Dear Valued Customer,

NIGHTSEA Fluorescence Viewing Systems, page 880

LatticeAx Wafer Cleaving Systems, page 432

Datacolor CHROMACAL™ Color Calibration System, page 160

LYNX II Tissue Processor, page 987

CryoJane Workstation, page 600

On behalf of myself and the entire team at Electron Microscopy Sciences, let me say that it is our honor and privilege to provide you with this catalog — the most comprehensive source of products for all fields of microscopy and general laboratory research available. As we come upon our 45th year in the industry, we truly believe the effort we put into producing a printed catalog in addition to our other endeavors (website, bulletins, emails, post cards) proves to be a valuable resource for you, our customer, who deserves the very best.

A lot has happened since we last released a comprehensive catalog. New technological achievements are here (Datacolor ChromaCal color calibration system, EMS Cryo-Sem Preparation System, Graphene — the strongest material ever measured, LatticeAx cleaving systems, Nightsea fluorescence viewing systems and the EMS Freeze Substitution Kit to name a few). The way we communicate using new media continues to evolve as well (EMS is now on Facebook, Twitter, and YouTube). Although all these changes have taken place, one thing remains the same — our commitment to manufacturing and distributing the highest quality chemicals, supplies, equipment and accessories available to the Microscopy and Histology community today. In fact, our team is working harder than ever to provide you with friendly service, competitive pricing, accurate technical support and swift delivery.

We know a lot of our customers look forward to this catalog to learn about exciting new products on the market. We carefully select these products, offering only those that meet our high standards before we present them to you.

Highlights of this catalog include two new sections: Cleaving (pages 432-444) and Antigen Retrieval (pages 612-616); the addition of over 1500 new thicknesses for Formvar and carbon support film grids (pages 116-133); and products available exclusively from Electron Microscopy Sciences: Datacolor CHROMACAL™ (page 160-163); Nightsea (page 880-883); LatticeAx (page 432-435); Lynx II Tissue Processor (pages

987-989); Cryo Workstation (pages 600-601); FIRM (page 32, 37, 473); EMS-UAR (page 68), and much more.

For those new to our catalog, you will find the products organized in sections to enhance your experience. There are entire sections devoted to particular fields, such as Histology or Materials Sciences, to help researchers quickly narrow their focus on products and equipment appropriate for their

needs. We hope you will discover exciting products that will benefit your research. Keep in mind, this is not merely a list of available products, it's an educational resource. You will find research citations and technical data alongside our products so you can learn how to take full advantage of the products you receive from us. There is an index of this information located on pages 1148-1150 for your convenience. There is also a completely updated listing of our Technical Data Sheets on page 1151. We invite you to visit our website as another resource for this information as well as for Material Safety Data Sheets which we keep up to date as a courtesy to our customers who find them invaluable. We are pleased to be of service and hope you will join our mailing list so we may continue to send you additional updates throughout the year.

It is with great pleasure we continue to offer to you our outstanding selection of Chemicals for Electron Microscopy, Light Microscopy and Histology; the industry-leading line of Aurion ImmunoGold Reagents; the highest quality, most precise sectioning and incomparable durability DiATOME Diamond Knives line, our superb line of EMS Sputter and Carbon Coaters, world-renowned Technovit® embedding resins, and the list goes on. Most of these lines have been enhanced with new options, so it's worth taking a look.

We hope that this catalog exceeds your expectations and we look forward to working with you. Please contact our customer service

and technical departments if we can help discuss any of these products with you in further detail regarding your particular application. Your comments and suggestions are always welcome. It's how we continue to grow. We achieve success if you do.

look for us...

**Electron
Microscopy
Sciences**

Table of Contents

1. **Chemicals for Electron Microscopy, Light Microscopy and Histology**.....8-70

- Adhesives and Mountants...9-21 • Buffers: Prepared...26-30 • FIRM...32
- Fixatives...38-45 • Formaldehyde...40-41 • Glutaraldehyde...43-44
- Osmium...55 • Picric...58 • Uranium Products...68-69

2. **ImmunoGold Reagents**.....72-90

- Introduction/Micrographs...72-73 • Product Information...74-81
- Product Listing...82-85 • Frequently Asked Questions...86-89
- Custom Labelling...89 • Immunogold Newsletters & Flyers...89
- EMS and Aurion ImmunoGold/Silver Staining Workshops...90

3. **Embedding Media Kits for Biological & Materials Science**.....92-102

- Durcupan, Epo-Fix, JB-4, LR White, Histo-cryl, and more...92-97 • Technovit GMA and MMA...98-100 • Unicryl...101 • Casting, Potting, and Encapsulating Resins...101-102

4. **Grids, TEM Support Films, Grid Staining & Storage**.....104-150

- Gilder – a reliable support specimen grid source...104-107 • EMS – Square Mesh and Oval Hole...107 • Veco – the most rigid grids available...108-111
- Maxtaform – smooth edges, firm support, and a large open area...112
- Athene Grids...112 • Index – Alpha Numeric and Asbestos Index Grids...112-113
- Synaptek™ unflexible grids, made of beryllium-copper...114
- Beryllium Grids for TEM...114 • Embra and Molybdenum Grids...115
- Support Film on Grids...116-133 • C-flat™ Holey Carbon Grids for cryo-TEM...134-137 • QUANTIFOIL Holey Carbon Films...138-139 • Graphene Films for TEM...140-141 • Grid Preparation Supplies...142-150

5. **Silