Mobile with 30n lens is made for dermatology and dental use as it utilizes a ring of polarized LEDs as well as white reflective LEDs.

68350-3n-M	ProScope HR w/ 30n Lens	each
-------------------	-------------------------	------

▶ ProScope HR™ and ProScope HR2™ Base Unit w/o Lens

Start with the base and add whatever lenses suit your needs. If you owned the previous version of the ProScope, then all you need is this base and your current lenses to enjoy the new high resolution ProScope HR™.

68350-00	ProScope HR™ Base Unit	each
68350-00-2	ProScope HR2™ Base Unit	each

▶ The ProScope Stand

Designed and developed for law enforcement, the ProScope Stand will steadily hold the ProScope in a wide variety of positions. Perfect for law enforcement, industrial inspection, and biology when working at high magnification.

68353-13	ProScope Stand	each
-----------------	----------------	------

▶ The ProScope Flexible Stand

With a smooth z-axis adjustment and solid base, the ProScope Flexible Stand is perfect to hold the ProScope steady for classroom science experiments or quality inspections.

68353-13-2	The ProScope Flexible Stand	each
-------------------	-----------------------------	------

▶ 0-10x LENS

Our most versatile lens, the 0-10x is a variable focus lens that can be used as a webcam, still or video camera lens, or manually adjusted to 10x magnification. Perfect for text, dissection, entomology, gems, crime scene investigation, circuit board inspection, assembly inspection and much more. 12 white LEDs give great illumination at short distances. Turn the LEDs off and use your own light source.

68352-10	0-10X Lens	each
-----------------	------------	------

▶ 30N LENS

The 30N lens utilizes white and polarized LED's for a non-reflective view. Perfect for skin, teeth, gems and metal surfaces.

68352-30	30N Lens	each
-----------------	----------	------

▶ 50x LENS

Preferred by science educators and law enforcement investigators, the 50x lens is the best base lens to start with for almost any use.

68352-50	50X Lens	each
-----------------	----------	------

▶ 100x LENS

Perfect for fingerprints, agricultural inspection, general biological studies. With this lens you can actually watch perspiration ooze from the pores on your fingerprints.

68352-100	100X Lens	each
------------------	-----------	------

▶ 200x LENS

Perfect for fiber analysis, ballistics, print inspection and microorganism study.

68352-320	200X Lens	each
------------------	-----------	------

▶ 400x LENS

Our most powerful lens, used for microorganism imaging.

68352-340	400X Lens	each
------------------	-----------	------

▶ C-Mount Adapter

Use your own optics with our industry standard 25.4mm c-mount adapter. Attach the ProScope to an existing microscope, telescope or camera lenses to capture digital images and expand your digital imaging tools.

68353-10	C-Mount Adapter	each
-----------------	-----------------	------

► C-Mount Adapter w/ IR Cut Filter for ProScope

This special C-Mount adapter incorporates a high quality IR cut filter. Highly recommended for professional users that require best color reproduction when using the ProScope HR/HR2 with a microscope, telescope, or borescope. The IR cut filter is made from high quality BK7 optical glass and has a transmission range of approximately 380nm to 700nm, the visible light spectrum. Invisible wavelengths, that can still be seen by the high quality HR series imagers, are removed for best color reproduction in critical applications.

68353-10-2 C-Mount Adapter w/ IR Cut Filter for ProScope each

► Lens Tube Adapter

If your microscope DOES NOT have a c-mount, our microscope lens tube adapter slides into a common 23mm ocular tube under the eyepiece which makes the connection from the ProScope to your microscope or telescope. YOU MUST USE THE C-MOUNT ADAPTER WITH THE MICROSCOPE LENS TUBE ADAPTER TO BE ABLE TO ATTACH THE PROSCOPE TO YOUR MICROSCOPE OR TELESCOPE.

68353-12 Lens Tube Adapter each

► The ProScope Case

The ProScope case is made of durable hard plastic shell and a soft inner mold with slots for the ProScope, all the lenses and the ProScope stand. Perfect for safely and securely taking your ProScope and lenses into field.

68353-14 ProScope Case each

► The ProScope Large Deluxe Case

Need one of everything? This large hard-sided case with foam interior will hold the ProScope and all the accessories.

68353-14-2 The ProScope Large Deluxe Case each

► Image Analyzer

ImageAnalyzer is a powerful multi-featured program designed to work with your original ProScope or ProScope HR. Measurements, grids, powerful image enhancement tools, and screen capture with voice-over are just a few of its many features.

68353-17 Image Analyzer each

► Measurement Software

Screen Calipers, Screen Compass and Screen Protractor are unique on-screen measurement tools that let you measure anything on your computer screen with ultimate accuracy.

68353-18 MacCalipers ProScope Edition each
68353-19 Screen Calipers for Windows ProScope Edition each
68353-20 Screen Measurement Pack Mac Edition each
68353-21 Screen Measurement Pack Windows Edition each

► LX-PROSCOPE HR (Windows XP SP2/Vista and up / Mac OS X 10.4.8 and up)

Capture stills, video, time lapse, perform detailed measurement, and annotate your still images with this elegant and sophisticated interface. Works with the original ProScope or ProScope HR under Mac OS X, Windows XP and Vista. (Windows XP SP2/Vista and up / Mac OS X 10.4.8 and up)

68353-22 LX-PROSCOPE HR each

► Logger Pro® 3

Logger Pro is the premier data collection and analysis software for education.

KEY FEATURES INCLUDE:

- Ability to take stills, movies, and time-lapse movies from the ProScope HR
- Supports data collection with 60+ Vernier sensors
- Automatically synchronizes sensor data with movies
- Statistical analysis of sensor data includes integrals, tangents, curve fitting, and more
- Allows for manual entry of data into a data table, to easily create graphs, and do further analysis of data
- 12 built-in self guided tutorials

Educational purchases of Logger Pro include a site license for all computers in a K-12 school or college department, including students' personal computers.

68353-23 Logger Pro3 each

Technical Specifications

	ProScope HR
Imager	¼ inch high resolution 1.3Mp color sensor 1,310,720 effective pixels
Interface	USB 2.0 or USB 1.1, USB 2.0 required for high resolution mode (SXGA) and higher frame rates.
Magnification	Varies based on attached lens. ProScope HR base unit can also attach to a traditional microscope via our optional C-mount adapter. 1-1 0x, 30Nx, 50x, 1 00x, 200x and 400x lens options available (approximate magnification when displayed on a 14-inch video monitor).
Dimensions	152mm (length), 45mm (width)
Weight	About 150g, without lens unit attached. About 185g with lens unit attached.
Power Consumption	About 400mA When using a 5V light source.
Length of cable	About 1 .8m (6 ft)
Capture Button	Initiates still, movie, and time lapse capture in ProScope HR software.
Light Switch	3-position on/off switch for lens LEDs A-OFF-B
Camera Mount	(2) standard tripod mount ¼" — 20 threads
Lens Release Button	Disengages lens lock pin for lens removal.
Video Preview	30 fps @ 320x240 pixels (QVGA) 15 fps @ 640x480 pixels (VGA)--- 3.75 fps @ 1280x1 024 pixels (SXGA)
LED Control	3-position on/off switch for lens LEDs. A-OFF-B Variable LED Intensity through ProScope HR Software.
Video Controls	Brightness, Contrast, Hue, Saturation, and Sharpness. Light Source/White Balance options include ProScope HR LED, Incandescent, Fluorescent, Daylight, and Auto.
Still Capture	USB 2.0 High Speed 320x240 pixels (QVGA) 640x480 pixels (VGA) USB 1.1 Full Speed 320x240 pixels (QVGA) 640x480 pixels (VGA) 1280x1 024 pixels (SXGA) High resolution mode (SXGA) not available
Video Capture	USB 2.0 High Speed 30 fps @ 320x240 pixels (QVGA) 15 fps @ 640x480 pixels (VGA) 3.75 fps @ 1280x1 024 pixels (SXGA) USB 1.1 Full Speed ~4 fps @ 320x240 pixels (QVGA) ~ 1 fps @ 640x480 pixels (VGA) High resolution mode (SXGA) not available.
Driver	USB Video Class USB Human Interface Device Class
Macintosh minimum system requirements	OS 10.4.8 or later Quicktime 7 or later Factory installed USB 2.0 or USB 1.1 port G4, G5 or Intel Mac USB 2.0 port recommended. A USB 1.1 port may be used but only 640x480 (VGA) and 320x240 (QVGA) modes are supported and at a much reduced frame rate.
Windows minimum	Windows XP Service Pack 2 or later Quicktime 7 or later DirectX 9 or later Factory installed USB 2.0 or USB 1.1 port Pentium 4 or equivalent USB 2.0 port recommended. A USB 1.1 port may be used but only 640x480 (VGA) and 320x240 (QVGA) modes are supported and at a much reduced frame rate
Operating Temperature Range	5°C~40°C
Storage Temperature Range	-10°C~60°C (Without condensation)
Other	RoHS Compliant, Lead Free, Made in USA
Warranty	Two Year Warranty

	ProScope HR2
Imager	¼ inch high resolution 2Mp color sensor 1,920,000 effective pixels.
Interface	USB 2.0 High Speed
Magnification	Varies based on attached lens. ProScope HR base unit can also attach to a traditional microscope via our optional C-mount adapter. 1-10x, 30Nx, 50x, 100x, 200x and 400x lens options available (approximate magnification when displayed on a 14-inch video monitor).
Dimensions	152mm (length), 45mm (width).
Weight	About 150g without lens unit attached. About 185g with lens unit attached.
Power Consumption	About 400mA When using a 5V light source.
Length of cable	About 1 .8m (6 ft)
Capture Button	Initiates still, movie, and time lapse capture in ProScope HR software.
Light Switch	3-position on/off switch for lens LEDs A-OFF-B
Camera Mount	(2) standard tripod mount ¼" — 20 threads
Lens Release Button	Disengages lens lock pin for lens removal.
Video Preview	30 fps @ 320x240 pixels (QVGA) 15 fps @ 640x480 pixels (VGA) 3.75 fps @ 1280x1024 pixels (SXGA) 2.5 fps @ 1600x1200 pixels (UXGA)
LED Control	3-position on/off switch for lens LEDs. A-OFF-B Variable LED Intensity through ProScope HR Software.
Video Controls	Brightness, Contrast, Saturation, Sharpness, Manual and Auto Exposure, Image Orientation (Flip and Mirror), Manual and Auto White Balance presets, and RGB White Balance components. Light Source/White Balance presets include ProScope HR LED, Incandescent, Fluorescent, Daylight, and Auto.
Still Capture	320x240 pixels (QVGA) 640x480 pixels (VGA) 1280x1024 pixels (SXGA) 1600x1200 (UXGA)
Video Capture	30 fps @ 320x240 pixels (QVGA) 15 fps @ 640x480 pixels (VGA) 3.75 fps @ 1280x1024 pixels (SXGA) 2.5 fps @ 1600x1200 pixels (UXGA)
Driver	USB Video Class USB Human Interface Device Class
Macintosh minimum system requirements	OS 10.4.8 or later Quicktime 7 or later Factory installed USB 2.0 high speed port G4, G5 or Intel Mac
Windows minimum	USB 2.0 port recommended. A USB 1.1 port may be used but only 640x480 (VGA) and 320x240 (QVGA) modes are supported and at a much reduced frame rate
Operating Temperature Range	5°C~40°C
Storage Temperature Range	-10°C~60°C (Without condensation)
Other	RoHS Compliant, Lead Free, Made in USA
Warranty	Two Year Warranty

	NEW! ProScope Wireless
Imager	¼ inch 5Mp Color CMOS
Interface	Wi-Fi
Magnification	X50 (when standard lens is used) Approximate magnification when displayed on 14-inch monitor.
Dimensions	153mm(H)x46mm(W)x43mm(D) (without Lens) 130g (without battery, with Lens)
Power Consumption	about 2.5W with standard lens
Length of cable	N/A
Capture Button	a) Freeze/Release b) Still image capture c) Push W/B after still image captured d) QVGA/VGA exchange e) Initialize for factory settings (Maintained after power supply is switched OFF)
Light Switch	"A-OFF-B (depends on the attached lens) A: OFF, or reflective LEDs"
Camera Mount	"OFF:OFF B: Reflective LEDs, or Non Reflective LEDs" 1/4-20 UNC
Lens Release Button	Unlocks Lens for Removal
Video Preview	15 fps (It changes with radio wave environment and the use device.) 320x240 (QVGA) / 640x480 (VGA)
LED Control	ON: The image is being transmitted OFF: Power OFF or Battery is low Flash 0.5sec: The W/B is being changed Flash 1sec: The resolution is being changed Flash 2sec: Initialize for factory settings Manual White Balance, Automatic Gain Control

Warranty	Two Year Warranty

Using ProScope HR Software

Once installed, ProScope HR software basically works like the LCD screen on your digital camera. The main viewscreen displays what the ProScope HR 'sees' in real time until you're ready to capture the image or video. This is called live mode. Images and video can be captured two ways:

1. Depressing the large white button on the ProScope HR itself.
2. Click the red capture button on the upper right side of the main window.

After an image or video clip has been captured, the image can be previewed by clicking the thumbnails below the main window. This is called preview mode. To return to live mode, click the main window.

There are three capture modes in which to shoot your subject:

1. **Still Image** - located at the top-left of the main window. Use this setting when you want to take still images, not video. You can capture images in three resolutions. Click the bar to activate.
2. **Video** - located at the top-center of the main window. Use this setting when you want to record video. You can record video in three resolutions. Click the bar to activate.
3. **Time Lapse** - located at the top-right of the main window. Use this setting when you want to record subjects in time lapse. You can record

Attaching a lens

To attach a lens, line up the mark on the side of the base...

...with the dot on the side of the lens.

Turn the lens clockwise until it clicks into place.

Turn on the lens lighting to make sure the lens is properly attached.

Removing a lens

To remove a lens, press and hold the lens release button...

while turning the lens counter-clockwise until the lens dot and mark on the base line up. Then remove the lens.

Finger at 50x

Finger at 100x

Finger at 200x

Finger at 400x

Focusing

For 30N and 50x lenses, turn the lens cone counter-clockwise until it stops. The lens cone is now fully extended and in touch view position. Simply touch the object to the end of the lens cone.

Turning the cone clockwise until it stops will fully retract it. The lens cone is now in distance view position. The focal distance is approx. 1/2-inch from the cone end. Use this mode if you do not want to touch the lens cone to your subject.

The 1/10x lens only works at a distance and can be adjusted in focus and magnification from 0x to 10x by turning the outer one. Great for use as a digital camera, web cam or dissecting scope.

The 100x, 200x and 400x lenses can be adjusted from touch view to distance view by turning the the forward part of the lens cone. Unlike the 30N or 50x lens, there is not an exact cone position for touch or distance view.

Adapting your old microscope into a digital microscope

Your old microscope.

Remove the ocular or eyepiece. On binocular microscopes, this would be the left ocular.

Depending on whether your microscope has a C (camera) mount, you may need to use one or both adapters.

This is the C-mount adapter.

If you have tiny C-mount threads under the ocular, then you only need the C-mount adapter.

If you don't have C-mount threads, then you'll need to use the Lens Tube with C-mount adapter.

Simply thread the C-mount adapter on to the lens tube.

Connect the C-mount/lens tube to the ProScope like you would any ProScope lens.

Now your ProScope HR is able to receive the image and you can view it on your computer screen.

When using the ProScope HR in distance view position, we recommend the ProScope HR stand — it will keep your ProScope HR steady and at the perfect focal distance.

ProScope HR
high resolution handheld microscope

► The ProScope Micro Mobile

ProScope Micro Mobile, the world's first handheld digital microscope, is now adaptable to mobile devices.

The first professional mobile microscope for our mobile device world. The new ProScope Micro Mobile uses custom coated glass optics to work with your onboard camera and provide superb quality images up to 80X. Built-in LEDs adjust to reduce reflection and are powered by a sleek rechargeable battery for up to 5 hours continuous use. Made with impact resistant Nylon and ABS for years of field, lab, classroom and exam room use.

FEATURES

- 20X to 80X magnification via Edmund pro level glass optics (specially coated lenses for better image quality and color reproduction).
- Adjustable LEDs to reduce surface reflection and powered by a sleek onboard Lithium Ion battery for 5 hours of continuous use.
- USB charging cable to recharge to full capacity in 2 hours.
- Built in desktop stand for hands free use.
- Made with impact resistant nylon and ABS for years of field operation.
- 1 year warranty.
- Made in Oregon, USA.

Applications

- Field scientists can examine specimens on site without destroying them in transit to the lab
- Doctors can show patients images and add them into practice management apps and software
- Crime scene investigators can send images from the device to a colleague in the lab or to a collaborative agency

There are adapters for use with other camera-equipped smart phones and tablets. ProScope Micro Mobile is also sold in popular kits. See tables below for product specifications and comparisons.

ProScope Micro Mobile with iPhone

ProScope Micro Mobile with iPad Mini

ProScope Micro Mobile with iPad

Technical Specifications

Compatibility	iPhone 5, iPhone 4/4S, iPad mini, iPad 2nd/3rd/4th gen, and iPod touch 4th gen. Also works with other camera-equipped Smartphones and tablets. (additional adapters may be required)
Lens Options	PMM-2080X - 20-80x lens Digital Zoom Magnification Range of 20x to 80x Precision glass optics for sharp image detail and accurate color reproduction
Buttons and Switches	Light Switch A/B A: 6 LEDs B: 6 LEDs Rocker Switch Increases/Decreases LED intensity Rocker Switch - Center Button Turns LEDs and charging circuit ON/OFF
LEDs	12 White LEDs 6 illuminated in A switch position 6 illuminated in B switch position (for use with optional polarizing filter)
Indicator LED	Indicates battery charge status While Charging: <20% = Blinking Red <50% = Blinking Yellow <99% = Blinking Green 100% = Solid Green While Operating: <20% = Solid Red <50% = Solid Yellow <=100% = Solid Green
Ports	USB MiniB (F) For connecting USB cable to charge internal battery
Power	Rechargeable Internal Lithium-ion Polymer Battery - 3.7v 340mAh Continuous operation at full LED intensity, approx 5 hours Typical use operation, several days Charging time from depleted state to full charge, approx 2 hours MiniB (M) to USB A (M) USB cable Powers LEDs when battery has no charge Charges Battery from standard computer USB port or charger with USB 5-volt port

Fluorescence isn't just for research microscopes anymore...

Now sort on your laboratory-level stereos
Use to facilitate micromanipulation and dissection
Expand from your research lab to your classroom

Modular...

Installs in seconds - just clicks into place
Interchangeable excitation/emission combinations
Move from microscope to microscope
No modification to your microscope needed

Economical - More Glow for the Dough...

Stretch your lab budget
Inexpensive enough for classroom use

Grows as your lab grows...

Buy just what you need now (up to 5 different wavelength sets)
Add more as your needs expand

▶ NIGHTSEA™ Stereo Microscope Fluorescence Adapter

Adapt your existing lab stereo microscopes for fluorescence

The NIGHTSEA™ Stereo Microscope Fluorescence Adapter adapts just about any stereo microscope (dissecting microscope) for fluorescence with no modification to the microscope itself. The modular design lets you easily switch between several different excitation/emission combinations to work with a variety of fluorescent proteins and other fluorophores. There are now five different excitation/emission combinations available, plus white light.

Applications

This simple system is excellent for:

- Quick screening of your fluorescent genotypes -Drosophila, zebrafish, C. elegans,...
- Genotype sorting
- Fluorescence-aided dissection, injection, or micromanipulation
- Freeing up your research-grade fluorescence microscopes for more demanding work
- New faculty start-up budgets
- Bringing fluorescence into the teaching laboratory

The Stereo Microscope Fluorescence Adapter system consists of:

- Flexible gooseneck lamp base with power supply
- Light head
- Ring adapter for microscope
- Barrier filter
- Filter shield

The light head, barrier filter, and filter shield are interchangeable so that you can easily switch between excitation/emission light+filter combinations.

The microscope mounting adapter fits up to 67mm to work with the majority of stereo microscopes.

Once you are set up for one excitation/ emission wavelength combination, additional combinations can be added by purchasing a kit that consists of a light head, barrier filter, and viewing shield. These three elements can be removed and replaced in seconds, and color coding ensures that you are using the right combination. The barrier filter clicks on to the ring adapter magnetically, so it is easy to remove it to switch back to white light viewing.

Stereo microscope configured for green fluorescence, viewing *Xenopus* through shield filter for sorting.

Accessories:

► Add-On Light and Filter Sets:

Each add-on excitation/emission set consists of:

- Light Head
- Barrier Filter
- Viewing Shield
- Padded Storage Box

Cat No.	Description	Qty.
SFA-LFS-RB	Add-On Light and Filter Set, Royal Blue	each
SFA-LFS-CY	Add-On Light and Filter Set, Cyan	each
SFA-LFS-GR	Add-On Light and Filter Set, Green	each
SFA-LFS-VI	Add-On Light and Filter Set, Violet	each
SFA-LFS-UV	Add-On Light and Filter Set, Ultra Violet	each

► Modular White Light Head

A white light head is also available as an illumination option for the Stereo Microscope Fluorescence Adapter. Now if you are using the NIGHTSEA system for fluorescence you do not need a separate light source for your white-light work - just exchange the fluorescence excitation light head module for the white-light module in a matter of seconds. Extremely convenient for general illumination and as a focusing aid for fluorescence imaging.

Cat No.	Description	Qty.
SFA-LFS-WH	Modular White Light Head	each

NIGHTSEA™ Accessories continued on next page ►►►

► NIGHTSEA™ Stereo Microscope Fluorescence Adapter (continued) Accessories

► Eclipse MicroTent

The Eclipse MicroTent™ is a unique product for fluorescence microscopy that provides local darkness around conventional laboratory stereo microscopes. Fluorescence microscopes are kept in dark rooms for good reason - fluorescence can be weak and in many cases it can be difficult to see well if there is any ambient light. Microscopes may be on lab benches in shared spaces, near windows, or in other difficult-to-darken locations such as in the field. Turning off overhead lights can help but inconveniences others.

The Eclipse Microtent creates local darkness around a microscope while still providing easy access to the sample stage and the focus and zoom controls. It is designed for stereo microscopes but could potentially be used with many varieties of compound microscopes.

Features

- Opening for the microscope oculars with elastic sleeve to minimize light entry
- Large front flap provides easy access to the sample stage and can fasten open
- Arm slots on sides to provide access to focus and zoom controls
- User-customizable to provide additional penetrations for camera port, power cords, CO2 lines, or other features as you need
- Tru-Block™ Eye Shields included with every Eclipse MicroTent
Folds flat for storage

Dimensions: 46 x 30 x 50 cm (18 x 12 x 20 in.)

Cat No.	Description	Qty.
SFA-TENT	Eclipse MicroTent	each

► Eye Shields

Light entering your eyes from the side can interfere with what you want to see in microscopy in general, and fluorescence microscopy in particular. Eye cups are available, but the standard ones don't extend far from the microscope and don't do a good job as ambient light increases. Our soft, molded rubber high-sided microscope eye shields are the answer. The tall wings extend up far enough to truly shield your eyes from any level of ambient light and eliminate distractions so that you can see your subject better. Two pairs (one Standard, one Compact) will be included with every Eclipse MicroTent™, and you can also purchase them separately.

The Tru-Block Eye Shields are available in two sizes:

Standard —
fits 36 - 45mm (1.45 - 1.75")

Compact —
fits 28 - 37mm (1.10 - 1.46")

Standard

Compact

► NIGHTSEA BlueStar™ Flashlight

The BlueStar flashlight combined with the matched barrier filter glasses is a convenient, powerful tool for exciting fluorescence in many subjects.

The BlueStar uses the latest in high intensity LED technology combined with specialized optics to produce an ultra-tight, ultra-bright 10-degree beam pattern for maximum excitation of fluorescence.

Comes with adjustable, cushioned wrist lanyard, rubber glare guard. Made in USA.

Specifications

Bulb Type	High intensity 1W LED Royal Blue - 440 - 460nm
Burn Time	6 hours at full power
Lamp Life	>10,000 hours
Battery	3 C-cell

Cat No.	Description	Qty.
BLS-1	BlueStar light plus style VG1 filter glasses	each
BLS-2	BlueStar light plus style VG2 filter glasses	each
BLS-3	BlueStar light plus style VG3 filter glasses	each

► NIGHTSEA™ Barrier Filter Glasses

Styles 1 and 2 fit over eyeglasses, Style 3 does not.

Glasses meet ANSI Z87.1 impact standards for safety glasses.

Cat No.	Description	Qty.
VG-1	Yellow filter glasses, style 1	each
VG-2	Yellow filter glasses, style 2	each
VG-3	Yellow filter glasses, style 3	each
RG-2	Red filter glasses, style 2	each

► NIGHTSEA™ Fluorescence Excitation Flashlights

Rapid screening of your fluorescent transgenic experiments

► NIGHTSEA DFP-1 Dual Fluorescent Protein Flashlight

The Model DFP Dual Fluorescent Protein Flashlights include two different, switch-selectable high intensity LEDs for excitation of fluorescent proteins. For years the most popular fluorescent colors have been green (GFP, eGFP, fluorescein, etc.) and red (DsRed, TdTomato, etc.), and we offered only one version of the DFP, with a combination of blue and green LEDs for exciting these fluorophores. This is still our 'standard' DFP product, but we are now offering build-to-order combinations using any two of the excitation colors that are available with our popular Model SFA Stereo Microscope Fluorescence Adapter.

With every DFP light you will receive two pairs of barrier filter glasses and a convenient storage case. The glasses are well matched to the excitation so that they block the reflected excitation light while transmitting the fluorescence with high efficiency, providing excellent viewing contrast.

Specifications

Filter Set	Excitation	Emission	Fluorophores

► miniLight

Constructed from the highest quality material and small as its name, this miniLight offers the most universal light source, handling many tasks that require a bright light but with a small foot print that fits into most locations.

► miniLight components:

Lamp - Available with 1 or 2 W power LED in 3 models each producing 15°, 28°, and 42° light cones. The miniLight's main component is the miniLamp. This is a small but powerful light source. It is able to brightly illuminate small areas with the following properties:

- Shines very bright on a small area.
- Low dissipation loss – no hot parts
- Long life – lifetime of a LED is 50,000 hours
- Little power needed (1watt)
- Adjustable intensity
- CE compatible

Gooseneck - For the mounting of the miniLight

- Flexible - easy to adjust
- Both ends come with different threads: one for the minilamp and one which connects to the base
- Made from brass and is anodized black.
- End-to-end measures 184mm (172mm actual length)

Magnetic Base - For mounting the miniLight

- Made from stainless steel with the magnet encased
- Threaded center for mounting the gooseneck or mounting bar
- Easily affixes to any magnetized surface
- Affix force is 64N

Steel Base - For mounting the MiniLight with a heavy base

- Stainless steel
- Threaded center for gooseneck or mounting rod
- Weight 450 g (1 lb)
- Measures: 65mm diameter x 18mm height.

Mounting Rods - For mounting the miniLight in a stable position

- Made from stainless steel
- Easy to mount and adjust the lamp with adjustable joint
- Short rod to mount Lamp – Long Rod to mount to the Steel Base

Joint - Connect the Mounting Rods

This joint is used to connect the mounting rod together in any angle, any position so the Lamp shines the way you want

- Very precisely made
- Anodized aluminum
- Knurled tighten screw.

Power Supply 12V - to power the miniLight

Supply with international AC-plug for feeding miniLight lamp with a constant tension of 12Volts. It is characterized by the following properties:

- Input voltage 90-264VAC
- Input frequency 47-63Hz
- Output Voltage 12V
- Power 8W
- AC-Connector for EU, GB, US, AUS
- Operating temperature 0-40°
- Weight 135gr. (without AC-plug)
- Dimensions 69.2x43.3x29.8mm without AC plug
- International approval UL60950, EN60950, SAA, PSE, CE, FCC Part 15 Class B

Application

Some applications that the miniLight is ideal for:

- Micro-technical working places, mounting, inspection
- Micro-electrical assembly
- Microscope, microbiology, cell counting ...
- Block trimming, etc.

Technical Data:

	ML-10 Series	ML-20 Series

Electron Microscopy Sciences Announces their State of the Art

Scientific Equipment Repair Center

No equipment is too small or impossible to either
Repair, Refurbish, or Upgrade!

Our facility is equipped to handle the following Manufacturers:

- Balzers/Baltech
- Leica
- Denton
- Reichert-Jung
- Edwards
- LKB
- Emitech
- RMC-Boeckeler
- Emscope
- And Many More...
- Bio-Rad

Our unique service allows us to come to you, or you send the equipment to us, depending on the level of Repair/Refurbishment needed.

Equipment such as:

- Vacuum Systems
- Tissue Processors
- Microtomes
- Lynx
- Ultramicrotomes
- Freeze Fracture Instruments
- Tissue Slicers
- High Pressure Freezers/Slammers/Propane Jet Freezers
- Vibratomes
- And Much More...
- Ovens
- Baths
- Shakers

For more information on any of our services, a comprehensive quote, please call, write, or e-mail us today.

▶ Optivision™ Head Band Magnifiers

Features a dial adjustment headband that fits any head size. Well-made magnifiers they are lightweight and durable, and fit over eyeglasses. Adjustable pivot assembly on visor can be set to desired tension, so it will stay in place when tilted. Lenses are ground and polished prismatic.

Ordering: Lens plate replacement is also available.

Magnifier Cat. #	Lens Plate Replacement #	Working Distance		Power	Qty

▶ QUASAR™ LS

L.E.D. Lighting System for Optivision Head Band Magnifiers

- Custom fit lighting attachment for magnifying visions
- Patent pending design utilizes the latest in LED technology
- Reduces shadows and increases visibility in any environment
- Lights up holes and deep cavities
- Super long batteries life – light remains bright after 16 hours of straight use
- Lasts up to 96 hours solid on a single set of batteries
- Over 100,000 hour bulb life expectant

QUASAR™ LS KIT INCLUDES:

- Lighting system frame
- Retro fit attachment pins
- Longer screw for OptiLOUPE™ fitted visors
- 2 'AA' batteries
- Velcro strap

68107-70 QUASAR™ LS Kit each

▶ PEAK Achromatic Magnifier; 4X

Uses high-resolution achromatic lenses whose chromatic aberration has been corrected. With its wide square Field-of-View (45x45mm) and its interchangeable semi-transparent/black skirt, this unique magnifier offers you a variety of uses for precision work. Fine focus adjustment with multi-groove screw helicoid system gives you very smooth operation. Neck strap is included.

Magnification:4X
 Field of View:.....45x45mm
 Size:51x65x51mm
 Net Weight:80g

68128-04 4X Achromatic Magnifier each

▶ Headband with Magnifier

- Lightweight, adjustable headband for comfort.
- Tilt up and away when not in use.
- Close-up magnification while leaving both hands free for working.
- Single lens with no center post means clear, comfortable, unobstructed vision with less eye strain and fatigue.

- Available in a variety of magnifications.

► Bausch & Lomb Classic Metal Eyeglass Loupes

Bausch & Lomb is pleased to bring back a classic. The classic Metal™ Eyeglass Loupes which set the standard for quality optics many years ago and they are now back with major enhancements.

- Made from precision optical glass
- Available in single or double lens configurations
- Side shield adapter kit provided for use with Safety Eyewear and Shields
- Ideal for any detail work
- Improved mounting system for more secure attachment
- High quality case provided to protect your investment
- Lens diameter is 24.0 mm

Cat.#	Description	Focal Distance	Diopters	Qty
68250-25	Single Eyeglass Loupe 4x	2.5"/6.4 cm	16D	each
68250-20	Single Eyeglass Loupe 5x	2.0"/5.1 cm	20D	each

68250-50	Side Shield Adapter Kit			each

► Bausch & Lomb Large Hand Held Magnifier

Round and rectangular magnifiers incorporate optics and an ergonomic design for increased clarity and comfort during use.

- 5" Round Magnifier
 - 2x powder with 4x inset power
 - 133 mm lens diameter
- 68274** Large Hand Held Magnifier each

► Bausch & Lomb Illuminated Coddington

Correction in the Coddington magnifiers is achieved through the use of a single thick lens with a central groove diaphragm. This provides for sharp, crisp image.

A problem sometimes encountered in using a high power magnifier is the lack of sufficient light on the object. A bulb inserted in the groove of the Coddington lens illuminates the object being examined eliminating this problem. Requires two 'AA' batteries (not included).

- 10x power
 - 1" / 2.5cm focal distance
 - 40 diopters
 - 19.8 mm lens diameter
- 68272** Illuminated Coddington each

► Bausch & Lomb Illuminated Stand Magnifier

This Bausch & Lomb Illuminated Stand Magnifier offers versatility across a number of different applications. Both the lens and the light are adjustable. Simply tilt the lens and small

hand held objects can be worked on or inspected. With the lens parallel to the work surface, lay the object directly beneath the lens and it's in focus. The lens is 2" x 4" and the lamp is a 7 watt GE 7C7 (or equal) 115 volt. The stand is nickel-plated steel rod.

- 2x power with 4x inset power
 - 50.8 x 101.6mm lens diameter
- 68270** Illuminated Stand Magnifier each

► Bausch & Lomb Pre-Moistened Lens Cleaning Tissue

A lot of clean in a little package. With Sight Savers® Pre-Moistened Lens Cleaning Tissues, you can conveniently clean lenses and a variety of other surfaces. Place the gravity feed dispenser where it's most accessible in a workplace or office environment.

- Individually wrapped.
 - 100 pre-moistened tissues per box, 5" x 8"
 - Box measures 5½" x 9" x 2¾"
- 68282** Pre-moistened Lens Tissue each

► Bausch & Lomb Magna Visor

Bausch & Lomb quality optics and contemporary design come together in this quality visor for hands-free-viewing. Lightweight acrylic lenses give you the precision you need for detail work, crafts, laboratory, and hobbies. Hard working features provide comfort and convenience. The molded frame is padded with a removable, washable fabric. The lenses are easily changed to a variety of focal lengths. Magna Visor with 3 interchangeable lens including 12", 8", and 6" lenses.

68253-00	Magna Visor w/3 Interchangeable Lens	each
68253-12	12" Lens, 1.8x Power, 7.2 diopters	each
68253-08	8" Lens, 2.2x Power, 8.8 diopters	each
68253-06	6" Lens, 2.6x Power, 10.4 diopters	each

► Edroy Binocular Loupe

Deluxe quality loupe with individual lenses provides the ultimate in comfortable mag-nified viewing. Can be worn over eyeglasses and each lens can be adjusted individually. The headband is adjustable with foam padding for added comfort. Magnification is 2½ X at a working distance of 14" (365 mm), and the field of view is 2" (51mm).

68255-10	Edroy Binocular Loupe	each
-----------------	-----------------------	------

Peak™ ABC Lupe

Seven kinds of magnifying power

The Peak ABC Lupe is a precision folding lupe, consisting of A lens (12X), B lens (3X) and C lens (6X). With these three lenses combined, seven kinds of magnifying power are available.

The lens is made from high quality glass optics and the body is made of aluminum.

The magnification desired will be available from the combination table shown on the back of the lupe.

68160	ABC Lupe	each
--------------	----------	------

► Penlight

A rugged, clear-coat, aluminum-shelled flashlight that is de-signed to last for years. Comes with two AAA batteries and storage tube.

68190-01	Penlight	each
-----------------	----------	------

► Pocket Measuring Microscope

It is as small as a fountain pen. A standard scale is incorporated in its lens barrel, giving an effecient brightness and excellent definition. It can be focused in the same way as a conventional microscope.

(1) Magnification:25X
Field of view:3.30mm
Min. scale division:0.05
Measuring range:3mm
Size:12.4 x 127mm
Weight:12.2g

68130	Pocket Measuring Microscope 25X	each
--------------	---------------------------------	------

(2) Magnification:50X
Field of view:2.00mm
Size:12.4 x 127mm
Min. Scale Division:0.02
Measuring range:1.60mm
Weight:12.2g

68131	Pocket Measuring Microscope 50X	each
--------------	---------------------------------	------

► Parasite Magnifier

An improved version of the conventional magnifying glass. A 20mm diameter parasite like lens is cemented on a large

75mm diameter lens. Magnifi-cation of the large one is 2.5X, while the small lens area has the magnification of 5X.

The mag-nified image is very sharp and clear. Weight: 111g

68110	Parasite Magnifier	each
--------------	--------------------	------

► Stereo Viewer

A simple device, used for viewing a set of 3-dimensional aerial photos in 3-dimension. It comes with two support legs that are folded flat for storage and are unfolded for the viewing position. Photos are viewed through the two lenses simultaneously with both eyes.

Lenses may be adjusted for suitable eye-to-eye width. The coated lenses are 32mm in diameter and magnifying power is two (2) for #68100 and four (4) for #68101. The size for 68100 is 118mmx56mmx124mm (2X Net Weight: 227g) and for 68101 is 118mm x 56mmx82mm 4X Net Weight: 216g).

68100	Pocket Mirror Stereo Viewer	each
68101	Pocket Mirror Stereo Viewer	each

► Mirror Stereo Viewer

For the viewing of 4"x5" (100x 125mm) stereo pairs. It stands on 4 folding legs. One of the legs is equip-ped with a length adjusting device, that provides stabilization to the unit during observation. The magnifier can be replaced depending on the application.

Base line spacing:260mm
Magnification:1.8X
Field of view without magnifier:260x200mm
Field of view with magnifier:210x150mm
Maximum size set up:713x267x255mm
Net weight:2.65Kg

68105	Mirror Stereo Viewer	each
--------------	----------------------	------

► 3D Stereo Glasses

EMS now offers Anaglyph 3D glasses, Red-Cyan Type and Red-Blue Type. White cardboard frames with temples for your red/cyan or Red-Blue 3D anaglyph needs. With red and cyan filters or Red and Blue filters, the glasses can be used for either red left or red right depending on which way you fold the temples. Two different fold-scores allow you to fit the glasses to smaller or larger viewer's heads.

68139-10	3D stereo Glasses Red-Cyan	10/pk
68139-20	3D Stereo Glasses Red-Blue	10/pk

► Glass Scale

A transparent glass plate well polished and marked by the photo-printing technique. It provides very accurate readings and it is a helpful tool for the stereo viewer.

Glass Scale Type	Thickness (mm)	Width (mm)	Length (mm)	Marking area (mm)	Increment (mm)
50	3	25	80	50	0.1
100	3	25	140	100	0.1
200	3	25	220	200	0.1

68140	Glass Scale 50	each
68141	Glass Scale 100	each
68142	Glass Scale 200	each

► Achromatic Magnifier, 4x and 2x

The magnifying glass introduced here is the new version of the classic magnifying glass used by the famous detective Sherlock Holmes. This achromatic is more defined in its function and can give you more accurate details of the subject to be observed. This magnifier is composed by two optical glass lenses, which are cemented together. The image seen through this lens is free of color and gives sharp contours so that no vague lines will be found throughout the entire image field.

With a solid red wood handle and a red mark at the base of the lens frame, this reminds you to use the face having this red point upwards.

The lens diameter is 37mm and the magnifying power is 4x. Both faces are purple coated and they measure 39 x 15 x 155mm., Weight 73g

68111-4X	Achromatic Magnifier, 4x	each
68111-2X	Achromatic Magnifier, 2x	each

► Folding Magnifier

Lightweight, compact, and simple; it comes with a measuring scale on the base frame. Base size is 1 square inch opening; marked every 1/8" on two sides and every millimeter on two other sides. Comes with 6X magnifier lens in a black anodized aluminum body. Folds flat when it is not in use.

68112	6X Folding Magnifier	each
--------------	----------------------	------

► Magnifying Lights: Green-Lite™

EMS is proud to introduce the next generation of Magnifying Lights

Product Description

Equipped with next generation, surface mount LEDs, these innovative designs create the new standard for illuminated magnifiers. Your investment in new technology quickly pays for itself through energy savings. Made in the USA.

Lighting Features

- Highest lumen output in a lighted magnifier
- Reduced glare, heat and energy consumption
- Multi-angle LEDs for shadowless lighting at a full range of focal lengths and heights
- User controlled LED groups shine desired level of light exactly where required
- Superb dimming software via convenient, reliable membrane switch

Optical Features

- Precision ground, optical grade glass
- Largest lenses in the industry
- Standard 4 diopter (2x) lens – O.C. White exclusive
- Optional 5 diopter (2.25x) lens available

Electrical Features

- Low voltage (15-24v) power supplies are auto-switchable with worldwide approvals
- Plug in around the world by simply switching the end power cord
- Energy Star compliant (each unit uses 8 watts maximum)
- Auto shut off at 4 hour intervals to prevent energy waste while users are away

Mechanical Features

- High quality die cast aluminum shades and all steel arm components for ESD safety
- Patented "Elite" arms are slim but have the greatest holding power of any arm of this type in the world
- Virtually "maintenance zero"

Catalog Number	Description	Magnification	Mounting Style	Voltage	Reach	Qty
68194-10	Green-Lite™ - 6" Round LED	2X	Table Edge Clamp	120 - 240 Volt	43"	each

► Lighted Flex Magnifier

A desktop portable magnifier with gooseneck that allows your hands to be doing other things. It may be used as an alternative to a dissecting microscope. It works with an AC adaptor or batteries. Both the adapter and batteries are sold separately

SPECIFICATIONS:

Magnification: 2x/6x Mini Bifocal
Diopter : 2.9 D
Lens Size: 102mm
Lens Shape: Biaspheric

Working Distance: Variable
Lens Material: PMMA Acrylic
Illumination: LED

Cat. #	Description	Qty.
68113-01	Lighted Flex Magnifier	each
68113-02	120V Wall Adapter	each
68113-03	220 V Wall Adapter	each

► Ergonomic Magnifier

This magnifier is easily maneuvered with the palm of your hand. The magnifier has an automatic switch off feature which turns the light off automatically after 30 minutes. The magnifier comes in a protective case .

SPECIFICATIONS:

Magnification: 5X
Diopter : 2.0 D
Lens Size: 58mm
Lens Material: PXMTM lightweight lens with patented Ceratec™ scratch-resistant coating

Lens Shape: Aspheric
Illumination: LED~ 8000k Cool light
Power Source: 2 AA Batteries (Included)

Cat. #	Description	Qty.
68113-04	Ergonomic Magnifier	each

► Steinheil Magnifier

A biconvex lens. Pocket size. The sliding frame is designed for the storage of the lens after use. It is good for the preliminary inspection of microscopic specimens. It is lightweight and has excellent chromatic correction with a reasonably wide field of view. The magnifier helps the user eliminate bulky and heavier conventional magnifiers.

Size: 39x24x22mm; Average weight: 20g

68145	7X Steinheil Magnifier	each
68146	10X Steinheil Magnifier	each
68147	14X Steinheil Magnifier	each
68148	20X Steinheil Magnifier	each

► Illuminated Magnilites® Vision-Lite® 2000

The Vision-Lite® 2000 is the world's first dimmable fluorescent illuminated magnifier. New "patented" state-of-the-art microchip controlled ballast technology allows the Vision-Lite® 2000 to be dimmable from 100% down to 25% so that highly reflective surfaces can easily be seen by dimming the units exclusive "Full Spectrum" bulb.

An exclusive slide switch allows the operator to change illumination intensity with the stroke of a finger.

The bulbs unique design provides three-sided illumination, eliminating annoying shadows that are associated with magnifiers, that have only two-sided, or left and right-sided bulbs.

It also eliminates all fluorescent flickering, reducing eye fatigue.

Ergonomic positioning.

The Vision-Lite 2000 boasts one of the largest 46.5 sq. in (7.5" x 6.2") (290 cm²) and clearest 3 diopter (1.75x – 1.85x) lens.

It is also equipped with an ESD Safe shade.

OPTIONS INCLUDE:

- 4-diopter lens (2x)
- Anti reflective coating (AVR) to reduce overhead glare
- Exclusive UV bulb, 365 nm

68225-01

68215

Electrical Specs	Mechanical Features
Low voltage, 12V	7.5" x 6.2" lens
120 volt, 230 volt optional	43" reach standard clamp-on
Molded 3-wire plug	25" reach standard portable
34 watt maximum	Springs (music wire)
Electric transformer "patented"	Bulb (U shaped), 10,000 hour life

Switch	Wide, quality clamp or weighed bases

Ordering: We offer the most popular models, which suits most any needs.

► Model 53139 - 1.75x, Light Gray (68205)

ESD Safe construction - Ergonomic 5" diameter lens - 45" Prolite® reach. - Clamp on - 22-watt cool white bulb

► Model 52139 - 1.75x, Light Gray (68206)

ESD Safe construction - Ergonomic 5" diameter lens - 37" Prolite® reach. - Clamp on - 22-watt cool white bulb

► Model 51739 - 1.75x, Light Gray (68207)

ESD Safe construction - Ergonomic 5" diameter lens - 25" Prolite® reach. - Portable with 11lb mounting base - 22-watt cool white bulb

► Model 51739-5 - 2.25x, Light Gray (68210)

ESD Safe construction - Ergonomic 5" diameter lens - 25" Prolite® reach. - Portable with 11lb mounting base - 22-watt cool white bulb

► Model 53139-5 - 2x, Light Gray (68208)

ESD Safe construction - Ergonomic 5" diameter lens - 45" Prolite® reach. - Clamp on - 22-watt cool white bulb

► Model 52139-5 - 2.25x, Light Gray (68209)

ESD Safe construction - Ergonomic 5" diameter lens - 37" Prolite® reach. - Clamp on - 22-watt cool white bulb

► Model 32300-5 - 2.25x, Light Gray (68211)

ESD Safe construction - Ergonomic 5" diameter lens - 43" Ultraflex® reach. - Screw down - 22-watt cool white bulb- 10 years mechanical warranty

Cat.#	Model	Description	Pack
68205-10	53139	Clamp-on, 1.75x, 45" Reach	each
68206-10	52139	Clamp on, 1.75x, 37" Reach	each
68207-10	51739	Portable, 1.75x, 25" Reach	each
68208-10	53139-5	Clamp-on, 2.25x, 45" Reach	each
68209-10	52139-5	Clamp-on, 2.25x, 37"	each
68210-10	51739-5	Portable, 2.25x, 25" Reach	each
68211-10	32300-5	Screw down, 2.25x, 43" Reach	each
68212-01	13367	Replacement Bulb	each
68212-02	13381	Ultra-Violet Light Bulb	each

68205

68207

► Lighted Magnifiers

A flashlight is attached to the magnifier that illuminates poorly lighted background making it bright and clear for easy observation. A variety of types and magnifications are available.

► (1) 3.5X Lighted Magnifier

Comes with a large square magnifier lens which measures 50mm/side. The lens is removable and the flashlight can be used alone.

Magnification:3.5X Battery:.....It takes 2 "C" batteries
Flashlight Size Alone:140mm(L) (UM-2, 1.5V/ea. not included)
.....x 30mm(dia) Weight:120g

68120 3.5X Lighted Magnifier each

68120

► (2) 7X Lighted Magnifier

A simple and accurate comparator. High quality measuring scale; detachable flashlight.

Magnification:7X Battery:.....It takes 2 "C" batteries
Scale Diameter:22mm (UM-2, 1.5V/ea-not included).
Divisions:0.1mm Weight:118g
Size: ...36mm(dia) x 58mm(H) x 175mm(L)

68121 7X Lighted Magnifier each

68121

► (3) 10X Lighted Magnifier

A simple and accurate comparator. High quality measuring scale; detachable flashlight.

Magnification:10X Size: ...47mm(dia) x 45mm(H) x 185mm(L)
Scale Diameter:32mm Battery: It takes 2 "C" batteries (UM-2,
Divisions:0.1mm 1.5V/ea-not included).

68122 10X Lighted Magnifier each

68122

► (4) 15X Lighted Magnifier

High quality magnifier lens. Very convenient to see details under poor lighting conditions.

Magnification:15X Battery: It takes 2 "C" batteries (UM-2,
Field of view:.....19mm 1.5V/ea-not included).
Size: ...36mm(dia) x 42mm(H) x 180mm(L) Weight:90g

68123 10X Lighted Magnifier each

68123

► (5) 15X Lighted Scale Magnifier

Scale magnifier 15X (EMS # 68158) is attached to an illuminating device to improve the visibility. Comes with one metric scale. Battery is not included.

68123-L 15X Lighted Scale Magnifier each

68123-L

► Magnifier 8X For 35mm Slide

For high performance. Well designed. The 8X magnifier uses a 24mm x 37mm angular objective lens and a two-element achromatic lens for the eyepiece. This arrangement enables the 8X magnifier to cover the entire 24mm x 36mm picture area of a single frame of 35mm film, and it is suitable for checking negatives. Engraved on the bottom edge of the transparent acrylic skirt is a 30mm long, 1mm division scale, which does not interfere with the field of view. With all of these features, you should have one for every day use.

Measurements: 46mm x 49mm x 39mm. Weight: 52g

68125 Magnifier 8X for 35mm Film each

► Film Marker

This device when fitted to the 8X magnifier (68125) enables you to view and check the 35mm roll film while marking the desired frame by depressing the puncher (located on the side of the device). The puncher punches out a V-shaped piece of film

on the perforation to mark the frame. When fitted in the reverse position to the 8X magnifier, you are able to view and check the slides.

68126 Film Marker each
68127 Film Marker and 8X Magnifier set

▶ Measuring Magnifiers

Excellent achromatic lenses with a photo-printed precise scale. Focusing ring. Accuracy and low prices.

68150

68154

68158

▶ (1) Magnification: 7X (3 lens, 2 groups)

Objective Lens:19mm
 Eyepiece:18mm
 Scale Diameter:26mm
 Measuring scale:20mm(L);
 Divisions:0.1mm or 0.8"(L);
 Divisions:0.005"(Metric &
English scale interchangeable)
 Size:36mm (d) x 62mm
 Weight:56 g

68150	7X Measuring Magnifier w/Metric Scale	each
68151	English Scale for 7X	each

▶ (2) Magnification: 10X (coated 4 lens, 2 groups)

Field of view:28mm
 Eyepiece:20mm
 Scale Diameter:35mm
 Measuring Scale:20mm(L);
 Divisions:0.1mm or 0.8"(L);
 Divisions:0.005"(Metric &
English scale interchangeable)
 Size:46mm (d) x 44mm
 Weight:74g

68154	10X Measuring Magnifier w/Metric Scale	each
68155	English Scale for 10X	each

▶ (3) Magnification: 15X (4 lens, 3 groups or 6 air-to-glass-lenses)

Field of view:14mm
 Eyepiece:13mm(L)
 Scale Diameter:26mm
 Measuring Scale:20mm(L);
 Divisions:0.1mm or 0.8"(L);
 Size:35mm (d) x 36mm
 Divisions:0.005"(Metric &
English scale interchangeable)
 Weight:40g

68158	15X Measuring Magnifier w/Metric Scale	each
68159	English Scale for 15X	each

For more Magnifiers see our Photography section page 734 <<<<<

▶ Measuring Scale, For Measuring Magnifiers

These scales are available in two different sizes; for use with the Measuring Magnifiers at left:

■ 26mm for 7X and some for 15X Magnifiers ■ 35mm for 10X Magnifiers

EMS proudly adds to our supply line a wide range of Microscopy Calibration Standards and Standard Graticules, which are manufactured to very tight tolerances and high precision. All Standards are available with or without Secondary or Direct NIST certification as per your choice. Made in the USA.

► I. Microscope Graticules and Stage Micrometers

► A. Linear Reference Scales

We offer Chrome-on-Glass (G) and Chrome-on-Opal glass (O) or Chrome-on Quartz (Q). The Opal and Quartz are offered by request only.

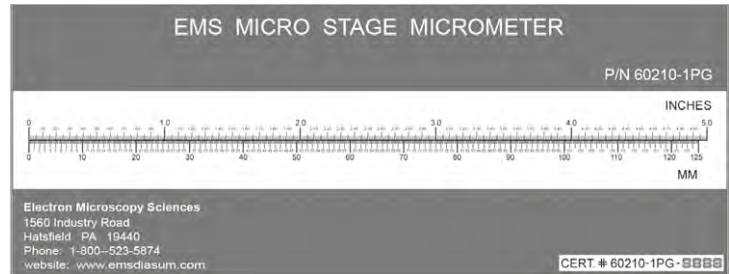

P: positive image (mostly clear or white); **N:** negative image (mostly opaque or black)

All EMS micrometers are come with sturdy wooden box, and last for years to come.

► Model SM-1

Glass Size:2" x 5.25" (50 mm x 132 mm).
 Scale Length:5 inch (English) X-axis only
125 mm (Metric) X-axis only
 Divisions:English = 0.01"; Metric = 100 μ m (0.1mm)
 With numerical labeling every 1 mm and 0.1"

Cat #	Description	Qty
60210-1PG	Stage Micrometer, SM-1, chrome on glass	each
60210-1PGC	Stage Micrometer, SM-1 with Calibration	each

► Model SM-3

Glass Size:1" x 3" (25mm x 75mm). \geq 1.42 mm (0.056") thickness
 Scale Length:0.04 inch (English) X & Y axis
10 mm (Metric) X & Y axis
 Divisions:English = 0.0005"; Metric = 10 μ m (0.010mm)
 With numerical labeling every 0.1 mm and 0.05"
 Flatness: \leq 10 μ m / 100 mm
 Image Forming Material:Chrome
 Image Contrast/Density:Chrome transmission density is \geq 2.0
 Feature Size Accuracy:2 μ m
 Image Placement Accuracy:0.001 mm / 100 mm
 Polarity: Scales are opaque on a clear background
 Reading Direction:Right Read Chrome Up (RRCU)
 Typical Uses:SM-3 is useful for calibration of magnification in microscopes and other optical magnification systems. Its auto-location features can be used for testing of an image analysis auto-location system.

Cat #	Description	Qty
60210-3PG	Stage Micrometer, SM-3, chrome on glass	each
60210-3PGC	Stage Micrometer, SM-3 with Calibration	each

► Model SM-4

Glass Size:1" x 3" (25mm x 75mm).
 Scale Length:1 inch (English) X-axis only
25 mm (Metric) X-axis only
 Divisions:English = 0.0005"; Metric = 10 μ m (0.010 mm)
 With numerical labeling every 0.1 mm and 0.05"

Cat #	Description	Qty
60210-4PG	Stage Micrometer, SM-4, Chrome on glass	each
60210-4PGC	Stage Micrometer, SM-4 with Calibration	each

► **Model SM-5**

Glass Size:1.5" x 3" (38mm x 75mm).
 Scale Length:1 inch (English) X & Y axis
 25 mm (Metric) X & Y axis
 Divisions:English = 0.001"; Metric = 25µm (0.025 mm)
 With numerical labeling every 1 mm and 0.1"

Cat #	Description	Qty
60210-5PG	Stage Micrometer, SM-5, Chrome on glass	each
60210-5PGC	Stage Micrometer, SM-5 with Calibration	each

► **Model SM-6**

Same as scale SM-5, but smaller division

Glass Size:1.5" x 3" (38mm x 75mm).
 Scale Length:1 inch (English) X & Y axis
 25 mm (Metric) X & Y axis
 Divisions:English = 0.0005"; Metric = 10µm (0.010 mm)
 With numerical labeling every 0.1 mm and 0.05"

Cat #	Description	Qty
60210-6PG	Stage Micrometer, SM-6, Chrome on Glass	each
60210-6PGC	Stage Micrometer, SM-6 with Calibration	each

► **Model SM-12**

Glass Size:1" x 3" (25mm x 75mm). ≥1.42 mm (0.056") thickness
 Scale Length:0.08 inch (English) X-axis only
 2.0 mm (Metric) X-axis only
 Divisions:English = 0.001"; Metric = 25µm (0.025 mm)
 No numerical scale labeling
 Flatness: ≤ 10 µm / 100 mm
 Image Forming Material:Chrome
 Image Contrast/Density: ...Chrome transmission density is ≥ 2.0
 Feature Size Accuracy:2 µm
 Image Placement Accuracy:0.001 mm / 100 mm
 Polarity: Scales are opaque on a clear background
 Reading Direction:Right Read Chrome Up (RRCU)

Cat #	Description	Qty
60210-12PG	Stage Micrometer, SM-12, chrome on glass	each
60210-12PGC	Stage Micrometer, SM-12 with Calibration	each

Typical Uses: SM-12 is useful for calibration of magnification in microscopes and other optical magnification systems.

► **Model SM-13**

Glass Size:1" x 3" (25mm x 75mm).
 Scale Length:0.08 inch (English) X & Y axis
 2.0 mm (Metric) X & Y axis
 Divisions:English = 0.001"; Metric = 25µm (0.025 mm)
 No numerical scale labeling

Cat #	Description	Qty
60210-13PG	Stage Micrometer, SM-13, Chrome on glass	each
60210-13PGC	Stage Micrometer, SM-13 with Calibration	each

► B. Image Analysis & Microscopy (IAM)

Vision Calibration Standards

We are proud to introduce the first complete and true line of Image Analysis Microscopy Calibration Standards, specially designed to address the current needs to accommodate the new generation of image analysis and machine vision systems. These unique standards are designed to test multiple morphometric parameters to assure that your image analysis systems are working properly, meeting the required calibration – certification requirements of your vision measurement systems.

We offer Chrome-on-Glass (G) and Chrome-on-Opal glass (O) or Chrome on Quartz (Q). The Opal and Quartz are offered by request only.

P: positive image (mostly clear or white); N: negative image (mostly opaque or black)

► Model IAM-1 – Morphometric Image Analysis Standards

Ideally for morphological calibration where two dimensional shapes have to be measured precisely. Standard is included of eight test plates of various shapes, positions, angles and sizes. Also included a linear measurement scale for calibrating your imaging system.

Overall size: 1" x 3" (25mm x 75mm). Positive image / Chrome on glass (PG)

Cat #	Description	Qty
60216-1PG	Morphology Stage Micrometer, Model IAM- 1	each
60216-1PGC	Morphology Stage Micrometer, Model IAM-1, T/L, Calibrated only plates 1, 2 & 8	each
-----	Additional calibrated each plate for IA 1	each

Plate	Frame Size	Description
1	4600 x 3500µm	Circles – 2000, 1000, 500 & 250 µm diameters
2	1000 x 800 µm	Circles – 500, 250, 125 & 62.5 µm diameters
3	1000 x 800 µm	Bars – 200x20 µm at 30 degrees increments
4	1000 x 800 µm	Various Shapes, Circles, Bars & Angular designs.
5	1000 x 800 µm	Squares – 100, 40, 20 µm set of 2 each.
6	2050 x 1650µm	Grid Patterns – 50 µm lines at 100 µm pitch
7	4200 x 3400 µm	Grid Patterns – 200 µm lines at 200 µm pitch
8	10 mm long	Scale with 10 µm divisions

► Model IAM-5 – Stage Mapping – Grid Pattern

This ideal standard is for verifying or qualifying multiple image analysis parameters such as optical distortion, alignment between systems or optical paths, cell areas for particle counting. The image area is 20mm x 50mm.

Overall size:1" x 3" (25mm x 75mm)
Image:Negative image / chrome on glass (NG)

Cat #	Description	Qty
60216-5SNG	Model IAM-5S, Grids, Small Size, 10µm Pitch	each
60216-5SNGC	Model IAM-5S with Calibrated (12 pts)	each
60216-5MNG	Model IAM-5M, Grids, Medium Size, 200µm Pitch	each
60216-5MNGC	Model IAM-5M with Calibrated (12 pts)	each
60216-5LNG	Model IAM-5L, Grids, Large Size, 1000µm Pitch	each
60216-5LNGC	Model IAM-5L with Calibrated (12 pts)	each

Model No.	Clear Aperture	Opaque Lines	Pitch
IAM-5S	8.5 µm square	1.5 µm sq.	10 µm
IAM-5M	180 µm square	20 µm sq.	200 µm
IAM-5L	980 µm square	20 µm sq.	1000 µm

► Model IAM-8 – Multi Grid Standard

A unique designed standard with 4 different grid size patterns: 0.5 x 0.5 mm grid with 25 µm pitch; 1.0 x 1.0 mm grid with 50 µm pitch; 2.0 x 2.0 grid with 100 µm pitch; and 4.0 x 4.0 mm grid with 200 µm pitch. Also includes a Star Target with 15 degree angle increments. This standard can be used to test not only the overall frame distortion issue but also linear distances for a wide variety of magnification ranges from 1x to 1000x power.

Overall Size:1" x 3" (25mm x 75mm)
Image:Positive image / chrome on glass (PG)

Cat #	Description	Qty
60216-8PG	Model IAM-8, Multi Grids Standard	each
60216-8PGC	Model IAM-8 Calibrated (16 pts)	each

➤ Model IAM-MET ASTM Grain Size / Nodularity Analysis Standard

Based on the IAM-1 – Morphometric Image Analysis above, the IAM-MET is a multi-morphology calibration standard designed specifically for ASTM. The IAM-MET includes all plates as found in IAM-1 except that plate 4 as is pictured above. This picture contains 9 images of irregular shapes, simulating features commonly found in metallurgical applications. As required by the ASTM standard, the IAM-MET includes secondary certification of plates 1, 2 and 8.

Overall size:76.2 mm x 25.4 mm (3" x 1")
Image:Chrome on glass / positive. Calibrated 32 points.

Cat #	Description	Qty
60216-METC	Model IAM-MET, ASTM Grain Size, 32 pts Calibrated	each

➤ Model IAM-2 – Linear (X & Y axis) Scale

A dual axis linear micrometer that can accurately calibrated both X & Y directions without rotation, for optical magnification, and camera aspect ratio using single stage. In addition, it can be used to calibrate and check linear stage motion or related auto measuring systems. Scales are in both English and Metric measurements

Overall size:1" x 3" (25 mm x 75 mm)
Scale Image:X = 1" (right scale); 25 mm (left scale)
 Y = 0.60" (right scale); 15 mm (left scale)
Divisions:English = 0.001", Metric = 25µm
Positive image / Chrome on glass (PG)

Cat #	Description	Qty
60216-2PG	Linear (X&Y axis) Stage Micrometer, Model IAM-2	each
60216-2PGC	Linear (X&Y axis) Stage Micrometer, Model IAM-2, T/L, Calibrated	each

➤ C. ACM-1 – Calibration Micrometer

This ideal standard is accurately calibrated of any eyepiece, reticles, filar micrometers, or electronic measuring instrument. Features a series of 'H' shaped fiducial images in a range of sizes from 0.1 mm through 20 mm, useful for calibration range from 1X to 1000X power.

Standard Size:25 mm x 75 mm
Substrate Type:Transparent glass (G), 1.42 mm or thicker
 Opal glass (O) is available per request.

Image Forming Material: Evaporated chromium on glass
Image Description: 'H' shaped fiducials as follows,
 centerline to centerline

Polarity:Positive (opaque or black features on clear background)
Reading Direction:Right Read Chrome Up (RRCU)
Image Placement Accuracy:3.0 microns or better
Image Contrast/Density:Chrome optical density grater than 2.0
Typical Use:Verification or calibration of magnification.

Pattern Length (mm)	Pattern Height	Line Width
0.10, 0.25, 0.50, 0.75	0.50 mm	10 µm
1.00, 2.50, 5.00, 7.50	1.00 mm	20 µm
10.0, 15.0, 20.0	3.00 mm	40 µm

Cat #	Description	Qty
60218-1PG	Model ACM-1, Calibrating Micrometer	each
60218-1PGC	Model ACM-1, with 11 pts Calibrated	each

► Standard Reticles

These standard reticles are manufactured to use with our microscope eyepieces. High quality, precision made with different designs and styles that help you do your work. We offer as a standard the following popular eyepiece diameters: 19 mm and 21 mm. Other eyepiece diameter sizes can be supplied as a special order.

All reticles are chrome on glass and positive polarity.

► Single Solid Cross Lines and Broken Cross Lines

Cat. #	Description	Qty
Single Cross Lines		
60250-19	RET 42, 9µm wide, 19mm Diameter	each
60250-21	RET 42, 9µm wide, 21mm Diameter	each
60251-19	RET 41, 17µm wide, 19mm Diameter	each
60251-21	RET 41, 17µm wide, 21mm Diameter	each
60252-19	RET 43, 25µm wide, 19mm Diameter	each
60252-21	RET 43, 25µm wide, 21mm Diameter	each
Broken Cross Lines		
60255-19	RET 50, 13 µm wide, 19 mm Diameter	each
60255-21	RET 50, 13 µm wide, 21 mm Diameter	each
60256-19	RET 51, 63 µm wide, 19 mm Diameter	each
60256-21	RET 51, 63 µm wide, 21 mm Diameter	each

► Double Cross Lines

Cat. #	Description	Qty
60260-19	RET 60, 0.025 mm gap, 19mm Diameter	each
60260-21	RET 60, 0.025 mm gap, 21mm Diameter	each
60261-19	RET 61, 0.075 mm gap, 19mm Diameter	each
60261-21	RET 61, 0.075 mm gap, 21mm Diameter	each
60262-19	RET 62, 0.125 mm gap, 19mm Diameter	each
60262-21	RET 62, 0.125 mm gap, 21mm Diameter	each
60263-19	RET 63, 0.50 mm gap, 19mm Diameter	each
60263-21	RET 63, 0.50 mm gap, 21mm Diameter	each
60264-19	RET 64, 1.0 mm gap, 19mm Diameter	each
60264-21	RET 64, 1.0 mm gap, 21mm Diameter	each
60265-19	RET 65, 2.0 mm gap, 19mm Diameter	each
60265-21	RET 65, 2.0 mm gap, 21mm Diameter	each

► Cross Lines with Scale

Cat. #	Description	Qty
60267-19	RET 21, 20mm of 0.10 mm Division Scale, 19mm Diameter	each
60267-21	RET 21, 20mm of 0.10mm Division Scale, 21mm Diameter	each

► Indexed Grid Scales

Cat. #	Description	Qty
60286-19	RET 83, Indexed Grid 5mm x 5mm x 1mm with 0.01mm Line, 1 - 5 horiz / 1 - 5 vert, 19mm Diameter	each
60286-21	RET 83, Indexed Grid 5mm x 5mm x 1mm with 0.01m Line, 1 - 5 horiz / 1 - 5 vert, 21mm Diameter	each
60287-19	RET 80, Indexed Grid 10mm x 10mm x 0.5mm with 0.025mm Line, 1 - 10 horiz / 1 - 10 vert. 19mm Diameter	each
60287-21	RET 80, Indexed Grid 10mm x 10mm x 0.5mm with 0.025mm Line, 1 - 10 horiz / A - Z vert. 21mm Diameter	each

► Scales

Cat. #	Description	Qty
60270-19	RET 14, Scale 2mm, 200 Div of 0.01mm, 19mm Diameter	each
60270-21	RET 14, Scale 2mm, 200 Div of 0.01mm, 21mm Diameter	each
60271-19	RET 15, Scale 5mm, 50 Div. of 0.1mm, 19mm Diameter	each
60271-21	RET 15, Scale 5mm, 50 Div of 0.1mm 21mm Diameter	each
60272-19	RET 11, Scale 5mm, 100 Div of 0.05mm, 19mm Diameter	each
60272-21	RET 11, Scale 5mm, 100 Div of 0.05mm, 21mm Diameter	each

60282-19	RET 71, Grid 5mm x 5mm x 0.5mm with 0.025mm Line, 19mm Diameter	each
60282-21	RET 71, Grid 5mm x 5mm x 0.5mm with 0.025mm Line, 21mm Diameter	each
60283-19	RET 73, Grid 10mm x 10mm x 1mm with 0.025mm Line, 19mm Diameter	each
60283-21	RET 73, Grid 5mm x 5mm x 1mm with 0.025mm Line, 21mm Diameter	each

➤ II. Microscope Graticules

Microscope graticules can be divided into two main classes:

Eye-piece graticules and Stage graticules

Eye-piece Graticules: These are placed at a focal plane of the eyepiece coincident with the primary plane of the objective. When the microscope is focused the image of the specimen and graticule will be seen together.

Stage Graticules: These are mounted on the stage either in plane of the normal specimen or in contact with it.

Eye-piece graticules insertion:

These are inserted in the focal plane of the eyepiece in one of two planes depending on the type of eyepiece used:

1. Below the eye-lens a **Huygenian** type, normally in contact with the field stop.
2. Below the field of lens a **Ramsden** or **Kellner** type usually in a special mount.

Choosing the correct eyepiece graticule:

1. Type of pattern. The type of pattern will largely depend on the analysis that is being undertaken.

2. Measurement divisions on the graticule scale.

It is important to note that the dimensions of the eyepiece patterns offered in this catalog refer always to the absolute dimensions on the graticule itself, and NOT the dimensions of the specimen that is being measured.

Care must also be taken to choose a graticule with dimensions large enough to be seen by the operator. For instance, an E28 with scale units of 0.01mm will be too fine to be seen clearly in an eyepiece with magnification less than X20.

3. Field of view. Another factor to consider is the field of view of the eyepiece defined by the diaphragm. Many eyepieces cover a field of 16mm diameter, but smaller fields often found in higher powered eyepieces will restrict the area of eyepiece graticule seen and will influence the choice.

4. Size of the graticule. The size of the graticule disc required will be determined by the size of the eyepiece tube. Eyepiece graticules are available in 16, 19 or 21mm diameter discs as a standard (others available upon request).

5. Type of image. Eyepiece graticules are available in two forms. Sandwich type (Reference E) where the pattern is produced in a layer between two glass discs. Dust and surface blemishes on the glass discs remain out of focus when the graticule is clearly defined.

Surface type (Reference NE) where the pattern is formed in a layer bonded to the surface of the glass disc. In this type the pattern reads correctly when viewed through the glass.

6. Calibration of Microscopes

In general, the total magnification of your microscope can be determined by simply multiplying the objective power by that of the eyepiece.

Objective	Eyepiece	Total Magnification
X20	X10	200

For most work, especially with modern optics, this is sufficient. However, where actual size is critical it is often necessary to modify the dimension, so when ordering eyepiece graticules, the following information is needed.

- Calibration factor.
- The objective in use.
- The eyepiece in use.
- Make and model of microscope.

To calibrate the instrument, fit the micro-scope with an eyepiece scale and appropriate stage micrometer. Compare the length of the stage micrometer with the eyepiece scale. An exact Calibration Factor can then be calculated.

Example: Using a 40X objective, a circle in the eyepiece requires a diameter of 4000 microns (4mm) to coincide with or read a 100 micron circle on the stage. The factor is therefore defined as 4.

7. Alternatively:

With the stage micrometer and eyepiece graticule in place, the microscope is focused in the normal way. The eyepiece scale now becomes superimposed upon the enlarged image of the stage micrometer.

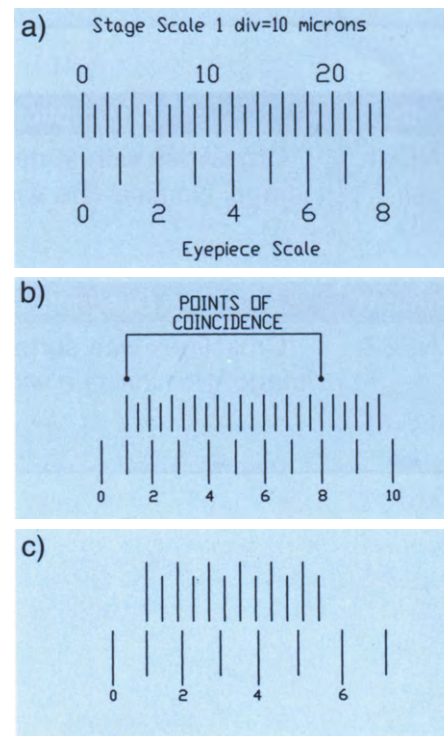

Move the stage micrometer until the zero on each scale are coincident. Further along another coincident point will be found. The relationship between the two points can now be seen and calculated.

a)
$$\text{Number of units} = \frac{\text{Number of stage micrometer divisions}}{\text{Number of eyepiece scale divisions}}$$

On scale shown a) there are 24 stage micrometer divisions which align with 8 eyepiece scale divisions. Therefore each eyepiece division is: $24/8 = 3$ units

b) In this case the 17 divisions on the stage micrometer line up with divisions 1 to 8 on the eyepiece scale. Thus $17/7 = 2.42857$ units. If the unit of the stage micrometer is 10 microns, then each division = 24.2857 microns. In practice terms this figure may be rounded to 24 or 24.3

c) It is possible that there is no second point of coincidence. Then on microscopes with an adjustable tube length coincidence can be obtained by lengthening or shortening the tube. Where there is no tube length adjustment, all measurement will be approximate.

► Inspecta Measuring Magnifier MAG 6

A hand-held magnifier for measurement and inspection. Their construction make them ideal aids for anyone concerned with quality control, inspection, drafting, photography, etc.

The clear base allows ample surface light to fall on the subject being measured and the eye lens can be focused to suit individual sight. Interchangeable graticules fitted in the base ring permit a variety of measurements to be made quickly and accurately. Comes complete with a leather case.

68056

68057

Specifications:

Divisions:0.1mm or 0.8"(L)
 Magnification:8X
 Field of view:25mm
 Height:65mm
 Overall Diameter:40mm

68055 MAG6 Measuring Magnifier each

Graticule for use with MAG6

68056 MT8 Combination Scale and Protractor each
 68057 M6T20 Inch/Metric Scale (0.1mm/0.005") each

► Focusing Eyepieces

► Huygenian Eyepiece X 7

Composed of two plano convex lenses, separated by an air space. The image plane is between the two lenses. The top lens is adjusted to bring the graticule into focus.

Field of view:15mm diameter
 Graticule:16mm diameter
 Reference No.:F7

► Kellner Eyepiece x 10

The F10 eyepiece, which fits most standard monocular microscopes, is specially designed to receive eyepiece graticules of 16mm diameter. This allows the graticule to be brought into sharp focus when superimposed on the object image, which is often difficult to achieve with fixed focus eyepieces. The graticule is held by a screw-on retaining ring and is easily removed for cleaning or replacement for another pattern.

Composed of a convex lens and an achromatic lens. The image plane is below the lens elements. The use of an achromatic lens provides a larger field of view, better color correction and substantial eye relief. The top lens adjusts to focus on the graticule.

Field of view:15mm diameter
 Graticule:16mm diameter
 Reference No.:F10

► Kellner Type Eyepiece (Wide Field x10)

With high eye point (useful for spectacle wearers). Non -focusing wide field.

Field of view:18mm diameter
 Graticule:19mm diameter
 Reference No.:F12

67990-F7 Huygenian Eyepiece, x7 each
 67990-F10 Kellner Eyepiece, x10 each
 67990-F12 Kellner Wide-Field Eyepiece, x10 each

► Eyepiece Graticules

The standard diameter size of the Eyepiece Graticules is 16, 19, 21mm. All other sizes are available upon request

► A. SIZE AND POSITION SCALES

► Line and Crosses

► Single Lines – NE50

For measurement of large objects in conjunction with a graduated mechanical stage, and for alignment as well.

Pattern	Description	Dia.	Cat.#
NE50	Single Line, nominal width 0.02mm. Image covers entire field of view Surface chrome image	16mm	67982-16
		19mm	67982-19
		21mm	67982-21

► Cross Lines – NE8, NE81, NE82

Used as NE50 but for measurements in two directions and for sighting and alignment. Image covers the entire field of view.

Pattern	Description	Dia.	Cat.#
NE8	Cross lines with surface chrome image. Nominal line width 0.020mm	16mm	67983-01
		19mm	67983-05
		21mm	67983-10
NE81	Cross lines with surface chrome image. Nominal line width 0.04mm	16mm	67983-20
		19mm	67983-25
		21mm	67983-30
NE82	Cross lines with surface chrome image. Nominal line width 0.005mm	16mm	67984-16
		19mm	67984-19
		21mm	67984-21

► Broken Crosslines – NE56

Used as above. Broken lines enable fine detail to be seen at the breaks. A thin boundary would be lost behind a continuous line.

Pattern	Description	Dia.	Cat.#
NE56	Broken cross lines. Image covers the entire field of view. Surface chrome image.	16mm	67985-16
		19mm	67985-19
		21mm	67985-21

► Crossed Gauge Lines – NE53, NE 54

Use as crossed lines, but for the measuring of distances between the lines. Greater accuracy can be obtained by locating the specimen detail between the graticules gauge pair.

Pattern	Description	Dia.	Cat. #
NE53	Two vertical lines 0.1mm apart with horizontal line. Image covers the entire field of view. Surface chrome image.	16mm	67986-16
		19mm	67986-19
		21mm	67986-21
NE54	Two vertical lines 0.2mm apart	16mm	67975-16
		19mm	67975-19
		21mm	67975-21
		Any Custom Size	67975-50

► Eyepiece Graticules

► Horizontal & Vertical Scales - NE1, NE2, NE5, NE20, NE28, NE31, NE41, NE120

These scales are used for the measuring of lengths of specimen or distances between points on a variety of different shaped objects. **NE1 scale showed:** This eyepiece graticule has an overall length of 10.00mm with 100 subdivisions of 0.1mm. When used with a x 10 objective each division will represent 10 microns on the specimen. By dividing the division of the chosen graticule by the magnification of the objective one obtains an approximate value that each division will represent on the stage.

Pattern	Description	Dia.	Cat.#
NE1	Horizontal micrometer scale 10mm long with 0.1mm subdivisions. Surface chrome image.	16mm	68010-16
		19mm	68010-19
		21mm	68010-21
NE2	Vertical micrometer scale 10mm long with 0.1mm subdivisions. Surface chrome image.	16mm	68006-16
		19mm	68006-19
		21mm	68006-21
NE5	Horizontal micrometer scale 5mm long with 0.05mm subdivisions. Surface chrome image.	16mm	67988-16
		19mm	67988-19
		21mm	67988-21
NE20	Horizontal scale 0.1inch long with 100 subdivisions. Surface scale image.	16mm	67987-16
		19mm	67987-19
		21mm	67987-21
NE28	Horizontal micrometer scale. 1mm long with 100 subdivisions. Surface chrome image.	16mm	67992-16
		19mm	67992-19
		21mm	67992-21
NE41	Horizontal micrometer scale 10mm long with 200 subdivisions. Surface chrome image	16mm	67993-16
		19mm	67993-19
		21mm	67993-21
NE120	Horizontal Micrometer 20mm long with 100 divisions of 0.1mm	16mm	67976-16
		19mm	67976-19
		21mm	67976-21
		Any Custom Size	67976-50
NE31	Horizontal scale 0.5" long with 100 divisions of 0.0005"	16mm	67977-16
		19mm	67977-19
		21mm	67977-21
		Any Custom Size	67977-50

Horizontal Scale

Vertical Scale

► Crossed Scales - NE17, NE18, NE70, NE72

Used as a horizontal and a vertical scale, they are especially useful when interested in measurement in different axis.

Pattern	Description	Dia.	Cat.#
NE17	Crossed micrometer scales 10mm long with 0.1mm subdivisions. Surface chrome image.	16mm	67989-16
		19mm	67989-19
		21mm	67989-21
NE18	Crossed micrometer scales 5mm long with 0.05mm subdivisions. Surface chrome image.	16mm	67994-16
		19mm	67994-19
		21mm	67994-21
NE72	Crossed Micrometer scale, each 20mm long with 200 Divisions of 0.1mm	23mm	67978-23
		24mm	67978-24
		26mm	67978-26
		27mm	67978-27
		Any Custom Size	67978-50
NE70	Crossed micrometer scale(imperial) Each 0.8" long with 400 divisions of 0.002"	21mm	67978-21
		23mm	67979-23
		24mm	67979-24
		26mm	67979-26
		27mm	67979-27
Any Custom Size	67979-50		

Crossed Scale

► Eyepiece Graticules

► Square and Grids

Note: These scales may need to be calibrated, according to intended use. There are a number of uses for the grids and squares listed and they will largely depend on the individual user's application.

EYEPIECE SCALES:

- **Sectoring:** A squared graticule might be used for the systematic examination of a specimen. Some of the squared patterns are numbered to aid in the identification of areas of interest. Sectioning is particularly useful for making drawings of specimens onto graph paper. The chessboard type of pattern helps the user to distinguish the position being examined: the darker squares are translucent, while the lighter ones are transparent, avoiding eyestrain in prolonged counting as many be necessary in hematology. These patterns provide the same advantages when used with image analysis and capture devices.
- **Counting:** A squared graticule can be used for counting. Here the basic principle is that a small area of the specimen is analyzed in order to obtain information about the total area. This minimizes wasteful work enabling simple analysis of a particular area. An example of this would be the comparison of large to small particles in a specimen. By using the Miller graticule (NE57) only the smaller particles in the small square are counted, the result being multiplied by ten for comparison with the number of larger particles in the large square.
- **Squared Grids:** Squared grids can be used in particle size analysis as simple technical aids where sophisticated image analysis systems are not required. The areas of the particles to be measured can be estimated by simply counting the number of squares occupied by those particles. It is necessary to estimate fractions of a square or make a rule (e.g. count as a square all partly covered squares at the right and bottom sides of the grid, and ignore partly covered squares at the left and upper sides of the squares). This method would only be useful for a fairly crude estimation of a large diameter. For more detailed optical analysis it is advisable to use a specialized graticule, such as those in the Particle Size Analysis section, on page 908-909.

► Squared Grids - NE10, NE11, NE34, NE7N

Simple grids are convenient for making sketches of the observed specimen on graph paper. They are also useful for particle counting.

Pattern	Description	Dia.	Cat.#
NE10	Grid (net) 0.5mm pitch. Surface chrome image (Pitch: distance of center bar to center bar)	16mm	68011-16
		19mm	68011-19
		21mm	68011-21
NE11	Grid (net) 1.0mm pitch. Surface chrome image (Pitch: distance of center bar to center bar)	16mm	68015-16
		19mm	68015-19
		21mm	68015-21
NE34	Grid (net) 0.1mm squares. Surface chrome image	16mm	68018-16
		19mm	68018-19
		21mm	68018-21

Square Grids

► Indexed Grids - NE10A, NE11A, NE34A, NE7I

Useful for particle counting, particularly when reference is needed between workers. Also, they are useful for area of specimen determinations.

Pattern	Description	Dia.	Cat.#
NE10A	Numbered grid 5mm x 5mm. 0.5mm pitch. Marked 1 – 10 and A -J. Surface chrome image.	16mm	68011-16A
		19mm	68011-19A
		21mm	68011-21A
NE11A	Numbered grid 10mm x 10mm. 1.0mm pitch. Marked 1 – 10 and A -J. Surface chrome image	16mm	68016-16
		19mm	68016-19
		21mm	68016-21
NE34A	Numbered grid 1mm x 1mm. 0.1mm pitch. Marked 1 – 10 and A -J. Surface chrome image.	16mm	68018-16A
		19mm	68018-19A
		21mm	68018-21A
NE7I	Index Pattern 20x20 Grid of 0.5mm squares	21mm	67981-21
		23mm	67981-23
		24mm	67981-24
		26mm	67981-26
		Any Custom Size	67981-50

Indexed Grids

► Indexed Grids – NE35

Useful for area of specimen determinations, especially rectangular shapes, also for particle counting.

Pattern	Description	Dia.	Cat.#
NE35	Numbered grid 10mm x 10mm. 1mm indexed squares. Surface chrome image.	16mm	68014-16
		19mm	68014-19
		21mm	68014-21

NE35

continued >>>>

► Eyepiece Graticules

► Chessboard Squares – NE15

The dark squares are translucent. Used as an alternative to simple grids for area of specimen determination and particle counting. Alternative light and dark squares help to reduce eyestrain.

Pattern	Description	Dia.	Cat.#
NE15	Chessboard (net) 2.0mm squares. Surface chrome image.	16mm	68008-16
		19mm	68008-19
		21mm	68008-21

NE15

► Squares – NE38

Combines three areas in one for convenience, giving area ratios A:B of 1:3 and B:C of 1:2.

Pattern	Description	Dia.	Cat.#
NE38	Squares 10mm, 7mm & 4mm. Glass sandwich.	16mm	68017-16
		19mm	68017-19
		21mm	68017-21

NE38

► Miller Squares – NE57

The ratio of large to small squares is 9:1. Originally designed for hematology, they can be utilized for rapid counting of any evenly spread field of particle.

► Eyepiece Graticules

► Gauges

► Concentric Circles – NE42, NE43, NE44, NE47

Can be used for two-way measurement when calibrated as a micrometer.

Pattern	Description	Dia.	Cat.#
NE42	Concentric circle 0.25mm – 2.5mm diameter. 10 circles. Surface chrome image.	16mm	68019-16
		19mm	68019-19
		21mm	68019-21
NE43	Concentric circle 0.5mm – 5mm diameter. 10 circles. Surface chrome image.	16mm	67997-16
		19mm	67997-19
		21mm	67997-21
NE44	Concentric circle 1mm – 10mm diameter. 10 circles. Surface chrome image.	16mm	67998-16
		19mm	67998-19
		21mm	67998-21
NE47	Concentric circle 2mm – 20mm diameter. 10 circles. Surface chrome image.	16mm	67999-16
		19mm	67999-19
		21mm	67999-21

NE48

► Concentric Circles and Cross Scales, NE48

Pattern	Description	Dia.	Cat. #
NE48	Concentric circles, 10 circles 1mm-10mm, with Graduated cross hairs	16mm	67991-16
		19mm	67991-19
		21mm	67991-21
		23mm	67991-23
		Any Custom Size	67991-50

NE22

► Concentric Circle – NE22

This design leaves the circle clear of obstruction. In addition the intermediate lines are broken to improve ease of reading.

Pattern	Description	Dia.	Cat.#
NE22	Concentric circle 0.5mm – 12mm diameter. 24 circles. Surface chrome image.	16mm	68000-16
		19mm	68000-19
		21mm	68000-21

► Gauge Pairs – NE19

Gauge pairs occupying a field of view of 10mm. Each gauge is proportional to its adjacent number. The approximately size of the smallest pair = 0.1mm.

Pattern	Description	Dia.	Cat.#
NE19	Gauge pairs. Surface chrome image.	16mm	68001-16
		19mm	68001-19
		21mm	68001-21

Full Protractor

► Full Protractor – NE45

Pattern	Description	Dia.	Cat.#
NE45	Full protractor scale 10mm diameter divided in degrees. Surface chrome image	16mm	68002-16
		19mm	68002-19

► Eyepiece Graticules

► B. PARTICLE SIZING AND DISTRIBUTING

The use of the eyepiece graticules showed in this section make it possible to analyze specimens containing particles as an alternative, or in addition to, sieving. Graticules for particle size analysis are particularly popular when there are only limited quantities of particles or where particles are smaller than 50 microns in diameter. Typical substances analyzed are sand grains, soil particles, plant seeds, fertilizers, abrasives, liquid droplets, pigments, pulverized coal, silica, fibers and fine dust.

The basic principle employed is to compare particles to the globes and circles of varying sizes that appear on the graticule – dark particles being compared to solids globes, and light or transparent ones to the circles. Naturally the procedure varies with the graticule concerned, more information about which is given below.

Please note that for calibration the circles and globes will represent particles smaller in diameter by the magnification of the objective.

► Paterson Globes and Circles – NG1

The graticule consists of a central rectangle, sub-divided into nine smaller rectangles with a number of increasing circles outside the top and bottom horizontal edges. The marked figures are the diameters of the circles in units. 250 units represent the horizontal length of the large rectangle. Rectangle size is 4.5mm x 2.025mm. Circle sizes in microns are 450, 360, 270, 225, 180, 145, 110, 74, 37, and 18.

Reference:

H.S. Patterson and W. Cawood. Transactions of the Faraday Society, Vol. 32 Feb. 1936. "The Determination of Size Distribution in Smokes." pp. 1084-1088

Pattern	Description	Dia.	Cat.#
NG1	Paterson globes/circles. Surface chrome image.	16mm	68031-16
		19mm	68031-19
		21mm	68031-21

NG1

► Porton – NG2

The circle areas of the Porton graticules increases with Root 2 progression as do the divisions on the right hand side of the rectangle. These divisions are numbered for convenience. The rectangle size is 4.5mm x 2.25mm. Circle sizes in microns are 560, 400, 280, 200, 140, 100, 70, 50, and 35. The specimen is racked on the mechanical stage of the microscope and traverses are taken right across the deposit sizing all the particles encountered.

Reference:

K.R. May, J. of Science Instrument. Vol. 22, Oct 1945. "The Cascade Impactor" An instrument for sampling coarse aerosols. Pp 187-195.

Pattern	Description	Dia.	Cat.#
NG2	Original Porton globes/circles. Surface chrome image.	16mm	68024-16
		19mm	68024-19
		21mm	68024-21

NG2

► New Porton – NG12

The NG12 is particularly useful since the array of globes and circles are conveniently close to where the particles pass. At the end of each band of the sample the mechanical stage is traversed vertically to take in the next band until the whole sample has been covered.

► Eyepiece Graticules

► British Standard Graticule – NG10

In this graticule the circle areas double progressively, hence the diameters alter by Root 2, so that the size classes can form a continuation of the standard series of sieves for particle sizing. Each particle is assigned to a size class defined by two adjacent circles, which represent the size limits of that class. Thus the distribution of size is obtained in terms of the diameter of circles having the same projected area as the particles. This method will cover particles in the range 150 micron to 0.38 micron. The size distributions with respect to their number and weight are determined separately. Final results are calculated as cumulative percents.

Originally designed by the National Coal Board for use in coal mining.

NG10

► Fairs – NG5

Designed to extend the sizing range of globe and circle graticules.

Example: Used in conjunction with NG2 the overall size range = 128:1. The circles increase by 2.

Note: Both graticules would have to be used with the same microscope, eyepiece and objective.

NG5

► Asbestos Fiber Analysis

► Walton and Beckett Graticule for Asbestos – G22, G24

Calibration factors are required for each of these graticules. See note below.

The Walton and Beckett graticule is used for counting fibrous dust (e.g. asbestos or glass fibers) and is particularly useful where the majority of fibers to be counted are shorter than 5 microns. The circle is divided into four by two diametrical lines scaled in units of 5 and 3 microns respectively. 3 and 5 microns are the critical measurements of fiber lengths and diameters used in fiber counting. Unlike the usual globes of other particle graticules, the Walton and Beckett have a series of shapes to compare objects with. These shapes have been designed for comparison with fibers, especially since they incorporate an aspect ratio of

3:1 or 5:1 essential for such analysis.

Reference: W.H. Walton and S.T. Beckett. Occupational Hygiene. Vol.20, pp19-23. "A Microscope Eyepiece For The Evaluation of Fibrous Dusts."

Pattern	Description	Dia.	Cat.#

		19mm	68028-19
		21mm	68028-21
G24	Walton & Beckett for asbestos. 5:1 ratio. Glass sandwich.	16mm	68029-16
		19mm	68029-19
		21mm	68029-21
G25	Based on the G22, the G25 is produced by the Institute of Occupational Health (1996). Glass sandwich.	16mm	68030-16
		19mm	68030-19
		21mm	68030-21

G25

IMPORTANT NOTE: The circle on these Walton & Beckett graticules must represent 100 microns at the stage and each one must be manufactured to suit the individual instrument. Therefore, details should be provided with your order of:

1) Calibration factor, if known (see page 493 for this information); 2) Objective magnification; 3) Eyepiece magnification; 4) Diameter of graticule disc required; 5) Microscope make and model.

		Any Custom Size	68003-50

NG30

► Thompson - G23

For counting particles in any of three areas of known size. The graticule is calibrated in the same manner as a normal eyepiece scale. The result is then used to calculate the area of any square.

Pattern	Description	Dia.	Cat.#
G23	Thompson for dust analysis 10mm, 7mm and 4mm squares. Glass sandwich.	16mm	68090-16
		19mm	68090-19
		21mm	68090-21

G23

► Chalkley Point Array - NG52

This is used to quickly determine the relationship of components to each other using random sampling.

Curtis gives an example of its application, where a researcher may want to see whether or not a certain drug affects the volume proportion of cell types in a given organ. With this graticule the proportion of points lying over the image of one type of component is statistically proportional to the area occupied by that component. The 25 points of the array are placed over the field of view at random, so that a comparison can be made between the number of points touching the one type of component, with number touching the other type of component in each viewing. A series of observations will yield an increasingly accurate ratio of the comparative incidence of each type of particle.

NG52

► Pharmaceutical PSA Pattern - G57

This graticule was designed for the pharmaceutical industry. However, it is also useful where particle size considerations are restricted to 10mm and 25mm. Dots and circles give quick references for these two sizes. In addition a scale is incorporated.

The microscope must be calibrated when ordering this graticule, such that the circle must equate to 1mm on the microscope stage.

► Eyepiece Graticules

► C. STEREOLOGY

In this simplest form, stereology is the science where information about a three dimensional object is obtained from only a two-dimensional section of that structure.

Measurements are usually made with these graticules in the following manner:

1. An adequate representation of sections of a specimen is obtained.
2. The graticule is superimposed upon the specimen (or micrograph/ projected image of the section).
3. Finally, the interaction between the superimposed graticule and the test sections are recorded.

An overall introduction is given by: L.G. Brianrty. "Stereology: Methods for Quantitative Light and Electron Microscopy." Sci. Prog. Oxf. 1975, 62; 1-32.

► The Mertz Graticule (36 Points) – NGM1

Used to estimate the three-dimensional surface areas or the surface density of a component in a given volume, when the component does not have a random orientation. It comprises a test system with parallel curved lines used for measuring the intersection of points.

Reference: W.A. Mertz. "Mikroskopie" Vol. 22 1967 pp 132-142.

NGW1

► Weibel 2 – NGW2

Used when making a surface to volume ratio of a structure per mass unit. This graticule consists of a number of short lines with interruptions as long as the lines. Basically, the number of intersections falling over the short lines is counted and the number of endpoints falling on the end of the structure is determined.

► Stage Micrometer/ Graticules

These stage graticules are intended for the routine calibration of eyepiece patterns, particularly when alternating between objectives on one microscope or when using the same graticule in different microscopes. Their robust construction makes them ideal for student use and for instructional purposes. The scale or grid is centered on a glass disc mounted in a black anodized aluminum slide 75mm x 24mm x 2mm thick. For applications requiring traceable standards, see page 648-649.

Two types are available:

- Transmitted light
- Reflected light, as is used with metallurgical microscopes.

► A. SCALES AND MICROMETER

► For Transmitted Light

► New PS52P & PS52N Dual Scale Calibration Slides

Key Features

- New Dual-Scale Calibration Slides
- 2" Imperial (English) and 50mm Metric Scales on a Single Slide
- Positive and Negative Versions
- Unique Serial Number for Traceability
- Available with Internationally Traceable Certificates of Calibration

Description

EMS has introduced two new calibration slides that have the benefit of dual imperial/metric scales. The PS52P is for transmitted light applications and has a bright chrome positive image. The PS52N has a negative pattern, formed in low reflective chrome for incident light applications to give excellent contrast. Both are ideal for calibrating optical products with a large field of view, such as stereo microscopes or imaging systems.

Pattern	Description	Cat.#
PS52P	Dual Micrometer Calibration Slide, 76mm x 25mm, positive image, 50mm in 0.1mm divisions and 2" in 0.005" divisions, serial numbered, supplied in wooden case	68040-05
	PS52P with UKAS certificate	68040-06
PS52N	Dual Micrometer Calibration Slide, 76mm x 25mm, negative image, 50mm in 0.1mm divisions and 2" in 0.005" divisions, serial numbered, supplied in wooden case	68040-07

➤ Stage Micrometer/ Graticules

➤ S18 Brightfield Stage Micrometer

EMS is proud to introduce the S18 Brightfield Stage Micrometer: Graduated Metric and English Scales for the calibration of measurement instruments across a wide range of magnifications

This flexible graduated scale stage micrometer is suitable for low magnification, stereo inspection microscopes to higher magnification compound microscopes.

KEY FEATURES:

- Dual Scales: 25mm or 1 Inch
- Graduated Divisions, fine for low magnifications, mid for medium magnifications and large for high magnifications
- High Definition, chrome on glass image
- Ideal for you if you use both metric and English measurements

The scales are centered on all glass slide 76mm x 25mm x 1.5mm thick.

Line Width:0.0025mm (2.5 micron)

Accuracy (Overall):0.002mm

Image Type:Low reflective chrome surface

S28/S29

► Stage Micrometer/ Graticules

► Diamond Ruled Stage Micrometer—S91

A stage micrometer with very well defined lines. These reference scales offer substantial improvements in definition over the standard types when used under the highest magnification. This is made possible by the use of diamond cutting tools and a special ruling engine.

The S91 has clear lines ruled through a semi opaque metal film, which with transmitted light, appear as bright lines on a dark background.

The micrometer is made on a glass substrate 76mm x 26mm x 1.2mm thick. The lines are 1 micron wide or less and 3.5mm long. The metric rulings provide a scale of 1mm divided into 0.01mm parts, with one part being subdivided into 0.001mm parts.

Pattern	Description	Cat.#
S91	Diamond ruled stage micrometer	68046-91

► For Reflected Light

This scale is etched through highly reflective vacuum coated metal. When viewed under vertical illumination, as with a metallurgical microscope, the scale appears black against a bright background.

► PS25 Hardness Tester Calibration Slides - Vickers/Rockwell

Key Features

Reflected light calibration slide with diamond shapes and scales for calibrating Vickers and Rockwell hardness testers

Description

For Vickers and Rockwell methods we offer the PS25 which has a series of diamond shapes of varying size and x-y scales. Each of the markings on the slide is clearly identified with its size. The PS25 has a glass disc with the image precision marked in vacuum deposited chrome and this is cemented into a stainless steel slide mount, making the item very durable. The slide has a unique serial number indelibly marked on the slide mount and can be supplied with an Internationally traceable certificate of calibration.

PS25 Pattern Detail:

Diamonds: (Point to point, mm's) 0.5, 0.3, 0.2, 0.1, 0.05, 0.02

Scales: Horizontal & vertical, 2mm in 0.1mm divisions

This product is supplied in a polished wooden box

Pattern	Description	Cat.#

	PS25 with UKAS certificate	68049-06

► PS26 Hardness Tester Calibration Slides – Brinell

Key Features

Reflected light calibration slide with circle shapes and scales for calibrating Brinell hardness testers

Description

For Brinell methods we offer the PS26 which has a series of circles, to represent the ball indentation shape, of varying size and x-y scales. The PS26 has a precision marked chrome deposition image on a glass slide. Each of the markings on the slide is clearly identified with its size. The slide can be supplied with an Internationally traceable certificate of calibration. This product is supplied in a polished wooden case.

PS26 Pattern Detail:

Circles: (Diameter, mm's) 5.0, 2.5, 1.0, 0.7, 0.3

Scales: Horizontal & vertical, 2mm in 0.1mm divisions

► B. STAGE CALIBRATION STANDARDS

These stage micrometers differ from the standard stage micrometers due to the fact they are being available with a certificate giving precise details about their accuracy. These calibrated standards provide traceability for the precise calibration and confirmation of accuracy of optical measuring instruments, which is necessary under ISO provisions.

► Micrometer Standards – PS1, PS4, PS4R, PS5, PS8, PS12, PS16, PS78

These standards are differ from the stage micrometers listed on page 646. The glass discs are mounted in stainless steel slides with engraved serial numbers. Each slide is supplied in a polished wooden storage case to distinguish it as a traceable standard of high value.

We can arrange for the calibration of its scales and grids to be carried out by the most appropriate laboratory to suit the customers requirements – the choice of laboratory is normally dependent on the nature of the calibration and the accuracy required.

1. Calibration by NPL: The National Physical Laboratory carries out measurements at selected points on the scale and grids and issues a certificate of calibration. Order Code NP. The NPL is the English equivalent of NIST.

2. Calibration by UKAS accredited laboratory: A UKAS accredited laboratory carries out measurements at selected points on the scales and grids and issues a calibration certificate. Order Code: NA

3. Measurement by Us: For applications, which do not require the accuracy provided by calibrations carried out by NPL or a UKAS accredited laboratory, We can provide a Certificate of Comparison. The scale or grid is compared with NPL calibrated in-house standards and a statement is provided on the accuracy of the item with respect to these standards. Order Code GR

➤ Stage Micrometer/Graticules

➤ Image Analysis Standard (Reference Stage Graticule)

This high precision image analysis standard provides four test areas designed for calibrating image analysis systems and identifying deviations and distortions in optical imaging systems.

The standard, which can also be used as a high precision stage micrometer, is supplied with recommendations for its use and an individual certificate of calibration.

It is produced on a 75mm x 25mm slide and has a square grid accuracy of $\pm 0.1\mu\text{m}$ and a dot accuracy of $\pm 0.3\mu\text{m}$ (except for the smallest and largest two dots on the root-2 array, where accuracy is $\pm 0.5\mu\text{m}$). The four test areas are:

- A 400 μm x 400 μm square grid which is subdivided into 200, 100, 50 and 25 micron squares provides a means of detecting gross image distortions, and can be used as an accurate two dimensional stage micrometer.
- A 20 x 17 array of nominally 15 μm diameter dots can be used to identify lens distortions. i.e. to set the field of view to eliminate edge distortion.
- A root-2 array of spots from 3 μm to 48 μm diameter is used for determining the threshold levels of cameras and microscope systems.
- A log-normal distribution array of 100 spots ranging from 4.5 μm to 27 μm diameter enables the mean and standard deviation to be determined and compared with the certified values. This is an idealized distribution of maximum dynamic range for a full screen.

➤ Universal Calibration Slide- PS20

Calibration of microscopes and image analysis systems is becoming more sophisticated, with the requirement being for a variety of image patterns to satisfy the numerous parameters. We're now introducing a new multi-function calibration standard specifically for these applications.

Multiple images on a slide provide the most cost-effective solution to calibration and resolution checking of microscopes and image analysis systems. The combination of scales, dots, circles, squares, rulings, grids and angles can be supplied with an internationally traceable certificate of calibration for those who require ISO conformity.

Each glass slide has a permanent serial number and can be supplied with full or partial UKAS certificate of accuracy.

Starting from a fixed 'Datum Point' mark, each individual pattern or array can be located using X, Y, coordinates.

General tolerance (microns)

Feature size	Tolerance
≤ 10	0.5
10 - 50	1.0
50 - 127	1.3
127 - 250	1.9
>250	2.54

Coating	Enduring evaporated chrome image
Optical density	>2.5
Substrate	Soda lime glass
Size	76 mm x 25 mm x 1.5 mm
Package	Polished wooden case

ID	Pattern Name	Location	Description
A	Concentric Circles	X =2; Y = 10	1, 2, 3, 4, 5 mm Circles with Cross Line & circle identifier. Line width 20 μm
B	Concentric Squares	X=10; Y=10	1, 2, 3, 4, 5 mm Squares with Cross Line & circle identifier. Line width 20 nm
C	Line Grating,	X=18; Y=10	12.5 Line Pairs per mm (40 μm 25 lines/mm line 40 μm space)
D	Line Grating,	X=26; Y=10	50 Line Pairs per mm (10 μm 100 lines/mm line 10 μm space)
E	Half Protractor	X=34; Y=10	15 Spacing, Line width 20 μm
F	Grid Array Coarse	X=40; Y=10	5 mm square array with 0.5 mm divisions and central 2 mm square with 0.25 mm divisions. Line width 20 μm
G	Grid Array Fine	X=48; Y=10	5 mm square array with 0.1 mm divisions and central 2 mm square with 0.05 mm divisions. Line width 8 μm
H	Dot Array	X=56; Y=10	Dot diameter 0.25 mm, dot centre to centre spacing 0.050 mm – 11x11 grid = 121 dots
I	Geometric Opaque Dots	X=2; Y=4	Line array of dots or square progression of shapes, of either clear or opaque. Reducing in size in a Root 2 progression for the purposes of edge threshold detection to enable an image analyzer to measure the size correctly, or general shape size comparison.
J	Geometric	X=17; Y=4	Root 2 progression of 21 dots or square shapes, from 3.5 μm to 3.5 μm .
K	Geometric progression of Clear Dots	X=32; Y=4	Nominal size in mm
L	Geometric progression of Clear Squares	X=47; Y=4	Dot/square size – Large to small in mm 3.5833; 2.5338; 1.7917; 1.2669; 0.8959; 0.6335; 0.4479; 0.3167; 0.2240; 0.1584; 0.1120; 0.0792; 0.0560; 0.0396; 0.0280; 0.0198; 0.0140; 0.0099; 0.0070; 0.0049; 0.0035
M	Vertical Scale Fine Variable	X=63 Y=2	Overall Scale length 10 mm. 5 mm in 0.5 mm divisions. Line width 20 μm 4 mm in 0.1 mm divisions. Line width 10 μm 1 mm in 0.01 mm divisions. Line width 3 μm
N	Horizontal Scale Coarse	X=0; Y=0	Scale length 62 mm in 2 mm divisions, subdivided in 1 mm divisions with a 20 μm line width.

► Stage Micrometer/Graticules

► H.S.E./N.P.L. Test Slide for Phase Contrast Microscopy - S84

This test slide is made in the UK and is under license from the National Physical Laboratory. It is an epoxy replica of a master slide produced and certified by that laboratory. The replicas are mounted on microscope slides of 1.2mm thickness with cover glass of 0.17mm thickness. This information is transferred to the accompanying table, which indicates the maximum phase change passing through test objects to test slide. A satisfactory system will detect block 5. Full details are supplied with the slide.

Block No.	Ridge Width (Micrometers)	Maximum Calculated Phase Change (in degrees) for light rays (wavelength = 530 nanometers) passing through test objects.
1	1.08	6.6
2	0.77	4.7
3	0.64	3.9
4	0.53	3.2
5	0.44	2.7
6	0.36	2.2
7	0.25	1.5

Cat.#	Pattern	Description	
68038-84H	S84	HSE Test Slide for Calibration in Asbestos Analysis	each

To ensure worldwide consistency of measurements, all the National Metrology Institutes (NMI's) in the world work in harmony. This is carried out under the auspices of the international diplomatic treaty, the Treaty of the Metre, signed in 1875 whereby Nations agreed, amongst other things, to the setting up of the International Committee of Weights and Measures (CIPM). Besides establishing the worldwide definitions of physical units, the CIPM organizes an ongoing series of key comparisons between NMI's to support the mutual recognition of measurement standards and calibration certificates. These key comparisons also involve regional metrology organization, such as EUROMET (EU + EFTA + European Commission), APMP (Asia Pacific Metrology Programme) and SIM (Canada, USA, Mexico, plus most Latin, South American and Caribbean states), which act as regional focuses for the growing number of NMI's throughout the world.

► C. VIBRATION

► FOE PPL Dot – S25

The pair of dots, which appear to merge into a single dot, determines the amount of vibration of the slide in the appropriate axis. The pattern on the S25 is an array of 20 pairs of dots converging on a single dot. The distance between each dot pair increases by 0.001 inch to a maximum of 0.02 inch, pairs being equispaced 0.25 inch.

Cat.#	Pattern	Description	
68038-25	S25	FOE PPL Dot vibration test pattern	each

► D. VOLUME/COUNTING CELL

These are used to create precise volumes of liquid to enable counting of particles in a specified volume of liquid. A thick slide (glass or plastic) has an area cut into its surface that will hold precise volumes of bathing fluid. The shallow well, facilitating easy counting of contained particles. In use, a single drop of liquid is placed on the slide and a coverglass is placed on the platform providing equal and accurate subdivisions of the fluid each of which can be observed for particle counting.

► Sedgewick Rafter and Cover Gass – S50, S51, S52

For use in water analysis, culture inspection, and any fluid where particles per unit volume need to be determined.

Available in two versions:

S50 is an economically priced plastic cell.

S52 is made from glass, with a chromium surface image. This is intended for professional use and when using phase contrast.

In each type, a central cell is filled with fluid and a coverglass limits the volume to 1 milliliter. The grid subdivides this into micro-liters.

S51 is the spare cover glass for S50 and S52. Each cell is supplied with one cover glass.

Cat.#	Pattern	Description

68050-52	S52	Sedgewick Rafter Counting Chamber (glass)	each
68050-51	S51	Cover glass for Sedgewick Rafter S50 & S52	each

► Howard Cell and Cover Glass – S60, K20

The Howard cell is a glass slide 76mm x 35mm with a central circular island and is used for counting mold fibers and spores in fruit juices, especially from tomatoes.

With the K20 coverglass in place a 0.1mm thickness of liquid is contained over the central island. The coverglass has 25 calibrated fields of 1.382mm diameter through which to view the particles. This coverglass removes the necessity of precise adjustment of the microscope and eyepiece graticule in the original Howard method.

► Stage Micrometer/Graticules

► E. FINDER GRATICULES

Finder graticules are used to swiftly and accurately give a position of reference to an area of interest on a specimen.

► The England Finder – S7

S7 is a glass slide 75mm x 26mm (3x1") marked over the top surface in a way that a referenced position can be directly read relative to the locating edges. That means it is marked with a square grid at 1mm intervals. Each square contains a center ring bearing reference letters and numbers, the remainder of the square being subdivided into four segments numbered 1 to 4. Reference numbers run horizontally 1 to 75 and letters vertically A to Z (omitting I). The main locating edge is the bottom of the slide, which is used in conjunction with either the left or right vertical edge of the slide.

All England Finders produced for over 40 years are identical. The purpose of the finder is to give the microscopist an easy method of recording the position of a particular field of interest, so that another person in another laboratory can relocate at a later date, or the same position, or when using any other England Finder on any other microscope.

The location of the arrows is identical for all England Finder slides. Mark a label on the left hand side of the specimen slide, indicating the orientation to be repeated. By replacing the specimen slide with England Finder, taking care not to disturb the position, feature of interest can be noted. The feature can also be re-located at another place or time by reversing the procedure. A total of 100 positions on a slide can be accurately located.

► Makler Counting Chamber

For Rapid Semen Analysis – The Makler counting chamber is only 10 microns deep, which is one tenth the depth of other hemacytometers, making it the shallowest of known chambers. This quality chamber is constructed from two pieces of optically flat glass: the first is the chamber, the second is the cover glass, which has a fine grid pattern of 1mm squares and a center area further subdivided into 0.1mm squares. Four quartz pins of precise height hold the cover glass to give an exact trapped specimen depth of 10 microns.

Diagram showing the coverglass being placed on the chamber to trap a 10µm depth of semen

► Combination Eyepiece Graticule and Stage Micrometer Sets

We have now simplified the way in which you order The Eyepiece Graticule/Stage Micrometer Sets to suit your application, Simply select the objective magnification on the microscope, and then look in the next column to find the measurement size range that suits you best. You then find the set order reference and the description for your calibration set.

Please state the eyepiece graticule diameter on your order.

► Optical Resolution Charts, Ronchi Rulings and Grids

The optical resolution charts are used to test characteristics such as resolution, contrast, distortion and modulation transfer function (MTF) of lenses, cameras and optical systems. Ronchi rulings and grids are used to create interference patterns, to measure distortion and for MTF measurements.

EMS offers a range of charts on glass and in metal foil. Customers often require special charts for specific applications and these can be made to your exact requirements.

In addition to these products, we also supply a specialist NPL/HSE test slide for checking the resolving power of phase contrast microscopes – see Page 828 ref S84 in stage micrometers catalogue.

► USAF 1951 Test Chart

USAF resolution charts are recognized the world over as a universal standard for testing the vertical and horizontal resolution of imaging systems. Each element on the chart comprises three vertical bars and three horizontal bars, and the detail on these slides is as fine as 0.78microns (644 line-pairs per mm). The resolution of the imaging system is normally specified as the Group and Element of the finest bars that can be clearly defined

68098-24	Grid with line pitch of 0.1mm	R10	each

► Gratings-Ronchi Rulings

Metallic grating pattern on glass squares with opaque lines approximately 50% of the pitch. Stock items are on 50mm x 50mm squares of glass 1.5mm thick. The grating covers the entire plate with the exception of R25, R26 and R27 where the grating occupies a 30mm wide central strip. The glass is B270 with refractive index of 1.52.

Uses:

- Paired as light gates.
- Demonstrate interference patterns.
- Produce optical gradients.

Mutually perpendicular pairs produce a screen of square apertures.

Vacuum deposited chrome gratings on glass substrate. Typically used for testing of resolution, field distortion and parfocal stability, but may be paired to provide interference patterns (fringe patterns) and as light gates.

R12 - 2 lines/mm	R17 - 40 lines/mm	R27 - 125 line/mm

▶ Counting Chambers from Hauser

These chambers are the finest quality, optically ground, and polished milled glass chambers available. The chamber is diamond etched and has a double improved Neubauer Ruling, which has a worldwide reputation in hospitals and laboratories for unmatched reliability, meeting the most demanding of standards.

The standard Hauser blood counting chambers are one piece construction (measuring 75mmx32mmx4.5mm) ensuring long term durability and absolute accuracy in measurement and count. We offer both the standard (incline) and the new "V-Load" counting chambers for different charging methods. The tolerances are (2% of the volume).

Cell Depth: 0.100 mm (+/-2%); Volume: 0.1 Microliter Ruling; Pattern: Improved Neubauer, 1/400 Square mm

Rulings cover 9 square millimeters. Boundary lines of the Neubauer rulings are the center lines of the groups of three. (These are indicated in the illustration). The central square millimeter is ruled into 25 groups of 16 small squares, each group separated by triple lines, the middle one of which is the boundary. The ruled surface is 0.10 mm below the cover glass, so that the volume over each of 16 small squares is 0.00025 cubic mm.

Made to Last

In addition to the standard ruling patterns which are etched permanently onto the polished surface, we offer the popular "Bright-Line" counting chamber. This bright-line counting chamber allows the ruling to appear brightly illuminated providing sharp contrast to the bright lines and cells, helping the user with accurate counts and less eyestrain. The triple

lines show clearly which cells lie within the counting area and eliminate guesswork. We guarantee that all marks are permanent, and can not be removed even after repeated washings.

Other Chambers and Accessories

In addition to the blood counting chambers, we also offer a variety of other counting chambers and accessories which compliment our discipline.

- **The Phase Hemacytometer:** used for phase microscopy; it is a one piece brightlined hemacytometer with a reduced thickness.
- **The Petroff Hauser Counting Chamber:** used for bacteria counting.
- **The Sperm Counting Chambers:** used primarily in fertility testing; it is offered in a series of depths (10, 20, 40 microns).
- **The Howard Mold Counter and the Sedgewick Rafter Counting Chamber** are also available as well as a series of hemacytometer and counting chamber cover glasses.

Thoma

Fuchs-Rosenthal

▶ 1. Double Neubauer Ruled Metallized Counting Chamber Hemacytometer.

An "H" shape moat which forms 2 counting areas are metal plated and double Neubauer ruled providing sharp bright line contrast for consistent cell counts. A "V" cut on each area is used to control the possibility of overflow. Triple dividing lines clearly show cells within the counting area. The ruled surface is 0.1mm below the cover glass; liquid capacity is 0.1mm³/mm² and 0.00025mm³/grid square.

Ordering: The complete set includes one counting chamber, two 0.5mm cover glasses, one red cell pipette, one white blood cell pipette, tubing, mouthpieces and carrying case.

► C-Chip Disposable Hemacytometer

The world's first truly disposable Hemacytometer, the C-Chip offers precise volume control and is easy to use.

Features

- Quartz grade optical plastic
- Precise design leads to highly reproducible results
- Two counting chambers fitted with clearest grid pattern rich in contrast
- Exposure to infectious material is reduced due to its closed system
- Continuous sample containment
- Light and unbreakable compared to glass
- No need for cover slips
- Time and cost saving
- For single use

Applications

Blood Analysis: Blood Cell Counting

Cell Culture: Cell Concentration measurement / Cell Viability Test

Microbiology: Bacteria and Fungal Spore Counting

IVF, IUI: Sperm Counting

Neubauer Improved

Neubauer Improved

Fuchs Rosenthal

Semen Test

➤ Counting Chambers

➤ Cellometer™ – The Disposable Cell Counting Chamber

Cell Counting Made Easy

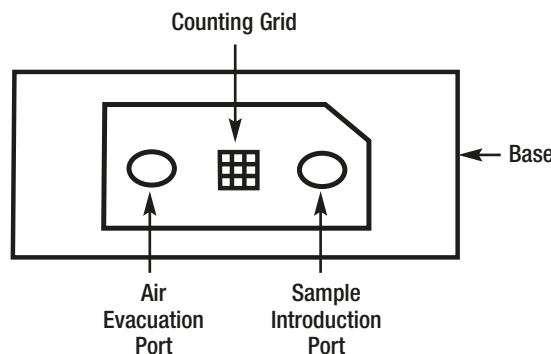

These Disposable Cell Counters are an enclosed chamber with two ports for sample introduction. The chamber contains precisely spaced lines in a grid pattern.

There are two counting chambers per slide for replicates.

The counting grid pattern is the Improved Neubauer, as in a common Hemacytometer. The consistent pattern design allows the standard cell counting procedure to be followed.

With a pipettor, 15 to 20 microliter cell-containing sample is introduced into the counting chamber through one of the ports. Liquid spreads inside the chamber, replaces air, which escapes through the opposing port.

The cell counting chamber is placed under a phase contrast optical microscope with a typical magnification of 100. The microscope is focused both onto the grid pattern and the cell particles. Standard protocols are followed for cell counting.

Cell counting principle using Cellometer™:

1. Count the total number of cells found in 4 large corner squares (C_{total})
2. Cell concentration = $\text{Dilution} \times \text{C}_{\text{total}} / \text{Volume}$

Let the Cellometer™ replace your Hemacytometers, which are traditionally used for cell counting!!

Benefits of the Cellometer™:

1. No washing after counting (Extremely important for people whom work with infectious samples)
2. No need to place the cover slide
3. Easy sample introduction (By integrating the cover slide into the counting chamber, The Cellometer™ eliminates the mistakes that may be caused by misplacement of the cover slide or misleading of the sample—two major sources for counting errors when using the Hemacytometer.)
4. Made from plastic (Ideal for BioSafety level 3)

Technical Data

Comparisons of Counting Protocols

Step	Cellometer™	Hemacytometer
1	Mix cell suspension	Mix cell suspension
2	Pipette 15 to 20 microliter into sample port	Carefully load with 10 microliter solution
3	Count cells in 4 corner squares (C _{total})	Count cells in 4 corner squares (C _{total})
4	Cell Concentration = $\text{Dilution} \times (\text{C}_{\text{total}}/4.0) \times 10^4$	Cell Concentration = $\text{Dilution} \times (\text{C}_{\text{total}}/4.0) \times 10^4$
5	Dispose used Cellometer	Wash and dry cover slide and base

Description of the experiment:

1. Cell Type: Human Tlymphocyte
2. Counting Devices: Cellometer™ with glass base (CG2), all plastic Cellometer™ (CP2) and a standard bright line Hemacytometer.
3. Cell counting performed alternating between Cellometer™ and Hemacytometer.
4. Statistical data analysis using Two-Sample T test.

Results:

	CP2-test 1	CP2-test 2	CG2
# of test (Cellometer™)	15	19	17
# of test (Hemacytometer)	8	17	17
Mean (Cellometer™)	1.78×10^5	1.83×10^5	1.87×10^5
Mean (Hemacytometer)	1.85×10^5	1.82×10^5	1.82×10^5
p-value	0.325	0.908	0.505

Conclusions:

1. Cell counts obtained using Cellometer™ and Hemacytometer are consistent.
2. With Cellometer™, sample loading is simple and consistent.
3. There is no washing and drying after using Cellometer™, which Eliminates liquid waste and Saves time and effort.

► EMS Specialty Counting Chambers

Sedgewick Rafter Cell

Howard Cell

Makler Chamber

Haemocytometry

Parasitology, Cytology & Others

Chamber Cover Glasses

This range of quality counting chambers are available in a wide range of types for Haemocytometry, Parasitology, Cytology and other applications

Chambers with inside markings have rulings applied using engraving techniques to give a permanent image, clearly visible through the glass without sacrificing light transmission.

Chambers with ruled cover glass have robust image applied using chrome deposition.

Volume Cell

These are used to create precise volumes of liquid to enable counting of particles in a specified volume of liquid. A thick slide (glass or plastic) has an area cut into its surface that will hold precise volumes of bathing fluid. The shallow well, facilitating easy counting of contained particles. In use, a single drop of liquid is placed on the slide and a coverglass is placed on the platform providing equal and accurate subdivisions of the fluid each of which can be observed for particle counting.

► 1. Sedgewick Rafter and Cover Gass – S50, S51, S52

For use in water analysis, culture inspection, and any fluid where particles per unit volume need to be determined.

Available in two versions: S50 is an economically priced plastic cell.

S52 is made from glass, with a chromium surface image. This is intended for professional use and when using phase contrast. In each type, a central cell is filled with fluid and a coverglass limits the volume to 1 milliliter. The grid subdivides this into micro-liters.

S51 is the spare cover glass for S50 and S52. Each cell is supplied with one cover glass.

Cat.#	Pattern	Description	
68050-50	S50	Sedgewick Rafter Counting Chamber (plastic)	each
68050-52	S52	Sedgewick Rafter Counting Chamber (glass)	each
68050-51	S51	Cover glass for Sedgewick Rafter S50 & S52	each

► 2. Howard Cell and Cover Glass – S60, K20

The Howard cell is a glass slide 76mm x 35mm with a central circular island used for counting mold fibers and spores in fruit juices, especially from tomatoes.

With the K20 coverglass in place a 0.1mm thickness of liquid is contained over the central island. The coverglass has 25 calibrated fields of 1.382mm diameter through which to view the particles. This coverglass removes the necessity of precise adjustment of the microscope and eyepiece graticule in the original Howard method.

Cat.#	Pattern	Description	
68051-60	S60	Howard Cell for Fruit Juices	each
68051-20	K20	K20 Calibrated Cover Glass	each

► 3. Makler Counting Chamber

For Rapid Semen Analysis – The Makler counting chamber is only 10 microns deep, which is one tenth the depth of other hemacytometers, making it the shallowest of known chambers. This quality chamber is constructed from two pieces of optically flat glass: the first is the chamber, the second is the cover glass, which has a fine grid pattern of 1mm squares and a center area further subdivided into 0.1mm squares. Four quartz pins of precise height hold the cover glass to give an exact trapped specimen depth of 10 microns.

EMS introduces this new disposable sampling equipment which is used to monitor indoor environmental, occupational health and safety conditions.

► Air-O-Cell® Sampling Cassette

This is a unique air sampling cassette specially designed for quick collection of a wide range of airborne aerosols including mold spores, pollen, insect parts, skin cell fragments, fibers (e.g. asbestos, fiberglass, cellulose, clothing fibers, etc.) and organic particulate e.g. ceramic, fly ash, copy toner, etc. The Air-O-Cell® collects both viable and non-viable sample specimens, providing a much broader overview of potential allergens and contaminants than conventional sampling techniques.

After sampling is completed, the cassettes are sent to a laboratory, where the slides are removed and direct microscopic analysis can be immediately performed. The collection media is compatible with a wide range of biological stains and refractive index oils, allowing direct quantitative analysis of organic and inorganic particulate.

The Air-O-Cell® can be used with any standard off-the-shelf area sampling pump capable of drawing 15 LPM open flow. The small compact size makes Air-O-Cell® suitable for use in confined or restrictive area.

EMS #	Description	Qty.
65210-10	Air-O-Cell® Cassette	10/pk
65210-50	Air-O-Cell® Cassette	50/pk

► Via-Cell Bioaerosol Sampling Cassette

The first disposable cassette impactor that brings simplicity and reliability to viable sampling combined with multiple analysis options

The Via-Cell® bioaerosol sampling cassette is designed to collect both viable and non-viable bioaerosols, maintain viability of the viable mold spores and prevent growth during transport to the laboratory. Sampling with the Via-Cell® is very similar to its sister product Air-O-Cell®. Simply connect it to any pump calibrated to 15 LPM and run your sample. The key to the Via-Cell® is that the media used for collection maintains viability of spores and allows several analysis options.

- Provided ready-to-use
- No refrigeration – only room temperature required
- No electricity or heavy equipment required
- 1 year shelf life is 4 times as long as traditional methods
- Multiple analysis options – compatible with culture plates, PCR and direct microscopy screening
- Independently validated and compared to current industry standard methods by both universities and laboratories.

Culturable Sampling: The Via-Cell® sampler is the perfect tool for collecting viable organism and culturing them on agar plates. Simply dilute the media in sterile water and transfer to a culture plate

PCR Analysis: The Via-Cell® utilizes a water soluble collection media which is ideal for PCR and other chemical types of analysis. Once the sample is diluted in water, it can be transferred most anywhere.

Direct Microscopy: Sample collected using the Via-Cell® sampler may be “pre-screened” using direct microscopy methods, which allow the analyst to decide if additional analysis techniques are needed, which may include culturing or standard direct microscopy analysis

► 25 mm Asbestos PCM and TEM Cassettes

These PCM and TEM 25mm air sampling cassettes are designed and manufactured to conform to all NIOSH, OSHA, and EPA standards. The cassette housings are injection molded in-house and are individually assembled and preloaded under stringent quality control standards. Once assembled, each cassette is individually tested prior to packaging for shipment. Random lot sample testing is performed daily by an independent laboratory to ensure low background fiber counts. Laboratory results are available upon request

- Quality 0.8µm MCE filter material
- 2" Static conductive extension cowl
- Meets NIOSH 7400 specifications
- Preloaded – ready-to-use

► 37mm Cassette with MCE Filters

The 37mm Air Sampling Cassette w/MCE Filters are designed to meet all NIOSH, OSHA, and EPA requirements for air sampling standards. All 37mm cassette housings are manufactured in house and are available in both two and three piece configurations. All 37mm cassettes are individually assembled and preloaded under stringent quality assurance standards with only the finest quality membrane and support pads.

- Polystyrene housing, 2 or 3 piece
- 3 piece model suitable for lead sampling
- Preloaded, ready-to-use
- Leak-free design.

► Zefon Bio-Pump® Plus

The Zefon Bio-Pump Plus® is the smallest and lightest portable battery powered IAD sampling pump available. It provides the simplest and most convenient way to sample with Air-O-Cell® and Via-Cell® cassettes at a flow rate of 15 LBM

FEATURES:

- New “quick Sample” feature makes sampling a breeze
- Extra long battery life – take over 100 samples on a single charge.
- Very small in size and weight – Over 40% less than the standard Zefon Bio-Pump
- Very quiet operation
- Programmable timer allows unattended operation
- Quick-charge battery charger included (approx. 3 hours)
- Uses Air-O-Cell® cassettes – the only industry proven and standardized sampling cassettes
- Uses Via-Cell® cassettes – the only cassette style sampler offering both viable and non-vialbe analysis options
- Nothing to prepare or clean. Just place the cassette on the pump, set the time and go
- Each pump come complete with both an Air-O-Cell® and Via-Cell® flow indicator, quick charger, 10 free Air-O-Cell® cassettes and a handy carrying case.

Specifications:

Flow Rate:	15 LPM
Housing:	ABS – Color Black
Battery:	Nickel Metal Hydride
Sampler size:	4.375” W x 8” Deep x 2.75” Height
Weight:	1.6 lbs

EMS #	Description	Qty
65211-12	Zefon Bio-Pump® Plus	each

➤ Accessories and Replacement Part for the Zefon Bio-Pump® Plus

➤ 1. Replacement Flow Indicators

A convenient, easy to use flow indicator used for calibration of the Zefon Bio-Pump® and Bio-Pump® Plus

EMS #	Description	Qty
65211-20	Replacement Air-O-Cell Flow® Indicator	each
65211-25	Via-Cell Flow Indicator	each

➤ 2. Bio-Pump Tripod Stand

A heavy duty stand, offering quick and easy attachment of the Bio-Pump

EMS #	Description	Qty
65211-30	Bio-Pump Tripod Stand	each

➤ 3. Zefon Bio-Pump Bubble Tube

This Bubble Tube is used as a primary standard in calibrating the Bio-Pump®. Attach the bubble tube to the pump as shown (tubing provided with the bubble tube). Then run the pump in calibration mode while inserting the end of the tube in soapy water so that bubbles travel up the tube. Timing the bubbles between the indicator lines will indicate your flow rate.

EMS #	Description	Qty
65211-35	Bio-Pump Bubble Tube	each

➤ Universal Cassette and Cyclone Holder

This Universal Cassette & Cyclone Holder allows cassettes and cyclones to be attached onto a workers collar. Compatible with 37mm and 25mm cassettes, and aluminum cyclone manufactured by Zefon and SKC. Weighs only 73 g or 2.5 oz. Comes with 3' of tubing attached

EMS #	Description	Qty
65230-01	25mm Asbestos TEM Cassette	each

➤ Cassette Sampling Stand

Sampling stand used to support sampling cassettes at elevated levels. Two models are available to choose from:

- **ZA0042 Economy Sampling Stand:** very nice stand, made from black anodized aluminum
- **ABS-1 Deluxe Sampling Stand:** very similar to the economy stand but made in the USA from aluminum. Better durability and stability than the economy one.

EMS #	Description	Qty
65232-42	Cassette Sampling Stand, Economy	each
65232-ABS	Cassette Sampling Stand, ABS-1	each

➤ Cassette Opener

Heavy duty stainless steel cassette opener. Works with 25mm, 37mm and Air-O-Cell cassettes. No need to remove labels, this opener cuts right through and effortlessly pries cassettes open.

EMS #	Description	Qty
65231-01	Cassette Opener	each

➤ 37mm Cassette Tubing Adapter

This Adapter is for connecting the 37mm cassettes to 1/4" ID tubing

EMS #	Description	Qty
65233-10	37mm Cassette Tubing Adapters	10/pk

➤ Via-Cell Blue Stain Solution

Via-Cell blue stain solution is a sterile liquid used during laboratory preparation when direct microscope will be performed.

EMS #	Description	Qty
65234-15	Via-Cell Blue Stain solution	15ml

➤ Via-Cell Linking Solution

Via-Cell linking solution is a sterile liquid used during laboratory preparation when direct microscope will be performed and further culturing may be desirable.

EMS #	Description	Qty
65235-15	Via-Cell Linking Solution	15ml

► BioCulture Microbial Air Sampler

The BioCulture™ air sampler is the smallest, most cost effective and easiest to use sampler available on the market. This BioCulture™ features a selectable, continuous, constant sample flowrate and is simple to operate, quiet operation, sampling in a variety of applications. No tools are needed.

Features

- Flow rate: 30 – 120 LPM
- Uses standard 90 mm petri dishes
- Sampling head design of 380 1mm diameter holes
- Battery powered—runs for 6.8 hours (depending on flow rate, battery maintenance and back-pressure)
- Tripod mounting threads on bottom of unit – allows 90 degree sampling
- Sampling head may be sterilized by autoclave or gas torch
- Built-in timers of 1, 2, 5, 10 minutes
- Optional calibration head allows field calibration of flow rate with a NIST traceable calibrator

(Note: a calibration head is required to calibrate the Bio-Pump, however it can be used to calibrate multiple pumps)

Applications:

- IAQ Surveys
- Mold sampling
- Building diagnostics
- Clean room sampling
- Hospital operating rooms
- Pharmaceutical compounding labs
- USP <797> active air sampling compliance
- Any location that you may need to verify and quantify microorganism presence

SPECIFICATIONS

Flow rate:30 – 120 LPM
 Accuracy of Flow Rate:.....±5%
 Battery Run Time:8 hours @100 LPM
 Battery Type:NiCAD
 Charging Time:12 – 16 hours
with standard charger.
 Optional 1 hour charger available
 Size:4.5" x 6" x 5.25"
 Weight:2.6 lbs
 Media Compatibility:90 mm petri dishes

Cat No.	Description	Qty
65224-12	BioCulture Pump, 120V Includes pump, standard 120V charger, pencil torch, carrying case & manual	each
65224-20	BioCulture Pump & Calibration Kit Includes pump, calibration head, standard 120V charger, pencil torch, carrying case & manual)	each
65224-55	Spare Sampling Head for BioCulture Sampler	each
65224-60	Fast One Hour Charger	each

► BioCulture™ Calibration Head

The BioCulture Calibration Head is A NIST traceable venture calibrator with 1% accuracy that allow users to calibrate the flow of the BioCulture pump themselves without having to send the pump out for service of calibration

- Allows flow calibration at flow rates between 30 – 120 LPM
- Designed for use with impeller fan type pumps like the BioCulture™, which require calibration devices with very little backpressure resistance
- Provided with a certificate of calibration traceable to NIST standards,

EMS #	Description	Qty
65224-50	BioCulture Calibration Head	each

► LIBRA™ Personal Sampling Pump

The Buck LIBRA™ is a low cost, high performance, constant flow personal sampling pump. Suitable for use in asbestos abatement, lead sampling and industrial hygiene sampling. Designed for use with asbestos and lead abatement, the LIBRA™ provides full constant flow compensation using 25mm and 37 mm cassettes

- Flow rate – 0.8 – 4 LPM
 - Rechargeable NiCAD battery pack system
 - Built-in washable stainless steel filter
 - Compact, lightweight and quiet
 - Intrinsic Safe Approval Pending
 - Full one year warranty
- LIBRA Pump comes with standard NiCAD battery, AC charger, luer adapter, 36" tubing, shirt's hose clip and manual.

EMS #	Description	Qty
65240-12	LIBRA Pump, 120volt Charger	each
65240-24	LIBRA Pump, 240volt Charger	each
65240-50	Buck FastOne Single Station Charger, 120/240 VAC	each
65240-51	Buck Standard Single Station Charger, 120 VAC	each

► Sensidyne Gilian BDX II Sampling Pump

The Gilian BDX II Abatement Air Sampler from Sensidyne is a dependable, low cost personal sampling pump. It is a "no-frills" model designed for use with asbestos and lead sampling. Meets NIOSH 7400, 7082, 7105 and 7300 specifications

- Flow rates – 500 – 3000 cc/min (0.50-3 LPM)
- Rechargeable battery pack system
- Built-in rotameter & flow adjust
- Compact, lightweight, quiet
- Full one year warranty

The Gilian BDX II includes a Pump with battery pack, battery charger, tool kit, 36" tubing, clip assembly and manual.

EMS #	Description	Qty
65241-12	Sensidyne Gilian BDXII Pump	each
65241-40	Gilian BDXII Pump Battery Pack	each
65241-50	Gilian BDXII Pump Charger	each

► mini Buck Primary Flow Calibrator

The mini-BUCK™ Primary Flow Calibrator is the industry standard for day-to-day flow verification and calibration of your personal and environmental sampling pumps. It is also suitable for verifying rotameters, setting instrument panels, and calibrating laboratory instruments. No more lugging oversized calibration panels. No more rotameter inaccuracies. The mini BUCK™ is accurate at any attitude and can be used for flow measurements with sampling media.

FEATURES:

- True Primary Standard
- Compact, lightweight and easy to use
- Work at any altitude without correction
- Instant readout of volumetric flow
- NIST traceable with $\pm 0.5\%$ accuracy
- Microprocessor controlled to provide fast, accurate, repeatable measurements
- Available with variety flow ranges

ORDERING:

EMS #	Description	Qty
65240-60	mini-Buck™ Low Flow 0.1 - 300cc/min, 120 V	each
65240-61	mini-Buck™ Medium Flow 1 - 6000cc/min, 120 V	each
65240-63	mini-Buck™ High Flow 100cc/min – 30LPM, 120 V	each
65240-64	mini-Buck™ High Flow 100cc/min – 30LPM, with ½" port, 120 V	each

► Acetone Vaporizer Kit

A small wonder Acetone Vaporizer Kit includes everything needed to clear slides for PCM analysis.

FEATURES:

- Heat control and thermometer built into vaporizer unit
- Padded carrying case protects equipment and supplies
- Enough supplies for the analysis of ½ gross of slides
- Lightweight but sturdy built
- Designed in strict compliance with the NIOSH 7400, 7402 or ORM requirement for preparation of microscope slides for PCM analysis

SPECIFICATION:

- Small wonder Acetone vaporizer with built-in heat control, temperature gauge, and cool cover; 2 oz acetone; ½ oz triacetin; ½ gross microscope slides; cover slips; tweezers; micro-dropper; syringe; #10 scalpel blade,; pre-cut foam padding; durable plastic carrying case with handle; instruction manual.
- Dimensions: 34⅞" L x 4½" W x 2¾" H (Vaporizer)
13" L x 11" W x 4" H (Kit Box)
- Material: Plastic case, ABS plastic cover on vaporizer, clear plastic bottles, metal and plastic tools.
- Weight: 2½ lbs. (Vaporizer), 8lbs (complete kit)
- Finish: Black Vaporizer cover with gray cord. Case color may vary
- Replacement items available separately.

EMS #	Description	Qty
65245-10	Small Wonder Acetone Vaporizer Kit	each
10015	Acetone, Glass Distilled	100ml
22060	Triacetin Reagent	½ oz

▶ LAB-AIR* System; Electronic Air Purifiers

A system which complies with OSHA Regulations and minimizes Occupational Exposure To Toxic Vapors.

The System that destroys the odors and fumes and doesn't just mask them. Toxic vapors are reduced as well!

Lab-Air Units are designed to eliminate harmful fumes and annoying odors from the laboratory workplace.

How do they work ?

Electronic Air Purifiers produce a controlled level of Ozone electrically by converting molecules of Oxygen (O₂) into molecules of Ozone (O₃). Ozone, sometimes called activated oxygen, as part of the process of returning to oxygen, casts off its extra atom. That extra atom combines with the molecule of the odor's source and thereby destroys the odor by oxidation. Once Ozone's extra atom is consumed fresh air is left behind which was created by a natural process.

Lab-Air Units produce a safe unsaturated level of activated oxygen that neutralizes harmful fumes and eliminates problem odors from organic materials as well as some commonly used chemicals such as: Formaldehyde, Xylene, Toluene, Glutaraldehyde, Alcohol, Acetone.

For instance:

* All Harmless Gases (American Institute of Technology)

What is the best location for our LAB-AIR* System?

- ▶ **Histology/Pathology/EM Labs** - There are common odors and toxic vapors which are generated by fixing fluids, staining and embedding materials, autopsy samples, body odors, remains of dead animals and fumes which can exceed the capacity of the fume hood. In these cases these fumes may spread to other areas of the building.
- ▶ **Other Labs with Odors** - There are other locations within the hospital or research lab where people are using chemicals such as xylene, glutaraldehyde, formaldehyde, etc. where the LAB-AIR* SYSTEM would be very beneficial.
- ▶ **Animal Necropsy** - These are odors and fumes associated with the remains of dead animals. These odors can spread, especially in the warmer months, throughout an entire building. The LAB-AIR SYSTEM eliminates this totally.

Features and Specifications:

Lab-Air's Electronic Air Purifiers are CSA approved and come with a two year warranty. Powered by 110 VAC, 60 Hz or 220 VAC, 50 Hz.

▶ Model PA 2500

Features:

- ▶ Programmed timer
- ▶ 2,500 milligrams ozone per hr
- ▶ 120Volts, 75 Watts
- ▶ 14" L x 15" W x 5.5" H
- ▶ Weight: 22 lbs

Model PA 2500

▶ Model PA 1200

Features:

- ▶ Has an adjustable ozone output; provides up to 980 mg/hr.
- ▶ Multiple option timer: 15 min, 30 min, 1 hr, 2 hr, 4 hr, and continuous operation settings.
- ▶ It comes with non-slip feet and power cord.
- ▶ It measures 14"(L)x10"(W)x7"(H). Weight: 13 lbs
- ▶ High output—has a 220 CFM fan

Model PA 1200

▶ For 110 VAC:

64490-56	Lab-Air Model PA 2500	each
64490-98	Lab-Air Model PA 1200	each

▶ For 220 VAC:

64491-56	Lab-Air Model PA 2500	each
64491-98	Lab-Air Model PA 1200	each

▶ Accessories for Lab-Air

64492-25	Cleaning Kit for Model PA 2500	kit
64492-30	Cleaning Kit for Model PA 1200	kit
64492-20	Wall Mounting Bracket	each

AREA x ODOR FACTOR = MG/HR required

Cubic Feet

Measure the Cubic Footage (L x W x H) of the AREA being treated

Estimate the ODOR FACTOR as follows:

- Light Odor Factor = 0.005
- Medium Odor Factor = 0.018
- Strong Odor Factor = 0.036

Multiply the AREA by the ODOR FACTOR to determine the MG/HR on the chart below. Set OZONE on the machine to the setting nearest the required MG/HR and adjust as required.

Cubic Meters

Measure the Cubic Footage (L x W x H) of the AREA being treated

Estimate the ODOR FACTOR as follows:

- Light Odor Factor = 0.18
- Medium Odor Factor = 0.65
- Strong Odor Factor = 1.29

Multiply the AREA by the ODOR FACTOR to determine the MG/HR on the chart below. Set OZONE on the machine to the setting nearest the required MG/HR and adjust as required.

Lab-Air 9.8

MG/HR (Milligrams per hour in dry air)

340	431	522	613	704	795	886	977	1068	1159	1250

➤ **Decon 90**

The leading surface active cleaning agent/radioactive decontaminant, for laboratory, medical and specialised industrial applications.

Description: Surface active cleaning agent, and/or radioactive decontaminant, for laboratory, medical and specialised industrial applications. NOT suitable for domestic applications. Supplied as a liquid concentrate, for dilution with water. For 'manual' cleaning, or for use in an ultrasonic cleaning bath.

Properties: Biodegradable *, phosphate-free, Bactericidal **, non-flammable and totally rinsable.

Appearance: Milky white, non-viscous liquid, having faint odor.

Ph: DECON 90 is alkaline. The concentrate having a ph in excess of ph 13.

Applications: For cleaning and/or decontaminating glassware, ceramics, rubbers, plastics, stainless steel and ferrous metals. Being alkaline, DECON 90 is NOT suitable for use on non-ferrous metals, notably aluminium and zinc, or on polycarbonate.

Formulation: An emulsion of anionic and non-ionic surface active agents, stabilising agents, non-phosphate detergent builders, alkalis and sequestering agents, in an aqueous base. Decon 90 does NOT contain Phosphates, Enzymes, EDTA/NTA or Chlorine Bleaches.

** Decon 90 satisfies the criteria in BS EN 1040 1997 for bacterial activity.

* Ready Biodegradability by OECD 301E (ISO method 7827 - 1986 (E))

60505-01 Decon 90 1 liter

➤ **Cutemol Cream; Protective Hand Cream**

Contains five skin softening compounds, plus allantoin to relieve dry, fissuring, peeling, chapped, or irritated skin.

70550 Cutemol Cream 50g

➤ **Amberclens Foam Cleanser**

A multipurpose anti-static foaming cleaner. Ideal for general cleaning on a wide variety of Laboratory, industrial, aerospace and commercial equipment.

Removes tough, stubborn stains such as grease, grime, and dirt

Anti-static formulation, reduces the attraction of airborne dust

Cat. # Description Qty.
68551-13 Amberclens Foam Cleanser 400 ml

➤ **XENIT Cleaner and Remover**

This All Natural Cleaner Removes What Soap & Water Can't

XENIT contains more than five high-performance ingredients such as Citrus 66, an all natural, highly refined extract of citrus fruit. XENIT is specially formulated to break down the complex molecules found in sticky materials. With this unique character, XENIT may be used to quickly remove labels, decals, and adhesive from glass, wood, vinyl and metals. XENIT removes chewing gum from carpet and upholstery. It cleans permanent marker, crayon, and lipstick from walls, woodwork, and counter tops. XENIT also remove shoe scuffs and heel marks from vinyl and wood flooring, and grease and dirt from carpet, fabrics and upholstery. It even removes dried latex paint.

➤ **XENIT Degreaser**

XENIT Degreaser is a powerful, non-flammable solvent cleaner that quickly removes grease, oil, carbon deposits, gums, varnish, and dirt from metal surfaces. It is fast drying and evaporates completely and leaves no residue.

➤ **XENIT Foaming Cleaner**

This is the fast, easy way to remove dirt, grime, and food stains, pen ink, soda pop, soap scum. Cleaned surface dry quickly and leave no marks.

➤ **XENIT Citrus Cleaner/Remover**

XENIT all natural citrus cleaner is the fast, easy way to remove sticky stuff, stains and gunk. XENIT removes greasy, grimy soils that soap and water can't. Cleans most surfaces in seconds. It cleans crayons, dry latex paint, gum, heel mark, ink, permanent markers, lipstick, shoe polish, sticker, tape, tar and sap.

Cat. #	Description	Qty.
60810-20	XENIT Foaming Cleaner	13 oz.
60810-30	XENIT Citrus Cleaner/Remover	10 oz.

➤ **Glass Cleaner – Invisible Glass**

Specially formulated, Invisible Glass quickly and easily removes dust, dirt, oil, grease, fingerprints, smoke film, haze and more from glass surfaces, such as windows, mirrors, computer screens, display cabinets, and photocopiers. Invisible Glass contains no water and soaps, surfactants or foams so it will leave no residue that will either streak or haze.

Cat. #	Description	Qty.
60811-01	Invisible Glass	19 oz.

► CURITY® Cotton Prepping Balls

- 100% cotton.
- Soft and absorbent.
- Packed in convenient poly bags.
- Designed for a variety of uses throughout the laboratories.
- Non sterile.

Cat. #	Description	Pack
71001-10	Cotton Balls, Medium	500/pk
71001-12	Cotton Balls, Large	200/pk

► CURITY® Rayon Prepping Balls

- Made from high quality rayon fibers.
- Non sterile.
- Designed for a variety of uses throughout the laboratories.

Cat. #	Description	Pack
71003-01	Rayon Balls, Large	1000/pk

► WEBCOL® Alcohol Preps

- A premium pad material that provides maximum absorbency for scrubbing and cleaning.
- 70% Isopropyl Alcohol.
- Sterile, non-woven sponges designed for moderate cleaning.
- Economical.
- Available in convenient sizes for a variety of uses.

Cat. #	Description	Pack
71005-20	Alcohol Prep, Medium, 2-Ply	200/pk
71005-30	Alcohol Prep, Large, 2-Ply	200/pk

► Absorbent Bench Top Covers

A wide selection of bench top covers from economy layered to premium ultra absorbent.

Cat #	Size	Absorbency Rating	Pack
64456-05	17" x 24"	Moderate	50/pk
64456-30	17" x 24"	Moderate	300/pk
64457-05	23" x 24"	Heavy	50/pk
64457-20	23" x 24"	Heavy	200/pk
64458-05	23" x 36"	Moderate	50/pk
64458-15	23" x 36"	Moderate	150/pk

► Cleaning Solutions:

► (1) Alconox®

Alconox detergents safely clean glass, plastic, metal, rubber, and porcelain without leaving a film, residue, or any scratches. Very versatile and cost efficient.

5 different types to choose from:

► Alconox®

The original anionic powder detergent for manual and ultrasonic cleaning. An odorless, high sequestering powder. It helps to decontaminate radioactive surfaces. Dilute 1:100, pH 9.0.

60510	Alconox	4 lb/bx
60511	Alconox	9 X 4 lb/cs
60512	Alconox	50 X 1/2 oz/bx

► Alcojet® Low Foaming Powdered Detergent

Non-ionic, low foaming cleaner for use in labware washers, parts washers, power spray systems, manual and ultrasonic cleaning. Corrosion inhibited formula recommended for glassware, metals, plastic, ceramic, porcelain, rubber and fiberglass. Free rinsing for reliable results no interfering residues. USDA authorized. Dilute 1:200 and it has a pH 12.

60513-01	Alcojet Powdered Detergent	4 lb/box
60513-09	Alcojet Powdered Detergent	9 x 4lb/cs

► Luminox® Low Foaming Neutral Cleaner

Low foaming neutral pH detergent for use in manual, and machine cleaning. A safe-handling detergent used for non-corrosive cleaning without chelation or alkalinity waste treatment problems. Recommended for aluminum and soft metal, medical devices, pharmaceutical equipments, alkaline sensitive labwares, and medical instruments, aluminum trays. Free rinsing, eliminating interfering residues. Dilute 3:100 and it has a pH 7.0

60514-01	Luminox Liquid Detergent	1 gal
60514-04	Luminox Liquid Detergent	4x1 gal/cs

► Liqui-nox®

A phosphate free anionic and non-ionic liquid detergent for manual and ultrasonic cleaning. Dilute 1:100, pH 6.5.

60515	Liqui-nox	1 qt
60516	Liqui-nox	12 X 1 qt
60517	Liqui-nox	1 gal
60518	Liqui-nox	4 X 1 gal

► Terg-A-Zyme®

Combine Alconox powder with this protease enzyme to effectively remove proteinaceous soils. Ideal for pre-soaking. It also cleans reverse osmosis installations. Dilute 1:100, pH 9.5.

60520	Terg-A-Zyme	4 lb/bx
60521	Terg-A-Zyme	9 X 4 lb/cs

► Det-O-Jet®

A highly alkaline liquid detergent and wetting agent that is soluble in soft or hard water. It is extremely effective on porcelain, metals, electronic parts, etc. It protects and lubricates the interior working parts of the washer. Dilute 1:100, pH 13

60525	Det-O-Jet	1 qt
60526	Det-O-Jet	12x1 qt

➤ (1) Alconox® (continued)

➤ Alcotabs®

Alconox detergent in an effervescent tablet form for use in syphon type washer rinsers for the cleaning of pipettes and test tubes. pH 6.5.

60529	Alcotabs	100 tab/bt
60530	Alcotabs	6 bt/ cs

➤ Citrajel® Low Foaming Liquid Acid Cleaner

Low foaming phosphate-free, concentrated, liquid cleaner and metal brightener, high performance removal of metal oxides, scale, salts and inorganic residues in lab-ware washers, parts washers, power-spray systems and manual and ultrasonic cleaning. Corrosion inhibited and free rinsing leaving no interfering residues. Ideal for acid washing and rinsing. Dilute 2:100 and it has a pH 2.5.

60532-01	Citrajel Liquid Detergent	1 gal
60532-04	Citrajel Liquid Detergent	4 x1 gal/cs

➤ Tergajet® Low Foaming Phosphate Free Powdered

Non-ionic, low foaming phosphate free powdered enzyme cleaner for use in labware washers, manual and ultrasonic cleaning. Corrosion inhibited formula recommended for glassware, metals, plastic, ceramic, porcelain, rubber and fiberglass. Free rinsing for reliable results and no interfering residues. Passes inhibitor residue test. Dilute 1:200 and it has a pH 11.5.

60534-01	Tergajet Powdered Detergent	4 lb/box
60534-09	Tergajet Powdered Detergent	9 x 4lb/cs

➤ Solujet® Low Foaming Phosphate Free Detergent

Low foaming phosphate free liquid cleaner for use in labware washers, manual and ultrasonic cleaning. Corrosion inhibited formula recommended for glassware, metals, plastic, porcelain, rubber and fiberglass. Free rinsing for reliable results and no interfering residues. This detergent passes the inhibitory residue test. Dilute 1:200 and it has a pH 11.5.

60536-01	Solujet Liquid Detergent	1 gal
60536-04	Solujet Liquid Detergent	4x 1gal/cs

➤ Detergent 8®

Low Foaming Phosphate Free Detergent Non-ionic, concentrated detergent for labware washers, PC board washers, power-spray systems, ultrasonic cleaning systems and manual cleaning. Specially formulated to remove oils, resin rosin and fluxes from printed circuit board, electronic part, phosphate sensitive labware and nuclear contaminated equipment with no interfering conductive residues. Excellent replacement for solvent cleaning. Dilute 3:100 and it has a pH 11.

60538-01	Detergent 8	1 gal
60538-04	Detergent 8	4x1gal/cs

➤ LQ9™ Critical-Cleaning Liquid Detergent

- Concentrated to save you money
- Replaces corrosive acids and hazardous solvents
- Phosphate free, biodegradable and readily disposable
- Free rinsing to give you reliable results and no interfering residues
- Use to pass your cleaning validation tests for lab accreditation and plant inspection approval

Used to clean: Healthcare instruments, laboratory ware, vacuum equipment, tissue culture ware, personal protective equipment, sampling apparatus, and more. Passes inhibitory residue test for water analysis. Used for phosphate sensitive analysis ware. FDAcertified.

60539-01	LQ9™ Critical-Cleaning Liquid Detergent	1 Gallon
60539-04	LQ9™ Critical-Cleaning Liquid Detergent	4 x 1 Gallon

➤ (2) Extran 300

A concentrated phosphate free surface cleaner used to clean equipment and apparatus, which is made from glass, quartz, porcelain, metal, rubber, and plastic.

60500	Extran-300	1 L
-------	------------	-----

➤ (3) Micro Cleaning Solution

Specially designed for ultrasonic cleaning machines. Cleans glass, most metals, plastics, and rubber. You can work with any concentration. Contains no phosphates and it is biodegradable. Even removes radioactive contaminants. Not to be used on zinc, magnesium, or aluminum.

71054	Micro Cleaning Solution	1 qt
71055	Micro Cleaning Solution	12 x 1qt/cs
71056	Micro Cleaning Solution	4 L
71057	Micro Cleaning Solution	4 x 4L/cs

➤ (4) General Purpose Cleaner

A concentrated solution, which is bio-degradable, phosphate and caustic-free alkaline cleaner formulated for general purpose and normal maintenance cleaning applications. General Purpose solution removes general soils, fingerprints, dust, packaging particulates, light oils, and greases. GP solution is safe for use with most base metals and alloys, thermoset and thermoplastic resins, and other synthetic materials. GP solution is easily mixed with water to form a concentration of 10-12% by volume, and can be used at temperatures ranging from ambient to 180°F (82°C)

71050	General Purpose Cleaner	1 qt
71051	General Purpose Cleaner	1 gal

➤ Oxide Remover (OR)

This cleaner may be used on brass, copper, steel and other metals to remove rust and metal-oxides. Comes as a concentrate. Dilute to 10 – 12% with water for use with ultrasonic machine.

71052	Oxide Remover (OR) Cleaner	1 qt
71053	Oxide Remover (OR) Cleaner	1 gal

ULTRASONIC BENCHTOP CLEANING

► Branson Ultrasonic Benchtop Cleaners

Branson's innovations include a signature elevated control panel, positioned above and behind the bath to avoid damage and increase operator safety. With a unique sweep frequency technology to eliminate standing waves, and a pioneering 40 kHz industrial transducers, Branson ultrasonic baths have been the industry standard for quality, reliability, and precision cleaning.

Digital Ultrasonic Baths

Advanced technology and digital performance in our most robust, versatile, ultrasonics baths.

Branson Baths Features

- Constant activity/power tracking automatically maintains the same ultrasonic power by adjusting for changes in liquid level and temperature caused by a light or heavy load. This helps ensure more uniform cleaning and consistent performance, even with multiple users or when bath conditions change.
- Assures uniform, precision cleaning over the entire surface, and consistent cavitation that reaches and cleans even tiny crevices on the parts.
- High/low power control adjusts the acoustic energy in the bath. It can be set at 100% power for normal to heavier loads, or at 70% power for lighter and more delicate applications, helping to protect delicate components from potential damage.
- Temperature settings are available up to 69°C/156.2°F, which can be set in either Celsius or Fahrenheit and programmed through the front panel for easy access and monitoring. This also allows for convenient re-calibration when needed onsite.
- High-temperature visual alarm/auto shut-off for added safety.
- Sleep mode provides energy savings automatically by shutting off unit if control keys are not touched within 15 minutes of cycle end. To restart, press any key.
- Degassing and conditioning of solutions through advanced wave modulation of up to 99 minutes also allow for a variety of sample prep applications.

Mechanical Ultrasonic Baths

The Branson MT Series includes two simple-to-use models: the M and MTH Series. Both series are designed for basic yet effective cleaning, with set-it-and-forget-it mechanical timers, which can be set up to 60 minutes or run continuously. MH Series units also offer a heating option. And both series are excellent for use in a variety of applications

Standard power requirements for all of our ultrasonic units are 120V, 50/60Hz. All units are available in 230/240 volt, 50/60Hz.

All of our units come with a tank cover.

► Model 1800

Tank size:	6"x5.5"x4"
(L,W,D)	150x140x100mm
Overall size:	9.9"x12"x11.9"
(L,W,D)	251x304x302mm
Weight:	7 lbs (3.2 kg)
Frequency:	40kHz
Tank Capacity:	.5 gal (1.9L)
Drain:	No

71048-22	UltraSonic Cleaner; Model 200, 220 volt	each

► W PC-620 Ultrasonic Cleaner

The PC-620 is offered in 2 frequencies to match cleaning capability to your application. At 40kHz it is ideal for cleaning pipettes, lab glassware, and other items requiring general cleaning.

Capacity:	2.75 gallons
Tank Size:	19½" x 5¾" x 6"
(L x W x D)	
Overall Size:	20¼" x 6¼" x 10"
(L x W x D)	

71046-R1	PC-620 Pipette Cleaner, Without Heat, 110V	each
71046-R2	PC-620 Pipettes Cleaner, With Heat, 110V	each
71046-E1	PC-620 Pipette Cleaner, Without Heat, 230/240V	each
71046-E2	PC-620 Pipettes Cleaner, With Heat, 230/240V	each
71046-C	Stainless Steel Cover for PC-620	each
71046-B	Stainless Steel Basket	each

► Retrieving Tweezers

A unique plastic coating on the tips of the tweezers insulates them and provides resistance to heat and chemicals. Ideal when cleaning with ultrasonics.

62112-06	Retrieving Tweezers, 6" Long	each
62112-08	Retrieving Tweezers, 8" Long	each
62112-10	Retrieving Tweezers, 10" Long	each
62112-12	Retrieving Tweezers, 12" Long	each

► Cleaning Basket

Made from stainless steel. Keeps small parts together when cleaning ultrasonically. A spring handle applies firm pressure to the basket to keep it closed when in use. Its overall length is 6". Spherical basket has a 1½" (38mm) diameter.

62110	Cleaning Basket	each
-------	-----------------	------

► Electric Benchtop Dryers

Electric benchtop dryers offer a compact footprint and accelerate drying of labware with warm, circulating air.

Conserve benchtop space by placing single-sided models up against the wall. Double-sided models double your capacity with only a slightly larger footprint and can be turned perpendicular to the benchtop for easy access to both sides.

- 400 watts of drying power gently circulates heated air into and around items to decrease drying time.
- Heat selector knob with three temperature settings: high, medium and low.
- Power button illuminates when in use, and an 8-amp @ 120V (4-amp @ 230V) circuit breaker and independent thermo-fuse protects unit from overheating.
- Select from single and double sided models with up to 76 peg locations and 4 baskets.
- Electric drying efficiency is enhanced with a replaceable polyurethane foam filter that keeps warmed air dust free. Redirect air flow by inserting plugs instead of pegs into unused peg holes.
- Like the non-electric benchtop models these freestanding dryers have sturdy bases with excellent balance and can be placed on any flat surface.
- Removable polypropylene baskets serve as storage for small labware and extra pegs.

► Beaker-Store; Instrument Store

For the first time EMS introduces a unique beaker with a silicone bottom that allows you to store all of your tweezers and tools in cleaning solution and never damage the tips. Instruments may be placed in the beaker with the tips only immersed in distilled water and or cleaning solution. This allows the instruments to be kept clean and safe and ready to use. The Silicone bottom prevents the tips of the instruments from being damaged and the top of the beaker is compartmentalized and segmented allowing for each tool to be kept separate.

The beaker measures 10 cm in diameter and it is 8 cm in height.

Cat. #	Description	Qty.
68113-05	Beaker Store	each

► Apron; Disposable

A plastic, full length, bib-type apron. Handy protection in a compact envelope. Smooth finish, size 28"x46" (71cm x 112cm; 1½ mil thick).

60900 Apron 100/bx

► EMS Diamond Knife Wash

This new concept of washing the Diamond knives using magnetic stirring action (with special stirring bar) gives you a fast, clean and safe method to remove particles that are left on the knives edge after sectioning.

Since most of the EM labs already have stirring plates, the Diamond Knife Wash has been designed for use with your existing unit, saving you the need to purchase an extra one. It is universal and can be used for all type and brands of Diamond Knives, including the Diatome Histo Knife. Warning: Never use on a hot plate. If used on a combination Stirrer/Hot Plate, make sure the heat is off.

70605 Diamond Knife Wash each

► Diamond Knife Cleaning Kit

Consists of 5x5ml vials of cleaning solution, 4 rods for cleaning the knife edge, and 1 hair curl for the removal of sections from the knife edge and the trough.

70600	Kit	each
71180	Hair Curl Only	each
70610	Cleaning Solution	10x5ml
70970	Cleaning Rods	4/bx

► Triton X-100; Diamond Knife Soaking Solution (0.08% Solution)

Triton X-100 is a low concentration soaking solution in distilled water. It is a non-ionic (neu-tral pH) solution used to soften dried debris on the edge of the knife prior to recommended cleaning. Also used in whole ,cell preparations.

22146 Triton X-100, 0.08% Solution 500ml

► Hair Curl

Made from human hair; it is good for removing sections and cleaning the diamond knife.

71180 Hair Curl each

► Eyelash Manipulator; A Traditional EM Tool

For direct manipulation of sections and small tissue samples this tool is perfect for any occasion. May be used during ultramicrotomy to carefully tease sections that are in the Diamond Knife boat. The Eyelash comes on a Sable Brush handle made from the highest quality wood.

These Eyelashes may be cleaned and sterilized with alcohol and a tissue.

71182 Eyelash Manipulator each

➤ **Duster Products** *100% SAFE FOR THE OZONE!*

NO CFC'S. NO HCFC'S. NO PROPANE. NO BUTANE!!!

Here at Electron Microscopy Sciences we are proud to introduce a new line of 100% ozone-safe pressurized duster products. This new formulation, DIFLUOROETHANE, delivers pure, moisture-free blasts which removes all dust and dirt particles. This new formulation is considered non-flammable (Formula S), and completely safe for normal use, however this formula is considered flammable for shipping purposes and does contain some flammable elements. For special applications, where flammable elements are prohibited, we do have available a special application formula, Tetrafluoroethane, (Formula N) which has been specially formulated with no flammable elements. Unfortunately, the propellant cost of this formulation is significantly higher. However, all of our new gases are very low in pressure, so you get many more blasts per ounce. In fact, the new canisters will yield 20% more blasts than the old ones. This is true even though these new cans contain 8 ozs and the old ones contained 12 ozs.

➤ **Dust-Pro System**

100% Safe for the ozone! Dust-Pro for dusting and chilling.

The system has many features:

- 100% ozone-safe pressurized Tetrafluoroethane.
- Meets Canadian Government Regulations.
- Non-Flammable and triple filtered for maximum purity.
- New designed Techni-Valve™ with no mounting clip needed.
- High pressure 120 psi dusting spray.
- Comes in either refill or disposable cans.

For dusting use in upright position. For chilling a specimen invert the can and spray in short bursts.

➤ **Dust-Pro™ Kit**

The kit includes one 8 oz. can Dust-Pro and Peca Techni-Valve™. The one-piece-valve is made from solid brass and is chrome plated with an extra long nozzle (3½") for hard-to-reach areas. No mounting clip is required. The valve can be removed at any time without loss of pressure.

70845-00 Dust-Pro Kit kit

➤ **Dust-Pro™ Refill**

Use with Peca Techni-Valve; 8 oz. can, 12 cans/ case.

70845-01 Dust-Pro Refill can 8 oz.
70845-12 Dust-Pro Refill case 12x8 oz.

➤ **Dust-Pro™ Disposable**

An 8 oz. can containing non-flammable Tetrafluoroethane; 100% ozone safe. Comes with an Acc-u-sol™ trigger for pinpoint accuracy in cleaning as well as chilling procedures.

70847-01 Dust-Pro Disposable 8 oz
70847-12 Dust-Pro Disposable 12x8 oz.

➤ **Peca Techni-Valve™**

For use with our Dust-Pro Refill cans.

- Professionally designed with a long nozzle (3½",90mm).
- Smooth bell housing and no mounting clip is required.
- Made from solid brass, chrome plated.
- The valve can be removed at any time without the loss of pressure.
- Patented bell housing fits the contour of your hand.

70849-10 Peca Techni-Valve each

➤ **Pro-Techni-Valve™**

The "Pro" model has all of the features of Peca Techni-Valve plus a threaded nozzle for 3 different swivel extensions which affords you pinpoint dusting control in all directions. Pro-Techni-Valve comes with a 5" swivel attachment.

70849-20 Pro Techni-Valve each
70849-23 10.5" Swivel Attachment each

NEW INFINITY 3-3UR Research-Grade Microscopy Camera

2.8 MP USB 3.0 Camera Offering Low Noise and High Sensitivity

For more information, see pages 750-754. >>>>>

► Dust-Off FGSA Model

Contains: Formula S (Difluoroethane) - 100% safe for the ozone. It uses the same chrome nozzle as the old FG Dust-Off. The nozzle is designed to prevent droplets from forming. It retains the same pressure until the can is empty. Its new concentrated formula will give you 57% more blasts per ounce, 17% more blasts per can. The kit consists of a 8 oz. can and a chrome nozzle. Refill is 8 oz can, 12 cans/case.

70705	Dust-Off FGSA Kit	each
70702	Chrome Nozzle Only	each
70810	Three Prong Valve Clip	each
70820	2ft Extension Nozzle	each
70706	Dust-Off FGSA Refill	each
70707	Dust-Off FGSA Refill	12/cs

► Dust-Off Plus Model (DPSA)

Contains: Formula S (Difluoroethane) - 100% safe for the ozone. It comes with a patented 360° Vector Valve. The multi-directional valve is used for easy blasting in hard to reach areas. The valve can be removed from the can anytime without any loss of gas. Its new concentrated formula will give you 57% more blasts per ounce, 17% more blasts per can. The kit consists of a 8 oz. can and a Vector Valve nozzle. Refill is 8 oz can, 12 cans/case.

70840	Dust-Off DPSA Kit	each
70834	Vector Valve Nozzle Only	each
70843	Dust-Off Plus Refill, DPSR	each
70844	Dust-Off Plus Refill, DPSR	12/cs

► Dust-Off Plus Model (DPN)

Contains: Formula N (Tetrafluoroethane) - 100% safe for the ozone. The same as DPSA above but this formula-as mentioned-contains no flammable elements.

70846	Dust-Off DPN Kit	each
70847	Dust-Off Plus Refill, DPNR	each
70848	Dust-Off Plus Refill, DPNR	12/cs

► Dust-Off XL Model (DPSXL)

Contains: Formula S (Difluoroethane) - 100% safe for the ozone. The first safe for the environment disposable pressurized duster. Removes dust and dirt with pure moisture free blasts. There is more product at less cost per ounce. Extension tube is included with the can. Its new concentrated formula will give you 57% more blasts per ounce, 17% more blasts per can. Weight per can: 10 oz disposable.

70837	Dust-Off XL (DPSXL)	each
70838	Dust-Off XL (DPSXL)	12/cs

► Dust-Off XL Model (DPNXL)

Contains: Formula N (Tetrafluoroethane) - 100% safe for the ozone. The same as DPXL above but this formula contains no flammable elements.

70827	Dust-Off XL (DPNXL)	each
70828	Dust-Off XL (DPNXL)	12/cs

► Sure Shot® Pressure Sprayers – ATOMIZER MODEL B

Model B sprayers are available in 16, 8 and 7 oz. Capacities. Anything that the aerosol can do, ATOMIZER can do safer. Refillable and Rechargeable. Eliminates aerosol disposal problems. All Model B sprayers come standard with Viton® seals, these seals are compatible with most products.

- Stainless Steel or Aluminum body
- Working pressure: 80 – 145 psi
- Measures are the same as aerosol cans (~2 3/4" dia)
- Liquid spray lighter than #10 Motor Oil

IMPORTANT: Sure Shot® Sprayers are not recommended for spraying any acids. Sure Shot® Sprayers will handle most chemicals, but are not designed to be used with products that are intended to etch or attack metal surfaces.

► 16 OUNCE CAPACITY ATOMIZER – MODEL B

Plated Aluminum Atomizer with a Brushed Finish

- 64186-10** Model 8500PL - Plastic Top. Comes with extra valve & nozzle assortment, including 2 fine, 2 regular, medium, 2 coarse and 1 pin stream
- 64186-12** Model 8500CB – Chrome-Plated Brass Top. Comes with extra valve & nozzle assortment, including 2 fine, 2 regular, 2 medium, 2 coarse and 1 pin stream

The model 8100 sure shot ATOMIZER features a Plated Aluminum canister. The plating is on both the inside and the outside of the canister, this gives the 16 oz capacity Plated Aluminum Atomizer a superior chemical resistance to plain aluminum, especially with chlorinated solvents:

Plated Aluminum Atomizer

- 64186-20** Model 8100PL - Plastic Top. Comes with extra valve & nozzle assortment, including 2 fine, 2 regular, 2 medium, 2 coarse and 1 pin stream
- 64186-22** Model 8100CB – Chrome-Plated Brass Top. Comes with extra valve & nozzle assortment, including 2 fine, 2 regular, 2 medium, 2 coarse and 1 pin stream

► Portable Air Compressor

Pressurize the Sure Shot® Sprayers with this rechargeable battery powered Air Compressor. The Compressor generates up to 220 PSI, the battery recharge unit by the AC 115V adapter or DC 12V adapter included. Completely portable, no trailing cords.

64195	Portable Air Compressor	each

► 8 OUNCE CAPACITY ATOMIZER – MODEL B

Aluminum Atomizer

- 64190-10** Model 8300PL - Plastic Top. Comes with extra valve & nozzle assortment, including 2 fine, 2 regular, 2 medium, 2 coarse and 1 pin stream
- 64190-12** Model 8300CB – Chrome-Plated Brass Top. Comes with extra valve & nozzle assortment, including 2 fine, 2 regular, 2 medium, 2 coarse and 1 pin stream

Plated Aluminum Atomizer with a Brushed Finish

- 64190-20** Model 8700PL - Plastic Top. Comes with extra valve & nozzle assortment, including 2 fine, 2 regular, 2 medium, 2 coarse and 1 pin stream
- 64190-22** Model 8700CB – Chrome-Plated Brass Top. Comes with extra valve & nozzle assortment, including 2 fine, 2 regular, 2 medium, 2 coarse and 1 pin stream

► 7 OUNCE CAPACITY ATOMIZER – MODEL B

Aluminum Powder Coated Epoxy Finish

- Slim line design
- 7 oz capacity
- All Viton® seals
- Fits perfectly in your hand

- 64190-30** Model 8200PL - Plastic Top. Comes with extra valve & nozzle assortment, including 2 fine, 2 regular, 2 medium, 2 coarse and 1 pin stream

► Atomizer Repair Kits for Model B

Cat. #	Model	Description
64187	B51	6-Complete Valve Assemblies. Contains: 6 of each B15, B14 & B30
64189	BK50	Complete Repair Kit (For Aluminum Sprayers Only). Contains: B05, B11, B12, B13, B25, 6 each of B15, B30, and B14

► Static Eliminators:

► Anti-Static Spray

It stops static build-up on optics, disc drives, photographic materials, lenses, metal rollers any where that static may generate. 14 oz. can.

60615 Anti-static spray each

► Anti-Static Brushes

Eliminates static electric charges and removes dust, lint and other particles from negatives and lenses with one quick operation. This non-chemical, non-radioactive, synthetic brush uses the natural principal of resistance flow to obliterate dust and the static electricity that attracts it. It is absolutely safe on all photographic surfaces and emulsions, great for computer monitors and glass screens as well. It can be cleaned with soap and rinsed with water. It never needs "recharging" and will last a lifetime with proper care. Short: A 4" (10.5cm) long carbonized plastic handle, 4" brush. Weight 1oz. (28g).

60612-04 Short Anti-Static Brush each

► Techni-Stat® Clean Mat

Clean Mat is a one-layer 0.060" thick, solid vinyl tablemat designed to be used in a clean room as well as general laboratory areas, where static control is needed. It is resistant to heat and most oil, grease, and common solvents. This material provides a safe, non-carbon work surface to dissipate a static charge 6.1 x 108Ω/sq. at a workstation. All cut mats come with one snap and a 10 ft common point ground. The static dissipate rubber design meets EOS/ESD-54.1 @ 10V. (USA)

Cat. #	Description
60617-23	Techni-Stat® Clean Mat, size 2ft x 3ft (61x92cm)
60617-24	Techni-Stat® Clean Mat, size 2ft x 4ft (61x122cm)

► Static Control Adjustable Wrist Band

This Hook and Loop Wrist Strap is designed for those whom need to be static free in the working area. This Hook and Loop wrist trap has a quick and easy adjustment. With a 1" wide conductive material that is sewn in and has a 1MΩ resistor.

Cat. #	Description	
60622-06	Static Control Adjustable Wrist Band, 6ft Coil Cord	each
60622-12	Static Control Adjustable Wrist Band, 12ft Coil Cord	each
60622-30	6 ft Coil Ground Cord only, ¼" Molded Female Snap	each

► Non-Marking Heel Grinder
► Velcro® E.Z. Close™

E.Z. Close is your low cost logical choice heel grinder. They are made from premium grade non-marking conductive rubber that is highly abrasion and wear resistant. The Velcro® fastening system is adjustable and comfortable. Includes: 18" conductive tab and 1½", two-layer, rubber cup. Built in resistor. Charge decay: less than 0.01 sec.; 2.4x10⁸Ω. Meets DOD-263A standards (USA)

60619-30	Heel Grinder w/o Resistor, Black Stretch Strap	each

► Cotton Gloves

These well tailored, high quality gloves are made from 100% cotton. They offer softness and comfort. A perfect choice for handling photographs.

Cat. #	Size	Qty.
71118-01	Small	6prs/pk
71118-03	Medium	6prs/pk
71118-05	Large	6prs/pk

► Gloves; Lint Free, Clean-room

Finest quality, stretch nylon, one size fits all.

Cat. #	Size	Qty.
71090	Mens	6 pair/pk
71092	Womens	6 pair/pk

► Lightweight Cotton Inspector Gloves

These gloves are un-hemmed and lint-free. They are tailored cotton gloves which are ideal for inspection jobs. These gloves are available in one-size fits all for either men or women.

Cat. #	Size	Qty.
71119-01	Women	12/pk
71119-05	Men	12/pk

► Gloves; Latex Exam Gloves With Aloe Vera and Vitamin E

Made from 100% natural latex with the addition of Aloe Vera and Vitamin E, offering the softness, tactile sensitivity and skin protection. Economical ambidextrous style, beaded cuff, and are chemically resistant to acids, alcohols, ketones and alkalis. Packed in a convenient dispenser box, 100/box. Non-sterile. Available either with powdered (biologically cornstarch dusting, ~ 2mg/glove) or powder-free gloves.

Latex Powder Free

► Nitrile Exam Textured Gloves

Powder-Free Green Gloves with Aloe Vera

Made from 100% synthetic nitrile, contains no latex. It is an extremely tough glove yet gentle on the hand. It offers superior textile strength and they are puncture resistant when compared to other similar thickness of latex or vinyl gloves. There are no natural rubber protein allergens as is present in natural latex rubber gloves. With the addition of Aloe Vera, the powder-free gloves will provide the user with superior comfort, excellent flexibility and dexterity. Textured gloves provide a positive grip on wet and or dry surfaces. The nitrile compound provides a broad range of hand protection against accidental chemical splashes.

➤ Cut-Resistant Gloves; Safeknit™

The comfortable choice when choosing a high performance cut resistant glove. Safeknit is a blend of abrasion-resistant Spectra® fiber and other synthetics. The mix of these fibers form a rugged cut resistant barrier that offers the histologist sensitivity for manipulation but with extreme comfort and productivity.

NOTE: These gloves are neither puncture proof nor water resistant. They should not be used to protect against intentional cutting. Avoid use near moving blades. For applications which are related to fluids where a water resistant glove is required, we recommend either double gloving or using Nitrile Gloves, (Cat # 71106-71109 or 71068.)

▶ Ultra Brush

The ULTRA BRUSH is totally different than standard camel hairbrushes. Its unique fibers are ultra-soft for clean-ing the delicate surfaces of camera lenses, binoculars, telescopes and other fine optics. The ULTRA BRUSH fully retracts within the base to completely protect the brush ends. Guaranteed to be the softest lipstick style brush you can buy.

60611 Ultra Brush each

▶ Cloth; Lint Free, Twill Jean

For a complete description, see page 245. <<<<<

71750 Lint Free Cloth 9"X 9" 100/pk
71752 Lint Free Cloth 9"X 9" 300/pk
71753 Lint Free Cloth 12"X 12" 150/pk

▶ C3E Wipes

These wipes are made from 100% synthetic fiber and spunlaced to provide excellent sorptive capacity. These durable wipes are exceptionally clean and have excellent chemical resistance, making them ideal for use with solvents. Recommended for use in ISO Class 5 Cleanroom applications.

Features:

- Soft and non-abrasive; excellent for cleaning delicate optical surfaces such as lenses and mirrors.
- Low particle generation. Ideal for cleaning parts that are sensitive to particle contamination.
- Highly absorbent; excellent solvent carrier.
- Economical.

71762 C3E Wipes 9"X9" 300/pk
71764 C3E Wipes 12"X12" 150/pk

▶ Dust-Off®/Luminex™; Microfiber Cleaning Cloth

For superior cleaning of delicate surfaces. Based on advanced microfiber technology, the Dust-Off/Luminex Microfiber Cleaning Cloth is a superior cleaning product. It actually gets under dirt and oily films and lifts them away, leaving the surface clean, polished and lint free. Ideal for: Camera, Lenses/Filters, Microscopes, Computer, Eyeglasses, Plastic, Metal. Any smooth surface...

UNSURPASSED FEATURES:

- Environmentally responsible - Lifts away oily film and dirt with no chemicals.
 - Will not streak or smear surfaces.
 - Non-abrasive and 100% lint-free.
 - Reusable - Machine or hand washable - Long lasting.
- Size: 7½"x7½" (19x19cm).

71716-01 Luminex Cleaning Cloth each
71716-12 Luminex Cleaning Cloth 12/pk

▶ Kimwipes Push-Up Box

This holder is a molded one-piece, hard plastic with a center island. Once the Kimwipes box is placed inside of this holder, Kimwipes will maintain in an up position until the last one is pulled out. Very handy for laboratory work bench, desk top or any work place.

Ordering

Cat. #	Description	Qty.
71603-01	Kimwipes Push-Up Box	Each
71603-02	Kimwipes Push-Up Box	2/pk.

▶ Cheese Cloth

Cotton woven cloth in the pattern of 44x36 (44 lines/inch horizontally and 36 lines/inch vertically) which makes it suitable for cleaning and polishing. Supplied in 60 yard rolls (continuous) 36" in width; This configuration allows you to cut out the exact length you desire.

71748-00 Cheese Cloth Box

▶ Tough-Wipes™

Solvent Moistened Cleaning Pads

Powerful - Proprietary solvent solution easily removes markings and adhesive residue

Skin Safe - Solvent soaked pads are gentle to your skin

Convenient - Reclosable container ensures pads stay moist

Cat. No. 72611-50 Description Tough-Wipes Unit 50/bottle

▶ Towel; Disposable

Large size towel: 13.3"x23" they are suitable for a number of uses around the lab. High absorbency and they are strong even when wet.

72610 Towel 45/bx

► **Low Lint Wipes; Tissues**

A. All purpose wipes.

Soft, highly absorbent, non-abrasive, and economic. 300, 5"x8" wipes in each dispenser box.

71620	All Purpose Wipes	1 dozen/lot
71630	All Purpose Wipes	5 dozen/case

► **B. Kimwipes**

Same characteristics as above wipes. 280, 4 1/2"x8 1/2" wipes in each dispenser box.

71600	Kimwipes	1 dozen/lot
71601	Kimwipes	5 dozen/case

► **C. Kimwipes**

Same characteristics as above Kimwipes. Larger size for bigger applications. 140, 15" x 17" wipes in each dispenser box.

71604	Large Kimwipes	5bxs/lot
71605	Large Kimwipes	15bxs/case

► **D. Wipes Holder**

Clear plastic; holds the standard size wipes box. (Cat. #71600 or #71620). It can be mounted by a backing adhesive or by two screws. Measures 4 3/4"(L)x5"(W)x3"(H).

71602	Wipes Holder	each
-------	--------------	------

► **Micro Fiber Cleaning Cloth**

Chemical free. Safely and easily removes fingerprints and smudges from all glass and plastic lenses. The advanced technology of the Micro Fiber Cleaning Cloth makes it ideal for cleaning any high gloss surface such as:

- Camera Lenses
- Scopes & Binoculars
- Eye Glasses
- Jewelry
- Photographs
- Scanners
- Computers
- Copy Machines
- TV Screens
- Mirrors & Chrome
- Compact & Laser Discs
- Musical Instruments

Care of the Cloth: Machine or hand wash and dry. The unique properties will not change. May be ironed with cool iron, if desired.

Cat. #	Description	Pack
71717-01	Micro Fiber Cleaning Cloth	each
71717-12	Micro Fiber Cleaning Cloth	12/pk.

► **Disposable Bibulous Paper**

- Highly absorbent white fiber paper
- Lint and dust free
- Recommended for drying microscope slides and other small lab glass items
- Size: 4 x 6

70086-01	Disposable Bibulous Paper Book, each	50/pk.
70086-10	Disposable Bibulous Paper Book, 10 each	50/pk.

► **Thirsty Stix**

Sterile - Disposable - Absorbent filter paper sticks- great for absorbing, leaning, and lubricating.

- Highly absorbent
- Adhesive, residue free
- Extremely low lint content
- Ideally to be used with the microtome to remove excess water from the boat
- Multiple uses
- Excellent to remove excess water or solution from tubes and plates
- Size: 6" long x 0.20" thick

70996	Thirsty Stix	250/pk
-------	--------------	--------

► **Opto-Wipes™; Precision Lens Cleaning Wipes**

A strong hydro-entangled mixture of polyester and cellulose fiber; designed for clean room environments. This special material offers softness, is lint-free, and traps particles and residue quite easily.

FEATURES:

- Soft: Super-soft fibers prevent the scratching of precision surfaces.
- Durable: Strong fiber matrix maintains integrity when wet.
- Highly Absorbent: Retains and withstands solvents such as MEK, methylene chloride, acetone, and alcohol.
- Efficient: Particle trapping matrix lifts particles and residue away from the surface. They are washable and reusable.

71755-01	Opto-Wipes, Size 4"x4"	200/pk
71755-02	Opto-Wipes, Size 6"x6"	150/pk
71755-03	Opto-Wipes, Size 6"x12"	100/pk
71755-04	Opto-Wipes, Size 12"x12"	100/pk

► **Lens Tissue – EMS (Ross)**

EMS (Ross) Lens tissue does not lint or scratch and it is free from mineral or vegetable filler.

71700	Lens Tissue, 4 1/2" x 5"	1000 sheets/box
-------	--------------------------	-----------------

► **EMS Lens Tissue**

EMS Lens Tissue is the world's finest optical tissue. It's extremely soft and virtually lint-free. Safe for any optical surface such as camera lenses, microscopes, tele-scopes, and eye-glasses. Each tissue is perforated for easy removal from the booklet. Tissue size: 4"x6", 50 sheets/bk

71712-01	EMS Booklet Lens Tissue	50/bk
71712-10	EMS Booklet Lens Tissue	10 bk/lot

► EMS ROR (Residual Oil Remover)

EMS is proud to introduce the ROR-It is not a lens cleaner in the usual sense-it goes far beyond what a routine cleaner does. ROR is specifically designed to emulsify and remove microscopic oil residues- a by product of environmental pollution –from the surface and pores of glass and plastic.

When you clean an optical surface with ROR you will observe a measurable difference in brightness and clarity. For the first time, you will experience pollution free, unimpeded vision. Because ROR removes microscopic oil residues, dust has nothing to adhere to allowing the surface to remain cleaner longer.

ROR is safe and versatile for all delicate surfaces. It has been tested and used on everything from multicoated lenses to beryllium surfaced contacts and has proven time and again to be the finest and safest optical cleaning treatment on the market today.

Invented 25 years ago with professional and amateur photographers in mind, ROR is used today by the military, NASA, astronomers, scientists, hospitals, laboratories and universities.

Protect your investment through regular ROR cleaning and maintenance and your equipment will endure and perform excellently for years to come.

The cleanser is available in either a Dropper bottle or a Pump style bottle

Instructions for Use:

The most likely source of damage to glass surfaces and sensitive optical coatings is abrasion caused by rubbing the fine particles that are resting on the surface. Never “dry clean” a lens because that will guarantee scratching and abrading of the coating.

ROR recommends:

- Use a can of compressed air or a camel hair blower brush to remove any particles that may be resting on the surface.
- Place a few drops or spray a little ROR on the surface, let the solution settle for a few moments then wipe gently with a lens cleaning cloth or tissue making sure that you use as much of the clean area of cloth or tissue, each time you wipe. If you are working on a small surface, squeeze a few drops or spray some ROR onto the applicator that you are using and commence the cleaning as described above.
- Apply enough pressure to effectively clean the optical surface.
- Use a clean cloth or tissue to do a final wipe of the surface, again using sufficient pressure for each additional motion.
- Use a professional task wiper to apply and remove ROR with. These soft, chemical free, non abrasive tissues offer great absorbency and streak free cleaning on sensitive surfaces. If you have to use a generic variety of tissues, make sure it is untreated.
- Untreated micro-fiber cloths also work well as long as you wash them frequently and keep them dust free in a pouch or container. Be sure to check the make-up of your micro-fiber cloth before using with ROR. Treated micro fiber cloths can integrate poorly with ROR, leaving a residue on the surface. We recommend you wash and dry the cloth before proceeding with your application.

Applications:

ROR has many uses for your business, home and hobbies.

It is one of the most versatile cleaning agents available. We are constantly amazed to hear from our customers about yet another use for our product. Just recently we were contacted by a church pipe organ technician who told us that nothing cleans keyboards and organ parts better than ROR! The list goes on and on.

the small, accurate, fast, low-cost cleaving solution, suitable for any lab.

For more information, see pages 432-435. >>>>

► **Mini-Cleaner Vacuum System**

A powerful, lightweight, and compact cleaning system. Instead of blowing dust around with a freon duster, this high performance vacuum collects dust efficiently and removes it from delicate areas. The mini-cleaner comes with a crevice tool, 2 dusting brushes and 2 filters, weighs 8 oz. and provides 115 volts of cleaning power.

71910	Vacuum Kit	each
71912	Additional Filters	5/pk

► **Label And Adhesive Remover**

The first label and adhesive remover to really work. To use, gently rub the label, wipe away the excess material from the surface, wait for 30 seconds then simply peel off the label, leaving a clean surface.

71827-01	Label and Adhesive Remover	each
71827-06	Label and Adhesive Remover	6/pk

► **Plastisolve; Methylene Chloride**

Good for removing cured or uncured epoxy resins.

19600	Plastisolve	1 qt
19610	Plastisolve	4x1 qt

► **Wenol Metal Polish**

A metal polishing compound used to clean all metal surfaces.

Ingredients			
Turpentine	11%	Ammonium oxide	27%
Kerosene	11%	Fatty Acid Diethanolamide	1%
Ammonium Oleate	13%	Glycine	< 1%
71832	Wenol Polish		100ml

► **Metal Polish; Pinky**

Contains no silicone. Good for cleaning EM parts. A pink paste. Grit Distribution: Particles over 45µm diam = 0-5%; 45-10µm diam = 20-40%; 10-1.6µm diam = 10-30%; under 1.6µm diam = 40-60%.
 • Vook, R.W., Kothari, R. (1992). Wear, 157, 65-79.

71830	Metal Polish; Pinky	200g
-------	---------------------	------

► **PEEK Polish**

EMS is proud to introduce PEEK a complete new line of cleaning materials that not only cleans but polishes and protects all metals as well as fiberglass surfaces as well. It is available in 5 different packaging configurations.

71833-10	PEEK Polish 100 ml Tube Blister Pack	each
71833-11	PEEK Polish 100 ml Tube Display Box	each
71833-12	PEEK Polish 250 ml Can	each
71833-13	PEEK Polish 1000 ml Can	each
71833-14	PEEK Polish 150 g Mousse (Foam)	each

► **EMS Bell Jar Shine**

This unique cleaning compound will not only clean but it polishes as well. Meant to be used on any surface which is either glass, metal, porcelain, ceramic and even chrome surfaces. Perfect for the cleaning of your bell jars from your Carbon and Sputter Coaters, as well as any surfaces in the lab that are metal, ceramic, steel etc.

Comes in a 1 lb container.

60540-01	EMS Bell Jar Shine	each
----------	--------------------	------

▶ PTFE Surface Protectors

A thickness of 0.001" PTFE film bonded to 0.008" self-adhesive vinyl. It protects your work surface area and it is sanitary and attractive. Easy to use: cut to desired size, remove the backing and press into place.

72612 TSP size 25"x15ft roll each

▶ Silver Bioguard Anti-Microbial Mats Neutralize & Protect

— Nanoscale Silver particles bind with proteins to neutralize 99.9% of common microbes

Better Results —

Ensure consistent sample reproduction and results by significantly minimizing workspace contamination

Reliable — Silver is used extensively in medical applications where microbial contamination is a concern

Use Anywhere — Mats are less than 1mm thick and are backed with an anti-skid coating making them perfect for the benchtop or culture hood

Cat. #	Description	Qty.
77519-1	Silver Bioguard Mat, 10" x 8"	each
77519-2	Silver Bioguard Mat, 15" x 10"	each
77519-3	Silver Bioguard Mat, 24" x 20"	each
77519-4	Silver Bioguard Mat, 30" x 22"	each

▶ Wood Applicators

Designed for specimen transfer, as mixing rods, or general laboratory applicators.

72300	Wood Applicator, 6"x $\frac{1}{2}$ "	1000/bx
72303	Wood Applicator, 12"x $\frac{1}{4}$ "	500/bx

▶ Wooden Sticks; Tongue Depressors

These sticks are made from close-grained northern white birch because of its ability to provide a smooth and polished surface. Used for mixing, stirring, or scraping.

72322	Wooden Sticks, 4 $\frac{1}{2}$ "x $\frac{3}{8}$ "	1000/bx
72320	Wooden Sticks, 5 $\frac{1}{2}$ "x $\frac{5}{8}$ "	500/bx

▶ Wooden Picks

They are round and double tapered; used for cleaning pole pieces and parts of the EM. Also used for orienting the specimen during the embedding stage.

72340 Wooden Picks 100/bx

▶ Cotton Tipped Applicator; Single End

A lint-free, cotton-tipped applicator 6" in length, $\frac{1}{2}$ " in diameter on a wooden shaft. Head size is $\frac{3}{16}$ "(d) x $\frac{5}{8}$ "(L). Suitable for cleaning delicate parts.

72310	Cotton Tipped Applicator, Single End	100/pk
72310-10	Cotton Tipped Applicator, Single End	10 pk/lot

▶ Cotton Tipped Applicator; Double End

A lint-free, 6" double cotton tipped applicator with one pointed end and one regular end on a 1/12" wooden shaft. The pointed head size is $\frac{3}{16}$ "(d) tapering to $\frac{1}{32}$ "(d) x $\frac{3}{8}$ "(L). Regular head size $\frac{3}{16}$ "(d) x $\frac{3}{8}$ "(L). Packed 100 sticks in a sealed bag.

72308	Cotton Tipped Applicator, Double End	100/pk
72308-05	Cotton Tipped Applicator, Double End	5 bx/lot

▶ Foam Tipped Applicator; Foam Swabs

These foam tipped applicators are lint free, non-abrasive, and sized for precision cleaning with solvents. (Freon, Trichloro-ethane, Isopropyl Alcohol, and Acetone). The head is made from 100% urethane foam with 100 PPI porosity. Tips are shred resistant and bonded securely to the shaft.

▶ **72312** is round, foam-tip over regular-cotton tip on a 6" long wooden shaft. Head size: $\frac{3}{8}$ "(d) x $\frac{1}{16}$ "(L). Packed 50 sticks in a sealed bag.

72312	Round Foam Tipped Applicator	50/pk
--------------	------------------------------	-------

▶ **72314** is rectangular, foam-tip on a 5" polypropylene shaft. Head size: $\frac{1}{16}$ "(d) x 1"(L). Packed 50 sticks in a sealed bag.

72314	Rectangular Foam Tipped Applicator	50/pk
--------------	------------------------------------	-------

▶ **72316** is an anti-static foam-tip over cotton tip on a 6" wooden shaft. Head size: $\frac{3}{8}$ "(d) x $\frac{1}{16}$ "(L). Packed 50 sticks in a sealed bag.

72316	Anti-Static Foam Tipped Applicator	50/pk

Vacuum Pumps, Accessories, & Evaporation Supplies

Vacuum Pumps

Metal Wire, Foils, Baskets, and Boats

Carbon and Graphite for Evaporation

Sputter Coater Targets

**Electron
Microscopy
Sciences**

► Edwards E2M1.5 Vacuum Pump

This miniature two stage pump features an alternative inlet connection position at the side of the pump so that overall installation height can be reduced to a minimum when required.

- 1.3 cfm (190L/min) displacement
- Ultimate vacuum (without gas ballast): 1.1x10⁻³ torr.
- Max. inlet pressure for water vapor: 11.3 torr
- Max. water vapor pumping rate: 0.035 lb/hr
- Oil capacity Max/Min: 0.28L/0.2L

Ultra Grade 19 oil is recommended for use with the E2M1.

Weight: 50 lbs (22kg)

Cat. #	Description	Qty.
91004	Vacuum Pump E2M1.5	each
91004-E	Vacuum Pump E2M1.5, 220 volts	each

► Edwards RV3 Vacuum Pump

Rotary Vacuum Pump, Double Stage

- Speed - (Pneurop 6602)
- 50 Hz operation - 2 ft 3min-1 (3.3 m3h-1)
- 60 Hz operation - 2.3 ft 3min-1 (3.9 m3h-1)
- Ultimate Vacuum (Total Pressure) - High Vacuum Mode - 2 x 10⁻³ mbar
- Inlet connection - NW25

In high vacuum mode it is ideal for backing turbo pumps, analytical instruments, and electron microscopes. Configurable for high throughput mode. Ultra Grade 19 oil is recommended for use with the RV3.

Cat. #	Description	Qty.
91003	Vacuum Pump RV3	each
91003-E	Vacuum Pump RV3, 220 volts	each

► Edwards RV5 Vacuum Pump

Rotary vacuum pump; Double stage.

- 4.1 cfm (117L/min) displacement
- Ultimate vacuum (without gas ballast) 1.5x10⁻³ torr.
- Max. inlet pressure for water vapor: 38 torr
- Max. water vapor pumping rate: 0.48 lb/h
- Motor: 1/2 hp
- Oil capacity Max/Min 0.7L/0.42L

Ultra Grade 19 oil is recommended for use with the RV5.

Weight 43 lbs. (19.6 kg)

Cat. #	Description	Qty.
91005	Vacuum Pump RV5	each
91005-E	Vacuum Pump RV5, 220volts	each

► Edwards RV8 Vacuum Pump

Rotary vacuum pump; Double stage.

- 6.9 cfm (195 L/min) displacement
- Ultimate vacuum (without gas ballast) 1.5x10⁻³ torr.
- Max. inlet water pressure vapor: 29 torr
- Max. water vapor pumping rate: .48 lb/h
- Motor: 3/4 hp
- Oil capacity Max/Min 0.75L/0.43

Ultra Grade 19 oil is recommended for use with the RV8.

Weight 50 lbs (24 kg)

Cat. #	Description	Qty.
91025	Vacuum Pump RV8	each
91025-E	Vacuum Pump RV8, 220 volts	each

➤ Vacuum Pump Exhaust Filters

Vacuum Pump Exhaust Filters for Vacuum Rotary Vane Pumps remove all visible oil mist and smoke from vacuum pump exhaust, even when it is saturated with oil. The high efficiency filter cartridge continuously drains the collected liquid, allowing the user to recover expensive lubricating fluid. Filters are for pumps with flow ratings ranging of 3 cfm and non-hazardous/non-corrosive applications. Port size is 1/2" NPT.

Features

- Eliminate 99% oil mist and smoke from vacuum pump exhaust
- Prevent oil accumulation in ductwork
- Recover expensive lubricating oils, and automatically return filtered oil to pump
- Eliminate potential OSHA and EPA violations
- The filter assemblies are shipped with filter cartridges, pressure gage (20 cfm and larger), and final filter pad.

Specifications

Maximum Flow Rate: 3 CFM
Material: Nylon
Maximum Seals: None
Maximum Temperature: 250°F (121°C)

Shipping Pressure: 15PSIG
Dimensions: 2" Dia. x 3.7" H
Weight: .25lbs (0.1kg)
Port Size: 1/2" NPT

Cat. #	Description	Qty.
96000	Vacuum Pump Exhaust Filter including adapter (1/2" female NPT to 3/4" BSPT with 1/4" NPT plug)	each
96001	Vacuum Pump Exhaust Filter, no adapter	each

➤ Foreline Traps

These rechargeable in-line traps effectively block oil back-streaming from mechanical pumps. Any mechanically pumped system, even one with a turbo pump, should have a foreline trap. The trap is placed in the foreline between the roughing pump and the diffusion or turbo pump. It uses a disposable, oxygen-free copper maze absorbent which requires no liquid nitrogen and will not hold water. Typically the maze is replaced every 1-2 years. The seamless body is available in aluminum.

- Quick change clamp for replacement of maze
- Viton "O" ring end cap
- Recessed screen
- Available in five pipe diameters
- Replacement elements (Copper Maze) also available

Catalog Number	Pipe Diameter	Body* Material	Pump Capacity	Body Diameter
91050-10	1/2"	Aluminum	5 CFM	2 1/2"
91050-15	3/4"	Aluminum	5 CFM	2 1/2"
91050-20	1"	Aluminum	10 CFM	3"
91050-25	1 1/2"	Aluminum	10 CFM	3"
91050-30	1 3/4"	Aluminum	15 CFM	4"

* Available in stainless steel upon special request.

➤ Ultra Grade 19 Oil

Edwards Ultra Grade 19 Oil is specially recommended for use in clean pumping applications. The oil offers reduced maintenance costs, longer fluid life, and cooler running pumps.

60740	Edwards Ultra Grade 19 Oil	1 L
60742	Edwards Ultra Grade 19 Oil	4 L

➤ EMF Oil Mist Filters

We are pleased to offer not only the vacuum pumps but also the oil mist filters to help you deal with exhaust mist from the pump which sticks to any surface that it touches and becomes a dust magnet.

Mist filters capture oil mist from the outlet of pumps, which would otherwise be ejected into the atmosphere. This may happen when you use gas ballast or when you pump high gas throughputs. You can also return oil trapped in the mist filter back to the pump, although you must ensure that the process gases will not contaminate the pump or pump oil.

For the E2M1.5 use the EMF3. For the RV3, RV5, and RV8 use the EMF 10.

EMF3

Features

- Protection from oil mist emissions as required by COSHH and health and safety regulations
- Use of optional oil return kits results in reduced oil level maintenance and savings in pump oil
- If the oil element becomes blocked, an integral pressure relief valve opens

EMF 10

The EMF10 mist filter is suitable for use with RV3, RV5 and RV8 pumps. They are very efficient at 99.999% DOP test and are also azide proof. The white bottom half of the body is semi-transparent, allowing the oil level to be monitored. The EMF filters have a unique odor element which neutralizes the smell of oil mist.

Supplied with NW25 clamp, centering ring and 'O' ring, NW25 to 3/4 inch BSP adaptor

Features

- Protection from oil mist emissions as required by COSHH and health and safety regulations
- Use of optional oil return kits results in reduced oil level maintenance and savings in pump oil
- If the oil element becomes blocked, an integral pressure relief valve opens

91004-OMF	EMF3 Oil Mist Filter	each
91004-RMO	EMF3 Replacement Mist Element	each
91004-ROM	EMF3 Replacement Odor Element	each
91005-OMF	EMF 10 Oil Mist Filter	each
91005-RMO	EMF 10 Replacement Mist Element	each
91005-ROM	EMF 10 Replacement Odor Element	each

➤ Vacuum Monitor

This vacuum monitor allows you to monitor the vacuum level in the foreline between the roughing pump and the diffusion (or turbo) pump. A high value would indicate a leak in the system or possibly an inefficient roughing pump. Comprised of a thermocouple gauge control module and cable. The unit can mount directly to the Foreline Trap via a thermocouple (TC) port supplied at no charge when ordered with a Foreline Trap. The 3-station version of the Vacuum Monitor allows the vacuum levels of several pumps to be measured.

91052-01	Vacuum Monitor	each
----------	----------------	------

► Tungsten Metal Wire and Boats

Tungsten has the highest melting point and lowest vapor pressure of all metals, and at the temperatures over 1650°C has the highest tensile strength. It has excellent corrosion resistance and is attacked only slightly by most mineral acids.

Tungsten is the most useful material used in vacuum evaporation technique, due to its special properties and cost factor.

► 1. Tungsten Wire

We are offering tungsten wire in 99.90% purity. Available in 0.025" (.64mm), 0.02" (.51mm), and 0.009" (0.23mm) diameters.

73800	Tungsten Wire, 0.020" (0.51mm) Diameter	20 ft
73801	Tungsten Wire, 0.020" (0.51mm) Diameter	100 ft
73802	Tungsten Wire, 0.025" (0.64mm) Diameter	20ft
73803	Tungsten Wire, 0.025" (0.64mm) Diameter	100ft
73804	Tungsten Wire, 0.009" (0.25mm) Diameter	20ft
73805	Tungsten Wire, 0.009" (0.25mm) Diameter	100ft

► 2. Tungsten Wire Baskets

Clean, vacuum grade, tungsten wire.

Basket Type	Turns	I.D. mm	Height mm	Wire Lead cm	Wire Dia. inches
A	9	4	7	3.5	0.020
C	8	7	9	5.0	0.020
D	8	9	14	4.0	0.030

73830	Tungsten Wire basket A	50/pack
73832	Tungsten Wire basket C	50/pack
73834	Tungsten Wire basket D	50/pack

► 3. Tungsten Wire Filaments

V-Shaped Filaments

High purity, vacuum grade tungsten wire 0.02" (0.50mm) diameter, V-shaped filaments 1/2" (12.7mm) deep, with a bottom angle of 45°, either single wire or triple strand.

Cat. #	Overall Length	No. Strand	V-Opening	Qty
73840	3" (76.2mm)	Single	3/4" (19mm)	10/pk
73842	3" (76.2mm)	Triple	5/8" (16mm)	10/pk
73844	3 1/2" (88.9mm)	Triple	3/4" (19mm)	10/pk

Coiled Filaments

Single or 3-strand coiled tungsten filaments, 0.5mm (0.002") diameter wires.

Cat.#	Description	Qty
73938-1	4" long Horizontal Helix, Coil length 45mm (1 3/4") with 6 turns, 6.3mm(1/4") diameter coil. Single strand	5/pk
73938-3	4" long Horizontal Helix, Coil length 45mm (1 3/4") with 6 turns, 6.3mm(1/4") diameter coil. Triple strand	5/pk
73939-1	5" long Horizontal Helix, Coil length 51mm (2") with 12 turns, 9.5mm(3/8") diameter coil. Triple strand	5/pk

Properties of Tungsten

Chemical symbol:	W	Number of Electron (with no charge):	74
Atomic Radius:	2.02Å	Number of Neutrons (most common/stable nuclide):	110
Atomic Volume, cm³/mol:	9.53	Ionic Radius:	0.62Å
Covalent Radius:	1.3 Å	Gross Section:	18.5 barns ± 0.5
Crystal Structure:	Body centered cube		
Atomic Number of Protons:	74		

► Tungsten Foil Boats

Tungsten Boat B1:

Thickness of tungsten foil is 0.05mm (0.002"), overall length is 32mm (1 1/4").

The trough: 12.7mm(L) x 9.5mm(W) x 3.2mm Deep (1/2" x 3/8" x 1/8")

Cat.#	Description	Qty
73816	Tungsten Boat B1	5/pk

Tungsten Boat B2:

Thickness of tungsten foil is 0.25mm (0.010"). The overall length is 101.6mm x 19.05mm (4" x 3/4").

Trough: 39.37mm (L) x 2.79mm Deep, 0.92 ml

Cat.#	Description	Qty
73816-B2	Tungsten Boat B2	5/pk

Tungsten Boat B3:

Thickness of tungsten foil is 0.25mm (0.010"). The overall length is 101.6mm x 19.05mm (4" x 3/4").

Trough: 39.1mm(L) x 6.35mm(W) x 3.3mm Deep, 0.5ml

Cat.#	Description	Qty
73816-B3	Tungsten Boat B3	5/pk

Tungsten Boat B4:

Thickness of tungsten foil is 0.25mm (0.010") The overall length is 100.5mm x 19.05mm (3 1/2" x 3/4").

Trough: 28.19mm(L) x 15.87(W) x 3.3mm Deep, 0.99ml

Cat.#	Description	Qty
73816-B4	Tungsten Boat B4	5/pk

► Tungsten Foil Boats (continued)

Tungsten Boat B5:

Thickness of tungsten foil is 0.25mm (0.010"). The overall length is 101.6mm x 12.7mm (4" x 1/2").

Trough: 9.65mm Diameter x 3.81mm Deep, 0.18ml

Cat.#	Description	Qty
73816-B5	Tungsten Boat B5	5/pk

Tungsten Boat B6:

Thickness of tungsten foil is 0.25mm (0.010"). The overall length is 101.6mm x 39.1mm(L) (4" x 1 1/2")

Trough: 39.1mm(L) x 12mm(W) x 3.55mm Deep, 1.0ml

Cat.#	Description	Qty
73816-B6	Tungsten Boat B6	5/pk

Tungsten Boat B7:

Thickness of tungsten foil is 0.25mm (0.010"). The overall length is 101.6mm x 25.4mm(L) (4" x 1")

Trough: 53.84mm(L)x25mm(W) x2.28mm Deep, 2.43ml

Cat.#	Description	Qty
73816-B7	Tungsten Boat B7	5/pk

► Metal Foils

For aperture cleaning, vacuum evaporation.

Cat.#	Description	Qty
73820	Molybdenum Foil 0.002"(0.05mm) thick; size 6x6" (15.2x15.2cm)	each
73822	Tantalum Foil 0.003" (0.075mm) thick; size 6x6"(15.2x15.2cm)	each

► Pyrolytic Graphite Foil Boat

Boat dimensions:

Thickness of pyrolytic graphite foil is 0.20 mm (0.020") Overall length is 32mm (1.25") and width is 9.6mm (0.375")

Trough Dimension:

12.7 mm (L) x 9.0 mm (W) x 3.2 mm (D) (0.5 x 0.355 x 0.03")

Cat.#	Description	Qty
73808-B1	Pyrolytic Graphite Boat B1	each

For more technical information about Pyrolytic Graphite, see page 625 >>>>>

► Heavy Duty Wire Bending Pliers

These extra heavy-duty pliers are used for bending any metal wire at a 'V' shaped angle, allowing for the formation of filaments in accordance to your specification.

Cat.#	Description	Qty
62185	Wire Bending Pliers, 6 1/2" (165mm) Long	each

► Metal Boats

For disc aperture cleaning, vacuum evaporation. Thickness: 0.05mm (0.002"). Overall Length: 75mm (3"). Trough measures: 12mm (1/2") long x 5mm (3/16") wide x 1mm deep.

Cat.#	Description	Qty
73810	Molybdenum Boat	5/pack
73812	Platinum Boat	1/pack
73814	Tantalum boat	5/pack

► Precious Metal Wires

High purity, vacuum grade. These metal wires are suitable for scanning and electron microscopy techniques.

Aluminum Wire: Purity: 99.99%

73000	Aluminum Wire, Diameter: 0.010"(0.25mm)	10 ft
73001	Aluminum Wire, Diameter: 0.010"(0.25mm)	50 ft

Gold Wire: Purity: 99.99%

73100	Gold Wire, Diameter: 0.008"(0.20mm)	10 ft
73101	Gold Wire, Diameter: 0.008"(0.20mm)	50 ft

Molybdenum Wire: Purity: 99.95%

73200	Molybdenum Wire, Diameter: 0.008"(0.20mm)	10 ft
73201	Molybdenum Wire, Diameter: 0.008"(0.20mm)	50 ft

Palladium Wire: Purity: 99.90%

73300	Palladium Wire, Diameter: 0.008"(0.20mm)	10 ft
73301	Palladium Wire, Diameter: 0.008"(0.20mm)	50 ft

Palladium/Gold 40:60, Purity: 99.90%

73400	Palladium/Gold wire, Diameter: 0.008"(0.20mm)	10 ft
73401	Palladium/Gold wire, Diameter: 0.008"(0.20mm)	50 ft

Platinum Wire, Purity: 99.95%

73500	Platinum Wire, Diameter: 0.008"(0.20mm)	10 ft
73501	Platinum Wire, Diameter: 0.008"(0.20mm)	50 ft

Platinum/Palladium, 80:20. Purity 99.95%

73600	Platinum/Palladium, Diameter: 0.008"(0.2mm)	10 ft
73601	Platinum/Palladium, Diameter: 0.008"(0.2mm)	50 ft

Silver Wire, Purity: 99.99%

73700	Silver wire, Diameter: 0.008"(0.2mm)	10 ft
73701	Silver wire, Diameter: 0.008"(0.2mm)	50 ft

Tungsten Wire, Purity: 99.90%

73800	Tungsten wire, Diameter: 0.02" (0.51mm)	10 ft
73801	Tungsten wire, Diameter: 0.02" (0.51mm)	100 ft

► Carbon Rods/Graphite Rods

Graphite is the stable form of carbon. Graphite is one of the softest; diamond is one of the hardest minerals known to man. Carbon is harder than graphite. For TEM and SEM applications, graphite is recommended.

Carbon /graphite films are most usable in TEM and SEM due to its value characteristics: uniformity amorphous and high transparent to electron beams. Because of low molecular weight and their unique structure (graphite have a sheet like structure, where the atoms all lie in a plane), carbon/graphite films have excellent mechanical stability, and even film thickness is about 1 – 2 nm.

Our carbon/graphite rods are CVP™ (Chemical Vapor Process) purity and spectrographic grade, grade 1, produced to ASTM tolerances or even tighter as well we have a technical grade. The technical grade has a typical impurity level of 50ppm or greater. Technical grade may be used in applications of non critical SEM coating applications.

► A. Carbon Rods: Spectro-Grade

Carbon Rods (graphite) with an impurity level of 2ppm or less with a maximum level element of each of 1 ppm. These rods are ideal for all TEM, SEM and all other critical applications.

70200	Carbon Rods, Spectro Grade, 1/8"(3mm) x 12" (304mm)	12/pk
70231	Carbon Rods, Spectro-Grade, 3/16"(4.6mm) x 12" (304mm)	12/pk
70230	Carbon Rods, Spectro-Grade, 1/4"(6.2mm) x 12" (304mm)	12/pk

► B. Carbon Rods: Technical Grade

70301	Carbon Rods, Technical Grade, 1/8"(3mm) x 12" (304mm)	12/pk
70302	Carbon Rods, Technical Grade, 1/4"(6.2mm) x 12" (304mm)	12/pk

► C. Carbon Rods

70210	12" (304mm) L x 1/8" (3mm) Diameter	12/pk
70212	12" (304mm) L x 1/4" (6.2mm) Diameter	12/pk

► Pre-Sharpened and Pointed Carbon Rods

To make your work easier we invite you to order our pre-sharpened rods. All of our line of Pre Sharpened Carbon Rods are made from our Spectroscopically Pure Carbon (Graphite)

Single Point:

Rod Length: 2 3/4" (60.3mm)

Neck Length: 0.205" (5.2mm)

Neck Diameter: .045" (1.14 mm)

70220-01	Single Point Carbon Rods, 1/8" dia. x 2 3/4" L (3 x 60.3mm)	50/pack
70221-01	Single Point Carbon Rods, 1/4" dia. x 2 3/4" L (6.2 x 60.3mm)	50/pack

Double-Pointed Carbon Rods

70220-45	(1/8") dia. x 2 1/4" long (3.05 x 57.1mm) Tip: .039" dia. (1.0mm), neck type tips	10/pack
70220-50	(3/16") dia. x 2 1/2" long (4.6 x 63.5mm) Tip: .039" dia. (1.0mm), neck type tips	50/pack
70221-40	1/4" dia. x 2" long (6.4 x 50.8mm) Tip: .039" dia. (1.0mm), neck type tips	50/pack
70221-60	1/4" dia. x 1 1/2" long (6.4 x 38mm), Tip: .056" dia. (1.4mm), neck type tips	10/pack

Properties of Carbon

Symbol:	C	m. p. sublimes:	~3550°C
Atomic number:	6	Boiling point:	4200°C
Atomic weight:	12.0107	Evaporation Temp	2400°C
Group number:	:14	(at which a substance has a vapor pressure of 1.33 x 10 ⁻² mbar):	
Period number	2	Density:	1.85 g/cc
CAS I.D.:	7440-44-0	Shore Scleroscope	45
Block:	p-block	Hardness:	
Specific gravity :	2.2 g/cm ³	Resistivity Ohms-in:	4.0 x 10 ⁴
(graphite)		Ash Content	<2 ppm
Specific gravity:	3.51 g/cm ³	Flexural Strength:	8000 lb/in ²
(diamond)		Porosity:	16.5%
Specific gravity:	1.88 g/cm ³		
(amorphous)			

► Carbon Cord/Carbon Fiber

Sometimes referred to as 'braid', carbon fibre consists of eight separate strands of individual carbon fibre braided together. The fibre is manufactured so that, when cut, the ends resist unravelling. The fibre density is about 1.6g/m

Used With: Most carbon coaters where thick carbon cord is used

91047-1	Carbon Fibre Cord - high purity (1m)	each
91047-5	Carbon Fibre Cord - high purity (5m)	each

Convenient to use, giving thick coating using a single length. 1m length

91046-1	Carbon Fibre Cord - standard grade (1m)	each
91046-10	Carbon Fibre Cord - standard grade (10m)	each
91046-100	Carbon Fibre Cord - standard grade (100m)	each

Description: Convenient to use, giving thin to medium coating using a single strand or several lengths. 1m length

91045	Carbon Fibre - fine strands (1m)	each
91045-10	Carbon Fibre - fine strands (10m)	each
91045-100	Carbon Fibre - fine strands (100m)	each

➤ **Carbon Rod Sharpener**

Sharpens either 1/4 inch or 1/8th inch rods.

Simply insert the blunt carbon rod into the collet and push button on the side of housing. Rotate collet to produce 1 mm diameter tip in about three to four seconds.

To reduce the possibility of tip breakage, stop the motor before withdrawing the sharpened rod.

This sharpener produces straight sided tips. To make pencil form rods, use a regular pencil sharpener.

Cat. #	Description	Qty.
70305-10	Electric Carbon Rod Sharpener, 110V	each
70305-20	Electric Carbon Rod Sharpener, 220V	each

➤ **Hand Tool For Creating Two Step Carbon Rods.**

Comes complete with brass adjustment tool.

Cat. #	Description	Qty.
70305-40	Two Step Carbon Rod Sharpener, for 1/4" rods	each
70305-45	Replacement Blades for, for 1/4" rods	each

➤ **Manual Carbon Rod Sharpener**

Used to sharpen rods into 1 millimeter cylindrical tips

Cat. #	Description	Qty.
70305-60	Carbon Rod Sharpener (1/8" [3mm] rods)	each
70305-65	Carbon Rod Sharpener (1/4" [6.2mm] rods)	each
70305-70	Cutter Replacement for Carbon Rod Sharpener	each

➤ **Amberclens Foam Cleanser**

A multipurpose anti-static foaming cleaner. Ideal for general cleaning on a wide variety of Laboratory, industrial, aerospace and commercial equipment.

Removes tough, stubborn stains such as grease, grime, and dirt

Anti-static formulation, reduces the attraction of airborne dust

Cat. #	Description	Qty.
68551-13	Amberclens Foam Cleanser	400 ml

Safety Precautions in Electron Microscopy Laboratories

Chemicals

Treat all fixatives with respect, they will fix your tissue too.

Osmium Tetroxide

1. Handle ampoules with disposable gloves.
2. Use double bottles and seal with parafilm.
3. Open only in a fume hood, and well-ventilated room.
4. Do not hold your breath when using OsO₄. Your nose is a very sensitive detector of dangerous fumes.

Aldehydes

1. Handle in fume hood.
2. Acrolein-See Osmium precautions.

Buffers

Some buffers (e.g. Cacodylate and Veronal) contain toxic components, and must be handled with caution. Use gloves at all times.

Propylene Oxide

A very volatile solution. Must be opened and used at room temperature. Never heat, store cool.

Embedding Resins

Most embedding resins may cause dermatitis.

1. When preparing the mixtures and during embedding procedures, ALWAYS use disposable gloves.
2. Cover working areas with paper towel or diapers and wipe spills immediately with alcohol.
3. Do not use alcohol to remove resins from your skin, it increases penetration. Use soap & water.
4. Get medical attention for any suspicious skin rash.
5. Harden all waste resin before disposal, wrap discarded containers, beakers, vials, pipettes, etc. carefully.
6. Never pour any plastic containing solutions (e.g., propylene oxide-epon mixture) down the drain. They will harden.
7. Store in fume hood, until disposal, all hardened waste: RESINS, RESIN MIXTURE AND FILM MAKING SOLUTIONS (A coffee can or large bottle can be used).

Sharp Objects

Glass knives, razor blades and scalpel knives are still sharp after being used. Discard only in containers provided for that purpose, or well sealed, and labeled cardboard boxes, so cleaning personnel will not be injured.

Equipment

1. Most vacuum evaporators do not have a safety switch to turn off power before opening the bell jar. Follow the instructions on the equipment. Never observe metal evaporation without goggles. The intense brightness can burn your retina.
2. Critical Point Dryers are potentially lethal. Do not observe them in use unless you understand the danger.

Note: Never attempt to operate any equipment without prior instruction by other people in the lab or without reading the operation instructions carefully.

► Sputter Targets

EMS precious metal sputtering targets are made from high purity metals, starting 99.99% with most standard disc sizes, for use on most sputtering units from many manufacturers: Emitech, Emscope, Bio-Rad, Polaron, Edwards, Balzers, Plasma Sciences, Technics Hummers, Denton, Cressington, and much more.

Our targets comes in a standard thickness of 0.1mm (100µm). Other thickness, ranging from 0.05 to 6mm, are available upon request. Targets are available mounted or unmounted whichever you prefer. For mounting please always state the make and the model of the sputtering unit so we can tend to it for you. Targets in other materials such as Chromium, Iridium etc are available upon request. We also can manufacture targets with diameters from 4 mm to 304.8mm (12"). Call for pricing.

All other materials and sizes are available upon request for all other machines. The standard thickness for all targets is 0.1mm All other thicknesses are available on request The most commonly requested is 0.2, 0.3mm but all others can be made on special request

Computer Controlled Cell Deforming — Cell Stretcher

Cell Stretcher CS-10 Series

**Electron
Microscopy
Sciences**

► Cell Stretcher CS-10 Series

OVERVIEW:

Various different cell types in the body experience mechanical forces and the effect of cell stretch, compression or other mechanical stimuli has become a new and important scientific focus. Many devices have been developed to stretch cells. Usually the cells are cultivated on elastic membranes and the entire membrane is deformed to deform the attached cells. This approach has been proven useful but suffers one big disadvantage: If cells are to be imaged during or after the membrane is deformed, the cells are displaced relative to the optical axis of the microscope and a microscopic observation becomes virtually impossible. As shown in the figure below only the part in the center portion (red X) remains stable relative to the objective of the microscope, when the membrane is stretched.

Our dcCS10-compensation is moving the entire membrane during the stretch so that it counteracts this displacement. As a result the region of interest is still precisely positioned above the objective of the microscope during (and after) the stretch.

The benefit: **Cells can be imaged even during stretch!**

When cells are grown on an elastic membrane and strain is applied to the membrane, only the center portion of the membrane can be used for imaging because only this part remains at its initial position relative to the objective of the microscope. This is a serious disadvantage as only those cells are available for microscopical investigation that have grown in this center portion of the membrane. We developed a computer-controlled stretch device that overcomes this impediment by using active motion compensation. With our new stretcher cells can either be subject to uni-axial strain or strain relaxation (compression) and it allows to simultaneously image the cells at high optical resolution. This is possible at any position on the membrane while strain or compression is applied. Numerous other features have been implemented to ensure easy handling of cells — during prolonged cell culture in the incubator as well as on the microscope.

detailed description of the device:

summary

This compact cell strain device makes it possible to perform life cell imaging studies where a rapid image acquisition is required, such as observing changes of the intracellular Ca²⁺ concentration

when cells are mechanically stimulated. A big advantage of this cell strain device is its stretching chamber, which allows to use commercially available PDMS sheets. The sheets are transparent and as a consequence it is possible to perform regular bright field as well as epi-fluorescence microscopy with an inverted microscope. The commercially available PDMS substrates are thin enough to use even oil immersion objectives. The cell strain device is not operated by the microscope software but the program is running on a separate computer — a small laptop or even a net book with the appropriate interface is sufficient. This enables the scientist to use the stretcher on any microscope and regardless of the image acquisition software installed. Naturally the device can also be used without the microscope.

stretch/compression device

Figure 1 below shows a schematic of the device. The strain/compression device consists of two different components with different functions.

Figure 1. Schematic of the strain/compression (SC) device.

A: The SC-device with the membrane chamber attached is mounted on the microscope. The carrier plate is shown in gray with all attached components in matching colors. The SC motor is mounted on the carrier plate and deforms the mounted membrane chamber by moving the sliding blocks via a ball screw and a metal band (see also text). To compensate the stretch-induced lateral displacement the carrier plate is moved laterally with the ball screw driven by the compensation motor (both in blue). The red arrows show the movements of the membrane holders during deformation and the movement of the carrier plate to compensate the lateral displacement.

B: The membrane chamber shapes the elastic membrane into a tray that is used to cultivate the cells. In the view on the top right one of the holders is shown before assembly. Two double hooks of the prestrain holder (bottom) are holding the membrane chamber and can be moved freely along the plate rail and fastened at any position with two screws.

Observation of the membrane chamber with a regular cell culture microscope through the observation window allows inspection of the cells during cultivation of the cells without removing it from the prestrain holder.

C: Membrane chamber and prestrain holder are readily assembled. The next steps are usually autoclaving and coating of the membrane followed by seeding the cells into the tray.

► Cell Stretcher CS-10 Series (continued)

One component deforms the membrane, which allows the user to strain a mounted membrane chamber or to compress a prestretched membrane chamber. The other component compensates the undesirable lateral displacement by moving the entire carrier plate (see figure 1A) along the strain/compression axis. The synchronous interplay of these two components keeps any desired region of the membrane at the same position while applying strain or compression. The deformation component is made of two sliding blocks where the membrane chamber is mounted during the experiment. To stretch the membrane the two blocks slide in opposite directions on a linear motion guide thereby changing the length of the membrane chamber and deforming the cells. One sliding block is directly displaced by the SC motor via a ball screw whereas the other sliding block is pulled in the opposite direction by an attached metal band and a pulley mechanism (see also figure 1A). Any movement of the motor driven block leads to a displacement of the other block for the same amount by the pulley mechanism. A spring tethers both sliding blocks to provide a permanent pulling force. This provides the necessary counterforce keeping the metal band under tension. Increasing the distance between the two blocks requires the motors, whereas the passive, attractive force of the spring allows to decrease the distance (see arrows in figure 1A).

To compensate the lateral displacement of the membrane the carrier plate is laterally moved by the compensation motor along a linear motion guide (not shown in figure 1). As all parts of the deforming component are fixed to the carrier plate, this component is moved as a whole. The two DC servo motors (compensation and SC-motor) are connected to an external control unit and controlled by a computer with a custom written software (see also below). The software not only calculates how much the carrier plate has to be moved to compensate the stretch-induced displacement but also provides a

convenient graphical user interface to design to stretch protocol. It allows the user to do the following:

- 1) Any desired strain protocol, including cyclic protocols with different characteristics (linear, sinusoidal, sigmoidal) can be programmed. This includes pauses or loops to insert static phases or to repeat a specific sequence.
- 2) The position of the membrane chamber along the stretch axis can be changed independently from movements for motion compensation.
- 3) For mounting the membrane chambers the distance of the two sliding blocks of the SC component can be adjusted. Thus membrane chambers of any length (within the limits of the device) can be mounted which allows to also mount prestrained membranes and to compress cells.

membrane chamber including prestrain holder

The membrane chamber comprises the membrane holders and the transparent membrane (thickness 127 microns). The membrane holders clamp the membrane so that it assumes a flat bottom with two side walls (angle of ca. 60°). So a tray is formed which allows to use the chamber like a regular culture dish. In figure 1B (top right) a side view of the membrane chamber during assembly is shown. One of the two membrane holders is shown before clamping the membrane to illustrate the mounting process. Once the membrane chamber

is assembled it is hooked onto the prestrain holder where it typically remains during the entire remaining procedure (autoclaving, surface coating, seeding of the cells). The membrane chamber conveniently fits in a regular 15cm culture dish, which allows sterile handling outside a sterile work bench and even to monitor cell growth in a conventional cell culture microscope with a low magnification objective. Two metal rods in the membrane holders are used for mounting the membrane chamber onto the two sliding blocks of the SC component. The rods and the sliding blocks are designed to easily mount and unmount the membrane holder from the device and to perform all necessary steps without deformation of the membrane which might lead to an unwanted deformation of the cells before the actual stretch. The two membrane holders can slide along a plate rail (see figure 1B) and can be locked at any desired prestrain with two locking screws. Mounting the membranes with prestrain is not only necessary for a later compression of the cells in the SC-device but usually the membrane is mounted with a slight prestrain (ca. 20%) to flatten the bottom of the membrane. Naturally, if cells have to be compressed the prestrain needs to be high enough so that the membrane still remains under tension after relaxation. The upper limit for prestrain (and therefore compression) is ca. 100% and defined by the total strain that can mechanically be applied to a membrane and by the stretch resistance of the membrane.

► Cell Stretcher CS-10 Series (continued)

Realtime Observation:

stretch 0%

stretch 20%

stretch 40%

stretch 60%

stretch 80%

Cultivated cells respond to a mechanical stimulus in various different ways and visualization of these responses has become an important tool to investigate mechanotransduction. Microscopic techniques, especially fluorescence detection methods, are steadily improving and countless fluorescence dyes and labeling methods are available to address cell-biological questions related to mechanical stimulation of cell. Examples are Ca^{2+} -sensitive dyes for measuring

Ca^{2+} dynamics in alveolar cells of the lung in the course of the respiratory cycle and dyes that address topics like lipid trafficking, membrane stress failure and repair mechanisms. Besides fluorescence dyes also the broad spectrum of fluorescent proteins can be used for life cell imaging in mechanobiology. Techniques such as fluorescence resonance energy transfer (FRET), fluorescence recovery after photo bleaching (FRAP) and other methods can be used to address questions even on a molecular level. Unfortunately, it is difficult to combine fluorescence life cell imaging with mechanical stimulation of cells, especially when cells are deformed by globally deforming an elastic growth substrate, which is a widely used method to stretch cultivated cells. Only the center part of the stretched growth substrate remains in a constant position relative to the objective of the microscope and therefore only cells in this part can be visualized properly when the stretch is maintained or when cellular responses should be detected even during the stretch. For observing other cells the stage of the microscope has to be repositioned to recover the specimen after deformation. For many reasons this task is often impossible and even if the microscopist succeeds it takes up to several minutes to relocate the area of interest. The SC device was designed to overcome this problem by automatically compensating the stretch-induced lateral displacement. The figure on the left shows the cytokeratin network in keratinocytes that were stretched up to 80% of their initial length.

Computer Control:

As mentioned above the stretching software is not part of the image acquisition software. The figure below demonstrates the main features of the user interface: Stretch Control (left at top) to adjust the distance of the sliding blocks, Motion Control (left, below Stretch Control) to start/pause and stop the stretch protocol, Compensation (left, below Motion control) to activate the compensation, Profile Editor (right, upper window) and Segment Properties (right, lower window) to define the stretch protocol.

There are several basic elements to create a stretch protocol: Sinusoidal change, linear change, sigmoidal change and pause. All elements can be combined with each other and the specific properties of each element can be modified with the segment properties function.

- A** Shows an example for a stretch profile.
- B** A magnified view of any desired region in the profile (grey overlay in A) can be displayed.
- C** The user-friendly surface allows to calibrate the device and also to operate it manually.
- D** In a separate window the sequence of the single steps as well as the parameters for each individual single step can be programmed.

minimum requirements

Software based on "JAVA"	1024 MB RAM
Windows 2000 or above.	100 MB free space on disc
Pentium 4	1024 x 768 screen resolution

► Cell Stretcher CS-10 Series (continued)

Motion Compensation:

How does the motion compensation work?

The motion compensation is not based on a feedback mechanism that recalculates the position from new image data but it is entirely based on the distance of the area of interest from the center of the membrane. To keep the specimen in the field of view of the microscope during stretch or compression of the cells the SC-device simply has to “know” the position of the membrane. This is achieved by calibrating the device once before mounting the membrane chamber onto the device and using only the software of the SC-device afterwards when the membrane chamber has to be moved along the axis parallel to the stretch/compression. Our uni-directional stretch device produces a homogeneous strain field regardless of the distance to the holders where the membrane is clamped. Thus the displacement of any point is defined by a simple linear correlation that depends on the distance between the observed point from the center of the membrane. A point at the very center of the membrane is not moved out of the optical axis whereas the displacement becomes larger with increasing distance from the center. Using a simple algorithm it is possible to predict this displacement and to counteract it. The system is designed in a way that both motors — the SC-motor and the compensation motor — are operated simultaneously so that there is virtually no delay between cell stretch/compression and compensation.

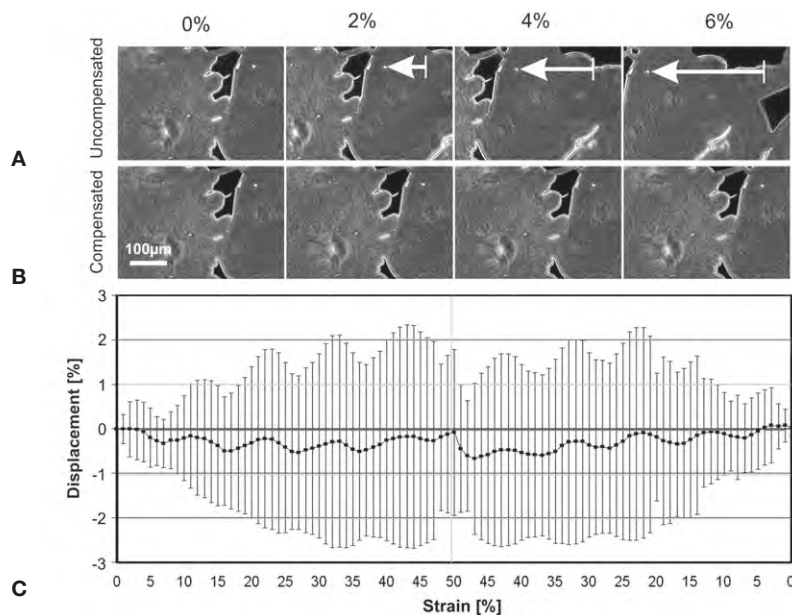

Figure 2

A: To demonstrate the displacement without motion compensation a membrane was stained with ink and a region 3mm away from the center of the membrane chamber was observed during stretch. A stretch of 6% was already moving most of the original area of interest out of the field of view.

B: With the motion compensation activated, the region of interest remains in the field of view of the microscope.

C: Measuring the relative displacement of 5 points on the membrane (all at a distance from the center between 2mm–4mm) we can show that even a stretch of 50% leads to only minor displacement with motion compensation. The mean relative displacements and the standard errors are shown.

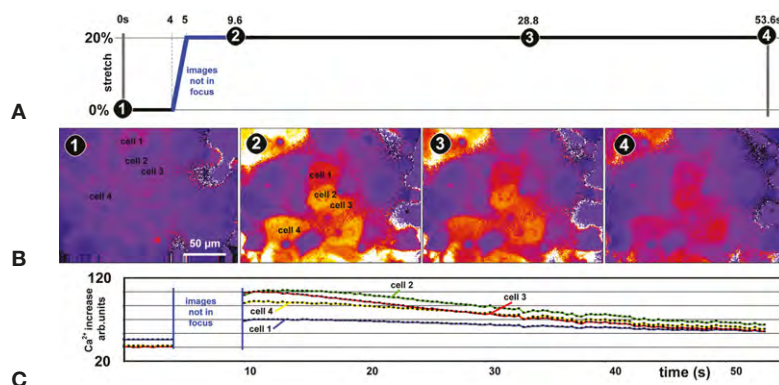

Figure 3. Image acquisition of ATI1 cells subject to one fast single stretch with motion compensation applied.

A: Cells were stretched with a simple protocol (20% stretch within 1s) and continuously imaged for 53.6s. The blue part of the time line illustrate the time where images were not in focus.

B: Four images of the sequence (numbers are shown in A) show ratiometric images of the Ca^{2+} dye Fura-2. The false color images (from low to high Ca^{2+} concentrations: blue-red-yellow-white) were calculated from 2 consecutive images acquired with different excitation wavelengths. Images were acquired with a 40x oil immersion objective. The position of the region was ca. 1mm off the center of the membrane parallel as well as perpendicular to the stretch axis. The vertical shift of the image between panels 1 and 2 is caused by the displacement perpendicular to the stretch axis.

C: The Ca^{2+} signal was quantified and the time course is shown. It demonstrates that the four cells indicated show a slightly different Ca^{2+} response.

► Cell Stretcher CS-10 Series (continued)

The membrane chamber and the prestrain holder also provide a convenient and save way to handle and cultivate the cells. The holder with the mounted chamber fit in a regular 150mm cell culture dish allowing sterile handling and incubation of the cell in a conventional CO₂ incubator. Moreover the cells in the dish can be observed with simple cell culture microscope at low magnification for brief inspection without removing the holder from the dish.

ORDERING INFORMATION:

mcCS10 – Manual Controlled

Dimensions: 18cm (w) x 11.5cm (t) x 2.5cm

Weight: 0.8kg

► Vibration Isolation Products

Creating the best environment for microscopy

Overview

Vibrations limit the performance of sensitive instruments in numerous applications. Thus the need to remove vibrations to optimize performance has become crucial. We have spent many years developing state-of-the-art workstations and platforms, which provide the user with a truly vibration free surface on which the user can place equipment. Our products are available in a wide range of sizes and shapes to support instruments of varying weights and footprints.

Features

- 2Hz natural frequency built-in air isolators
- Active self leveling and passive pump up versions
- Highly rigid laminated construction with damping core
- Low cost, easy to install and free from maintenance
- Ideal for laboratories and clean rooms, will meet Class 10 (Class 1 available)
- Simple, compact, easy to use and clean
- Wide range of sizes, options and accessories

Confocal Laser Microscope

Theory

Elimination of movements from a working surface is achieved by isolating it from any external influences such as the floor and the structure itself is rigid and damps out any induced surface movements (fans etc.). The major sources of external disturbances are vertical and horizontal floor movements.

Floor vibrations arise from many sources; road traffic, trains, large machinery, lifts and building sway are among common examples. Typically building vibrations peak in the region of 7 Hz, however a metal frame building of height H has a resonance of roughly $46/H$ hertz, which means that on the fifth floor of a building you can expect horizontal and vertical displacements as low as 3 hertz. Floors almost never exhibit periodic vibrations in the 1 to 3Hz band.

The measure of the effectiveness of an isolation system is given by its transmissibility (below). As an approximate rule isolators start to become effective at between two to three times their own natural resonant frequency. Thus to remove vibrations at 7Hz an isolator with a natural frequency of about 2Hz is required.

The performance of an isolator depends on its stiffness and the mass it is supporting. In general isolator performance improves as mass is increased and for optimum performance one should work close to the maximum load an isolation system is designed to support. As an example, it is bad practice to place a 50kg load on a table designed to support 500kg, whereas a load of 200kg or more would be suitable

The load supported by an isolator is calculated by multiplying the air pressure inside the isolator by the area of the piston it is supporting. Thus a piston of 15cm^2 surface area will support 25kg at 2 Bar. As (pressure) x (volume) for an isolator is a constant at any given temperature, increasing the load on an isolator will cause the piston to drop until the pressure has risen sufficiently to support the load. If one wishes to return the platform to its original level, then one must introduce more air into the isolator at the new pressure.

Semiconductor Bond Tester

Construction

Our platforms combine a highly rigid damped table with an excellent vibration isolation system in one unique package.

It has long been accepted that the best isolation is achieved using pneumatic isolation chambers, which utilise high performance rolling diaphragms. All our isolators contain such a specially designed diaphragms.

Our isolators are also connected to a damping volume via a tuned restrictor. The restrictor absorbs system energy by converting air movements into heat as it is forced through the restrictor. This removes the overshoot and oscillations, which occur in isolators without dampening chambers and highly specialised restrictors such as ours.

We use a low isolation volume to damping volume ratio, which means that the working surface appears stiff to the touch (as all large low frequency disturbances are rapidly damped away). Small higher frequency disturbances are removed by the isolator chamber, these have a resonant frequency (dependant on version and load) typically in the range 1.5 to 2Hz. and whose characteristics are given in the transmissibility curves.

Our platforms feature a seamless steel top finished in either a grey epoxy powder coat or optionally made from dull polished stainless steel. Both finishes meet the Class 10 requirements. The stainless finish may be required in certain environments and we would be pleased to advise on this. The tops are formed by laminating a highly damping core between two steel plates using high strength aerospace grade adhesives, a technique we developed in producing our range of high performance optical tables and breadboards.

Four isolators, airflow restrictors and damping volumes are integrated into the platforms, which allow the working surface to float freely away from its base during operation. The natural frequency is typically 2Hz both vertically and horizontally and is suitable for all but the most sensitive instruments, where our low frequency option should be selected. We offer a choice of active and passive platform versions.

In active platforms, each isolator is connected to a self-leveling arm, which can be externally adjusted to set the height of the platform and level it. They should be chosen when the load on a table is expected to vary frequently. These platforms require a continuous supply of air. This can be provided by a compressor or using a gas bottle (suitable for months of normal operation and ideal for clean room uses).

Passive platforms are designed for applications where load does not vary. This includes balance tables, which are designed for light loads where the platform is weighted to give good performance.

Platforms are manufactured in one location using state-of-the-art automated machinery to guarantee high tolerances and consistency while keeping costs low. Our products are assembled by a highly skilled workforce and rigorous quality control is applied throughout the manufacturing process.

Excellence in design

Great care has been taken in the design of our products to ensure they achieve the highest levels of performance while being easy to use and to clean thoroughly. With isolation design optimized for use in microscopy and surface design optimized for easy cleaning, our tables are ideal solutions for use in general purpose microscopy to cleanrooms and Biohazard areas.

- Excellent working environment
- Comfortable ergonomic design
- 240grade silicon stainless steel surface available

A better working environment

Platforms and workstations improve the environment for microscopes with all the features necessary to make your work easier. Workstations provide a tailored working environment as well as featuring an isolation platform built into the work surface, making working with a microscope both faster and easier, leading to more reliable measurements in your laboratory. Platforms can also be used stand alone beneath microscopes to isolate them from external disturbances and speed up measurement.

Vibration Control

The AMF and AMP platforms offer the ultimate performance, incorporating four 2Hz damped rolling diaphragm air isolators, efficiently isolating frequencies from 6Hz and upwards. The AMS tables incorporate Sorbothane isolators, giving excellent isolation with a natural frequency of less than 7Hz. Our isolators considerably outperform both simple air cushion and rubber isolators, shortening stabilisation times and speeding up measurements.

Flexible Solutions

We offer a range of workstations and platforms to suit different environments and microscope performance levels. Workstations feature a platform mounted on a study steel frame with height adjustable leveling feet and guards to protect the table from accidental knocks during use.

Ergonomic Design

The ergonomic workstation design minimises user stress. With the active area option microscope platforms sit flush with the work surface and the surrounding area is useable for general work without disturbing measurements. Frames have height adjustable leveling feet, for excellent stability and user comfort with retractable castor feet, frame shelf and monitor support optional.

► Selecting a platform

To select a platform you must first decide on the size of the working surface you require, the load it needs to support and the sensitivity of the equipment to vibrations; from this you can determine the class of product you require. You then need to decide whether you will require it to be floor mounted and what type of air supply would be best suited. We would be pleased to assist you and answer any questions you may have.

Active Platforms: AMF Series

These platforms are self-leveling and ideal for use when loads on the platform are likely to change. They can support up to 160kg and are available in a range of standard sizes from 60x60cm up to 150x90cm. Their low 6cm working height and low weight makes them ideal for use on desks and benches.

Passive Platforms: AMP Series

These platforms are designed to be pumped-up and left alone. Simple to use, they are ideal for use with fixed loads or in applications where pressurised air or gas cannot be used. They support loads up to 160kg and sizes range from 60x60cm to 150x90cm with a 6cm working height.

Balance Tables: AMB Series

These passive platforms are weighted to 25kg and are for use with light instruments such as balances. They support loads to 120kg and are available in three sizes, 45x30cm, 40x50cm and 60x60cm. Their small footprint also makes them ideal for use when space is at a minimum. Working height is 6cm.

High Load Workstations: AMH Series

These workstations are designed for heavy instruments such as electron microscopes, which require high degrees of isolation from vibrations. They comprise a highly rigid platform supported on a sturdy isolation frame fitted with leveling feet.

The platform is fabricated by laminating two 5mm thick ferromagnetic steel plates to a 5cm thick aluminium close cell honeycomb core using aerospace grade adhesives.

The resultant plate has excellent compliance characteristics and its rigidity is suitable for supporting large loads up to 1500kg.

The vibration isolators are built into the legs of the frame. Each leg contains a low natural frequency rolling diaphragm isolator connected to a damping volume via a tuned flow restrictor, giving a highly damped system with a natural resonance (at high load) of around 1.1Hz. The isolation system is active with a self-leveling arm attached to each leg allowing the platform to be levelled as required and to compensate for varying loads. The isolators are available in two versions, the standard version for loads up to 500kg and a heavyduty version for loads to 1500kg. The standard platform is available in a range of sizes from 90 x 90cm to 150 x 120cm.

Contoured Platforms: AMC Series

This light and compact passive platform has been specially designed for instruments such as microscopes. Its T-shaped profile allows users to place their arms on either side of the platform while the width at the rear is large enough to support a wide range of instruments.

The AMC Series is available in two different construction materials. Starting with the AMC-12, -12S, and 13, these platforms are made entirely from electroless Nickelplated aluminium parts and is suitable for Class 1 requirements. The top plate is 1cm thick with three damped isolators mounted to the underside.

The AMC-7 platform is made from high grade steel parts welded together for rigidity and coated with a tough epoxy powder white finish. It is resistant to most forms of biological and chemical attack and isolators are simply removed making cleaning easy. The platform top plate incorporates three elastomeric isolators which remove over 97 percent of horizontal vibrations at 50Hz and over 95 percent of vertical vibrations greatly improving instrument performance. These isolators are available in two load ranges, up to 25kgs and from 25 to 75 kgs. Isolators are simply secured by a single thumbscrew and require no adjustments for varying loads.

Sorbothane elastomer isolators have outstanding damping performance compared to isolators that use springs, rubber, orneoprene and so eliminate any rocking or wobble that is a major problem with other brands of platform. Sorbothane rapidly damps down disturbances to the microscope, such as when it is being touched during operation. It greatly improves image quality by protecting microscopes from both horizontal and vertical vibrations emanating from sources such as floors, walls and benching and caused by traffic, lifts, rotating machinery and numerous other sources.

Balance Workstations: AMD Series

- Built-in isolation area designed for analytical balance
- Removes up to 99 percent of unwanted vertical and horizontal vibrations
- Flush working area around balance for supporting hardware
- 240 satin silicon 0.4Ra ground stainless steel meets international standards for cleanliness

Outperforms rubber and spring isolators and simple granite and steel tables. These workstations remove unwanted vibrations which limit the performance of sensitive instruments such as balances. The top surface is 75x75cm and incorporates a 30x45cm vibration isolation platform, which sits flush with the surrounding table surface in a recess. Instruments are placed directly onto this isolation section of the workstation and isolations are removed by the built-in isolators. Tilting leveling feet on the frame ensure the table sits stably on the floor.

Three versions are available, the ST and SS versions can be easily upgraded to the SA at a later date if required.

Product Details

AMD-SA stainless air table features our AMB-30x45 pneumatic platform. It incorporates four low 2Hz natural frequency rolling diaphragm damped isolators and the platform and table top feature 240 ground satin stainless steel. The isolators are simply inflated via adjustable valves using a bicycle pump.

AMB 30 x 45
included in AMD-AS

AMD-SS stainless version features an AMS-30x45 platform with four 7Hz sorbothane isolators which give an excellent 95 percent isolation at 50Hz. A unique sound deadening core soaks up surface borne vibrations and ensures our tables outperform simple granite and steel tables by up to 20dB. 240 silicon satin stainless ensures our tables meet all the requirements for use in stringent environments such as cleanrooms and biohazard areas.

AMD-ST and AMD-SB standard table has a white powder epoxy table top surface incorporating a AMT-30x40 granite platform featuring four sorbothane isolators. It improves balance performance and is ideal for balances up to 4 to 5 digit.

The smooth seamless table shape ensures thorough and easy cleaning removing risks such as cross contamination. The stainless steel versions feature 240 satin silicon steel with a very low Ra of 0.4 making them ideal for cleanrooms and as well as being resistant to almost all forms of biological and chemical attack. The frame is produced using tubular ERW steel which combines high rigidity with a closed profile that allows easy and thorough cleaning. Tilting leveling feet ensure it sits perfectly in contact with the floor.

Options for Workstations AMD-101 Shelf, AMD-102 Castor Feet, AMD-103 Active Area White Top Plate

Options, Accessories, & Components:

Low Frequency Platform Option (LF Option). Platforms with this option incorporate a specially extended isolator, which has a natural frequency of 1.5Hz vertically and horizontally. It is available only for active platforms. The only difference to the standard versions is that the platform depth is increased to 10cm with a corresponding increase in working height to 11cm.

Frame. Frames bolt directly to the platforms and are feature a hard grey epoxy powder finish. They are supplied with four leveling feet, giving 3cm of adjustment to ensure the frames stability on the most uneven floors. Frame height 71cm, going to a working height of 78cm.

Frame Shelf. Frame shelves are made from 2cm laminated board and are suitable for supporting equipment such as computers

Platform Guard. The platform guard is a sturdy rail (with side rail option) that fully surrounds the platform and protects it against accidental knocks, which would otherwise disturb instruments on the platform.

Platform Shelf. A 30cm wide shelf, which sits on the guard rail over the platform and is quick and easy to remove and replace.

Monitor Stand. This padded stand will support monitors weighing up to 30kg. It features 360 degree rotation of the arm as well as height adjustment. It mounts to the platform guard.

Retractable Castors. These castors incorporate a foot, which can be raised and lowered using a thumbwheel, allowing the workstation to be wheeled around and then securely mounted to the floor in a new location.

Silent Compressor. These compact and oil free air compressors are virtually silent (30dB/A) versions and suitable for running several platforms.

Air Preparation Unit. An air preparation unit should be used if compressed air is used which may be damp or contain small particles. The unit will ensure the air supply is properly cleaned and dry before entering the platforms.

Stainless Working Surface. The dull polished stainless steel surface is ideal for stringent environments, such as within the food industry and in medical applications.

Mounting Holes. We can supply platforms with a ferromagnetic steel working surface featuring either M6 holes on a 25mm grid of ¼-20UNC holes on 1 inch centers.

Concentric Airmount AM2. This low profile airmount has a working height of only 40mm. Our unique design incorporates an isolation chamber surrounded by a concentric damping chamber. The chambers are connected by a tuned airflow restrictor which gives optimum damping with no overshoot while isolating out floor vibrations.

Concentric Airmount AM3. This low cost isolator has a very small footprint and is designed for incorporation into instruments. It is used in conjunction with a damping chamber, which has the advantage of being placable at some distance from the isolator, as required by the user.

High Load Isolator AM7. These high load isolators are capable of supporting loads up to 400kg and have a very low natural frequency as low as 1.1Hz. They are ideal as mounts for heavy sensitive instruments such as electron microscopes.

Leveling Arm AM9. These high load isolators are capable of supporting loads up to 400kg and have a very low natural frequency as low as 1.1Hz. They are ideal as mounts for heavy sensitive instruments such as electron microscopes.

TAKING THE next step...

Over the last decade Electron Microscopy Sciences has sponsored and participated in workshops covering a wide range of preparation techniques for electron microscopy and light microscopy.

Now we've added webinars as another way for us to communicate with you.

If you are on the fence about a product, wondering if it's right for your application, you can always contact our expert technicians by phone or now, by webinar!

Our webinars feature our latest, innovative products so you can learn more about the features and benefits of our products such as ChromaCal, Nightsea, LatticeAx, and more without ever leaving your computer.

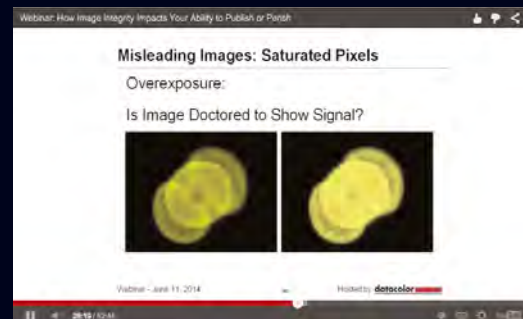

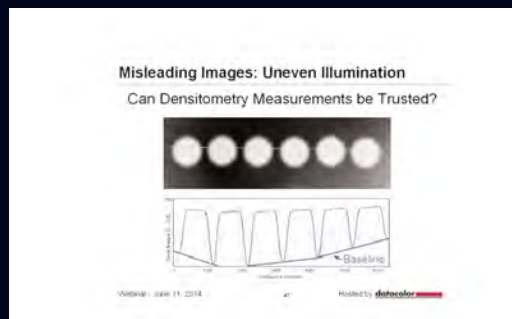

Look for this graphic on our website to find out if there is a product-specific webinar available for your area of interest.

Look for us on YouTube and Facebook as well!

► Vibration Damping Mounts – Vibrasorb®

- Isolate sensitive analytical balances and other instruments from disturbing vibrations.
- Economical space saving alternate to full size balance tables.
- Polishes surface resists scratches and chemical attack.

- Molded from dense black & white terrazzo.
- Platform 64mm (2½") thick.
- Four Vibro-Absorber™ cushions and neoprene feet.
- Supports up to 16 kg (35 lbs).
- Overall height 76mm (3").
- Two sizes available.

Cat.#	Size	Ship weight	Qty
67120-01	Vibrasorb® 45 x 56cm (18 x 22")	39 kg (87 lb)	each
67120-02	Vibrasorb® 35 x 35cm (13¾ x 13¾)	19 kg (42 lb)	each

► Vibration Isolation Platform – VIP Series 300

VIP Series 300 isolation technology is superior to air technology. First, these vibration isolation platforms are passive, mechanical and maintenance free. There are no air hoses or supporting hardware required. Second, Vistek bearings isolate effectively for the horizontal and vertical vibration components. The superior performance of the Vistek bearings in all six degrees of freedom makes this isolation platform the best choice for eliminating unwanted vibrations. Virtually any type of scientific instrument may be positioned on the Series 300 Vibration Isolation Platform. Units such as microscopes, hardness testers, measuring devices, digital imaging systems, AFMs, and Analytical balances are all applications for a bench top or tabletop platform. Standard sizes are 12" x 18", 18" x 24", and 24" x 30", for general use. Custom shapes, sizes and colors are available on request. Transmissibility Curve for the VIP Series 300 1/6th Hertz Vibration Isolation Bearing.

► The Richter Anti-Vibration Pad

- Cost Effective – An inexpensive solution which dampens vibrations generated from lab equipment
- Non-Slip – Creates a stable surface that will keep equipment in place
- Versatile – Fits a variety of bench-top vortexes, shakers, rockers and microscopes
- Portable – Small, lightweight design makes transportation between benches and labs easy
- Configurable – Pads can be stacked for heavier units or positioned side-by-side for larger equipment

Cat. #	Pad Size	Qty.

High-performance
anti-vibration platform
for microscopes

► The EMS AMC-7 Microscope Platform

Key Features

- Contoured shape ideal for working with microscopes
- Unique elastomer isolator removes up to 99 percent of vibrations
- Loads to 25kgs with 75kg load version option
- No rocking or wobble unlike other brands of platform
- One platform size suits majority of microscopes

These platforms remove the unwanted vibrations which limit the performance of microscopes. Their T shaped profile allows users to place their arms on either side of the platform, while the rear section is wide enough to accommodate most makes of microscope.

Platforms are made from high grade steel parts welded together for rigidity and coated with a tough epoxy powder white finish. They are resistant to most forms of biological and chemical attack and isolators are simply removed making cleaning easy.

The platform top plate incorporates three elastomeric isolators which remove over 97 percent of horizontal vibrations at 50Hz and over 95 percent of vertical vibrations greatly improving instrument performance. These isolators are available in two load ranges, up to 25kgs and from 25 to 75kgs. Isolators are simply secured by a single thumbscrew and require no adjustments for varying loads.

Sorbothane elastomer isolators have outstanding damping performance compared to isolators that use springs, rubber or neoprene and so eliminate any rocking or wobble that is a major problem with other brands of platform. Sorbothane rapidly damps down disturbances to the microscope, such as when it is being touched during operation. It greatly improves image quality by protecting microscopes from both horizontal and vertical vibrations emanating from sources such as floors, walls and benching and caused by traffic, lifts, rotating machinery and numerous other sources

Type	Performance	Surface	Isolation	Application
AMC-7	Scientific	White epoxy powder	2Hz/7Hz	Microscopes

Specifications

Dimensions (L x W x H)	565 x 380 x 45 mm
Load Capacity	25kgs; 75kgs with Option L
Platform Height	25 mm
Isolators	3 off elastomeric
Isolation performance	
50Hz	97 percent horizontal; 95 percent vertical
100Hz	99 percent horizontal; 98 percent vertical
Natural Frequency	2Hz horizontal; 7Hz vertical
Surface Finish	White powder epoxy
Construction	Steel
Bacterial Resistance	No growth
Fungal Resistance	No growth
Heat Aging	Stable
Working Temperature	-20°C to 160°C
Weight	10Kgs

► EMS-820 Precision Pulsed Laboratory Microwave Oven

FEATURES

- Easy operation and maintenance
- Easily adjusted effect % knob
- Accurate temperature control
- Well ventilated chamber
- 3 different timer modes
- Built in air pump for mixing
- Manifold for up to 5 mixing tubes
- Adjustable temperature probe holder
- Stainless steel chamber
- Glass fiber reinforced silicone floor
- Built in reflector for even distribution of microwaves
- On/off rotator switch

FOR OPTIMUM RESULTS...

The oven features a very well defined adjustable effect, an accurate temperature control, a well ventilated chamber, and three different timing modes for running the unit.

Our temperature control not only prevents the tissue in the chamber from becoming denatured (by high temperature) but it also assists in pulsing the microwave effect in small precise portions. The temperature control has a direct effect on the magnetron (the microwave generator) as it allows the unit to switch on and off in the most efficient way at the preset effect level. The set effect is adjustable at any time either before or during a run. This aids in the balance of the microwave load and the content of the microwave absorber. It should be noted that the penetration rate and process times are influenced by the presence of microwave radiation in the chamber and for this reason it is imperative that the effect rate be adjustable at any given time during a run.

Inside the chamber there is a manifold for up to 5 tubes which allows you to achieve bubble mixing in from 1-5 containers at once. There is a built in

pump that facilitates the mixing, avoiding temperature gradients in the mixing process. These adjustable bubble mixers make the EMS-820 ideal for decalcification.

Our oven is so versatile that you have the option to run it in three different modes depending on your application:

- 1) 3 optional presets programmed by the operator: 5 seconds-99 minutes
- 2) Continuous run: indefinite time.
- 3) Timed run: up to 99 minutes. with or without turntable.

The oven chamber is made entirely of stainless steel and it is very easy to clean. It is extremely resistant to all staining solutions that are usually employed in histology and like fields. The floor of the unit, which covers the rotator cavity, is a glass fiber reinforced silicone plate which serves as a thermal insulator and will not absorb microwaves. The plate is totally chemical resistant.

► **EMS-820 Precision Pulsed Laboratory Microwave Oven (continued)**

The EMS-820 is designed for easy operation and maintenance. All of the controls can be set with one hand and are easily accessible allowing for changes at any time. An adjustable thermal probe encased in a white PTFE holder (a microwave transparent material) comes with the unit. The probe can be set at different heights to accommodate all different types of containers and volumes of liquid. Attached to the probe is an adapter to hold one of the mixing tubes; this is important because the liquid which is regulated by the thermostat needs to be mixed well to avoid temperature gradients. The probe automatically measures the existing temperature and displays it.

The unit has a built in reflector inside the chamber which evenly distributes the microwaves. A rotator is built into the unit, as well, to prevent "Hot-Spots" from forming even for very small volumes (e.g.; reagent drops on glass slides).

Advantages of the EMS-820 Precision Pulsed Laboratory Microwave Oven

Ease of Use: When using a laboratory microwave oven, one has to determine the set effect to use depending on the type of sample, temperature, and load. Our unit has the effect control knob easily accessible at all times, and can be changed even during the middle of a run. The effect percentage setting is easy to read at all times.

Continuous Run Mode: For longer procedures (greater than 99 minutes our unit runs continuously for an indefinite period of time. There is no need to shut off the unit and begin again.

Multiple Bubble Mixing: A 5-port manifold for mixing up to 5 different containers at once.

Stainless Steel Compartment: Very easy to clean and resistant to staining or scratching. Resistant to all staining solutions.

Adjustable Temperature Probe Holder: It will accommodate any size container and it is flexible and very easy to align.

Glass Fiber Reinforced Silicone Floor: It comes standard with the unit and it covers the rotator when it is not in use.

Ventilation: Our unit has a built in powerful fan which accommodates at least 2 meters of tubing.

SPECIFICATIONS

Magnetron Effect.....	1000W
Effect Range	0-100%
Temperature Range.....	25-100°C
Temperature Accuracy.....	+/- 0.5°C within 25-70°C
Temperature Variation	+/- 0.4°C at 40°C Balanced effect with 200ml H2O load and 200ml H2O sample
Timer.....	5 sec-99min 99sec
Continuous Run.....	Timer override-works as a count up timer for an indefinite period of time
Chamber evacuation	Fan tubing outlet at rear
Safety Switch Off At.....	105°C Chamber temperature

➤ Microwave Accessories

➤ Microwave Leakage Detector

Evaluate the RF emissions of mobile phone, radio and TV transmission towers, wireless camera, Wi-Fi and LAN detection and installation, microwave oven leakage and other environmental safety concerns. Radio Frequency (RF) is the range of electromagnetic frequencies above the audio range and below infrared light. Features maximum and minimum hold, an audible alarm, and a zero adjustment to eliminate background EMF. The display also indicates overload and low battery. Comes with a soft carrying case and standard 9V battery, which provides approximately 100 hours of use.

Dimensions: 5¼" x 2¼" x 1¼" (130 x 56 x 38mm). Weight: 6oz (170g).

Specifications

Display:3¾ digits, maximum reading 3999
 RF Power Density:0.003~2.700 mW/cm²
 RF Frequency:50MHz ~ 3.5GHz
 Microwave Frequency:2450MHz
 Resolution:0.001mW/cm²
 Accuracy:±2dB @ 2.45GHz ±50MHz
 Axis:Single
 Alarm:@ readings >1mW/cm²
 Operating Temp:41°F ~ 104°F (5°C ~ 40°C)
 Operating RH:<80% RH

72083-00 Microwave Leakage Detector each

➤ Art of Microscopy

A complete text book encompassing 384 pages of all aspects of microwave technology. All of the techniques found in a Microscopy, histology and general research laboratory are contained in this revised edition of the book.

Written by: Kok, L. P. and Boon, M. E. (2003). Coulomb Press. Leyden, The Netherlands. ISBN# 90-71421-41-4.

31100 Art of Microscopy each

➤ The Microwave Tool Book; A Practical Guide For Microscopists

A step-by-step work book of fun laboratory exercises that teaches you how to calibrate and standardize microwave ovens; practice safety when using a microwave in the laboratory; see areas of high and low microwave power; measure cycle time and magnetron warm-up time; use your oven for fixation, staining, embedding, etc. When you complete the exercises in this book, you will find that what has up to now been a confusing amalgamation of concepts and recipes will become understandable and easy. Approx. 150 pp., 24 exercises, dozens of illustrations, and lots of practical tips. Written by: Gary R. Login, DMD, DMSc, and Ann M. Dvorak, MD, Dept of Pathology, Harvard School Of Dental Medicine, Harvard Medical School, and Beth Israel Hospital Boston, MA. 02115.

31110 Microwave Tool Book each

➤ Microwave Calibration Slide Set*

EMS EXCLUSIVE

A calibration slide for microwave staining. A set which includes two glass slides. Slide #1 has liquid crystal squares corresponding to the following temperatures: 35°C, 40°C, 45°C; Slide #2 has liquid crystal squares corresponding to the following temperatures: 50°C, 55°C, and 60°C.

This calibration set will ensure reproducible programming of the oven to achieve an ideal target temperature of large staining volumes (50-200ml solution).

97031-01 Microwave Calibration Slide Set Set

➤ Stain-'N'-Temp Slide*

This device is used as an aid when programming a microwave oven to achieve an ideal target temperature of 20-100ml staining volumes. The tool is designed to give quantitative temperature information about the droplet during staining of tissue sections on electron microscope grids.

EMS EXCLUSIVE

This unit is a 4-well PTFE-coated glass slide, each well 8mm in diameter which will maintain the uniform shape of the droplet; 4 liquid crystal temperature strips ranging from 35° to 50° are affixed to each well to monitor the microwave oven temperature.

97030-01 Stain-'N'-Temp Slide each

97030-06 Stain-'N'-Temp Slide 6/pk

➤ Fix-'N'-Temp Container*

EMS EXCLUSIVE

This container will permit rapid specimen handling and provides temperature information during microwave irradiation. A

liquid crystal strip is affixed into the bottom of a 35mm diameter petri dish and covered with a thin layer of Embed resin. The temperature range is 35°C-60°C. This container is ideal for tissue fixing by microwaves. The two active temperature windows are 45°C and 50°C.

97033-01 Fix-'N'-Temp Container each

97033-06 Fix-'N'-Temp Container 6/pk

➤ Alpha-Numeric Oven Tray*

Made from polypropylene, Each line is spaced 1 cm apart with letters along the sides and numbers across the top and bottom. This tray has ruled lines that aid in the reproducible placement of the specimens in the oven.

97035-01 Alpha-Numeric Oven Tray each

➤ Neon Bulb Array*

EMS EXCLUSIVE

This Neon Bulb Array is made from silicone and has many advantages:

1. Silicone has a high resistance to extreme heat.
2. The silicone holds each bulb snugly and prevents bulb spillage during handling.

Each bulb in the mat is 2.5cm apart. The mat is divided into quadrants. A mark on the back left corner of the array lid is used to key the back left corner of the oven. There are letters and numbers along each edge for easy placement on the Alpha-numeric tray. The mat size is 8"x8".

97036-01	Neon Bulb Array	each
-----------------	-----------------	------

*The above microwave accessories are developed in collaboration with Dr. Gary Login, Beth Israel Hospital, Boston, Ma.

➤ Coverplate™ Technology

The Coverplate Microwave Immunostaining Systems

Shandon Lipshaw's patented Coverplate technology is the foundation of our microwave immunostaining system. Increased quality control, time and reagent savings, specimen protection, and consistent superb quality stains can be expected when using our Coverplate Microwave Immunostaining protocols.

97091	Disposable Cover Plates™	10/pk
97092	Cover Plate™ Slide Rack (holds 10 cover plates)	each

➤ Cassette Rack for Microwave Histoprocessing

We are very pleased to announce the development of a simple and reliable device designed to hold up to 24 standard cassettes for histoprocessing in a microwave. This new rack is manufactured from PTFE resins, and will withstand repeated exposure to fixatives, dehydrating agents, clearing agents and paraffin. It is easily cleaned in hot water. It is intended for use with a disposable tray which holds the processing chemicals.

Four processing racks and trays will fit into the EMS 9000 Microwave Processor, so that up to 96 cassettes can be processed in one run. Using this system, the histotechnologist needs to handle the individual cassettes only once, to load them into the racks. The rack is then placed into a tray containing the dehydrating medium, usually 100% ethyl alcohol, and microwaved. After dehydration, the rack containing the cassettes is transferred into a tray containing the clearing agent, usually isopropanol, and microwaved. After clearing, the rack is transferred to a tray containing liquid paraffin, and microwaved. The whole process can take as little as 25 minutes (for small specimens, such as needle biopsies). There are no hazardous chemicals needed (no xylene!).

97050	PTFE Cassette Rack for Microwave Histoprocessing	each
97051	Microwave Histoprocessing Rack with 10 Disposable Trays	set

➤ Other Holders, Racks, and Trays

97052-01	Microwave transparent dish	each
97052-04	Microwave Slide Staining Holder	each
97090	Microwave Slide Staining Holders, with disposable tray (each rack holds 24 slides).	6/pk
97082	Microwave-Transparent Trays	50/pk

➤ Formalin Solutions: A New Cassette Holder for Microwave Fixation and Processing

Each holds 64 or 40 cassettes in a single horizontal plane, which conforms to research regarding the way to achieve the best distribution of microwave energy. It is based upon an original design in wood (the 'Bamboozle') developed by Dr. Richard Dapson of Anatech, Ltd. It is adapted to a pyrex container which allows the paraffin to easily hold its temperature, and minimizes the risk of overheating of specimens due to lack of sufficient microwavable load.

97070-10	Cassette Holder and Tray, holds 64 cassettes	each	97071-10	Cassette Holder and Tray, holds 21 cassettes	each
97070-01	Tray only	each	97071-01	Tray only	each
97070-02	Cassette Holder only, holds 64 cassettes	each	97071-02	Cassette Holder, holds 21 cassettes	each

➤ Incubation Tray for Microwave Immunostaining

For immunostaining, we recommend a water load that is the same size as the bottom of the microwave cavity in order not to disturb the distribution of microwave energy within the cavity. In our research, we found that between 150 and 200ml of water in the bottom of the incubation tray prevents evaporation of the droplets of reagent. A PAP pen should be used to maintain the droplets at a uniform size and shape.

97060	Microwave Incubation Tray for Immunostaining	each
--------------	--	------

➤ Micro Tube Rack- Microwaveable

Polypropylene floating racks keep microtubes submerged in a water bath – perfect for controlling sample temperature. Detachable legs give the users more options: attach legs so rack stands upright on benchtop, or detach legs so sample tubes can be quickly popped out by pushing down onto any surface.

Ideally to hold microcentrifuge tube in water bath during polymerization, such as LR White®, JB4... These racks are not autoclavable. Measures: 60 mm high, including legs.

EMS #	Wells	Tubes	Shapes/Color	Qty

72372-R20	20	1.5/2.0 ml	Round (98 mm) White	each

► The EMS 9000 Precision Pulsed Laboratory Microwave Oven

The EMS 9000 Laboratory Microwave Oven represents a state-of-the-art solution for performing many of the steps in sample preparation prior to either light or electron microscopy. Procedures such as fixation, staining, dehydration, decalcification, impregnation, polymerization as well as immunohisto and cytochemistry can be done with ease in the EMS 9000.

The EMS 9000 offers a significant reduction in processing times while obtaining improved results.

Features:

- 900 watt nominal output with variable wattage
- Bubble manifold for 5 tubes
- Forced exhaust system with fail-safe interlock
- Adjustable duty cycle—one second and greater for very precise process control
- Magnetron pre-warming
- Right side closet
- Vacuum system for rapid infiltration (optional)
- Load cooler/circulation system (optional)
- Three different timer modes
- Multiple safety interlocks
- Visual and aural warnings on errors and malfunctions
- All controls are automated
- Flexible temperature probe

Advantages of the EMS 9000 Precision Pulsed Laboratory Microwave Oven.

- Ease of use: User-friendly touch keypad to set and store all parameters-programmable
- Multiple running modes
- Multiple bubble mixing (5 ports)
- Adjustable temperature probe
- Ventilation
- Optional vacuum cycling for rapid infiltration
- Optional Load cooler
- Safety exhaust fans with fail safe interlock
- Integrated on board digital controller

Includes:

- 8' Ventilation Hose
- User's Manual
- Microwave Companion
- Processor Tray
- Vacuum Processor Bowl (when ordering the unit with Vacuum option)
- Vacuum Processor Cover (when ordering the unit with Vacuum option)
- 74 Position Cassette Basket Set
- (2) Histoprocessing Bowls
- (2) Microwave Transparent Containers
- Polar Heat Sample Pack
- Preserve Solution

For Optimum Results

The EMS 9000 features a touch pad keyboard that allows for all settings to be programmed quickly and easily. With a very well defined adjustable effect, accurate temperature control, well ventilated chamber, and three different timing modes, the EMS 9000 is the most advanced microwave processor available today.

For Temperature Control

Our temperature control not only prevents the tissue in the chamber from becoming denatured (by high temperature) but it also assists in pulsing the microwave effect in small precise portions. The temperature control has a direct effect on the magnetron for it allows the unit to switch on and off in the most efficient way at the preset effect level. The temperature probe is mounted on a ball swivel that allows for easy placement of the probe within the microwave chamber. In addition, the probe is made from stainless steel and it is quite flexible so that it may be bent and formed as required to place it in various shaped containers. The temperature sensor is located at the tip of the probe.

Adjustable Set Effect

The set effect is adjustable at anytime either before or during a run. This aids in the balance of the microwave load and the content of the microwave absorber. It should be noted that the penetration rate and process times are influenced by the presence of microwave radiation in the chamber and for this reason it is imperative that the effect rate be adjustable. The unit allows for preset parameters, which are stored in the EMS 9000 memory and are called upon to perform particular processes automatically.

Bubble Mixing from up to 5 Tubes

Inside the chamber there is a manifold for up to 5 tubes that allows you to achieve bubble mixing in from one to five containers at the same time. There is a built in air pump that facilitates the mixing and avoids temperature gradients in the mixing process. These adjustable bubble mixers make the EMS 9000 ideal for decalcification.

Our unit is so versatile that you have the option to run it in three different modes depending on your application.

1. Dual mode

a.) Time at temperature—The timer starts after the selectable threshold temperature is reached.

The timer measures the time of the process at the set point temperature

b.) Total time—The timer starts upon entry into "run" state and measures the total time of the process including the ramp-up time.

2. Extended timer range of 99 hours: 59 minutes: 59 seconds

3. Count up and count down timing

The EMS 9000 processor has two microwave power control modes.

■ **Temperature**—Under the temperature control, the power is adjusted in a closed loop fashion to obtain a particular temperature profile.

■ **Power**—Under power control, the power is adjusted in a fashion that ignores the process temperature as a control factor. In both of the control methods power output is pulsed with a one second cycle time. However, because the EMS9000 can supply power pulses as short as 120 milliseconds, the power output can be finely tuned to provide excellent control in both modes.

► The EMS 9000 Precision Pulsed Laboratory Microwave Oven (continued)

The system has many unique safety features that make the EMS 9000 the safest unit on the market!

The on-board screen will caution and shut down the system if there is high probe temperature, system over temperature; keyboard error; inoperative vent or low probe temperature.

The oven chamber is made entirely of stainless steel and is very easy to clean .It is extremely resistant to all staining solutions and solvents. The floor of the unit is ceramic which serves as a thermal insulator and will not absorb microwaves and it is completely chemical resistant.

The EMS 9000 is designed for easy operation and maintenance. All of the controls can be set with one hand and are easily accessible allowing for changes at anytime.

The unit has a built-in reflector inside the chamber that evenly distributes the microwaves and prevents "hot spots" from forming even for very small volumes.

Specifications

Microwave Output:	825 W
Effect Range:	0-100%
Temperature Range:	0-120°C
Temperature Accuracy:	Timer error: <0.1% in all modes
Temperature Readout Update Rate:	once/sec
Temperature Readout Accuracy:	<0.5°C
Power Control Accuracy:	error <1%
Air Agitation:	Total air agitator flow is 1 liter per minute nominal
Internal Lighting:	Chamber Lighting available at all times via keyboard switch (40 watt incandescent lamp)
Fluid Ports:	2 ports supplied as a standard - accepts up to 3/16" hose.
Pulse Length:	1 second
Timer Value:	0-99:59:59
Vent System:	Vent fan rated at 106 CFM nominal
Input Power:	15A at 120 Volts nominal 10A at 230 Volts nominal
System Dimensions:	19"High x 21.5"Wide x 24.5"Diameter (48.3cm x 54.6cm x 62.2cm)
Microwave Chamber:	9.5" High x 13.5" Wide x 15.5" Diameter (24.1cm x 34.3cm x 39.4cm)
Weight:	70 pounds
Continuous Run:	Timer override works as a count up timer for an indefinite period of time.

Safety Interlocks:

- * Vent interlock inhibits operation unless vent airflow is normal
 - * Primary Door Interlock
 - * Secondary Door Interlock
 - * Monitor Switch - Short circuit of the magnetron when door is open
 - * Oven temperature Switch
- 100, 120, 230 volt models FCC approved, CSA NRTL approved.

--------------	--	------

Optional Accessories

► **EMS 9000 Processing Chamber: An EMS Exclusive**

Microwave processing tissues for electron microscopy can yield inconsistent results caused by different microwave distribution patterns within the microwaves chamber. Exact, consistent placement of samples within the chamber is key to achieving uniform results. After two years of development and testing at a leading University Hospital, Electron Microscopy Sciences is proud to introduce the MPC 9000. The MPC 9000 developed only for our use in our top-of-the-line EMS 9000 laboratory microwave processor, hits the target that every laboratory needs: consistent processing, vacuum infiltration, and quick specimen turnaround.

Sturdy, heat & chemical resistant guide allows exact placement of processing chamber every time.

Lynx I specimen vial are locked in and tip-proof during processing. That's the specimen basket it holder assembly in the rear vial.

Features:

- **Sturdy heat and chemical resistant guide frame.**
- **Uses standard EMS Lynx I & II specimen handling technology**
- **Two tip-proof processing stations for disposable processing vials.**
- **A wide range of processing baskets configurations available.**
- **Feed-through for process temperature probe placement while under vacuum.**
- **Low maintenance chamber disassembles for easy cleaning.**

User may mix and match the basket configuration to match the workload

Using a Neon Bulb Array

EMS Catalog #97036-01, see page 991

The Neon Bulb Array is a tool which helps you to locate power peaks in your microwave oven. It shows you where to place your samples in the microwave, therefore, improving the reproducibility of your results.

Procedure

- Take two photocopies of Figure 1. Be sure the number and position of circles on your drawing match your Neon Bulb Array. You will chart illuminating patterns on these maps.
- Place the Neon Bulb Array on the floor of the microwave oven. Place the corner with the dot against the oven's left, rear corner.
- Close the oven door. Program the oven to irradiate at 100% power for 30 seconds. Press start.
- Observe the illumination pattern of the bulbs in the left, rear quadrant of the Neon Bulb Array. On the drawing mark an "X" on each bulb that is continuously lit.
- Let the bulbs cool for two minutes. Do not remove the Neon Bulb Array.
- Repeat steps 3 through 5 three more times, one for each of the remaining quadrants.

- Place a beaker with 200 ml of room-temperature water in the right, rear corner of the oven. If necessary, remove enough bulbs from the Neon Bulb Array to make room for the beaker of water to sit on the mat.
- Repeat steps 3 through 5 one time for each of the four quadrants of the array. Compare the illumination patterns of each map. Place the maps in your notebook.

Expected Observations

When the microwave oven contains only the Neon Bulb Array, most of the neon bulbs will remain continuously lit. With the beaker of water in the oven, the pattern of bulb illumination will change dramatically. Few bulbs will be lit; those that light up may flicker.

Precautions

- Do not irradiate the neon bulbs for more than 1 minute. They will become too hot to handle.
- Do not place the beaker of water on top of the bulbs. The bulbs may break and the water may spill. Instead, remove some bulbs to make room for the water load.

Lynx II Automated Tissue Processor for Histology and Microscopy

EMS is proud to announce the release of the most unique state-of-the-art tissue processor which not only is compatible with all plastic resins but paraffin waxes as well.

Introduction:

LYNX II is designed to be the successor of the Lynx Tissue Processor with several enhancements including capabilities to perform optional processing of larger size samples for Histology.

The LYNX II holds 24 reagent vials for EM processing. Optional HP (Histology processing) may be done with 12 larger size reagent vials for HP processing. In both EM and HP modes, LYNX II has two independently controlled heating/cooling stations.

Operational Overview of LYNX II:

LYNX II is a batch mode, tissue processing system. The tissues may be processed for EM or HP. Tissues of either type are processed in the same manner: Samples are mounted on the sample arm and reagents are loaded on the reagent carousel. Based on the program selected by the user, the LYNX II rotates the reagent carousel until the selected reagent station is at the processing station. At the processing station the sample is lowered into the reagent. Based on the selection of agitation and vacuum, the LYNX II periodically moves the sample arm to provide agitation and applies vacuum when the agitation is not in progress. Once the programmed time in a given reagent is over, the sample is raised and the next reagent is rotated in the processing station.

The operator may select the processing for EM or HP by the program numbers. Programs 1 through 10 are used for EM processing and programs 11-20 are used for HP processing. In addition to the proper program number selection, it is the responsibility of the end user to use the proper carousel positions and the appropriate type of reagent vials based on the selection of EM vs. HP processing. Once the unit is properly configured for EM or HP processing, the operator loads the reagent carousel and the samples, selects the desired program and starts the run.

At the end of the run, the sample is retained in the last reagent until the operator removes the sample.

Features:

Number of reagent vials for HP processing	12
Number of reagent vials for EM processing	24
Volume of reagent in EM reagent vial	25 ml
Volume of reagent in HP reagent vial	125 ml
Number of Programs	20 (10 for EM and 10 for Histology)

- Two independently controlled heating/cooling stations
- Easy replacement of reagent carousel
- Paraffin Processing
- Sample agitation
- Vacuum infiltration during processing
- Choice of plastic and metal containers for improved chemical compatibility and heat transfer
- Built-in fume extraction and ability to connect the discharge hose to lab exhaust system
- Optional external media based interface to a PC for ease of programming and allowing for the editing of programs on a PC and the transfer of programs between the LYNX II and the PC
- Internal battery back-up during power fail to protect samples
- Ability to continue run after power interruption
- User Friendly Operator Interface
- Optional external UPS for continued processing during longer power outages

Functional Specifications:

System Configuration:

1. LYNX II is designed with the following functional modules.

- Rotary mechanism to rotate the reagents
- EM and HP reagent carousel
- Up/Down mechanism to move the sample in and out of the reagent as well as to provide the agitation
- EM and HP Sample arms
- Tight seal for all reagent containers except for the one at the processing station.
- Vacuum pump and a pressure sensor or a switch
- Two Peltier operated heating/cooling stations with independent temperature sensors and controls
- Fume extraction fan and air flow sensor

2. Reagent Carousel:

A reagent carousel may be installed, either a 24-position carousel for holding EM reagents or a 12-position carousel for holding HP reagents. The EM carousel holds cylindrical vials that are approx. 1.2" in diameter and 2.5" tall, whereas HP vials are approx. 2.2" diameter (to hold 1.75" x 1.2" cassette flat) and 2.5" tall.

The carousel is approx. 12" in diameter. Each vial has a flange for ease of handling. The vials are available in either plastic or aluminum. The vials may be mixed and matched between the metal and the plastic vials on a given carousel for certain kinds of processing.

The LYNX II has a built in sensor to detect that the proper reagent vial types (EM vs. HP) are installed on the unit before starting a run. Ability to detect only one of the two vial types is sufficient.

3. Sample Arm:

The sample arm holds either an EM sample holder assembly or an HP sample holder assembly. Each sample holder assembly is designed to mount on the arm at a location to center the samples in its respective reagent container. The Sample Arm top may be changed to accommodate different samples.

4. Agitation and Vacuum:

The arm provides a gentle agitation (approx. 5 mm up and down travel at a rate of 2.5 mm per second or one up/down agitation per second) once the sample is in the reagent container. Five agitation strokes are executed in 5 seconds and repeated every 45 seconds. If vacuum infiltration is selected, the agitation will be applied for 5 seconds followed by 40 seconds of vacuum. These agitation-only or the agitation-vacuum cycles will be repeated for the duration of the station time.

The sample holder assembly has a fitting to attach the vacuum hose from the vacuum pump.

Lynx II Automated Tissue Processor for Histology and Microscopy (continued)

5. Heating-Cooling Stations:

The LYNX II provides 2 independent, identical heating-cooling stations (HCS). Each HCS is heated or cooled by a Peltier module and has its own temperature sensor. One HCS is located at the sample processing station and the second one is located one position prior to the sample processing station. This arrangement allows for the pre-heating or pre-cooling of the reagent for a program where the reagents are arranged in a sequential, contiguous manner.

Each HCS can be programmed to be between 4 deg. C and 65 deg. C. The accuracy of the actual temperature will be +/- 2 deg. C measured on the surface of the Heating - Cooling station. The set point at the HCS surface is reached within 7 minutes of the arrival of the reagent at the station.

6. Fume Control:

LYNX II provides a fume extraction fan to direct fumes from the reagent/sample area to an exhaust port. An external hose may be connected to the unit and the hose may be directed to a fume hood or to a laboratory exhaust system. The fume extraction is designed to ensure that the fumes are diverted away from electronics and the mechanism components.

7. Lid/Cover:

An acrylic cover with a latch is part of the fume control system. The controller of the system can detect if the cover is latched or not. By default, a run cannot be started (and will pause) if the cover is not in place. However, there is a software override will allow for the running of the unit without closing the cover.

8. Seal for Reagent Vials:

A tight seal is provided to cover all reagent vials except for the one under the processing station.

Reagents Used:

Materials for various components and subsystems of LYNX II are compatible with the following reagents during processing.

HP Processing

- Formalin
- Alcohol
- Xylene
- Xylene Substitutes
- Water
- Paraffin
- 10% Bleach Solution
(to wipe clean the system)

EM Processing

- Buffers
- Osmium Tetroxide
- Ethyl Alcohol
- Acetone
- Propylene Oxide
- Epoxy/Acrylic Resins

9. Operation During Power Outage:

The LYNX II contains a small internal battery capable of moving the sample from up position to down position and the carousel to the next reagent position at least three times without being re-charged, to preserve the sample during a power outage.

When the electronics in LYNX II detects that the A/C power is about to fail, the LYNX II will shut down the power to the Peltier elements at both heating/cooling stations. Next, it will ensure that the samples are down in a reagent container. If the samples are out of a reagent vial (since LYNX II was just about to rotate the carousel to the next reagent position or was in the middle of the rotation), the carousel will be rotated by one position and then the samples will be lowered in to the reagent at the processing station. The time when the power fail warning was activated will be recorded and the unit will go in the standby mode.

Once the power is restored and is maintained for at least 30 seconds, LYNX II will resume the run. As LYNX II resumes run, the station time countdown does not resume until the heating/cooling stations have reached the desired temperatures. The station time countdown does not begin for additional 60 minutes if the temperature at the processing station or at the previous station was above 55° C during an HP run. This feature ensures that the paraffin at either of the two stations completely melts before moving samples to the next station.

Specifications

Dimensions:

Max Width:	22.5"
Max Depth:	19.0"
Max Height:	12.0" (cover closed)
Max Weight:	50lb (32 kg)

Electrical Design:

Display:	8 lines x 20 column text only LCD
Keypad:	Membrane style keypad with tactile feed back
Mechanism Drive:	Stepper Motors

Power Requirements:

100 - 115 volts AC, 50-60 Hz, 8 Amps Max.
230 volts AC, 50-60 Hz, 4 Amps Max.
Back-up power: NiCd Battery, 12 volts, 1 Amp-hour

Fuse Rating:

100 - 115 volt version	8 Amps x 250 Volts AC, Time Delayed (Slo-Blo)
230 volt version	5 Amps x 250 Volts AC, Time Delayed (Slo-Blo)

Operating Environmental Conditions:

Ambient Temperature:	15 to 25° C (70 to 90° F)
Relative Humidity:	20-80% non-condensing
Ambient Pressure:	28"-32" (70-80 mm) of Hg

Storage/Transportation Conditions:

Temperature:	10-40° C (50 to 102° F)
Humidity:	15%-80% non-condensing
Pressure:	28"-32" (70-80 mm) of Hg

Lynx II Automated Tissue Processor for Histology and Microscopy *(continued)*

Ordering Information

Lynx II Accessories and Consumables

Cat. #	Description
L12600	Lynx II for Microscopy*
L12601	Lynx II for Histology**
L12610	Histology Kit (Histo Sample Holder, Histo Sample Arm, Histo Carousel, Power Cord, Operator Manual, Histo Aluminum Containers (24), Histo Plastic Containers (36), Plastic Caps (36), Exhaust Hose, Small Cassettes (100), 2 Sample Record Note Pads, Spare Fuses.
L12612	Electron Microscopy Kit (EM Sample Holder, EM Sample Arm, EM Carousel, Loading Jig, Power Cord, Operator Manual, Aluminum Containers (24), Plastic Containers (72), Plastic Caps (72), Exhaust Hose, Small Baskets (100), Large Baskets (100), Basket Lids (100), 2 Sample Record Note Pads, Spare Fuses
L12602	Lynx II for EM and HP Combined***
L12655	EM Reagent Vials, Bag of 72
L12656	EM Regent Vial Cap, Bag of 72
L12657	HP Reagent Vials, Bag of 36
L12658	HP Reagent Vial Cap, Bag of 36
L12659	EM Aluminum Container (Box of 24)
L12660	HP Aluminum Container (Box of 12)
L13154	EM Sample Holder Assembly (Basket Stem Assembly)
L12663	HP Cassette Holder Assembly
L12661	Vacuum Pump Tubing (1 each)
L12662	Vial Seal Assembly
L12937	Rubber Bumpers, 50/pk
L12995	EM Sample Arm Seal
L12996	HP Sample Arm Seal
L12952	EM Carousel (Without Aluminum Containers)
L12953	HP Carousel (Without Aluminum Containers)
L12664	Replacement Back-up Battery
L12665	Lynx II Operator Manual
L12667	Lynx II Service Manual
300.0005	Disposable Basket Lid
300.0002	Disposable Basket Small
300.0041	Specimen Record Pad 3 and 4 Divisions
300.9513	Specimen Record Pad 8 Divisions
300.8041	Exhaust Hose 3 Meter
300.0011	EM Sample Loading Jig (Same as Lynx I)
300.0196	Disposable Basket 8 Segment
300.0003	Disposable Basket Large

*The Lynx II for Microscopy comes with: EM Sample Holder, EM Sample Arm, EM Carousel, Loading Jig, Power Cord, Operator Manual, Aluminum Containers (24), Plastic Containers (72), Plastic Caps (72), Exhaust Hose, Small Baskets (100), Large Baskets (100), Basket Lids (100), 2 Sample Record Note Pads, Spare Fuses.

** The Lynx II for Histology comes with: Histo Sample Holder, Histo Sample Arm, Histo Carousel, Power Cord, Operator Manual, Histo Aluminum Containers (24), Histo Plastic Containers (36), Plastic Caps (36), Exhaust Hose, Small Cassettes (100), 2 Sample Record Note Pads, Spare Fuses.

***The Lynx II for Microscopy and Histology comes with everything found in both units .

All of the above accessories may be purchased separately or in the kit.

Lynx I Accessories and Replacement Parts

Cat. #	Description	
300.0002	Disposable Basket Small	100/pk
300.0003	Disposable Basket, Large	100/pk
300.0005	Disposable Basket, Lid	100/pk
300.0196	Disposable Basket, 8 Segment	100/pk
300.0036	Disposable Vials	100/pk
300.9011	Loading Jig	each
300.9017	Vial Lid Assembly	each
300.9010	Basket Stem & Foot Assembly	each
306.0830	Key	each

300.0041	Specimen Record Pad 3&4 Div.	each
300.8041	Exhaust Hose, 3 meter	each
300.9014	Heater/Cooler	each
300.0140	Disposable Vial Cap	100/pk
300.9023	Vial Retaining Band	each
300.9513	Specimen Record Pad 8 Div	each
User Replaceable Parts		
300.9500	Assembly Heater/Cooler	each
300.0015	Cap (TurnTable Locking)	each
300.0008	Location Pin	each
300.8105	Printer Data Cable	each
300.9100	Starter Kit	each
300.0139	User Manual	each
300.9016	Vial Seal Assembly	each

► Lynx Process Accelerator (LPA) An EMS Exclusive

One of the most time consuming tasks during Paraffin processing is wax infiltration. Not a step to cut corners on unless you want to deal with poorly infiltrated blocks. The Lynx-LPA was designed to allow a greater through-put of specimens without compromising the critical infiltration step. Once your initial tissues reach the first paraffin step you can transfer the cassette holder to the Lynx-Pal for vacuum infiltration while you un-burden the Lynx to start another process cycle.

The LPA has 3 positions to accept three HP cassette holder which conveniently uses the same Aluminum vial as the Lynx processor to contain paraffin. Each Aluminum vial is fitted with a platform to allow the stir-bar to circulate the melted wax.

Processing time can be set between 1 and 180 minutes in variable increments. Temperature can be set between 40 and 65 deg. C in one degree C increments. Temperature is displayed in Deg C as a two digit number without any decimal point. The temperature accuracy at the sensor (and on the display) will be within +/- 2 deg. C. Vacuum off time can be between 0 and 3 minutes in 1 minute increments. Vacuum cycle runs as on time followed by the off time where 0 on time implies that no vacuum is necessary and 0 off time implies that vacuum must be on continuously. During sample processing the vacuum is applied as per on and off time selection. If the processing is paused, the vacuum is released within 15 seconds. At the end of the cycle time, the vacuum continues to be cycled and temperature is held at the desired point.

Specifications:

Number of Paraffin Containers:	3
Temperature Range:	37° C – 75° C
Vacuum On Time:	0:30 To 3:00 (Min:Sec) in 30 second increments
Vacuum Off Time:	0:15 to 2:00 (min:sec) in 15 Second increments
Vacuum:	Preset at factory, 5 (+/- 2) PSI below ambient
Temperature Accuracy:	+/-20C at the sensor at set point
Temperature Offset:	-5 to +50C
Process Time:	0:15 To 3:00 (hour:Min) in 15 minute increments
Stirring:	Magnetic Stir Bar
Input Voltage:	100-230 Volts AC 50/60 Hz
Power :	150 Watts Max

Cat #	Description

► All New-Innovative– State-Of-The-Art Oscillating Tissue Slicers

The EMS Oscillating Tissue Slicers for the most challenging of sectioning with the highest quality. The EMS 4500 and 5000 Oscillating Tissue Slicer represents the most thoughtfully designed solution to sectioning either fixed or fresh tissue, as thin as 5 microns. No longer is there a need for embedding or freezing your sample and preparation time is reduced dramatically. The risk of distortion and artifacts normally associated with these procedures are eliminated. The EMS 4500 and 5000 meets the highest standards for precision and accuracy and it meets or exceeds the performance of units on the market costing twice as much.

► The EMS Tissue Slicer Family

The EMS 5000 series may be used for the sectioning of samples for use in the fields of electrophysiology of fresh tissue, immunocytochemistry and immunohistochemistry, Neurophysiology, Neuropathology, Experimental Biology, Histology, Cytology, Botanical Research, Microscopy, Polymer and Materials Science. The EMS 5000 now features a new innovative design of the slicer head which minimizes Z-Axis vibration. This improvement dramatically improves slice surface integrity and is especially beneficial in the field of fresh tissue where IR/DIC imaging methods are concerned. The unique blade holder has now been modified to accept: razor, sapphire, diamond and glass blades.

To reduce time between slices the EMS 5000 series features a user programmable travel window (cutting window). This allows the sectioning cutting range of the blade to be customized to the specimen sample. This feature of "automatic sectioning" offers a beginning advance and end advance further automating the EMS 5000. In conjunction with our "home button" the programmable window guarantees rapid sectioning of even the largest of specimens. As well, the EMS 5000 allows the sectioning of samples in two different modes. In single slice mode, the unit sections samples and harvests them while the blade repositions itself to perform the next slice and in the multiple slice mode the EMS 5000 will automatically perform multiple uniform slices.

The EMS 5000 series control panel has been totally redesigned to allow for ambidextrous and ergonomic operation. The keypad has been sealed to avoid buffer spill seepage. The tray is made from molded clear polycarbonate for improved viewing of the slicing operation. The tray is removable to facilitate specimen mounting and cleaning. Two white LED's are installed in the blade head, which provide constant cold

illumination of the specimen during the slicing process.

The EMS 5000 series is engineered for maximum stability ensures even the most delicate of tissue to be cut successfully every time. The knife holder allows any blade (as per list) to be secured and the blade angle set from 10- 30 degrees. The specimen mount is x, y, z axis adjustable and the knife advance is continuously adjustable with a touch of the keypad from 0- 5mm/s and the section thickness is now adjustable in 1 micron increments ranging from 1-999 microns. Our precision slicer features automatic touch selection of section thickness, blade speed, advance, and a user-defined travel window so that the consecutive sections may be cut easily and rapidly. Other EMS 5000 features include: Touch pad control of the blade height, slice counter / slice thickness, precise bar graph displays of blade oscillation and advance speeds. Blade oscillation is adjustable from 50-5000 cycles/minute and advance speed is adjustable continuously from 100 microns -5mm/sec.

Our EMS 5000 series is designed for easy operation and maintenance. The specimen collecting tray is removable and easy to clean. All controls may be set with one hand with options for multiple slicing modes.

The unit comes complete with gooseneck magnifying lens, media tray (2.5" wide) and pedestal, specimen vice holder, blocks, as well as a foot switch with 6' cable. A large tray (3.5" wide) is available as an option and comes complete with fixed stage and adjustable pedestals.

The tissue pedestal with pivotal pin (included with media tray), allows for the mounting of a specimen directly to the pedestal and the ability to change the angle of your specimen relative to the blade, offering you perfect specimen orientation. The sample vice with pivotal pins (also included in package) allows for the adherence of your specimen directly to a mounting block.

Updates and Advantages of the EMS 5000 Series

- Cutting window for automatic sectioning allows for faster and more reliable sectioning.
- Control pad with membrane buttons is now separated from the slicer module improving ergonomics and reducing buffer spillage from contaminating the controls.
- X,Y, and Z – 3 axis adjustable specimen mount.
- Easy to release slicer head for safety and ease of specimen mounting.
- Slice thickness is now adjustable from 1-999 in 1 micron steps.
- One touch "home" button to return the blade arm to a predetermined point near the specimen.
- The specimen tray is made from a clear polycarbonate for improved viewing of the slice operation. No worry of leakage and section visualization in easy.
- The pivot pins which come as a standard on the pedestal as well as the vice holder allow changing of the angle of the pedestal relative to the blade. Easy sample orientation in all directions.
- The tray includes a lock on feature for a more secure mount to the platform.
- The standard unit comes complete with our unique pivotal tissue pedestal (you can mount the specimen directly on the pedestal without the need for vices or blocks mounted in the sample tray)

➤ **The EMS 4500 Tissue Slicer**

The EMS 4500 Tissue Slicer is a scaled down version of the EMS 5000. All of the specifications of the EMS 5000 are the same for the EMS 4500. The only difference between the two units are as follows:

The EMS 4500 does not include:

Functional Features	Accessories
1. Adjustable window	1. Foot Switch
2. Multi-Slice function	2. Tissue Blocks
3. Home functionality	3. Vice Holder

The EMS 4500 can be upgraded to the complete EMS 5000 unit at any time.

➤ **The EMS 5000 Refrigerated Controller and Tray**

The EMS 5000 Refrigerated Controller and Tray provide refrigeration capabilities to the Tissue Slicer. The controller three digit LED displays the current temperature of the bath medium in degrees C. The temperature is maintained within 0.5oC. The temperature range on the unit is between 0-10oC.

The refrigerated tray is fitted with a peltier heat exchange unit. A cold water source is circulated through the assembly to transfer heat. The tubing is connected to the tray with quick connect fittings. No tools are necessary for installation. The fittings are self sealing to prevent leaking during installation. The tray fits directly to the mounting platform of the EMS 5000.

Features:

- Control pad with membrane buttons separated from the slicer module to improve ergonomics, reduce “handedness”, and isolate switches from bath solutions.
- New slicer head design increases blade motion stability and minimizes vibration that causes tissue distortion.

- Slice thickness from 0 to 999 microns, set in 1 micron increments. Push button advance; digital display of status.
- Easy release slicer head facilitates safe, easy specimen mounting as well as easy cleaning.
- Ultra light blade oscillation mechanism
- Accepts metal, glass, diamond and sapphire blades
- 3 axis adjustable specimen mount (X,Y,Z).
- User defined “travel window” reduces blade travel time between slices.
- User selectable slicing modes for “hands-free” performance of many slices.
- Slice counter/Slice thickness display
- Precise bar graph displays of blade oscillation and advance speeds.
- Consistent live tissue slices of 10 microns achieved.
- Adjustable/Removable magnifier lens X2-Swings away when not in use.
- White LED’s mounted to knife holder for constant, direct, cold source illumination during slicing.
- Blade mechanism above bath simplifies maintenance; easy to clean removable tray.
- Mounting of the specimen can be done directly on our unique tissue pedestal (with the option of using the pivot pin [see diagram 1] or just setting the pedestal flat on the bottom of the tray on a 90o angle [see diagram 2] in addition a sample vice holder, with pivot pin can be attached to the tray and mounting blocks used [see diagram 3] – both devices come standard with unit).
- Adjustable knife angle indicator is built into the arm of the unit.

1. Slice Counter/ Thickness

Displays a count of the number of slices from a user defined zero reference. When prompted, displays the slice thickness setting in microns.

2. Oscillation

Displays the speed of the blade oscillation in bar graph form. Each line of the graph represents a speed.

3. Advance

Displays the speed of the blade advance in bar graph form. Each line of the graph represents a speed.

4. Refrigeration Controller

5. Tray

Electron Microscopy Sciences is committed to offering you the most up-to-date equipment on the market. For this reason if you would like to see us implement any changes to our Tissue Slicers or any of the products that we sell please let us know. All ideas and suggestions are encouraged and we look forward to hearing from you.

► The EMS 5000 Refrigerated Controller and Tray (continued from p. 687)

Specifications: 5000 Series

Vertical travel	28mm
Slice Thickness:	Adjustable from 1 to 999 microns in 1 micron increments
Blade Speed	Adjustable from 50- 5000 cycles per minute
Blade Angle Adjustment	Adjustable from 15 to 35degrees
Blade Travel	35mm total
Blade Advance Speed	Continuously adjustable from 100 microns-5mm per second
Blade Types	Sapphire, Razor, Diamond, Glass
Blade Reverse Speed	2.5mm per second
Specimen Size	25mm Wide x 25mm Diameter x 15mm High maximum volume
Magnifier	4" diameter, X2 lens mounted on 12" (30cm) gooseneck, 9" working distance
Lighted	White LED's mounted on the knife holder aimed at blade edge.
Dimensions	Slicer: 27cmx40cmx21.5cm (10.5"x16 x7.5") Keypad: 17cm x 8.5cm x 3.4cm (6.7" x 3.4" x 1.35")
Weight	13kg (30 lbs)
Power Requirements	110-240VAC, 50-60Hz universal power input. Available with CE Mark
Display	3 segment LED display of slice counter and thickness. (Changes with appropriate buttons) 20 segment LED's bar graph display blade oscillation and advance speed.
Specimen Mount	X, Y, Z axis adjustable pedestal: 1¼" x 2½"
Working Space Requirements	12" Wide x 18" Diameter x10" High) (30cm x 45cm x 25cm)
Mounting Blocks	½ x ½ x ½" (3 each) /1 x 1 x 1" (3 each)

Specifications: 5000 Series Refrigeration Controller and Tray

Temperature Control Range	0° — 10°C
Temperature Indication	3 digit LED display indicates temperature in 0.1oC with a negative sign indicator.
Power Requirements	115/230V AC 50-60 Hz auto ranging fused at 1 amp max current
Dimensions	Control Module: 8.25 x 6.25 x 5.5" (20.9cm x 15.9cm x 13.9cm) Cooling Tray: 4.25 x 3.5 x 2.625" (10.8cm x 8.9cm x 6.7cm) with a 3' cable (91.4cm)

Control Keypad

Blade Position

Forward: Moves the blade arm forward at the set advance speed. Press once to begin movement, again to stop.

Reverse: Moves the blade arm back at the maximum travel speed. Press once to begin movement, again to stop.

Up: Moves the blade arm up. Momentarily pressing the button moves the blade arm the set thickness amount. Pressing the button for longer than one second moves the blade at the fastest travel speed.

Down: Moves the blade arm down. Momentarily pressing the button moves the blade arm the set thickness amount. Pressing the button for longer than one second moves the blade at the fastest travel speed.

Speed

Oscillation: Pressing these buttons increments (+) and decrements (-) the blade oscillation speed.

Advance: Pressing these buttons increments(+) and decrements (-) the blade arm advance speed.

Thickness

Pressing these buttons adjusts the slice thickness. Pressing momentarily changes the setting in 1 micron increments. Holding for longer than 1 second causes 10 micron changes.

Travel Window

Reverse Limit: Pressing this button sets the position for the blade arm to start the slice process. The limit can be changed using the blade position buttons at any time to override the limit. Pressing this button again will set the new limit.

Forward Limit: Pressing this button sets the position for the blade arm to stop and return to the reverse limit. The limit can be changed using the blade position buttons at any time to override the limit. Pressing this button again will set the new limit.

Multiple Slice

Start/Stop: Pressing this button starts the process of automatically slicing. Pressing this button once will begin the blade arm moving forward. It will continue until it reaches a forward limit (travel window or mechanical) stop, return to the reverse limit, step down the selected thickness, and begin another slice. Pressing this button during this process will cause the arm to stop and wait for a command. The multiple slice process will continue until the lowest mechanical limit is reached. It will then automatically return to the home position (full up and back).

Zero

Pressing this button resets the slice counter display to read all "0".

Home

Pressing this button at any time will cause the blade to return to the home position.

Different Mounting Options

Mounting of the specimens can be done directly on our unique tissue pedestal with the option of using the pivot pin (see diagram1) or just setting the pedestal flat on the bottom of the tray on a 90° angle (see diagram2). In addition, a sample vice holder, with pivot pin can be attached to the tray and mounting blocks used (see diagram3). Both devices come standard with the EMS 5000.

The cutting angle can be easily changed and calibrated by loosening the set screw on top of the support arm. The angles between 10-20o can be read off the scale on the side of the support arm.

Diagram 1

Standard Pivoting Tissue Pedestal

The pivot pedestal arrangement is designed so that the sample can be glued directly to the surface and the angle of the sample can be adjusted relative to the blade.

Diagram 2

Standard Tissue Pedestal

This is the same pedestal as in diagram one; however you have the option to mount the pedestal flush to the base on a 90o angle

Diagram 3

Sample Vice Holder

The sample vice which is provided with the system can be easily alternated with the pedestal. 1.2cm square mounting blocks (provided with the system) or the other pegs are held by the vice clamp.

Ordering Information:

93200	EMS 4500 Oscillating Tissue Slicer with: 2.5" wide media tray with pedestal, Razor Blades (25/pk), Gooseneck Magnifying Lens LED Lights, Adhesive, 1/16" hex key for blade angle adjustment and OperatingInstructions, 110V-240V.	each
93205	EMS 5000 Oscillating Tissue Slicer with: 2.5" wide media tray with pedestal, Specimen Vice Holder for 2.5" tray, Razor Blades (25/pk), Anodized Aluminum Blocks-Both Sizes (3/pk), Foot Switch with 6' Cable, Gooseneck Magnifying Lens LED Lights, Adhesive, 1/16" hex key for blade angle adjustment and Operating Instructions, 110V-240V.	each
93226	EMS 5000 Control Module and Refrigeration tray	each
93220	EMS 5000 With Refrigeration including 2.5" wide media tray with pedestal, Specimen Vice Holder for 2.5" tray, Razor Blades Anodized (25/pk), Aluminum Blocks-Both Sizes (3/pk), Foot Switch with 6' Cable, Gooseneck Magnifying Lens LED Lights, Adhesive, 1/16" hex key for blade angle adjustment and Operating Instructions, 110V-240V.	each

Replacement Parts:		Qty/pk
93020	General Purpose Razor Blades	25/pk
93211	Specimen Vice for Standard Tray	each
93050	Tray-Complete including Fixed Stage and Adjustable Pedestal	each
93401	Standard (2.5") Tray	each
93030-C	Pedestal Assembly	each
93402	Large Tray Only	each
93404	Fixed Stage Pedestal for Large Tray, Complete Assembly	each
93030	Surface for Standard Tray Pedestal	each
72588	Specimen Adhesive	5/pk
93034	Mounting Blocks 1/2"	3/pk
93035	Mounting Blocks 1"	3/pk
93036	Magnifier	each
93037	Foot Switch	each

Optional Accessories:

93039	Glass Blade Holder	each
93041	Sapphire Blade Holder	each
93060	Sapphire Blade	each

► Slicer Kit

To make your job easier we have put together a kit of accessories that will assist you when using our Oscillating Tissue Slicer.

Complete Kit includes: Sable brush, Parafilm 4x250', Quick Bond (5 tubes/pk), Kimwipes, Set of tweezers (#5, #6, #7) Fontax, Specimen forceps (4", 6"), Sample specimen bottle with cap-8ml (6per pack), Glass Microbeakers 5 ml (6 per pack), Glass Microbeakers 7.5 ml (6 per pack). -All items in the kit can be purchased separately.

93040	Slicer Kit	kit

► EMS 4000 Replacement Parts

93030-C-4000-P	2.5" Tray and Pedestal Assembly	each
93401-4000	Standard (2.5") Tray	each
93030-C-4000	Small Pedestal Complete Assembly	each
93050	Large Tray with pedestal	each
93030-4000	Standard Pedestal Surface Only	each
93031	Large Pedestal Surface Only	each
93034	Anodized Al Mounting Blocks 1/2"	3/pk
93035	Anodized Al Mounting Blocks 1"	3/pk
93037	Foot Switch	each
93031-C	Pedestal for Large Tray, Complete Assembly	each
93026	Light Bulb	each
93020	General Purpose Razor Blades	25/pk

Recommended Accessories

93038	Glass Knife Holder: Allows you to reproducibly cut fresh (10µm sections) and fixed tissue. This holder attaches directly to the unit and will accommodate 6.4mm x25mm glass knives.	each
71016	Histology Glass Knife Strips; (6.4mmx25mmx400m) 30 per pack. Saver.	each
93050	Large Media Tray with Pedestal. 95 x 25 x 73mm (internal dimensions).	each

Top-of-the-range, high precision, vibrating microtomes...the finest slicers in the world for all specimen preparation.

► 7000smz-2, 5100mz, and 5100mz-plus Vibrating Microtomes

The 7000smz-2 unit with a z-axis deflection of Sub-Micron and a blade advance controllable to 10 microns/second. The 5100mz-Plus and 5100mz are very competitively priced high precision units with a z-axis deflection of only 1-2 microns and a blade advance controllable to 10 microns/sec. On all units the section thickness step size is 0.001mm. The 7000smz-2 and 5100mz-Plus are supplied with their own z-axis calibration verifier.

All types of sectioning is possible including sectioning for visual patching of neurological tissue, heart, and lung, and much more....

The effect of excessive Z-axis deflection on the health and viability of the tissue preparation has been much discussed since the publication of Jonas et al (2003) and the 7000smz-2 will now deliver perfect sections every time with sub-micron Z axis deflection across a wide range of vibration speeds and amplitudes. The affordable 5100mz-Plus offers almost the same features with Z-axis deflection of 1-2 microns at all vibration speeds and amplitudes, which is less than most other microtomes on the market.

The all-new user interface is both easy to use and versatile. The 7000smz-2 and both 5100mz models offer similar operation at the press of a button. The versatility includes simple operation at the push of a button or a range of changeable and programmable parameters and a menu enables the settings of your own preferences.

The 7000smz-2 also gives you longevity of performance, in other words it not only gives submicron performance out-of-the-box but the advance vibrating mechanism does not contain bearings and other components subject to wear. Consequently it will retain the sub-micron Z-axis deflection performance for years to come, giving you consistency in your biological preparation.

Tissue cooling is accomplished by the use of either an ice-water bath or an electronically controlled thermo-electric cooler. Other options include a LED cold light source and a magnifier or a stereoscope for clear observation whilst slicing.

FEATURES AT A GLANCE

7000smz-2:

- Includes a z-axis calibration unit
- Z-axis blade adjust minimizer
- Blade holder angle to user requirement
- Set start and stop position from blade travel.
- Vibration speeds from 50 to 120 Hz
- Amplitudes from 0.5mm to 2.5mm
- Controlled blade advance at 10microns per sec
- "Auto" programming by storage of the first slicing
- Ice water bath easily removed for cleaning
- Optional LED light and scope for clear observation

5100mz-Plus and 5100mz:

- Includes the Z-axis calibration unit (5100mz-Plus only)
- Vibration frequency from 50 to 80 Hz
- Adjustable amplitude from 0.5mm to 1.5mm
- Fine control of the blade advance (min. 0.1 mm/sec)
- Set start and finish position of blade travel
- Remote controls allowing for sterile use in culture hood
- Ice water bath easily removed for cleaning
- Optional cold light and magnifier for clear observation
- Optional Peltier cooled bath

The New 5100mz series Vibrating Microtomes share the User interface with the premium 7000smz-2, placing a wide range of adjustable parameters at the user's fingertips. Use in fully manual or the semi-automated "Slice window" mode which automatically remembers the start and finish position of the slice.

Model 5100mz-Plus

The 5100-Plus is perfect for those who need to keep slices viable for longer e.g. for electrophysiological field recordings. The user can calibrate the Z-axis deflection of the blade to 2 μ m with the adjustable blade holder and "Optical" Calibration device. Minimal Z-axis deflection reduces the "chatter" and minimises damage to the slice surface, leading to greater viability of the cells on the slice surface.

Model 5100mz

The 5100mz is a very competitively priced, high precision, vibrating microtome which shares many features with the top of the range 7000smz series, such as the vibrating mechanism, the inner and outer tissue baths and the easy to use control system.

5100 Series: Control box on umbilical cord ideal for operation in an isolated environment

This New entry-level Microtome is perfect for techniques such as histology, organotypic slice culture and low resolution imaging with a fixed blade holder and a mechanism Z axis error of \approx 5-8 μ m.

Options

Temperature Controlled Standard Tissue Bath

Model 7610

Product Description

The 7610-A Tissue Bath Cooler Unit is intended for use with our 7000 and 5000 range of vibrating microtomes. Unfixed brain slices sectioned at 4°C give better tissue preservation and are viable for longer in-vitro recordings. Additionally, some enzyme histochemical techniques give better staining results when sectioned at low temperatures.

The 7610 Series coolers use "Peltier" thermoelectric elements. The stainless steel tissue bath and mount are detachable to allow sterilisation by autoclave if required.

The equipment comprises of a mains operated control unit, cooling element, tissue bath and specimen holder. The control unit houses a power supply and temperature control circuitry. The cooling element assembly consists of thermoelectric "Peltier" elements, temperature feedback sensors and a cold water fed heat exchanger. Current from the power supply flows through the thermoelectric elements, which act as heat transfer units. Heat is drawn off, cooling the solution in the tissue bath. The heat generated by this process is removed by the water supply fed through the heat exchanger. The unit uses a proportional temperature control algorithm to maintain temperature stability. This will hold the bath temperature to within 0.5°C of the temperature set point. There will, however, be a small variation in temperature vertically through the bath. Experience will show the best temperature to be set for any given requirement and ambient temperature.

Product Specifications

Display Resolution:.....0.1°C	Voltage Requirements:230V 50Hz or 115V 60Hz
Temperature Accuracy:+/- .5°C	Power Rating:.....60W
*Temperature Range:.....+8°C to 0°C	Inlet Fuse Rating:2A

**Note that the actual temperatures achievable will be dependent upon the solutions used and local temperature conditions*

Tissue Bath mount

Integrally Mounted Magnifying Glass

Model 7000-1-3

Product Description

For general global slices a magnifying glass offering approx 2x magnification is sufficient. However, if specific loci are under study then an inspection microscope is desirable. The binocular inspection microscope with 10x-40x magnification, a zoom of 1x-4x and a working distance of 80mm is ideal for the task.

Product Features

- 115mm Diameter
- 305mm Focal Length
- 2x Magnification

Integrally Mounted Inspection Microscope

Model 7000-1-1
(x20-x40)

Model 7000-1-2
(x5 and x10)

Integrally Mounted Cold Light Source

Model 7000-2-1

Product Description

To facilitate the careful slicing operation, it is most important that the progress of the blade through the tissue be clearly observed. This observation is used to ensure control of the speed of advance and of the oscillation of the blade. Two elements are required for clear observation, light and magnification.

Product Features

- Ability to direct the light where needed with two flexible fiber optic light guides.
- Maintains temperature stability of the tissue or surrounding a.c.s.f.
- Light Intensity is adjustable by a rotary dial knob.
- 20W/12V Halogen lamp
- 2000 hour life approx.
- Fan and electronic power supply
- Adjustable with potentiometer
- Twin 500mm fiber optic light guides

Integrally Mounted Cold Light Source and Magnifying Glass

Model 5100-1-3

Product Description

A magnifying glass for general global slices offering approximately 1.5x magnification. Integral cold light powered directly via the Model 5100mz Vibrating Microtome.

Upgrade Kit for 5100mz

Model 5100-1-45

Optional kit to upgrade the 5100mz to the 5100mz-Plus. Allowing the user to optimally calibrate the Z-axis deflection of the blade to 2± 0.1 µm.

5100-1-45 Upgrade Kit for 5100mz each

Specifications

	7000smz-2	5100mz
Section thickness step size	1 μ m	1 μ m
Vertical (Z-axis) calibration device	'Opti-cal' included as standard	'Opti-cal' optional extra
<i>Campden's 'Opti-cal' is calibrated with metrology equipment traceable to National Standards</i>		
Vertical (Z-Axis) Deflection (Calibration)	Sub- μ m ($\pm 0.1 \mu$ m)	$\approx 5-8 \mu$ m (2.0μ m ± 0.1 with calibration upgrade kit)
Max specimen size	33*50*19	33*50*19
Maximum (vertical) travel of bath table	19 mm	19 mm
Memory to store section thickness	Yes	Yes
Multiple user settings	8 different	8 different
Cutting head advance speed, while slicing	From a minimum of -1.00 mm/sec, through zero to a maximum of +1.00mm/sec	From a minimum of -1.0 mm/sec, through zero to a maximum of +1.0mm/sec
Cutting head advance speed resolution while slicing	0.01 mm/sec	0.1 mm/sec
Cutting head advance speed max (fast mode when not slicing)	+/- 4.0 mm/sec	+/- 2.0 mm/sec
Specimen retraction as blade retracts	Yes	Yes
Cutting head retraction speed (fast mode)	4.0 mm/sec	2.0 mm/sec
Automation	Manual, semi-auto 'Slice Window' or fully automated 'Profile Repeat'	Manual or semi-automated 'Slice Window'
Blade oscillation Frequency range (dependent on amplitude)	50-120 Hz	50-80 Hz
Frequency step size	5 Hz	5 Hz
Blade oscillation amplitude	Minimum: 0.5 mm (nominal) Maximum: 2.5 mm (nominal)	Minimum: 0.5 mm (nominal) Maximum: 1.5 mm (nominal)
Amplitude step size	0.25 mm (nominal)	0.5 mm (nominal)
Cooling options	Ice bath surround or Peltier type temperature controller	Ice bath surround or Peltier type temperature controller
Power requirements	115VAC 60Hz 230VAC 50Hz (selectable)	90-264 VAC 50/60Hz (Switch Mode PSU)
Power rating	100W	65W
Fuse rating (115V) (230V)	T2A 250VAC T2A 250VAC	T2A 250VAC T2A 250VAC
Light source	100-240Vac 3W mains connection	Powered from 5100mz
Dimensions	410mm W x 400mm D x 270mm H (excluding light source and microscope)	350mm W x 450mm D x 350mm H (excluding magnifier/light source)
Weight	35kg	15kg
Packaged weight & dimensions	Wooden crate 70x54x48cms, 55Kgs	Box wt & dims TBA

Consumables

Ceramic Blades Model 7550-1-C

The new blade holder design is now included with all Integraslice and Vibroslice instruments. 7550-1-C and 7550-1-SS are designed for new Integraslice instruments.

Product Features

- Made from ultra hard zirconium
- Honed by a process of "lapping" both sides of the single bevel to micron flatness
- Great rigidity, hence a straight cutting edge
- Prolonged slice life, especially in the most difficult of tissues such as young brain or very old brain
- Inert and impervious to corrosion
- Initial higher cost is offset by its longevity
- Fits into a special blade holder now standard on both Integraslice and Vibroslice instruments
- Dimensions: 38mm x 7mm x 0.5mm

Stainless Steel Blades

Model 7550-1-SS

- Double beveled on both faces, honed to an acute cutting edge and hardened to 56 Rockwell.
- Nevertheless, stainless steel is relatively soft and these blades are usually used once or at a maximum changed every day.
- These blades are for use in specially designed blade holders for Vibroslice instruments manufactured prior to 2003.

Blade Specifications

	7550-1-SS	7550-1-C
Material	Stainless Steel	Ceramic
Dimensions	38mm x 9mm x 0.5mm	38mm x 7mm x 0.5mm
Geometry	Double sided	Single sided
Bevel	Double bevel	Single bevel
Honing	Ground edge	Lapped edge
Packaging	50 per pack	5 per pack

Ordering Information

7000smz-2 and 5100mz-Plus, and 5100mz Vibrating Microtomes, Options, and Accessories

The finest vibration microtomes with sub-micron z-axis deflection at all speeds and amplitudes of vibration.

5100mz-Plus	Vibrating Microtome, includes demountable tissue bath (7000-1-3) and sample blades in stainless steel and ceramic. 115V or 220V	each
5100mz	Vibrating Microtome, includes demountable tissue bath (7000-1-3) and sample blades in stainless steel and ceramic. 115V or 220V	each
7000smz-2	Programable Vibrating Microtome, includes demountable tissue bath (7000-1-3) and sample blades in stainless steel and ceramic plus 'Opti-Cal' z-axis calibration device. 115 V or 230 V	each

Upgrade Kit for 5100mz

Model 5100-1-45

Optional kit to upgrade the 5100mz to the 5100mz-Plus. Allowing the user to optimally calibrate the Z-axis deflection of the blade to $2 \pm 0.1 \mu\text{m}$.

5100-1-45	Upgrade Kit for 5100mz	each
------------------	------------------------	------

Optional Accessories

7610-A	Standard Temp. Controlled Tissue Bath (autoclavable) and Controller	each
7000-1-3	Magnifying Glass, mounted to machine	each
7000-1-2	Inspection Microscope fixed x5-x10	each
7000-1-1	Inspection Microscope zoom x20-x40	each
7000-2-1	Cold Light Source	each
5100-1-3	Integrally Mounted Cold Light Source and Magnifying Glass for 5100mz and 5100mz-Plus	each

Spares and Accessories

7000-3-1A	Tissue Bath Mount (additional price only - this mount comes standard with purchase of 5100mz or 7000smz-2)	set
7000-3-2	Stainless steel inner specimen bath	set
7000-4-1	Specimen Mount Only	each
7000-4-2	Tilting Tissue Mount	each
7000-5-3	Blade holder- special angle, includes right and left hand clamp screws, single-axis adjustment screw	each
7000-6-1	'Opti-Cal' Z-axis measurement, traceable to national standards	each
7000-7-1	Blade handling tool	each
7000-50-1	Tool kit - hexagonal drivers	each
7000-60-1	Transit crate, includes packaging expansion bags	each
7550-1-SS	Stainless steel blades - narrow, ultrasonically cleaned	pk/50
7550-1-C	Ceramic blades	pk/5

► EMS-002 Cryo Workstation

Economical, Universal Application Rapid Freezing Workstation

Overview

Ultrarapid freezing, when used in conjunction with appropriate accessory processing methods has long been recognized to provide reservation of ultrastructure, localization of soluble inorganic and organic species, and preservation of antigenicity that is superior to that obtainable through conventional chemical fixation techniques and the use of cryoprotectants. Furthermore, it is the only procedure currently available for capturing events that occur on timescales less than a few seconds. Successful ultrarapid freezing requires that heat be withdrawn so rapidly from an unfixed un-cryoprotected sample that no ice crystal damage is visible at the electron microscopic level of analysis. This is not a trivial undertaking, and until recently, the improvements gained through ultrarapid freezing were often paid for in terms of decreasing productivity. However, over the last several years, improvements in methodology and the introduction of refined equipment for the ultrarapid freezing of biological samples has significantly improved both the ease of application of technique and the yield of well preserved samples. The EMS-002 Cryo Workstation allows for a reliable virtually routine freezing of biological samples

1. Removable Drop Anvil Assembly
2. Specimen Holder
3. Stainless Steel Liquid Nitrogen Dewar
4. Cryogenic Temperature Controller
5. Drop Release
6. Removable Cryogen Holder for safe disposal of cryogen
7. Frozen Specimen Workstation

Applications:

- Cryo-fixation of virus partials
- Cryo-fixation of isolated or assembled macromolecules
- Cryo-fixation of emulsions paints and polymers
- Cryo-fixation of suspension and tissues for Cryo-techniques such as freeze fracture/etch, freeze drying, freeze substitution.

Advantages:

- Economical, universal application rapid freezing unit.
- Plunge freezing with temperature controlled cryogen.
- Frozen samples handled under cold dry nitrogen atmosphere.
- Rapid set up and easy use.
- Reproducible results.
- High and low set points for cryogen control.

► Temperature Controller

This allows the user to set desired holding temperatures of the cryogen being used for the freezing process. Easy to use controller also has settable arms to alert the user that the cryogen is warming up and the unit needs attention before the cryogen reach is evaporation temperature.

► EMS-002 Cryo Workstation (continued)

► Optional Accessories

1. Freeze Substitution Module

Allows the EMS-002 to perform freeze substitution and progressive lowering of temperature (PLT) on a routine basis.

2. Cryo-TEM Transfer Interface

Allows the direct insertion of Gatan cryo-holder into the plunge freezer's liquid nitrogen dewar.

3. Climate Controlled Environmental Chamber

Inhibits air-drying and pre-cooling of samples prior to freezing. Allows easy sample blotting to achieve the optimal amount of sample on your TEM grid.

4. Metal Mirror Impact Freezing Fixture

Allows user to quickly change from the plunge freezing to impact freezing.

5. Diamond Anvil

Special freeze anvil with real diamond plate for rapid freezing and easier specimen removal. Does not require polishing like standard copper anvils.

6. Automatic Liquid Nitrogen Filling

Keeps constant LN₂ level in the Dewar automatically. (Note: To be used only in conjunction with basic plunge freezing or freeze substitution.)

7. Propane Transfer System

Allows the operator to efficiently transfer propane to the condensation chamber from the propane storage vessel.

8. Freeze Forceps

Special tweezers specifically for use with the plunge freezer that are self locking. Extra sets allow quicker turnaround when freezing multiple samples.

9. Muscle Biopsy Clamps

Clamps designed for human muscle biopsies to keep the muscle from contracting during fixation.

► Recycling and Operating Costs

The recycling time of the device is less than three minutes, just long enough for it to be ready when you finish processing the last sample. The operating cost is about \$0.47 per sample, depending on the price of liquid nitrogen. The device will operate for about two hours on 10 L of liquid nitrogen, including the initial cool down.

Specifications

Dimensions:	Width — 11 inches (279mm)
	Depth — 13 inches (330mm)
	Height — 14 inches (356mm)
Electrical:	100 VAC-240 VAC 50/60 Hz 8A
Temperature Range:	+30 to -200°C
Liquid Nitrogen Consumption:	1 to 2 L per hour
CryoGen Volume:	approximately 20 mL

► Process of Ultra-Rapid Sample Cooling

The EMS-002 achieves ultra-rapid cooling by quenching the sample in liquid propane or other suitable cryogen, cooled to near liquid nitrogen temperature. The EMS-002 accomplishes this by using a stainless steel vacuum insulated Dewar and copper condensation chamber. Liquid nitrogen is poured into the Dewar to a level determined by the user. The initial cooling of the cryogen condensation chamber takes about 15 to 20 minutes.

Gaseous propane is then admitted to the condensation chamber slowly enough to allow it to condense and fill the chamber with liquid propane. The propane is led to cool to near liquid nitrogen temperature supervised by the digital temperature controller while the sample is being prepared for freezing. The device requires only about 10 minutes to cool to operating temperature after the first filling of propane, and less than five minutes after subsequent fillings.

The operator can increase or decrease the rate of cooling by adjusting the level of liquid nitrogen in the Dewar. Heaters built into the chamber wall, powered by the temperature controller, evenly warms the propane above its melting point. The controllers' temperature is set for the kind of cryogen being used, for instance, 185°C for commercial grade propane.

Chemically pure propane (map. 190°C) can also be used, but it is significantly more expensive than commercial grade propane and confers no particular advantage. Ethane and a non-flammable cryogen, SUVA-124 produced by Dupont can also be used as a cryogen in this instrument. When using flammable cryogens like Propane & Ethane we recommend using the EMS-002 in a fume hood.

► Sample Preparation

The sample can be prepared using any favorite size EM Grid if the system is being used for Cryo-TEM or Panama hat-shaped specimen carriers for Freeze-Fracture or Freeze Substitution. Once the sample is applied to the EM grid for instance, the excess must be carefully blotted away with a small piece of filter paper. Remember, the goal is to form a thin meniscus of specimen across the holes in the grid. Once achieved, insert the specimen holder in the "Drop Anvil" of the EMS-002.

► Results and Techniques

The technique provides higher rates of cooling than can be achieved by plunging the sample into the cryogen by hand because of the high velocity and accuracy the sample enters the cryogen. The optimal plunging speed is approximately 100m per/sec it provides more efficient heat exchange. The freezing is fast enough to capture rapid events and labile structures that are not seen in chemically fixed material. The technique has been applied to many types of specimens: aqueous suspensions and emulsions, tissue culture cells, suspensions of a cells, and tissues. Specimens frozen with the EMS-002 may be freeze fractured, freeze substituted, frozen thin sectioned, or freeze dried. The samples may also be used for Cryo-SEM or Cryo-TEM.

➤ EMS-002 Cryo Workstation (continued)

➤ Accessories

➤ 1. Freeze Substitution Module for EMS-002 Cryo Workstation Part # 34765

In the 1980s descriptive ultrastructure analysis essentially came to the end and microscopists found they needed to correlate structure with function to advance their research. About the same time biochemists and molecular biologists were able to see where molecules interacted with cellular membranes. It was essential to marry the work of the structural biologists to the functional biologists by preserving the ultrastructure in the antigenicity of the tissue. During this research it was determined early on that conventional methods of fixation using chemicals were unsuitable for such studies because of the extensive redistribution of proteins, extraction of cytoplasmic constituents, and destruction of cellular antigenicity.

Freeze substitution, which is the dissolution of freezing water (ice) in the frozen specimen at low temperature has turned out to be one of the most powerful techniques in electron microscopy. The dissolution of the ice within the specimen is achieved by substituting water molecules with molecules of an inorganic solvent like acetone, while simultaneously fixing the biological material with Osmium tetroxide and blocks staining with Uranyl acetate. This slow dissolution of the ice takes place over many hours at slowly increasing temperatures. Once the substitution process is complete the samples can be infiltrated and embedded with a wide range of Epoxies or Acrylics. It is even possible to perform a low temperature embedding at -50° Celsius using specialized resins. The end results are beautifully preserved specimens possessing both antigenicity for your immuno-localization studies and perfect structural relationship for descriptive ultrastructure analysis.

The EMS-002 Freeze substitution module is a simple cost-effective method to achieve freeze substitution. Once your samples are frozen on the EMS-002 Cryo Workstation the cryogen condensation module can be removed from the stainless steel Dewar and replaced with the substitution chamber. The freeze substitution controller will control the liquid nitrogen levels automatically as well as the substitution process itself. The user just has to monitor the systems progress during substitution and perform scheduled substitution media changes.

➤ Freeze Substitution Controller

1. Programmable Substitution Temperature Controller:

Comes preprogrammed from the factory to control precise ramp/soak times and temperatures critical to successful freeze substitution

2. Liquid Nitrogen Level Controller:

Since the substitution process runs over the course of many days using published protocols, the LN2 controller insures that LN2 levels inside the Dewar are maintained at a level appropriate for the process step being executed.

➤ Freeze Substitution Chamber

1. Transfer tool enables users move the substitution chamber in and out of the substitution chamber while at cryogenic temperatures.
2. Vacuum insulated stainless steel LN2 Dewar (Part of the Plunge Freezer)
3. Substitution chamber acts as the main heat sink and control interface for the substitution chamber.
4. Substitution holders large mass enhances temperature stability for the samples and media.

5. Substitution Media Vials Holders:

Allows users to store extra substitution media at the correct process temperature for solution exchanges as required by the protocol being used.

6. Specimen Vials Holders: Containers for the tissue being substituted as well as the substitution media.

7. Substitution Chamber Lid: Helps maintain Dewar temperature stability and a pure Nitrogen gas atmosphere. Also excludes water vapor from the substitution chamber.

➤ 2. Cryo-TEM Transfer Interface Part # 37000-T

It is possible to directly transfer your vitrified samples using the Cryo-TEM transfer interface, along with your Gatan 3500 series ultra-low temperature, tilt rotate specimen holders. The transfer interface allows the direct insertion of Gatan cryo-holder into the plunge freezers liquid nitrogen dewar. This will allow easy cryogenic transfer of the vitrified sample directly to the microscope via the 3500 cryo-holder right from the work platform within the dewar. Please consult the EMS product manager for options as the transfer holder is not compatible with all possible plunge freezer configurations.

➤ EMS-002 Cryo Workstation (continued)

➤ 3. Environmental Chamber
Part # 37457

Some plunge freezing applications will require a controlled environment for the samples to be frozen in a satisfactory manner. The environmental chamber module can provide specific relative humidity and temperatures required for many types of samples. The dry nitrogen atmosphere below the environmental chamber allows us to precisely adjust the relative humidity, upwards, and easier to add water in this case. We choose to control the temperature then manually adjust the humidity by adding small quantities of water to the environment by vaporization. The vaporized water is quickly and evenly distributed throughout the chamber by a circulation fan. The integrated shutter mechanism prevents the sample from precooling before it is rapidly frozen.

➤ Instrument Overview

1. **Temperature & Humidity Sensor:** Sends temperature & humidity data to controller.
2. **Baffle Comb:** Allows used to transfer frozen sample to be transferred to the plunge freezer's "Work Platform" without allowing the Dewar gas to enter the chamber while shutter is closed.
3. **Shutter:** Keeps the controlled atmosphere inside the Chamber till the sample is to be frozen. It also can prevent pre-cooling of the sample. (Not shown)
4. **Heating & Vaporizer:** This provides a good portion of the heat load. It also serves to vaporize added water if the humidity is too low.
5. **Vertical Mounting Bar:** Serves to anchor the Chamber to the Cryo Workstation.
6. **TEC (Thermo Electric Cooler):** This assembly has a solid state device at its center that heats & cools depending on the polarity of the voltage applied. Used for addition heating and cooling but its main function is to lower humidity if the humidity is too high.
7. **Shutter Re-set:** Plunger is pressed in firmly to lock the shutter in the closed position.
8. **Water Tube:** Is used to introduce tiny amounts of water into the Heating/Vaporizer assembly if the humidity inside the chamber is too low. (Not shown)

➤ Controller Front Overview

1. **Controller:** Used to maintain temperature inside of the chamber and MONITOR Humidity only.
2. **Heat/Cool Selector Switch:** Allows user to select additional heating for the chamber or cooling which can be used to reduce the humidity in the chamber.
3. **Aux Heating/Vaporizer Mode Switch:** Simple on-off switch to turn on the vaporizing chamber, rapidly adding water vapor to the environment.

➤ 4. Metal Mirror Freezing Kit Part # 37455

This technique has been widely used for fast freezing of very small samples where you only need 5 to 10um of good freezing while maintaining specimen orientation. Metal mirror freezing has been available for quite some time and was used extensively in conjunction with freeze fracture, and deep etch rotary shadow. In the traditional method, the sample was placed on top of a slice of aldehyde fixed lung hung upside down. Once mounted its accelerated onto the surface of a copper block that was cool to liquid nitrogen temperature. Some investigators even used liquid helium to achieve higher rates of thermal transfer between the copper block and sample.

➤ 5. Diamond Anvil Part # 37015

Special Freeze Anvil with real diamond plate for better rapid freezing and easier specimen removal. Does not require polishing like standard Copper anvils.

➤ 6. Automatic Liquid Nitrogen Filling Part # 37454

Keeps constant LN2 level in the Dewar Automatically. (NOTE: To be used only in conjunction with basic plunge freezing or freezing substitution.)

➤ 7. Propane Transfer System Part # 37015

Allows for the efficient transfer of propane to the condensation chamber from the propane storage vessel.

➤ 8. Freeze Forceps

Part # 37458

Special tweezers specifically for use with the Plunge Freezer that is "self-locking". Extra sets allow quicker turn around when freezing multiple samples.

➤ 9. Muscle Biopsy Clamps

Part # 37459

Clamps designed for human Muscle biopsies to keep the muscle from contracting during fixation. Now it is possible to improve the morphology of the sample by rapid freezing by plunging into liquid cryogen. Fits directly into the drop anvil on the Plunge Freezer.

Selection Guide: Specimen Stages for EMS Equipment

The EMS line of specimen stages meets most requirements. All are easy-change, drop-in style (no screws) and are height adjustable (except rotary planetary stage). Examples:

Cat #	Stage Type	Description	Compatible Equipment
4500-1	50mm	Standard stage with six stub positions for 15 mm or 6.5 mm or 1/8" pin stubs (same as #3330, 6401, 6552)	All EMS Series
4500-2	Tilt	Rotate-tilt stage with six stub positions for 15 mm or 6.5 mm or 1/8" pin stubs. Tilts Up to 90° from horizontal (same as #3340, 4519, 6400-S, 6551)	All EMS Series
4500-3	4" Wafer	Adjusts to accept 2", 3", 4" wafers comes with 4500-6, a 4" stub holder to accept up to 18 1/8 pin stubs (same as #6549)	All EMS Series
4500-4	6" Wafer	Adjusts to accept 4" & 6" wafers comes with 4500-7, a 6" stub holder to accept up to 27 1/8 pin stubs (same as #6547)	EMS 300
4500-5	8" Wafer	Adjusts to accept 6" & 8" wafers comes with 4500-8, an 8" stub holder to accept up to 54 1/8 pin stubs	EMS300TT EMS300RT
4500-6	4" Stub Holder	A 4" stub holder to accept up to 18 1/8 pin stubs	All EMS Series
4500-7	6" Stub Holder	A 6" stub holder to accept up to 27 1/8 pin stubs	EMS300TT EMS300RT EMS300TD
4500-8	8" Stub Holder	An 8" stub holder to accept up to 54 1/8 pin stubs	EMS300TT EMS300RT
4500-9	4" Wafer & Offset Gearbox	A combination of 4500-3 and a small gearbox to offset the sample position Enable even coating of up to a 4" sample size. (same as #3360, 4522)	EMS150T EMS150R
4500-10	Fibre Stage	A stage accept single fibres or pins up to 1 mm diameter rotating horizontally to achieve all round coating	EMS150T EMS150R
4500-11	6" Square Wafer	Stage to accept 6" square wafer or Masks	EMS300TT EMS300RT
4500-12	Rota Cota	"Rota Cota" planetary stage with six stub positions for 15 mm or 6.5 mm or 1/8" pin stubs. Tilts up to 30° from horizontal (same as #4521, 6402, 6553)	EMS150T EMS150R
4500-13	8 Place Stub	8 places for 25 or 30mm Polished embedded samples. Includes a polished Brass Tally	All EMS Series
4500-14	14 Place Stub	14 places for 25 or 30mm Polished embedded samples. Includes a polished Brass Tally	All EMS Series
4500-15	9 Place Coverslip	A Stage to accept 9 20X20 cover slips. The top part of stage lifts off and has a mechanism to lift the cover slips for easy removal	All EMS Series
4500-16	4 Place 25mm Stub	4 Place 25mm Stub Stage with locking screws. May be fitted to 4500-12 rota cota stage	All EMS Series
4500-17	Slide Stage	Microscope slide stage for up to two 75 mm x 25 mm slides or eight stub positions for pin stubs. (same as #3370, 4520, 6403, 6554)	All EMS Series

4500-2 Tilt Angle

4500-3 4" Wafer

4500-12 Rotary Planetary

4500-13 8 Place Stub

4500-14 14 Place Stub

4500-15 9 Place Coverslip

4500-16 4 Place
25mm Stub

4500-17
Glass Microscope

Why cool?

Low vacuum (LV) or variable pressure (VP) modes are now standard on most scanning electron microscopes (SEMs). For this reason it has become important to control water evaporation from wet specimens. Cooling such specimens reduces the loss of water by evaporation, or - depending on chamber pressure - can prevent it altogether.

Saturated vapour pressure of water decreases considerably with temperature. At room temperature, water will very quickly evaporate - causing considerable damage to specimen composition and ultra-structure. This is due to high forces of surface tension at the drying front as it passing through the specimen. In most biological systems this will result in distortion and collapse of membranes and other structures.

At 300Pa, the specimen temperature needs to be less than -9.5°C , and at 85Pa less than -25°C to stop water evaporation. Therefore, by cooling a specimen to -25°C , chamber pressures up to 85Pa can be used with little or no water loss by evaporation. In this way, changes in specimen structure can be minimised. In addition, being able to operate at higher vacuum gives a better signal-to-noise ratio and clearer images.

► The EMS Coolstage for SEM, LV or VP

Overview

The Coolstage is a Peltier-driven SEM cooling stage for scanning electron microscopy (SEM), low vacuum (LV) or variable pressure (VP) applications. The stage can be cooled to sub-zero temperatures for specimens that may be sensitive at ambient temperature, subject to beam damage, or may otherwise 'sublime' (lose water) at ambient temperatures.

There are three versions of coolstage - Standard, Enhanced and Ultra - to cover differing specimen requirements.

Features - Standard Coolstage

- Temperature range -30°C to $+50^{\circ}\text{C}$ at 300Pa
- Self contained cooling - no additional external cooling water needed
- Temperature accuracy $\pm 1.5^{\circ}\text{C}$ or 2% - whichever is greater
- Minimal image drift
- Cooling and heating rates of up to 30°C per minute
- Keypad control - with simultaneous display of actual and target temperature
- Supplied with SEM chamber port feedthrough - specify when ordering
- One-year warranty

Features - Enhanced Coolstage

- Temperature range -30°C to $+160^{\circ}\text{C}$ at 300Pa
- All other specifications as per Standard Coolstage

Features - Ultra Coolstage

- Temperature range -50°C to $+50^{\circ}\text{C}$ at 300Pa
- All other specifications as per Standard Coolstage

Product Description

The Coolstage is a temperature-controlled specimen stage that can be fitted to any low vacuum (LV) or variable pressure (VP) scanning electron microscope (SEM).

The Standard Coolstage consists of a single stage Peltier device, onto which a thermally isolated specimen holder and dual temperature sensor is mounted. The Coolstage assembly is mounted onto the SEM stage using an adaptor plate specific to the microscope. Cooling pipes and electrical wires connect to the SEM feedthrough flange. External components are a recirculating water chiller and power supply case, and a compact keypad for digital temperature readout and control.

Compact, efficient cooling and temperature control

The temperature range of the Standard Coolstage is -30°C to $+50^{\circ}\text{C}$ at 300Pa. The specimen holder is water-cooled using a small, self-contained closed loop recirculating chiller that is normally positioned approx 2m from the SEM. A microprocessor controls and monitors the temperature of the cold stage. A small keypad is used to set the required temperature and display target and current temperatures.

The specimen holder has been designed to minimise image drift due to temperature change, giving a stable image at high magnification. An integrated RS-232 interface allows temperature to be set and read from the SEM.

Standard Coolstage. Range: -30°C to $+50^{\circ}\text{C}$ at 300Pa

Ultra Coolstage. Range: -50°C to $+50^{\circ}\text{C}$ at 300Pa

► The EMS Coolstage (Continued)

Rapid specimen exchange

To exchange a specimen it is necessary to increase the specimen stage temperature to ensure that condensation does not form on the specimen or specimen stage. The keypad controller has a convenient 'exchange' button that will automatically take the specimen holder temperature to a programmable temperature from between +5°C to +20°C. Typical cooling and heating rates are up to 30°C per minute.

When not in use, the major parts of the system can be left in situ and the cooling stage is very easily removed when reverting to 'normal' use. A convenient storage block is provided for Coolstage stage assembly and vacuum feedthrough for when the system is not in use.

Coolstage and vacuum feed through connected to the storage block (stage protected by plastic shutter)

Specifications

- Specimen size10mm Ø (adaptor stub for 12" Hitachi stubs can be supplied on request)
- Stage Temperature RangeNOTE: Higher vacuum will allow for cooler temperatures, compatible with high vacuum levels to 1x10⁻⁵Pa
Standard Coolstage: -30°C to +50°C at 300Pa with no external cooling water from SEM (at ambient +20°C)
Enhanced Coolstage: 30°C to +160°C at 300Pa with no external cooling water from SEM (at ambient +20°C)
Ultra Coolstage: -50°C to +50°C at 300Pa with no external cooling water from SEM (at ambient +20°C)
- Temperature display resolution-0.1°C
- Temperature stability+/- 0.2°C
- Temperature accuracy+/- 1.5°C or 2% (whichever is greater)
- Stage movementNormal x, y and z movements maintained. Tilt maintained for X-ray analysis (up to 45°). No rotation
- Working distanceAs on SEM, Coolstage is set to the SEM Eucentric height
- Operating voltage.....100V or 115V or 230V @ 100VA, voltage tolerance +/- 10%
- Size and weightOperation/display unit: 90mm L x 112mm W x 350mm H, 300g
 Power supply/cooling unit: 305mm L x 245mm W x 330mm H, 15kg
- Packed size and weight550mm L x 580mm W x 400mm H, 28kg
- Supplied with:Operating manual, one set of interconnecting cables and mains supply lead, storage block for specimen cooling unit when not in use, specimen holders: 15 x flat 10mm Ø stubs and 15 x dish 10mm Ø OD stubs

Coolstage and vacuum feed through connected to the storage block (with protection shutter open)

Dish-style specimen stub, showing flat bottom side (left) and dish side (right)

Ordering Information

90100	EMS Standard Coolstage	each
90101	EMS Enhanced Coolstage	each
90102	EMS Ultra Coolstage	each

90104	Dish style specimen stubs, 10mm external diameter	10/pk

Using the EMS 3500 with Critical Point Dryers

The EMS 3500 will give controlled heating of EMS 3000 and EMS 3100 Critical Point Dryers. It is connected directly to the inlet and outlet of the EMS 3000 or EMS 3100 water jacket. The temperature of the circulating fluid is pre-set, typically set to 37°C (eg just above the critical temperature of carbon dioxide).

Mature Spruce Wood

Critical point dried block of mature spruce wood block, demonstrating transverse, tangential and radial views of tracheids and vessels.

Stomatal Pore on Xerophyte Leaf Surface

Critical point dried epidermis of a xerophyte (cactus), demonstrating raised stomatal pores.

Barley Leaf

Trichomes and stomatal pores on the epidermal surface of a barley (*Hordeum vulgare*) leaf. Some very fine wax crystalites are also just visible on the surface of the leaf.

► EMS 3500 Thermocirculator

The EMS 3500 Thermocirculator is a low cost, portable water circulating system for supplying a constant temperature supply for closed and open loop applications at near ambient to +60°C.

Features

- Precise control of heating
- Compact
- Robust and reliable
- No running water to waste
- Ideal for use with the EMS 3000 and EMS 3100 Critical Point Dryers

The EMS 3500 is suitable for open and closed loop applications and has all controls and liquid connections on the front panel. The temperature controller shows not only the 'set' temperature (between ambient and +65°C), but also the actual liquid temperature. The fluid is circulated by a glandless magnetic pump, through an aluminum reservoir.

A cooling coil is mounted in the liquid reservoir. This coil can be directly connected to the main water supply and is primarily used when temperature control near to ambient is required. The electronic control system features a zero voltage switching unit which minimizes mains electrical interference, enabling the EMS 3500 to be used and sited with other sensitive electronic instruments.

Specifications

Working temperature range	Ambient to +65°C
Heating rating	500W
Reservoir capacity	2.2L / 3.5 Pints
Pump type	Glandless magnetic drive
Pump motor	Shaded pole
Pump flow	270L/h (zero head) / 60 Gal/hr (zero head)
Pump pressure	0.25kg/cm ² / 3.5psi
Max pump head (unrestricted)	2.5m / 7.5ft
Size (unpacked)	330 x 280 x 150mm / 13 x 11 x 6"
Weight	8kg / 17.6lbs
Electrical	220-240V/50Hz, 115V/60Hz

Ordering Information

91095	EMS 3500 Thermocirculator	each
-------	---------------------------	------

► EMS 4800 Recirculating Heater/Chillers

Recommended for open and closed loop applications, offering simplicity, reliability and quiet operation. The range includes the EMS 4860, 4870, 4880 and 4890.

Features

- Precise temperature control
- Proven reliability
- Environmentally friendly- avoids running water to waste
- Quiet, efficient operation
- Low maintenance

Temperature control

Many instruments measuring physical properties depend on accurate control of temperature and in some processes optimum temperature is essential. With the EMS 4800 series, over-cooling (which affects efficiency) is prevented and the water temperature can be accurately controlled over the range -10 to +60°C.

A commonly misunderstood feature of refrigerated systems is in applications where the control temperature is other than at or near room temperature. When the instruments are to be operated at controlled temperatures below ambient, the extraction deteriorates significantly and, as a guide, the compounded change is 4% per degree Celsius. In practice, the refrigerant gas pressure has to be adjusted to optimize the performance at any particular temperature. However, the EMS 4800 series incorporate automatic adjustment valves in the systems.

The EMS 4800 series are of the 'closed loop' type and therefore efficiencies are dramatically improved compared with open bath models. They are simple to set up and to operate, and essentially maintenance free.

Choosing the correct heater/chiller

In order to optimize performance from a heater/chiller system, the correct specification must be selected for a particular application. To cool or heat any instrument or system it is important to obtain the following information from the manufacturer:

- Heat load to be dissipated to water, eg for an electron microscope: diffusion pump heater, lenses, etc
- Flow rate and size of tubing
- Minimum pressure

With this information, consult the Specifications below and select the appropriate heater/chiller. The basic heat load calculation formula is as follows:

$$\text{Flow rate} \times \text{weight of fluid} \times \text{specific heat} \times \Delta T = \text{Heat Extraction.}$$

Specifications

Some typical applications

Vacuum coating equipment

Critical point dryers
(EMS 3000 and EMS 3100)

Electron microscopes

Chromatography equipment

Electrophoresis baths

Environmental chambers

Crystal growth apparatus

Fermentation equipment

Interferometers

Photographic baths

X-ray equipment

Polarimeters, refractometers

...and many others

Optional Attachments

- High pressure pump for EMS 4860 and EMS 4870 (standard in EMS 4880 and EMS 4890)

- Water failure alarm

- Over and under temperature cut out

NOTE: Larger capacity heater/chillers (6kW and 12kW) are available on request - please contact us for further information.

- Custom-made heater/chiller units

91095 EMS 4890 1 HP Recirculating Heater/Chiller

What is... Sputter Coating?

When a glow discharge is formed between a Cathode and Anode using a suitable gas (typically Argon), and Cathode target material (commonly Gold) the bombardment of the target with gas ions will erode this target material, this process being termed 'Sputtering'.

The resulting omni-directional deposition of sputtered atoms will form an even coating on the surface of the specimen. It will inhibit charging, reduce thermal damage, and improve secondary electron emission which are beneficial for Scanning Electron Microscopy.

The Cathode target material is commonly Gold. However, to achieve finer grain size, and thinner continuous coatings, it is advantageous to use cathode target materials such as Chromium. To achieve sputtering with this target material requires vacuums somewhat better than those achievable with a Rotary Vacuum Pump.

See how it works... Learn how to do it...

Techniques and Applications

Introduction

When a target is bombarded with fast heavy particles, erosion of the target material occurs. The process, when occurring in the conditions of a gaseous glow discharge between an anode and cathode is termed sputtering. Enhancement of this process for scanning electron microscopy (SEM) sample coating is obtained by the choice of a suitable ionization gas and target material. Sputtered metal coatings offer the following benefits for SEM samples:

- *Reduced microscope beam damage.*
- *Increased thermal conduction*
- *Reduced sample charging (increased conduction).*
- *Improved secondary electron emission*
- *Reduced beam penetration with improved edge resolution*
- *Protects beam sensitive specimens*

Increase in electrical conductivity of a sample is probably the single most common requirement for SEM, though all factors come into play with FEG SEM. Low voltage SEM operation can still benefit in many cases from a thin coating.

The development of Sputter Coater systems embodies significant empirical design, however, an understanding in classical terms of glow discharge characteristics enhance such designs and may assist in the comparison of differing systems.

Gaseous Condition

If an inert gas such as argon is included in a cathode gas tube, the free ions and electrons are attracted to opposite electrodes and a small current is produced. See **Figure 1**.

As voltage is increased some ionization is produced by collision of electrons with gas atoms, named the "Townsend" discharge. When the voltage across the tube exceeds the breakdown potential, a self sustaining glow discharge occurs - characterized by a luminous glow.

The current density and voltage drop remains relatively constant, the increase in total current being satisfied by the area of the glow increasing. Increasing the supply voltage increases current density and voltage drop, this is the abnormal glow region.

Further increase in supply voltage concentrates the glow into a cathode spot and arc discharge is apparent. The operating parameters of sputter coaters are within the glow discharge regions of the characteristic described.

Figure 1: Circuit to determine the current-voltage characteristics of a cold cathode gas tube

A = Ammeter V = Voltmeter

Glow Discharge

Once the condition for a sustained discharge is met, the tube exhibits the characteristic glow discharge, so called because of the associated luminous glow. It has been established that free ions and electrons are attracted to opposite electrodes producing a discharge - however for a discharge to be self-sustaining requires regeneration of the electrons by the positive ion bombardment of the cathode. This produces secondary electrons and enhances ionization. The resulting positive ion excess creates a positive space charge near the cathode. The voltage drop experienced is termed the cathode fall. If the discharge is established in a long narrow tube it exhibits the characteristics indicated.

The positive ion density in the "Crookes dark space" is very high; as a result a significant voltage drop is experienced between it and the cathode.

The resulting electric field accelerates the positive ions which produce secondary electron emission from the cathode.

These electrons accelerated in the direction of the anode cause ionization, generating positive ions to sustain the discharge. Subsequently, excitation of the gas results in intense illumination

Techniques and Applications

in the negative glow region. From this stage the electrons have insufficient exciting or ionizing energy, resulting in the "Faraday dark space". Towards the anode a small accelerating field can produce ionization and excitation, the gas again becoming luminous. See **Figure 2**.

Sputter Coating

It has been indicated that under conditions of glow discharge, ion bombardment of the cathode will occur. This results in the erosion of the cathode material and is termed plasma sputtering, with the subsequent omni-directional deposition of the sputtered atoms forming coatings of the original cathode material on the surface of the sample and work chamber.

This process is enhanced in sputter coaters for use in Scanning Electron Microscopy where one objective is to provide an electrically conductive thin film representative of the specimen to be viewed. Such films inhibit "charging", reduce thermal damage, and enhance secondary electron emission.

The most common arrangement for a D.C. (Direct Current) sputter coater is to make the negative cathode the target material to be sputtered (typically gold, platinum or with high vacuum sputter coaters, metals such as chromium and iridium), and to locate the specimens to be coated on the anode (which is usually "earthed" to the system, so the specimens are effectively at "ground" potential).

The desired operating pressure is obtained by a pump (usually a two-stage rotary vacuum pump, or a turbomolecular pumped "backed" by a rotary pump), with an inert gas, such as argon admitted to the chamber by a fine control (leak) valve.

Operating Characteristics

The glow discharge in sputtering is significantly dependent on the work function of the target material and pressure of the environmental gas. A range of target materials are used including gold, gold-palladium, platinum and silver. Although gold is still a common sputtering metal, having the most effective electrical conduction characteristics, it does however, have the largest grain size and is not always suitable for high resolution coating. For this reason gold-palladium and platinum are now widely used as their grain sizes are smaller than gold. Films with even smaller grain sizes can be achieved using metals such as chromium and iridium, but both require the use of a high vacuum (turbomolecular pumped) sputtering system.

The sputter head and sputter power supply should be effective over a range of anticipated target materials.

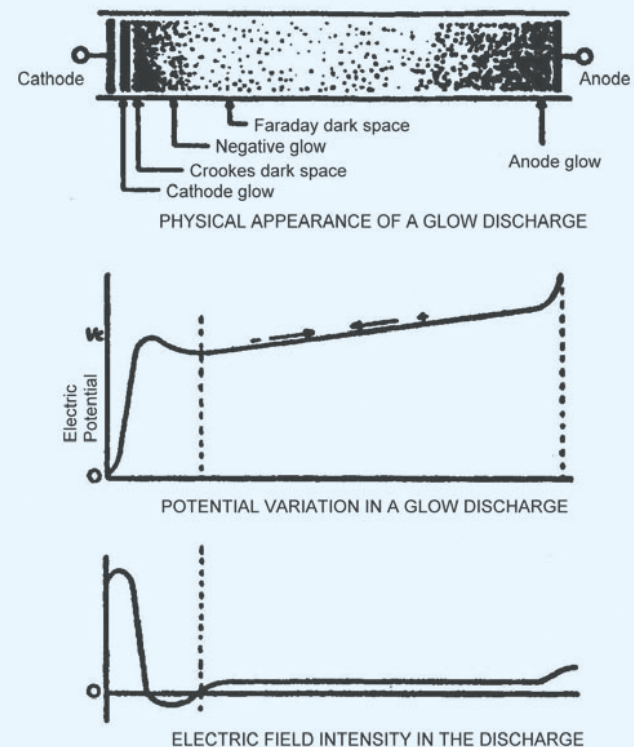

The deposition rate is current dependant, and if we operate in the correct glow region of the characteristic plasma discharge, as previously described, several fold changes in current should be available for a relatively small change in sputtering voltage. The deposition rate should not be sensitive to small changes in pressure which may be experienced in the system.

If the sputtering head is well designed and operating at low voltage and as a result, low energy input, then radiant heating from the target and high energy electrons (potentially the most significant sources of damage to delicate specimens) should be considerably reduced. There is also evidence to suggest that such a sputter head system may also produce finer grain size for a given target material.

The presence of an inert gas which will not decompose in the glow discharge is obviously desirable. Argon, having a relatively high atomic weight, provides a suitable source of ions for effective bombardment of the target material. Sputtering in air is best avoided.

The effectiveness is also dependent on the "mean free path" (m.f.p.) which is inversely proportional to pressure. If the m.f.p. is too short, insufficient

Figure 2

energy will be gained for effective bombardment and will inhibit movement of sputtered material from the target.

If the m.f.p. is too long, insufficient collisions occur and, in addition, the flow of sputtered material may change from diffusion in the gas to free molecular flow with a reduction in the effectiveness of omni-directional deposition.

If these characteristics for sputter heads are achieved, then it should not be necessary to cool the specimen stage for the majority of applications. If not, however, such cooling will only serve to reduce the baseline temperature, the thermal conductivity of most specimens we are considering being relatively poor.

For sensitive specimens pre-cooling (Peltier, water or cryo cooled) and subsequent reduction of the baseline may still be desirable and there is also evidence to suggest a reduction in grain size of the coating. It may be apparent that Scanning Electron Microscopy requires a versatile system without compromising performance. Specifically, fine grain size, uniform coating and low heat input. Consideration of these characteristics in design and development should enable a suitable coating system to be realised.

A major disadvantage of simple diode sputter coaters in SEM is the excessive amount of heat generated in the sample. To overcome this problem, permanent magnets are utilized to deflect the high energy electrons generated in the glow discharge away from the sample.

The magnetic lines of force cause enclosed loops at the target surface,

Techniques and Applications

increasing the interaction path length of the high energy electrons in the discharge. Deflection and retardation of electrons result in increased ion yield and sputtering efficiency.

It was indicated previously that while imperial design may be in evidence, it should now be apparent that effective production of positive ions for glow discharge is required. The sputter head and its associated power supply should be a primary objective of design and development.

All modern SEM sputter coaters use heads fitted with an arrangement of magnets and often an associated shroud assembly, with a disc target. Power supplies generally employ solid state switching for applied voltage control. See **Figure 3**.

The overall result is a low mean voltage head with low energy input. The possibility of thermal damage due to radiant heating and electron bombardment is considered negligible.

For a typical modern magnetron sputter coater

Vacuum	8 x 10 ⁻² to	2 x 10 ⁻² mbar
Sputtering Voltage	100V to	3Kv
Current	0 to	50mA
Deposition	0 to	25 nm/min
Grain size	Less than 5nm	
Temperature rise	Less than 10C	

It is, of course, possible to satisfy very precise parameters by the selection of target material, 'voltage' 'deposition', 'current' and 'vacuum'. Under these conditions, it is possible to achieve thin films to 10nm with grain sizes better than 2nm and temperature rises of less than 1°C.

Choice of Sputtering Material

As stated many times, metal coating is an indispensable technique for SEM. The development of high resolution FEG SEMs has brought about more wide spread use of specialized techniques such as Ion Beam Sputtering, Penning Sputtering, E-Beam Evaporation and Planar magnetron ion-sputtering. More lately Chromium coating has become the "fashionable" material to use. It offers a thin continuous film and emits less back scattered electrons than other sputter materials. However it is not free of its own problems. To operate it requires a high vacuum and ideally vacuum transfer (or vacuum storage) of the sample to avoid oxidation problem. Cr coated samples may often have a "see through" look as there is the possibility of images generated from electrons from sub surface structures. More recently iridium films have been shown to give excellent fine grain (sub nanometer) films that compare favorably with those generated with Cr. Both metals require high vacuum sputter coaters for

effective deposition.

Application data collected has shown that a high quality well designed rotary pumped magnetron sputter coater, such as the EMS 550X, is capable of producing a continuous Pt (platinum) film with a grain size in the order of 2 nm. It also has the benefit of being a good secondary electron emitter, unlike chromium. Some images of chromium show bright high contrast images. Many workers, and our own studies have led us to consider the possibility of each grain of chromium being oxidised before sample is coated and hence the film is not truly continuous and indeed each metal grain is individually charging. This is another reason to consider iridium as an alternative.

Silver as a sputter material is often ignored but is a very satisfactory method for ensuring conductivity of the SEM sample but has a major advantage the whole process is reversible as the metal may be removed by the neutral aqueous reagent known as "Farmers reducer". This enables many samples to be viewed and then returned to their original condition. Beware. ...Silver may form crystalline deposits on the surface of the sample in the presence of active Halogens

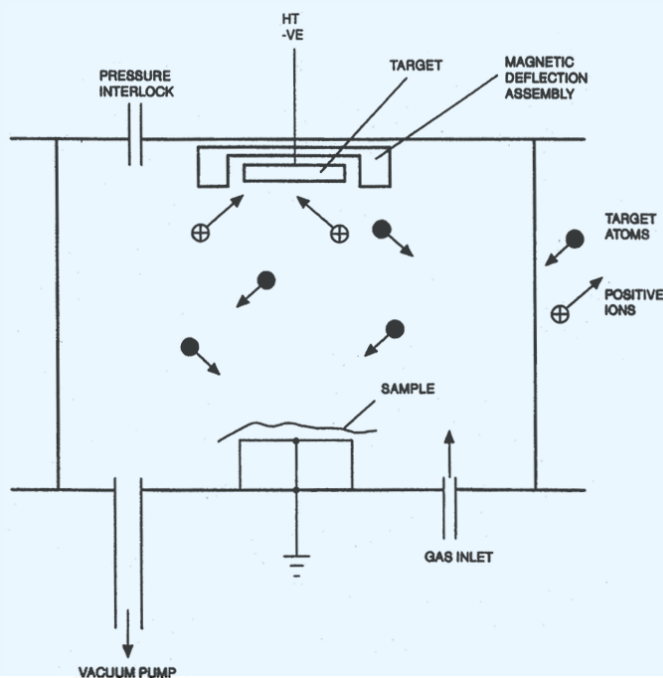

- *Sputtered silver offers smaller grain size than evaporated silver.*
- *Sputtered Gold and Silver have similar grain size but the silver has larger reticulation after storage.*
- *Silver is the most conductive metal known.*
- *Silver has a high secondary electron coefficient.*
- *X-ray emission lines are well separated from the biologically important sulphur and phosphorous.*
- *Cost effective.*

Gold/Palladium (80:20) targets are now a popular standard choice for the routine coating of a wide range of samples. The idea behind using this alloy is that the palladium will act as a physical barrier to the gold which will attempt to conglomerate into large islands and restrict ultimate resolution performance.

The minimal loss in secondary electron emission performance from the palladium is not seen as significant with current SEMs.

Other target choices are generally made based on the requirement for X-ray analysis of samples or back scattered electron detection.

Figure 3 – Diagram of a "cool" sputtering head

Techniques and Applications

Rates of Sputtering

A question regularly asked is what difference is there in sputtering rates for each of the target materials. The following list gives the variance of the materials in relation to gold, assuming gold to be: 1, it is impossible to give actual coating rates as this varies with sputtering conditions.

Au	Gold	1.0
Ag	Silver	1.2
Co	Cobolt	0.5
Cr	Chromium	0.5
Cu	Copper	0.7
Fe	Iron	0.5
Mo	Molybdenum	0.3
Ni	Nickel	0.5
Pd	Palladium	0.85
Pt	Platinum	0.6
Ta	Tantalum	0.2
W	Tungsten	0.2

Thickness of Coating

Experiments using interferometric techniques have shown that the thickness of Au/Pd coating sputtered in argon gas can be calculated at 2.5KV according to:

$$Th = 7.5 I t \text{ (angstroms)} \quad (V = 2.5KV, \text{ target to specimen distance} = 50mm)$$

t = time in minutes

I = current in mA

Th = thickness in angstroms

Average coating times will be of the order of 2 -3 minutes using V = 2.5KV and I = 20 mA

Platinum targets when fitted will give approximately half the deposition rate.

General Points for Improving Performance

1. Cleanliness, the work chamber must be kept clean! We advise that a separate carbon coater be used in applications where the maximum performance of the sputter coater is required

- Clean the glass chamber with hot soapy water and dry thoroughly, solvents can be used but we have found this unnecessary and having greater danger to health and safety. If the deposit is stubborn, use a kitchen scouring pad such as the green Scotch Bright variety.
- Use Isopropyl alcohol on metal surfaces, not acetone which has greater danger to health and safety. It will also take longer to out gas and reduce the vacuum performance.

2. Vacuum, Never leave the chamber under vacuum without isolating the roughing pump from the coater, this is usually done with a manual valve (Quorum high vacuum sputter coaters have useful "pump hold" facility that allows the vacuum chamber to be held under vacuum when the instrument is not in use). Failure to do so will increase the risk of suck back of hydrocarbons (pump oil) in to the sputter chamber and increase contamination.

- Always ensure the system is dry and pumping to its correct vacuum level before working with samples, failure to do so will result in poor sputter rate and contamination.
- Ballast rotary pumps on a regular basis and ensure they are serviced at regular intervals.

3. Sputter gas, Always use high purity argon gas of the grade known as "White spot" this will ensure fast sputter rate and good pump down time.

4. Rotary planetary specimen stages are essential for ensuring even coatings on specimens with irregular surfaces.

Gold/palladium coating of 6" wafer

This wafer was wafer-coated with 3nm of gold/palladium (Au/Pd) using the EMS 7640 Sputter Coater. Settings: 800V 12mA using argon gas and vacuum of 0.004 bar. Further tests revealed that coating was of an even thickness right to the edge of the 6" wafer. Work was done by Dr Jost Gabler of Gala Instrumente GmbH.

Platinum coating using SC7640

Borosilicate glass with surface imperfections (dark spots). Coated with 3nm of platinum (Pt) using the EMS 7640 Sputter Coater. Settings: 800V 12mA using argon gas and vacuum of 0.004 bar. Image provided by Gala Instrumente GmbH.

Techniques and Applications

Silver as a removable coating for scanning electron microscopy

Acknowledgement: The following abstract and method results (introduction only) is reproduced by kind permission of A.A. Mills, Scanning Microscopy, Vol. 2, No.3, 1988 (Pages 1265-1271)

Abstract

A thin film of silver, applied by sputtering or vacuum evaporation, provides an excellent conformal conductive coating for scanning electron microscopy of insulating specimens. When no longer required it is easily removed with Farmer's Reducer - a dilute aqueous solution of potassium ferricyanide and sodium thiosulphate. No damage was apparent to fine structure in the calcite matrix of ostracode shells, or to other biological tissues. No problems have been encountered with grain in the silver film at magnifications up to x15,000, or in the storage of coated specimens in a desiccator for periods exceeding six months.

Introduction

Many specimens for which scanning electron microscopy (SEM) is invaluable are electrical insulators, for example microfossils and dried biological preparations. To promote the emission of secondary electrons, and to prevent charging of the surface (with consequent repulsion of both incoming and secondary electrons) it is usual to coat such specimens with a very thin layer of metal.

Nowadays gold (sometimes over a thin undercoat of carbon) is commonly employed for the majority of work, although refractory metals have been recommended for the very highest magnifications. These coatings are normally applied by sputtering in a glow discharge, for this technique is omni-directional and tends to give a fine-grained deposit, while the apparatus required is comparatively simple and inexpensive since a high vacuum is not required.

An alternative, older technique (which also allows aluminum to be deposited) is evaporation of a molten bead of the chosen metal in a high vacuum. The inherent directionality of this method means that specimens must generally be moved continuously by a rotating/nodding table.

Problems arise when it is desired to return a specimen to its original uncoated condition, for example to allow successive treatments or because too thick a coating has been accidentally applied. Even specimens which have been

correctly coated may be rendered unsuitable for subsequent optical and analytical examination, due to the highly reflective nature of the gold film and its interference with x-ray emission. For these reasons there is frequently a reluctance to allow SEM examination of certain material, eg type specimens and archaeological artifacts.

Removal of Gold and Aluminum Coatings

Attempts have therefore been made to remove the metal film by suitable reagents, which must obviously not attack the substrate. It is well-known that gold is recovered from siliceous ores by complexing with aqueous cyanide under oxidizing (aerobic) conditions, and two groups have independently utilized this reaction.

A major obstacle is the highly toxic nature of cyanides, necessitating efficient fume hoods and a high degree of supervision and control unwanted in most laboratories. A less objectionable reagent is ferric chloride in alcohol, but it requires some six hours on a gold/palladium film from a smooth PTFE surface, and appears likely to attack many specimens. Mercury amalgamates gold, but does not remove it completely and adds its own background.

Aluminum dissolves in weak acids and alkalis with the evolution of hydrogen. Sylvester and Bradley therefore hoped that soaking in a dilute solution of sodium hydroxide would enable this metal to be removed from calcite microfossils without damage to the matrix. Unfortunately, they were later obliged to acknowledge that insufficiently careful exposure to alkali could result in dissolution of fine structure.

Advantages of a silver film

Silver would appear to have much to commend it as an alternative to gold. It is the most conductive metal known, possesses a high secondary electron coefficient, and is readily applied by sputtering or evaporation to follow irregular contours better than any other material.

Unlike gold, its x-ray emission lines are well-separated from those of the biologically important sulphur and phosphorus. Its cost is only a fraction of gold and the platinum metals. The unique applicability of silver to photography has resulted in extensive research upon its complex ions and their solubility.

Quite early in the history of photography it was found that a dark, over-exposed negative could

be rendered less opaque ('reduced') by aqueous oxidizing agents in the presence of sodium thiosulphate. The metallic silver forms the Ag ion, which is promptly complexed by the thiosulphate so that still more silver dissolves. No gas is evolved. The negative would be removed from the reagent and thoroughly washed when a sufficient amount of silver had been abstracted from the image.

Materials and methods

One of the mildest of these 'reducers' is that formulated by Farmer in 1884, employing very dilute potassium ferricyanide as the oxidizing agent. As paper, albumen and gelatine were apparently unaffected, it was thought that this reagent might well prove suitable for dissolving silver from a variety of coated specimens without damage to the matrix. Ferricyanides do not possess the extreme toxicity of the simple cyanides, and may be purchased and used in the same way as ordinary laboratory and photographic chemicals.

Farmer's Reducer - the formulation used is based on that given by Jacobson:

Solution A

25g sodium thiosulphate (crystals)
250ml water
2 drops of Kodak 'Photoflo'

Solution B

10g potassium ferricyanide
100ml water

These solutions appear to be stable indefinitely at room temperature if kept in securely stoppered amber glass bottles. Immediately before use, the following mixture is to be prepared:

50ml water
50ml Solution A
3ml Solution B

Techniques and Applications

It was found that the resulting pale yellow solution had a pH of about 5, the same as the CO₂-equilibrated tap water used for its preparation. It was unstable, losing activity and color after about two hours at room temperature.

A neutral mixture may be prepared by substituting pH 7 phosphate buffer (conveniently prepared from a BDH tablet) for water in the above dilution. However, all the tests to be described in the paper were conducted with the ordinary solution prepared with tap water.

It should be noted that calcium carbonate has a significant solubility in water. In nature, calcite microfossils are protected against percolating groundwater by the sacrificial dissolution of fossils above and around them. Once removed from this environment to the laboratory, such fossils should presumably be washed only with distilled water that has been allowed to stand in contact with CaCO (eg marble chips) and filtered. Otherwise needles and similar fine structures will be particularly at risk.

This equilibrated 'hard' water could be used to prepare and dilute the Farmer's Reducer. A very brief final rinse in distilled water is probably permissible; the common practice of 'soaking overnight' is not.

Results — silver mirror on glass

A silver mirror was made by evaporating the metal on to a microscope slide cleaned with chromic acid. Sufficient was deposited to give a semi-transparent film: silvery when placed on a dark background and viewed by reflected light, but behaving as a blue filter when examined by transmitted light.

The coated glass slide was immersed in freshly-prepared Farmer's Reducer. The silver was gently dissolved in a controlled manner, as shown by the gradual and uniform loss of color in transmitted light, until none remained after three minutes. No gas was evolved. It was decided that a 10 minute immersion should allow an ample margin to deal with specimens with convoluted surfaces. The reagent had no effect upon gold films. Alloys of silver and gold have not been investigated.

Comparative Sputter Data

Iridium and other materials

Samples were coated using an EMS 575X Sputter Coater and were examined using a Hitachi S-5200 Field Emission SEM.

Gold

► EMS 7620 "Mini" Sputter Coater/Glow Discharge

The EMS 7620 is a compact, low cost SEM sputter coater that comes complete with a glow discharge option as a standard. When combined with the optional carbon attachment EMS 7640-CF it makes the ideal low cost SEM sputtering and carbon coating system package. The EMS 7620 is robust, easy to operate and is backed up with a three-year warranty.

Features

- Low cost
- Simple operation
- Magnetic deflection sputter coating head
- Compact design
- Carbon fiber evaporation option
- Adjustable height specimen stage
- Easy to change sputter targets - gold/palladium (Au/Pd) standard
- Built to all the latest safety standards - features include positive break electro-mechanical interlock which ensures the sputter coating head is electrically isolated when the optional carbon attachment is in use
- Robust and reliable
- Three-year warranty
- Glow discharge as a standard

Easy operation

The EMS 7620 is ideally suited to the budget-conscious user who nonetheless demands quality results from an easy-to-use instrument. Designed for routine applications, the EMS 7620 uses a basic magnetron sputter head with a simple-to-replace disc target (gold/palladium (Au/Pd) as standard). The head is hinged for easy operation and fitted with electrical safety interlocks.

To prevent accidental damage the high voltage lead is shielded. The plasma current is variable by adjustment of the vacuum level using an argon leak valve with the plasma voltage pre-set. For maximum sputter coating efficiency the gas injector system ensures that argon gas enters the chamber close to the plasma discharge. Venting is to argon.

Fast cycle times

The 100mm/4" diameter Pyrex cylinder is mounted on an aluminium collar and sealed with O rings. The small vacuum chamber means pump-down times and cycle times are fast; it also allows a small economical rotary pump to be used.

The specimen stage is height-adjustable over a wide range and can easily be removed to accommodate larger specimens. The system is controlled manually by a 180-second timer with 15-second resolution. Pressure and plasma current are monitored by analogue meters.

Glow discharge (hydrophilisation)

A three-way switch on the front panel allows the EMS 7620 to be switched to glow discharge mode.

Freshly-made transmission electron microscopy (TEM) carbon support films tend to have a hydrophobic surface that hinders the collection of TEM sections from the surface of water baths and prevents the spreading of suspensions of particles in negative staining solutions. However, after glow discharge treatment with air, carbon film can be made hydrophilic and negatively-charged, thus allowing collection of TEM sections and easy spreading of aqueous suspensions.

Other possible treatments include magnesium acetate treatment to create hydrophobic and positively-charged surfaces. If alkylamine is used as a process gas, the carbon film surface will become hydrophobic and positively-charged, while using methanol as a process gas results in the surface becoming hydrophobic and negatively-charged. Such treatments can allow the optional absorption of selected biomolecules.

The EMS 7620 also comes complete with 1m x 12mm bore vacuum hose and fittings, and requires only the addition of a rotary pump with a capacity of 50L/m or greater - see Options and Accessories.

Specifications

Dimensions:.....340mm W x 130mm D x 250mm H (unpacked) excluding chamber

Site Requirements:

Electrical: Ensure that a suitable mains electricity supply (110VAC - 20A or 240VAC - 13A, frequency 50/60Hz) is available. Check that the voltage label attached to the side of the cabinet is suitable for the local voltage and frequency. The units are supplied for either 230V or 110V operation at 50/60Hz. The power rating is 250VA excluding the rotary pump. The rotary pump outlet is rated at 230V at 10A or 110V at 16A. The 240V pump outlet uses either a three-pin plug (404440310) or 110V standard US plug - both supplied.

Sputtering Gas: Ensure that a suitable gas supply is available, such as a commercial cylinder of argon gas (Zero Grade) fitted with a two-stage regulator, in order to deliver gas at a pressure of around 5-10psi (0.5bar).

Vacuum Pump: Ensure that a suitable vacuum pump is available. The work chamber has to be evacuated to less than 10-2mbar. This can be achieved in a reasonable time (depending on the cleanliness of the chamber) using a floor-mounted 50L/m or 90L/m two-stage rotary pump. Alternatively you can use a 30L/m desk-top mounted two-stage rotary pump, preferably incorporating an anti suck-back device and fitted with an oil mist filter on the exhaust port. Where a rotary pump is used, ensure that it has been filled with oil, in accordance with the manufacturer's instructions. The exhaust should be filtered or expelled to a safe area. All pumps we supply are fitted with an exhaust filter.

Carbon evaporation attachment (optional):The EMS 7640-CF Carbon Accessory Power Supply can be used in conjunction with the EMS 7640 'Mini' Sputter Coater. The units are supplied for either 230V or 110V operation at 50/60Hz. Ensure that a suitable mains electricity supply (110VAC - 20A or 240VAC - 13A, frequency 50/60Hz) is available. Check that the voltage label attached to the side of the cabinet is suitable for the local voltage and frequency.

Space requirement: 340mm W x 320mm D x 310mm H (including chamber and sputtering head). Weight: 14kg. Additional space is required for the rotary pump, which can be located either on the floor or on the bench with the coater.

Options and Accessories

A carbon coating accessory (EMS 7640-CF) which consists of an evaporation power supply and carbon fiber head is available. Fitting the optional carbon evaporation attachment is simple. The normal sputtering head is tilted back and replaced with the carbon fiber head. Connection is then made to the power supply. To ensure that the exposed sputtering head cannot be powered when the add-on carbon head is under vacuum, a positive-break mechanical interlock ensures electrical isolation of the sputtering head. We also offer a 'stand alone' SEM carbon coater, see the EMS 450X.

➤ EMS 7620 (continued)

Choosing a target

Gold/Palladium (Au/Pd): Supplied as standard. Has the same properties (sputtering rate, secondary electron yield, cost) as gold but the sputtered grain size is smaller.

Gold (Au): Gold sputter coating is still widely used in many laboratories

Platinum (Pt): The sputtered grain size is smaller than gold or gold/palladium. Platinum has a slower sputtering rate and is more expensive than gold or gold/palladium.

Silver (Ag): Compared to the other metals, it is relatively easy to remove silver. Therefore it is useful for museum and forensic specimens.

Palladium (Pd): Sometimes used instead of gold, gold/palladium and platinum for x-ray microanalysis.

All targets are 57mm Ø x 0.1mm thick (unless specified otherwise)

Optional carbon fibre evaporation attachment and controller (fitted)

➤ EMS 7620-CF Carbon Accessory Power Supplies

The 7620-CF carbon attachments are modular add-ons for our sputter coaters, allowing carbon fiber or carbon rod evaporation.

Each attachment uses the existing chamber and vacuum system of the sputter coater and is therefore a cost-effective and efficient method for the evaporation of carbon for SEM applications. Note that the diameter of the top plate will vary according to the chamber size of the sputter coater onto which it is being fitted. We also offer free-standing carbon evaporators - see the EMS 150R1 and EMS 150T.

The EMS 7640-CF, EMS 7640-CR and EMS 7620-CF can be used in conjunction with the EMS 7620 (EMS 7620-CF), EMS 500X, EMS 550X, EMS 575X, EMS 650X and EMS 675X sputter coaters. Sometimes it is also possible to retrofit one of the above onto our older models, Please contact us for information on compatibility.

The attachment consists of two components - a free-standing power supply and a carbon fiber or carbon rod head to suit the chamber size of the sputter coater onto which it is to be fitted.

The power supply is switchable between 10V/100A (for carbon rod evaporation) and 20V/50A (for carbon fiber evaporation). A vacuum interlock is provided to ensure safe operation of the sputter coater and carbon accessory system. Out-gas and coat switches are provided for complete control of the evaporation sequence.

Low voltage	25V
Out-gas current	Selectable for carbon fiber or carbon rod
Electrical supply	230V/50Hz (3A max), 115V/60Hz (6A max)

What is... Carbon Coating?

The use of carbon films in Electron Microscopy with their low background signal and relatively good electrical conductivity is well known. Thin films, nominally 5nm or 50 Angstroms, are used in TEM, while a range of somewhat thicker films, ranging from 50nm or 500 Angstroms, may be used in SEM for such applications as X-ray microanalysis.

Commonly, a high vacuum evaporator with carbon rods is used to achieve these coatings, and still has preferential applications. The use of carbon fiber however, has allowed a flash evaporation technique to be developed which can be suitable for a number of general EM requirements.

Pinus sylvestris (Scots pine)

Transverse section of *Pinus sylvestris* (Scots pine) in the first image shows the latewood portion of the growth ring. This surface shows latewood tracheids (transportation and structural cells) and also part of a ray (cells for storage of food substances). EDX spot analysis of the wood specimen using Oxford Instruments' INCA Energy shows a small chlorine peak, which results from treatment of the wood with a preservative - shown in the graph. The specimen charges excessively unless carbon coated. Other types of coating cannot be used due to the very low levels of chlorine used in the preservative, with which the wood is treated. With thanks to Oxford Instruments.

Techniques and Applications

Procedures for the preparation of TEM carbon support films

Section A. Preparation of normal carbon support films

NOTE: Process uses a diffusion-pumped vacuum evaporator, for turbomolecular-pumped systems please modify the process as appropriate. For optimum results, vacuum levels in the range of 5×10^{-6} mbar or better are recommended.

Step 1. Copper grids should be pre-cleaned by sonicating for 10 seconds in acetone, followed by 10 seconds of sonication in ethyl alcohol. Allow grids to dry on filter paper in a dust-free environment before use.

Step 2. Add 0.12g of formvar powder to 50ml of ethylene dichloride and mix well on a magnetic stirrer until dissolved. Pour the solution into a clean coplin jar.

Step 3. Clean a glass slide with water and detergent. Rinse well to make sure that all of the detergent is removed and finally rinse in de-ionized water before drying with a paper towel. Blow off any lint on the slide with compressed air. Place the slide in a dry, dust-free environment such as on filter paper under an upturned beaker. If there are problems in getting the plastic film to be released from the slide (Step 5), using a slide that has not been as thoroughly cleaned might help.

Step 4. Dip the cleaned slide into the formvar solution (step 1 in picture) and touch edge to filter paper to drain off the excess fluid (step 2 in picture). Dry upright in a dust-free environment (this requires 5-10 minutes).

Step 5. Score the edges of the formvar film with an acetone-cleaned razor blade (step 3 in picture). Breathe on the slide to loosen the film, and slowly slide off onto a clean water surface by immersing the slide into the water at a -15° angle (step 4 in picture). Place grids, dull/rough surface down, onto good (uniform, grey color, un-wrinkled) areas of the film. Place a small piece of clean, white office paper onto the surface of the grids and film and allow the paper to soak up water. Pick up the paper, grids and film and place in a covered petri dish to dry.

Step 6. Carbon coat film according to directions (see Section C) to desired thickness - a light-brown color indicates a thickness of 100\AA .

Step 7. Place the paper and coated grids onto a piece of filter paper that is soaked with ethylene dichloride in a covered petri dish. 30 minutes should be sufficient time to dissolve the Formvar film and not damage the carbon support. Remove the grids and paper and allow them to dry in a dust-free area.

Section B. Preparation of perforated carbon support films

Step 1. Copper grids should be pre-cleaned by sonicating for 10 seconds in acetone, followed by 10 seconds of sonication in ethyl alcohol. Allow grids to dry on filter paper in a dust-free environment before use.

Step 2. Add 0.17g of formvar powder to 50ml of chloroform and mix well on a magnetic stirrer until dissolved. Pour the solution into a clean coplin jar.

Step 3. Clean a glass slide with water and detergent. Rinse well to make sure that all of the detergent is removed and finally rinse in de-ionized water before drying with a paper towel. Blow off any lint on the slide with compressed air. Place the slide in a dry, dust-free environment such as on filter paper under an upturned beaker. If there are problems in getting the plastic film to be released from the slide (Step 6), using a slide that has not been as thoroughly cleaned might help.

Step 4. Add about 50 drops of a 50% glycerol/water solution to the surface of the formvar solution. Place the tip of a probe sonicator onto the surface of the solution and sonicate until mixed. Sonication intensity should be great enough to 'violently' cause the solution to bubble. This often requires not much more than about five seconds. This should produce numerous holes that are 1-2 μm in diameter and suitable for use with frozen-hydrated specimens. Sonicating for longer periods of time produces smaller holes in the film.

Techniques and Applications

Step 5. Immediately after sonicating, dip the cleaned slide into the formvar solution (step 1 in first diagram) and touch edge to filter paper to drain off the excess fluid (step 2 in first diagram). Dry upright in a dust-free environment for about 5-10 minutes.

Step 6. Score the edges of the formvar film with an acetone-cleaned razor blade (step 3 in first diagram). Breathe on the slide to loosen the film, and slowly slide off onto a clean water surface by immersing the slide into the water at a -15° angle (step 4 in first diagram). Place grids, dull/rough surface down, onto good (uniform, grey colour, unwrinkled) areas of the film. Place a small piece of clean, white office paper onto the surface of the grids and film and allow the paper to soak up water. Pick up the paper, grids and film and place in a covered petri dish to dry.

Step 7. Place the paper with the film and grids onto a methanol-soaked piece of filter paper in a covered petri dish for about 30 minutes. This should perforate any pseudo-holes that may be in the films (these occur when a small drop of glycerol was present but it was not enough to perforate the film).

After allowing the paper and film to dry, the grids may be examined in a light microscope under phase contrast to determine the quality of the films.

Step 8. Carbon coat film according to directions (see Section C) to desired thickness - a light-brown color indicates a thickness of 100\AA .

Step 9. Place the paper and coated grids onto a piece of filter paper that is soaked with ethylene dichloride in a covered petri dish. 30 minutes should be sufficient time to dissolve the formvar film and not damage the carbon support. Remove the grids and paper and allow them to dry in a dust-free area.

Section C. Use of a shadow evaporator for carbon coating plastic films

Step 1. Turn shadow evaporator on: Turn both the main and mechanical pump switches on. Move the black-knobbed, manifold valve handle downwards to 'backing' position. Open the air inlet valve and CAREFULLY remove the implosion shield and bell jar. Set the bell jar upside down on the rest on the adjacent cabinet.

Step 2. Set up carbon coating apparatus: Plug one lead to ground ('E') and the other to '1' (see second diagram). Remove the cylindrical glass shield. Release the tension spring that holds the right carbon rod in place and remove the rod. File the edge of the left carbon rod flat with a piece of emery cloth. Replace the right rod with a fresh one or sharpen it by the procedure described below.

Step 3. Carbon rod sharpening procedure: Place the carbon rod in the chuck of the sharpener. Pull the rod out until its edge is aligned with the edge of the aligning arm and then tighten the chuck. Turn on the sharpener and run the first sharpener tool against the rod until a conical point is formed. Then run the other sharpener tool against the rod until a narrow point is formed. Turn off the sharpener and clean off all carbon dust. Put the newly sharpened rod in the chuck of the carbon coater and tighten. Replace the tension spring and then the glass shield.

Step 4. Set up grids: Place the grids and paper support on a piece of filter paper on top of the base of the carbon coating apparatus (see second diagram). Place a thumbtack alongside the slide. This provides a 'shadow' on the filter paper and helps you determine the relative thickness of the carbon coating.

Step 5. Diffusion pump warm up: Replace the bell jar and the implosion shield. Close the air inlet, and move the manifold valve handle slowly upwards to the roughing position. Allow the vacuum to reach 0.04 Torr on the bell jar gauge and then move the handle downwards to backing. IMPORTANT: Turn on the water supply. The water supply-line valve is located on the wall behind the shadow evaporator. Turn on the diffusion pump switch

and allow the pump to warm up for 15 minutes before continuing.

Step 6. Obtaining a high vacuum: Move the manifold valve handle slowly upwards to the roughing position and allow the vacuum to reach 0.04 Torr on the bell jar gauge. While waiting for the vacuum to recover, fill the baffle with liquid nitrogen. When the bell jar vacuum has reached 0.04 Torr, move manifold valve handle down to the backing position. Depress the metal guard beneath the red mains valve knob and move the knob handle upwards to the open position. Allow the vacuum to reach a minimum of 2×10^{-5} Torr or better.

Step 7. Carbon coating: Turn the electrode selector to #1. Turn the electrode switch on. Slowly turn the electrode current control knob until there is a slight glow at the point where the two carbon rods meet. Slowly increase the current until the rods become white hot. The proper current setting should be just before the point where the carbon starts to sputter. Frequently monitor the thickness of the carbon by turning down the current, checking the darkening of the filter paper and then turning the current back up again.

Step 8. Diffusion pump cool down: Turn down the electrode current control knob and turn off the electrode switch. Make sure the manifold valve is set to the backing position and close the mains valve. Open the air inlet, remove the implosion shield and bell jar and remove the grids. Then replace the bell jar and implosion shield, close the air inlet and move the manifold valve handle to the roughing position. Allow the vacuum to reach 0.04 Torr on the bell jar gauge, move the manifold valve handle to the backing position, turn off the diffusion pump, and allow the pump to cool for 20 minutes.

Step 9. Turn shadow evaporator off: Close the manifold and turn off the mechanical pump and main power switches. Turn off the cooling water.

Section D. Glow discharging carbon films

Step 1. NOTE: Place the very edge of your carbon coated grids along the edge of a piece of double-sided tape on a glass slide. This will help to prevent your grids from flying around inside the shadow evaporator when the air release switch is opened.

Step 2. Turn shadow evaporator on: Turn the main power switch on, turn on the mechanical pump and move the manifold valve handle (black knob) downwards to the backing position. Open the air inlet. CAREFULLY remove the implosion shield and bell jar.

Step 3. Set up glow discharge unit: Plug the lead into the proper receptacle (BNC connector). Place the glass slide with your grids on the unit and replace the bell jar and implosion shield. Close the air inlet, turn the butterfly switch by the current gauges to glow discharge and move the manifold valve handle slowly upwards to the roughing position. Allow the vacuum to reach 0.2-0.15 Torr on the bell jar gauge. The manifold valve may be turned to the closed position if the vacuum rises above 0.10 Torr.

Step 4. Glow discharging: Turn the electrode selector to position #1 and turn the electrode switch on. Slowly turn up the electrode current until there is a bright purple glow surrounding the glow discharge unit. Maintain this setting for approximately 10 seconds while monitoring vacuum. Turn off the electrode current control knob and the electrode switch. Move the manifold valve handle to the backing position. Turn the butterfly switch back to the evaporator setting.

Step 5. Turn shadow evaporator off: Slowly open the air inlet to prevent your grids from being blown around the bell jar. Remove the grids, replace the shields and then close the air inlet. Move the manifold valve to the roughing position. Allow the vacuum to reach 0.04 Torr on the bell jar gauge before moving the manifold valve handle to the horizontal (closed) position. Turn off the mechanical pump and the main switch.

► EMS150R Rotary Pumped Carbon and Sputter Coating System

EMS Series of Rotary Pumped Modular Coating Systems

Innovative and versatile Sputter Coater and Carbon Evaporator for SEM Applications

Quick Overview

The EMS150R is a compact rotary pumped coating system ideally suited for SEM and other coating applications. The EMS150R is available in three formats:

EMS150R S – a compact rotary pumped sputter coater, suitable for non-oxidising metals, such as gold (Au) and platinum (Pt)

EMS150R E – a compact rotary pumped carbon fibre coater suitable for SEM applications

EMS150R ES – a compact rotary pumped combined sputter coater and carbon evaporator

KEY FEATURES

- Metal sputtering or carbon evaporation - or both – in one space saving design
- Rotary pumped sputter coating – allows sputtering of a wide range of non-oxidising (noble) metals, such as gold (Au), platinum (Pt), silver (Ag) and palladium (Pd)
- Carbon fibre coating – ideal for SEM carbon coating applications (eg EDS and WDS)
- Advanced design carbon evaporation gun – simple operation, reproducible results
- Glow discharge option – for modification of sample surface properties (eg hydrophobic to hydrophilic conversion) or for cleaning / removal of contaminating surface residues
- Control of evaporation current profile – ensures consistently reproducible carbon films
- Repeatable thickness control using the film thickness monitor option
- Fully automatic touch screen control – rapid data input, simple operation
- Multiple, customer defined coating protocols can be stored – ideal for multi-user labs
- Automatic vacuum control, which can be pre-programmed to suit the process and material – no needle valve to adjust
- “Intelligent” recognition system – automatically detects the type of coating insert fitted
- Easy-to-change, drop-in style specimen stages (rotation stage as standard)
- Thick film capabilities – up to 60 minutes sputtering time without breaking vacuum
- Ergonomic one piece moulded case – easy maintenance and service access
- Ethernet with local FTP server connection – simple programmer updates
- Power factor correction – complies with current legislation (CE Certification) – efficient use of power means reduced running costs
- Three-year warranty

Product Description

Ideal for SEM applications

EMS150R is available in three formats: sputtering, carbon evaporation or both. Depending upon the selected configuration, the EMS150R can be a top-of-the-range sputter coater for scanning electron microscopy (SEM), a carbon coater suitable for SEM (eg EDS and WDS), or both, in a single easy to use system.

Color touch screen control

Molded case with color touch-screen

The EMS150R is presented in a custom molded, one-piece case. The color touch screen allows multiple users to input and store coating protocols. The case houses all the working components. Automatic bleed control ensures optimum vacuum conditions during sputtering.

The vacuum chamber has an external diameter of 165mm (6.5") and comes with an integral implosion guard. A variable speed rotary specimen stage is fitted as standard, with other stages available as options.

► EMS150R (continued)

Sputter coating, carbon coating or both

The EMS150R is available in three formats, each with a range of optional accessories:

- **EMS150R S** – a compact rotary pumped sputter coater, suitable for non-oxidising (noble) metals. A wide selection of sputtering targets is available, which are highly recommended for SEM applications.
- **EMS150R E** – a compact rotary pumped carbon fibre coater suitable for SEM applications (eg EDS and WDS). The system uses carbon fibre / cord as standard.
- **EMS150R ES** – a combined system with both sputtering and carbon fibre coating. The deposition inserts can be swapped in seconds and the intelligent system logic automatically recognizes which insert is in place and displays the appropriate operating settings.

Each of the above can be fitted with a range of optional accessories (eg glow discharge, carbon rod coating, film thickness monitor). See options for details.

Rapid data entry

At the operational heart of EMS150R is a simple color touch screen, which allows even the most inexperienced or occasional operators to rapidly enter and store their own process data. To further aid ease of use a number of typical sputtering and evaporation profiles are already stored.

Improved Tolerance to Out Gassing Substrates

The pump time out has been moved to a new level defined by "safe outgas threshold" parameter, this is user definable between 5×10^{-2} and 2 mbar.

Until now the system would limit the time to achieve operational vac of 1×10^{-3} to 10 minutes. With the new modification once the "Safe outgas threshold" has been achieved the system will pump continuously. Implemented from software version 2-0042 onwards.

Controlled Evaporation Process

This process can automate a metal evaporation process when using low power evaporation sources. It can be used with the FTM.

The use of key properties about the source and required termination allow the process to:

- **Bring the source current up to the point of evaporation.**
- **Ramp the current up at a controlled rate until evaporation is seen.**
- **Close the shutter and shut the evaporation PSU down when the specified thickness is seen.**
- **Check the source for open or short circuit when starting the process.**

This process will be available on the EMS150T with software version 2-0048 or later. Consideration should be made to the thermal effects of the evaporation source when using the FTM to control the process.

Improvements to the Pulse Carbon Rod Evaporation

Continued work on this process has found that the thickness deposited can be variable if the power applied to the rods is either too high or too low. With

the optimum current being a narrow margin between them. However, limiting the available voltage supplied to the rods increases this current window. This coupled with reducing the spigot diameter to work at a more optimum point in the PSU operation produces a more continuous spark which in turn produces a more repeatable thickness.

This improvement can be implemented by:

- **Software version 2-0046 or later implements the voltage limit. Note all the carbon rod profiles should be deleted if a unit is updated to this software version.**
- **The evaporation current should be set between 60 and 65A.**
- **The reduced spigot diameter of 1.2mm can be produced with the blue handle rod shaper.**

Maintenance

The intuitive touch screen interface features maintenance prompts which highlight:

- **Time of last clean**
- **Coating time since last cleaned**
- **System "on time"**
- **Time of last service**

Glow Discharge Attachment

The primary application of glow discharge is as a technique for the surface modification, or 'wetting' or hydrophilisation of newly-evaporated transmission electron microscopy (TEM) carbon support films.

Freshly-made TEM carbon support films tend to have hydrophobic surfaces which inhibits the spreading of suspensions of particles in negative staining solutions. However, after glow discharge treatment with air, the carbon film is made hydrophilic and negatively charged, thus allowing easy spreading of aqueous suspensions. With subsequent magnesium acetate treatment the surface is made hydrophilic and positively charged.

In addition to glow discharge treatment using air, other process gases may be used to modify surface properties. For example, methanol as a process gas results in the surface becoming hydrophobic and negatively charged. Such treatment can facilitate the optional absorption of selected biomolecules

'Cool' sputtering. Optional film thickness monitor (FTM) fitted

Optional glow discharge attachment (for R S and R ES versions)

► EMS150R Rotary Pumped Carbon and Sputter Coating System (continued)

Specifications

Instrument case	.585mm W x 470mm D x 410mm H (total height with coating head open: 650mm)
Weight	.28.4kg
Packed dimensions	.725mm W x 660mm D x 680mm H (36.8kg)
Work chamber	.Borosilicate glass 152mm Ø (inside) x 127mm H
Safety shield	.Integral polyethylene terephthalate (PET) cylinder
Display	.145mm 320 x 240 colour graphic TFT (Thin Film Transistor) display
User Interface	.Intuitive full graphical interface with touch screen buttons, includes features such as reminders for when maintenance is due and a log of the last ten coatings carried out
Sputtering target	.Disc style 57mm Ø. A 0.1mm thick gold target is fitted as standard. Q150R S and Q150R ES versions only
Specimen stage	.50mm Ø rotating stage with 6 stub positions for 15mm, 10mm, 6.5mm or 1/8" pin stubs. Rotation speed 8-20 rpm

Vacuum

Rotary pump	.Edwards RV3 50L/s two-stage rotary pump, with vacuum hose, coupling kit and oil mist filter
Vacuum measurement	.Pirani gauge fitted as standard
Typical ultimate vacuum	. 2×10^{-2} mbar in a clean system after pre pumping with dry nitrogen gas
Sputter vacuum range	.Between 3×10^{-2} and 5×10^{-1} mbar

Processes

Sputtering	.0-80mA to a pre-determined thickness (with optional FTM) or by the built-in timer. The maximum sputtering time is 60 minutes (without "breaking" vacuum and with built in rest periods)
Carbon evaporation	.A robust, ripple free D.C. power supply featuring pulse evaporation ensures reproducible carbon evaporation from fibre, cord or rod sources. Current pulse for carbon cord: 1-60 Amps; current pulse for carbon rods with spigot size of 1.4mm Ø: 1-90 Amps
Glow discharge	.0-80mA operates in DC+ and DC- modes

Services and other information

Gases	.Argon sputtering process gas, 99.999% (R S and R ES versions). Nitrogen venting gas (optional)
Electrical supply	.90-250V ~ 50/60 Hz 1400 VA including RV3 rotary pump power. 110/240V voltage selectable
Conformity	.CE conformity
Power factor correction	.Complies with the current legislation (CE Certification) and ensures efficient use of power which means reduced running costs

Carbon fibre evaporation insert and automatic source shutter

Sputtering insert. Gold (Au) fitted as standard, but other metals available

Ordering Information

EMS150R S

4500	EMS150R S Rotary pumped sputter coater, includes an 57mm Ø x 0.1mm gold target
4501	Quick-release sputter insert for EMS150R S and EMS150R ES – suitable for non-oxidising (noble) metals. Supplied with A 57mm Ø x 0.1mm thick gold target as standard. For additional noble metal targets (eg Platinum, Gold / Palladium, Silver) see Sputtering Targets section
4502	Rotation stage, 50mm Ø with adjustable height for target to sample distances of 38mm-79mm (supplied with 2 mounting pillars). Note: this stage does not tilt – for tilting stage see Specimen Stages section

EMS150R E

4503	EMS150R E Rotary pumped carbon fibre evaporator, supplied with carbon fibre / cord
4504	Quick-release carbon fibre evaporation insert for EMS150R E and EMS150R ES – suitable for evaporation of carbon fibre and carbon cord
4506	Rotation stage, 50mm Ø with adjustable height for target to sample distances of 38mm-79mm (supplied with 2 mounting pillars). Note: this stage does not tilt – for tilting stage see Specimen Stages section

EMS150R ES

4507	EMS150R ES Rotary pumped sputter coater, includes an 57mm Ø x 0.1mm gold target, and carbon fibre evaporator, supplied with carbon fibre / cord
4508	Quick-release sputter insert for EMS150R S and EMS150R ES – suitable for non-oxidising (noble) metals. Supplied 57mm Ø x 0.1mm thick gold target as standard. For additional noble metal targets (eg Platinum, Gold / Palladium, Silver) see Sputtering Targets section
4509	Quick-release carbon fibre evaporation insert for EMS150R E and EMS150R ES – suitable for evaporation of carbon fibre and carbon cord
4510	Rotation stage, 50mm Ø with adjustable height for target to sample distances of 38mm-79mm (supplied with 2 mounting pillars). Note: this stage does not tilt – for tilting stage see Specimen Stages section

► EMS150R (continued)

Carbon fibre evaporation insert

Glow Discharge insert

Options and Accessories

A range of interchangeable, plug-in style coating inserts are available:

4511	Additional sputter insert for quick metal change (R S and R ES only). Note: this is an entire sputtering assembly; individual noble metal targets can also be purchased
4512	Carbon rod evaporation insert for 3.05mm Ø rods (R E and R ES only). Includes manual rod shaper and 3.05mm Ø carbon rod
4513	Glow discharge insert to modify surface properties (eg hydrophobic to hydrophilic conversion) or to clean surface residues (R S and R ES only). Can be retrofitted
4514	Additional standard glass chamber assembly
4515	Extended height vacuum chamber (214mm high – the standard chamber is 127mm high). For increased source to sample distance and for coating large specimens
4516	Rotating vacuum spigot allows more convenient connection of the vacuum hose to the rear of the EMS150R when bench depth is limited
4517	Film thickness monitor (FTM) attachment. Consists of a built in chamber mounted quartz crystal oscillator (includes crystal). As sputtered or evaporated material is deposited onto the crystal, so its frequency of oscillation is modified. This “modification” is used to measure and control the thickness of material deposited
4518	Spare quartz crystal

Specimen stages

The EMS150R has alternative specimen stages to meet most requirements. All are easy-change, drop-in style and are height adjustable (except 10360 rotary planetary stage)

4519	50mm Ø rotate-tilt specimen stage with adjustable tilt (up to 90 degrees) and height (37mm-60mm). Has six stub positions for 15mm or 6.5mm or 1/8" pin stubs. Stage rotation speed variable between 8 and 20rpm
4520	90mm Ø rotating specimen stage for glass microscope slides (up to two x 75mm x 25mm slides). Stage rotation speed variable between 8 and 20rpm
4521	Variable angle “Rotacota” rotary planetary stage with 50mm Ø specimen platform. Has six stub positions for 15mm or 6.5mm or 1/8" pin stubs. Stage rotation speed variable between 8 and 20rpm
4522	Flat rotation specimen stage for 100mm / 4" wafers, includes gearbox for increased coverage. Stage rotation speed variable between 8 and 20rpm

Carbon Supplies

4538	Carbon fibre cord - high purity - 1m	each
4539	Carbon fibre cord - high purity - 5m	each
4540	Carbon fibre cord - standard grade - 1m	each
4541	Carbon fibre cord - standard grade - 10m	each
4542	Carbon fibre cord - standard grade - 100m	each
4543	Carbon rods - 3.05mm Ø x 50mm length (shaped) pack of 10	each
4544	Carbon rods 3.05mm Ø x 300mm length (unshaped) pack of 10	each
4546	Manual rod shaper for 3.05mm Ø carbon rods	each

Sputtering Targets

4523	57mm Ø x 0.1mm Gold	each
4524	57mm Ø x 0.2mm Gold	each
4525	57mm Ø x 0.3mm Gold	each
4526	57mm Ø x 0.1mm Gold/Palladium (80/20%)	each
4527	57mm Ø x 0.2mm Gold/Palladium (80/20%)	each
4528	57mm Ø x 0.3mm Gold/Palladium (80/20%)	each
4529	57mm Ø x 0.1mm Platinum	each
4530	57mm Ø x 0.2mm Platinum	each
4561	57mm Ø x 0.3mm Platinum	each
4532	57mm Ø x 0.1mm Nickel	each
4533	57mm Ø x 0.1mm Silver	each
4534	57mm Ø x 0.1mm Palladium	each
4535	57mm Ø x 0.1mm Copper	each
4536	57mm Ø x 0.1mm Platinum/Palladium (80/20%)	each
4537	57mm Ø x 0.3mm Platinum/Palladium (80/20%)	each

Spare kits

4547	Two-year spares kit for EMS150R S Includes: 57mm Ø x 0.1mm gold target, standard glass chamber assembly quartz crystals, O-rings	each
4548	Two-year spares kit for EMS150R E Includes: carbon fibre / cord, standard glass chamber assembly, quartz crystals, O-rings, springs	each
4549	Two-year spares kit for EMS150R ES Includes: 57mm Ø x 0.1mm gold target, / carbon fibre / cord, standard glass chamber assembly, quartz crystals, O-rings, springs	each

► EMS 150T Turbo-Pumped Sputter Coater/Carbon Coater

The EMS150T is a compact turbomolecular-pumped coating system suitable for SEM, TEM and many thin-film applications. The EMS150T replaces previous the following models EMS575X and EMS950X.

The EMS150T is available in three formats:

EMS150T S — a high resolution sputter coater, suitable for oxidising and non-oxidising metals

EMS150T E — a high vacuum carbon coater for SEM and TEM applications

EMS150T ES — a high resolution sputter coater and high vacuum carbon evaporator

Features

- Metal sputtering or carbon evaporation - or both – in one space saving design
- Fine grain sputtering – for advanced high resolution FESEM applications
- High vacuum turbo pumping – allows sputtering of a wide range of oxidizing and non-oxidizing metals – suitable for SEM, high resolution FESEM and also for many thin film applications
- High vacuum carbon coating – ideal for SEM and TEM carbon coating applications
- Advanced design carbon rod evaporation gun – simple operation, reproducible results
- Control of evaporation current profile – ensures consistently reproducible carbon films
- Precise thickness control using the film thickness monitor option
- Fully automatic touch screen control – rapid data input, simple operation
- Multiple, customer defined coating schedules can be stored – ideal for multi-user laboratories
- Automatic vacuum control, which can be pre-programmed to suit the process and material – no needle valve to adjust
- “Intelligent” recognition system – automatically detects the type of coating insert fitted
- Easy-to-change, drop-in style specimen stages (rotation stage as standard)
- Vacuum shutdown feature – leaves the process chamber under vacuum when not in use – improved vacuum performance
- Thick film capabilities – up to 60 minutes sputtering time without breaking vacuum
- Ergonomic one piece molded case – easy maintenance and service access
- Ethernet with local FTP server connection – simple programmer updates
- Power factor correction – complies with current legislation (CE Certification) – efficient use of power means reduced running costs
- Three-year warranty

Ideal for SEM, high resolution FESEM and TEM applications

EMS150T is available in three formats: sputtering, carbon evaporation or both. Depending upon the selected configuration, the EMS 150T can be a

top-of-the-range sputter coater for high resolution scanning electron microscopy (SEM), a carbon coater suitable for SEM and transmission electron microscopy (TEM), or both, in a single easy to use system.

The ability of the EMS150T to rapidly sputter a wide selection of oxidizing and non-oxidizing metals also makes it an ideal platform for many thin film applications.

Molded case with color touch-screen

The EMS150T is presented in a custom molded, one-piece case. The color touch screen allows multiple users to input and store coating protocols. The case houses all the working components, including the efficient 70L/s air-cooled turbo molecular pump. Automatic bleed control ensures optimum vacuum conditions during sputtering.

The vacuum chamber has an external diameter of 165mm (6.5") and comes with an integral implosion guard. The EMS150T includes “vacuum shutdown” which enhances vacuum performance by allowing the chamber vacuum to be maintained when the system is not in use. A variable speed rotary specimen stage is fitted as standard, with other stages available as options.

Sputter coating, carbon coating or both

The EMS150T is available in three formats, each with a range of optional accessories:

- **EMS150T S** – a high resolution sputter coater for oxidizing and non-oxidizing (noble) metals. A wide selection of sputtering targets is available, including iridium and chromium, which are highly recommended for FESEM applications.
- **EMS150T E** – a high vacuum carbon coater, ideal for the production of highly stable carbon films and surface replicas for transmission electron microscopy (TEM). The system uses economical 3.05mm diameter carbon rods.
- **EMS150T ES** – a combined system with both sputtering and carbon coating. The deposition inserts can be swapped in seconds and the intelligent system logic automatically recognizes which insert is in place and displays the appropriate operating settings.

Each of the above can be fitted with a range of optional accessories (eg metal evaporation, carbon fiber coating, film thickness monitor). See options for details.

➤ EMS 150T (continued)

Rapid data entry

At the operational heart of the EMS150T is a simple color touch screen which allows even the most inexperienced or occasional operator to rapidly enter and store their own process data. To further aid ease of use, a number of typical sputtering and evaporation profiles are already stored.

Ramped Carbon Evaporation (EMS150T E and EMS150T ES)

This profile is used to produce carbon coatings from a specifically shaped carbon rod. It can be used in place of the pulsed carbon rod process when a greater repeatability of the deposited thickness is required.

Implemented from software version 2-0039 onwards.

Generally, this process requires the use of the extended height chamber. However, the short chamber may be used for coating thicknesses greater than 12nm with default parameters. Additionally, if the short chamber is used the FTM will be inaccurate due to the close proximity of the high temperate rods.

Pulsed Cleaning for Aluminum Sputtering (EMS150T S and EMS150TES)

Aluminum is often difficult to coat due to its fast oxidizing properties. Also its oxidized layer is difficult to remove as it reduces the required target voltage to product a sputter current of 150mA. This increases the time required to clean the target.

However, the EMS150T now has a special profile for aluminum to cycle the plasma which reduces this cleaning time. The cleaning cycle is then auto terminated as its target voltage rises above 300V, thus preventing an already clean target coating the chamber excessively.

Implemented from software version 2-0041 onwards.

Improved Tolerance to Out Gassing Substrates

The pump time out has been moved to a new level defined by "safe outgas threshold" parameter, this is user definable between 5×10^{-2} and 2 mbar.

Until now the system would limit the time to achieve operational vac of 1×10^{-3} to 10 minutes. With the new modification once the "Safe outgas threshold" has been achieved the system will pump continuously.

Implemented from software version 2-0042 onwards.

Controlled Evaporation Process

This process can automate a metal evaporation process when using low power evaporation sources. It can be used with the FTM.

The use of key properties about the source and required termination allow the process to:

- Bring the source current up to the point of evaporation.
- Ramp the current up at a controlled rate until evaporation is seen.
- Close the shutter and shut the evaporation PSU down when the specified thickness is seen.
- Check the source for open or short circuit when starting the process.

This process will be available on the EMS150T with software version 2-0048 or later. Consideration should be made to the thermal effects of the evaporation source when using the FTM to control the process.

Improvements to the Pulse Carbon Rod Evaporation

Continued work on this process has found that the thickness deposited can be variable if the power applied to the rods is either too high or too low.

With the optimum current being a narrow margin between them. However, limiting the available voltage supplied to the rods increases this current window. This coupled with reducing the spigot diameter to work at a more optimum point in the PSU operation produces a more continuous spark which in turn produces a more repeatable thickness.

This improvement can be implemented by:

- Software version 2-0046 or later implements the voltage limit. Note all the carbon rod profiles should be deleted if a unit is updated to this software version.
- The evaporation current should be set between 60 and 65A.
- The reduced spigot diameter of 1.2mm can be produced with the blue handle rod shaper.

Glow Discharge Attachment

The primary application of glow discharge is as a technique for the surface modification, or 'wetting' or hydrophilisation of newly-evaporated transmission electron microscopy (TEM) carbon support films.

Freshly-made TEM carbon support films tend to have hydrophobic surfaces which inhibits the spreading of suspensions of particles in negative staining solutions. However, after glow discharge treatment with air, the carbon film is made hydrophilic and negatively charged, thus allowing easy spreading of aqueous suspensions. With subsequent magnesium acetate treatment the surface is made hydrophilic and positively charged.

In addition to glow discharge treatment using air, other process gases may be used to modify surface properties. For example, methanol as a process gas results in the surface becoming hydrophobic and negatively charged. Such treatment can facilitate the optional absorption of selected biomolecules

Processes

Sputtering: 0-150mA to a pre-determined thickness (with optional FTM) or by the built-in timer. The maximum sputtering time is 60 minutes (without 'breaking' vacuum and with built in rest periods).

Standard Rotation Stage and FTM

Carbon evaporation: A robust, ripple free DC power supply featuring pulse evaporation ensures reproducible carbon evaporation from rod or fiber sources. Current pulse: 1-90A

Carbon Rod Evaporation Insert

Metal evaporation and aperture cleaning insert (option): For thermal evaporation of metals from filaments or boats. For cleaning SEM or TEM apertures a standard molybdenum boat (supplied) can be fitted. The metal evaporation head is set up for downwards evaporation, but upward evaporation can be achieved by fitting two terminal extensions (supplied). Evaporation times: up to four minutes.

Metal Evaporation Insert

► EMS 150T Turbo-Pumped Sputter Coater/Carbon Coater (continued)

Specifications

Instrument case: 585mm W x 470mm D x 410mm H (total height with coating head open: 650mm)

Weight: 33.4kg

Packed dimensions: 725mm W x 660mm D x 680mm H (42kg)

Work chamber: Borosilicate glass 152mm Ø (inside) x 127mm H

Safety shield: Integral polyethylene terephthalate (PET) cylinder

Display: 145mm 320 x 240 color graphic TFT (Thin Film Transistor) display

User interface: Intuitive full graphical interface with touch screen buttons, includes features such as a log of the last ten coatings carried out and reminders for when maintenance is due

Sputter target: Disc style 57mm Ø. A 0.3mm thick chromium target is fitted as standard. EMS150T S and T ES versions only

Vacuum

Turbomolecular pump: Internally-mounted, 70L/s air-cooled turbomolecular pump

Rotary pump: Edwards RV3 50L/s two-stage rotary pump, with vacuum hose, coupling kit and oil mist filter

Vacuum measurement: Pirani gauge as standard. A full range gauge (10428) is available as an option

Typical ultimate vacuum: 5×10^{-5} mbar in a clean system after pre pumping with dry nitrogen gas

Sputter vacuum range: Between 5×10^{-3} and 5×10^{-1} mbar

Specimen stage: 60mm Ø rotating stage. Rotation speed 8-20 rpm

Services and other information

Gases: Argon sputtering process gas, 99.999% (TS and TES versions) Nitrogen venting gas (optional)

Electrical supply: 90-250V ~ 50/60 Hz 1400 VA including RV3 rotary pump power. 110/240V voltage selectable

Conformity: CE conformity:

Power factor correction: Complies with the current legislation (CE Certification) and ensures efficient use of power, which means reduced running costs

Ordering Information

EMS150T S High Resolution Turbomolecular-Pumped Sputter Coater, inc. a 54mm Ø x 0.3mm chromium (Cr) target

EMS150T ES High Resolution Turbomolecular-Pumped Sputter Coater and Carbon Evaporator, including a 57mm Ø x 0.3mm chromium (Cr) target and high vacuum carbon rod evaporation insert for 3.05mm Ø carbon rods. NOTE: coating inserts are interchangeable

EMS150T E Turbomolecular-Pumped Carbon Evaporator, suitable for TEM and SEM applications. Fitted with a carbon rod evaporation insert for 3.05mm Ø carbon rods. Supplied with carbon rods (3.05mm Ø x 100mm) and a carbon rod shaper (manual operation)

Rotary pump requirements (must be ordered separately)

91003 Edwards RV3 50L/s two-stage rotary pump, with vacuum hose, coupling kit and oil mist filter

Options and Accessories

Including details of coating head inserts and specimen stages that are fitted as standard.

Coating Head Options

A range of interchangeable, plug-in style coating head inserts are available:

3200 Sputtering head insert suitable for oxidizing and non-oxidizing metals. Supplied with a 54mm Ø x 0.3mm thick chromium target as standard.

3210 Additional sputter insert for quick metal change. Note: this is an entire sputtering assembly, individual targets can also be purchased

3230 Carbon rod evaporation head insert (for 3.05mm Ø rods)

3240 Carbon rod evaporation head insert (for 6.15mm Ø rods). Note that EMS recommends 3.05mm Ø rods as they offer greater process control and are more economical (less wastage)

3250 Carbon fiber evaporation head insert

3260 Metal evaporation and aperture cleaning head insert, including the ability to evaporate upwards or downwards (T E and T ES versions only). Supplied with a pack of ten tungsten filaments and a molybdenum boat

3270 Extended height vacuum chamber (214mm high – the standard chamber is 127mm high). For increased source to sample distance and for coating large specimens

3280 Vacuum spigot allows more convenient connection of the vacuum hose to the rear of the EMS150T when bench depth is limited

3290 Film thickness monitor (FTM) attachment. Consists of a built in chamber mounted quartz crystal oscillator (includes crystal). As sputtered or evaporated material is deposited onto the crystal, so its frequency of oscillation is modified. This 'modification' is used to measure and control the thickness of material deposited

3300 Spare quartz crystals. Pack of three

3320 Full range vacuum gauge for low and high vacuum measurement (a low vacuum Pirani gauge is fitted as standard)

4513 Glow discharge inset to modify surface properties or to clean surface residues

Easy-to-change coating inserts

Sputter coater insert

Carbon fibre evaporation insert

Metal evaporation insert

Glow discharge attachment option

► EMS 150T (continued)

Specimen stages

The EMS150T has specimen stages to meet most requirements. All are easy-change, drop-in style (no screws) and are height adjustable (except rotary planetary stage): Please contact us for a quote.

3330	Rotation stage, 50mm Ø (supplied as standard). This stage only rotates – no tilt or height adjustment
3340	Rotate-tilt specimen stage with adjustable tilt (up to 90 degrees) and height (37mm-60mm). Tilt angle can be pre-set. 50mm Ø specimen platform with six stub positions for 15mm or 6.5mm or 1/8" pin stubs. Stage rotation speed variable between 8 and 20rpm
3350	Variable angle "Rotacota" rotary planetary stage with 50mm Ø specimen platform. Has six stub positions for 15mm or 6.5mm or 1/8" pin stubs. Stage rotation speed variable between 8 and 20rpm
3360	Flat rotation specimen stage for 100mm / 4" wafers, includes gearbox for increased coverage. Stage rotation speed variable between 8 and 20rpm
3370	Rotating specimen stage for glass microscope slides (up to two x 75mm x 25mm slides). Stage rotation speed variable between 8 and 20rpm. Includes gear box to allow optional FTM to be used

Tilt Angle Stage

4" Wafer Stage

Rotary Planetary Stage

Glass Microscope Stage

Carbon Evaporation Insert

Sputtering Targets

The EMS150T S and EMS150T ES are fitted as standard with a 0.3mm thick chromium sputter target. Other optional targets:

3410	57mm 0 x 0.1mm Gold	each
3411	57mm 0 x 0.1mm Gold/Palladium (80/20)	each
3412	57mm 0 x 0.1mm Platinum	each
3413	57mm 0 x 0.1mm Nickel	each
3414	57mm 0 x 0.1mm Silver	each
3415	57mm 0 x 0.1mm Palladium	each
3416	57mm 0 x 0.1mm Copper	each
3417	57mm 0 x 0.3mm Chromium	each
3418	57mm 0 x 0.5mm Tungsten	each
3419	57mm 0 x 1.5mm Chromium	each
3420	57mm 0 x 0.2mm Tungsten	each
3421	54mm 0 x 1.5mm Carbon	each
3422	57mm 0 x 0.1mm Aluminium	each
3423	57mm 0 x 0.1mm Platinum/Palladium (80/20)	each
3424	57mm 0 x 1.5mm Titanium	each
3425	57mm 0 x 0.3mm Platinum/Palladium (80/20)	each
3426	57mm 0 x 0.3mm Gold	each
3427	57mm 0 x 0.3mm Gold/Palladium (80/20)	each
3428	57mm 0 x 0.3mm Platinum	each
3429	57mm 0 x 0.5mm Titanium	each
3430	57mm 0 x 0.1mm Iron	each
3431	57mm 0 x 0.3mm Iridium	each
3432	57mm 0 x 0.1mm Cobalt	each
3433	57mm 0 x 0.1mm Tin	each
3434	57mm 0 x 0.1mm Molybdenum	each
3435	57mm 0 x 0.3mm Magnesium	each
3436	57mm 0 x 0.1mm Tantalum	each
3437	57mm 0 x 3mm Indium Tin Oxide (90/10)	each

Carbon supplies

3500	Carbon rods – 6.15mm 0 x 100mm length (unshaped)	10/pk
3510	Carbon rods – 6.15mm 0 x 50mm length (shaped)	10/pk
3520	Carbon rods - 3.05mm 0 x 50mm length (shaped)	10/pk
3530	Carbon rods 3.05mm 0 x 300mm length (unshaped)	10/pk
3540	Carbon fiber cord - high purity - 1m	each
3550	Carbon fiber cord - high purity - 5m	each
3560	Carbon fiber cord - standard grade - 1m	each
3570	Carbon fiber cord - standard grade - 10m	each
3580	Carbon fiber cord - standard grade - 100m	each
3590	Manual rod shaper for 6.15mm Ø carbon rods	each
3595	Manual rod shaper for 3.05mm Ø carbon rods	each
3540	Carbon fiber cord - high purity - 1m	each
3550	Carbon fiber cord - high purity - 5m	each
3560	Carbon fiber cord - standard grade - 1m	each
3570	Carbon fiber cord - standard grade - 10m	each
3580	Carbon fiber cord - standard grade - 100m	each
3590	Manual rod shaper for 6.15mm Ø carbon rods	each
3595	Manual rod shaper for 3.05mm Ø carbon rods	each

Other consumables and spare kits

3600	Metal evaporation basket - pack of 10 (for use with metal evaporation head)
3610	Two-year spares kit for EMS150T S Includes: chromium target, glass cylinder, carbon fibre cord, quartz crystals, O-rings
3620	Two-year spares kit for EMS150T E Includes: chromium target, glass cylinder, carbon fibre cord, carbon fibre - fine, carbon rods 3.05mm, quartz crystals, O-rings
3630	Two-year spares kit for EMS150T ES Includes: chromium target, glass cylinder, carbon fibre cord, carbon fibre - fine, carbon rods 3.05mm, quartz crystals, O-rings

► EMS150GB Turbo-Pumped Sputter Coater/ Carbon Coater – For Glove Box

Quick Overview

The EMS150GB is a modular glove box version of the highly successful EMS150T ES bench top turbomolecular-pumped coating system - suitable for SEM, TEM and many thin-film applications. The EMS150GB comes as standard with sputtering and carbon rod evaporation inserts and a rotating specimen stage. Options include a metal evaporation insert, glow discharge, a film thickness monitor (FTM), aperture cleaning insert and special stages to suit a range of specimen types.

Key Features

- Modular construction for mounting in glove boxes
- Integral glove box pressure monitoring
- Remote operation from a touch screen control panel
- Metal sputtering and carbon evaporation in one system
- Fine grain sputtering for advanced high resolution FE-SEM applications
- High vacuum turbo pumping - allows sputtering of a wide range oxidising and non-oxidising metals
- High vacuum carbon rod coating - ideal for SEM and TEM carbon coating applications (carbon fibre available as an option)
- Advanced "anti-stick" carbon rod evaporation gun – simple operation, reproducible results
- Control of evaporation current profile - ensures consistently reproducible carbon films
- Precise thickness control using the film thickness monitor option
- Fully automatic touch screen control – rapid data input, simple operation
- Multiple, customer defined coating schedules can be stored - ideal for multi-user laboratories
- Automatic vacuum control which can be pre-programmed to suit the process and material – no manual needle valve to adjust
- "Intelligent" recognition of system - automatically detects the type of coating insert fitted
- Easy-to-change, drop-in style specimen stages (flat rotation stage as standard)
- Vacuum shut down feature - leaves the process chamber under vacuum when not in use - improved vacuum performance
- Thick film capabilities - up to 60 minutes sputtering time without breaking vacuum
- Power Factor Correction - complies with the current legislation (CE certification) - efficient use of power means reduced running costs
- Three-year warranty

Product Description

The EMS150GB is single platform for sputtering and carbon rod evaporation. Metal evaporation using filament or boat sources is possible using an optional insert.

Depending upon user preference, the EMS150GB can be a top-of-the-range sputter coater for high resolution scanning electron microscopy (SEM), or a high vacuum carbon coater suitable for SEM and transmission electron microscopy (TEM). The flexibility of the system can be further expanded using a range of optional accessories.

The EMS150GB can rapidly sputter a wide selection of oxidising and non-oxidising metals making it ideal for many thin film applications.

The EMS150GB has an integral turbomolecular pump and additionally requires a suitable rotary pump or dry pump to "back" the turbomolecular pump (see Option and Accessories).

Flexible modular design

A modular design enables the vacuum chamber to be mounted through the base of the glove box or - when modification to the glove box floor is not possible - inside the glove box (optional feedthroughs are required).

A separate power supply housed in a rugged case is designed to be floor mounted and can be positioned conveniently beneath the glove box or bench. The touch screen user interface is housed in a robust stainless steel case and can be positioned outside of the glove box environment, if preferred.

EMS150GB mounted in a glove box

Options for glove box mounting:

Vacuum module mounted in the floor of the glove box

A cut-out is made in the floor of the glove box and the vacuum chamber fitted and sealed with the gasket supplied. External connections from the floor mounted power supply, vacuum pump and argon gas can then be made directly to the chamber.

OR

Vacuum module placed inside the glove box

The chamber assembly is placed inside the glove box and the power supply, vacuum pump and argon gas connections are made through two KF40 feedthroughs in the rear of the glove box.

Note: each EMS150GB is supplied with an accessory/configuration kit to suit either internally or externally mounted vacuum chambers. Additional kits can be designed on a case-by-case basis to allow the system to be adapted to various manufacturers' glove boxes. *Please contact EMS for more details.*

► EMS150GB Turbo-Pumped Sputter Coater/Carbon Coater – For Glove Box (continued)

Touch screen user interface

Enclosed in a stainless steel case and mounted at a convenient position outside the glove box, the touch screen allows multiple users to input and store coating protocols.

Vacuum module - including "vacuum shutdown" and glove box pressure interlock

The vacuum module houses all the working components, including the efficient 70L/s air-cooled turbomolecular pump. An automatic bleed control ensures optimum vacuum conditions during sputtering and a full range active gauge is fitted as standard to monitor the vacuum.

The EMS150GB includes "vacuum shutdown", a convenient feature which enhances vacuum performance by allowing the chamber vacuum to be maintained when the coater is not in use.

A unique feature of the EMS150GB is the integral pressure interlock switch. This independently monitors the pressure inside the glove box and shuts off the vacuum pump if the glove box atmosphere is unacceptably reduced due to a vacuum leak.

The vacuum chamber is 214mm high to allow for increased source to substrate distances required for coating large specimens. It has an external diameter of 165mm and comes with an integral implosion guard. The chamber assembly is easily removed to allow specimen exchange and chamber cleaning.

A variable speed rotary specimen stage is fitted as standard, with full height adjustment from 0 to 190mm above the base plate; other stages are available as options.

Sputter coating and carbon coating as standard, plus an option for metal evaporation

"Intelligent" Quick-change deposition inserts

The deposition inserts can be swapped in seconds and the intelligent system logic automatically recognises which insert is in place and displays the appropriate operating settings.

High resolution sputter coating

The EMS150GB features a high-resolution sputter coater insert (3200) for oxidising and non-oxidising (noble) metals. A wide selection of sputtering targets is available, including iridium and chromium, which are highly recommended for FE-SEM applications. Please see Options and Accessories for details of available metal targets.

Touch screen control module

Vacuum chamber assembly

Carbon rod evaporation

The high vacuum carbon rod coating insert (3230) is ideal for the production of highly stable carbon films and surface replicas for transmission electron microscopy (TEM). The system uses economical 3.05mm diameter carbon rods and the advanced "anti-stick" carbon rod evaporation gun offers simple operation and reproducible results. A carbon fibre evaporation insert (3250) is available as an option (see Options and Accessories).

Carbon rod evaporation insert

Metal evaporation/aperture cleaning option

A quick change insert (3260) allows metal evaporation from tungsten baskets or molybdenum boats - ideal for thin film applications. For ease of set up in a glove box, the metal charge can be loaded into the evaporation source away from the vacuum chamber.

Each of the above configurations can be used with a range of optional accessories. See options and Accessories for details.

Metal evaporation insert option

Rapid data entry

At the operational heart of EMS150GB is a simple colour touch screen, which allows even the most inexperienced or occasional operators to rapidly enter and store their own process data. To further aid ease of use a number of typical sputtering and evaporation profiles are provided.

Carbon fibre evaporation insert option

Additional Information

Options and Accessories (including details the standard specimen stage)

Coating inserts included with the EMS150GB

A range of interchangeable, plug-in style coating head inserts are available:

- Sputtering head insert (3200) is suitable for oxidising and non-oxidising metals. Supplied with a 54mm Ø x 0.3mm thick chromium target (3417) as standard. For additional targets see "Ordering Information" section.

Note: changing sputtering targets is easy, but additional sputter head inserts can be purchased for even quicker coating material change - see (3210)

- Carbon rod evaporation head insert and accessories for 3.05mm Ø rods (3230)

Optional coating inserts

Carbon rod evaporation head insert for 6.15mm Ø rods (3240).

Note that EMS recommends 3.05mm Ø rods as they offer greater process control and are more economical (less wastage)

- Carbon fibre evaporation head insert (3250)

► EMS150GB Turbo-Pumped Sputter Coater/Carbon Coater – For Glove Box (continued)

- Metal evaporation and aperture cleaning head insert (3260), using tungsten wire baskets and molybdenum boats. Includes electrode extensions to allow upwards evaporation, if required. Note: when the electrodes are fitted some stage options cannot be used

Specimen stages

The EMS150GB has specimen stages to meet most requirements. All are easy-change, drop-in style (no screws) and are height adjustable (except rotary planetary stage).

- 6800-S rotation stage, 50mm Ø (supplied as standard). This stage only rotates – no tilt or height adjustment.
- 6801 rotate-tilt stage, 50mm Ø with height adjustment (target to stage height variable between 37mm and 60mm). The tilt angle can be pre-set.
- 6803 variable angle 'Rota-Cota' rotary planetary specimen stage with 50mm Ø specimen platform with six stub positions for 15mm or 6.5mm or 1/8" pin stubs.
- 3360 flat rotation stage for 4"/100mm wafers. Includes gear box which needs to be fitted when the optional FTM is being used or for coating over the full area of the stage.

4" wafer stage option

standard rotating specimen stage
and optional film thickness
monitor (FTM)

- 6804 rotation stage for glass microscope slides. Allows two 75 x 25mm slides to be coated.

Note: all rotation stages have rotation speeds that can be variable between 8 and 20 rpm.

Specifications

Vacuum module size	267mm W x 490mm D x 494mm H (total height with coating head open: 767mm)
Power supply size	310mm W x 357mm D x 262mm H
User interface size & weight	160mm W x 157mm D x 42mm.
Weight:	40kg
Packed dimensions	725mm W x 660mm D x 787mm H (44kg)
Work chamber	Borosilicate glass 152mm Ø (inside) x 214mm H
Safety shield	Integral polyethylene terephthalate (PET) cylinder
Display	145mm 320 x 240 colour graphic TFT (Thin Film Transistor) display
User interface	Intuitive full graphical interface with touch screen buttons, includes features such as a log of the last 100 coatings carried out and reminders for when maintenance is due
Sputtering target	Disc style 57mm Ø x 0.3mm thick chromium target is fitted as standard
Specimen stage	60mm Ø rotation stage. Rotation speed 8 ~ 20 rpm
For alternative stages see	Options and Accessories
Specimen shutter	An automatic shutter is fitted as standard to shield specimens during pre-sputtering of oxidising metals and protection during evaporation outgassing procedures

Vacuum

Turbomolecular pump	Internally mounted, 70L/s air-cooled turbomolecular pump
Rotary pump	5m ³ /hr-1 two-stage rotary pump with oil mist filter (order separately: 91003)
Vacuum measurement	An active full-range gauge is fitted
Typical ultimate vacuum	5x10 ⁻⁹ mbar
Sputter vacuum range	Between 5x10 ⁻³ and 5x10 ⁻¹ mbar

Interlocks

The EMS150GB is interlocked to prevent continuous pumping of the glove box in the event of a vacuum leak

Processes

Sputtering 0-150mA to a pre-determined thickness (with optional FTM) or by the built-in timer. The maximum sputtering time is 60 minutes (without "breaking" vacuum and with built-in rest periods)

Carbon evaporation A robust, ripple free, D.C. power supply featuring pulse evaporation ensures reproducible carbon evaporation from rod or fibre sources. Current pulse: 1-90A

Metal evaporation and aperture cleaning insert (option) For thermal evaporation of metals from filaments or molybdenum boat can be fitted. The metal evaporation head is set up for downwards evaporation, but upward evaporation can be achieved by fitting two terminal extensions (supplied). Evaporation times: up to four minutes

Services and other information

Gases	Quick-connect inlet for: argon sputtering process gas, 99.999% ("zero grade")
Nitrogen venting gas (no quick-connect – uses the glove box atmosphere as the source)	
Electrical supply	90-250V ~ 50/60 Hz 1400 VA including rotary pump power. 110/240V voltage selectable
Conformity	CE conformity: Power Factor Correction. Complies with the current legislation (CE Certification) and ensures efficient use of power which means reduced running costs

► EMS150GB Turbo-Pumped Sputter Coater/Carbon Coater – For Glove Box (continued)

Other options, including FTM and glow discharge

- 3270 extended height chamber (87mm higher than the standard stage) For tall specimens.
- 3290 Film Thickness Monitor (FTM). Consists of a controller and quartz crystal oscillator built into the EMS150GB and a vacuum feed though, chamber mounted crystal holder and quartz crystal. As sputtered or evaporated material is deposited onto the crystal, so its frequency of oscillation is modified. This 'modification' is used to measure and control the thickness of material deposited.
- 4513 glow discharge insert. Used to modify surface properties (eg hydrophobic to hydrophilic conversion).

Glow discharge attachment option

During sputtering, optional film thickness monitor (FTM) shown

Ordering Information

EMS150GB A modular, high resolution turbomolecular-pumped sputter coater/carbon rod evaporator for glove boxes. **Includes:** sputtering insert, 54mm Ø x 0.3mm chromium target, carbon rod evaporation insert, carbon rods (3.05mm Ø x 300mm) and carbon rod shaper (manual operation). Fitted with a rotation stage

Rotary pump requirements (needs to be ordered separately)	
91003	Edwards RV3 50L/s two-stage rotary pump, with vacuum hose, coupling kit and oil mist filter
6550	Diaphragm pump. A "dry" alternative to the standard 91003 oil-based rotary pump complete with vacuum hose, coupling kit and oil mist filter

Options and accessories

3230	Carbon rod evaporation head insert (for 3.05mm Ø rods)
3240	Carbon rod evaporation head insert (for 6.15mm Ø rods).
Note that EMS recommends 3.05mm Ø rods as they offer greater process control and are more economical	
3250	Carbon fiber evaporation head insert
3260	Metal evaporation and aperture cleaning head insert, including the ability to evaporate upwards or downwards. Supplied with a pack of ten tungsten filaments and a molybdenum boat.
3270	Extended height vacuum chamber (214mm high – the standard chamber is 127mm high). For increased source to sample distance and for coating large specimens
3290	Film thickness monitor (FTM) attachment. Consists of a built in chamber mounted quartz crystal oscillator (includes crystal). As sputtered or evaporated material is deposited onto the crystal, so its frequency of oscillation is modified. This 'modification' is used to measure and control the thickness of material deposited
3300	Spare quartz crystal.
3320	Full range vacuum gauge for low and high vacuum measurement (a low vacuum Pirani gauge is fitted as standard)
4513	Glow discharge insert to modify surface properties (eg hydrophobic to hydrophilic conversion) or to clean surface residues
3600	Metal evaporation basket - pack of 10 (for use with metal evaporation head)
3630	Two-year spares kit for EMS150GB

Includes: chromium target, glass cylinder, carbon fibre cord, carbon fibre - fine, carbon rods 3.05mm, quartz crystals, O-rings

Specimen stages

6790-S	Swinging arm stage drive, a stage drive and positioning mechanism which positions the stage under the correct target. Also provides rotation drive to the stage. Rotation Speed Max 38 rpm Min 14 rpm
6800-S	Rotating specimen stage for 6" (152 mm) wafers, with rotation variable between preset limits.
6801	Rotating 50 mm Ø specimen stage with adjustable tilt. The platform has six specimen stub positions for 15 mm, 10 mm, 6.5 mm or 1/8" pin stubs. The stage rotation speed is variable between preset limits. The target to stage height is variable between 0 mm and 42 mm for the standard stage. When used with the extended height cylinder the target to stage height would be an additional 87 mm.
6802	50 mm Ø variable height specimen stage with six stub positions for 15 mm, 10 mm, 6.5 mm disc stubs or 1/8" pin stubs. Stage rotation speed variable between preset limits.
Note: Target to stage height is variable between 10 mm and 53 mm for the standard stage. The stage is supplied with two mounting pillars; one provides 10 mm to 32 mm target to stage distance and the other 31 mm to 53 mm. An adjustable stop is used to set the height. When used with the extended height cylinder (optional accessory) the target to stage height would be an additional 87 mm.	
6803	50 mm Ø rotary tilting stage. A rotary planetary style stage with a variable tilt angle from horizontal to 30 degrees. The platform has six positions for either 6.5 mm, 10 mm and 15 mm disc stubs or 1/8" pin stubs. Rotation speed is variable between preset limits.
Note: depending upon specimen height, this stage may require the optional extended height cylinder.	
6804	A 90 mm Ø specimen stage for glass microscope slides (up to two 75 mm x 25 mm slides or a single 75 mm x 50 mm slide). The stage can alternatively accommodate up to six 1/8" SEM pin stubs. The stage rotation speed is variable between preset limits. A gear box is included to allow the optional FTM to be used.

► EMS300R T Triple Target, Large Chamber, Rotary-Pumped Sputter Coater

Innovative and versatile Sputter Coater and Carbon Evaporator for SEM Applications

Quick Overview

The EMS300R T is a large chamber, rotary-pumped coating system ideally suited for sputtering a single large diameter specimen (e.g. a wafer) up to 8"/203 mm or smaller, multiple specimens over a similar diameter.

The EMS300R T is fitted with three individual sputtering heads to ensure even deposition on a range of specimen types. The system is designed to sputter non-oxidizing (noble) metals, for example gold (Au), gold/palladium (Au/Pd) and platinum (Pt). It is fitted with three individual sputtering heads to ensure even sputtering deposition over a large diameter. Gold targets are fitted as standard.

Note: for sputtering both non-oxidizing and oxidizing metals please see the EMS300T T Large Chamber Turbo-Pumped sputter coater. For sequential sputtering of two different oxidizing or non-oxidizing metals please see the EMS300T D Large Chamber, Turbo-Pumped dual head sputter coater.

KEY FEATURES:

- **Large area sputter coating** – up to 8"/203 mm diameter
- **Triple sputtering head** – ensures even coating deposition of large specimens
- **Single target selection** – for economic coating of small specimens
- **Sputtering of a range of non-oxidising (noble) metals**, such as gold (Au), platinum (Pt) and silver (Ag). For oxidising metals see EMS300T T and EMS300T D
- **Precise thickness control using the film thickness monitor option**
- **Fully automatic touch-screen control** – rapid data input, simple operation
- **Multiple, customer-defined coating schedules can be stored** – ideal for multi-user laboratories
- **Coat logging** – details of the last 100 coatings available on screen
- **Automatic vacuum control** – can be pre-programmed to suit the process and material; no needle valve to adjust
- **Easy-to-change, drop-in style specimen stages (rotation stage as standard)**
- **Vacuum shut-down option** – leaves the process chamber under vacuum when not in use giving improved vacuum performance
- **Thick film capabilities** – up to 60 minutes sputtering time without breaking vacuum
- **Ergonomic one-piece moulded case** – allowing easy maintenance and service access
- **Ethernet with local FTP server connection** - simple programmer updates
- **Power factor correction** - complies with the current legislation (CE Certification), efficient use of power means reduced running costs
- **Three-year warranty**

Product Description

Ideal for sputter coating large specimens for SEM

The EMS300R T is suited for sputtering noble metals, such as gold (Au) and platinum (Pt) for the preparation of specimens for scanning electron microscopy (SEM).

Triple sputtering head

The EMS300R T is fitted with three individual sputtering heads to ensure even deposition of individual large specimens or multiple smaller specimens. Please note that it is not possible to sequentially sputter three different sputtering metals from each sputtering head – for sequential coating please see EMS300T D dual head coater..

For economical coating of small specimens "single target" mode can be selected.

Molded case with color touch screen

The EMS300R T is presented in a custom molded, one-piece case, allowing easy servicing access. The color touch-screen allows multiple users to input and store coating 'recipes'. The case houses all the working components, with an automatic bleed control valve that ensures optimum vacuum conditions during sputtering.

The vacuum chamber has an internal diameter of 283 mm/12" and comes with an integral implosion guard. The EMS300R T also includes 'vacuum shutdown', which enhances vacuum performance by allowing the chamber vacuum to be maintained when the system is not in use.

A variable speed rotary specimen stage is fitted as standard for 8"/203 mm and 6"/152 mm wafers, with other stages available as options, please see the Options and Accessories section below.

Triple sputtering head (closed)

Triple sputtering head (open)

➤ EMS300R T (continued)

Rapid data entry

At the operational heart of the EMS300R T is a simple color touch screen, which allows even the most inexperienced or occasional operator to rapidly enter and store their own process data. To further aid ease of use, a number of typical sputtering and carbon coating profiles are already stored. For added convenience summaries of the last 100 coatings carried out can be viewed.

Maintenance

The intuitive touch screen interface features maintenance prompts which highlight:

- Time of last clean
- Coating time since last cleaned
- System 'on time'
- Time of last service

Improved Tolerance to Out Gassing Substrates

The pump time out has been moved to a new level defined by "safe outgas threshold" parameter, this is user definable between 5×10^{-2} and 2 mbar.

Until now the system would limit the time to achieve operational vac of 1×10^{-3} to 10 minutes. With the new modification once the "Safe outgas threshold" has been achieved the system will pump continuously. Implemented from software version 2-0042 onwards.

Controlled Evaporation Process

This process can automate a metal evaporation process when using low power evaporation sources. It can be used with the FTM.

The use of key properties about the source and required termination allow the process to:

- Bring the source current up to the point of evaporation.
- Ramp the current up at a controlled rate until evaporation is seen.
- Close the shutter and shut the evaporation PSU down when the specified thickness is seen.
- Check the source for open or short circuit when starting the process.

This process will be available on the EMS150T with software version 2-0048 or later. Consideration should be made to the thermal effects of the evaporation source when using the FTM to control the process.

Improvements to the Pulse Carbon Rod Evaporation

Continued work on this process has found that the thickness deposited can be variable if the power applied to the rods is either too high or too low. With the optimum current being a narrow margin between them. However, limiting the available voltage supplied to the rods increases this current window. This coupled with reducing the spigot diameter to work at a more optimum point in the PSU operation produces a more continuous spark which in turn produces a more repeatable thickness.

This improvement can be implemented by:

- Software version 2-0046 or later implements the voltage limit. Note all the carbon rod profiles should be deleted if a unit is updated to this software version.
- The evaporation current should be set between 60 and 65A.
- The reduced spigot diameter of 1.2mm can be produced with the blue handle rod shaper.

Additional Information

Options and Accessories (including details the standard specimen stage)

Specimen stages

The EMS300R T has specimen stages to meet most requirements. All are easy-change, drop-in style (no screws) and are height adjustable (except for the rotary planetary stage). Rotation speed is variable between preset limits:

- Flat rotation stage for wafers - for 8"/203 mm and 6"/152 mm/wafers (fitted as standard)
- Rotation stage – 50 mm Ø. This stage only rotates - no tilt or height adjustment is possible
- Rotate-tilt stage – 50 mm Ø with height adjustment (target to stage height variable between 30-80 mm). Tilt angle can be pre-set (horizontal to 30 degrees)
- Rotation stage for glass microscope slides

EMS300R T standard specimen stage shown with a 4" wafer. Optional film thickness monitor (1152) fitted

Other options

Extended height chamber – for taller specimens

Film thickness monitor (FTM) - this attachment consists of a controller and quartz crystal oscillator built into the EMS300R T and a vacuum feed-through, chamber-mounted crystal holder and quartz crystal. As sputtered or evaporated material is deposited onto the crystal, so its frequency of oscillation is modified. This 'modification' is used to measure and control the thickness of material deposited. Note: cannot be used when the coater is operated in "single target" mode.

► EMS300R T Triple Target, Large Chamber, Rotary-Pumped Sputter Coater (continued)

Specifications

Instrument case	585mm W x 470mm D x 410mm H (total height with coating head open: 650mm)
Weight	36.4kg
Packed dimensions	725mm W x 660mm D x 680mm H (44.8kg)
Work chamber	Borosilicate glass 283mm ID x 127mm H
Safety shield	Integral polyethylene terephthalate (PET) cylinder
Display	145mm x 320mm x 240mm colour graphic thin film transistor (TFT) display
User interface	Intuitive full graphical interface with touch screen buttons, includes fea- tures such as a log of the last 100 coatings carried out and reminders for when maintenance is due
Sputter targets	Disc style 57mm Ø with thick depending upon the targets fitted. Three 57 mm Ø x 0.1 mm thick gold (Au) targets are fitted as standard.
Vacuum	
Rotary pump	50L/m two-stage rotary pump with oil mist filter. Vacuum measurement ..Pirani gauge
Typical ultimate vacuum	2×10^{-2} mbar in a clean system after pre-pumping with dry nitrogen gas
Specimen stage	Flat rotation stage for 200mm/8" and 150mm/6" wafers fitted as standard. Rotation speed is variable between preset options. For alternative stages see Options and Accessories

Processes

Sputtering	0-80mA to a pre-determined thick- ness (with optional FTM) or by the built-in timer. The maximum sputter- ing time is 60 minutes (without 'breaking' vacuum and with built-in rest periods)
------------	--

Services and other information

Gases	Argon sputtering process gas, 99.999% Nitrogen venting gas (optional)
Electrical supply	90-250V 50/60Hz 1,400VA including RV3 rotary pump power. 110/240V voltage selectable
Conformity	CE conformity: Power factor correc- tion. Complies with the current legis- lation (CE Certification) and ensures efficient use of power, which means reduced running costs

Ordering information

EMS300R T	Large-Chamber-Rotary-Pumped Sputter Coater, fitted with three sputtering heads to ensure even metal deposition. Include three 57mm Ø x 0.3mm gold (Au) sputter targets. A flat rotation stage for 8"/203 mm/ and 6"/152 mm wafers is fitted as standard	each
91005	Rotary pump requirements (needs to be ordered separately) Edwards RV5 90L/s two-stage rotary pump, with vacuum hose, coupling kit and oil mist filter	each

Specimen Stages

6400-S	Rotating 50 mm Ø specimen stage with adjustable tilt. The platform has six specimen stub positions for 6.5mm, 10 mm and 15 mm or 1/8" pin stubs. Stage rotation speed is variable between preset limits. No rotation is possible when in single target mode. Target to stage height is variable between 0 mm and 42 mm for the standard stage. When used with the extended height cylinder (optional accessory 10596) the target to stage height would be an additional 87 mm	each
6401	50 mm Ø variable height specimen stage with six stub positions for, 6.5 mm 10 mm and 15 mm disc stubs or 1/8" pin stubs. Stage rotation speed is variable between preset limits	each
6402	50 mm Ø rotary tilting stage. A rotary planetary style stage with variable tilt angle from horizontal to 30 degrees. The platform has six positions for either 6.5 mm 10 mm and 15 mm disc stubs or 1/8" pin stubs. Rotation speed is variable between preset limits.	each
	Note: depending upon specimen height, this stage may require the optional extended height cylinder	
6403	A 90mm Ø specimen stage for glass microscope slides (up to two x 75mm x 25mm slides or a single 75 mm x 50 mm slide). The stage can alternatively accommodate up to six 1/8" SEM pins stub. Stage rotation speed variable between preset limits. Includes a gear box to allow the optional FTM to be used	each

► EMS300R T (continued)

Options and Accessories

6404	Film thickness monitor (FTM) attachment. Including oscillator, feed-through, quartz crystal holder and one C5460 quartz crystal	each
6405	Spare quartz crystal	each
6406	Extended height vacuum chamber (214 mm in height - the standard chamber is 127 mm high). For increased source to specimen distance and for coating larger specimens	each
6407	Vacuum spigot allows more convenient connection of the vacuum hose to the rear of the Q300R T when bench depth is limited	each
6408	A lockable emergency stop (e-stop) switch which can be mounted on top of the system in a position easily accessible for the operator. It is provided with a key to release the knob after activation. Note: the addition of the e-stop does not inhibit or replace the normal On/Off switch function. The e-stop can be retrofitted to existing systems	each
6409	Coating shields. Shields can be fitted to protect large surfaces from coating deposition, easily removable for ease of cleaning	each
6410	Two-year spares kit for EMS300R T. Includes: 3 x 57mm Ø x 0.3mm gold (Au) target, standard glass chamber assembly, O-rings etc.	each
6411	6" Wafer Specimen Stage: A flat adjustable stage capable of accepting 6" or 101.6 mm wafers	each
6412	4" Wafer Stage : A flat 4 1/2" 102mm flat, drop in wafer stage which accepts 2, 3, 4 " Wafers	each
6413	Additional Standard Glass Cylinder Assembly	each

Sputter targets

NB: The EMS300R T is fitted as standard with three 0.3mm thick gold (Au) targets. Other optional targets are available (three required):

4523	57mm Ø x 0.1mm Gold	each
4524	57mm Ø x 0.2mm Gold	each
4525	57mm Ø x 0.3mm Gold	each
4526	57mm Ø x 0.1mm Gold/Palladium (80/20%)	each
4527	57mm Ø x 0.2mm Gold/Palladium (80/20%)	each
4528	57mm Ø x 0.3mm Gold/Palladium (80/20%)	each
4529	57mm Ø x 0.1mm Platinum	each
4530	57mm Ø x 0.2mm Platinum	each
4561	57mm Ø x 0.3mm Platinum	each
4532	57mm Ø x 0.1mm Nickel	each
4533	57mm Ø x 0.1mm Silver	each
4534	57mm Ø x 0.1mm Palladium	each
4535	57mm Ø x 0.1mm Copper	each
4536	57mm Ø x 0.1mm Platinum/Palladium (80/20%)	each
4537	57mm Ø x 0.3mm Platinum/Palladium (80/20%)	each

► EMS300TT Triple Target, Large Chamber, Turbo-Pumped Sputter Coater

Quick Overview

The EMS300T T is a large chamber, turbomolecular-pumped coating system ideally suited for sputtering a single large diameter specimen up to 8"/203 mm (for example a wafer) or smaller multiple specimens of a similar area.

The EMS300TT is fitted with three individual sputtering heads to ensure even deposition on a range of specimen types. The system is designed to sputter both oxidising metals e.g. chromium (Cr) and aluminium (Al) and non-oxidising (noble) metals such as gold (Au), gold/palladium (Au/Pd) and platinum (Pt). Chromium targets are fitted as standard.

If the requirement is for sputtering non-oxidising metals only then the EMS300R T large chamber, turbo-pumped sputter coater is the most suitable choice.

KEY FEATURES

- Large area sputter coating – up to 8"/203 mm diameter
- Triple sputtering head – ensures even coating deposition of large specimens
- Single target selection – for economic coating of small specimens for SEM
- Fine grain sputtering for advanced high resolution FE-SEM applications
- Coat logging – details of the last 100 coatings available on screen
- High vacuum turbo pumping - allows sputtering of a wide range of oxidising and non-oxidising metals suitable for SEM, high resolution FE-SEM and also for many thin film applications
- Precise thickness control using the film thickness monitor option
- Fully automatic touch-screen control – rapid data input, simple operation
- Multiple, customer-defined coating schedules can be stored – ideal for multi-user laboratories
- Automatic vacuum control – can be pre-programmed to suit the process and material; no needle valve to adjust
- Easy-to-change, drop-in style specimen stages (rotation stage supplied as standard)
- Vacuum shut-down option – leaves the process chamber under vacuum when not in use, giving improved vacuum performance
- Thick film option – up to 60 minutes sputtering time without breaking vacuum
- Ergonomic one-piece moulded case – enables easy maintenance and service access
- Ethernet with local FTP server connection – simple programmer updates
- Power factor correction – complies with the current legislation (CE Certification) – efficient use of power means reduced running costs
- Three-year warranty

Product Description

Ideal for sputter coating large specimens and thin film applications and SEM / FE-SEM

The EMS300T T is suited for sputtering a range of oxidising and non-oxidising (noble) metals for thin film applications and scanning electron microscopy (SEM). The range of target materials available is extensive and detailed in the Ordering Information section below.

High vacuum turbo molecular pumping

The EMS300T T is fitted with an internally mounted 70L/sec turbo-molecular pump, backed by a 50L/m two-stage rotary pump (which needs to be ordered separately). A Pirani vacuum measurement gauge (range: 1000 mbar to 5×10^{-4} mbar) is included, but a full range gauge (1000 mbar to 5×10^{-9} mbar) is available as an option.

Typical ultimate vacuum of around 5×10^{-5} mbar can be expected in a clean system after pre-pumping with dry nitrogen gas

Triple sputtering head – for an even, consistent coating

The EMS300T T is fitted with three individual sputtering heads to ensure even deposition of individual large specimens or multiple specimens. Please note that it not possible to sequentially sputter three different sputtering metals from each sputtering head, for sequential coating of two metals then the EMS300T D is a more suitable option. For economical coating of small specimens such a SEM stubs then "single target" mode can be selected.

Triple sputtering head with automatic shutter open

Triple sputtering head with automatic shutter closed

► EMS300TT (continued)

Molded case with color touch-screen

The EMS300T T is presented in a custom moulded, one-piece case allowing easy servicing access. The colour touch-screen enables multiple users to input and store coating 'recipes'. The case houses all the working components and includes an automatic bleed control that ensures optimum vacuum conditions during sputtering.

The vacuum chamber has an internal diameter of 283 mm/12" and comes with an integral implosion guard. The vacuum shutdown option can enhance vacuum performance by allowing the chamber vacuum to be maintained when the system is not in use.

A variable speed rotary specimen stage is fitted as standard and accommodates 8"/203 mm and 6"/152 mm wafers. Other stages are available as options for this coater, please see the Options and Accessories section for more information.

Rapid data entry

At the operational heart of the EMS300T T is a simple colour touch-screen, which allows even the most inexperienced or occasional operator to rapidly enter and store their own process data. To further aid ease of use, a number of typical sputter coating profiles are already stored. For added convenience summaries of the last 100 coatings carried out can be viewed.

Improved Tolerance to Out Gassing Substrates

The pump time out has been moved to a new level defined by "safe outgas threshold" parameter, this is user definable between 5×10^{-2} and 2 mbar.

Until now the system would limit the time to achieve operational vac of 1×10^{-3} to 10 minutes. With the new modification once the "Safe outgas threshold" has been achieved the system will pump continuously. Implemented from software version 2-0042 onwards.

Controlled Evaporation Process

This process can automate a metal evaporation process when using low power evaporation sources. It can be used with the FTM.

The use of key properties about the source and required termination allow the process to:

- Bring the source current up to the point of evaporation.
- Ramp the current up at a controlled rate until evaporation is seen.
- Close the shutter and shut the evaporation PSU down when the specified thickness is seen.
- Check the source for open or short circuit when starting the process.

This process will be available on the EMS150T with software version 2-0048 or later. Consideration should be made to the thermal effects of the evaporation source when using the FTM to control the process.

Improvements to the Pulse Carbon Rod Evaporation

Continued work on this process has found that the thickness deposited can be variable if the power applied to the rods is either too high or too low. With the optimum current being a narrow margin between them. However, limiting the available voltage supplied to the rods increases this current window. This coupled with reducing the spigot diameter to work at a more

optimum point in the PSU operation produces a more continuous spark which in turn produces a more repeatable thickness.

This improvement can be implemented by:

- Software version 2-0046 or later implements the voltage limit. Note all the carbon rod profiles should be deleted if a unit is updated to this software version.
- The evaporation current should be set between 60 and 65A.
- The reduced spigot diameter of 1.2mm can be produced with the blue handle rod shaper.

Maintenance

The intuitive touch-screen interface features a maintenance prompt facility, which highlights:

- Time of last clean
- System 'on time'
- Coating time since last cleaned
- Time of last service.

Additional Information

Options and Accessories (including details of the standard specimen stage)

Specimen stages

The EMS300T T has specimen stages to meet most requirements. All are easy-change, drop-in style (no screws) and are height adjustable (except the rotary planetary stage). Rotation speed is variable between preset limits.

The standard specimen stage is designed to hold a 6" or 8" wafer. This image shows the non-standard 4" wafer stage and wafer and optional film thickness monitor (1152)

- Flat rotation stage for wafers – for 8"/203 mm and 6"/152 mm wafers (fitted as standard).
- Rotation stage – 50 mm Ø. This stage only rotates - no tilt or height adjustment
- Rotate-tilt stage – 50 mm Ø with height adjustment (target to stage height variable between 30-80 mm). The tilt angle can be pre-set (horizontal to 30 degrees)
- Rotation stage for glass microscope slides

Other options

- Extended height chamber – for taller specimens
- Film thickness monitor (FTM) – the optional FTM attachment consists of a controller and quartz crystal oscillator built into the EMS300TT, a vacuum feed-through, chamber-mounted crystal holder and quartz crystal. Note: the FTM cannot be used when the coater is operated in "single target" mode.

Terms and Techniques

Carbon Fiber

Carbon fiber, normally in the form of a woven cord, can be used to thermally evaporate thin layers of carbon onto a substrate. The main application in electron microscopy (EM) is the production of thin, electrically-conducting coatings on scanning electron microscopy (SEM) specimens. Carbon fibre can be used for transmission electron microscopy (TEM) applications, but carbon rod is normally preferred due to superior control of the evaporation process.

Carbon Rods

Carbon (C) in the form of shaped graphite rods can be used to thermally evaporate thin layers of carbon onto a substrate. Common applications in electron microscopy (EM) include the production of carbon-coated transmission electron microscopy (TEM) grid support films and the making of TEM surface replicas. Carbon rod evaporation is also used to produce electrically-conducting surface coatings on scanning electron microscopy (SEM) specimens.

Edwards RV3 Rotary Pump

**What is...
Carbon Evaporation?**

The use of Carbon Evaporation is well known in Electron Microscopy for support films and replicas in TEM, and X-Ray Microanalysis and conducting coatings in SEM.

The films are continuous for thicknesses of 2nm (or 20 Angstroms) or more, and free of significant structure.

The most common form of deposition is from resistance heated carbon, or graphite rods, spectrographically pure. The rods are shaped to achieve a high current density at the point of contact of the rods with sufficient temperature being generated to cause the evaporation. At this point, the appearance being that of small, bright, glowing particles of carbon. To achieve the required vacuum condition of 1x 10⁻⁴ mbar, or better, requires the use of Diffusion or Turbo Molecular Pumps.

► EMS 975 Large Chamber Turbo Evaporator & EMS 975S for Semiconductor Wafer Coating

The EMS 975 Turbo Evaporator is a multiple application system to enable a range of preparation techniques to be applied with the flexibility and module expansion capability to develop new methods and prepare new specimens.

The EMS 975 allows for carbon evaporation, metal evaporation from both baskets and crucibles and sputter coating option. A range of techniques can be practiced including carbon support films and replicas for TEM, carbon/metal evaporation, low angle shadowing and sequential layer coating using dual source evaporation and the sputter option can be used for a range of target materials.

The system flexibility is further enhanced by the use of a microcontroller, which readily allows the customer access to a range of options, but readily 'defaults' to optimum operating conditions, allowing both fully automatic and manual override as required. The unique loading rack out drawer system gives the user easy sample access with good sample size and the hinged lid assembly makes any other areas of the system readily accessible.

The unit has a turbo pump, externally mounted for convenience and easy exchange, and is backed up by a Rotary Vacuum Pump. The complete pumping sequence is under fully automatic control, achieving a high vacuum for evaporation.

The unit is bench mounted, with easy to use controls, and cannot be damaged by inadvertent use.

The EMS-975S is based on the EMS-975, however it has a special load lock door which allows the entry of 8" wafers with carbon coating, or other samples up to 140mm x 140mm square.

FEATURES

- Turbomolecular Pump.
- Automatic pumping sequence.
- Clean vacuum.
- Variable outgas control.
- Evaporation pulse button.
- Unique "anti stick" carbon rod gun evaporation assembly (patent pending).
- Rack out drawer sample loading system.
- Rotating plate specimen table with external accurate tilt control (option).
- Large sample capacity, 150mm (6") using drawer with up 200mm (8") for top loading.
- Sample holders range of options, including grid holders, stub holders.
- Carbon and Carbon/Platinum evaporation.
- Full range vacuum measuring system.
- Fast pumping cycle.
- Protective Polycarbonate Implosion Shield.
- Selectable evaporation supplies giving x 4 evaporation settings.
- Restricted or full vent control to avoid disturbances of samples.
- Microcontroller with LCD displays of status and customer data entry for control of systems.
- Modular electronics.
- Bench mounted unit.
- Sputter coating (option) for range of metal targets.
- Film thickness measurement for carbon and metal depositions.

Product Description

Coating sources

The EMS 975 is fitted with a carbon rod gun and metal filament/boat source which can also be used for cleaning TEM and SEM apertures. An optional sputtering source is available.

Work chamber

The borosilicate glass work chamber is 250mm diameter x 300mm and mounted on an aluminium support collar. A tough chamber implosion guard is included as standard. The chamber can accommodate specimens up to 8"/200mm in diameter. A unique rack-out specimen loading system gives the user easy specimen access and the hinged lid assembly makes other areas of the vacuum chamber readily accessible.

Menu-driven control

The menu-driven microcontroller allows the user access to a range of options, but readily 'defaults' to optimum operating conditions, allowing both fully-automatic and manual override as required.

Turbomolecular pumping and venting

The EMS 975 uses a modern 100L/s turbomolecular pump backed up by an external rotary vacuum pump (not included, see 91005) with the complete pumping sequence being under fully-automatic control.

The vacuum pump-down sequence is automatically controlled by the system microprocessor. Vacuum measurement is by a combined pirani/penning gauge and is displayed digitally.

Process gases (nitrogen for venting - if fitted - and argon for the optional EMS 350 sputtering attachment) are automatically controlled and can be programmed for use during coating sequences. The vent valve has an adjustable restrictor and programmable vent time to prevent disturbing specimens due to the inrush of gas at the end of the cycle.

A very useful feature of the EMS 975 is 'vacuum shut-down', which allows the process chamber to remain under vacuum when not in use. This helps to maintain a high level of system cleanliness and vacuum performance.

Typical chamber set up, showing carbon and metal evaporation sources, specimen stage and optional film thickness monitor (FTM)

► EMS 975 (Continued)

Specimen stages

The EMS 975 is fitted with an 80mm flat stage as standard, but this may be exchanged for optional holders, such as a 3mm grid holder, low-angle shadowing attachment and a rotary planetary stage (see Options and Accessories). Specimen holders are supplied with a bayonet fixing for quick exchange.

EMS 975 specimen stage and optional film thickness monitor (FTM)

The rotary stage is mounted on a sliding access port on the side of the chamber. This allows the user to exchange specimens quickly without having to remove the glass chamber and disturb any coating set-up. The standard flat stage may be tilted. For rotary shadowing techniques, the standard stage can be tilted from 0° to +/- 180°.

EMS 975 specimen drawer with stage in specimen exchange position

Chamber base plate and evaporation power supplies

The EMS 975 is fitted with a 0-100A evaporation power supply with base plate terminals for carbon rod evaporation (14V/100A), evaporation from a metal filament (15V/35A), carbon string evaporation (25V/35A) and a terminal rated at 5V/35A for TEM and SEM aperture cleaning using a molybdenum (Mo) boat. A wide range of add-on options is available - see Options and Accessories.

Close up of EMS 975 carbon evaporation source. The 'anti-stick' design ensures smooth movement of carbon rods during evaporation

EMS 975 metal evaporation source fitted. NB: Can also be use to evaporate carbon fiber string

EMS 975S Thermal Evaporator

The EMS 975S is based on the EMS 975, but a special load lock door allows the loading of wafers up to 8"/200mm. Please contact us for more information.

SPECIFICATIONS

Dimensions and Weight	450mm (W) x 500mm (D) x 300mm (H). 65kg
Work Chamber	Borosilicate Glass 250mm (Dia.) x 300mm (H) with hinged top plate (can accommodate samples to 200mm) (8") in Dia.
Implosion Guard	Polycarbonate - readily removable for maintenance
Carbon source	Adjustable height with tilt control of 0-200°. Uses 6.15mm Ø carbon rods (source for 3.05mm Ø carbon rods can be fitted - please specify at time of ordering)
Metal source	Adjustable height with tilt control 0-200°. Supplied with pack of 10 B5230 tungsten specimen baskets
Specimen Stage	With tilt facility 0-45°
Vacuum Gauge range	Atm to 1 x 10 ⁻⁷ mbar
Operating Vacuum	Towards 1 x 10 ⁻⁵ mbar, typically achieved within 15 minutes
Low voltage evaporation supply	Pulsed or variable control. Selectable: 0-5V-15V-25V, out-gas current: 0-25A
Services	Nitrogen gas (if used for venting). Argon gas (if the optional sputtering attachment is fitted)
Vacuum pumping	100L/s turbomolecular pump. Requires a 50L/m 'backing' rotary pump with oil mist filter
Electrical supply	230V/50Hz (8A max including pump), 115V/60Hz (16A max including pump)

Supplied with Accessory kit including: carbon rods (6.15mm x 100mm), evaporation filaments, manual rod shaper and operating manual

► EMS300TD Dual Target, Large Chamber, Turbo-Pumped Sputter Coater

Quick Overview

The EMS300T D is a fully automatic, free-standing sputter coater ideally suited for thin film applications and for conductive coating of scanning electron microscopy (SEM) specimens.

At the operational heart of the EMS300T D is a large chamber fitted with two independent sputtering heads. This “dual-head” configuration allows two different metals to be sequentially sputtered without the need to “break” vacuum. A dual channel film thickness monitor option is available.

The system is designed to sputter a wide range of metals, both non-oxidising (noble) metals such as gold (Au), silver (Ag) and platinum (Pt) and oxidising metals such as chromium (Cr) and aluminium (Al).

The EMS300T D sputter coater has a 300 mm x 127 mm work chamber. The specimen stage accepts substrates of 2”, 3” or 4” wafer sizes as standard and 6” wafers with an optional stage accessory. An optional extended height glass chamber is available to enable coating of larger specimens.

KEY FEATURES

- Fully automatic touch screen control - rapid data input, simple operation
- Dual sputter head – for sequential sputtering of two different metals
- Customer defined coating protocols
- Wide range of oxidising and non-oxidising targets available
- Fine grain sputtering for advanced high resolution FE-SEM applications
- Large chamber format
- Coat logging - details of the last 100 coatings available on screen
- Optional dual channel film thickness monitor (FTM) module
- High vacuum turbo pumping - allows sputtering of a wide range of oxidising and non-oxidising metals - suitable for SEM, high resolution FE-SEM and also for many thin film applications
- Automatic vacuum control - can be pre-programmed to suit the process and material - no needle valve to adjust
- Vacuum shut-down feature - leaves the process chamber under vacuum when not in use giving improved vacuum performance
- Thick film capabilities - up to 60 minutes sputtering time without breaking vacuum
- Ergonomic one-piece moulded case - easy maintenance and service access
- Ethernet with local FTP server connection - simple programme updates
- Power factor correction - complies with the current legislation (CE Certification) - efficient use of power means reduced running costs
- Three-year warranty

Standard rotating specimen stage - for 4” wafers or individual SEM mounting stubs. Shown with optional dual-channel film thickness monitor

Standard rotating specimen stage with 4” wafer and optional dual-channel film thickness monitor

Product Description

Ideal for thin film applications or for sputter coating large specimens for SEM/FE-SEM

The EMS300T D is suited for sputtering a range of oxidising and non-oxidising (noble) metals for scanning electron microscopy (SEM) and thin film applications. The range of target materials available is extensive and detailed in the Ordering Information section below. The EMS300T D sputter coater comes with a chromium (Cr) and a gold (Au) target as standard.

High vacuum turbo molecular pumping

The EMS300T D is fitted with an internally mounted 70L/sec turbomolecular pump, backed by a 50L/m two-stage rotary pump (ordered separately). A Pirani vacuum measurement gauge (range: 1000 mbar to 5×10^{-4} mbar) is included, but a full range gauge (1000 mbar to 5×10^{-9} mbar) is available as an option. Typical ultimate vacuum of around 5×10^{-5} mbar can be expected in a clean system after pre-pumping with dry nitrogen gas.

Dual head sputtering – for sequential sputtering

The EMS300T D is fitted with two independent sputtering heads to allow sequential sputtering of two different metals without the need to break vacuum. For example, a thin “seeding” layer of chromium followed by a deposition of gold. An automatic shutter mechanism is fitted to enable cleaning of oxidising sputter targets and to protect the second target and substrate during coatings. For single metal coating applications an individual target can be selected.

Specimen stages

The EMS300T D is fitted with a flat rotating specimen stage capable of accepting wafers up to 4” (102 mm) in diameter. The rotation speed is variable between preset limits and the stage to sputtering head distance can be adjusted between 25 mm and 71 mm. A range of optional specimen stages can also be fitted, please see the Options and Accessories section.

Moulded case with colour touch-screen

The EMS300T D is presented in a custom moulded, one-piece case, allowing for easy servicing and access. The colour touch screen enables user control of the coater functions (on various administrative levels) and multiple users to input and store coating ‘recipes’. The case houses all the working components and includes an automatic bleed control that ensures optimum vacuum conditions during sputtering. The vacuum chamber has an internal diameter of 283 mm/12” and comes with an integral implosion guard. The EMS300T D can also be fitted with the optional facility for

► EMS300TD (Continued)

vacuum shutdown, which enhances vacuum performance by allowing the chamber vacuum to be maintained when the system is not in use.

Rapid data entry

At the operational heart of the EMS300TD is a simple colour touch screen, which allows even the most inexperienced or occasional operator to rapidly enter and store their own process data. To further aid ease of use, a number of typical sputter coating profiles are already stored. For added convenience summaries of the last 100 coatings carried out can be viewed on the touch screen.

Improved Tolerance to Out Gassing Substrates

The pump time out has been moved to a new level defined by "safe outgas threshold" parameter, this is user definable between 5×10^{-2} and 2 mbar.

Until now the system would limit the time to achieve operational vac of 1×10^{-3} to 10 minutes. With the new modification once the "Safe outgas threshold" has been achieved the system will pump continuously. Implemented from software version 2-0042 onwards.

Controlled Evaporation Process

This process can automate a metal evaporation process when using low power evaporation sources. It can be used with the FTM.

The use of key properties about the source and required termination allow the process to:

- Bring the source current up to the point of evaporation.
- Ramp the current up at a controlled rate until evaporation is seen.
- Close the shutter and shut the evaporation PSU down when the specified thickness is seen.
- Check the source for open or short circuit when starting the process.

This process will be available on the EMS150T with software version 2-0048 or later. Consideration should be made to the thermal effects of the evaporation source when using the FTM to control the process.

Improvements to the Pulse Carbon Rod Evaporation

Continued work on this process has found that the thickness deposited can be variable if the power applied to the rods is either too high or too low. With the optimum current being a narrow margin between them. However, limiting the available voltage supplied to the rods increases this current window. This coupled with reducing the spigot diameter to work at a more optimum point in the PSU operation produces a more continuous spark which in turn produces a more repeatable thickness.

This improvement can be implemented by:

- Software version 2-0046 or later implements the voltage limit. Note all the carbon rod profiles should be deleted if a unit is updated to this software version.
- The evaporation current should be set between 60 and 65A.
- The reduced spigot diameter of 1.2mm can be produced with the blue handle rod shaper.

Maintenance

The intuitive touch screen interface features maintenance prompts which highlight:

- Time of last clean
- Coating time since last cleaned
- System 'on time'
- Time of last service

Additional Information

Options and Accessories (including details the standard specimen stage)

Specimen stages

The EMS300TD has specimen stages to meet most requirements. All are easy-change, drop-in style (no screws) and are height adjustable (except rotary planetary stage). Rotation speed is variable between 14 and 38 rpm:

- Flat rotation stage for 4" (102 mm) wafers - fitted as standard
- Flat rotation stage for 6" (152 mm) wafers
- Rotation stage - 50 mm Ø. This stage only rotates - no tilt or height adjustment
- Rotate-tilt stage - 50 mm Ø with height adjustment (target to stage height variable between 30-80 mm). The tilt angle can be pre-set (horizontal to 30 degrees)
- Rotation stage for glass microscope slides

Other options

- Extended height chamber – for taller specimens
- Dual channel film thickness monitor (FTM) - the optional FTM attachment consists of a controller and quartz crystal oscillator built into the EMS300TD and a vacuum feed-through, two chamber-mounted crystal holders and quartz crystals. As sputtered material is deposited onto the crystal its frequency of oscillation is modified, this 'modification' is used to measure and control the thickness of material deposited

Rotary planetary stage and dual-channel film thickness monitor - both EMS300TD options

Optional specimen stage for glass microscope slides and dual-channel film thickness monitor option

continued >>>>

► EMS300TD Dual Target, Large Chamber, Turbo-Pumped Sputter Coater *(continued)*

Specifications

Instrument case	585 mm W x 470 mm D x 410 mm H (total height with coating head open-710 mm)
Weight	36.6 kg
Packed dimensions	725 mm W x 660 mm D x 680 mm H (44.8kg)
Work chamber	Borosilicate glass 283 mm ID x 127 mm H
Safety shield	Integral polyethylene terephthalate (PET) cylinder.
Display	145 mm x 320 mm x 240 mm colour graphic thin film transistor (TFT) display
User interface.....	Intuitive full graphical interface with touch-screen buttons, includes features such as a log of the last 100 coatings carried out and reminders for when maintenance is due
Sputter target.....	Disc style 57 mm Ø targets are fitted as standard, one 57 mm Ø x 0.3 mm thick chromium (Cr) target and one 57 mm Ø x 0.1 mm thick gold (Au) target, other targets are available

Vacuum

High vacuum pumping	Internally-mounted, 70L/s air-cooled turbomolecular pump
Rotary pump	50L/m two-stage rotary pump with oil mist filter.
Vacuum measurement	Pirani gauge (a full range gauge is available as an option)

Typical ultimate vacuum5x10 ⁻⁵ mbar in a clean system after pre-pumping with dry nitrogen gas
Specimen stage	Flat rotation stage for 4" (102 mm) wafers is fitted as standard. Rotation speed is variable between preset limits. For alternative stages see Options and Accessories.

Processes

Sputtering	0-80 mA to a pre-determined thickness (with optional FTM) or by the built-in timer. The maximum sputtering time is 60 minutes (without 'breaking' vacuum and with built-in rest periods).
------------------	---

Services and other information

Gases.....	Argon sputtering process gas, 99.999% Nitrogen venting gas (optional).
Electrical supply	90-250 V 50/60Hz 1,400 VA including RV3 rotary pump, power. 110/240 V voltage selectable.
Conformity	Power factor correction. Complies with the current legislation (CE Certification) and ensures efficient use of power, resulting in reduced running costs

Ordering information

EMS300T D	Dual-Head, Large-Chamber-Turbo-Pumped Sputter Coater, supplied with 1 x 57 mm Ø x 0.3 mm chromium (Cr) and 1 x 57 mm Ø x 0.1 mm thick gold (Au) target. A flat rotation stage for 6" (152 mm) wafers is included.	each
------------------	---	------

Rotary pump requirements (needs to be ordered separately)

91003	Edwards RV3 50L/s two-stage rotary pump, with vacuum hose, coupling kit and oil mist filter.	each
6550	Diaphragm pump. A "dry" alternative to the standard oil-based rotary pump. Complete with vacuum hose, coupling kit and oil mist filter.	each

Specimen Stages:

6790-S	Swinging arm stage drive, a stage drive and positioning mechanism which positions the stage under the correct target. Also provides rotation drive to the stage. Rotation Speed Max 38 rpm Min 14 rpm	
6800-S	Rotating specimen stage for 6" (152 mm) wafers, with rotation variable between preset limits..	each
6801	Rotating 50 mm Ø specimen stage with adjustable tilt. The platform has six specimen stub positions for 15 mm, 10 mm, 6.5 mm or 1/8" pin stubs. The stage rotation speed is variable between preset limits. The target to stage height is variable between 0 mm and 42 mm for the standard stage. When used with the extended height cylinder the target to stage height would be an additional 87 mm.	each
6802	50 mm Ø variable height specimen stage with six stub positions for 15 mm, 10 mm, 6.5 mm disc stubs or 1/8" pin stubs. Stage rotation speed variable between preset limits. Note: Target to stage height is variable between 10 mm and 53 mm for the standard stage. The stage is supplied with two mounting pillars; one provides 10 mm to 32 mm target to stage distance and the other 31 mm to 53 mm. An adjustable stop is used to set the height. When used with the extended height cylinder (optional accessory) the target to stage height would be an additional 87 mm.	each
6803	50 mm Ø rotary tilting stage. A rotary planetary style stage with a variable tilt angle from horizontal to 30 degrees. The platform has six positions for either 6.5 mm, 10 mm and 15 mm disc stubs or 1/8" pin stubs. Rotation speed is variable between preset limits. Note: depending upon specimen height, this stage may require the optional extended height cylinder.	each
6804	A 90 mm Ø specimen stage for glass microscope slides (up to two 75 mm x 25 mm slides or a single 75 mm x 50 mm slide). The stage can alternatively accommodate up to six 1/8" SEM pin stubs. The stage rotation speed is variable between preset limits. A gear box is included to allow the optional FTM to be used.	each

► EMS300TD (Continued)

Options and Accessories

6805	Dual channel film thickness monitor (FTM). A fully integrated system using the Q300T D touch screen display for the control and display of all FTM functions. The FTM allows for the automatic termination of the metal sputtering process at a pre-selected thickness value. The rate for the sputtering processes is displayed in nm/min, with a resolution of 0.1 nm. Two FTM crystal holders are fixed in the chamber to give optimal position for both targets and to coat one material per crystal. Operating crystal frequency is in the 5 MHz to 400 kHz operating range. Includes two spare quartz crystals	each
6806	Spare quartz crystal.	each
6807	Extended height vacuum chamber (214 mm in height, the standard chamber is 127 mm high). Ideal for increased source to specimen distance and for coating of larger specimens.	each
6808	Vacuum spigot allows more convenient connection of the vacuum hose to the rear of the EMS300T D when bench depth is limited.	each
6809	A lockable emergency stop (e-stop) switch which can be mounted on top of the system in a position easily accessible for the operator. It is provided with a key to release the knob after activation. Note: the addition of the e-stop does not inhibit or replace the normal On/Off switch function. The e-stop can be retrofitted to existing systems.	each
6810	Full range, active vacuum gauge capable of measurement over the range of 1000 mbar to 5×10^{-9} mbar. Typical ultimate vacuum of the EMS300T D is 5×10^{-8} mbar. Note: this must be factory fitted.	each
6811	Coating shields. Can be fitted to protect large surfaces from coating deposition and can be easily removable for cleaning.	
6812	Spares kit, including: spare standard glass cylinder, one chromium (Cr) and one (Au) sputtering target, vacuum tubing with coupling insert, argon gas tubing, two sputter head magnets, rotary pump oil mist filter, FTM quartz crystal and fuses.	each

Sputter targets

NB: The EMS300T D is fitted with a 57 mm diameter 0.3 mm thick chromium (Cr) target and a 57 mm diameter 0.1 mm thick gold (Au) target as standard. Other optional targets are available:

3410	57mm Ø x 0.1mm Gold	each	3424	57mm Ø x 1.5mm Titanium	each
3411	57mm Ø x 0.1mm Gold/Palladium (80/20)	each	3425	57mm Ø x 0.3mm Platinum/Palladium (80/20)	each

10nm Au on Sugar

What is... Freeze Drying?

The application of freeze drying for specimen preparation for TEM and SEM is a well established practice.

Its application is to reduce the distortion which occurs when a wet specimen dries by normal evaporation. This distortion is due to the forces of surface tension going from a liquid to a vapor phase such as water to water vapor, commonly the situation in a Biological Specimen. However, if we freeze the specimen and maintain it frozen, then by applying a vacuum, we can obtain a situation where we can remove the frozen water by sublimation, avoiding the liquid phase, and reducing the distortion. This rate of sublimation is very much a function of temperature and vacuum, and associated drying time which is on the order of several hours or longer. Ideally freeze drying could be carried out at temperatures below the recrystallization of ice, which will require an inordinately long drying period. In practice, temperatures of -60°C have been found to give reasonable results under vacuums achievable with two stage rotary pumps, having ensured that good, fast freezing of the specimen has been carried out initially.

For particular applications, however, it can be necessary to freeze dry at temperatures below -80°C with lower sublimation rates for delicate specimens. This requires a better vacuum than can be obtained using a rotary vacuum pump. At normal temperatures and pressures the water in the specimen would dry by evaporation and would experience forces due to the effects of surface tension between the liquid and vapor interface, however, at pressures below the Triple Point, the solid phase can be changed to the vapor phase at a rate depending on the temperature, without the liquid being present. In the case of a frozen Biological Specimen where we are considering water (H_2O) from solid to vapor phase the Triple Point pressure is a relative vacuum. There are notable exceptions such as Carbon Dioxide (CO_2) where the Triple Point is higher than atmospheric pressure.

Techniques and Applications Freeze Drying Principles

Sublimation consideration

The Figure shows the phase diagram for the ICE/WATER/WATER VAPOR system. The Curve A-B is termed the Sublimation Curve, at which the Solid and Vapor are in equilibrium. Similarly for Curve B-C the Melting Curve and B-D the Evaporation Curve, terminating at C-P the Critical Point. The point of intersection of the Curves T-P is called the Triple Point, at which the three phases exist in equilibrium. It has a unique value for pressure and temperature, and is a reference point, for which the Celsius temperature scale is now defined.

It should now be apparent that for any pressure in a system below the Triple point pressure, we can change water from the solid to vapor phase without the liquid phase being present, if the temperature at which we are allowed to do this does not have any restrictions.

In the freeze drying of Biological Specimens there are however limitations on the initial temperature to which the specimen should be allowed to warm when drying is commenced.

Phase Diagram (not to scale)

Sublimation Curve (Vacuum)

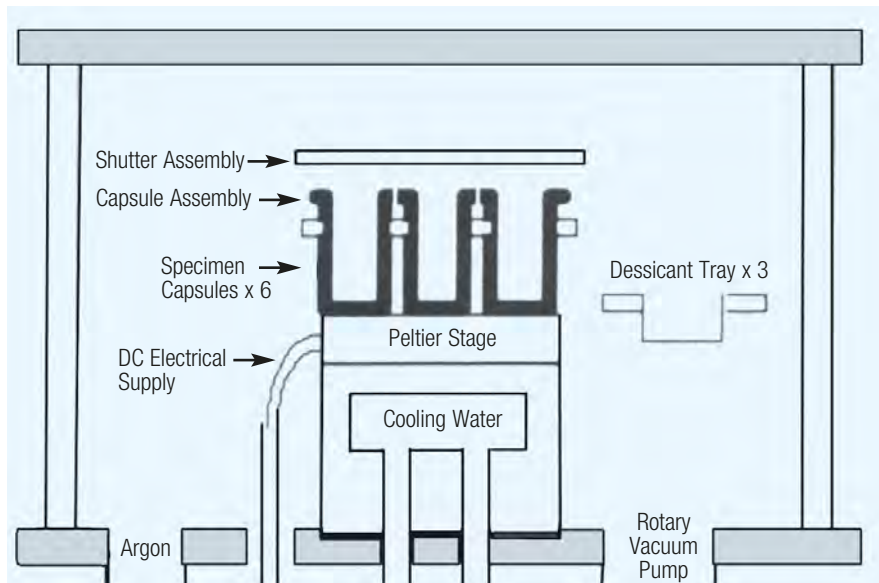

Techniques and Applications

In practice therefore, the system pressure (relative vacuum) used, is much lower than the Triple Point pressure. The Fig. gives an indication of the sublimation pressure (Saturated Vapor pressure at differing temperatures, and satisfactory freeze drying will be determined by this, and the partial pressure (Unsaturated Vapor pressure) of the water vapor in the vacuum system, which is required to be lower. The right hand scale gives an indication of Sublimation rates, (assuming partial pressure of H₂O is not limiting) which are totally temperature dependent.

Freezing Considerations

The presentation and nature of a specimen prior to freeze drying depends on the user and the application. Irrespective of this, however, there is a pro-requisite for good (FAST) freezing, this is probably the most singularly influential factor on the final result, within the limitations previously considered of the drying routine.

A range of cryogens and freezing techniques are being applied to the freezing of specimens, the understanding of the mechanisms of which, are still at an early stage. However, with exceptions, (Hyperbaric freezing containment of ice crystals is generally less than 20 micrometers from the surface, and Liquid Nitrogen (LN₂) usually readily available and unsophisticated in its application, should be satisfactory for a range of specimen freezing. The technique for its application is that of plunge freezing by hand or mechanical device.

► EMS 750 Freeze Dryer

The EMS 750 Freeze Dryer operates at rotary pump vacuum using a 'Peltier' Thermoelectric stage, with drying temperatures of the order of -60°C , with back-up water cooling at a nominal 15°C . Both the Temperature and the Timer can be pre-selected, and the drying cycle will be completed automatically.

Provision is made at the end of the drying cycle to allow the specimen to assume room temperature, or be subsequently warmed prior to embedding. Disposable desiccant containers are located in the preparation chamber to enhance the water vapor removal, and with a suitable container, the vacuum chamber can be utilized to prepare liquid nitrogen 'slush' for fast freezing.

Features

- Thermoelectric cooling and heating.
- Convenient to use cold stage.
- Accurate temperature and time monitoring and control.
- Automatic drying cycle.
- Modular electronics.
- Clean line design.
- Polycarbonate safety shield.

Specifications

Instrument Case	450mm(W) x 350mm(D) x 175mm(H)
Work Chamber	Borosilicate Glass 165mm(Dia.) x 125mm(H)
Weight	18Kg
Specimen Stage	-60°C to $+60^{\circ}\text{C}$
Vacuum Gauge	ATM -1×10^{-2} mbar
Temperature Controller & Monitor	-90°C to $+90^{\circ}\text{C}$ Display Resolution to 0.1°C
Timer	0-999 Hours
Supply	115V 60Hz (12 Amp Max incl pump) 230V 50Hz (6 Amp Max incl pump)
Services	Water Cooling at nominal 15°C
Vacuum Pump (Recommended)	Complete with vacuum hose and oil mist filter 85L/Min
Size	470mm(L) x 150mm(W) x 250mm(H)
Weight	20Kg

► EMS 775 Turbo Freeze Dryer

The EMS 775 Turbo Freeze Dryer operates at temperatures down to -140°C and employs a Turbomolecular pumping unit, backed by a Rotary Vacuum pump. The lower temperatures are achieved by using a Liquid Nitrogen fed Cold Stage.

The pre-frozen specimens are admitted into the cooled stage of the drying chamber through a vacuum gate valve which interfaces to the specimen transfer chamber.

The system incorporates both Time and Temperature Control, and at the end of the drying period, the stage may be heated prior to specimen removal. The system also has facilities for purging with Nitrogen Gas.

For extended drying periods, an auto top-up device can be provided as an option to continuously 'fill' the chamber's liquid nitrogen dewar.

The option of a custom designed specimen freezing chamber to produce 'slushy' sub cooled liquid nitrogen is available which also interfaces to the specimen transfer chamber.

The option for a carbon or sputter coating attachment without breaking vacuum is available.

Features

- Programmable multi-segment sequence control with 10 times and 10 temperatures.
- Built-in penning head and gauge.
- Liquid Nitrogen fed cold stage.
- Vacuum gate valve to chamber.
- Vacuum specimen transfer chamber.
- Accurate time and temperature monitoring.
- Modular electronics.
- Clean line design.
- Polycarbonate safety shield.

What is... Critical Point Drying?

Critical Point Drying is so named as it includes, as part of its process, the occurrence known as the continuity of state for which there is no apparent difference between the liquid and gas state of a medium, the surface tension between this interface reducing to zero. This occurs at a specific temperature and pressure with resulting density, and is known as the Critical Point. This condition of zero surface tension can be used to dry Biological Specimens, avoiding the damaging effects of surface tension.

In biological specimens we are mainly concerned with the removal of water. Unfortunately, the critical point for water of +374°C and 3212 p.s.i. is inconvenient, and would cause heat damage to the specimen. The most common and convenient transitional medium for critical point drying is Carbon Dioxide (CO₂), which has a critical point at 31°C and 1072 p.s.i. However, it is not miscible with water, and therefore, we have to involve a third medium, commonly Acetone, which is termed the intermediate fluid. We can now convert our transitional fluid, typically CO₂, from liquid to gas without surface tension at the critical point.

Techniques and Applications

A summary of the critical point drying method

Critical point drying is an established method of dehydrating biological tissue prior to examination in the Scanning Electron Microscope. The technique was first introduced commercially for SEM specimen preparation by Polaron Ltd in 1971. The original design concepts, which included a horizontal chamber, are still embodied in the design of the EMS 3000 and EMS 3100 CPD models.

In recent years we have introduced two further models: the EMS 850, which features built-in chamber cooling and heating, and the EMS 850WM, which is designed for drying a 100mm/4" silicon wafer.

All three models have found general acceptance in many laboratories throughout the world. Together, these critical point dryers offer the user a choice most suited to the particular specimen preparation requirements.

The phase diagram shows the pressure to temperature ranges where solid, liquid and vapor exist. The boundaries between the phases meet at a point on the graph called the triple point. Along the boundary between the liquid and vapor phases it is possible to choose a particular temperature and corresponding pressure, where liquid and vapor can co-exist and hence have the same density. This is the critical temperature and pressure.

Critical point drying relies on this physical principle. The water in biological tissue is replaced with a suitable inert fluid whose critical temperature for a realizable pressure is just above ambient. The choice of fluids is severely limited and CO₂ is universally used today, despite early work with Freon 13 and nitrous oxide.

With CO₂ a critical point of approximately 35°C can be achieved at a pressure of around 1,200psi. Therefore if the water is replaced with liquid CO₂ and the temperature then raised to above the critical temperature, the liquid CO₂ changes to vapor without change of density and therefore without surface tension effects which distort morphology and ultra structure.

Since liquid CO₂ is not sufficiently miscible with water, it is necessary to use an intermediate fluid which is miscible with both water and liquid CO₂. In practice intermediate fluids commonly used are methanol, ethanol, amyl acetate and acetone.

Stomatal Pore on Xerophyte Leaf Surface

Critical point dried epidermis of a xerophyte (cactus), demonstrating raised stomatal pores.

Barley Leaf

Trichomes and stomatal pores on the epidermal surface of a barley (*Hordeum vulgare*) leaf. Some very fine wax crystallites are also just visible on the surface of the leaf.

The advent of Scanning Electron Microscopy (SEM) in the study of surface morphology in biological applications made it imperative that the surface detail of a specimen was preserved. Air (evaporative) drying of specimens can cause severe deformation and collapse of structure - the primary cause of such damage being the effects of surface tension. The specimen is subject to considerable forces, which are present at the phase boundary as the liquid evaporates. The most common specimen medium, water, has a high surface tension to air; by comparison that for acetone is considerably lower. The surface tension could be reduced by substitution of a liquid with a lower surface tension with thereby reduced damage during air-drying. However, the occurrence of what is known as 'continuity of state' suggests a drying technique for which the surface tension can be reduced to zero. If the temperature of liquefied gas is increased the meniscus becomes flatter indicating a reduction in the surface tension. If the surface tension becomes very small the liquid surface becomes very unsteady and ultimately disappears.

Techniques and Applications

Critical Point Drying Principles

When this 'critical point' is reached, it is possible to pass from liquid to gas without any abrupt change in state.

If a specimen had been in the liquid during this process it would have experienced a transition from a 'wet' to a 'dry' gas environment without being in contact with a surface, in this way avoiding the damaging effects of surface tension.

This is termed Critical Point Drying (CPD), the basis of which are the classic experiments carried out over 100 years ago during investigations on the liquification of gases.

The Critical Phenomena

The principle of the experiments, which were initially carried out using carbon dioxide (CO₂), was to measure the change in volume with the application of pressure, of a fixed mass of gas, while maintaining a constant temperature. This was repeated for a range of different temperatures.

The results are best understood by considering the graph obtained from plotting pressure (P) against volume (V) for the series. This is shown in Figure 1; the curves obtained are termed 'isothermals'

Consider first the 10° C isothermal at low applied pressure. The CO₂ is gaseous (vapor) and generally exhibits the characteristics of a gas (Boyle's Law) over the range from 'r' to 's'. From point 's' a very slight increase in pressure results in a change from vapor state to the liquid state. This is the phenomena of saturation. From 's' to 't' the pressure is virtually constant while the volume is decreasing and at 't' the substance is all liquid.

From point 't' the graph becomes almost vertical indicating significant application of pressures for very little change in volume, liquids being virtually incompressible.

The 20° C isothermal has similar general characteristics, however there is less difference between points 'v' to 'w' compared to the difference between equivalent points 's' to 't' on the 10° C isothermal; these points representing the difference in volume occupied between the vapor phase and the liquid phase.

Fruit body neck
with spores adhering
to the sides

Bacteria adhering to
the tip of a fungus.

Powdery Mildew,
hyphal filament
on leaf surface.

This indicates that the densities of the saturated vapor and liquid are approaching each other, also the slight departure from the vertical 'w' shows the compressibility is greater than that at higher pressures. This shows that the properties of the liquid and gas states of the substance are becoming similar and will ultimately coincide. This in fact is realized at the 31.1° C isothermal, which does not show any horizontal discontinuity. The temperature at which this occurs is termed the *Critical Temperature* and has an associated *Critical Pressure and density* and hence for a particular mass of gas, a *Critical Volume*. If a liquid was heated in a closed system so that the critical pressure could be attained, at the critical temperature, any visible meniscus would disappear; the surface tension would be zero and it would not be possible to distinguish between the properties of a liquid or a gas. We therefore have continuity of state. Above this temperature the gas cannot be liquified by the addition of pressure and strictly speaking a substance should only be classified as a gas above its critical temperature, below this temperature where it could possibly be liquified by the application of pressure, it is more precisely termed a vapor.

The critical phenomena can be utilized as a drying technique as it achieves a phase change from liquid to dry gas without the effects of surface tension and is therefore suitable for delicate biological specimens.

However, it is not surprising that the initial investigations were on CO₂ as will be apparent from Figure 2, showing a table of critical constants for some common substances. Even the practical achievement of the critical conditions would not assist the biologist, as the specimens would suffer significant thermal damage if we attempted to apply the technique direct for the removal of water from specimens.

CRITICAL CONSTANTS

Substance	Temp. C	P.S.I
HYDROGEN	-234.5	294
OXYGEN	-118	735
NITROGEN	-146	485
CARBON DIOXIDE	+31.1	1072
CARBON MONOXIDE	+141.1	528
WATER	+374	3212

continues

Techniques and Applications

Critical Point Drying Principles (continued)

Therefore CO₂ remains the most common medium for the CPD procedure and is termed the 'Transitional Fluid'. However, CO₂ is not miscible with water and therefore water has to be replaced in the specimen with another fluid which is miscible with CO₂, this is termed the 'Intermediate Fluid'.

Ideally it will be able to replace the water in the specimen, and also serve as the 'Dehydration Fluid'. This is not exclusively the case, and additional steps may be used for particular circumstances.

However, where it is being utilized for both processes, texts may refer to it under the different headings, dehydration and intermediate, depending at what stage it is being used in the specimen preparation schedule. Prior to any of these stages chemical fixation of the specimen must be carried out (normally using glutaraldehyde -osmium procedures).

NOTE

The whole discipline of specimen preparation (chemical or vapor fixation) prior to the transitional stage is only mentioned in its most basic terms, procedures vary according to the type and nature of the specimens. Further references should be obtained.

a) Intermediate Stage

As mentioned previously this involves dehydration and intermediate fluids, the following is a possible schedule.

(Wet Specimen) H₂O ➔ Acetone ➔ CO₂ ➔ C.P.D. (Dry Specimen)

The specimen is usually processed through varying concentrations of dehydration fluid, culminating in complete replacement of the water with this intermediate fluid. Because it has a low surface tension the specimen is less likely to experience damage due to evaporation while transferring to the chamber, also being miscible with CO₂ (the Transitional Fluid) ensures satisfactory conditions after flushing (purging) for the CPD process to commence.

(Wet Specimen) H₂O ➔ Acetone ➔ 30%* 100% ➔ CO₂** ➔ CPD (Dry Specimen)

Note:

*50/60/70/80/90 typically 10 minutes each

** Flush Typically 3 times

The table (Figure 3) gives an indication of some intermediate fluids. (Water is 73 Dynes/cm.)

Critical point drying stages

Figure 3: Dehydration Intermediate Fluids for CPD

SUBSTANCE	SURFACE TENSION (DYNES/CM)
ETHANOL	23
ACETONE	24
FREON (113)	19

Having transferred the specimen to the chamber in the Intermediate Fluid, the chamber is flushed several times to replace it with the Transitional Fluid. The process from which the complete techniques derives its name CPD can now be initiated.

CO₂ grades required for critical point drying

Generally speaking, the grade we recommend is 'normal' grade - that is the one most commonly offered by industrial gas suppliers.

In most parts of the world, 'normal' grade of CO₂, from the suppliers, is specified as 'N4.5' or 99.995% minimum purity with a maximum level of 50ppm of impurities.

There are, however, two other grades available by special order from most gas suppliers. One is 'N4.0' or 99.99% (less pure than 'normal' grade). The other is 'N5.5' or 99.9995% minimum purity. The N5.5 purity is easier to find in those parts of the world where there is high level of activity in electronics, since these customers often demand gases with higher purities.

We are not aware of anyone who has ever reported either superior results using N5.5 purity vs N4.5, or inferior results using N4.5 vs N5.5. However, we do want our customers to have the benefit of such detail about liquid carbon CO₂ procurement in the event they should ever find reason to believe that their particular specimens might benefit from the higher purity product.

Remember, the requirement is for LIQUID carbon dioxide and NOT gaseous carbon dioxide. For this reason a cylinder with an internal 'siphon' must be specified. A siphon cylinder is normally denoted by a white stripe painted along its length. No pressure regular is needed.

Techniques and Applications

Critical Point Drying Principles (continued)

(b) Transitional Stage

As discussed previously (see Figure 1) the conditions for which the critical point passage can be obtained for CO₂ are 31.1°C and 1072 psi. However, it must be remembered that these isothermals are obtained from a fixed mass of gas and an applied pressure for a series of constant temperatures.

In the laboratory application of CPD we have a fixed volume which is filled with the transitional fluid. Some typical examples of which are given in figure 4.

Pressure is obtained by the effect of applying heat and while it can be readily appreciated that we can take a liquid from below its critical temperature and obtain the transition to gas above its critical temperature, an understanding of the relevant 'start' and 'end' points and the cycle involved is required in evaluating the design and performance of CPD equipment. It is still useful however, to utilize these CO₂ isothermals as indicated in figure 5 with the Superimposed 'arrows' showing differing conditions for the CPD device.

Starch Grains in Potato Tuber

Critical point dried fractured cell from the tuber of potato (*Solanum tuberosum*), demonstrating thin cell walls starch grains (amyloplasts).

Glandular Trichomes on Modified Leaf Surface of Butterwort

An insectivorous plant, the butterwort (*Pinguicula vulgaris*) has modified leaves which bear tiny granular trichomes which trap insects. The capitate head of the trichome then secretes protease enzymes to digest the insect parts.

Barley Root Tip

Critical point dried tip of barley (*Hordeum vulgare*) root, demonstrating root cap cells (calyptra) and slightly deformed (compressed) root hairs (Pili).

It is already acknowledged that these circumstances are not exactly comparable. For example, during operation of the CPD we would fill at CO₂ cylinder pressure and at ambient temperature: not at saturated vapor pressure. At a lower temperature decompression is as a result of venting and the subsequent reduction in mass of gas, not reduction in externally applied pressure. The relative volume is determined by the initial level of liquid in relationship to the total free volume available (this being the chamber plus sample "boat" etc.)

If we consider 'X' with the liquid CO₂ more than half filling the total available volume and we heat from 10°C to 35°C then we will make the transition from liquid to gas. The pressure rise will be rapid as the liquid will expand and the level will increase before the critical temperature is reached. This is termed 'going around' the critical point. Usually (as in the case of instruments supplied by Electron Microscopy Sciences) a pressure-bursting disc is employed to prevent excessive pressure increase.

For condition 'Y' with approximately a full pressure chamber, the liquid level will remain relatively constant, its density decreasing and that of the vapor increasing, and becoming the same when its critical temperature has been reached, together with the corresponding critical pressure.

Looking at condition 'Z' with the pressure chamber less than half full. The level will fall and vaporization will occur before the critical temperature is reached, also the specimens may be uncovered and subjected to unwanted evaporation.

Ideally, we wish have a situation where the liquid fills the specimen chamber, while still only accounting for approximately 50% of the total volume available. This will ensure that specimens are not uncovered during initial flushing stages and in addition this should enable critical constants of temperature, pressure, and density to be achieved relatively simultaneously without excessive pressure or evaporation conditions occurring.

It is also advisable to maintain a temperature somewhat above the critical temperature during decompression, this will avoid the possibility of gas recondensing. It is also important to control the decompression rate itself as there is evidence that rapid pressure equalization can cause specimen.

► EMS 3000 and EMS 3100 Critical Point Dryers

The design of the EMS 3000 gives unequalled visibility of the critical point drying process and an unsurpassed view of the fluid level in the chamber. Unlike many of the more complex critical point dryer designs, it is much easier to see the phase change at the critical point.

EMS 3100

EMS 3000

The design of the EMS 3000 features a horizontal pressure chamber measuring 30.1mm internal diameter x 82mm in length. The chamber has an external water jacket for temperature control and specimens are introduced via a removable rear door. The front of the chamber is fitted with a 25mm diameter window which permits easy viewing of the liquid level.

EMS 3100

Where increased chamber volume is required, for either size or quantity of specimens to be dried, the large capacity model EMS 3100 is available. The chamber dimensions are 63.5mm internal diameter x 82mm in length, giving approximately three times the volume of the EMS 3000. The transfer boat will also accept three times the number of specimen baskets.

EMS 3000

FEATURES

- Proven reliability - over 6,000 critical point dryer installations world-wide
- Simple robust construction - easy to maintain - many critical point dryer users carry out their own routine maintenance
- Horizontal chamber and large viewing window - excellent visibility of the fluid level and drying process
- Large robust valves for draining of fluids, ingress of CO₂ and venting of gas - very durable; the rapid ingress of CO₂ helps prevent pre-drying of specimens
- Safety - every critical point dryer unit is pressure tested to 2,500psi and a certificate is issued. A pressure bursting disc is also fitted to safeguard against misuse
- Specimen handling - optional specimen holders for coverslips and TEM grids. Porous pots are available for fragile or very small specimens
- Three-year warranty

Temperature control

Dial gauges display pressure in the chamber and the temperature of water circulating through the jacket. Three pressure valves permit easy connection to the liquid CO₂ cylinder and allow liquid agitation and venting of the chamber. A source of hot running water is essential. Cooling is also useful, especially for sequential process runs or in hot climates.

The temperature of the EMS 3000 and EMS 3100 chamber is raised with a hot water supply. Mains water can be used but a more elegant method involves the use of the optional EMS 3500 Thermocirculator, which is connected directly to the inlet and outlet of the water jacket. The temperature of the circulatory fluid can be pre-set (eg at 37°C, just above the critical temperature).

A second alternative is the model EMS 4860 Recirculating Heater/Chiller, which can be used to pre-cool the chamber to below ambient prior to loading specimens and then to heat the chamber to the critical temperature.

Safety

Safety is, of course, an important consideration with all pressure vessels. Should critical pressure and temperature be inadvertently exceeded, a bursting disc is incorporated in the chamber support. The critical point drying chamber itself is tested to 2,500psi, which is approximately twice the working pressure. A guard is also fitted over the viewing window.

Specimen holder (boat)

An important feature is the design of the transfer boat. This permits specimens in the intermediate fluid to be transferred to the critical point dryer. On sealing the chamber, the intermediate fluid begins to drain and can be replaced with liquid CO₂. In this way the specimens are never allowed to dry out during the specimen loading and transfer stage of the process.

Both the EMS 3000 and EMS 3100 are supplied with a standard tissue holder (boat). The EMS 3000 comes with the EMS 3000-01 tissue boat and has a single slot with three tissue baskets. Specimens are loaded into each basket and the gauze lid moved laterally to seal the top.

The EMS 3100 is supplied with the EMS 3100-01 tissue boat and has three slots each with three tissue baskets, making a total of nine tissue baskets. Other choices of holders are listed below under Options and Accessories.

Bonded chamber seals – Nitrile or EPDM?

All models of EMS 3000 and EMS 3100 are fitted with a standard with nitrile bonded window and door seals. Nitrile is a good general material due to its ability to withstand attack by solvents, such as ethanol.

EMS 3000 Specimen Boat

EMS 3100 Specimen Boat

EMS 3000 and EMS 3100 (continued)

However, if acetone is used as the transition fluid then the EPDM seals have been found to be more resistant to chemical attack by that solvent.

If you are ordering an EMS 3000 or EMS 3100 and are planning to use acetone as the transition fluid, please state this on the order and EPDM bonded seals will be fitted.

For existing instruments, both Nitrile and EPDM bonded seal can be ordered as spare parts.

Options and Accessories

Glass microscope coverslip holder (option):

Specially adapted boats allow glass coverslips to be held firmly during drying. The EMS 3000-02 is designed for the EMS 3000 and has a maximum capacity of seven coverslips. Likewise, the larger EMS 3100-02 coverslip boat is available for the EMS 3100 'Jumbo' Critical Point Dryer and has a carrying capacity of 21 coverslips.

Coverslip Holder

TEM grid holder (option):

The EMS 3000-1 holder for 3.05mm grids and the EMS 3000-2 grid holder for 2.3mm grids can be used with all Electron Microscopy Sciences critical point dryers. Maximum number of grids is three.

TEM Grid Holder

Porous pots with lids (option):

EMS 800A solvent-resistant porous pots (12.7mm x 15.5mm) with lids are ideal for very small or very delicate specimens.

Porous Pots

For the EMS 3000 (NOTE: EMS 3000-01 is included as standard):

- EMS 3000-1 Specimen holder for 3.05mm grids
- EMS 3000-2 Specimen holder for 2.3mm grids
- EMS 3000-01 Specimen holder for tissue (boat)
- EMS 3000-02 Specimen holder for coverslips
- EMS 800A Porous pots with lids 12.7mm x 15.5mm (pack of 10) for micro-specimens
- EMS 3500 Thermocirculator for control of heating cycle
- EMS 4860 Recirculating Heater/Chiller to control heating and cooling cycle (please specify voltage)

For the EMS 3100 (NOTE: EMS 3100-01 is included as standard):

- EMS 3100-1 Specimen holder for 3.05mm grids
- EMS 3100-2 Specimen holder for 2.3mm grids
- EMS 3100-01 Specimen holder for tissue (boat)
- EMS 3100-02 Specimen holder for coverslips
- EMS 800A Porous pots with lids 12.7mm x 15.5mm (pack of 10) for micro-specimens
- EMS 3500 Thermocirculator for control of heating cycle
- EMS 4860 Recirculating Heater/Chiller to control heating and cooling cycle (please specify voltage)

Site Requirements

Site selection: The apparatus should be positioned in the laboratory with convenient access to:

- Hot and cold water supply (if the optional EMS 3500 Thermocirculator or EMS 4860 Recirculating Heater/Chiller are not used)
- Mains power supply (for EMS 3500 and EMS 4860 only)
- Fume cupboard or window, or an area of good ventilation
- Space for CO₂ siphon cylinder

CO₂ Cylinder: The EMS 3000 and EMS 3100 require a cylinder of liquid CO₂ fitted with a siphon tube (indicated by a vertical white stripe on the cylinder). If there is any doubt regarding the presence of a siphon tube, advice should be sought from the gas supplier.

Cylinder connection threads vary from country to country and even between manufacturers in the same country. For example, the transfer pipe supplied is fitted with ¼" British Standard Pipe (BSP) and 0.86" x 14 TPI union. These are standard threads for the UK and generally in the rest of the world, but will not fit cylinders in the USA.

An EMS 3000-US kit should be specified for use within the USA; this includes a transfer pipe adaptor which will fit USA cylinders. If it is deemed necessary to fabricate another transfer pipe, advice should be sought from a local supplier of high-pressure fittings.

Heating and cooling: Use a mixer to the laboratory hot and cold water outlets, terminating with a 6mm/¼" hose connection for the PVC tubing supplied. A 'Y' piece connected to the hot and cold water taps is also suitable.

The EMS 3000 and EMS 3100 require both hot and cold water during the operating cycle. Cooling facilitates filling of the work chamber with liquid CO₂, and heating is required to take the liquid above its critical point.

Good control of the water temperature is essential for good results, hence the recommended use of the EMS 3500 Thermocirculator or, more conveniently, the EMS 4860 Recirculating Heater/Chiller which gives precise control of cooling and heating.

Space requirement: A minimum bench space of approximately 230 x 230mm is required.

► EMS 850 Critical Point Dryer with Thermoelectronic Heating and Adiabatic Cooling

The EMS 850 Critical Point Dryer is designed for use with CO₂, having first replaced any water in the specimen by a series of dehydration, often in the same fluid such as Acetone, which will also be the intermediate fluid.

(Wet Specimen)–Water–Acetone–30%–100%–CO₂–C.P.D.–(Dry Specimen)

The specimens for critical point drying are located in the pressure chamber of the EMS 850. The chamber is pre-cooled to allow it to be readily filled with liquid CO₂ from a gas cylinder. The chamber is then heated to just above the critical temperature with subsequent critical pressure being achieved. The CO₂ gas is vented through a needle valve, to avoid specimen distortion.

The EMS 850 is fitted with thermoelectronic Heating and Cooling and Temperature control of +5°C on Cooling, and +35°C on Heating. This ensures the critical point is accurately obtained, avoiding excess pressures or temperatures, or the need to rely on pressure relief valves to control pressure during the heating cycle. The chamber is vertical, with top loading, to ensure specimens do not become uncovered during the drying process, with a side viewing port to locate the meniscus for the correct level when initially filling the chamber.

The EMS 850 is fitted with a fine let down needle as standard and flow gauge is no longer required.

Features

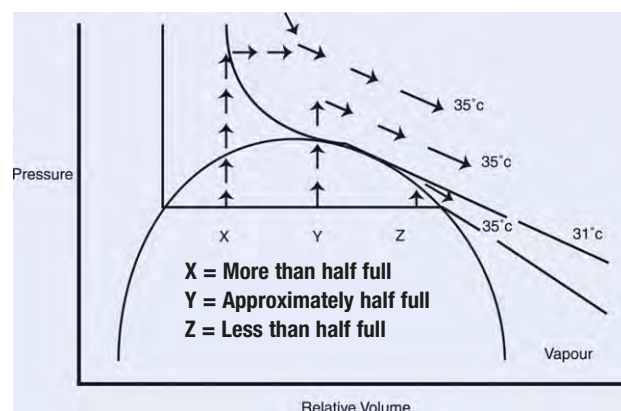

- Vertical chamber with top filling and bottom draining.
- Normal operating temperature 35°C pressure 1500 psi.
- Thermoelectric Peltier cooling and heating.
- Fine control needle valve pressure letdown.
- Illuminated chamber with side viewing port and protective 'Lexan' shield.
- Stirrer system for enhanced solvent exchange.
- Temperature monitoring and control with thermal cut-out protection.
- Pressure monitoring with pressure relief valve and rupture disc protection.
- Polycarbonate safety shield.

Specifications

Instrument Case	450mm (W) x 350mm (D) x 175mm (H)
Weight	12Kg
Specimen Chamber	30mm (Dia.) x 40mm (H) (Tested to 3000 psi)
Temperature Gauge	0-120°C
Thermal Cut-Out	40°C
Pressure Gauge	0-3000 psi
Pressure Relief	At 1500 psi
Rupture Disc	At 1900 psi
Peltier Cooling/Heating	+5°C to +35°C
Two On/Off Valves	Inlet/Outlet/Cool/Vent Needle Valve Letdown
Supply	115V 60Hz (6 Amp Max) 230V 50Hz (3 Amp Max)
Services	Requires CO ₂ gas cylinder direct connection by high pressure hose. (High pressure hose included with instrument.)

► EMS 850WM Large Chamber Critical Point Dryer

The EMS 850WM is compact, bench-top instrument designed to critical point dry a complete 150mm/6" wafer. A convenient wafer holder allows rapid transfer and ensures that pre-drying does not occur.

Features

- 170mm diameter chamber - optimized for wafer/MEMS drying
- Vertical chamber with top-loading and bottom draining - ensures specimens do not become uncovered during drying
- Thermoelectric heating - accurate temperature control
- Fine control needle valve pressure let down - precise control
- Temperature monitoring and control with thermal cut-out protection
- Pressure monitoring with safety cut-out for over pressure
- Three-year warranty

The EMS 850WM has built-in heating and water cooling using the EMS 4860 Recirculating Heater/Chiller. This combination will give temperature control of +5°C cooling and +35°C during heating. This ensures the critical point is accurately obtained, avoiding excess pressures or temperatures, or the need to rely on pressure relief valves to control pressure during the heating cycle.

The EMS 850WM has a vertical chamber which allows top-loading of specimens. A viewing port is fitted in the top plate for specimen observation. The specimen exchange mechanism is simple to use and ensures the specimen remains under liquid during loading.

Specimen handling

100mm or 150mm diameter wafers are held in a PTFE holding tray. The tray including wafer is immersed in acetone in order to remove all moisture from the specimen. After dehydration, the wafer and holder are transferred into the pre-cooled specimen chamber using the wafer transfer device. On completion of the critical point drying process, the wafer is removed from the chamber using the transfer device prior to further processing.

Mature Barley Root

Critical point dried transverse fracture of a mature barley (*Hordeum vulgare*) root, demonstrating central stele and surrounding cortical cells. Root hairs (Pili) are also obvious.

Aphid

Critical point dried aphid on a leaf surface.

Bamboo Stem

Transverse fracture of the stem of young bamboo (*Bambusa* sp), demonstrating xylem and phloem bundles and heavily thickened (lignified) epidermal and hypodermal cells.

► EMS 1050 Plasma Asher

The EMS 1050 consists of a solid state RF Generator and associated tuning circuits, a vacuum system with a solenoid controlled valve, a constant feed gas supply system, and a reaction chamber system which includes two semicircular electrodes and two piece pyrex chamber. The unit has one gas control as standard.

The solid state RF Generator is a solid state crystal controlled oscillator designed to provide up to 150 watts of continuous wave 13.56 MHz power to the reaction chamber. Maximum power transfer from the power supply to the reaction chamber is accomplished by matching the output impedance of the amplifier to the input impedance of the reaction chamber.

The gas supply system consists of the gas delivery system inside the reaction chamber. This delivery system is a glass tube sealed on the inner end and perforated along its bottom surface. Connections to the delivery tube are fastened with special clips to prevent the possible leakage of contaminants into the chamber.

The EMS 1050 is often used in Asbestos Specimen Preparation as a Low Temperature Ashing Technique.

FEATURES

- Automatic tuning of RF power.
- Built-in rotary vacuum pump.
- Barrel chamber with isotropic etching.
- Low temperature plasma ashing, etching, and cleaning. (0-150 watts RF)
- Vacuum monitoring.
- Dual flow gauge gas control.
- Accurate process timer.
- Needle valve vent control.
- Micro controller, with default settings programmable by the operator.
- Indication of settings by LCD display of status/entry.
- Indication of conditions during cycle, vacuum, power, time.
- Location bay for backing pump filled with special "oil".
- Sample carrier for convenient loading.
- Rack-out drawer loading door for ease of sample access.
- Polycarbonate safety shield.

Product Description

Built to withstand heavy use - 24 hours a day for some plasma ashing schedules - the EMS 1050 features microprocessor control with automatic operation and offers durability and simplicity of operation. Barrel systems plasma etch or plasma ash isotropically (in all directions) and are suitable for the majority of applications.

The EMS 1050 uses a low pressure, RF-induced gaseous discharge to modify specimen surfaces or remove specimen material in a gentle, controlled way. A significant advantage over alternative methods is that the plasma etching and ashing processes are dry (no wet chemicals needed) and take place at relatively low temperatures.

A wide range of surface modification methods are available, using a variety of process gases. Using oxygen (or air) as the process gas, the molecules disassociate into chemically-active atoms and molecules and the resulting 'combustion' products are conveniently carried away in the gas stream by the vacuum system.

Chamber, specimen handling and gas control

The EMS 1050 has a 110mm diameter x 160mm borosilicate glass chamber horizontally mounted with a slide-out specimen drawer and viewing window. Evacuation of the chamber is achieved by an optional 50L/m mechanical rotary vacuum pump. Ingress of reactive gases is controlled by two built-in flow-meters backed by solenoid valves.

NB: For applications where borosilicate glass needs to be avoided, the EMS 1050 can be fitted with a quartz chamber.

"Rack Out" Specimen Stage

Application Example

Low temperature plasma ashing of coal...

The EMS1050 can be used to remove the organic content from coal, leaving a residue of mineral and volatile components for subsequent analysis. The advantage of low temperature RF plasma ashing over other methods, such as heating in a muffle furnace (typically at 700°C), is that many more of the volatile components are retained.

In the following experiment oxygen gas was used with a forward power setting of 100W.

A thermocouple was introduced into the chamber via a vacuum feed through in the rear of the EMS1050 process chamber. The thermocouple was fixed with high temperature resistant tape to the base of a glass Petri dish and covered with approximately 5g of coal granules of approximately 1-2mm³ in size, covering the thermocouple tip to a depth of 1.5mm.

After one hour it was apparent that the temperature had reached a maximum 150°C.

► EMS 1050 (Continued)

Power, tuning and vacuum monitoring

RF power of up to 100W at 13.56MHz is available and can be infinitely controlled and pre-set to required values. Automatic tuning of forward and reflected power is standard. Forward power and vacuum levels are indicated by the digital display.

Automated microprocessor control

The EMS 1050 is fully automatic. Control parameters for time, power and vacuum are easy to preset and can be monitored and adjusted throughout the process run.

'Autotuning' of RF power for optimum control and reproducibility

During the plasma process the 'autotune' facility ensures that the RF power is automatically impedance-matched to any variation in the system or loading. This means conditions in the chamber are maintained at their optimum - important as it gives faster reaction times, greater reproducibility of results and protects the power supply during the RF cycle.

Pumping options

A working system requires only the addition of a specified rotary pump. A fomblinised rotary pump (91005-F) is strongly recommended for safety reasons when applications involve the use of oxygen as a process gas. Where oil-based rotary pumps need to be avoided, we offer dry pumping options (see Specifications).

Application Example

These two SEM micrographs show before and after results comparing identical areas of a metal photo litho plate on which extraneous lines can be visualised. Treatment in a barrel plasma reactor, with oxygen as the process gas, removed the ink - which is essentially a carbon pigment in a binder - without disturbing anything that was present underneath. Subsequent SEM examination shows a scattering of particulate material made up of irregular platelets 0.2 to 2µm in diameter. X-ray microanalysis gave a spectrum characteristic of a clay mineral.

This SEM micrograph shows a set of free-standing single crystal silicon wires for studying thermal transport. The wires were fabricated in silicon-on-insulator material using electron beam lithography and CF4 plasma etching in a barrel reactor. The wires are 40µm long, 1µm wide and 0.5µm thick and are suspended above a silicon substrate. (Image courtesy of the Microelectronics Research Centre, Cavendish Laboratory, University of Cambridge).

What is... Cryogenic Specimen Preparation?

In this instance we are referring to Frozen Hydrated Bulk Specimens for Scanning Electron Microscopy, commonly termed L.T.S.E.M. (Low Temperature Scanning Electron Microscopy). When Biological specimens are prepared by conventional methods, they may collapse and distort. In addition to which, there may be a loss of the diffusible elements that they may normally contain, and therefore affecting the validity of the X-Ray Microanalysis.

The use of L.T.S.E.M. offers a solution to this, and in addition allows viewing and analysis of 'liquid' specimens such as emulsions and suspensions, which was not previously practical. In preparing the specimen, we first want to freeze it as quickly as possible. This will reduce the morphological distortion important for structural observations, and also minimize any redistribution of solutes which is essential for X-Ray Microanalysis.

The aim of fast freezing is to reduce the size of ice crystals by reaching as quickly as possible the point at which recrystallization takes place, which is on the order of -130°C (for pure water), and maintaining the specimen below this temperature. Rapid freezing is commonly obtained by plunging the specimen into a cryogenic fluid. This is commonly liquid nitrogen, usually in the form of 'slushy' nitrogen at -210°C , and for the types of specimen we are considering, this has proved to be an effective cryogen.

Having frozen the specimen, we need to maintain it below -130°C (the recrystallization temperature) and prevent sublimation (below -130°C the rate of sublimation of ice is very low, of the order of 0.001nm/sec). We should, therefore, maintain the specimen with cryoprotection in a good clean vacuum to avoid contamination. Frozen specimens can subsequently be fractured, etched, coated with gold or carbon, using a preparation system, and then viewed and analyzed on the cold stage of the S.E.M.

Zoological

Frozen hydrated aphid

In comparison with the critical point dried aphid, this image shows that there is no distortion of the abdomen nor any other parts of the aphid following freeze drying.

Techniques and Applications

Cryo-SEM – the advantages

The Scanning Electron Microscopist is faced with the inescapable fact that liquid is a fundamental part of practically all lifesciences – and many materials – specimens. Since water occupies up to 98% of some animal and plant tissues it represents a most formidable specimen problem to most Scanning Electron Microscopists.

Cryo-SEM is a quick, reliable and effective way to overcome these not inconsiderable SEM preparation problems. Additionally the technique is widely used for observing 'difficult' samples, such as those with greater beam sensitivity and of an unstable nature. An important application, often overlooked, is the ability to use cryo-SEM to study dynamic processes (industrial or otherwise) by using a series of time resolved samples.

Naturally the advent of various "higher pressure" modes, such as VP, LV and ESEM has allowed such samples examined in SEM without resorting to freezing or drying methods. However, cryo-SEM is still by far the most effective method of preventing sample water loss, which will in fact occur at any vacuum level – even with Peltier stages fitted to the SEM and the careful addition of water vapor in the SEM chamber. Cryo-SEM also a number of additional advantages, including the ability to fracture and selectively remove surface water (ice) by controlled specimen sublimation.

Why choose cryo-SEM?

The limitations of conventional 'wet processing' include:

- Shrinkage and distortion
- Extraction of soluble materials
- Relocation of highly diffusible elements
- Mechanical damage (fragile specimens can be damaged during conventional processing)
- Slow (24 hours or longer)
- Toxic reagents are required (fixatives, buffers etc)

Advantages of cryo-SEM:

- Specimen viewed in fully hydrated state
- Soluble materials are retained
- Less relocation of highly diffusible elements
- Little or no mechanical damage
- Time lapse experiments and evaluating industrial processes at timed intervals
- Usually no exposure to toxic reagents
- Rapid process
- High resolution capability (compared to low-vacuum techniques)
- Extra information obtained by low-temperature fracturing (compared with conventional and low-vacuum methods)
- Good for liquid, semi-liquids and beam sensitive specimens
- Ability to selectively etch (sublimate to reveal information)
- Ability to 'rework' specimen (eg re-fracture and coat)

Techniques and Applications

A summary of the cryo-SEM preparation technique

Cryo preparation techniques for scanning electron microscopy (SEM) have become essential for the observation of wet or 'beam sensitive' specimens. Using such techniques removes the need for conventional preparation techniques, such as critical point drying or freeze-drying, and allows observation of the specimen in its 'natural' hydrated state.

The specimen is rapidly cooled and transferred under vacuum to the cold stage of the preparation chamber, which is mounted onto the SEM chamber. The preparation chamber is pumped either with a rotary pump (PP2000) or by a specially designed turbomolecular pumping system (PP2000T). The specimen can be fractured, sublimated ('etched') to reveal greater detail, and coated with metal by sputtering or with carbon by thermal evaporation.

Finally, the specimen can be moved under vacuum into the SEM chamber where it is easily located on a cold stage specifically tailored to the SEM. At all stages of the procedure the specimen is maintained at a 'safe' temperature of typically lower than -140°C .

Typical applications

Biological sciences including botany, mycology, zoology, biotechnology and biomedical – plus economically import agricultural sciences.

More recently cryo-SEM is becoming an essential tool for pharmaceutical, cosmetics and healthcare industries, where it is used in basic applied research and for routine QA of many products, such as creams, cosmetics and drug delivery systems.

Cryo-SEM has long been a standard preparation method in the food industry. Of interest are multi-

phase products, such as ice cream, confectionery and dairy products.

Botanical: Cryo-SEM is the perfect method for highly hydrated botanical material.

Some specimen mounting techniques for cryo-SEM

Surface mounting

This technique is used for leaf specimens etc. Roughen stub surface with fine emery paper. Specimen is laid on top of mounting media.

Edge mounting

This technique is used for edge observation and fracture. Roughen surface of stub with fine emery paper. Specimen is placed on its edge in a machined slot and secured with mounting media.

Film emulsion mounting

This technique is useful when a small specimen would be obscured by the Tissue-Tek mounting media, or when specimens need to be recovered. Specimens need to be slightly damp to use this method (good for nematode worms). The specimen is laid on surface so that its dampness slightly dissolves the film emulsion allowing the specimen to adhere to the film surface. Exposed unused film with the emulsion side uppermost is secured to the stub with mounting media. It may be useful to scrape off the protective coating of the film emulsion first to assist conductivity.

Rivet mounting

For liquids and for when specimens need to be frozen off the stub to achieve fast freezing rates. The rivet is placed in the hole and filled with liquid prior to freezing. If the specimen needs to be frozen away from the stub, two liquid-filled rivets are held together and then frozen prior to transfer onto the stub.

Alternative rivet mounting method

Pipette liquid sample into hole in sample stub

Place metal rivet or small piece of plastic tubing on top of hole (containing liquid sample).

Note: Small drop of "Super Glue" can be used to hold tube to stub.

Freeze & transfer onto preparation chamber cold stage

Pipette liquid sample into tube

Result: clean surface fracture

Geological

Wax crystals in gas oil

When cooled to a temperature below about 2°C , the waxes in fuel oils such as this tend to crystallize out. Wax crystal size and shape can be varied by altering the rate at which the oil is cooled.

Polymers

Stable emulsion of a hydrophobic polymer

This image illustrates a stable emulsion of a synthetic liquid polymer dispersed in an aqueous continuous phase.

► PP3010T Cryo-SEM Preparation System

Quick Overview

The PP3010T is a highly automated, easy to use, column-mounted, gas-cooled cryo preparation system suitable for most makes and models of SEM, FE-SEM and FIB/SEM. The PP3010T has all the facilities needed to rapidly freeze, process and transfer specimens. The cryo preparation chamber is turbomolecular pumped and includes tools for cold fracturing, controlled sublimation and specimen coating. The specimen can then be transferred onto a highly stable SEM cold stage for observation. Cold trapping in the cryo preparation chamber and SEM chamber ensures the whole process is frost free. Specimen process times are typically between five and ten minutes.

Key Features

- High resolution performance
- Large 'recipe' driven touch screen interface
- Easy to use - extensive automation, on-screen help, videos, data logging and diagnostics
- Column-mounted preparation chamber - essential for frost-free transfer and ease of use
- Cold stage temperature down to -190°C , plus comprehensive cold trapping (not possible with conduction cooling)
- Turbo pumping system mounted off-column - less mass on the SEM
- Unsurpassed specimen visibility - large front window, top viewing ports, multiple LED chamber lighting
- Cameras in the preparation chamber and SEM - cumbersome binocular not needed
- Preparation chamber cooling - twenty-four hour hold time with a single fill of liquid nitrogen, allowing unattended overnight operation
- Automated start up, sublimation, and coating
- Fully compatible with SEM beam deceleration/stage bias modes up to 5kV
- Vacuum storage of the cryo transfer device; integrated valves enhances performance
- Typical vacuum when cold: 10-6mbar or better - specimen transfer into the SEM always high vacuum to vacuum
- Twin liquid nitrogen slushing and specimen handling system for pre-frozen specimens
- Fracturing/specimen manipulation device
- Prepdek™ workstation - self contained work area, extra bench space not required
- Specialized support backed up with a three-year warranty

See how it works... Learn how to do it...

Product Description

The PP3010T is a great leap forward in cryo-SEM technology. It combines the highest quality results with unparalleled ease of use.

The PP3010T is a column-mounted, gas-cooled cryo preparation system suitable for use with SEM, FE-SEM and FIB/SEM instruments. Control is via a large and intuitive touch screen mounted on the spacious Prepdek™ workstation, giving the operator instant access to, and control of, all the key operating parameters.

Visibility is a key feature throughout the whole system. CCD camera images from the preparation chamber and the SEM are displayed on the control screen - the image can be expanded to full screen when required. Five preparation chamber viewing windows give unsurpassed visibility of the specimen and chamber interior.

On-column preparation chamber with off-column cooling and pumping

The PP3010T conveniently combines the advantages of what are often referred to as 'on-column' and 'off-column' cryo preparation systems. The preparation chamber is directly attached to the SEM, but with the turbomolecular pumping and advanced SEM cooling system mounted remotely from the SEM. In this way, the mass and volume attached directly to SEM is kept to a minimum.

There are significant advantages of having the preparation chamber attached directly to the SEM. In particular, specimen transfer is always from high vacuum to high vacuum, which greatly reduces the risk of specimen contamination (frosting). In addition, it makes the system easier to use and allows the operator a more flexible approach to specimen preparation and observation. This is because during a single processing run it may be useful to move the specimen between the preparation chamber and the SEM cold stage - and vice versa - on a number of occasions.

Prepdek™ workstation and touch screen user interface

The Prepdek™ workstation has been designed to allow specimen mounting, freezing (and pre-frozen specimen manipulation) and transfer device storage on one ergonomically designed work surface. The control electronics are mounted in a sealed, but accessible, cabinet beneath the Prepdek™. A flexible LED light gives the user an excellent view of the preparation process.

Remotely mounted turbomolecular pumping system

► PP3010T Cryo-SEM Preparation System (continued)

Conveniently set into the Prepdek™ works surface is a pumped storage tube and allows the cryo transfer device to be stored under clean, dry vacuum conditions when not in use.

A variable position specimen shuttle mounting pillar gives a solid base for specimen mounting and includes a height gauge to ensure specimens are within the acceptable height range.

The control PC is mounted on a flexible arm and can be positioned to suit the user (eg angled towards the SEM operator during specimen observation - allowing key system parameters to be viewed at a glance).

The PP3010T is controlled using a 15" intuitive colour touch screen, mounted on the user-friendly Prepdek™ workstation. The touch screen allows user-defined 'recipes' to be rapidly entered and stored for instant future access. The screen can be set to suit different operator levels and preferences - eg analog or digital vacuum measurements.

CCD camera images of both the preparation chamber and SEM cold stages are displayed and can be expanded to fill the screen. Although many of the key steps in the specimen preparation process are automated (airlock pumping, sublimation, sputter coating, etc), further help is instantly available through user-friendly videos. These guide the operator through the system set-up and then each specimen processing step in a concise and logical way.

Handling and transferring specimens

The PP3010T Prepdek™ workstation is fitted with a slushy nitrogen freezing station, connected to the pumping system. Rapid freezing reduces ice crystal damage, which results in improved ultra-structural preservation.

For handling pre-frozen material, the Prepdek™ is also fitted with the Advanced Specimen Handling System, which allows specimens that have been frozen by alternative freezing methods (or stored field specimens) to be manipulated in liquid nitrogen and then transferred under vacuum into the PP3010T preparation chamber for subsequent processing and observation.

The vacuum transfer device is compact, vacuum tight and has a convenient bayonet connection to the specimen shuttle to ensure rapid transfer. In line with the automatic design of the PP3010T, when the vacuum transfer device is located on the preparation chamber, the airlock is automatically pumped.

The PP3010T is supplied with universal 10mm specimen stubs with surface slots, holes and a flat area - useful for most specimen types, because the holes and slots can be used for liquids and to hold solid material for cross-section fracturing. Blank stubs are also included. A range of optional holders are available, including shuttles for large specimens and top-loading holders for high pressure freezing rivets and planchettes.

Specimen transfer device

When not in use, the cryo transfer device can be stored under vacuum in the pumped storage tube, located on the Prepdek® work surface

Transfer device, shuttle and universal specimen stub

Cryo preparation chamber

The PP3010T preparation chamber is connected directly to the SEM and includes facilities for preparing all types of specimens. The chamber is fitted with two fully integrated and interlocked gate valves. The outer load-lock valve includes a pumped airlock which accepts the cryo transfer device; the inner SEM valve ensures rapid high-vacuum to high-vacuum specimen exchange.

Specimen stage cooling is by an integral liquid nitrogen dewar which has an all-day run time (up to 24 hours) on a single fill (0.75L) of liquid nitrogen. The stage has a dovetail fitting to accept a cryo shuttle and specimen and can be precisely controlled over a temperature range from 100°C to -190°C or lower. Large gas cooled cold traps located above and below the specimen stage ensure clean, high vacuum conditions in the chamber.

High visibility

The PP3010T has superb chamber visibility. In addition to the large front window there are additional top and side windows. The specimen stage is lit by three LEDs, which avoids the problem of the fracturing knife 'shadowing' the specimen during cryo fracturing.

A CCD camera allows the specimen stage to be viewed on the control touch screen. Twin manipulators (actively cooled) are available and allow a range of specimen types to be fractured.

The PP3010T is fitted as standard with a front mounted fracturing/manipulation device. The ball-jointed mount offers flexible movement of the blade and allows the no.5 scalpel to be used both as a surface pick (probe) and a fracturing knife. Alternative blades can be fitted (not supplied).

An optional micrometer advanced fracturing tool (12145) is available (in addition to the standard side-mounted tool). Fractured fragments are captured in the large cold trap located below the specimen stage.

Automatic sublimation and sputtering

Sublimation and sputtering are fully automatic. The high resolution sputter coater is specifically designed for cryo applications and will give fine grain films that are essential for FE-SEM applications. A platinum (Pt) target is fitted as standard; other metals include gold (Au), gold/palladium (Au/Pd), chromium (Cr) and iridium (Ir). An optional carbon fibre evaporation head can be fitted.

An optional terminating film thickness monitor (FTM) is available. The system is fully integrated - no external control boxes.

	Standard?		Standard?
Cryo preparation chamber (column-mounted)		Pumping system and controls	
Built-in liquid nitrogen cooling dewar with a twenty-four hour run time between fills	Yes	Remotely-mounted turbomolecular-pumping system (70L/s). Includes: anti-vibration base, vacuum buffer tank, vacuum valves and stainless-steel bellows connection to the preparation chamber. Typical preparation chamber vacuum: 10-6mbar	Yes
Two integral gate valves (loading and SEM) with appropriate electrical interlocks. Air lock pumping is automatically activated when the specimen transfer device is attached	Yes	Single 90L/m rotary pump required	Order separately
Variable temperature conduction cooled specimen stage (-185°C to 50°C)	Yes	System control and specimen handling	
Cold stage 'parking space' for a second specimen shuttle (allows a second specimen to be prepared in advance)	Yes	Control via a colour user touch screen monitor (15") mounted on the Prepdek™	Yes
Large anti-contaminator (cold trap) plates above and below cold stage	Yes	Multi-ability user interface screen (expert/novice)	
Robust micrometer-fed fracturing knife (actively cooled)	Option	Quick, easy overview of system status	
Side-mounted surface knife/probe (actively cooled). A range of scalpel blades can be fitted to suit different specimen requirements	Yes	User-definable 'recipes' can be stored	
Automatic sublimation (controlled and viewed on the touch screen)	Yes	Quick access to videos outlining preparation techniques and system maintenance	
Fully automatic, high resolution sputter coater with platinum (Pt) target. (Other targets, including gold (Au), gold/palladium (Au/Pd), chromium (Cr) and iridium (Ir), are available as options.)		Fully automatic sputtering	
Sputtering controlled and viewed on the user touch screen	Yes	Automatic sublimation	
High purity argon gas canister (1L)	Yes	Quick, easy overview of system status	
Carbon fiber evaporation head and power supply	Option	CCD camera image of preparation chamber and microscope chamber	
Large front viewing window (138 x 73mm) plus top and side viewing ports	Yes	Twin liquid nitrogen slushing and specimen handling system - ideal for handling pre-frozen specimens. Mounted on the Prepdek™	Yes
Preparation chamber camera (CCD) mounted on a side port	Yes	System electronics stored in a ventilated, sealed unit under the Prepdek™	Yes
Viewing port shutter - automatically closes during sputtering to ensure the port window is clear of sputtered material	Yes	Specimen shuttles (x2). E7449-9 multi-specimen stubs (pack of 10) and E7402 blank aluminium (Al) stubs (pack of 10). Other shuttles and stubs available - see Ordering Information	Yes
Vacuum transfer device	Yes	Installation and training	
Chamber illumination - three LEDs	Yes	Installation and training at the customer site	Contact EMS
SEM cooling dewar, SEM cold stage and cold trap (anticontaminator)		Support and other information	
Gas-cooled nitrogen cold stage assembly (-190°C to 50°C). Temperature stability of > 1°C	Yes	Comprehensive start-up kit with key spares	Yes
Separate gas-cooling circuits for SEM stage and SEM anti-contaminator	Yes	Three-year warranty	Yes
CHE2000 12L capacity, off-column cooling dewar with run time between fills of up to 24 hours	Yes	SEM column interfaces and SEM stage adaptor (tailored to each microscope)	Yes
SEM CCD camera- viewed on the system control screen	Yes	Some options and accessories (see Ordering Information for full list)	
LED lighting (interlocked)	Yes	Terminating film thickness monitor (FTM)	Option
		Self-pressurising LN2 dewar and regulator (for storage and venting)	Option
		Carbon fiber evaporation head	Option
		Wide range of specimen holders and specimen stubs	Option

Cryo preparation chamber pumping

The preparation chamber is pumped by a remotely-positioned 70L/s turbomolecular pumping system. Typical preparation chamber vacuums during operation are in the region of 10⁻⁶mbar or better.

Positioning the turbomolecular pump away from the SEM ensures total elimination of mechanical vibration and significantly reduces the cryo system mass that is connected to the SEM. A vacuum buffer tank allows the rotary pump to be automatically switched off for most of the time. The pumping system is connected to the preparation chamber by flexible stainless-steel bellows.

A 1.389L/s rotary vacuum pump is required to "back" the turbomolecular pump and for slushing and rough pumping operations. The rotary pump can be located up to five metres from the system, allowing remote location if required. Dry pumping alternatives are available.

SEM cold stage, cold trap and cooling system

A highly stable, thermally isolated, liquid nitrogen gas-cooled stage attaches to the SEM stage. The SEM stage and cold trap are cooled by two separate cold gas circuits - both capable of reaching temperatures down to -190°C. This configuration allows the operator to select stage and cold trap temperatures that are optimised for specific specimens. For example, for some non-biological materials it is useful to hold the specimen at very low temperatures - a cold stage temperature of -175°C and a cold trap temperature of -190°C.

The SEM cold stage has a temperature range of +100°C to -190°C and a temperature stability of < 1°C.

Off-column cooling

The cold nitrogen gas-cooling dewar for the SEM stage and cold trap is remotely positioned (typically on the floor behind the SEM). The system will run for up to 24 hours between fills.

Plunge freezing in slushy nitrogen.

Cryo preparation chamber with cryo transfer device fitted

View during specimen transfer

Nitrogen gas cooled cold stage—temperature range down to -190°C

Gas-cooled SEM cold trap (temperatures down to -190°C). Tailor-made to suit each SEM

CHE3010 heat exchanger and dewar. During operation the heat exchange is inserted into the dewar. Typically hold times are up to 24 hours

Ordering Information

For a full quotation, including on-site installation and customer training, please contact us.

PP3010T	Cryo-SEM preparation system for SEM, FE-SEM and FIB/SEM applications. Including: column-mounted cryo-preparation chamber with off-column turbo pumping system. SEM cold stage and cold trap, Prepdek™ workstation with dual freezing and specimen manipulation facilities, automatic sputtering and sublimation. Touch screen user interface mounted on the Prepdek™ workstation. Transfer device, 2 x AL200077B and 1 x 10246 specimen shuttles, E7449-5 and E7402 specimen stubs. Microscope interfaces, start-up kit, mounting media and operation manual	each
----------------	--	------

Pumping

The PP3010T requires one 90L/m rotary pump (dry pumps available on request).

91005	RV5 90L/m 115/230V 50/60Hz rotary vacuum pump with oil mist filter	each
--------------	--	------

Options and accessories

PP7450	Pressurised dewar (75L) for LN2 storage and venting gas supply	each
10998	Carbon fibre evaporation head including 1m high purity carbon fibre	each
10999	Film thickness monitor (FTM)	each
12145	Micrometer controlled fracturing device with tool steel blade. Note: the standard ball-joint mounted fracturing tool is fitted as standard. The 12145 can be fitted in addition	each
13061	Two-years spares/consumables kit	each

Specimen holders

10245	Top-loading specimen shuttle for planchettes	each
10246	Top-loading specimen shuttle, to take a 10mm stub	each
10247	Top-loading specimen shuttle for rivets (vice style)	each
E7433	Rivet holder specimen stub, screw-down style (for use with 10246)	each
E7449-5	Universal specimen stub with surface holes and slots (pack of 5)	each
E7401	Specimen stub shuttle (spare)	each
E7402	Aluminum (Al) stubs (pack of 10)	each
E7403	Copper (Cu) stubs (pack of 10)	each
E7405	Screw down stub for thin, hard specimens	each
E7406	Copper (Cu) stubs with 3 x 3mm slots (pack of 5)	each
E7407	Copper (Cu) stubs with 1 x 3mm slot (pack of 5)	each
32816510	Brass rivets for fracturing liquids (pack of 100)	each

Sputter targets and carbon fibre

E7400-314A	Gold (Au) target 0.008" thick	each
E7400-314B	Gold/palladium (Au/Pd) (80:20) target 0.2mm thick	each
E7400-314C	Platinum (Pt) target 0.008" thick	each
E7400-314IR	Iridium (Ir) target 0.008" thick	each
E7400-314CR	Chromium (Cr) target 0.3mm thick	each
91047-1	Carbon fiber cord - high purity - 1m	each
91047-5	Carbon fiber cord - high purity - 5m	each

► SECADOR™ DESICCATOR CABINETS

Pick the SECADOR™ DESICCATOR CABINET that suits your lab!

Contemporary design – Fits every laboratory's budget.

- Patented dehumidifying module – protects anhydrous and hygroscopic materials.
- RH reduced to < 25% - protects any components requiring controlled storage conditions.
- Patented sealed construction- airtight, dust and moisture-free storage.
- Portable and stackable – use on bench-top or in special storage areas, small footprint.
- Automatic desiccant regeneration.
- Built-in hygrometer – quick check on RH levels.
- Transparent – easy viewing of contents.
- Embedded UV protection – blocks 99% of UV light – protect cabinet for longer service life.
- Superior chemical resistance –resists staining.
- Carrying handles – easily transported.
- Rugged construction – durable – crack resistant.
- Sturdy latches and provision for locks – secure, tamper evident storage.
- Contemporary design – attractive appearance.
- Larger units offer adjustable shelves.
- Smaller units have a stackable compact design.
- Excellent pricing – fits every lab's budget.
- Made in the USA.

► SECADOR™ 1.0 DESICCATOR CABINET

- Built-in hygrometer – Quick check on RH levels.
- Transparent for easy viewing of contents.
- Superior chemical resistance – Resists staining.
- Patented sealed construction – Airtight.
- Stackable - Small footprint.

One latch – Volume is 0.75 cu. Ft – 1 shelf
 Size: 8.4" (H) x 13.4" (W) x 16.3" (D) (21.3 x 34.1 x 41.4cm)

Cat.#	Description	Qty
71225-00	SECADOR™ 1.0 Desiccator Cabinet, Color Clear	each
71225-06	SECADOR™ 1.0 Desiccator Cabinet, Blue End Caps	each
71225-07	SECADOR™ 1.0 Desiccator Cabinet, Color Blue	each

► SECADOR™ CARRYING CASE

- Carrying handle – Portable convenience

Two latches, airtight. Available in clear and blue
 Volume 0.75 cu. Ft – 2 shelves
 Size: 14.7" (H) x 8.4" (W) x 16.3" (D) (37.3 x 21.3 x 41.4cm)

Cat.#	Description	Pack
71226-10	SECADOR™ Desiccator Carrying Case, Color Clear	each
71226-20	SECADOR™ Desiccator Carrying Case, Color Blue	each

► SECADOR™ 4.0 DESICCATOR LARGE - VERTICAL

► A. SECADOR™ 4.0 AUTODESICCATOR CABINET - Vertical

The superior dehumidification performance of the Autodesiccator model makes it a natural choice for more perishable and expensive products that require constant low humidity. Totally automatic, continual desiccation with silica beads, and generation every 20minutes, keeps RH level in the SECADOR™ 4.0 Desiccator at a constant level. No long regeneration lag between cycles – minimal change from opening the cabinet door. Two fans guarantee continuous airflow within the Cabinet, and continuous exhaust of humid air.

- Hygrometer, autodesiccator module.
- 3 shelves, 4 positions, 2 latches. Volume: 2 cu. Ft.
- Reduces RH from 75% to <25% in ≈ 8 hours.
- Maintains RH level within narrow range.
- Size: 20.4" H x 13.4" W x 16.3" D (51.8 x 34.1 x 41.4cm).

Cat.#	Description	Qty
71227-15	SECADOR™ 4.0 Autodesiccator Vertical, Clear, 115v	each
71227-16	SECADOR™ 4.0 Autodesiccator Vertical, Blue End Cap, 115v	each
71227-17	SECADOR™ 4.0 Autodesiccator Vertical, Blue, 115v	each

➤ SECADOR™ DESICCATOR SHELVES

To convert your Model 4.0 Secador™ Autodesiccator Cabinets or Secador™ Desiccator Cabinets from the Horizontal configuration to the Vertical, or from Vertical configuration to Horizontal, all you need is a new set of shelves.

Cat.#	Description	Pack
71229-10	Horizontal Shelves 2 needed to convert to Horizontal	each
71229-20	Vertical Shelves 3 needed to convert to Vertical	each

➤ Desiccator Cabinet – Low Temperature

Dry, dust-free storage for use in refrigerators, freezers or at room temperature. These durable cabinets are made from 6.35mm (¼") acrylic. Gasket airtight doors are 9.5mm (¾") acrylic with full-length hinges and stainless steel twist locking latches. Choose from easy viewing clear units or dark bronze for light sensitive materials. Both offer deep, slide-in trays with perforated bottoms and are available in three sizes.

Cat.#	Color	Height x Width x Depth, cm (in.)	No. of trays	Pack
71220	Clear	22.86 x 22.86 x 40.64 (9x9x16)	2	each
71220A	Bronze	22.86 x 22.86 x 40.64 (9x9x16)	2	each
71222	Clear	17.78 x 17.78 x 25.4 (7x7x10)	2	each
71222A	Bronze	17.78 x 17.78 x 25.4 (7x7x10)	2	each
71221	Clear	30.48 x 30.48 x 30.48 (12x12x12)	3	each
71221A	Bronze	30.48 x 30.48 x 30.48 (12x12x12)	3	each

➤ Desiccator Cabinet 1

Good for compact areas. It is see through from all sides. The door is air tight when closed and when it is opened it slides into a hide away compartment beneath the cabinet. Safely stackable up to five high. Inside measurements: 8¼"(L) x 7"(W) x 5"(H) (21 x 18 x 13 cm) Outside measurements: 9¼"(L) x 8½"(W) x 6½"(H) (23 x 21 x 17cm).

71215	Desiccator Cabinet 1	each
-------	----------------------	------

➤ Desiccator Cabinet 2

Same construction as cabinet 1. Comes with two shelves and vent holes, four sets of shelf rails for adjusting to low or high objects. "Smoke" tinted in color. The Door opening is 9" wide and 8" high (23 x 20cm); inside depth is 9". Overall measurements are 10 x 10 x 10" (25x25x25cm).

71216	Desiccator Cabinet 2	each
-------	----------------------	------

► Desiccators Cabinet - Acrylic

71220

For dry, dust-free storage at temperatures up to 120°F. They can be used in incubators, freezers, and refrigerators or at room temperature. Cabinets have airtight doors that need no lubrication. Sliding perforated shelves for easy access; transparent acrylic walls for see-through storage. The third bottom shelf accommodates desiccants. Cabinets are also available with locks and a hygrometer. Hygrometer has a temperature range of -58°F to 158°F with $\pm 1.5^\circ\text{F}$ accuracy up to 104°F. Humidity range is 20 to 95% with $\pm 5\%$ accuracy. LCD display. Includes 2 'AAA' batteries.

TECHNICAL TIP

- In order to extend the shelf-life of salts, buffer ingredients, and embedding components (which do not need to be refrigerated), we recommend that you store them in desiccators, where the humidity is controlled.
- The hydrated salts are always more stable than the anhydrous ones. For instance, Sodium Phosphate Dibasic Anhydrous is less stable than Sodium Phosphate Dibasic Dihydrate or Heptahydrate.

► Nitrogen Purge Cabinet – Acrylic

Simple and easy to use at temperatures up to 120°F. They can be used in freezers, refrigerators, or at room temperature. Cabinets have airtight doors that need no lubrication. Sliding perforated shelves for easy access, transparent acrylic wall for see-through storage. These cabinets are also available with Flow Meters. Direct reading scale flow meters with control levels that let you not only measure flow through the meter, but also make flow adjustments in the line. Acrylic, ethylene propylene and Type 316 stain-less steel welded parts. With a flow range of 2 – 20 scft, with an accuracy of $\pm 6\%$. Flow meter dimensions: 2" scale height x 4¼" overall height with mounting centers of 3".

➤ **Dry-Keeper™**

Non-Vacuum with Dial Hygrometer in Door; Electrically Operated

➤ **Vertical Cabinet**

Made from clear methyl-methacrylate (Acrylic), this auto-desiccator cabinet features a permanent desiccant contained in the control unit; therefore, no desiccant tray is needed. The cycle is indicated by a green light for a 4½ hours absorption period, or a red light indicating ½ hour regeneration of the desiccant. This cabinet will lower relative humidity to 30 - 40% and it includes two adjustable shelves. The unit draws 6 watts, 120 VAC. The Unit measures overall: 12½" Length x 15½" Depth x 24½" Height (31.75 x 39.37 x 61.6 cm)

➤ **Horizontal Cabinet**

The same construction and all features as the Vertical Cabinet but its layout is horizontal. The generator unit is on the side. The overall unit measures: 24½" Length x 15½" Depth x 13½" Height (61.6 x 39.37 x 32.93 cm)

Cat. #	Description	Qty
71217	Auto-Desiccator Cabinet - Vertical	each
71217-HZ	Auto-Desiccator Cabinet - Horizontal	each

➤ **Dry Keeper Plus™ Desiccator Cabinet; Non-Vacuum**

- User-friendly electronic desiccant control
- One-touch door latch with silicone rubber door gasket
- Molded cabinet made from ABS plastic.

Efficient dehumidification is monitored by a hygrometer dial in the door. The dehumidifying auto-drying unit has an air circulating system which helps drop relative humidity sharply through its cycling of absorption and regeneration of the enclosed permanent desiccant. It can bring the relative humidity down from 60% to 10% in 6 hours of continuous operation in an unloaded cabinet. The unit comes with three clear, removable shelves with vent holes which provide evenly spaced storage area. It operates on 110 volts, 60 Hz., 10 watts, and comes with a 2-prong 6 ft (2 meter) cord.

Overall Measurement: 12.2"(L)x13.9"(W)x16.9"(H) (310x353x430mm).

Hinged door measures: 11.8"(W)x14"(H) (300x355mm). Weight: 13 lbs (5.9 Kg)

➤ **Sample Stub Vacuum Desiccators**

Precision machined from a block of aluminum – anodized black - this Sample Stub Vacuum Desiccators accommodates 18 SEM Mounted Sample Stubs, pin style, under vacuum for year long.

- Compact and sturdy – will last as long as you own them
 - Prevents oxidation from occurring to the sample during long term storage
 - All pin stubs are kept secure inside the chamber by a built in "O" ring in each position
 - Very simple to use - Just need small vacuum pump to evacuate air out of the chamber
 - Acrylic Clear top for easy viewing the contents
 - Interlock when stack together to safe space
 - Ideal for transport and storage samples for SEM, TEM, FIB, AFM, etc.
- Measures: 13 cm x 13cm x 4.5cm High. Chamber cavity is 10.4cm diameter x 18mm deep. Lid is made with 10mm thick clear acrylic.

TECHNICAL TIP

Vacuum Drying Technique May Be An Effective Method To Eliminate Or Reduce The Wrinkles In Semithin Epoxy Sections.

Wrinkled, folded, buckled or warped sections can be vacuum dried as follows: a vacuum desiccator is furnished with a layer of calcium sulfate, and with a petri dish filled to a depth of 3 mm with phosphorous pentoxide. A large filter paper (Whatman #1) secured under the tray of the desiccator prevents dust from contaminating slides during pumping. Slides, positioned on top of the tray, are kept in vacuum for 48 hours. Immediately after removal from the vacuum jar, and without immersion in any organic solvent, the slides are coverslipped with mounting media. Hildegard H. Crowley and Ben H. Leightling (1989). Elimination or Reduction of Wrinkles in Semithin Epoxy Sections by Vacuum Drying. Stain Technology, Vol. 64, No 5, pg. 221-223

► Lab Companion™ Vacuum Desiccators

Premium Vacuum Sustainment

EMS is proud to announce our complete line of Lab Companion™ Vacuum Desiccators that holds a vacuum three times longer than the average vacuum desiccator. They stay gastight allowing reliable storage, creation of anaerobic environments, degassing of materials or vacuum drying of samples over extended periods. Available in 14 models available to suit most needs, users can choose from a standard round style or a unique cabinet style with molded design that prevents implosion.

- Cabinet style Lab Companion® desiccators hold more and often fit workspaces better
- Round style Lab Companion® desiccators complement Bel-Art Product's round vacuum desiccator offering; larger than Space Saver™ Vacuum Desiccators, smaller than Technidome® Vacuum Desiccators
- All units maintain a vacuum for 72 hours minimizing maintenance and monitoring

Choose from 14 models that hold a vacuum up to 3 times longer than the average vacuum desiccator

These high-quality vacuum desiccators provide vacuum integrity lasting three times longer than the average vacuum desiccator resulting in lower maintenance and greater peace of mind. Able to maintain 29in.-Hg vacuum for over 72 hours at room temperature, they stay gastight allowing reliable storage, creation of anaerobic environments, degassing of materials or vacuum drying of samples over extended periods.

- Viton® 3-way valve offers consistent and uniform vacuum draw, vacuum release, or gas exchange
- Transparent polycarbonate construction is durable, easy to clean, chemical-resistant, and allows quick visualization of the desiccator contents
- Amber tinted UV blocking models block 100% of UVA, B, and C light to minimize damages or discoloration of light-sensitive samples
- Vacuum gauge (analog dial) allows quick and convenient checking of the vacuum level

► Round Style Lab Companion™ Vacuum Desiccators

Eliminate the guesswork; easy to view vacuum gauge

- Vacuum level checking is simplified with a built-in analog vacuum gauge at the top of the unit • High-quality silicone O-ring and specially designed locking ring allow outstanding vacuum capability with virtually no leakage
- Locking ring secures top and bottom halves when vacuum not in use; provides additional convenience and safety when moving the unit
- Six models to choose from; 6, 10, and 20 liter internal volume in clear or UV blocking amber

► Cabinet Style Lab Companion™ Vacuum Desiccators

Outstanding vacuum sustainment in a space-maximizing cube

- Integrally molded cubic box design enables outstanding vacuum capability with virtually no leakage and exceptional durability
- Cabinet style provides maximum useable space
- Swinging door allows easy access; built in locking tabs secure the door when not under vacuum
- Analog vacuum gauge in front door allows vacuum level checking at a glance
- Perforated shelves can be repositioned to accommodate various storage needs (additional shelves available separately)
- Built-in ports permit attachment of up to 3 additional valves (sold separately)
- Stackable space-saving design allows efficient use of work space
- Eight models to choose from; 11, 23, 35, and 45 liter internal volume in clear or UV blocking amber

► Lab Companion™ Vacuum Desiccators (continued)

► Glass Desiccators

Glass vacuum desiccators are versatile and are equipped with a sidearm for connection to a vacuum source. The contents of the sealed evacuated desiccators are maintained in a dry, reduced pressure atmosphere. Dried materials are stored in desiccators while cooling in order to minimize the uptake of moisture.

■ **Hygroscopic materials should be stored in containers having tight fitting closures. Deliquescent samples and effervescent pharmaceuticals are prime examples.**

Applications:

- Protection of hygroscopic and deliquescent samples.
- Prolonged storage at reduced pressure.
- Reactions at ambient temperatures.
- Anesthesia chamber for laboratory animals.
- Environmental studies.
- Storage of thin layer chromatography plates.
- Determination of void content of aggregates and filters.
- Greaseless seal.
- Maximum vacuum of 27" Hg.
- Temperature range -15° to 80°C.
- De-aired the mixture.

Desiccants See page 1071 >>>>>

► Dry Seal® Vacuum Desiccators – With Covers, Sleeve Valves, Silicone Sealing Rings and Plates

Lubricating the standard taper sleeve valve with silicone-based vacuum grease is recommended for increased performance and to prevent freezing. 1/4" to 3/8" vacuum hose required. Made from Wheaton "810" glass and they are available in 3 sizes.

Cat.#	Size, mm	Joint Size	Qty/case
71256-15	170	40/35	each
71256-25	250	55/38	each

► Desiccator Components:

► 1. Vacuum Jars

Replacement jars for all Dry-Seal® desiccators.

Cat.#	Size, mm	Qty/case
71257-10	100	each
71257-15	150	each
71257-25	250	each

► 2. Covers, Without Sleeve Valves

Replacement for all Dry Seal® vacuum desiccators.

Cat.#	Size, mm	Joint Size	Qty/case
71258-10	100	40/35	each
71258-15	150	40/35	each
71258-25	250	55/38	each

► 3. Sleeve Valves

Replacement for all Dry Seal® vacuum desiccators.

Cat.#	Joint Size	Qty/case
71259-40	40/35	each
71259-15	55/38	each

► 4. Retaining Rings

For sleeve valves.

Cat.#	Size, mm	Qty/case
71259-35	40/35	each
71259-38	55/38	each

► 5. Sealing Rings

These rings are molded from chemically resistant Viton® rubber.

71262-10	100	each
71262-15	150	each
71262-25	250	each

► Vacuum Bell Jar and Plate

Good for vacuum drying and degassing procedures. The chamber is made from a clear polycarbonate allowing for full visibility. Its polypropylene stopcock has a PTFE plug and it accepts 1/4" (6.4mm) I.D. tubing. The chamber measures: 77/8(20cm)I.D.; inside maximum height is 43/8"(11cm); plate is 13/4"(4.4cm)Hx91/8"(23.2cm) in diameter.

71236 Vacuum Bell Jar & Plate each

► Mini Vacuum Desiccator

- Ideal for Small Samples
- Degassing Embedding mixtures

The top part of the desiccator is clear, molded from polycarbonate and see-through from any angle. A polyethylene stopcock with a PTFE plug allows for gentle releasing of the vacuum. A peripheral flange around the poly-propylene bottom section fits into and snap locks therefore sealing the two halves against a "O" ring. Vacuum retention rating is 740 mm Hg (29"). Inside dimensions are 102mm (4") diameter x 59mm (2 3/16") high. The base is 175mm (6 7/8") diameter.

71246-01 Mini Vacuum Desiccator each

➤ **Reusable/Disposable Desiccant Cartridge**

These desiccant cartridges can be used in desiccator cabinets or non-vacuum desiccators, analytical balance cases, and precision laboratory instruments. The clear polystyrene dish allows for instant visual inspection of the silica gel color which changes from blue to pale pink as it absorbs moisture. A highly porous membrane covers the dish of the desiccant providing good moisture absorption. The desiccant can be regenerated by heating cartridges in an oven at 50°C (122°F) overnight. For rapid drying, cut the membrane and transfer the spent gel crystal into a glass or porcelain dish. Then place it in a 150°C (302°F) oven for one hour. The silica gel is inert and non-toxic. Each cartridge is individually sealed in aluminum foil. Dispose of the cartridges after repeated use. Cartridges come in two sizes: Small: 2 1/2" (65mm) diameter and Large: 4" (100mm) diameter.

71212-02	Desiccant Cartridge, Small	6/pk
71212-04	Desiccant Cartridge, Large	6/pk

➤ **Desiccant Canister; Reusable**

Ideal for dry control of desiccator cabinets. Moisture is absorbed through the perforations in the aluminum case, which contains silica gel. This 2 x 4" canister maintains a safe level of humidity in 3cu.ft (0.8 cu. meter) area. When the monitor window turns pink, the silica gel is saturated. It can be regenerated in a 300°F (150°C) oven in about 3 hours. The monitor window will be blue in color when recharged.

71210	Desiccant Canister	each
71211	Desiccant Canister	4/pk

➤ **Silica Gel-Desiccant**

Fast and extra moisture absorbing agent.

- Meets FDA specifications for food and drug product
- Provides superior absorption. Remains dry at maximum saturation.
- Silica gel can absorb 15% of its weight in water vapor in two hours.

➤ **Silica Gel Packets**

These packets lay flat, malleable to the storage area. Available in a variety of sizes.

Cat.#	Gram Size	Bag Dimensions	Protects Cu. In.	Pack
71206-01	1	3/8" x 1 1/2"	6.1	100/pk.
71206-02	2	3/8" x 2 1/4"	12.2	100/pk.
71206-03	3	1 1/8" x 2 1/8"	24.4	50/pk.
71206-05	5	1 1/8" x 2 1/4"	45.75	50/pk.
71206-10	10	2 3/4" x 3"	91.5	20/pk.

➤ **Desiccant in a Cartridge**

Regenerates Repeatedly without Degradation

These cartridges fit into the bottom of a standard glass or plastic desiccator. The cartridge consists of a durable long wearing polyester felt bag with a perforated Mylar cover sealed in place. The indicating gel beads will change their color from blue when dry to pink when moist. Saturated gel can be regenerated in a 150°C (300°F) vented oven for 3 hours or more (depending on size), until the blue color is restored. Cartridges come individually sealed in a moisture-proof pouch ready to use.

Cat.#	For Desiccator Diameter	Cartridge Diameter	Weight	Pack
71209-16	160 mm	114 mm	0.23kg (1/2 lb)	each
71209-20	200 mm	197 mm	0.68kg (1 1/2 lb)	each
71209-25	250 mm	238 mm	1.36kg (3 lb)	each

➤ **Vacuum Pressure Indicator**

This Vacuum-Pressure Indicator fits between the desiccator dome and the desiccator stopcock. Its slips easily onto the tapered outlet of the desiccator dome and into the standard desiccator stopcock without requiring any tools. The thermo-plastic elasto-meter collapses when there is negative pressure vacuum in the desiccator and expands under ambient atmospheric pressure.

71242-01	Vacuum Pressure Indicator	each
-----------------	---------------------------	------

➤ **Replacement Stopcock**

A polypropylene body which has a PTFE plug and washer as well as a bright red handle and nut. Its taper fits on the desiccator port and the plug is 3-way allowing for vacuum draw, shut-off, and release. May be used with our following catalog numbers: #71230; 71232; 71234; 71246.

71242-05	Replacement Stopcock	each
-----------------	----------------------	------

➤ **Replacement Desiccator Plates**

These 4.8mm thick plates are able to withstand temperatures up to 150°C (300°F) and have excellent resistance to thermal shock, and to chemicals. They are non-combustible and asbestos free. Round plates are perforated with 4mm (.165") diameter holes on 12.7mm (1/2") centers in a straight line pattern. They are available in three sizes, and fit our following desiccators #71230; 71232; and #71234.

71242-15	140mm Diameter Desiccator Plate	each
71242-19	190mm Diameter Desiccator Plate	each
71242-23	230mm Diameter Desiccator Plate	each

► High-Speed Mini-Centrifuge

This compact centrifuge is ideal for most protocols calling for fast spins (up to 12,500 rpm / 9,800 rcf) and quick spin-downs. Useful for PCR®, microfilter cell separation, clinical applications, and HPLC protocols. Operation is extremely simple for this high-level of sophistication. For duplicate spins, simply reload rotor and push Start. Designed with quick-spin option for commonly used 20-second spins. Includes a toolfree, quick-change rotor system. Safety features ensure the

unit will not operate with an open lid, a jammed rotor or when out of balance. Efficiently designed for minimum bench top space.

Features

- Two rotors
- 12 place standard rotor with lid for 1.5/2 mL tubes
- Twelve 0.2 mL and twelve 0.5 mL adapters for customized use
- AC adapter 100 to 240VAC, 50/60Hz

Specifications

Maximum Speed	12,500 rpm
Maximum RCF	9800 x g
Voltage	100-240
Dimensions	203x171x114

EMS #	Description	Qty.
72359-12	Gusto mini-centrifuge	each

► 6-Place Table Top Centrifuge

This is a powerful, quiet, centrifuge for table top use in small labs or offices.

FEATURES:

- Variable 30-minute timer.
- Standard locking lid.
- Six place rotor.
- 7, 10 or 15ml tube capacity without the added expense of extra tube carriers.

Specifications:

Maximum Speed:	3,200 rpm
Maximum RCF:	1,300xg
Power:	120VAC, 120W
Maximum Volume:	90ml
Diameter (base):	10" (25.4cm)
Height:	8" (20.3cm)
Weight:	7.5lbs (3.40kg)

72359-06	6-Place Table Top Centrifuge	each
----------	------------------------------	------

► Sprout® Mini-Centrifuge

Newly improved rubber footplate includes soft feet to increase stability and deaden vibration

This compact mini-centrifuge is ideal for quick spin-downs from tube walls and caps. Use to microfilter cell separations and HPLC samples. Most spins last around 20 seconds, so Sprout® is designed for easy repeat opening. Ergonomically designed lid fits the palm of the hand comfortably.

Operation is very simple: load tubes, close lid, press ON/OFF button. For repeated spins, simply open or close the lid to operate. Internal safety switch ensures unit will not operate with lid open.

This personal centrifuge uses minimal benchtop space. Removable cord for easy storage. Unit is ETL, cETL, and CE marked and also complies with European RoHS directive.

Specifications:

Maximum Speed	600 rpm
Maximum RCF	2000 x g
Dimensions	153 x 128 x 104 mm

Tubes accommodation:

- Circular rotors and adapters combine to hold up to 6 microtubes (2.0 ml, 1.5 ml, 0.5 ml, or 0.4 ml)
- Straight rotor holds up to 16 PCR tubes (individual or two strips of 8)

Circular rotors are glass-filled polycarbonate; straight rotor is unfilled polycarbonate.

This mini Sprout unit includes:

- Two interchangeable rotors covering all applications – includes a set of adapters to accommodate all major microtubes and PCR tube styles.
- Storage case – Polyurethane foam case keeps extra rotors and adapters contained and dust-free.
- Tube Rack – Handy for handling samples before and after quick spins.

EMS #	Description	Qty.

► Mini Microcentrifuge

An ultra quiet, space saving centrifuge which is only 5 inches in diameter. This unit is ideal for use under the fume hood, or on any benchtop. It comes with a clear carbonate lid which is extra durable and allows visual inspection of the 6-place rotor while in operation. To start the operation of the unit simply close the lid; to open depress the plastic tab. The unit operates at 6400 rpm and 2000xg. 110 VAC.

72359-10	Mini Microcentrifuge	each
----------	----------------------	------

► Thumbs-Up Microtubes

Made of autoclaveable polypropylene

- Opens with flip of thumb!
- Easy retrieval from rotors
- Special reaction vessels in lid
- Color option for easy identification
- RNase and DNase free
- Temperature range: -196°C to 130°C
- RFC rating of 17,00 x g

► Micro Sample Tubes

Suitable for use in the mini centrifuge. Poly-propylene tubes with a captive plug; they are steam autoclavable at 250°F (121°C).

72363	Polypropylene Tubes, 1.5ml	100/bx
72361	Polypropylene Tubes, 400µl	100/bx

► Micro Tube Label; Tough-Tags™

Pre-cut, peel-off, pressure sensitive labels. They are sized to fit microcentrifuge tubes, cryo tubes and many other containers.

FEATURES:

- They can be boiled, froze, and autoclaved.
- They are thin and will not jam in the centrifuge rotor.
- They are chemically resistant.
- They will not dry out, fall-off, or tear.

Tough-Tag® 1.28" x 0.50" (33mm x 13mm), Ideal Use: 1.5 ml Tubes

Cat. #	Color	Labels per roll

► Double End Pestle

This pestle is mounted on a stainless steel shaft, 3.2mm (1/8") in diameter and it may be hand held or mounted in a motorized chuck. Double ended pestle. One end fits the 1.5ml microcentrifuge tube and the other end fits the 0.5ml tube. Overall length is 152mm (6")

64786-02	Double End Pestle	each
----------	-------------------	------

► Pestle Mixer with Matched 1.5 Tube

Economical Disposable polyethylene pestles and 1.5ml micro centrifuge tubes are used to resuspend precipitates such as protein or DNA pellets in buffer solution, or to grind soft tissue. The pestles are a matched fit for the tubes. These sets are excellent for processing large numbers of samples.

64788-10	Green Pestle and 1.5 ml Tube	100/pk
64788-20	Green Pestle only	100/pk

► Micro Centrifuge Sample Pestle

This pestle is ideal for resuspending lyophilized products or precipitates, or for homogenizing samples in a microcentrifuge tube. The PTFE pestle is mounted on a stainless steel shaft, 2.3mm (1/8") in diameter. It may be hand held or mounted in a motorized chuck. Overall length 143mm (5 3/8")

64785-15	1.5ml Tube Pestle, Flat Tip Cone	each
64785-16	1.5ml Tube Pestle, Rounded Tip Cone	each

► Silica Gel Canister

This small container offers more desiccant in less space. It is ship-proof and possesses greater drying capabilities. Designed for use in bottles and small containers. Perfect for protecting against potency loss, odor formation, color changes, caking, mildew and condensation. Capsule shell is made from polyethylene with very fine mesh top and bottom. The canister contains 1 gram silica gel. Capsule measures 9/16" dia. x 11/16" high (14 mm x 18 mm high)

Cat. #	Description	Pack
71205-01	Silica Gel Canister	100/pk
71205-05	Silica Gel Canister	500/pk

► Micro Sample Tube Racks

These round floating bubble racks can incubate 8 to 20 tubes in a beaker of water. Perfect for use in microbiology and immunology labs. Made to be used in beakers. The racks are loaded from the top and the tubes are easily removed by pressing the rack down on a bench until the short legs touch. Molded from buoyant foam-filled TPXR (polymethylpentene) with tiny bubbles throughout. 10.8mm diameter holes fit the 1.5ml microtubes, and 7.7mm holes fit the 0.5ml tube. The racks are 1/4"(6.4mm) thick with 3/4" (19mm) long legs and a center rod handle. They are steam autoclavable at 250°F (121°C).

72364-22	105	20	7.7mm	1000 ml

► Microcentrifuge Tube Racks; BestRack®

This Reversible Rack Holds 96 Microcentrifuge Tubes

This sturdy polypropylene rack holds 96 tubes in an 8 x 12 format. The rack provides easy access to each tube, even when 96 places are full. The transparent polypropylene lid has a snug fit and is tall enough to store most screw-cap microcentrifuge tubes. The rack measures 8-7/16" (L) x 45/8" (W)x2"(H) with lid.

- Holds 1.5/2.0 ml tubes on one side, and 0.5 ml tubes on the other.
- Rows and columns labeled for easy sample identification.
- Frosted labeling areas on four sides.
- Withstands freezing (-90°C) and autoclaving.
- Comes in 5 popular colors as well as natural.

Cat.#	Description	Pack
72375-05	96-place Rack. Mixed color (blue, green, pink, orange, and yellow) and Natural Lids	5/pk
72375-06	96-place Rack and Lid, Natural color	5/pk
72375-01	96-place Rack and Lid, Natural color	each

► Hot Plate/Stirrers Models PC-220

The Corning™ exclusive glass-ceramic Pyroceram® top has been a laboratory standard. These Hot Plate/Stirrers are packed with improved and customer requested features that are both durable and sophisticated, including:

- Exclusive Microprocessor design ensures faster and even heating.
- Exclusive closed-loop stirring monitors and regulated stirring speed.
- Exclusive external 'spill trough' deflects spills away from electronic and control knobs.
- Superior component designs and enclosed control electronics protect temperature and stirring control circuits from harsh environments.
- Extra large knobs with easy-to-read numbers provide better control.
- External Temperature Controller socket is provided on the 400 and 600 series

Model	Cat.#	Power	Top Size	Stir Range RPM	Temperature Range, °C	Weight Lb (kg)	Dimensions H x W x H, In.	Pack
PC-220	72348-10	120V/60Hz/283W/2.4A	4 x 5"	60-1100	25 - 550	5.0 (2.3)	4.4 x 5.8 x 7.3	each

Notes: 230 volt Units come with UK plug. Continental European and Italian plugs are available upon request.

► Water/Ice Bath Rack

Rust-proof Anodized Aluminum Rack – Designed to be used in Water/Ice Baths

- 24-place rack holds 1.5 and 2.0ml tubes.
- 40-place rack holds 0.5ml tubes.
- Removable cover keeps tubes closed while boiling.
- Handle for easy removal from water baths.
- Will not rust.

Dimensions
(W)x(L)x(H)

Cat.#	Rack Style	Dimensions (W)x(L)x(H)	Pack
72380-20	24-place, for 1.5/2.0 ml Tubes	6 ⁵ / ₁₆ " x 2 ¹ / ₄ " x 2 ³ / ₈ "	each
72380-24	40-place, for 0.5 ml Tubes	4 ¹ / ₂ " x 2 ³ / ₄ " x 1 ¹ / ₈ "	each

► Beaker Buddy™

Round, Anodized Aluminum Rack for use with Beakers, Water Baths, and Ice Baths

Keep microcentrifuge tubes closed while boiling. Place the tubes in the rack, and then screw on the handle to hold down the cover. The handle is 51/8" long, and assist's in the removal from hot beakers. Rack measures 31/2" diameter and holds up to 16 tubes.

- For 1.5 and 1.0ml tubes.
- Fits standard 800ml or larger beakers.
- Thermometer slot for monitoring temperature.
- Aluminum legs for free-standing use.
- Will not rust.

72365-01	16-place Beaker Buddy (2016-7801)	each
72365-06	16-place Beaker Buddy with lid	each

► **Temperature Controller Accessory for Hot Plate/Stirrers Models PC-220**

The Corning temperature controller accessory works with all Corning hot plates/stirrers, models PC-220. The controller plugs into the socket on the back of the hot plate. It can be used to control or monitor the temperature of the hot plate. The temperature controller features a PTFE coated probe, which allows the controller to be used for more applications.

Specifications: Optional Temperature Controller $\pm 2^{\circ}\text{C} @ 80^{\circ}\text{C} + 1\%/10^{\circ}\text{C}$, after 30 minutes.

► **Support Rods**

Corning hot plates, stirrers, and hot plate/stirrers have a space for a support rod accessory to be screwed into the base of the unit. These support rods are constructed from stainless steel and are offered in three different sizes

Cat.#	Description	Use with Model	Pack
72351-21	Temperature Controller B	PC-200/210/220	each
72351-12	Support Rod $\frac{5}{16}$ " x 12"L	PC-200/210/220	each
72351-18	Support Rod $\frac{5}{16}$ " x 18"L	PC-200/210/220	each
72351-24	Support Rod $\frac{5}{16}$ " x 24"L	PC-200/210/220	each

► **Overhead Stirrer**

- Allow for power homogenization or mixing
- Speed control capable of RPM / Torque combinations
- Use only with tissue grinders with stainless steel rods
- Keyless chuck accepts shaft size to 7.9 mm
- One year warranty

This overhead stirrer is a compact unit with solid state speed control capable of providing RPM/torque combinations for most laboratory operation such as homogenizing or mixing. This Over Head Mixer should be attached only to Tissue Grinders with PTFE pestles and with stainless steel rods. Unit and motor are mounted in a housing with epoxy finish and is provided with 6" aluminum rod and clamp for attachment to support stand. Keyless chuck accepts shaft sizes up to 5/16" (7.9 mm). Support stand is not included. One year warranty.

SPECIFICATIONS:

Speed Range:300 – 5,000 RPM (Under load)
 Electrical:.....120 VAC, 50/60 Hz, 50 watts
 Dimensions:4½" x 5" x 12" (11.5 x 13 x 30 cm)
 Weight:.....6 lbs (2.7 kg)

Cat. #	Description	Qty
64806-10	Overhead Stirrer Complete Unit	each

► **Accessories:**

Cat. #	Description	Qty
64806-50	Swivel blade paddle for stirring liquid in vessels with side entry port or for vessels with narrow openings. Shaft $\frac{1}{4}$ " x 12" (6.3 x 305mm), Blade: $\frac{1}{2}$ " x 2" (12.7x50.8mm)	each
64806-51	Stainless steel Extension Rod, $\frac{1}{4}$ " x 6" (6.3 x 153mm). For use with extension sleeve for lengthening Paddles.	each
64806-52	Stainless steel Extension Rod, $\frac{1}{4}$ " x 12" (6.3 x 305mm). For use with Extension Sleeve for lengthening Paddles.	each
64806-53	Stainless steel Extension Sleeve for $\frac{1}{4}$ " (6.3mm) diameter Rods, with set screws. For use in lengthening Paddles.	each

► **PTFE Magnetic Stirrer**

A New Concept in Magnetic Stirrers!

All parts are fully encapsulated in a PTFE body to give a stirrer which is totally inert to the most aggressive laboratory conditions.

- Speed display
- Reversible Spin Mode
- No heat transfer to media
- BIO VERSION
- Controlled speed 10 -160 rpm
- Stutter free motion

SPECIFICATIONS:

Max beaker capacity:2L
 Size:130 x 130 x 50 mm
 Power:7 watt – CE Marked
 Weight:1.3 kg (included power unit)

24 Volt stepper motor with controlled acceleration and deceleration and stall detection

Ambient temperature range 0 – 40°C
 PFA covered lead cable fused into body

Ordering: All units come with a power module

► Corning® Digital Stirring Hot Plates

Corning Stirring Hot Plate model PC-420 (EMS #72350-) is replaced by our new Digital Stirring Hot Plate, model PC-420D, and model PC-620 (EMS #72349-) is replaced by our new Digital Stirring Hot Plate, model PC-620D.

Corning® has now added innovative microprocessor technology into their units with digital display which optimally controls the heating and stirring to the 5" x 7" (12.7 x 17.8cm) and 10" x 10" (25.4 x 25.4cm) Pyroceram glass-ceramic stirring hot plates.

Performance Features:

- Closed-loop heating and stirring controls that monitor and regulate both temperature and stirring speed.
- Microprocessor maintains consistent and repeatable temperature setting from 5°C (if ambient temperature is 0°C or lower) up to 550°C.
- Digital LED temperature display is adjustable in 5°C increments and blinks until temperature is reached.
- Optional external temperature controller truly controls temperature inside the vessel and eliminates the need to closely monitor liquid temperature.
- Exclusive closed-loop stirring control monitors and regulates the stirring speed from 60 -1150 RPM for aqueous, viscous, or semi-solids solutions.
- Digital LED speed display gives you better control of your stirring process.
- Stronger, larger magnet improves stir bar coupling combined with automatic up speed adjustment minimizes decoupling.

Safety Features:

- Bright LED HOT TOP icon lights up when top plate is over 60°C, even when heat control is turned off.
- Separate temperature sensor provides power cutoff if unit overheats.
- Optional temperature controller will shut off unit when is not in liquid.
- Two piece casting design deflects spills away from electronic and includes a built in mount for an optional 18" (45.7cm) support rod.
- UL and cUL approved.

Ordering:

Model	EMS #	Power	Top Size	Stir Range RPM	Temp. Range, °C	Weight Lb/Kg	Dimensions LxWxH, in. (cm)

► External Temperature Controller for Digital Hot Plates

This temperature controller (model 6795PR) is designed to take the guesswork out of controlling liquid temperatures on the digital display PC-400D and PC-600D hot plates and PC-420D and PC-620D stirring hot plates.

- Controls the temperature of liquids up to 200°C in vessels on top of the Pyroceram heated top
- Increases accuracy and repeatability by controlling liquid temperature not top plate temperature
- When in use, the controller icon on the display will be lit and the temperature control on the unit can set from 5 – 200°C.
- CAUTION: A 200°C setting when using 6795PR does not mean that the top plate is at 200°C. Top plate temperature could be as high as 550°C

► Temperature Probe Support Clamp

This is a 3/16" (1.1cm) diameter by 6" (16.5cm) support clamp for clamp for

model 6795PR and 400188(EMS 72351-21) temperature probes. Support has two openings, 3/8" (9mm) and 0.15" (3.75mm), for holding probes. It is designed to be used with a boss heat clamp (Corning® #440140) or standard right angle clamp.

► Stainless Steel Support Rod

This is a stainless steel, two piece, 18" (45.7cm) support rod with a 5/16" (0.8cm) diameter that consists of two 9" rods that screw together. It screws into the base of Corning® hot plate and stirrer models PC-400/410/420, PC-400D/410D/420D/and PC-600D/610D/620D

► Accessory Kit

This kit is designed for all Corning digital display hot plates and stirring hot plates (Models PC-400D, PC-420D, PC600D, PC-620D). It is voltage independent and includes a Temperature Controller (6795PR), a two piece, 5/16" (0.8cm) diameter, 18" (45.7cm) long support rod, and magnetic stir bar retriever.

Ordering:

72351-30	Probe Support Clamp for #72351-21 & #72351-22	All Corning® Hot Plates and Stirring Hot Plates that have temperature probes.	each
72351-25	Two 9" support rods that screw together	PC-400/410/420, PC-400D-410D/420D, PC-600D/610D/620D	each
72351-50	Universal Accessory Kit	PC-400D, PC-420D, PC-600D, PC-620D	each

➤ SUPER-NUOVA™ Digital Hot Plates

Top of the Line Features:

- Warning system deters accidental contact with hot surface
- Remote probe allow for accurate reading of solution temperature to 0.1°C for temperature below 100°C
- User-adjustable over-temperature protection prevents runaway temperature conditions
- 24 months warranty

PRODUCT DESCRIPTION & OPERATION

- Rugged low profile cast aluminum body provides stability and durability
- Unit designed provides protection of internal components in case of spillage
- Available in 7 x 7" and 10 x 10" sizes
- Accommodates sample weights up to 35 lbs (19.5kg) on the 10 x 10" models, 25 lbs (11.3kg) on 7 x 7" models
- Integral ring stand holder accommodates 0.5" (1.3cm) diameter support rod
- Unique, single knob design controls heating. Set points go up slowly when the knob is rotated slowly, faster as the knob is rotated faster. The knob then is locked out to avoid accidental changes
- RS232 port enables you to output time count, temperature set points, top surface/remote probe temperature, to a printer or computer
- All models supplied with 6" type K probe, detachable cord and retention bracket that prevents cord from accidentally removed.
- Easy-to-read digital displays indicate temperature settings adjustable in 1°C increments
- Designed to provide superior control of temperatures below 100°C
- Ideal for cold room application. Can be used in a 0 to 27°C, 80% relative humidity, non-condensation environment

- User programmable preset buttons allow for up to four often-used temperatures to be recalled at the touch of a single button. Ideal for lab that perform repetitive procedures
- Hot surface alert systems protect from accidental burns.
- Walk away timer shuts off heating after a preset user-defined interval
- Independently adjustable over temperature protection circuit limits top plate temperature and prevent run away conditions.
- Calibration mode allows remote probe to be calibrated to external standard and at any temperature the user selects.

Ordering Information

Choose from Ceramic or Aluminum Top

- Rugged aluminum surface provides uniform heat distribution and added durability to sustain point impacts that might break ceramic or glass surface.
- Seamless reflective white ceramic top enhances sample visibility and provides an easy-to-clean and alkali/acid resistant surface.

► Great Low-End Nuova™ Hot Plate

- Corrosion resistant heating Surface
- Low profile
- 24 month warranty

Product Description and Operation

- Die cast aluminum case – durability and long lasting
- Porcelain coated stainless steel top – corrosion resistant
- Topside drip edge – protects internal components in case of spillage
- Integral ring stand holder – accommodates 0.5" (13mm) support rod
- Accommodates up to 20 lb (9.1 kg) loads
- Recommended for use with glass vessels only
- All unit included PTFE coated stir bar
- Demand-Type thermostatic temperature control – excellent temperature stability $\pm 5.0^{\circ}\text{C}$ (9°F) @ 371°C (700°F)
- Embedded heating elements – uniformity transfer heat to the top plate
- Low temperature control: 38°C (100°F) – perfect choice for warming applications
- All units operating temperature range is $38 - 371^{\circ}\text{C}$ ($100 - 700^{\circ}\text{F}$)
- Heating Surface $7.0'' \times 7.0''$ ($17.7 \times 17.7\text{cm}$)
- Overall dimensions $11.8''\text{W} \times 4.5''\text{H} \times 8.6''\text{D}$ ($29.9 \times 11.43 \times 21.8\text{cm}$). Shipping weight 10 lb (4.5kg)

Applications

- General reagent heating
- Evaporation – Sample drying
- Heating TLC plates
- Digestions

► SUPER-NUOVA™ Digital Multi Position

Multi-Position Stirrer and Stirring Hot Plates

Top of the Line Features

- Four in One Performance – all of the features of the Super-Nuova with 4-position stirring ability
- Precision Control – 1 rpm stir control and 1°C temperature control
- Smart Performance – Walk away timer, RS232 output and user calibration function
- Simple operation – A single knob controls both heating and stirring
- Built-in Safety Features – Hot top warning system and user defined over temperature protection
- 24 Month Warranty

PRODUCT DESCRIPTION & OPERATION

- Suoer-Nuova Multi Position stirring hot plates combine the features of the Super Nuova with four individually controlled string positions; making it the only one of its kind on the market
- Stir Trac™ breaking feature brings stir bar to an immediate stop for quick flask removal and prevents 'runaway' or decoupled stir bars.
- Operation is simple, with a single knob controlling both heating and stirring
- Store up to three programs and recall at the touch of a button using the preset buttons.
- Dual LED's display both temperature and stir speed simultaneously
- Adjust temperature in increments of 1° up to 370°C (698°F); 0.1°C for temperatures below 100°C with remote temperature probe.

- Stirring adjustable in unit of 1 rpm
- 'Hot Top' warning system alerts users when the hotplate is over 50°C even if the power is off.
- Walk away timer shut off heating, stirring, or both after 1, 2, 4, 8 or 12 hours

► Explosion Proof Hot Plate Stirrers – Model SF87325

Explosion proof Hot plate Stirrers meets these requirements:

- UL Listed for Class I, Group C, and D hazardous atmospheres
- Safe in hazardous situations where Class I, Group C and D flammable gases or solvent vapors can produce explosive or ignitable mixtures.
- UL listed explosion proof; meet IEC1010 laboratory standard.
- Thermostatic control
- Over-temperature safety control

PRODUCT HIGHLIGHTS

- Stir solutions with a viscosity of 1200 cps @400 rpm @21.5°C
- Large, aluminum top plate surface 9.1" x 9.1" (23.2 cm x 23.2 cm) provides efficient heat transfer and excellent temperature uniformity. (Uniformity of top plate @ 70°C (158°F) is ±2°C (±4°F))
- Electronic temperature control. Temperature range from 38°C to 220C (100°F to 428°F)
- Precise electronic heat control maintains temperature stability within ±2°C (±4°F)
- Automatic over temperature safety switch cuts power to unit if top plate temperature exceed 280°C
- Sturdy construction allows maximum load capacity on top of the plate (25 lb or 11.3 kg)

- Stainless steel case is easily cleaned and maintained
- Designed for sparkless, hardwired connection. Unit has 45.7 cm lead wire and conduit attachment
- Optional dial thermometer, with 0°C to 300°C range, fits directly into top plate and measures surface temperature
- Meets all CE, UL and CUL

APPLICATION

- Heat and stir flammable chemicals or solvents (Class I, group C & D)
- Heat-treat and uniformly mix coatings
- Silicon wafer etching
- Quality control – test viscosity of oil and water/organic content analysis

➤ Analog and Digital Modular Blocks – Dri-Baths

Choose from Analog and Digital!

- Compact design saves bench space.
- Powder-coated steel body construction ensures durability.
- Digital units utilize a PID microprocessor controller with digital temperature set and easy-to-read LED display for accurate and reproducible temperature control.

ANALOG UNITS

- Temperature control at 37°C: ±3.0°C
- Temperature uniformity at 37°C: ±0.5°C
- Dual temperature control for precise control over the two ranges: from slightly above ambient to 60°C and from 50°C to 130°C
- Read thermometer and adjust knob controller to your desired point.

- Analog units feature a bimetallic dual thermostat control as an economical alternative.
- Dri-baths hold one to six interchangeable modular blocks to accommodate a variety of vessels. Modular block sold separately.
- Temperature range: Ambient +5°C to 130°C.

DIGITAL UNITS

- Temperature control at 37°C: ±0.1 to 0.2°C
- Temperature uniformity at 37°C: ±0.1 to 0.4°C
- Set point is easily adjusted by using up and down arrow keys located on the front of the unit
- Modular block mounts on a single temperature probe in the bottom of the dri-bath providing better temperature accuracy and control.

¹CSA, ²UL, ³CUL, ⁴CE - All Models include heavy duty 3-wire line cord and block puller.

➤ Modular Block Accessories

Close contact of tubes to block walls, provides excellent heat transfer.

- Block includes thermometer well for monitoring block temperatures.
- Solid black anodized aluminum blocks for better heat retention.
- Block Puller included with all models.
- For use with all our brand modular dri-baths.
- Single block size: 3.75" W x 2" H x 2.9" D (9.5 x 5.1 x 7.4 cm).

Modular Blocks for Dri-Bath

■ Anodized coating resists the harshest environments

■ Versatile

Solid anodized aluminum blocks provide maximum heat retention. All blocks include thermometer well for easily measuring block temperature.

Fit all our Modular Block Dri-Baths. All blocks are same sizes. Blocks measure: 3" (7.6cm) W x 2" (5cm) H x 4" (10.1cm) D.

Digital Dry Bath

Thermally control samples during use.

■ Versatile - Utilizes all CoolSafe system chambers

■ Stable Operation - Temperatures can be controlled from 5° above ambient to 100°C in 1° increments.

■ Uniform Heat Transfer - Aluminum block evenly transfer heat to tubes.

■ Easy Removal - each unit comes with a block lifter to safely remove hot chambers.

■ Small Footprint - 7.625"W x 6.375"D x 4.125"

Note: To use microplates with the 61951-10, 61951-50, and 61951-80, you will need a lifting chamber. This chamber is included with the 67119-20, -30, -40.

Cat. #	Desc.	Qty.
67119-10	Digital Dry Bath	each
67119-20	Digital Dry Bath w/CHAM-1000 and lifter	each
67119-30	Digital Dry Bath w/CHAM-3840 and lifter	each
67119-40	Digital Dry Bath w/CHAM-9600 and lifter	each

► CoolSafe Cooling Chambers

Each Cooling Chamber is a solid aluminum block that surrounds inserted tubes to guarantee sustained hot or cold temperatures.

Cat. #	Dimensions	Ideal Use
61951-10	6 7/8"(L) x 3 1/8"(W) x 1"(H)	0.2ml tubes
61951-20	6 7/8"(L) x 3 1/8"(W) x 1 1/4"(H)	0.5ml tubes
61951-30	6 7/8"(L) x 3 1/8"(W) x 1 1/2"(H)	1.5ml tubes
61951-40	6 7/8"(L) x 3 1/8"(W) x 1 1/2"(H)	1.5ml Cryogenic tubes

61951-70	6 7/8"(L) x 3 1/8"(W) x 1 1/2"(H)	multi-tube format
61951-80	6 7/8"(L) x 3 1/8"(W) x 1"(H)	Microplate Chamber

➤ **Metric Polygon Assortment Box**

Polygon stirring bars: PTFE. It consists of 2 each:

10mmx6mm, 15mmx6mm, 20mmx7mm, 25mmx8mm, 30mmx8mm, 40mmx8mm, 50mmx8mm, 60mmx8mm, 80mmx10mm.

64510-18 18 Polygon Spin Bar Assortment Box 18/bx

➤ **Color Coded Octagon Assortment Box**

24 color coded octagon magnetic stirring bars: PTFE with pivot ring. Consists of 1 each: Yellow, Red And Blue: 1/2"x1/8", 5/8"x5/16", 7/8"x5/16", 1/2"x5/16", 1"x5/16", 1 1/2"x5/16", 2"x5/16", 3"x1/2".

64510-24 24 Color Coded Spin Bar Assortment Box 24/bx

➤ **Egg-Shaped Assortment Box**

These egg-shaped magnetic stirring bars provide its own pivot point. Designed especially for use in round-bottom vessels.

13 Egg-shaped spin bars, PTFE. Consists 1 each: 3"x3/4", 2 each: 3/4"x3/8", 1"x1/2", 1 1/4"x5/8", 1 1/2"x5/8", 1 5/8"x3/4", 2"x3/4".

64510-13 13 Egg-Shaped Spin Bar Assortment Box 13/bx

➤ **SpinPlus™ Assortment Box**

Add speed and efficiency to your mixing. The "+" shape creates a deep vortex and provides stability to your mixing. 5 SpinPlus magnetic stirring bars, PTFE. Consists of 1 each: 5/8"x3/8", 3/4"x3/4", 1"x1", 1 1/4"x1 1/4", 1 1/2"x1 1/2".

64510-05 5 SpinPlus Spin Bar Assortment Box 5/bx

➤ **Stirring Rods**

Available in two versions: pure PTFE solid rod with tapered end and pure PTFE with bendable steel core. The version with steel core can be bent into a permanent shape. Rods are inert and will not scratch, use up to 280°C.

EMS #	Rod Length	Rod OD, mm	Qty
PTFE with Steel Core Rods			
66200-10	100 mm (4")	6	each
66200-15	150 mm (6")	6	each

66200-25	250 mm (10")	6	each
66200-30	300 mm (12")	6	each
66200-35	350 mm (14")	6	each
66200-40	400 mm (16")	6	each
Solid PTFE Rods			
66201-10	100 mm (4")	8	each
66201-15	150 mm (6")	8	each
66201-20	200 mm (8")	8	each
66201-25	250 mm (10")	8	each
66201-30	300 mm (12")	8	each

➤ **Colored Micro Assortment Box**

12 Micro Spin Bar magnetic stirring bars in assorted colors; PTFE. Consists of 1 each of every color and size: red, yellow and blue: 8mmx1.5mm, 5mmx2mm, 7mmx2mm, 10mmx3mm.

64510-12 12 Colored Micro Spin Bar Assortment Box 12/bx

➤ **KOMET™ Spinbar® - Stirring Bar**

Improved Efficiency

The PTFE Komet™ Spinbar® Magnetic Stirring Bar is made from a high-energetic magnetic material. That, combined with its octagonal shape, produce exceptional power although its length is only 50mm (1.969" with a 21mm (.827") diameter. The Samarium-Cobalt magnet is encapsulated in PTFE. Its eight edges generate strong turbulence so liquids are thoroughly mixed and its stability is not impaired in vessels with curved bottoms. In addition, the risk of demagnetization caused by external magnetic fields is completely eliminated. Komet™ transmits torque loads 2 to 3 times larger than those of conventional stirring bars of this length significantly improving efficiency.

64517-01 Komet™ Spinbar® each

➤ **Disposable Magnetic Stirring and Mixing Bars**

These bars are designed for single use applications where efficiency and cross contamination is a concern. These economical bars have a PTFE coating which is chemically inert for high purity contact. The magnet is an Alnico V. Packaged 100 pieces/bag.

Cat.#	Size	Pack
64521-01	25.4 x 8 mm (1 x 5/16")	100/pk.
64521-02	50.8 x 8 mm (2 x 5/16")	100/pk.
64521-12	12.7 x 3.2 mm (1/2" x 1/8")	100/pk.
64521-16	41.3 x 8 mm (1 5/8" x 5/16")	100/pk.

➤ **Micro Stirring Bars**

Coated with PTFE white resin. For stirring test tubes, micro-beakers, etc... Packed 12 bars per box.

Cat.#	Measures	Pack
64515-01	1/8x3/16 inches; 1.5x15mm	12/bx
64515-04	1/8x3/16 inches; 1.5x8mm	12/bx
64515-06	3/8x1/4 inches; 2x7mm	12/bx
64515-08	1/2x3/8 inches; 3x10mm	12/bx
64515-12	3/8x1/2 inches; 3x12.7mm	12/bx

► Magnetic Stirring Bars

► Octagon Assortment Box with Micro Spinbars®

Box contains 16 assorted bars; It consists of 12 octagon magnetic stirring bars, PTFE with pivot ring and 4 fleas. 2 each: 7mmx2mm, 10mmx3mm, 1/2"x3/8", 5/8"x3/8", 1"x3/8", 1 1/2"x3/8", 2"x3/8", 2 1/2"x3/8"

64510-16 16 Spin Bar Assortment Box 16/bx

► Round Assortment Box

22 round magnetic stirring bars.

PTFE with removable pivot ring on 1" long and over. The box consists of 2 each: 1/2"x3/8", 1"x3/8", 2"x3/8", 1/2"x5/16", 3/4"x5/16", 1"x3/8", 1 1/2"x5/16", 1 3/4"x5/16", 2"x5/16" and 1 each: 1 1/4"x5/16", 1 1/4"x3/8", 1 1/2"x3/8", 1 3/4"x3/8".

64510-22 22 Spin Bar Assortment, Round 22/bx

► Stirring Bar Retrievers

Polypropylene Stirring Bar Retrievers: are ideal for use with all stirring bars. The entire retriever is totally encased in chemically resistant polypropylene. Handy ring allows for hanging when not in use.

PTFE Stirring Bars Retrievers: a permanent powerful magnet which is encapsulated in PTFE and it is supplied with a flexible PTFE rod.

Cat#	Description	Pack
64208-12	Polypropylene Retriever, 12" (304mm) long	each
64208-18	Polypropylene Retriever, 18" (456mm) long	each
64208-13	PTFE Retriever, 13" (330mm) long	each

► Mini-Mixer

Perfect for mixing in test tubes, micro centrifuge tubes and other containers which are too narrow for conventional mixers. The stirring rod will also flare out for use in larger spaces. It comes with a clear vinyl carrying case, 4 1/2"x1/4" stirring rod, and two "AA" batteries. Dimensions (including rod): 8"x1 1/2"x1". Weight: 3 oz.

71849-10	Mini-Mixer	each
71849-11	Mini-Mixer Stirring Rods	10/pk

Micropunch See Specimen Prep. page 305-307 <<<<

► Microwave Stirrer

Heat and Magnetically Stir Simultaneously Inside a Microwave Oven

- Simultaneous heating and stirring – for more consistent mixing and dissolving.
- Speedy processing of frozen materials – for greater efficiency.
- Purification of chemical compounds—by preparing super-saturated solutions for re-crystallization.

The Microwave Stirrer magnetically stirs inside a microwave oven by using the oven's turntable drive spindle as the power source. Many two step-processes can now be combined for increased efficiency and productivity. Use this Microwave Stirrer with virtually any microwave oven containing a rotary turntable.

Overall measurements: 10 1/2" x 10 1/2" x 2 1/2" (276 mm x 257 mm x 67 mm)

Cat.#	Description	Pack
72081-01	Microwave Stirrer	each

► Tissue Rotator

This variable speed rotator provides a slow rotation which helps in the agitation of biological specimens during tissue preparation. It is very useful during procedures such as fixation, dehydration and infiltration, etc. The rotational head comes complete with adjustable tilt. The standard rotation disc (Cat. No. 71780-50) provided with the unit carries:

- Twelve 30mm OD vials in its outer ring
- Ten disposable cups, fit in the inner ring,

Measurement (with disc in place): 11 1/2" (30cm) width, 9" (23cm) height. Disc diameter is 10" (25.4cm).

71780-10	Tissue Rotator, 110V, 0-6RPM	each
71780-20	Tissue Rotator, 220V, 0-6RPM	each

► Tissue Rotator Disc

In addition to the disc (Cat. #71780-50) that comes with the Tissue Rotator above, we offer another disc with 24 outer holes for 13mm diameter test tubes, and 10 inner holes for 28.6mm diameter cups.

71780-52	Test Tube and Cup Disc	each
-----------------	------------------------	------

► **Mini Rotator**

The mini-rotator is a small, compact, rotator which is ideal for use on a lab bench; in a small incubator or refrigerator; in a biological cabinet; or in a fume hood or any other place where space is at a premium. It handles both large and small applications for micro centrifuge tubes and micro test tubes.

It is heavy duty and has a permanent-magnet motor which maintains constant speed with a variable speed control between 2-80rpm and its mixing action is able to be adjusted from a gentle slosh to a rapid agitation. For optimum mixing, the chemical resistant cabinet is fixed at a 20 degree angle. Unit comes complete with an aluminum disk head with spring clips to hold 15 each for both 5-10mm and 12-14mm tubes. An option of 30 position tissue culture tube head is available.

Specifications:

Speed:Variable speed control(2-80 rpm)
 Ambient Temp.Range:0°C to 40°C
 Size:7"Wx10"Dx11"H (18x25.5x28cm)
 Rating:180VA, 50/60Hz
 Electrical:Speed Control with ON/OFF Switch and protected-fuse, 6 ft, 3-wire cord.
 Finish:.....Foxtip gray and charcoal

65100-10	Mini-Rotator, 120V	each
65100-20	Mini-Rotator, 220V	each
65100-50	Tissue Culture Head with Clips	each

► **Spinbar® Circulas™ (Dumbbell-shaped)**

This magnet stirring bars provide strong turbulence at relatively low speeds, offer reduces surface contact and have excellent centering characteristics, particularly in vessels with convex bottoms. Ideal for all "problem" liquids, highly viscous mixtures, metals particles in fluid. All sizes have solid PTFE end disks 20 mm

(.79") in diameter, and bar diameter is 8 mm (.315")

EMS #	Description	Qty
64511-W	Circulus™ 32mm (1¼") long, White	each
64511-R	Circulus™ 32mm (1¼") long, Red	each
64511-Y	Circulus™ 32mm (1¼") long, Yellow	each
64511-B	Circulus™ 32mm (1¼") long, Blue	each
64512-W	Circulus® 52mm (2") long, White	each
64512-R	Circulus® 52mm (2") long, Red	each
64512-Y	Circulus® 52mm (2") long, Yellow	each
64512-B	Circulus® 52mm (2") long, Blue	each

► **Spinbar® Magnetic Sink Strainer**

Just drop in place – prevent Spinbar® from going down the sink

- Durable and flexible material
- Four strong magnets included: capture Magnetic Stirring Bars before they go down to the sink drain.
- Long slits: fluids drain easily and rapidly
- Wide skirt: can be used with a variety of sink drain
- Four legs located on the underside: anchors the strainer firmly in the sink drain.
- One size fits most laboratory sinks.

EMS #	Description	Qty
64525-B	Spinbar Magnetic Sink Strainer, Blue	each
64525-G	Spinbar Magnetic Sink Strainer, Green	each

► **SpinBar® Restrainer**

Hold on to SpinBar to the beaker while decant the content

- Conveniently capture magnetic stirring bars in containers, without contaminating solution being stirred.
- Eliminate hazard caused with stir bar splashes when decanting mixing vessels
- Made with easy-to-clean durable polystyrene

The Spinbar Restrainer fits in one hand and when placed alongside the outer wall of a mixing vessel, it readily attracts and holds stirring bar in place. As vessel is drained, the stirring bar is securely retrieved from vacant vessel. The Spinbar Restrainer is molded of easy to clean high impact polystyrene. It contains a powerful magnet that attracts and holds magnetic stirring bars up to 80mm (3") long.

EMS #	Description	Qty
64526	Spinbar® Restrainer	each

► **Wood Stirring Rods**

Smooth 8" long hardwood. One end flat for mashing, one end sharply pointed for pinpoint stirring.

Cat. #	Description	Qty
66205-10	Wood Stirring Rods	100/pk

► **Glass Stirring Rods & Policeman**

Useful tool for all laboratories needs to stir / mix substances. Glass rods are 5mm diameter, and come in three lengths. 12 rod / box.

Policeman is rubber cover to fit 5mm rods above. The sealed end is cut at an angle to help stir at the bottom of container. 12 policeman / box.

Cat. #	Description	Qty
66206-20	Glass Rods, 200 mm Long	12/pk
66206-25	Glass Rods, 250 mm Long	12/pk
66206-30	Glass Rods, 300 mm Long	12/pk
66207-12	Rubber Policeman	12/pk

► Vortex Genie™ 2 and Vortex Genie™ 2T

Versatile Vortex-Genie 2 mixes or shakes fluids in any type container with speed and precision Vortex-Genie has long been the standard for laboratory mixing. However, now with the development of numerous new mixing heads, the range of applications for the Vortex-Genie 2 has been greatly broadened so its use is limited only by your imagination. The Vortex Genie 2 is The Lab Standard that we have all come to know, and the Vortex Genie 2T is new with an Integral Timer.

FEATURES FOR 2 AND 2T:

- **Shaking or Vortexing Action.** Variable speed control allows slow speed shak action up to high speed vortexing. In addition, each attachment is designec produce different mixing actions, allowing you to choose the correct action your application.
- **Multi-Task Versatility.** A broad range of attachments of various shapes, sizes, and materials allows for the mixing of almost all common tubes or container for hands-free or touch operation.
- **Hand-Free or Touch.** A 3-position power switch lets you select continuous action or "Touch On" control. With the true "Hands-Free" operation of continuous action, lab operators can greatly increase lab efficiency.
- **Stable Platform.** Tough metal housing combined with "just enough weight", provides a stable platform for all types of mixing.
- **Unmatched Reliability.** Many years of proven performance in laboratories all over the world.

ADDITIONAL FEATURES FOR 2T

- **Timer Function.** Both Touch and Hands-Free mode automatically turns the unit off after set time. Touch Mode: 1-60 seconds. Hands-Free (Switch activated Start/Stop) Mode: 1-60 minutes, or continuous un-timed mode.
- **Convenient.** No need to watch the clock. Unit automatically stops at set time – in Touch Mode or Hands-Free (switch activated Start/Stop) Mode.
- **Reproducibility.** Vortexing time is constant, no matter the day or operator. Accuracy $\pm 5\%$. Repeatability $\pm 1\%$.

71841-T	Vortex-Genie 2T, 230V, 50Hz, 0.5Amp	each

► **Roto-Shake Genie® - 6-in-1**

Rotator/Rocker - The one that does it all!

- **Magnetic Platform & Clip Plates**
- **Suitable for Use in Cold Rooms & Incubators**
- **Change between Rocking & Rotating Quickly & Easily.**
- **Economical, Space Saving & Secure**

Combination platform/tilt, shaker, rocker, and specialized rotator mixes tubes in 6 different ways: rotating, rocking/shaking, rotating/rocking, rolling/rocking and rotating/rolling, as well as a combination of all these mixing actions. An optional 3-D Orbital Shaker attachment transforms the unit into an orbital shaker. Easy to remove, two-sided 8" x 13.5" (20.3cm x 34.3cm) stainless steel magnetic platform easily converts from rotating to rocking with a simple mechanical adjustment. The platform is magnetized to accommodate up to two 6" x 6" (15.3 x 15.3cm) plastic bags per side, a 12" x 12" (30.5 x 30.3cm) non-skid metal rocker tray for conventional rocker/shaker operations, or up to four metal clip plates per side to accommodate similar or different tube sizes for various mixing solutions. Ideal for use in cold rooms and incubators for complete and even soaking of membrane-based blot assays/washings. Unit can be easily cleaned or decontaminated. Maintains the set speed between 32°F (0°C) and 100°F (38°C). Expansion kits are available for increased capacity, and different containers.

Specification:

Rotating:.....5 – 35 RPM
 Rocking:.....10 – 70 cycles per minutes
 Rocking Angle:±10 degree from the horizontal
 Platform Workload:10 lb (4.5kg)
 Weight:26lb. (11.8kg)
 Electrical:120VAC, 60Hz, 0.5A
 Requirements:230VAC, 50/60Hz, 0.25A
 Dimensions:10.5" x 20.0" x 9.9" (26.7x50.8x25.2cm)
(12" D with non-skid metal rocker tray installed)
 Environmental:Installation Category 2" 32°F (38°C)
95% maximum relative humidity.

2-Year Warranty!

Ordering:

- **The Roto-Shaker Genie is supplied with:**
- **1 non-skid metal rocker tray, measuring 12" x 12" (30.5x30.5cm)**
- **4 magnetic stainless steel mounting strips for holding 2 plastic bags, measuring up to 6 x 6" (15.3 x 15.3cm)**
- **1 clip plate for 12 each of 10-13mm tubes**
- **1 clip plate for 6 each of 15 – 17mm tubes**
- **1 clip plate for 3each of 28-30mm tubes**

Cat #	Description	Pack
71834-10	Roto-Shake Genie®, 120VAC	each
71834-20	Roto-Shake Genie®, 220VAC	each

► **Accessories for Roto-Shaker Genie®**

Cat.#	Description	Pack
71834-50	6 Clip Plates for 12 each of 10-13mm tubes	each
71834-51	6 Clip Plates for 6 each of 15-17mm tubes	each
71834-52	6 Clip Plates for 3 each of 28-30mm tubes	each
71834-53	1 Clip Plates for 12 each of 10-13mm tubes	each
71834-54	1 Clip Plates for 6 each of 15-17mm tubes	each
71834-55	1 Clip Plates for 3 each of 28-30mm tubes	each
71834-56	Magnetic Mounting Strip for Bag, 16/bag	each
71834-57	Expansion Kit, two stainless steel trays & 24 magnetic mounting bag strips	each
71834-60	2 Clip Plates for Hybridization Tubes	each
71834-64	2 Universal Clip Plates	each
71834-65	1 Magnetic Attachable Covered 100 Microtube Box	each
71834-66	1 Clip Plate for 4 100ml Volumetric Flasks	each
71834-67	3-D Orbital Shaker Attachment	each
71834-68	Non Skid tray	each

► Disruptor Genie™

Cell Disruptors and Media

- Rapid hands-free disruption of up to 12 microtubes (1.5 ml or 2.0 ml) at one time
- Unique agitation, vortexing, and collision actions for cell disruption and sample resuspension
- Maintain operating speed for up to 15 minutes or continuous operation, even in cold rooms
- Supplied pop-up cup easily attaches for use as a standard single-tube vortex mixer
- Ideal for glass bead procedures using Disruptor Beads
- Less costly than ultrasonic units or homogenizers

Disruptor Beads

- Spherical lead-free soda lime glass beads are available in two sizes
- Can be used for disruption of yeast, bacteria, and other samples
- Used in combination with Disruptor Genie or TurboMix™ attachments for Vortex-Genie™ 2, Vortec-Genie™ 2T or Digital Vortex-Genie™ 2

Specifications

Disruptor Beads

0.1 mm diameter beads for bacteria	375g (8 fl. oz.)
0.5 mm diameter beads for yeast	375g (8 fl. oz.)

► Vortex Genie® 2 Digital

Digital Control and Display

Shaking or Vortexing Action. Variable speed control allows slow speed shaking action up to high-speed vortexing. In addition, each attachment is designed to produce different mixing actions, allowing users to choose the correct action for each application.

Multi-Task Versatility. A broad range of attachments of various shapes, sizes, and materials allows for mixing of almost all common tubes or containers for Hands-Free or Touch operation.

Digital speed control and display. Provides accuracy, reproducibility and repeatability.

Timer Function. Touch on for 1-99 seconds. Hands-Free for 1-99 minutes or continuous.

Does not walk. Tough metal housing combined with "just enough weight", provides a stable platform for all types of mixing.

Unmatched Reliability. Many years of proven performance in laboratories all over the world.

Additional accessories for the Vortex Genie® 2 Digital available.

Specifications

Supplied with:	3 inch Platform, Pop-Off Cup
Speed	500-3000 (2850 for 50Hz models)
Timer	1-99 seconds, 1-99 minutes or continuous
Weight	4 Kg (8.8 lb)
Dimensions (base).....	165 x 122 x 165mm (D x W x H)(6.5 x 4.8 x 6.5in)
Warranty.....	2-year manufacturer warranty

71842-55	3-inch Platform w/o Rubber Cover	each
71842-56	Assorted Foam Inserts (4)	kit
71842-57	Rubber Cover for 3-inch Platform	each
71842-58	Two-Tier Microplate Foam Insert	each
71842-59	TurboMix Attachment, 2.0ml Tubes	each

Note that items marked with an asterisk (*) are included with Vortex-Genie 2 and Vortex-Genie 2T.

➤ Microplate Genie® – Microplate Mixer

High Speed Action For Increased Mixing Efficiency In Every Well!

- Aggressive mixing speed from 750-3200 RPM for complete and uniform mixing in any microplate format.
- May be used to shake any single microplate.
- Multi capacity microplate mixer is also available (Multi-MicroPlate Genie).
- Small vortexing orbit of 1.0mm for thorough mixing regardless of sample viscosity.
- Speed and orbit combine to offer true vortexing action in each well of a microplate.
- Accepts most microplate types within the recommendations of the Society for Biomolecular Screening (SBS), even in 384-well formats.
- Built-in timer operates from 1 - 60 minutes or continuous for hands-free use.
- May be used in cold rooms and incubators for temperature sensitive applications.

Heat will not be transferred to your microplates. The fan (located in the bottom of the unit) directs air downward and out of the unit. As a result, room air is constantly drawn into the unit underneath the tray that holds the microplates, insuring that samples will not be heated.

Specifications

Speed	750 - 3200 RPM (750 - 2700 RPM for 50Hz models)
Time	1 - 60 minutes or continuous
Vortexing Orbit	1.0mm diameter
Maximum Capacity	1 microplate, any type with standard SBS footprint
Dimensions (D x W x H)	150 x 180 x 165mm (5.75 x 7.0 x 6.5in)
Weight	2.75kg (6.1lb)

Ordering:

61040-12	MicroPlate Genie, 120V, 60Hz	each

61040-AU	MicroPlate Genie, 230V, 50Hz, Australian Plug	each
61040-10	MicroPlate Genie, 100V, 50/60Hz	each

Additional accessories for the Microplate Genie® available.

➤ Multi-Microplate Genie® – Microplate Mixer

High Speed Action For Increased Mixing In Up To 8 Microplates!

Heat will not be transferred to your microplates. The fan (located in the bottom of the unit) directs air downward and out of the unit. As a result, room air is constantly drawn into the unit underneath the tray that holds the microplates, insuring that samples will not be heated.

- Aggressive mixing speed from 750-3200 RPM for complete and uniform mixing in any microplate format.
- May be used to shake up to 4 microplates, an optional accessory tray is available to double capacity and shake up to 8 microplates at one time.
- Single capacity microplate mixer is also available (MicroPlate Genie)
- Small vortexing orbit of 1.0mm for thorough mixing regardless of sample viscosity.
- Speed and orbit combine to offer true vortexing action in each well of a microplate.
- Accepts most microplate types within the recommendations of the Society for Biomolecular Screening (SBS), even in 384-well formats.
- Built-in timer operates from 1 - 60 minutes or continuous for hands-free use.
- May be used in cold rooms and incubators for temperature sensitive applications.

► Multi Vortex Genie® – Large Capacity Multi Vessel Vortex Mixer

Vortex Anything and Everything that only a Vortex-Genie can - Only More!

- Same true vortexing as with the original Vortex-Genie® 2.
- Holds multiple test tubes, vials, or cylinders of various sizes (racks included) or up to six 250mL vessels, (more for smaller vessels) or a combination of tubes and vessels such as Erlenmeyer flasks.
- Designed and built "Genie"™ strong, rugged and reliable.
- Digital control and display of speed and time for reproducibility and accuracy, with true speed display.
- Gentle ramp up to speed, so open containers will not spill.
- Use for gentle, orbital-style shaking or more vigorous vortexing.
- Durable and heavy zinc die casting with specially designed feet prevents "walking".
- No additional holders or accessories necessary. Racks are included.
- May be used in cold rooms or incubators.

Specifications

Supplied with	Two 12-Pack Multi-Tube Racks holding up to 24 tubes of any material up to 29mm dia., or up to six 250mL vessels.
Speed	250 - 1000RPM (up to 950RPM for 50Hz models)
Vortex Orbiting	4mm dia. (same as Vortex-Genie 2)
Timer	1-99 minutes or continuous
Dimensions (D x W x H)	310 x 270 x 195mm (12.2 x 10.6 x 7.7in)
Weight	11.3 kgs (25 lbs)
Warranty	2-year manufacturer warranty

➤ **QuadMag Genie®** — Magnetic Stirrer

The powerful multi-position QuadMag Genie provides vigorous stirring for up to 4 vessels simultaneously.

General purpose magnetic stirrer designed for general laboratory applications

- Powerful magnet and motor offer exceptional magnetic force capable of stirring up to 2L for each position.
- Powerful “rare earth” magnets automatically pull stir bars into position and stay coupled even under the most demanding stirring conditions.
- Rugged ABS/Polycarbonate housing and the famous Vortex-Genie® heavy-duty motor provide years of reliable service
- Easy-to-use controls allow users to easily change the desired speed.
- Spill-resistant housing channels fluids away from the internal components.
- Can be used in cold rooms and incubators.
- Non-skid feet.

Specifications

Stirring Speed	150-1500 RPM
Maximum Stirring Positions	4
Maximum Stirring Capacity	2 L each position
Stir Bar Maximum Length	5.6 cm (2in)
Material	ABS/Polycarbonate Nonskid Top Pads (4)
Top Surface Dimensions	305 x 305mm (D x W x H).....
Overall Dimensions	12 x 12in
Overall Dimensions	310 x 305 x 130mm (D x W x H).....
Weight	12.25 x 12 x 5.1in
Weight	3 kg (6.6 lb)

➤ **MegaMag Genie®** and **Digital MegaMag Genie®** — Magnetic Stirrers

Large volume magnetic stirrers designed for large capacity applications

The powerful single-position MegaMag Genie and Digital MegaMag Genie provide the optimal stirring for large volume containers. Both analog and digital feedback (true speed) versions are available.

- Powerful magnet and motor offer exceptional magnetic force capable of stirring up to 38L.
- True Speed digital feedback version is available. Analog version features speed dial.
- Feedback control on digital version of the MegaMag Genie is adjustable in 10 RPM increments.
- LED display is offered on digital version for easier speed and time readings.
- Rugged ABS/Polycarbonate housing and the famous Vortex-Genie® heavy-duty motor provide years of reliable service.
- Spill-resistant housing channels fluids away from the internal components.
- Ramping feature slowly increases speed to avoid splashing and improve spin bar control.
- Can Be Used in cold rooms and incubators.
- Non-skid Feet.

Specifications

Stirring Speed	200-1300 RPM
Timer	1-99 min or continuous (digital only)
Maximum Stirring Positions	1
Maximum Stirring Capacity	38 L
Stir Bar Maximum Length	7.6 cm (3in)
Material	ABS/Polycarbonate

► MagStir Genie® – Magnetic Stirrer

The revolutionary single-position MagStir Genie provides low to high speed stirring and editable memory profiles. Microprocessor controls offer precision and reproducibility without internal heat build-up.

- Customize your application with the single-position MagStir Genie.
- MagStir Genie may be used with any regular flask/beaker or spinner flask and a maximum sample weight of 5.0 kg.
- Speed range of 10-1800 RPM including reverse and interval stirring for applications ranging from gentle stirring for cell culture to aggressive mixing for viscous polymers.
- Three power levels are available for various sample viscosities.
- Low-profile magnetic stirrer uses microprocessor control for precise and reproducible operation without heat build-up from internal friction.
- Manual mode provides stir, stir reverse, and time functions.
- Profiles mode allows users to quickly program speed, ramp rate, stir direction, time (including pause), and power level in up to 9 distinct steps. Up to 4 stirring profiles can be saved.
- Automatic mode recalls and executes one of up to 4 user-defined profiles.

Specifications

Speed	10 - 1800 RPM including stir reverse
Time	1 second - 99 hours
Power Levels	Low, Medium, High
Selectable Ramp Rates	5 - 300 rpm/sec
Memory	Up to 4 user-defined profiles
Maximum Capacity	5.0 kg (11 lb)
Dimensions (D x W x H)	200 x 160 x 55mm 7.9 x 6.3 x 2.2in
Weight	1.0 kg (2.2 lb)

72404-AU	MagStir Genie, 230V, 50Hz, Australian Plug	each

► MultiMagStir Genie®

- The revolutionary 4-position MultiMagStir Genie provides low to high speed stirring and editable memory profiles. Microprocessor controls offer precision and reproducibility without internal heat build-up.
- Customize your application with the four-position MultiMagStir Genie!
- MultiMagStir Genie may be used with up to 4 1L flasks/beakers or 3 1L spinner flasks and a maximum sample weight of 10.0 kg.
- Speed range of 10-1200- RPM including reverse and interval stirring for applications ranging from gentle stirring for cell culture to aggressive mixing for viscous polymers.
- Three power levels are available for various sample viscosities.
- Low-profile magnetic stirrer uses microprocessor control for precise and reproducible operation without heat build-up from internal friction.
- Manual mode provides stir, stir reverse, and time functions.
- Profiles mode allows users to quickly program speed, ramp rate, stir direction, time (including pause), and power level in up to 9 distinct steps. Up to 4 stirring programs can be saved.
- Automatic mode recalls and executes one of up to 4 user-defined protocols.

Specifications

Stirring Speed	10-1200 RPM
Time	1 second - 99 hours
Power Levels	Low, Medium, High
Selectable Ramp Rates	5 - 300 rpm/sec
Memory	Up to 4 user-defined profiles
Maximum Capacity	10.0 kg (22 lb)
Weight	3.2 kg (7.0 lb)
Dimensions (DxWxH)	375 x 325 x 48mm 14.8 x 12.8 x 1.9in

► **Enviro-Genie® - 6-in-1**
Bench-top Refrigerated Incubator

■ REFRIGERATOR ■ INCUBATOR ■ ROTATOR ■ ROCKER ■ STIRRER ■ SHAKER

Designed to provide the security of precise temperature control and uniformity for demanding incubation/refrigeration application without taking up a great deal of space. It uses Thermo-Electric (Peltier) refrigeration & heating with no compressor. Chamber air is gently and continuously re-circulated at a rate that ensures the temperature consistency and uniformity of all test samples. Re-circulated air eliminates the possibility of contamination from outside air. Shatter resistant viewing window allows for inspection of samples without effecting the chamber environment.

Applications include the study of microorganisms and tissue cell growth under strictly controlled conditions of temperature and agitation. It performs membrane based assays/washing and hybridizations more efficiently.

Microprocessor controls easily achieve desired rotating, rocking, stirring, shaking, temperature and time; all of which are displayed on large LED's for accurate reproducible results. Timer displays elapsed time or remaining time until programmed off – up to 96 hours. Visible and audible alarms for both temperature and time. Equipped with RS232 port for connection to your computer.

Specifications:

Stirring:.....1 – 2000RPM (includes reverse)
Rotating:.....1 – 35 RPM
Rocking:.....2 – 70 cycles per minute

Temperature

Heating:to 75°C
Cooling:to 4°C
Accuracy:±0.2°C
Uniformity:±1.5°C
Resolution:0.1°C
Stability:±0.1°C
Time, Hours:programmable to 96
Alarms:audible, visible, temp. & time
Platform workload:
Capacity:.....10 lb 4.5kg
Chamber volume:.....0.86 cu. ft (24L)
Weight:80 lb (36kg)
Electrical:120VAC, 60Hz, 5A
Requirements:230/240VAC 50Hz, 2.5A

Dimensions

Chamber DxWxH:10" x 14¼" x 10¼" (254x362x260mm)
Overall DxWxH:19½" x 24½" x 14½" (495x622x368mm)

► **Rotamix™**

The Rotamix units are designed with interchangeable 12" long rotary rods accommodating tubes ranging from 1.5ml to 50 ml, which make the rotary universal. Rotamix is made from steel, coated with a chemically resistant paint and is extremely quiet. Rotamix® is suitable for use both in the cold room and the incubator. The speed is variable from 0 to 80 rpm. On the RKVSD, rotation speed is displayed on a large LCD.

- Immunoprecipitation
- Blood mixing
- Extractions and phase separations
- Bacterial cultures
- Bead mixing and extracting
- Embedding infiltration

The Rotamix 61051-10
Shown with the Rotation Rod 61061-10 (optional)

Specifications:

Rotation speed:0 – 80 rpm
Material:Chemically resistant coated steel case,Stainless steel rods.
Voltage:12V, power transformer supplied
Weight:5 lb
Motor:Variable speed DC motor
Power:6W, 110V, 60Hz
Dimensions:16.25" (L) x 4.75" (D) x 6.12" (H)

All units are analog controlled and come without racks. Racks are sold separately.

Ordering:

Cat. #	Description	Pack
61050-10	Rotamix® RKVS – Analog Control, 0 – 80 rpm, 110V –	each
61051-10	Rotamix® RKVSD – Analog control, 0 – 80 rpm w/digital speed display	each
61060-10	TT-Rack – Platform designed to rotate "flip rack" for 96 – 1.5ml or 96 – 0.5ml tubes	each
61061-10	TT-15 – Rod for 26 – 10 – 15ml tubes (15 – 17mm)	each
61062-10	TT-1.5 – Rod for 26 – 1.5ml tubes (9 – 12mm)	each

61064-10	TT-mix – Rod for 14 - 1.5ml and 10 – 15ml tubes	each

► Vacuum Ovens

The Most Popular, Multipurpose Vacuum Ovens!

- 220 Degrees C (428F) Maximum temperature.
- Two control configurations and display options.
- 0.44 cu. ft (12.5 L), 0.7 cu ft (19.8 L) and 2.3 cu. ft (65 L) chamber volumes.
- 24 Months Warranty.

OPERATION

- Operating temperature range from ambient +5°C to 220°C (428°F)
- Vacuum level displayed on gauge from 0 to 30" Hg (76.2cm)
- Model 3606, 3608 and 3618 Vacuum Ovens feature a hydraulic thermostat to control temperature to $\pm 1.5^\circ\text{C}$ with a uniformity of $\pm 5^\circ\text{C}$ @ 100°C; 25" Hg and built-in oven-temperature protection.
- Model 3618P Vacuum Ovens feature programmable microprocessor-based P.I.D. temperature control that regulates to within $\pm 0.2^\circ\text{C}$ with a uniformity of $\pm 2.4^\circ\text{C}$ @ 100°C; 25" Hg.
- The programmable microprocessor-based temperature control on Model 3618P Vacuum Ovens run at a single set point or utilize a 24-step program of ramps and dwells. These vacuum ovens features independent vacuum and purge needle values.
- Model 3606 and 3606-1 have top-mounted independent evacuation and venting vacuum fittings; all other models features front-mounted three-way valve for evacuation, venting, and purging of inert gases (e.g. nitrogen or argon) with vacuum fitting on front of unit.

PRODUCT DESCRIPTION

- Radiant warm wall heating system provides optional uniformity.
- Conserves chamber space for drying, curing, vacuum embedding, and plating applications.
- Silicone door gasket and a positive latch door maintains the seal for all vacuum levels.
- Exclusive Polycarbonate safety shield protects door glass.
- Two removable aluminum shelves included standard.
- Vacuum fittings require 0.25" (0.6cm) I.D. tubing.
- Easy-to-clean #304 stainless steel chamber interior.
- Powder coated heavy gauge steel exterior construction.

➤ General Purpose – High Quality Incubators

Affordable Prices!

PRODUCT DESCRIPTION

- Gravity convection incubators come with 3-wire cord.
- 5.1 cu. ft. (144L) chamber size.
- Two adjustable, perforated aluminum shelves come standard and are easily removed to facilitate interior chamber cleaning
- Twenty shelf positions per chamber, adjustable on half inch centers
- Corrosion resistant aluminum chamber construction
- Pilot light indicates when unit is operating
- Durable powder coat paint on steel exterior construction
- Red, spirit filled thermometer is safe for handling
- Adjustable hydraulic thermostat reacts quickly to temperature changes in the range of 5°C above ambient to 65°C
- Radiant warm wall heating provides maximum temperature uniformity in chamber.
- Superior heat distribution help eliminate hot spots and provides temperature uniformity of ±1.3°C at 37°C

APPLICATIONS:

- Bacteriological cultures
- Hematology studies
- Chick embryo studies

➤ Oven/Incubator

This Oven/Incubator with an aluminum inner chamber, and venting is up to the task of providing many years of long service in busy labs.

The oven comes complete with a double-pane glass window door which means there is no longer a need to squint to see what is going on inside the oven. The cast aluminum chamber provides for dependable temperature uniformity and the vent efficiently expels moisture and vapors. The unit comes complete with a Removable shelf.

FEATURES:

- A double-pane glass window located in the door permits easy viewing of contents.
- A magnetic latch assures positive door closure.
- An aluminum chamber provides excellent temperature uniformity.
- A thermometer port at the top of the oven accommodates any partial immersion thermometer.
- Heats up rapidly. (56°C in 9 minutes).
- The chamber is vented through the top to allow for the removal of moisture and other vapors.
- The aluminum chamber is easy to clean and it provides excellent temperature uniformity.
- Oven works on the gravity convection heating method.
- The unit comes complete with one removable metal shelf, three-wire cord, and plug.

APPLICATIONS:

- General drying and incubation applications.
- Polymerization of resins.

► Compact Low Cost Incubator *Low Cost Incubator for Clinic or Classroom!*

- Mechanical Convection Technology
- Controller with LED display
- Minimal benchtop for space restricted lab areas
- Temperatures at or below ambient: 17° to 40°C
- High temperature accuracy
- Easy-to-use interface

- Internal light and window facilitate observation
- Footprint: 1.3 sq.ft (.12 sq. m)
- Number of shelves (supplied/max.): 2/3
- Maximum shelf load: 4.4 lb. (2 kg)
- Temperature uniformity of $\pm 1.2^\circ\text{C}$ (at 37°C)
- Temperature stability of $\pm 0.2^\circ\text{C}$ (at 37°C)

Applications:

- Bacteriological cultures
- Hematology studies
- Chick embryo studies

► Isotemp Standard Lab Incubators

Incubators with gravity flow circulation provide accurate, efficient heating for routine laboratory procedures: drying and staining of slides, paraffin embedding, tissue culture work, incubation of antibody tests, microbiological determinations, crystallization studies and more. Electrical receptacle inside (5A at 120V) to plug in a stirrer, shaker or other apparatus. Includes: Small (2.5 cu. ft.) and medium (3.75 cu. ft.) incubators each come with one plated-steel shelf; large (5.0 cu. ft.) incubator comes with two shelves.

Easy to operate:

- Microprocessor control
- Controls are conveniently located at the top of the incubator chamber
- Keypad with arrow keys to increase or decrease set point temperature in 0.1°C increments
- Overtemperature value is automatically set at 3°C above setpoint
- PID controller comes with fixed parameters so no tuning is required
- Circuit breaker protects incubator from power surges; battery backup
- Designed to stack two units

Big three-character LED display

- Digits display actual temperature to nearest 0.1°C
- Display shows current value for set point temperature
- HEAT indicator light cycles on and off to show when incubator heaters are on

- ALARM indicator lights up if temperature exceeds overtemperature limit; backup controller maintains temperature at 3°C above setpoint; safety backup built into software

Small, medium and large workload capacities

- Available in three chamber capacities
- Mounting holes at 2 in. (5cm) intervals on the chamber walls for shelf placement
- Small incubator holds a maximum of five shelves, medium incubator holds eight, and large incubator holds eleven

Low-maintenance incubators with inner and outer doors

- Cabinet has durable, enamel-coated steel exterior
- Extruded aluminum trim has acrylic powder coating

- Chamber is easy-to-clean stainless steel
- Low-watt-density heater elements are designed for long life
- Silicone gasket on outer door and 3 in. thick (7.6cm) fiberglass insulation throughout prevent heat loss
- Outer door opens to 180° for unhindered access and features two grabber-type latches
- Inner door is tempered glass
- Steel shelves are 17.37 in. wide and 16.75 in. front-to-back (44 x 42.5cm)
- Black synthetic rubber feet keep incubator from slipping and maintain a space between incubator and benchtop for ventilation

Operating Specifications

Convection Technology: Dual Convection
Controller: Microprocessor control with vacuum fluorescent display
Temperature range: ambient +5° to 105°C
Temperature uniformity at 37°C: $\pm 0.6^\circ\text{C}^\dagger$
Temperature Stability at 37°C: $\pm 0.1^\circ$
Timer: weekly / real time / hour
Maximum Shelf Load: 44 lbs. (25 kg)
Plug Type: Nema 5-15

[†]Rated average uniformity per ASTM* E 1292 Method. Value assumes fan is off. With fan at full speed, uniformity is $\pm 0.2^\circ\text{C}$ (51028066), $\pm 0.3^\circ\text{C}$ (51028067), and $\pm 0.4^\circ\text{C}$ (51028068).

► Cooling Chambers and Ice Baths

► The CoolSafe™

The World's Most Versatile and Effective Benchtop Cooling and Storage System

Complete CoolSafe Systems

Versatile – Designed for 0.2ml tubes (strips or trays), 96-well and 384-well microplates, 0.5ml, 1.5ml, 5ml tubes

Specially Formulated – Cool Bricks maintain a constant temperature (1°C or -10°C) for up to 10 hours

Quality Engineering – Each aluminum Cool Chamber surrounds tubes to guarantee sustained cold temperatures

Durable – The CoolSafe box is made of triple density expanded polystyrene and molded under extreme pressure creating a durable container that guarantees temperature stability.

Easy to Use – Easily interchange Cool Chambers and Cool Bricks for different sized tubes.

No Mess – Messy ice buckets are now a thing of the past!

"Surround-a-Tube" Engineering

Super temperature-conducting solid metal surrounds the vast majority of the surface area of the microtube, keeping the entire sample or tray of samples cool.

Ordering the Complete CoolSafe Systems

Each complete CoolSafe System includes:

- 1 CoolSafe box with lid
- 1 Cool Chamber
- 2 Cool Bricks (1°C & -10°C)

Cat. #.	Description	Holes	Unit
61950-10	For 0.2ml PCR plates or tubes	96**	kit
61950-20	For 0.5ml tubes	91	kit
61950-30	For 1.5ml tubes	48	kit
61950-40	For 1.5ml Cryogenic tubes	55	kit
61950-50	For 384-well plates	384**	kit
61950-60	For 5ml tubes	32	kit
61950-70	For 0.2ml, 0.5ml, 1.5ml tubes	79	kit
61950-80	For flat-bottom microplates	None**	kit

**These Chambers also include 4 holes for 1.5ml tubes and 6 holes for 0.5ml tubes

► CoolSafe Individual Components

► Cooling Chambers

Each Cooling Chamber is a solid aluminum block that surrounds inserted tubes to guarantee sustained hot or cold temperatures.

Cat. #	Dimensions	Ideal Use
61951-10	6 1/8" (L) x 3 1/8" (W) x 1" (H)	0.2ml tubes
61951-20	6 1/2" (L) x 3 1/8" (W) x 1 1/4" (H)	0.5ml tubes
61951-30	6 1/8" (L) x 3 1/8" (W) x 1 1/2" (H)	1.5ml tubes
61951-40	6 1/8" (L) x 3 1/8" (W) x 1 1/2" (H)	1.5ml Cryogenic tubes
61951-50	6 1/8" (L) x 3 1/8" (W) x 1" (H)	384-well microplates
61951-60	6 1/8" (L) x 3 1/8" (W) x 2 1/2" (H)	5ml tubes
61951-70	6 1/2" (L) x 3 1/8" (W) x 1 1/2" (H)	multi-tube format
61951-80	6 1/8" (L) x 3 1/8" (W) x 1" (H)	Microplate Chamber

► Cool Bricks

Each Cool Brick allows up to 10 hours of benchtop temperature stability. Two temperature zones are available: 1°C and -10°C.

Cat. #.	Ideal Use	Temp	Qty
61952-10	For 5ml tubes	1°C	each
61952-20	For 0.2ml, 0.5ml, 1.5ml & 5ml tubes	-10°C	each
61952-30	For 0.2ml, 0.5ml & 1.5ml tubes	1°C	each

► CoolSafe Box

The CoolSafe Box is made of triple density expanded polystyrene and is molded under extreme pressure to create a durable container that guarantees temperature stability.

► CoolBag

The CoolBag is an insulated cooler for added coolness of critical samples. Use the shoulder strap for easy transporting from lab to lab.

Cat. #.	Description	Qty
61953-01	CoolSafe Box	each

► The CoolSafe™ (continued)

► The CoolSafe™ Deluxe

- Additional sample protection
- Improved portability
- Smaller bench-top footprint
- Clear lid for sample visibility

Each complete CoolSafe Deluxe system includes:

- 1 CoolSafe Deluxe box
- 1 Cool Chamber
- 2 Cool Bricks (1°C & -10°C)

**These Chambers also include 4 holes for 1.5ml tubes and 6 holes for 0.5ml tubes

Cat. #	Description	Holes	Unit
61954-10	For 0.2ml PCR plates or tubes	96**	Kit *
61954-20	For 0.5ml tubes	91	Kit *
61954-40	For flat-bottom microplates		Kit *
61954-55	CoolSafe™ Deluxe box	None**	each

► Stand Alone Specialty Cooling Chambers

Ideal for Ice Pans, Ice Buckets, and Cold or Hot Plates

Multiple Uses – Ideal for use on hot or cold plates or for temperature sensitive liquid transfers

Durable – Anodized aluminum blocks will not rust or corrode

Ideally Sized – A variety of options are available to accommodate PCR tubes and trays, 1.5ml tubes, 15ml and 50ml conical tubes

A variety of Specialty Chambers are available to keep samples cool and on ice while you work. Freeze these Chambers overnight for added cooling convenience.

These Chambers do not fit the CoolSafe system; use separately (*61955-30 not pictured)

► 15ml & 50ml

Chambers

Each Chamber is an anodized aluminum block. Excellent temperature conductors. Use with hot plates or with our Ice Pans & Ice Buckets.

Cat. #	Dimensions	Ideal Use	Holes	Qty
61951-10	6½"(L) x 3½"(W) x 1"(H)	15ml tubes	6	each
61955-21	3½"(L) x 3½"(W) x 3½"(H)	15ml tubes	12	each
61955-40	3½"(L) x 1¾"(W) x 3½"(H)	50ml tubes	2	each
61955-41	3½"(L) x 3½"(W) x 3½"(H)	50ml tubes	4	each

► Double Chamber for 0.2ml tubes

The Double Chamber fits two 96-well PCR trays or individual tubes and strips. Each edge can accommodate up to (12) 0.5ml and (8) 1.5ml tubes. Great for

temperature sensitive liquid transfers. It measures 6¾" x ½" x 1".

Cat. #	Dimensions	Ideal Use	Holes	Qty
61955-10	6¾"(L) x 6¾"(W) x 1"(H)	0.2ml PCR Plates, tubes	192	each

► 64-Place Step Chamber

Description: Anodized aluminum block sized to fit 64 1.5ml microtubes (16 holes per 'step') for easy viewing of samples when in the freezer, on the bench-top or in an ice pan or ice bucket.

Cat. #	Dimensions	Ideal Use	Holes	Qty
61955-30	8¼"(L) x 3"(W) x 2½"(H)	1.5ml tubes	64	each

► 80-Well Chamber

The 80-well Chamber is a solid, anodized aluminum block sized to fit 1.5ml microtubes. An excellent temperature conductor for use with hot plates and ice buckets. It measures 8.25" x 2.625" x 1.25".

Cat. #	Dimensions	Ideal Use	Holes	Qty
61955-80	8¼"(L) x 2¾"(W) x 1¼"(H)	1.5ml tubes	80	each

► EMS Freeze Substitution Kit

Freeze Substitution is a process for low temperature dehydration and fixation of rapidly frozen cells that usually takes days to complete. With the amazing work of K.L. McDonald and R.I. Webb¹ they have now introduced a new method for freeze substitution with a basic kit that we are proud to offer.

With this unique kit researchers are now able to achieve excellent freeze substitution results in as little as 90 minutes for cells of small volume such as bacteria and tissue culture cells. For those cells of greater volume or that have significant diffusion barriers such as cuticles or thick cell walls, one can extend the time to 3 hours simply by putting a lid on the box.

For more information on the EMS Freeze Substitution Kit, see page 692-693

Cat. #.	Description	Qty
34500	EMS Freeze Substitution Kit with Shaker	kit
34500-S	EMS Freeze Substitution Kit without Shaker	kit
34502	EMS 111 Platform Shaker, 115 Volt	each

► Ultraviolet Lamps; UV Lights

► High-Intensity UV Lamp

These UV Lamps are designed to provide a beam of 365nm wave with an average 7000µW/cm² at 15" (38.2cm). Its powerful 100-watt light source fluoresces fine particles and hard to see surface defects. The lifetime of the light bulb is 2,000 hours. At 18" (45.7cm), this lamp produces a highly intense center of UV irradiance about 5" (12.5cm) in diameter. This offers the microscopist a quality tool in staining and polymerization as well as many other uses that are related to UV lights in EM labs. The lamp head rotates a full 3600, and is mounted into a removable pistol grip handle, which inserts firmly into the transformer base (as a stand); it weighs only 21½ lbs. It comes with a 5" (12.5cm) diameter black light filter which is recessed in the head. If more details are needed in order to study the subject, a second filter is available as an option that reduces the visible light. Powered by 115V, 60Hz, total cord length is 15 ft. (4.57m).

72414	Hi-Intensity UV Lamp, 115V	each
72415	Hi-Intensity UV Lamp, 220V	each
72416	Hi-Intensity UV Filter	each
72417	Hi-Intensity UV Bulb	each
72418	Extension Cord (20')	each
72420	UV Safety Spectacles	each

► Low-Intensity UV Lamp

This 6-watt UV lamp meets most laboratory requirements; such as, fluorochemistry, bacterial identification, specimen staining, titration processes, photochemical reactions, aflatoxin detection, and curing UV cements. Constructed from Cyolac® plastic, with a longwave emission of 365nm and an intensity at 6" (15.2cm) of 750µm/cm². The bulb has a rated life of 6,000 hours. It can be used as a hand-held light or it may be mounted on a stand (optional). Powered by 110V/60Hz or 220V/50Hz.

72422 (The UV Lamp Stand is an optional)

72422	Low-Intensity UV Lamp, 110V	each
72423	Low-Intensity UV Lamp, 220V	each
72424	Low-Intensity UV Lamp Stand	each
72425	Replacement Low-Intensity Bulb	each

► Laboratory Jacks – LabJack

This LabJack provides stable height adjustment and support for items in the lab such as flasks, baths or hot plate stirrers. Top and bottom plates are constructed of anodized aluminum while the support mechanism is made of chrome plated steel.

Safety in the Electron Microscopy Laboratory

All of us at Electron Microscopy Sciences are concerned for the safety and well being of the microscopy community. For this reason we highly recommend the following publications regarding safety in the lab:

ELECTRON MICROSCOPY SAFETY HANDBOOK; Vernon C. Barber and Deborah L. Clayton, Editors. San Francisco Press Inc., 1985 ISBN 0-911302-56-5

ELECTRON MICROSCOPY PRINCIPLES AND TECHNIQUES FOR BIOLOGISTS; John J. Bozzala and Lonnie D. Russell. Jones and Bartlett Publishers., 1992 pp. 498-519. ISBN 0-86720-126-6

SAFETY IN THE SCANNING ELECTRON MICROSCOPY LAB; J. Bastacky and T.L. Hayes, Scanning 7:255-72., 1985

► Tissue-Tek® NEUTRA-GUARD™ Aldehyde Control Systems

These products offer a safe, efficient and economical solution for the control of aldehyde wastes and/or spills:

- 4 unique products for fast, safe and efficient aldehyde neutralization
- Eliminates exposure to potentially hazardous conditions
- It is a certified technology for treating formalin waste
- Complies with federal, state, and local ordinances

► Neutralex™

- CAL/EPA certified technology
- Complete aldehyde neutralization in 15 minutes
- No drain-clogging polymer by-products
- Final neutralization levels down to 10 ppm
- No pH adjustment
- Easy to use: Pre-measured pouches are ready to use convenient to store and will not leak or freeze during the winter months.
- Neutralex® Starter Kit consists of: 16 Neutralex® pre-measured pouches, each pouch neutralizes 4 liters (1 gallon) of aldehyde; Aldehyde Test Kit consisting of 100 analytical test strips; 9.5 L (2.5 gallon) Reaction Container

► Neutra Pads™

- Revolutionary grossing pad that absorbs and neutralizes 10% formalin
- Significantly reduces the effects of noxious vapors
- Unique pad design encapsulates formalin and promotes neutralization
- Exclusive plastic pad backing prevents escape of harmful liquids; keep grossing area drier, cleaner and safer
- Neutra-Pads™ come packaged: 10 pads per bag, 10 bags per case, each pad measures 20.3 x 25.4 cm (8" x 10")

► Neutra-Wipes™

- Rapidly absorbs and neutralizes small formalin spills
- Significantly reduces the effects of noxious vapors
- Perfect liner for tissue transporting trays
- Ideal as a shelf liner in tissue storage areas
- Convenient pop-up dispensing container provides fast accessibility to wipes
- Neutra-Wipes™ Starter Pack consists of: 1 dispenser, 1 roll of Neutra-Wipes™ Four-Roll Packs consists of: 4 rolls, 60 wipes per roll; Wipe size: 30.5 cm x 31.8 cm or (12" x 12.5")

► Neutra-Form™

- Fast, effective control agent for accidental aldehyde spills
- Diminishes harmful vapors
- Neutralizes hazardous aldehydes
- Neutra-Form™ Sets consist of: 2 containers; each container neutralizes larger spills of 10% formalin or 2% glutaraldehyde.

Cat.#	Tissue-Tek	Description	Pack

➤ **Formalin Spill Control; F-gard- ER**

For the handling and disposing of formaldehyde containing solutions. It immobilizes, cools, and contains spills. As well, it reduces the escape of formaldehyde gas and significantly reduces formalin concentration. F-gard- ER aids in reducing exposure to formaldehyde gases by immobilizing the formalin and transforming it to an easily removed semi-solid mass. The mass cools rapidly minimizing formaldehyde off-gassing.

24140-01	Formalin Spill Control	11 oz
24140-06	Formalin Spill Control	12x11 oz/cs

➤ **Formaldehyde Spill Response™ Kit**

This kit features FSC-1™ to aid in reducing exposure to formaldehyde gas in the event of a spill. The formalin is transformed into an easily removable semi solid mass. The resulting mass cools rapidly to minimize formaldehyde off gassing.

KIT CONTAINS:

- | | | |
|--|--|------------------------|
| 1 – 11oz bottle of FSC-1™ solidifier (EMS #24140-01) | 1 – Respirator | 4 – Scoop/scrappers |
| 1 – Pair vented goggles | 1 – Open backed gown to protect clothing | 3 – Wiper pads |
| | 1 – Pair nitrile gloves | 4 – Thirty gallon bags |

Cat. #	Description	Qty
24141	Formaldehyde Spill Response Kit in Hard Case	each
24141-R	Formaldehyde Spill Response Kit , Refill	each

➤ **Glutaraldehyde Spill Control; G-gard-ER**

Transforms glutaraldehyde to a nearly neutral solution and renders the solution acceptable for sewer disposal. Prepares glutaraldehyde for biodegradation. Reduces biocidal activity and odor. 65g G-gard pre-treats one gallon of 1% solution.

24142-01	Glutaraldehyde Spill Control	62.4g pouch
24142-10	Glutaraldehyde Spill Control	10 x 62.4g pouches

➤ **Glutaraldehyde Clean-up™ Kit**

The kit contains GPT-1™ pre-treatment and neutralizer, and Green Z™ fluid control solidifier. Sprinkle GPT-1™ onto the glutaraldehyde spill. Once the spill turns brown, it has been neutralized. Then apply the Green Z, which transform the neutralized spill into a semi-solid mass.

KIT CONTAINS:

- | | | |
|---|-------------------------------|---------------------------------|
| 1 – 5oz bottle of Green Z™ | 1 – Pair of high-risk gloves | 2 – Scoop/scraper |
| 1 – 2.2oz pouch of GPT-1™ (EMS #24142-01) | 1 – Goggle | 1 – Disposable bag with closure |
| | 1 – Glutaraldehyde respirator | 1 – Instruction |

Cat.#	Description	Qty
24143	Glutaraldehyde Spill Response Kit in Hard Case	each
24143-R	Glutaraldehyde Spill Response Kit , Refill	each

➤ **Lab-Sorb**

Converts Liquid Waste to Solid Waste for Easy Disposal

Turn this...

...into this

- Convenient - Includes extra durable disposal bags, super absorbent LabSorb granules and a convenient graduated scoop.
- Prevents Spills - Reduces the possibility of accidentally spilling liquid waste in the lab. If spills do occur, use LabSorb for safe liquid containment during cleanup.*
- Quick - Convert liquids to solids in seconds.
- Adaptable - Apply to any volume of liquid waste including 500mL, 600mL, 1L and 2L vessels. One jar of LabSorb can absorb up to 50 litres of liquid.
- Versatile - LabSorb granules can rapidly absorb aqueous or mixed aqueous and organic solvent waste

68552-06	Lab-Sorb Jar	16 oz
68552-07	Kit - Lab-Sorb 16 oz jar plus 25 small bags	each
68552-08	Kit - Lab-Sorb 16 oz jar plus 25 medium bags	each
68552-09	Kit - Lab-Sorb 16 oz jar plus 25 large bags	each
68552-10	Variety kit - Lab-sorb plus 15 small, 10medium, and 5 large bags	each
68552-11	50 small (500 to 600m)l bags	each
68552-12	50 medium (1L) bags	each
68552-13	50 large (2L) bags	each

➤ **RED-Z - Fluid Control Solidifier**

RED-Z will solidify any water base fluid at a ratio of ¾ oz to 1 full liter.

- Solidifies, decontaminates and deodorizers.
- Contains chlorine (NaDCC) an EPA registered disinfectant - almost twice the amount recommended by the CDC.
- An Alternate treatment to steam sterilization or incineration.
- For blood and other body fluids.
- Available in a pointed top bottle that fits easily in porthole containers and in a flip-top shaker top bottle for large spills.

24145-10	Red-Z™ Shaker Top Bottle	11 oz.	each
24145-25	Red-Z™ Shaker Top Bottle	15 oz.	each

► Break-Safe™ Ampoule Opener

EMS Introduces Break-Safe™ allowing you to safely open up to 3 ampoules at one time

Box style design allows one handed opening of up to 3 ampoules at a time. Gently pressing down on the lid snaps ampoule necks clean while keeping them contained within the device and away from fingers. After removing ampoule contents, simply turn the device upside down over a trash receptacle to safely discard ampoules and tops.

Features:

- 4 inserts allow opening of 1ml, 2ml, 5ml and 10 ml ampoules
- Open ampoules easily and safely
- Transparency allows unobstructed viewing of ampoule contents at all times
- Copolyester plastic construction has broad chemical resistance

60607 Break-Safe™ Ampoule Opener each

► Ampoule Breaker; Soft Silicone

EMS EXCLUSIVE Reusable – Made from soft silicone. It offers a simple way to break pre-scored glass ampoules safely. Accommodates 5, 7, and 10 ml size ampoules. Reduces injury and spillage.

60600 Ampoule Breaker; Soft Silicone each

► Ampoule Cracker™

The Ampoule Cracker™ is a disposable plastic fracture and safety collar, which is specially designed to aid in the breaking open of pre-scored glass ampoules. Simply slip the Ampoule Cracker™ over the top at the pre-scored portion, snap it, and discard both the ampoule top and the safety collar to prevent cross contamination.

Cat #	Description	Pack
60605-04	Ampoule Cracker for Ampoule Size 1 – 4 ml	500/pk
60605-10	Ampoule Cracker for Ampoule Size 5 – 10 ml	500/pk
60605-20	Ampoule Cracker for Ampoule Size 10 – 20 ml	500/pk

► Bottle and Jar Opener

THIS UNIQUE OPENER:

- Saves your wrist by making it easy to open bottles and jars
- Open lids up to 4.5" in diameter
- Eliminates the risk of cracking the cap by using the wrong tool

64493-20 Bottle And Jar Openers each

► Hot Hand® Protector Pad

Made from strong silicone and it withstands temperatures as high as 500°F (260°C). A gripping surface with built in multi suction studs for a non-slip grip. Has two pockets for thumb and fingers.

64480 Hot Hand Protector Pad each

► Benchtop Mat

A flexible polyethylene film backing which has a highly absorbent upper surface which traps water, dyes, resins, solvents, and radioactive solutions. The sheets can be rolled up and discarded after use. Ideal for daily use in EM labs. Benchtop mat comes in a roll 20" (50.8cm) wide and 50 ft. (15.2m) long in a dispenser carton, or a cut size of 20" x 24" sheets.

64445 Benchtop Mat 50' roll each
64446 Benchtop Mat Cut Size 20"x24" 100/bx

► Spill Control Tray

The tray is made from vacuum formed polystyrene ½" (12.7cm) deep with an external flange. The overall dimensions are 23"x27" (58x69cm). The tray accommodates our Benchtop mat (Cat. #64446). These trays are very useful in the biology or chemistry labs.

64448 Spill Control Tray each

➤ **TubePopper™**

For One-Handed Opening and Closing of Microtubes

- Improve Efficiency - Ring design allows researcher to wear the
- TubePopper on the pipetting hand while pipetting
- Finger Saving - "Pry open" design means tubes pop right open, saving your fingers from the repetitive stress of opening microtubes
- Snag-Free - Bottom portion of TubePopper allows caps to be pressed closed without snagging glove fingers
- Universal - Works with most flat-top and domed microtubes
- One Size Fits All - TubePopper can be worn on any finger so you can find the perfect pipetting fit

Cat #	Description	Qty
70556-21	TubePopper	each

➤ **Stabilizing Rings**

Vinyl coated lead rings which stabilize glassware that is immersed in water baths; reduces tilting and chemical spills.

Cat.#	Weight gm	I.D. mm	Fits Glassware	Pack
64435	165	20	5-10ml cylinders	each
64436	237	48	125-500ml flasks	each
64437	454	56	250-1000ml flasks	each
64438	681	61	500-2000ml flasks	each
64439	408	74	1000-4000ml flasks	each
64440	Stabilizing Rings, assorted sizes			5/pk

➤ **VIKEM® Vinyl Coated Lead Sheets**

A soft lead sheet coated with Vikem vinyl has many uses for stabilizing laboratory equipment in water baths or any application where extra weight is needed. Small sheets are handy as a hold-down weight for note books, drawings or charts on the table top. Longer sheets may be bent into the shape of the glassware to keep them from sliding or tilting. Coated lead sheets are 0.085" (2.2mm) thick.

Cat.#	Dimensions		Weight		Qty
	in	mm	lb	gm	
64434-01	2x7	51x178	.36	163	each
64434-03	2x12	51x305	.62	281	each

64434-05	8x24	203x610	4.93	2238	each

➤ **VIKEM® Vinyl Coated Lead Wire**

This lead wire is 1/4" (6.4mm) in diameter and is coated with a chemical-resistant red Vikem vinyl. Its 12" (300mm) length and its flexibility make it a very versatile weight. It can be coiled around a flask, beaker, or any other irregular shape. It weighs only 1/4 lb (114g).

64443-00	Vinyl Coated Lead Wire	each
----------	------------------------	------

➤ **Weighted Beaker/Flask Holder**

This weighted holder grips the beaker or flask firmly in four flared stainless steel prongs. The Vikem® vinyl-coated lead ring secured beneath the beaker keeps it immersed in water, providing a low center of gravity which allows water to circulate underneath the beaker.

Cat.#	Fits Beaker Size		Weight		Diameter		Qty
	ml	lb	gm	in	mm		
64441-01	100	.36	165	2.4	60	each	
64441-02	250	5	237	3.2	80	each	

70573 (DermaPlus not included)

► DermaPlus

A greaseless, non-toxic skin protection. It is a sophisticated formulation of lanolin, aloe vera and vitamin E, that can be applied to any area of the skin. It provides two distinct advantages:

- A barrier to aqueous-based materials.
- It contains one of the most effective broad-spectrum antimicrobial agents available.

DermaPlus is able to repel substances with any pH ranging from

0-14 (acids and bases except HF); caustic substances; and organic fluids. DermaPlus provides a barrier against continued aggravation of abused sensitive skin. It prevents the continuation of irritation enabling the skin to heal naturally, even after repeated washings. DermaPlus is not meant to be a glove replacement; however, it does offer added extra protection to the

skin in case of glove failure or leakage. On your hands it works as a "glove under a glove." It is a primary line of defense on the face, neck, and other exposed areas that are difficult, if not impossible to cover. Furthermore, it protects those that are exposed to microorganisms and/or toxic irritants. DermaPlus has been tested and is resistant to most chemicals used in microscopy. Due to its formula make-up once a layer is applied and dries (within 4-5 minutes) it works as an invisible barrier that protects the skin. It is long lasting (4 hours), convenient, comfortable, and safe.

► Silver Bioguard Antimicrobial Wipe

Moisture activated silver particles bind bacteria proteins through an ion exchange with salt.

- Antimicrobial - Prevents the spread of bacteria and fungus.
- Anti-Odor - Alleviates odors caused by mold.
- Effective - Kills 99% of common microbes.
- Versatile - Use on door handles, switch plates, instrument panels or refrigerator or incubator gaskets.

68552-15	Silver BioGuard Roll, 0.75" x 100'	Roll
68552-16	Silver BioGuard Sheets, 2" x 5" 20/Roll	Roll

► Bio-Pure™ Alcohol Wipes

100% biodegradable - Proprietary fabric is formulated to easily break down over time.

- Green - Re-sealable and flexible packaging has a low carbon footprint.
- No Residue - 70% IPA/30% H₂O mixture evaporates completely.
- Lint-Free - Wipes won't scratch surfaces or optics.
- Durable Strong fabric won't fall apart.
- Ideal Use Clean lab surfaces, equipment, optical parts and cuvettes.

68552-14	Bio-Pure Alcohol Wipes	40/pk
----------	------------------------	-------

► Instant Hand Sanitizer (Fresh Scent)

Kill 99.99% of germs in 15 seconds without the use of soap and water. This formula evaporates completely with no rinsing required. Instant Hand Sanitizer contains aloe-vera which adds moisture with each use. Instant Hand Sanitizer is available in convenient pump dispensers, single use pouches and flip-top dispenser bottles. Our Hand Sanitizer helps you meet OSHA, APIC and CDC hand washing recommendations in the absence of soap and water. Instant Hand Sanitizer has demonstrated virucidal activity against HIV-1 and Avian Flu A in 15 seconds.

Wall Mount Bracket for 16 oz Pump Bottle

Wire bend and rubber coated bracket to hold 16 oz Fresh Scent Hand Sanitizer bottle in a convenient location for office or production areas wherever sanitizing hand needed.

70575-01	Hand Sanitizer, Fresh Scent, 0.125oz (3g) Pouch	each

➤ Pipette Tip Disposal Bin (Gamma Protection)

Gamma (g) rays are produced when an unstable isotope such as ¹²⁵I enters into nuclear decay; this form of electromagnetic radiation is attenuated by lead. The gamma rays intensity increases exponentially as the thickness of the lead increases. The recommended thickness of lead for use with ¹²⁵I is 0.5mm. We use 3mm lead for all of our g protection products.

Other isotopes shielded by our products include 32P, 51CR, 35S, 33P, 3H, and 14C. The enclosed boxes are perfect for short-term storage of isotopes and contaminated labware. All our gamma disposal boxes feature a polyethylene liner and sleek black acrylic exterior.

The box measures: 6" (L) x 6" (W) x 10" (H)

64451-01	Pipette Tip Disposal Bin, Gamma Protection	each

64402-50	Non-Ferrous See-Through Cart	each

► **Core DX Lab Cart**

EMS introduces the new Core DX Lab Cart to organize your lab supplies and easily transport documents, glassware, chemicals, pipettes, samples, squeeze bottles, gloves and wipers. The food-grade high density polyethylene construction is rugged enough to withstand years of laboratory use. The Core DX Cart is the ideal lab cart for laboratory workers, doctors, and anyone else who frequently stores and moves supplies from place to place. The EMS Core DX is engineered with toughness in mind. The 60-pound cart is made of sturdy rustproof polyethylene and ABS, with built-in handles in the corners to push and pull with ease. As a result, both tall and short users can comfortably maneuver the cart. The 3-inch, non-marking rubber wheels, meanwhile, roll smoothly on virtually any surface, from concrete to tile to vinyl to carpet to linoleum. Best of all, the cart provides a professional appearance worthy of any situation and can be stored in a small 23 x 17" wide area against the wall. The Core DX's modest profile makes it ideal for using in small or large work areas and is virtually indestructible putting up with all the abuse you can dish out.

FEATURES:

- Made from white, chemically resistant high-density polyethylene (HDPE)
- Durable and versatile design is perfect for all types of laboratories and those needing to organize a variety of supplies
- Three, full-extension drawers give full access to lab supplies
- Locking acrylic door slides up and down to secure drawers or bulk storage
- Carries up to three times its weight of 58 pounds of lab supplies in drawers, shelves, dispensers, holders and bulk storage

- 3-inch, non-marking, rubber casters roll smoothly on most surfaces
- Easy to unpack and assemble wheels and snap on shelves mean it's only minutes before your Core DX is ready for use.

Dimensions:
Width: 23" Height: 35" Depth: 17" Weight: 58 lbs.

► Tilted Safety Shelves

EMS is proud to introduce the New Tilted Safety Shelves in 4 different sizes.

These innovative Tilted Safety Shelves add new options to store and organize supplies for easy access for the demanding environments of laboratories and hospitals with the fear of the supplies rolling or falling off the shelf.

Bench top Tilted Safety Shelves are designed for saving space, secure storage and easy access.

PVC construction looks great for years and does not show scratches

The following features are standard:

- Handcrafted from chemically resistant, easy-to-clean PVC
- Specially designed tilted shelves let you securely and store boxes of supplies or other items within easy reach.
- Holds up to 23 lbs of supplies on each shelf
- Four sizes from which to choose
- Ready-to-use out of the box

► Pipette Tip Disposal Bin (Gamma Protection)

Gamma (g) rays are produced when an unstable isotope such as ¹²⁵I enters into nuclear decay; this form of electromagnetic radiation is attenuated by lead. The gamma rays intensity increases exponentially as the thickness of the lead increases. The recommended thickness of lead for use with ¹²⁵I is 0.5mm. We use 3mm lead for all of our g protection products. Other isotopes shielded by our products include 32P, 51CR, 35S, 33P, 3H, and 14C. The enclosed boxes are perfect for short-term storage of isotopes and contaminated labware. All our gamma disposal boxes feature a polyethylene liner and sleek black acrylic exterior.

The box measures: 6" (L) x 6" (W) x 10" (H)

64451-01	Pipette Tip Disposal Bin, Gamma Protection	each
----------	--	------

Pipettor Workstation

- Allows you to keep the pipettor and the disposable tips handy at all times in one convenient box.
- Self-closing lid provides dust-free storage.
- Built-in rack stores up to 6 pipettors.
- The bottom, sides, and top pipettor rack are made from white acrylic.
- The bins have a transparent front for easy identification of their contents.
- Two bins, each measure 5"(H) x 8"(W) x 3"Deep.
- The holes at top are 17/32" in diameter.
- Overall measurements: 9½" (H) x 16 3/8" (W)
- Weight 5.8 lbs.

64374-01	Pipette Workstation	each

➤ Lab Turntable

- Non-skid cork surface
- Seat on heavy-duty ball bearing base
- Handles heavy load while easily rotating
- Ideally for shared reagents and daily used solutions

64442-series

Cat. #	Description	Qty
64442	12" Diameter Lab Turntable	each
64442-08	8" Diameter Lab Turntable	each
64442-10	10" Diameter Lab Turntable	each

➤ Drawer Liners

The soft, ribbed material fits in drawers or on the shelves to keep fragile items from rolling when drawers are opened or closed.

64407-series

Cat. #	Description	Dimensions		Qty
		W"	L"	
64407-01	Ribbed Liner	12	18	each
64407-02	Ribbed Liner	16	18	each
64407-03	Ribbed Liner	18	18	each
64407-04	Ribbed Liner	18	24	each
64407-05	Ribbed Liner	24	27	each

➤ Book Holders

64364-10

64364-75

64364-40

Ideal for organize your lab books, instruction manuals or references etc. These book holders secure to the surface with double sided tape or magnets.

Cat. #	Description	Dimensions			Qty
		L"	W"	H"	
64364-10	Small Book Holder	6	1.25	4.5	each
64364-20	Large Book Holder	6	2	4.75	each
64364-25	X-Large Book Holder	10	2.5	7	each
64364-40	Freestanding 2" Book Holder	7.5	3	5.5	each
64364-50	Free-Standing 3" Book Holder	7.5	4	5.5	each
64364-60	Free Standing 4" Book Holder	7.5	5	5.5	each
64364-70	Tall Book Holder	10	1.5	8.25	each
64364-75	Closed End Book Holder	10	2.5	7.25	each
64364-00	Add-on Magnet, add				

➤ Tool Holders

64369-06

64369-20

These tool holders help keep your tools ready at your finger tip any time you need them. With double sided tape or magnet you can secure this holder at any place you want.

Cat. #	Description	Dimensions			Qty
		L"	W"	H"	
64369-20	Deluxe Tool & Book Holder	21.2	1.25	5.85	each
64369-06	6-Slot Tool Holder	9.5	1.5	4	each
64369-09	9-Slot Tool Holder	13.875	1.375	4.375	each
64369-12	12-Slot Tool Holder	22	1.5	4	each
64369-00	Magnet Add-on, add				each

➤ Wash Bottle Holder

- Made from chemical resistant plastic is easy to clean
- Provide convenient access to your wash bottles anytime you need them
- Protects bench-top from spills and stains

64373-series

Cat. #	Description	Qty
64373-01	Single 500 ml Bottle Holder	each
64373-02	Double 500 ml Bottle Holder	each
64373-03	Triple 500 ml Bottle Holder	each
64373-04	Quad 500 ml Bottle Holder	each
64373-21	Single 1 L Bottle Holder	each
64373-22	Double 1 L Bottle Holder	each
64373-23	Triple 1 L Bottle Holder	each
64373-24	Quad 1 L Bottle Holder	each

➤ Rotating Bottle Holder

- Conveniently spin the holder around and get the bottle you want
- Holds eight 500ml bottles & one 1 L bottle
- The base has 12.75" diameter.

64373-50

Cat. #	Description	Qty
64373-50	Rotating Bottle Holder	each

➤ Bottle Carriers

For the storage or carriage of wash bottles or solvents. Available in two sizes: 4" holes (white) and 27/8" holes. Six-pack storage, convenient carrying handles. Sturdy construction and they are resistant to solvents.

Cat.#	Description	Dimensions			Pack
		L"	W"	H"	
64371-04	4" Holes Bottle Carrier	13 1/2	10	11	each

► Microwave Leakage Detector

THE FACTS ARE :

- Microwave ovens have become a very useful tool in the laboratory.
- Microwave energy is capable of penetrating approximately 1.18" into living tissue.
- Human senses are unable to detect microwave energy leaks.
- Microwave oven manufacturers recommended periodic checks of the ovens seal integrity.

Over time and with use, microwave leakage often develops around door seals, hinges and the metal fittings of a microwave oven. Our Microwave Leakage Detector is designed for this reason and will determine on a pass/fail basis whether the microwave oven is safe to use or should be repaired. No batteries are required as the Detector is powered by the microwaves themselves. Magnetic strip for the attachment of the detector to the oven.

Dimensions: 4¾" x 2½" x 1¼" 6oz.

72083-00 Microwave Leakage Detector each

► AirChek® Badges

Monitor vapor levels, simply and effectively

AirChek Badges provide an innovative, simple and effective system for monitoring vapor levels, including:

- Formaldehyde,
- Glutaraldehyde
- Xylene
- Toluene
- Isopropanol

The badges are simply clipped on to the technician's clothing and a record is kept of name, location and time, providing continuous sampling for personal monitoring and allowing the measurements required under Government regulations.

One badge provides continuous sampling over 8 hours. A second badge can be used to supply information for analysis of 15-minute peak exposure periods.

Cat No.	Description	Qty.
64472-10	AirChek® Badge, Formaldehyde	6/pk
64472-20	AirChek® Badge, Glutaraldehyde	6/pk
64472-30	AirChek® Badge, Xylene	6/pk
64472-40	AirChek® Badge, Toluene	6/pk
64472-50	AirChek® Badge, Isopropanol	6/pk

► Electric Benchtop Dryers

Electric benchtop dryers offer a compact footprint and accelerate drying of labware with warm, circulating air.

Conserve benchtop space by placing single-sided models up against the wall. Double-sided models double your capacity with only a slightly larger footprint and can be turned perpendicular to the benchtop for easy access to both sides.

- 400 watts of drying power gently circulates heated air into and around items to decrease drying time.
- Heat selector knob with three temperature settings: high, medium and low.
- Power button illuminates when in use, and an 8-amp @ 120V (4-amp @ 230V) circuit breaker and independent thermo-fuse protects unit from overheating.
- Select from single and double sided models with up to 76 peg locations and 4 baskets.
- Electric drying efficiency is enhanced with a replaceable polyurethane foam filter that keeps warmed air dust free. Redirect air flow by inserting plugs instead of pegs into unused peg holes.
- Like the non-electric benchtop models these freestanding dryers have sturdy bases with excellent balance and can be placed on any flat surface.
- Removable polypropylene baskets serve as storage for small labware and extra pegs.

► **Notebooks, PolyPaper®**

PolyPaper® is a Trademark of Nalgene® for a special spunbonded polyethylene “paper” designed for exceptional strength and resistance to moisture and chemicals. Records written or printed on PolyPaper® are virtually indestructible. PolyPaper® outperforms conventional papers, even with special coatings. It is unaffected by fresh or salt water. The non-absorbent, lint-free material resists mildew, tearing, fraying, curling, aging and discoloration. Chemical spills rinse off easily. PolyPaper® accepts any writing device. You can even write on it with No. 2 pencil under water.

► **Laboratory Notebooks**

Valuable notes and data are permanently secured in these hand cover, case-bound books – important for documenting research.

- Thick polyethylene cover, uncoated PolyPaper® pages
- Waterproof, and extremely chemical resistant
- 50 sheets are numbered and printed with a fine green ¼", grid or horizontal 3 lines per inch
- Pages include spaces for dates and signatures of workers and witnesses, for securing patent protection, measures: 9 1/4" x 11 1/4" (235 x 286mm)
- Other pages include instructions for keeping research records, table of contents, and the page for issuing the notebook

Cat. #	Mfr. #	Cover Color	Qty
38020-10	6300-1000	Lab Notebook, Black	each
38020-20	6300-2000	Lab Notebook, Blue	each

► **Spiral Field Notebook**

Coated PolyPaper® pages – Blue polyethylene cover

- Flexible yet durable cover, with sheets permanently bound with spiral binding
- Chemical and moisture resistance ideal for fieldwork
- Pages are printed on both sizes with a fine green ¼" grid and numbered 1 through 96
- Title and table of contents pages. Each page has space for date and signatures of workers and witnesses to research records
- Page measures 9" x 11 1/4" (229 x 286 mm)

Cat. #	Mfr. #	Description	Qty
38021-10	6303-1000	Field Notebook	each

► **Laboratory Paper Notebooks**

Paper pages – Water Resistant Cover

- These notebooks feature permanently bound pages with grid lines
- Acid free pages with spaces for dates, title, project number, book number, and witness signatures
- Each Notebook contains periodic and conversion tables in the back
- Admissible as court evidence when used as prescribed by law
- Page measures: 8 1/2" x 11" (216 x 279 mm)

Cat. #	Description	Qty
38025-10	Laboratory Notebook, 100 pages	each
38025-20	Laboratory Notebook, 200 pages	each

► **Wash Bottles**

Permanently Labeled/Color-Coded Wash Bottles. These safe wash bottles, which are permanently labeled and color-coded, eliminate the risk of dispensing the wrong liquid by mistake. All of these wide-mouth (easy transfer liquid) polyethylene bottles have polyalomer caps and a fine-tip-nozzle that may be cut back for heavier flow.

Capacity is 16 oz (500ml), low density polyethylene.

64150	Acetone Wash Bottle	each
64151	Acetonitrile Wash Bottle	each
64153	Dichloromethane* Wash Bottle	each
64154	Ethanol Wash Bottle	each
64155	Ethyl Acetate Wash Bottle	each

64162	Toluene* Wash Bottle	each
64165	Water Wash Bottle	each

Group of Six - Variety includes: Acetone, Methanol, Water, Iso-propyl Alcohol, Ethanol and Toluene*

64167	Group of Six - Variety	6/pk
-------	------------------------	------

*Short term storage only

► Disposable Boxes

These boxes are used to dispose of empty ampoules, broken glass, empty vials, biohazard wastes, etc. The outer box is made from corrugated cardboard; the inner one is a 2-mil polypropylene bag. When the box is full, the safety cap is pulled into place and the entire unit is ready for disposal or incineration.

■ Colorful graphics for quick identification.

■ Assembly instructions on each box.

■ Folding design for shipping and storage.

There are no replacement bags for these boxes.

► Glass Disposal Box

► Sharp Objects Disposal-Pouch

Made from 10 mil solid paperboard, which opens to an oval shape by folding the bottom flaps. When full just close the top flaps and lock into place. Ideal for needles, razor blades, scalpel blades, etc. An epoxy coated steel wire pouch stand provides stable support to that keeps the pouch standing upright.

64430	Sharp Objects Disposal-Pouch	100/bx
64431	Sharp Objects Disposal-Pouch	200/bx
64432	Disposal-Pouch Stand	each

► Benchtop BioHazard Disposal Can

- Hinged swing top lid for easy access and odor control
- Holds a 25 x 25cm (10" x 10") autoclave bag
- 12.7cm (5") diam. x 19cm (7 ½") H
- Biohazard-labeled for safety
- Measures: 19cm (7 ½") high with a top diameter of 12.7cm
- Shipping weight .45kg (1lb.)

This biohazard-labeled, bench-top disposal can is ideal for quick convenient disposal of items like pipette tips, microcentrifuge tubes, lab wipes, and more. Aesthetic and durable, it is made of 400-series brushed stainless steel that resists fingerprint smudges and stains.

64419	Benchtop BioHazard Disposal Can	each
-------	---------------------------------	------

► Safety Shields

► 1) Coated Lead Shield

This ¼" (6.4mm) thick lead shield protects against chemical reactions and nuclear radiation. The shield is coated with vinyl for a soft smooth surface which eliminates the hazard of any skin contact as well as flying debris. Size: 8½" (W) x 3" (D) x 6" (H) (22x8x15cm).

64460	Coated Lead Shield	each
-------	--------------------	------

► 2) Splash Shield

Splash Protecting in Standing or Sitting Position Provides good protection personal from pipetting or pouring chemicals. An extra wide, angled viewing area and low bend allow the shield to be used from a standing or sitting position. Made from 6.4 mm (¼") thick clear acrylic with non-skid feet for stability. Acrylic base work area is 50.8 x 30.5 cm (20 x 12") deep. Face is 50.9 x 38 cm (20 x 15") high. Not recommended for Beta use.

64464	Splash Shield (Angle Shield)	each
-------	------------------------------	------

► 3) Micro Tube Beta Shield

This shield is a solid, molded, clear-acrylic block with 13 wells 11mm in diameter. It holds 13 of 1.5ml micro sample tubes (EMS Cat. #72363) or similar. A clear tight-fitting cover allows space for the micro tube flip top. It is ideal for DNA sequencing.

Measures 2¼" x 4¼" x 2¼" (H) (52x105x62mm). Tubes not included.

64450-00	Micro Tube Beta Shield	each
----------	------------------------	------

► **Bottle and Jar Opener**

THIS UNIQUE OPENER:

- Saves your wrist by making it easy to open bottles and jars
- Open lids up to 4.5" in diameter
- Eliminates the risk of cracking the cap by using the wrong tool

64493-20 Bottle And Jar Openers each

► **Hot Hand® Protector Pad**

Made from strong silicone and it withstands temperatures as high as 500°F (260°C). A gripping surface with built in multi suction studs for a non-slip grip. Has two pockets for thumb and fingers.

64480 Hot Hand Protector Pad each

► **Silver Bioguard Anti-Microbial Mats**

Neutralize & Protect — Nanoscale Silver particles bind with proteins to neutralize 99.9% of common microbes

Better Results — Ensure consistant sample reproduction and results by significantly minimizing workspace contamination

Reliable — Silver is used extensively in medical applications where microbial contamination is a concern

Use Anywhere — Mats are less than 1mm thick and are backed with an anti-skid coating making them perfect for the benchtop or culture hood

Cat. #	Description	Qty.
77519-1	Silver Bioguard Mat, 10" x 8"	each
77519-2	Silver Bioguard Mat, 15" x 10"	each
77519-3	Silver Bioguard Mat, 24" x 20"	each

► **PTFE Surface Protectors**

A thickness of 0.001" PTFE film bonded to a 0.008" self-adhesive vinyl gives your work surface good protection. Easy to use: cut to desired size, remove the backing, and press into place.

72612 PTFE Sheet, size 25" x 15 ft. Roll each

► **COVAMAT® Lining**

Versatile Clear Lining Material

Clear polyethylene ribbed matting can be used for lining laboratory bench top, shelves, trays, etc. It is easily trimmed and also works well under drums or carboys. 0.25mm (.010") width 0.7mm (.030") thick ribs, 76cm (30") wide x 15.2 meter (50ft) and 4.6 meter (15ft) roll. 1 roll/box.

72615-15	Covamat® Lining, 15'	Roll
72615-50	Covamat® Lining, 50'	Roll

► **Disposable Charcoal Cartridge**

Absorb Incubator Contaminants

This disposable, activated charcoal cartridge efficiently absorbs low energy 35S radioactive components during metabolic labeling. The containment problem exists in incubators and is caused by 35S-labeled amino acids, such as methionine and cysteine which are used to label proteins. The charcoal is supplied in a 100mm diameter plastic petri dish with a highly porous membrane sealed to the top edge.

64454-05 Charcoal Cartridge 5/pk

► LAB-AIR* System; Electronic Air Purifiers

A system which complies with OSHA Regulations and minimizes Occupational Exposure To Toxic Vapors.

The System that destroys the odors and fumes and doesn't just mask them. Toxic vapors are reduced as well!

Lab-Air Units are designed to eliminate harmful fumes and annoying odors from the laboratory workplace.

How do they work ?

Electronic Air Purifiers produce a controlled level of Ozone electrically by converting molecules of Oxygen (O₂) into molecules of Ozone (O₃). Ozone, sometimes called activated oxygen, as part of the process of returning to oxygen, casts off its extra atom. That extra atom combines with the molecule of the odor's source and thereby destroys the odor by oxidation. Once Ozone's extra atom is consumed fresh air is left behind which was created by a natural process.

Lab-Air Units produce a safe unsaturated level of activated oxygen that neutralizes harmful fumes and eliminates problem odors from organic materials as well as some commonly used chemicals such as: Formaldehyde, Xylene, Toluene, Glutaraldehyde, Alcohol, Acetone.

For instance:

* All Harmless Gases (American Institute of Technology)

What is the best location for our LAB-AIR* System?

- **Histology/Pathology/EM Labs** - There are common odors and toxic vapors which are generated by fixing fluids, staining and embedding materials, autopsy samples, body odors, remains of dead animals and fumes which can exceed the capacity of the fume hood. In these cases these fumes may spread to other areas of the building.
- **Other Labs with Odors** - There are other locations within the hospital or research lab where people are using chemicals such as xylene, glutaraldehyde, formaldehyde, etc. where the LAB-AIR* SYSTEM would be very beneficial.
- **Animal Necropsy** - These are odors and fumes associated with the remains of dead animals. These odors can spread, especially in the warmer months, throughout an entire building. The LAB-AIR SYSTEM eliminates this totally.

Features and Specifications:

Lab-Air's Electronic Air Purifiers are CSA approved and come with a two year warranty. Powered by 110 VAC, 60 Hz or 220 VAC, 50 Hz.

► Model PA 2500

Features:

- Programmed timer
- 2,500 milligrams ozone per hr
- 120Volts, 75 Watts
- 14" L x 15" W x 5.5" H
- Weight: 22 lbs

Model PA 2500

► Model PA 1200

Features:

- Has an adjustable ozone output; provides up to 980 mg/hr.
- Multiple option timer: 15 min, 30 min, 1 hr, 2 hr, 4 hr, and continuous operation settings.
- It comes with non-slip feet and power cord.
- It measures 14"(L)x10"(W)x7"(H). Weight: 13 lbs
- High output—has a 220 CFM fan

Model PA 1200

AREA x ODOR FACTOR = MG/HR required

Cubic Feet

Measure the Cubic Footage (L x W x H) of the AREA being treated

Estimate the ODOR FACTOR as follows:

- Light Odor Factor = 0.005
- Medium Odor Factor = 0.018
- Strong Odor Factor = 0.036

Multiply the AREA by the ODOR FACTOR to determine the MG/HR on the chart below. Set OZONE on the machine to the setting nearest the required MG/HR and adjust as required.

Cubic Meters

Measure the Cubic Footage (L x W x H) of the AREA being treated

Estimate the ODOR FACTOR as follows:

- Light Odor Factor = 0.18
- Medium Odor Factor = 0.65
- Strong Odor Factor = 1.29

Multiply the AREA by the ODOR FACTOR to determine the MG/HR on the chart below. Set OZONE on the machine to the setting nearest the required MG/HR and adjust as required.

Lab-Air 9.8

MG/HR (Milligrams per hour in dry air)

*Pressure-sensitive tape stick to all surfaces, yet easily remove, leaving no messy adhesive residue clean up.

► **Three Step Pathology CNI Label**

Identify and correlate pathology specimens with the Specialty CNI System (Consecutive Number Identification), a three-part labeling program that saves time and reduces errors. Three different labels are each imprinted with identical consecutive numbers, each designed to function in a different step of tissue examination.

Step 1: Numbering the cassette — The first label features the number printed in permanent, black ink on sturdy card for use inside cassettes. These 1/4" x 1 1/2" labels come in booklet form with a perforation between each label. The label has no adhesive. It fits beside the tissue, inside the cassette, and remains unaltered throughout the use of solvents.

Step 2: Numbering the paraffin block and/or specimen storage container — The second number label has pressure sensitive adhesive and measures 1/4" x 1" to fit the paraffin block. This label can also be used on the specimen storage container, correlating the whole specimen with its sections. Permanent adhesive secures the label in place and makes any removal attempt or alteration immediately evident.

Step 3: Numbering the microscope slide — A 1 5/16" square, permanent pressure sensitive adhesive label carries the number in step three. These labels hold firmly on the glass slide and ensure correct identification through examination and storage.

Package: 1000 labels each step, total 3,000 labels for three steps

Cat.#	Description	Pack
77040-03	3-Step CNI Pathology Labels	3,000/pk.

► **Specialty Expiration Labels**

Quickly identify outdated laboratory items such as reagents and controls. These labels provide space for noting the date that the items were received, opened and when it will expire. A permanent adhesive holds the label firmly in place on a variety of surfaces.

The label measures 3/4" x 1 1/2" and are supplied in rolls of 500 labels.

Cat.#	Description	Pack
77024-05	Expiration Labels	500/pk.

► **Slide Label Sheet Form for Laser Printing**

Available in standard thickness only with square corner or round corner on 8 1/2" x 11" sheet. Price is 5000 labels per carton.

Cat. #	Description	Label Size	Thickness
77021-10	Label Model SLS-LASER	1 5/16" x 1 5/16"	Standard
77021-11	Label Model SLS-LASER RC	1 5/16" x 1 5/16"	Standard
77021-12	Label Model SES-LASER	1 5/32" x 1 5/16"	Standard

► **Specialty Satin Cloth Labels**

Designed to adapt to a wide range of laboratory procedures. These labels withstand dry ice, liquid gasses, deep freezes, acids, oils, greases, salt water, fresh water and soap. Their textured surface may be marked with pen, pencil, or felt marker. Pressure-sensitive adhesive sticks to almost any surface or shape. Specialty Stain Cloth Labels are supplied pre-cut on protective backing paper. Each label is perforated making it easy to remove the label from the roll.

These labels are available in a variety of sizes. Labels 5/8" in width come in sheet form only; all other sizes come on rolls of 1000 labels.

Cat.#	Label Size	Quantity
77030-01	5/8" x 1", Sheet	1,000/pk
77030-02	5/8" x 2", Sheet	1,000/pk
77030-03	1" x 2", Roll	1,000/pk
77030-04	1" x 2 1/4", Roll	1,000/pk
77030-05	1" x 2 1/2", Roll	1,000/pk
77030-06	1 1/4" x 2", Roll	1,000/pk
77030-08	1 1/4" x 2 1/2", Roll	1,000/pk
77030-09	1 1/2" x 2", Roll	1,000/pk
77030-10	1 1/2" x 2 1/4", Roll	1,000/pk
77030-11	1 1/2" x 2 1/2", Roll	1,000/pk
77030-12	1 3/4" x 2 3/4", Roll	1,000/pk

► **Microscope Slide Labels**

These specialty Microscope Slide Labels and matching End Labels are available in standard (thin) or pathology (tissue high) thickness, and square or round corner (RC). Permanent adhesive holds labels in place during use and long-term storage.

Sheet Form Size is 5 1/4" x 8". Prices are per thousand labels

► Laser Cryo-Babies® & Cryo-Tags™ Labels for Cryogenic Storage†

Temperature-Resistant – From -196°C to 150°C. Cryo-Babies and Cryo-Tags withstand freezer temperatures down to -196°C (liquid and vapor phase nitrogen), boiling water baths (100°C), autoclaving and moderate oven temperatures (150°C).

Tough – Chemically inert labels resist most organic solvents and caustic agents. They adhere to most plastics*, glass and metals without cracking, peeling or degrading.

Specially Designed – Label sheets are specially top-coated to readily accept laser printing. Heat-resistant, stay-flat sheets will not jam in laser printers.

Innovative – Made with a flexible, polyolefin* label material and acrylic adhesive. This unique combination expands and contracts together with temperature fluctuations resulting in a strong adhesive bond.

Packs are available in Individual Colors or in *Rainbow Packs (4 sheets of each color)

► Cryo-Clear™ Laser Labels

Clear Cryogenic Storage Labels for Use with Laser Printers

"The Choice is CLEAR" – Contents of vials beneath labels remain visible.

Temperature-resistant – From -196°C to 70°C. Cryo-Clear labels remain fully adhered down to -196°C (liquid and vapor phase nitrogen).

Durable – Chemically inert labels resist most organic solvents and caustic agents. Labels adhere to plastics*, glass and metals without cracking, peeling or degrading.

Laser Printable – Label sheets are specially top-coated to accept laser printing and other markings. Heat-resistant, stay-flat sheets will not jam in laser printers.

Innovative – Made with a flexible, vinyl label material and permanent acrylic adhesive. This unique combination expands and contracts together as temperatures fluctuate resulting in a strong and sustained adhesive bond.

Cryo-Clear Laser Labels - Sizing Guide

1. 1.28" x 0.50" for 1.5 – 2.0ml tubes	2. 0.94" x 0.50" for 0.5ml tubes
--	--------------------------------------

Cat. #	Color	Tag Size (Inches / Millimeters)	Sheet layout	Labels/Sheet	Ideal Use	Qty.
1. 77575-C	Clear	1.28" x 0.50" / 33mm x 13mm	5 Across - 17 Down	85	1.5ml tubes	1,700/pk.
2. 77576-C	Clear	0.94" x 0.50" / 24mm x 13mm	7 Across - 17 Down	119	0.5ml tubes	2,380/pk.

* NOTE: Siliconized surfaces should be avoided. Apply to clean, dry tubes at room temperature. Tubes made of 100% virgin polypropylene are recommended.

► Direct Thermal CryoTags®

Temperature-Resistant – From -196°C to 70°C and also freezable in liquid nitrogen.

Tough – They adhere to most plastics, glass and metals without cracking, peeling or degrading. Also resistant to scuffing and smearing.

Compatible – Tubes labeled with Direct Thermal CryoTags easily slide in and out of centrifuge rotors without binding.

Specially Designed – Labels accept printing from direct thermal printers such as Dymo LabelWriters.

Barcoding – Print popular barcode formats for fast and easy sample identification.

Effortless – Printer setup and use is easy and user friendly

Economical – Limit label waste by printing only the quantity required

New Format – Labels are now oriented vertically and are compatible with the new LabelWriter 450

Same Great Product – Users of Direct Thermal Tough-Tags will be happy to know we've expanded the temperature range of Tough-Tags and made them Cryo-Tags

Online

Support – Email us at sgkck@aol.com to request new definition files for the LabelWriter 450

* NOTE: Prolonged exposure to alcohol may cause material discoloration.

► Cryogenic Labels

These labels are made from top quality materials, a wide range of sizes, designed specially for cryogenic use.

1. DuraStick Labels (KDS-series)

For Temperature of -40°C and Below

These labels feature a smudge resistant surface. They are available in rolls for thermal transfer printing or in 8½" x 11" sheets for laser printing. All accept handwritten notations with cryo markers.

2. CryoStick Labels (FCS-series)

For Temperatures of -80°C

Ideal for use with cryotubes, these labels are best used with thermal transfer printers or cryo marker pens. Available in a wide range of sizes on sheets or rolls, they are not recommended for laser printing.

3. LiquiStick Labels (LSC-series)

For temperatures of -195°C

Labels feature a synthetic surface that accepts crisp bar codes from thermal transfer printers or handwritten notations cryo markers. Supplied in sheets or rolls, these labels are not recommended for use with laser printers.

4. Satin Cloth Labels (SC-series)

For temperature of -60°C

These textured labels withstand dry ice, deep freezers and liquid gases. Supplied in sheets or rolls. They are easily marked with cryo markers, not for use with automated printers.

5. Wrap-Around Labels (WA-1)

For Freezers and Cryogenic Use

These unique labels are for sub-zero use, measures 1½" x 2¾". They feature a 1½" x 1½" area, frosted for thermal printing or marking with cryo markers. The remainder of the label is clear. It wraps around the cryo-tube to provide a protective cover for printed information while leaving a clear space for viewing the tube contents.

► Thermal Transfer Tough-Tags & Cryo-Tags

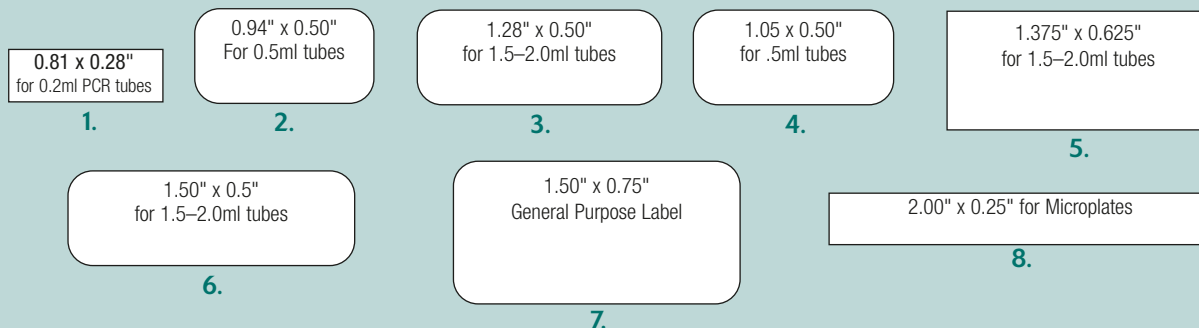

Pre-cut, Peel-Off Labels Designed for Use in Thermal Transfer Printers

Thermal Transfer Tough-Tags and Cryo-Tags are a reliable and convenient way to identify samples with text or a barcode on microtubes, microplates, bottles and other laboratory containers.

- Unique solvent-resistant, acrylic-based adhesive provides excellent cold temperature performance
- Print crisp, clear, professional quality labels
- Resists degradation from scuffing, chemicals, moisture and wide temperature fluctuations
- Specially coated for use with a resin ribbon that provides the best performance under extreme conditions
- Print as little as one label at a time, eliminating label waste and saving time and money

SIZING GUIDE: Thermal Transfer Labels for Storage in Temperatures From -196°C to 80°C

Cryo-Tags on a 1" I.D. Core with 2,000 labels per roll

► Cryo Labels And Markers

► **Labels:** A specially formulated material for use at ultra-low temperatures and in cryo storage conditions, such as liquid nitrogen and liquid oxygen. They are durable and adhere well to plastic as well as cardboard cryogenic storage boxes. They will not peel or shrink. Ten sheets of labels: five pre-printed, five plain. Twenty labels/sheet. Label measures: 2.5cmx5cm.

62046	Cryo Labels	200 labels/pk
62047	Cryo Labels	10pk/lot

► **Markers:** For permanently marking cloth, cardboard, and plastic. It will not fade at ultra-low temperatures. Smudge-proof. Package consists of four, extra fine point pens in assorted colors (red, green, blue and black).

62050	Cryo Markers	4/pk
62051	Cryo Markers	6pk/cs

► Laser Tough-Tags®

Labels for Microcentrifuge Tubes and Other Containers

Temperature-Resistant – From -40°C to 121°C. Tough-Tags resist boiling water baths, autoclaving and moderate freezer temperatures.

Tough – Chemically inert, polyester sheets resist most organic solvents and caustic agents. They adhere to most plastics*, glass and metals without cracking, peeling or degrading.

Compatible – Tubes labeled with Tough-Tags easily slide in and out of centrifuge rotors without binding.

Specially Designed – Label sheets are specially top-coated to readily accept laser printing. Heat-resistant, stay-flat sheets will not jam in laser printers.

Laser sheets are available in individual colors and also in Rainbow Packs

1. Laser Tough-Tags® size 1.28" x 0.50" (33mm x 13mm).

Ideal Use: 1.5 ml tubes.

► Tough-Tags® on a Roll

Compatible – Tough-Tags are pre-cut, peel-off labels that accept any marking instrument. They are perfectly sized to fit microcentrifuge tubes and other containers in the laboratory.

Convenient – Dispensing box assists in labeling individual tubes used in small experiments.

1. Tough-Tag® 1.28" x 0.50" (33mm x 13mm)

Ideal Use: 1.5 ml Tubes

Cat. #	Color	Labels per roll
62045-20	White	1000

Ideal Use: Micro plates

Cat. #	Color	Labels per roll
77538-W	White	1000

► Direct Thermal Tough-Tags®

For Use in Direct Thermal Printers

- Withstands temperatures from -40°C to 70°C
- Freezable in liquid nitrogen when label ends overlap (not applicable to round labels)
- Resistant to scuffing, smearing and chemicals
- Print barcodes for easy sample tracking
- Limit label waste by printing the quantity required
- Quick and easy setup for PC's or MAC's
- Small printer takes up little space

Cat. #	Label Size (Inches/Millimeters)	Ideal Use	Qty.
1. 77593-1	1.05" x 0.50" / 27mm x 13mm	0.5ml tubes	2000/Roll
2. 77593-2	1.50" x 0.50" / 38mm x 13mm	1.5ml tubes	2000/Roll
3. 77593-3	1.50" x 0.75" / 38mm x 19mm	2.0ml tubes	2000/Roll
4. 77593-4	3/8" diameter / 9.5mm diameter	0.5ml tubes	2000/Roll
5. 77593-6	1.50" x 0.50" - 3/8" diameter spot	1.5ml tubes	2000/Roll
6. 77593-5	2.00" x 0.25" / 51mm x 6mm	Microplates	2000/Roll

Note: All labels are White and are on 1" I.D. cores with 2,000 per roll. 100% Virgin Polypropylene tubes are recommended for optimal performance. Avoid the use of siliconized surfaces.

► Color-Coded Dual Tough-Tags™

- 500 tag and spot sets per roll
- Matte surface is suitable for accepting pencil, pen or marker writing
- Labels fit 0.5ml – 1.5ml tubes
- Will not come off in rotors, cyclers or racks
- Resistant to extreme temperatures

Cat. #	Color	Qty.
77539-B	Blue	500/roll
77539-G	Green	500/roll
77539-R	Red	500/roll

77539-Y	Yellow	500/roll

► Bake Tough-Tag®

1.50" x 0.75" (38 x 19mm) Ideal Use: Oven Sterilization

Bake Tags are oven-safe marking labels that withstand conventional oven-sterilization (typically 180°C) or heating to inactivate RNase, DNase and other enzymes. Bake Tags will withstand autoclaving, cryogenic freezer storage conditions and boiling baths, without peeling or falling off.

INNOVATIVE LABEL SOLUTIONS

Combo Tough-Tag / Tough-Spot label set allows for quick and easy labeling of tube tops as well as the side of the tube.

Removable Tough-Tags®

Durable labels cleanly removes from reusable surfaces

No Residue - Easily remove from surfaces without leaving any adhesive

Track Samples - Use labels to follow samples from purification to processing

Resistant - Resistant to most laboratory solvents and have shown short-term resistance to Acetone and Xylene

Useful - Great for beakers, bottles, flasks, glass vials, tubes, tube racks and pipettes

Multiple Formats - Available on rolls for hand writing or for direct thermal printing using the Dymo® LabelWriter®

Cat. #	Size	Color	Labels per roll

► **Micro Tube Label; Tough-Tags™**

Pre-cut, peel-off, pressure sensitive labels. They are sized to fit microcentrifuge tubes, cryo tubes and many other containers.

■ They can be boiled, froze, and autoclaved.

- They are chemically resistant.
- They are thin and will not jam in the centrifuge rotor.
- They will not dry out, fall-off, or tear.

**Tough-Tag® 1.28" x 0.50" (33mm x 13mm),

► **Laser Tough-Spots®**

Pre-Cut Peel-Off Labels for Microcentrifuge Tube Tops

Temperature-Resistant – Withstands freezer temperatures down to 196°C (liquid and vapor phase nitrogen), boiling water baths (100°C), autoclaving and moderate oven temperatures (150°C).

Tough – Chemically inert labels resist most organic solvents and caustic agents. They adhere to plastics*, glass and metals without cracking, peeling or degrading.

Specially Designed – Label sheets are specially top-coated to readily accept laser printing. Heat-resistant, stay-flat sheets will not jam laser printers.

Innovative – Made with a flexible, polyolefin¹ label material and acrylic adhesive. This unique combination expands and contracts together with temperature fluctuations, resulting in a strong adhesive bond.

► Tough Spots® On a Roll

Pre-cut Peel-off Round Labels for Microcentrifuge Tube Tops

Easy To Write On – PVC labels accept writing from most lab markers including our Solvent Resistant Pens and Teeny Writers.

Convenient – Dispensing box assists in labeling individual tubes used in small experiments.

Options – A variety of sizes, colors and formats ensures the right label for the job.

► Tough-Tag Dispenser

The Tough-Tag Dispenser – For use with Tough-Tags, Cryo-Babies and Tough-Tag Spots up to 1 3/8" wide. Hold up to 4 rolls. Outer Dimension: 7" W x 5" D x 4" H

Cat. #	Description	Qty. each
77590	Tough-Tag Dispenser	each

► Tough-Tag Station

Conveniently holds up to 6 rolls of Tough-Tags, Tough-Spots or Cryo-Tags. Utilize the ledge to easily write on labels for sample identification.

*77582-100 does not fit the Tough-Tag Station

Cat. #	Description	Qty. each
77590-10	Tough-Tag Station	each

➤ Chameleon Tough-Tags

Autoclave Indicating – Labels change color* from Green to Purple when exposed to autoclave temperatures.

Tough – Chemically inert, polyester labels resist most organic solvents and caustic agents. They adhere to most plastics, glass and metals without cracking, peeling or degrading.

Temperature-Resistant – From 40°C to 121°C, Chameleon Tough-Tags resist boiling water baths, autoclaving and moderate freezer temperatures.

Ideally Sized – Fits a variety of microcentrifuge tubes, microscope slides and other laboratory containers. Tubes labeled with Chameleon Tough-Tags will easily slide in and out of centrifuge rotors.

Compatible – Labels accept writing from any lab marker.

Before Autoclaving After Autoclaving

Cat. #	Color	Label Size	Qty.
77541-GP	Green>Purple	0.94" x 0.50" / 24mm x 13mm	1,000/roll
77542-GP	Green>Purple	1.28" x 0.50" / 33mm x 13mm	1,000/roll

*Labels will have a slight "textured" look to them due to the nature of the ink.

➤ Specialty Tough-Tags®

Temperature Resistant - From -196°C to 80°C

Save Time - Preprinted Tough-Spots make labeling and identifying samples quick and easy. Use the numbered Tough-Spots to identify a series of samples - no handwriting or printing needed.

Color Coded - The best of both worlds! Each color coded ToughSpot has a distinctly different color to identify similar samples and also includes a white area to clearly write a quick note about it.

Safety - Lab safety is always a top priority. Use the Biohazard or Radioactive Tough-Spots to identify tubes or other vessels containing hazardous materials.

➤ Wash-Off Labels™

Rinses Away Leaving No Adhesive Residue

Easy Removal – Labels Wash-Off in 1 rinse cycle at any water temperature

Autoclavable – Labels resist exposure to steam* at 121° C

Environmentally Safe – 100% biodegradable and FDA-compliant

Temperature-Resistant – Long term storage best between 32° F to 70° F (0° C to 21° C)

Laser Printable – Accepts laser printing and other markings

Labels dissolve under running water in less than 30 seconds.

*Build-up of liquid water on the label surface will dissolve the material

Cat. #	Color	Size (Inches / Millimeters)	Qty.

► Pre-cut, Peel-off Labels for Thermal Transfer Printers

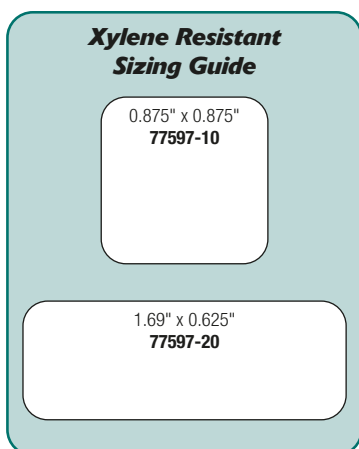

Xylene-Resistant - Polyester labels provide strong solvent resistance, specifically to multiple xylene washes as well as longer term exposure to xylene.

Versatile - Temp. Range: -40°C to 121°C. Xylene labels resist boiling water baths, autoclaving and moderate freezer temperatures.

Specially Designed - Rolls are specially top-coated to readily accept thermal transfer printing.

Convenient - Labels are available in a microscope slide size as well as a unique general purpose size for multiple uses.

Note: 100% Virgin polypropylene tubes are recommended. Avoid the use of siliconized surfaces

Cat. no.	Label size	Ideal Use	Unit
77598-10	0.875 x 0.875" (22x22mm)	Microscope Slides	1000/roll
77598-20	1.69"x0.625" (43x16mm)	General Purpose	1000/roll

► Wet Grip

Labels for Moist, Frosty or Frozen Tubes

- "GRIPS" to wet, frost-covered and frozen surfaces
- Temperature resistant to -40°C
- Compatible with centrifuge rotors
- Resistant to chemicals and solvents
- Adheres to plastics, glass, metals and even paperboard boxes
- Print on sheets with Laser printers or use rolls for Direct Thermal printers

► Direct Thermal (Temp. Range: -40°C to 70°C)

➤ **Solvent-Resistant Pens & Teeny Writers**

Solvent Resistant Pens feature an ultra-permanent ink.

- Resistant to xylene, alcohol, acetone and formalin
- Ideal for histology and cytology
- Markings will not run on embedding cassettes or frosted/painted slides and labware, even after repeated washes and solution treatments
- Remove markings with acetic acid, an ethanol/xylene mixture or paraffin. Testing advised before use

Teeny Writers are perfect general use lab markers.

- The Twin-Tip Teeny Writer has a fine tip and an ultra fine tip
- The original Teeny Writer has an extra fine tip
- Both are ideal for writing on Tough-Tags and Tough-Spots
- Use for labeling samples stored at room temperature and not exposed to chemicals and/or caustic agents

The Twin-Tip Too laboratory marking pen provides a new option for all writing needs. It is the best of both worlds. It is resistant to most mild laboratory chemicals and gives the flexibility of a twin tip pen for fine tip writing on small tubes and labels. Keep it close by utilizing the included handy pocket clip.

Testing is recommended.

Twin-Tip Teeny Writer

Cat. #	Description	Color	Tip (Millimeters)	Qty.

62052-B	Teeny Writer	Black	Extra Fine (0.4)	each

➤ **Write Protect™**

A Clear Adhesive Overwrap to Protect Writing

Write Protect is a clear adhesive tape designed to cover and protect writing or printing on labels, on the surface of microtubes and on other laboratory containers. The clear tape comes in a handy dispenser and will adhere to all plastics, glass, metals and label materials. The tape is provided in perforated, pull-off segments for 0.5ml and 1.5ml tubes. Write Protect will not dry out, peel or fall off and will withstand temperatures ranging from -196°C to 150°C.

77626-10	Write Protect Tape (1.25 x 0.50" / 32 x 13mm)	1,000/roll
77626-20	Write Protect Tape (1.60 x 0.63" / 41 x 16mm)	1,000/roll

➤ **Perf-Tape™**

Slit-Perforated Laboratory Tape – No Scissors Needed!

Convenient - Slit-perforated every 1.25" to allow for clean tearing every time

Quick - Don't waste time with scissors, simply tear and apply!

"Invisible" Perfs - High-tech perforations are designed to remain "invisible" when tape is marked and may be written over

Strong - Perf-Tape™ won't tear while it is being unrolled

No residue - Leaves no adhesive residue when peeled off

Water resistant - Also oil and acid resistant

Temperature - Withstands cold (-23°C) and hot (121°C) temperatures

0.75" x 500" (19mm x 12.7m) w/1.25" perforation

➤ **Rocker Tape**

Double-Sided Adhesive Film for Laboratory Containers

Mounting Convenient - No more fumbling with clamps

Versatile - Use with rockers, shakers, incubators or nutators

Strong - Easily rock and roll up to 300rpm and beyond*

Long Lasting - Re-usable based on load capacity and vessel number

Resistant - Keeps on rockin' even in the presence of most solvents and caustic agents

* RPM limits may vary based on load and vessel contact area. Test load recommended

Ordering:

77512-12	1.50" x 20' (38mm x 6m)	roll
77512-20	Rocker Tape Sheets, 12" x 12"	3/pk

➤ Hi/Lo Write-On Temperature Tape

➤ Color Tape

These color-coded label tapes work well with all glass and plastic labware, racks, tubing, bags, boxes, and cabinets. It adheres to any surface, including Teflon® and peels off without leaving a sticky residue. Tapes resist moisture and most solvents and can withstand autoclaving (250°F). It may be used as well down to -73°C. All rolls fit on a standard 1" (25.4 mm) or 3" (76 mm) core. Tape is available in widths of ½" (12.7 mm), ¾" (19 mm), and 1" (25.4 mm), 40 yards (36.6 M) long.

➤ Cloth-Textured Hi/Lo Temperature Tape

These tapes mold tightly to any container, withstands acids, alkalis, oils and greases. It's will not crack peel or fall off in 550°F dry oven temperatures. Hi/Lo Temperature tape also sticks tightly in the dry ice, liquid gases and deep freeze of cryogenic temperatures. Tape is available in widths of ½", ¾" and 1" on 250" roll. (This tape must be cut with scissors)

Cat.#	Description	Pack
77012-05	Hi/Lo Cloth Tape, ½" wide	each
77012-07	Hi/Lo Cloth Tape, ¾" wide	each
77012-10	Hi/Lo Cloth Tape, 1" wide	each

➤ Hi Temperature Indicator Tape

Specialty cloth-textured Hi Temperature Indicator tape shows the word "STERILIZED" in bold, black letters after standard sterilization processing. The tape sticks to almost any surface or shape, holds fast in 550°F dry oven temperatures. Available in widths of ½", ¾" and 1" on 250" rolls.

Cat.#	Description	Pack
77015-05	Indicator Tape, ½" wide	each
77015-07	Indicator Tape, ¾" wide	each
77015-10	Indicator Tape, 1" wide	each

➤ Steam Autoclaves Imprinted Tape

Indicate the status of all laboratory items to be sterilized with these tape labels. The word "STERILIZED" appears after processing at 250°F under normal sterilization conditions. Tape is available in widths of ¾" and 1" on 60 yard roll, 3" core.

Cat.#	Description	Pack
77016-07	Imprinted Tape (A) ¾"	each
77017-07	Imprinted Tape (B) ¾"	each
77018-07	Imprinted Tape (C) ¾"	each
77016-10	Imprinted Tape (A) 1"	each
77017-10	Imprinted Tape (B) 1"	each
77018-10	Imprinted Tape (C) 1"	each

➤ **Scotch 811 Removable Magic Tape**

This transparent tape can be removed as easily as it goes on. Ideal for taping before photocopying, leaving notes and memos, taping transparencies onto frames, etc., 3" core.

77200	Removable Magic Tape ½" x 72 yds	2 rolls/bx
77210	Removable Magic Tape ½" x 72 yds	5bx/lot

➤ **Scotch 810 Magic Tape**

The ever popular tape that is invisible when applied. Can be written on. Resists yellowing, cracking, and moisture. Ideal for mending, slicing, and many other permanent applications. 3" core.

77300	810 Magic Tape, ½" x 72 yds	2 rolls/bx
77310	810 Magic Tape, ½" x 72 yds	5bx/lot
77301	810 Magic Tape ¾" x 72yds	each

➤ **Scotch 235 Photographic Tape**

Black, crepe paper, pressure-sensitive tape that is designed for use in commercial as well as private photography. It can be used for making negatives, positives, and transparencies. Conformable, opaque, and it has low light reflectance. 3" core.

77400	235-Photographic Tape, ½"x60 yds	each
77410	235-Photographic Tape, 1"x60 yds	each

➤ **Scotch 616 Lithographer's Tape**

This ruby-red transparent tape is for use in opaquing, stripping, and edging on film materials. 3" core.

77500	616-Lithographer Tape, ½"x72 yds	each
77510	616-Lithographer Tape, ½"x72 yd	5 roll/lot

➤ **Scotch 850 Color Tape**

Good for making glass knife boats as well as for hanging, protecting and stripping. 3" core.

77700	Silver Tape ¾" x 72 yds	each
77710	Gold Tape ¾" x 72 yds	each
77720	Black Tape ¾" x 72 yds	each
77701	Silver Color Tape ½" x 72yds	each

➤ **Scotch Double Sided Tape:**

➤ **1) Without backing paper: Scotch 665**

This is a non-conductive transparent tape with adhesive on both sides. There is no liner to remove and it is long lasting for permanent applications. 3" (77mm) core, ¼"(6.35mm)Wx 72yds (32.9m)L. Comes 2 rolls inside a protective box.

77100	3M® 665, Double Sided, ¼" W x 36yds (6.4mm x 32.9m)	each
77110	3M® 665, Double Sided, ¼" W x 36yds (6.4mm x 32.9m)	5/pk
77101	3M® 665, Double Sided, ¾" W x 72yds (9.5mm x 65.8m)	each
77102	3M® 665, Double Sided, ¾" W x 36yds (19mm x 32.9m)	each

➤ **2) With paper liner: Scotch 666**

This is a non-conductive transparent tape with adhesive on both sides and white paper as a liner, which is slit in the center to facilitate its removal. This produces good adhesion and cleanliness.

Comes 3 rolls inside a protective box, 3" core, ¼" (6.35mm) W x 36 yds (32.9m) L.

77115	Scotch 666 Double Sided Tape	each
77116	Scotch 666 Double Sided Tape	5/box
77117	Scotch 666 Double Sided, ¾" x 36yds	each
77118	Scotch 666 Double Sided, ¾" x 36yds	each
77119	Scotch 666 Double Sided, 1" x 36yds	each

► Conductive Adhesive Tapes

► 1) Scotch Conductive Tapes:

We offer two types of foil: Aluminum foil tape (Scotch 1170) and copper foil tape (Scotch 1181) with conductive adhesive. 3" core, 1/4" (6.35mm) width x 54 ft (16.5m) long

Technical Data	Copper	Aluminum
Foil Thickness, mils	1.4	2
Total Thickness, mils (mm)	3(.076)	4(.102)
Adhesion oz/in (N/10mm)	35(3.81)	35(3.81)
Electrical Resistance		
Through Adhesive ohm/in(ohm/cm)	.005(.032)	.01(.07)
Continuous Long Term °C	155°	155°
Functional Days-Weeks °C	175°	175°

77800	Aluminum Tape, Single Sided 1/4" x 18yds	1 roll
77799	Aluminum Tape, Single Sided 1/2" x 18yds	1 roll
77798	Aluminum Tape, Single Sided 1" x 18yds	1 roll
77801	Copper Tape, Single Sided 1/2" x 18yds	1 roll
77802	Copper Tape, Single Sided 1/4" x 18yds	1 roll

Double Sided Copper Conductive Tape

With the same technical properties of our 77802 shown above this conductive tape is 12.7mm(W)x16.4m(L).

77802-22 Copper Conductive Tape, Double Sided each

► 2) SEM Conductive Tapes:

Technical Data	Cu Contained Nickel Tape	Al Contained Nickel Tape
PAD	Pressed thin Cu	Pressed thin Al
Overall Thickness	0.075mm	0.09mm
PAD	0.035mm	0.05mm
Adhesive	0.040mm	0.04mm
Conductive resistivity	0.004ohm/sq. Inch	0.008ohm/sq. Inch
Adhesive Power/25mm width	920 gf	840 gf
Capacity after 60 min	0.1mm	0.1mm

We now offer a new line of conductive tapes, that are electrically conductive and offer a clean background. They were developed especially for SEM.

77810	Copper/Nickel Tape	each
77811	Copper/Nickel Tape	5 Rolls/pk
77813	Aluminum/Nickel Tape	each
77814	Aluminum/Nickel Tape	5 Rolls/pk

► 3) Double Sided Carbon Tape

With carbon double-sided tape, small particle sizes, such as 15-20 microns, can be mounted on the adhesive and produce good background structure. Our Double sided Carbon tape is also available in five widths to accommodate varying specimen mount surface sizes and applications.

Double sided Carbon Tape	
PAD	Isolate unwoven cloth
Overall Thickness	0.16mm
PAD	0.07mm
Adhesive	0.045mmx2
Conductive resistivity	50ohm/sq. Inch
Adhesive Power/25mm width	1,000 gf
Capacity after 60 min	0.2mm

77817-05	Double Sided Carbon Tape, 5mm(W)x20m(L)	each
77816	Double Sided Adhesive Carbon Tape 8mm(W) x 20m(L) (5/16" x 65)	each
77817	Double Sided Adhesive Carbon Tape 8mm(W) x 20m(L) (5/16" x 65)	5 Rolls/pk
77817-12	Double Sided Carbon Tape, 12mm(W)x20m(L)	each
77817-20	Double Sided Carbon Tape, 20mm(W)x20m(L)	each
77817-50	Double Sided Carbon Tape, 50mm(W)x20m(L)	each

Same as above however with Aluminum base as opposed to the unwoven base above. Offers a smoother surface

77817-05-AL	Double Sided Carbon Tape, 5mm(W)x20m(L)	each
77817-08-AL	Double Sided Carbon Tape, 8mm(W)x20m(L)	each
77817-12-AL	Double Sided Carbon Tape, 12mm(W)x20m(L)	each
77817-20-AL	Double Sided Carbon Tape, 20mm(W)x20m(L)	each
77817-50-AL	Double Sided Carbon Tape, 50mm(W)x20m(L)	each

► 3a) Carbon Conductive Tape, Double Coated

EMS introduces this unique double sided carbon tape which is 260 microns in thickness. The base which is Polycarbonate and 200 microns thick has on both of its sides 30 microns of conductive glue giving it a total thickness of 260 microns. The tape has one transparent liner on one side and a white thicker one on the reverse which protects the tape in shipping.

Specifications:

Core Diameter:	3" (76mm)
Adhesive:	Carbon Filled Acrylic Glur
Remover:	Ethyl acetate, ethanol, isopropanol and or alcohol
Temperature:	60°C(140°F)-Maximum
Impurities:	Cu, Si, Sb, S, Na, P, Fe and Mg*

* These are considered to be small impurities but they may be present

77819-12	Double sided Carbon Conductive Tape, 12mm (W) x 5m (L)	each
77819-25	Double Sides Carbon Conductive Tape, 25mm (W) x 5m (L)	each
77819-65	Carbon Conductive Tape in sheet form, 65mm (W) x 300mm (L)	each

► 4) Double Sided Conductive Cohesive Sheets

Features:

- Minimum impurities - Maximum conductivity.
- Produces minimum gas under vacuum conditions.
- Easy handling.

These conductive cohesive sheets offer good adhesion to the specimen and yield good conductivity and background structures, even with particles as small as 15 microns.

Sheet size: 5cm(W)x12cm(L)

Technical Data	Thickness	Adhesive Power	Conductive Resistivity
Silver Sheet	0.13mm	880 gf/25mm	0.00ohm/5mm ²
Carbon Sheet	0.16mm	1,100 gf/25mm	4,000ohm/5mm ²
77820	Silver Cohesive Sheet		5/pk
77822	Carbon Cohesive Sheet		10/pk
77822-01	Carbon Cohesive Sheet (Technical Grade)		10/pk

► **XYZ-Axis Electrically Conductive, 3M™ Double Sided Tape 9712**

3M™ XYZ-Axis Electrically Conductive Tape 9712 is an isotropically conductive pressure sensitive tape. The tape consists of a 3M adhesive loaded with conductive fibers. The result is a double-sided tape providing both good adhesion and good electrical performance with very high conductivity.

The 9712 Tape is an excellent choice when needing to bond your samples for all SEM work.

Specification:

Adhesive Type:	Filled Acrylic
Filler Type	Conductive Fibers
Release Liner	Silicone treated PolyCoated Kraft Paper
Paper Remover:	Acetone
Thickness Approximate:	Tape Only; .005" (.127mm) Release Liner; .004" (.010mm)
Temperature Range:	Short Term Exposure; 250°F (121°C) Long Term Exposure; 158°F (70°C)

► **XYZ-Axis Electrically Conductive, 3M™ Double Sided Tape 9713**

3M™ XYZ-Axis Electrically Conductive Tape 9713 is an isotropically conductive pressure sensitive tape. 3M tape 9713 conducts electricity through the thickness (Z-axis) and in the plane of the adhesive (X, Y planes) and is ideal for EMI/RFI shield and EMI/RFI gasket attachment to metal surfaces. The tape consists of a high performance 3M adhesive loaded with conductive fibers. The result is a double-sided tape providing both good adhesion and good electrical performance. The conductive fibers in 3M tape 9713 also provide improved handling characteristics. The 9713 Tape is an excellent choice when needing to bond your samples for all SEM work

Specification:

Adhesive Type:	Filled Acrylic
Filler Type	Conductive Fibers
Release Liner	Silicone treated PolyCoated Kraft Paper
Remover:	Acetone
Thickness Approximate:	Tape Only; .0035" (.0889mm) Release Liner; .004" (.010mm)
Temperature Range:	Short Term Exposure; 250°F (121°C) Long Term Exposure; 158°F (70°C)
Outgassing (ASTM E-595):	Total Mass Loss (TML); 1.60%
Collected Volatile	
Condensed Materials (CVMC):	0.03%
Water Vapor Recovered (WVR)	0.36%

► **Z-Axis Electrically Conductive, 3M™ Double Sided Tape, 9703**

3M™ Electrically Conductive Adhesive Transfer Tape 9703 is a pressure sensitive adhesive (PSA) transfer tape with anisotropic electrical conductivity. The PSA matrix is filled with conductive particles which allow interconnection between substrates through the adhesive thickness (the "Z-axis") but are spaced far enough apart for the product to be electrically insulating in the plane of the adhesive. The PSA tack properties and lack of any thermal curing make tape 9703 easy to use in all applications requiring a conductive tape.

Electrical Properties: Contact Resistance

Substrate Tested			
Aluminum/Aluminum	Aluminum/Stainless Steel	Copper/Aluminum	Copper/Copper
<24Ω	<21.5Ω	<16Ω	<.66Ω

Based upon four wire (Kelvin probe) resistance measurements made with crossed pieces of Foil/Type 9712 or 9713/Rigid plate construction using a 1.0" x 1.0" square piece of 3M tape Type 9712 or 9713. The rigid metal surface was prepared with a Scotch-Brite™ pad to roughen the surface and cleaned with isopropyl alcohol.

Adhesion Properties:

Substrate	Adhesion in oz./in(g/cm)			
	20 Min at 72°F (22°C)	24 Hours at 72°F (22°C)	20 Min at 158°F (70°C)	24 Hours at 72°F (22°C)
Stainless Steel	>41(457)	>42(468)	>43(479)	>53(590)
Aluminum	>35(390)	>33(367)	>36(401)	>43(479)
Copper	>47(412)	>39(434)	>43(479)	>55(613)

The tape is available in 3 sizes and it comes on a 3" Core(76mm)

Cat. #	Description	Qty
77808-63	XYZ-Axis Electrically Conductive, 3M™ Double Sided Tape, 9712, 6.35mm (W) x 32.9m (L)	each

► Write-On™ Tape Dispenser

This tape dispenser offers you a convenient writing platform, suitable for both left- and right-handed users. The epoxy-coated platform with finger holes and built-in cutting edge, make dispensing and cutting the tape a simple one-handed action. The weighted base with non-skid bottom pads assures stability. The 3" (76mm) core fits standard tape rolls up to 1" (25mm) wide. The weighted base with non-skid bottom assures stability when in use. Weight: 4 lbs (1.8kg). The dispenser accepts series 77010-tapes shown above. The tape is not included.

77001-00 Single Roll Write-On Tape Dispenser each

► Write-On Label Tape Dispenser

This dispenser holds 1 & 3" core Write-On Label Tape. Measures: 302 x 143 x 160 mm H (12 x 5 5/8 x 4 3/16"H)-Two types.

77001-20 Dual Core Write-On Tape Dispenser, Standard, see picture B each

77001-30 Dual Core Write-On Tape Dispenser, Heavy Base, see picture A each

► Multi-Roll Write-On™ Tape Dispenser

This tape dispenser allows tape rolls of various widths and colors to be mounted on a single drum and reeled off individually as needed. Accepts all 3" (76mm) core roll tapes. Separators keep tape rolls apart. Writing platform is 4" x 6" (102x152mm) with a serrated cutting edge. The weighted base with non-skid bottom pads assures stability. Made from epoxy coated steel. It measures 10 1/4" x 6" x 4 3/8" (H) (260 x 150 x 110mm). Weight: 5 lbs (2.3kg). Tape not included.

77002-00 Multi-Roll Write-On™ Tape Dispenser each

► Scotch C-25 Heavy Duty Dispenser

Durable and economical; high impact resistant plastic dispenser. It features a permanently attached tape drum to eliminate loss. A rubber base prevents slipping. Two tone brown and beige. Holds tape up to 1" wide. 3" core.

77000 Tape Dispenser each

► Single Roll Dispensers

Lightweight and easy to use. Hand dispenser holds 500" tape rolls. They are made from durable plastic that can be reused many times with a safety cutting edge that protects fingers.

Cat.#	Description	Pack
77052-01	Single Roll Dispenser, Model SDH-1	each
77052-02	Single Roll Dispenser, Model SDH-2	each

► Stationary Dispensers

Made from durable plastic. For use with 60-yard tape rolls.

Model SD-2 is for one or more rolls, up to 2" wide. Measures: 10" long x 4" wide x 5" high.

Model SD-6 is for multi-rolls up to 6" wide. Measures: 10" long x 6" wide x 5" high.

Cat.#	Description	Pack
77053-02	Tape Dispenser, Model SD-2	each
77053-06	Tape Dispenser, Model SD-6	each

► Multi-Roll Dispensers

We offer three different size dispensers to accommodate your 500" tape rolls (1" core) on countertop or cart; and one size dispenser for 2160" tape rolls (3" core). They provide easy dispensing while keeping all tape in one convenient location. A unique design allows easy addition or replacement of every other roll on the dispenser. Made from sheet metal.

Starter EM Kits

Kits for TEM Preparation

CleanKit for SEM, TEM and Microtomy

**Electron
Microscopy
Sciences**

Start off on the right foot with EMS's convenient Starter Kits

► Starter Kits for TEM

Electron Microscopy Sciences offers a complete discount package for new labs and established labs starting new projects. This package is arranged to enable a laboratory to perform standard preparations of biological specimens with enough supplies to last.

► Chemkit - Cat #14750

Fixation:

19100	Osmium tetroxide crystal	5x1g
19150	Osmium tetroxide 4% solution	10x2ml
16320	Glutaraldehyde EM Grade 50%	10x10ml
16020	Glutaraldehyde EM Grade 8%	10x10ml
19202	Paraformaldehyde, Prill	1 kilo
15710	16% Paraformaldehyde	10x10ml

Buffers:

21190	Sodium phosphate monobasic	500g
21180	Sodium phosphate dibasic	500g
21160	Sodium hydroxide pellets	100g
12300	Sodium cacodylate trihydrate	100g

Dehydrants:

20410	Propylene oxide	4x500ml
10010	Acetone	4x1qt

Embedding Media:

14120	EMbed-812 kit	1 kit
14300	Low viscosity kit (Dr. Spurr)	1 kit

Stains:

22050	Toluidine Blue	50g
21130	Sodium Borate, Tetra	500g
22400	Uranyl acetate	25g
27800	Lead citrate	2x25g
14950	Epoxy tissue stain	100ml

► Labkit - Cat #14760

0200-Cu	Grids, 200 mesh, copper	5 vials
0300-Cu	Grids, 300 mesh, copper	3 vials
0100-Cu	Grids, 100 mesh, copper	1 vial
H200-Cu	Grids, Hex 200 mesh, copper	1 vial
71152	Grid storage box, for 50 grids	1 dz
71170	Grid mats, round	3 mats
70680	Petri dishes, round	pk/100
70010-B	Embedding Capsules	pk/500
70900	Flat embedding molds	2 ea.
60950	Tri-pour beakers 50ml	pk/100
70960-1	Pipettes, 2cc	pk/500
72300	Wood applicators	bx/1000
71112	Latex gloves	bx/100
72631-10	Shell vials	pk/144
71960	Razor blades, carbon steel	bx/100
72550	Trimaide	2 pcs
72660	Dental wax	1 lb
70705	Duster w/nozzle	1 kit
72120	Marker pen, black	pk/12
72510	Syringes, 10ml	pk/100
78320-5	#5 Tweezer	2 pair
78322-7	#7 Tweezer	1 pair

► Cleankit - Cat #14780

A collection of cleaning supplies for the SEM, TEM and Microtome offered at a quantity kit discount.

71752	Lint-free cloth	pk/300
71090	Lint-free gloves	pk/6pr
70705	Duster w/nozzle	1 can
70707	Duster Refills (Environmentally Safe)	1 cs
71700	Lens tissue	2 bxs
72340	Wooden picks	2pk/100
71830	Metal polish, POL	1 tube
71112	Latex gloves	pk/100
60510	Alconox	4 lb. box
71054	Micro Cleaning Solution	1 quart
71620	Wipes	1 dozen
72310	Cotton Tipped Applicators	2/pk
71020-MTH	1800 Ultra Sonic Bath	each

When ordering any of the special kits, please specify particular sizes and any reasonable substitutions. Thank you and we hope you take advantage of this special money-saving opportunity.

	Alkaline Phosphatase for Glycol Methacrylate Sections
	Acid Phosphatase for Glycol Methacrylate Sections
14654	Glycol Methacrylate Embedding for Immunohistochemistry
	Technovit® 8100 Sections Specifically for Immunohistochemistry
14654-60, 14654-70	Technovit® 3040 Histobloc®
14655	Technovit® 9100 Methyl Methacrylate Application Information from Heraeus Kulzer
	Technovit® 9100 Routine Staining, Immune Reactions, Enzyme Histochemistry, In-Situ Hybridization
	Technovit® 9100 Short Instructions
	Technovit® 9100 Histology Technology Accessories
14660	Unicryl Embedding Resin
14700	Vestopal-W Embedding Medium
14800	Entellen Mounting Medium
14900	Determination of Proportion of Epoxy Resin
14942	EMS Cured Epoxy Remover
14950	Epoxy Tissue Stain
15285	Fast Frozen Stain Kit
15320	Eukitt Mounting Medium
15550	Ferritin Cationized
15675	Formaldehyde/Zinc Fixative
15720	Karnovsky's Fixative
15920	Gach Kit
15940	May-Grunwald and Geimsa for Bone Marrow
16580	Gold Sols Preparation
16905	Imidazole
17894	Biomount™
17970	Citifluor AF1, AF2 & AF3
17976	Citifluor AF87
17978	Citifluor CFPVOH and AF100
17983-20/-100	FluoroGel with Para Phenylenediamine (PPD) Anti fading Mounting Medium
17984	Fluoromount-G Aqueous Mounting Medium
17984-24	Dapi-Fluoromount-G™
17985-01 to -04	EMS Shield with DABCO, Anti-Fading Mounting Medium
17985-05 to -08	EMS-Mount Mounting Medium
17985-09/-100	EMS Shield Mount
17985-10	Fluoro-Gel
17985-12/-17	Clear-Mount, with Tris Buffer or Pipes Buffer, A Permanent Aqueous Mounting Medium
17985-30	Fluoro-Gel Mounting Medium with TES Buffer
17985-50/-51	Fluoro-Gel II with Dapi
17985-60/-61	FLUORO-Gel III Mounting Medium With Propidium Iodide (PI)
17985-150/-200	EMS Shield Mount with Anti-Fading
17987-01	Limonene-Mount Mounting Medium
17988-30	In Situ Mounting Medium
17994	Cargille Meltmount™
17994	MeltMount™ Quick-Stick™ Series
19100	Neutralization Of Osmium Tetroxide
19230	Pipes
19312	Polyester Wax
19320	Poly L Lysine Solution
20410	Propylene Oxide (Reagent Grade)
22400	Uranyl Acetate
22405	UAR-EMS Uranyl Acetate
20700	Ruthenium Tetroxide 0.5% Aqueous Solution
21630	EMS Sure Cut Surfactant
21700	Tannic Acid
21900	TCH - Thiocarbonylazide
23410	EMS Xylene-Subs
24141	Formaldehyde Spill Response™ Kit
24142-01	Glutaraldehyde Spill Control
24200	Crystal Clear® Series Clear Urethane Casting Resins
24210	Acrylic Casting Resin

71305	Slide Coating Device (Film Casting)	EMS 150, EMS 300	Sputter Coater Principles		Research and Educational Institutions Using NIGHTSEA
71310	Pap-Pen		Silver as a Removable Coating for Scanning Electron Microscopy		Publications Citing Use of NIGHTSEA Equipment
71313	Fro and Para Marker	EMS 150	SEM/TEM Carbon Coaters Techniques and Applications	QX-102, QX-302	WETSEM® Technology
71319-10	Slide Warmer	91080, 93123	Freeze Drying Principles		Imaging Wet Cells - Bridging The Gap Between Light and Electron Microscopy
71894	Vacuum Pick Up system	91090, EMS 3000	Critical Point Drying Principles		Lipid Imaging and Analysis
72243	Adjustable Cover-Slip Rack	PP3000T	Cryogenic Specimen Preparation Principles		Imaging lipid bodies in fully-wet cells and tissues
72250, 72255	Quartz Microscope Slides and Coverslips	93000	Plasma Etching and Ashing Principles		EDS of wet samples with QX capsules
72274	Thernanox®, TMX Coverslips		Plasma Ashing Applications		Imaging particles in their fully-wet environment
72420	UV Spectacles	93100	Plasma Chemistry Applied to Electron Microscopy (EM) Preparation Procedures	General	Safety Precautions in EM Laboratories
72592	Tissue Freezing Medium	93123	Freeze Drying Principles		
74200	EMS Kodak D-19® Replacement	95000, 95100	Infinity 1-2 CMOS Cameras PDF only		
74257	Photo Flo 200 Solution	95102	Infinity 1-3 CMOS Camera PDF only		
74802	Photomicrograph Scale Marker	95103	Infinity 1-5 CMOS Camera PDF only		
76550	Sample Stub Vacuum Desiccator	95105, 95106	Infinity 2-1 CCD Cameras PDF only		
79500	Celestial Spheres	95107, 95108	Infinity 2-2 CCD Cameras PDF only		
79502	Silicone Test Specimen	95109	Infinity 2-3 CCD Camera PDF only		
	Example Certificate Of Calibration				
79510	Gold Particles On Carbon High Resolution				
79511, 79512	Gold Particles On Carbon Ultra High Resolution				
80014	Catalase Crystal Diffraction Standard				
80020	Evaporated Platinum Iridium in Holey Carbon Film				
80035 to 80038	Crystals for Lattice Plane Resolution

Abrasive Papers382
Abrasive Cut-off Wheels:
• Aluminum Oxide383
• Diamond383
• Silicon Carbide383
Absorber/Protector; Benchtop281, 954, 1104, 1123
4-Acetamido-4'-Isothiocyanato-stilbene-2,2'-
Disulfonic Acid (SITS), Sodium Salt8
Acetate Buffer8, 26, 446-447
Acetone:8, 446
• Glass Distilled8
• Reagent ACS8, 446
Acetone Alcohol8, 446
Acetic Acid Solution8, 446
Acetonitrile8
Acetylated BSA77-85
Achromatic Magnifier 4x + 2x734, 886, 889
Acid Alcohol8, 446
Acid Black 2, see Nigrasin54, 470
Acid Fuchsin8, 472
Acid Pump220
Aclar 7-8mil286
Aclar, 2mil286
Aclar Film286
Acridine Orange Solution8, 468, 472
AcrylMount Embedding371
Acrylic Dye371
Acrylic Plastic Casting101
Acrylic Resin, FIRM32, 37, 473
Acrytol Mountant9, 514
ActivFlo Cassettes542-543
Adaptors:
• Chuck252
• Cryostat549, 582, 603
• Pin Mount Stub637
Adhesion Slides:
• Excell320
• Gold Seal319
• Trubond320
Adhesive; Instant19-20, 218, 376, 653
Adhesive Tabs636, 653-654
Adhesives & Mountants:9-21, 514-519
• Acrytol9, 512
• Aron Alpha9

Ordering Information and Conditions of Sale

Office Hours:

6 am-6:30 pm Eastern time, Monday-Friday.

Ordering:

To make the ordering process as easy and fast as possible, Electron Microscopy Sciences offers three easy ways to order:

1. Phone: 1-(800) 523-5874

1-(215) 412-8400

2. Fax: 1-(215) 412-8450 or 8452
(24 hours a day-7 days a week)

3. Mail: Electron Microscopy Sciences
P.O. Box 550
1560 Industry Road
Hatfield, PA 19440

4. email: sgkck@aol.com or stacie@ems-secure.com

5. Internet: <http://www.emsdiasum.com>

No Minimum Order is Required.

Confirmation Orders are Not Required.

Standing and blanket orders are encouraged. The benefits offered you on these types of orders are:

- minimization of paperwork
- quantity discounts
- firm pricing for the period of the order
- regardless of price fluctuations in the market

C.O.D. orders are accepted and will be shipped by either UPS or Federal Express; Customers' choice.

Pricing:

Every effort will be made to keep prices firm, but they are subject to change without notice. Unless instructed otherwise, we will ship items that have increased in price as long as the increase is no more than 10%. When any increase is greater than 10%, we will contact you for authorization to ship

Terms and Conditions:

Terms of payment are net 30 days.

Orders will be shipped F.O.B. Hatfield, PA with transportation charges prepaid and added as a separate item on the invoice. All shipping charges are the exact cost of charges from the carrier that we have incurred.

Personal orders and checks are accepted with proper identification. We are pleased to announce that we accept American Express, Discover, MasterCard, and VISA for your convenience.

*Service and Shipping Information:

Here at ELECTRON MICROSCOPY SCIENCES we strive to offer you the best service, quality, pricing, and technical support that is possible. Management is always available to discuss any customer problems or suggestions. We can't fix a problem if we don't know about it. So, please feel free to call either Stacie Kirsch with any comments about our products, technical staff, or customer service.

Service with a smile! We guarantee to ship your order within 24 hours after we receive it. If you need your order urgently, we will be more than happy to ship it by either Federal Express or UPS Air. If time is not a factor, the most economical method for shipping is by UPS Ground. We do have discounted rates with both UPS and Federal Express to save you money. The choice is yours. Please be advised that it is our company policy to only charge you the exact shipping charges that we are charged - NO MORE.

***UPS®:** Either ground, Orange (3 day), Blue (2nd day), or Red (next day)

***Federal Express®:** Express Saver, Economy (2nd day), or Priority (next day)

Motor Freight: for excessive weight

Unless you otherwise specify, we will choose the most practical shipping method.

*To assure you the lowest possible shipping costs we have set up special accounts with UPS, Federal Express, DHL & Airborne where you will benefit from our corporate discounts.

Business Classification:

Woman owned - small business.

Regulated Shipments:

In the past year the Department of Transportation has enforced new rules and regulations regarding the packaging and shipping of regulated chemicals. Compliance to these regulations is mandatory. Therefore, a hazardous packing charge will be added to your invoice for only those materials requiring special packaging (Poison B's and extremely flammable). We will try our best to keep the expense to a minimum.

Returns - Breakage - Discrepancies:

- Returns may not be made without prior authorization.
- No custom orders or equipment may be returned
- To make a return, please repackage very carefully and include the following information:

Customer's name and address.

Customer's phone number.

Original purchase order number.

EMS invoice number.

- Items that are ordered in error and are returned are subject to a 15% restocking charge.
- Returns are not accepted after 60 days from the day of invoice.
- Shipments should be inspected immediately upon receipt.
- All breakage and discrepancy claims should be made promptly. We can not be responsible for shortage or breakage of which we have not been informed within 7 days after receipt of shipment.

Internet Resources:

Our site puts valuable technical support at your fingertips 24 hours a day. Our web site features not only our entire printed catalog on the web, but a complete encyclopedia of technical tips, reprints of all of our technical data sheets for all of our products, technical assistance, order information and ordering forms to order direct from our site, as well as up to the minute new product releases and much more. (See our sample home page at the back of the catalog).

Legal Liability:

All EMS products are offered for research work only and not for clinical, food, cosmetic, household, or drug use. We offer no warranty and accept no responsibility for their use.

All the information and references presented in this catalog have been compiled from sources considered reliable to the best of our knowledge.

It is the users' responsibility to determine the suitability of any material or procedure recommended.

Technical Support:

Whether you require assistance in choosing a correct product, troubleshooting a product, procedure or protocol, or you just want to discuss an application, our technical team and specialists remain at your disposal. Our technical service is available by phone, fax, e-mail, or internet.

New Products:

Additional items are continually being added to our line. Information in the way of our newsletters will be sent to you as it becomes available. If you can not locate an item that you require in our main catalog or in our newsletters, please call us. If we can supply it or locate it for you, we will be happy to do so. All special chemical formulations and packaging requirements are encouraged. Because we manufacture many of the chemicals ourselves, any special size or purity requirements are not a problem. Please let us know what you want.

If you would like to see us carry a product that is not currently listed in our literature or you have an idea for a new product, please let us know. We have received a lot of input from our customers over the years and many of the products that are currently in our catalog have come from our loyal patrons in the lab. We look forward to hearing from you.

Discounts:

Opening a new lab or need to buy a large quantity of supplies? Call us for special pricing today. Large quantity discounts are available and encouraged.

Representation:

We have sales representatives throughout the United States as well as foreign distributors in the rest of the world. For the local rep in your area, please call or write us today.

Specials:

We love custom orders – no minimums on any items we manufacture. Whether you require a special item not found in our catalog, or you want a variation of a current catalog item, we are happy to oblige you. Please contact us with your requests.

Electron Microscopy Sciences

A complete online Product Catalog of chemicals, supplies, accessories, and equipment for Electron and Light Microscopy, Histology, Cell Biology, Neuroscience, and all biological related research fields. At the site, you can find technical tips and recommended articles of interest, technical and product data sheets, Material Safety Data Sheets, and many revolutionary new products and exclusive items.

DIATOME
For All Your Diamond Knives

A complete product catalog of the entire Diatome collection of Diamond knives, tools, and accessories for Electron and Light microscopy for Biological and Materials Science at room and cryo temperatures. Available on-line as well is information on our services, programs, specials, and policies. The complete handling and use technical manual as well as troubleshooting can also be found at our site.

SUMMERS OPTICAL

The Summers Optical on-line catalog including a complete line of optical cements and adhesives, decentering agents, hardness testers, ultrasonic baths and UV lights as well as technical and transmission data and problem solving can be found at this site. As well as, our unique bonding manual including troubleshooting and charts for how to choose a cement for specific applications and a complete set of MSDS on all of our products can be seen here.

DUMONT
SWISS MADE

Dumont produces high quality handmade tweezers, and has gained the popularity of all researchers over the years. Online at <http://www.DumontTweezers.com>

Visit us on the web

Find all the information you need at:
www.emsdiasum.com

On our main homepage you have access to all four of our websites:

Electron Microscopy Sciences **Summers Optical**
Diatome U.S. **Dumont**

To visit the **DIATOME U.S.** site, click onto the **DIATOME U.S.** logo.

At the Diatome U.S site, you will find a complete product catalog of the entire Diatome collection of diamond knives, tools, and accessories for Electron and Light Microscopy for Biological and Materials Science at room and cryo temperatures. Available on-line as well is information on our services, programs, specials, and policies. The complete handling and use technical manual as well as troubleshooting can also be found at our site. It is possible to place orders on-line, and request literature and technical support.

DIATOME Diamond Knives
Development, Manufacturing and Customer Service since 1970

What have we achieved in this period?

- Ultra 45[®] the first diamond knife with an absolutely score-free, hydrophilic cutting edge.
- Best of the first diamond knife for alternating sectioning aldehydes/semithin.
- Cryo the diamond knife for sectioning at low temperatures.
- Mite the first diamond knife for semithin sections for light microscopy.
- Ultra 35[®] the diamond knife for optimized sectioning results in almost all applications.
- Static Line II the knife for eliminating electrostatic charging in ultramicrotomy.
- Cryo-PI a cryo knife with a patented platform for section pick-up.
- Cryo Immuno the optimized cryo diamond knife for the Tokuyasu technique.
- Ultra Santic the oscillating diamond knife for room temperature sectioning.
- Cryetrim 45 and 28 for optimizing trimming with diamond blades.
- Ultra AFM & cryo AFM the first diamond knives for AFM at room and low temperatures.
- Cryo 20[®] for sectioning frozen hydrated specimens.
- Trimodal 45[®] and 28[®] trimming tools for both room and cryo temperatures.
- Manipulator for easy handling and mounting section ribbons.

These developments were possible by the cooperation with you, our valiant customers. We are convinced that our future developments will allow diamond knives to be used for many new applications.

What services can we offer you?

- Technical assistance in all fields of ultramicrotomy.
- Free sectioning tests for all types of samples.
- Make use of our many years of experience in perfecting our knives.
- With a telephone call, an e-mail or a fax message we can inform you of any details you require.

Contact us or visit us at any of the upcoming shows:

- Microscience Congress
July 1-3, 2014
Manchester, UK
- Microscopy & Microanalysis
August 3-7, 2014
Hartford, CT, USA
- International Electron Microscopy Congress
September 7-12, 2014
Prague, Czech Republic

DIATOME

For all of your Diamond Knives

DIAMOND KNIVES | OVERVIEW | ORDER ONLINE | SERVICES | HANDLING & USE | MORE INFO | HOME

AFM Cryo & Ultra | Cryer | Cryo | Cryo Immuno | Histology | Manipulator | Static Line | Trimmers | Ultra | Ultra Santic

manip

For easy handling and mounting of section ribbons. The mounting of the manipulator is easy. The original piece on the cryochamber is removed, the manipulator is fixed in 5 minutes.

Applications

- Frozen hydrated biological samples (EMCRYO/ES)
- Room temperature sectioning of water sensitive samples.
- On site sectioning of biological samples for chemical analysis.
- On site sectioning of industrial samples such as polymers.

Functionality

- The left manipulator moves a conductive fibre on which the sections are attached by electrostatic force; the growing ribbon is guided.
- The right manipulator guides the grid very precisely below the section ribbon; the sections are attached to the carbon film with electrostatic force.

Your benefits of working with Diatome

Free customer service
Sectioning tests with biological and material research specimens of all kinds.

See and on the sections along with the support sample, a report on the results obtained and a recommendation of a suitable knife.

Complete discretion when working with proprietary samples.

The resource guide

for the scientific community

www.emsdiasum.com

On our main homepage you have access to all four of our websites:
Electron Microscopy Sciences **Summers Optical**
Diatome U.S. **Dumont**

To visit the Electron Microscopy Sciences site, click onto the Electron Microscopy Sciences logo.

The Electron Microscopy Sciences web site is the answer to every researchers' (biological and materials science) and clinicians' needs. Since our beginning 45 years ago, Electron Microscopy Sciences has been specializing in the manufacturing, preparation, and distribution of only the highest quality chemicals, supplies and equipment for microscopy, and all of its related fields.

Because of our commitment to, and close contact with the research community at large, we feel that our web site should not only be a vehicle for sales, but an instrument of reference and assistance. At our web site, you can browse our complete on-line catalog, place an order, and stay abreast of the most up-to-date information on the microscopy and histology market. Many helpful items can be accessed in our site such as MSDS's for the majority of our chemicals, technical tips, the newest recently published technical articles, as well as technical data sheets which will assist you in performing your job efficiently.

The screenshot shows the top navigation bar of the emsdiasum.com website. It includes the company logo and four main product categories: Electron Microscopy Sciences, Diatome, Summers Optical, and Dumont. Each category is accompanied by a small image of a representative product.

This screenshot displays the 'Catalog' section of the website. It features a sidebar with navigation options like 'Online Catalog Table of Contents' and 'Chemicals for Electron Microscopy, Light Microscopy and Histology'. The main content area lists various chemical products with their respective categories and sub-categories.

This screenshot shows the 'Technical' section of the website. It includes a 'Technical Summary' table listing various products and their specifications. Below the table, there are sections for 'EMMS Technical Data Sheets' and 'Download Product Brochures and Catalog Addendums'.
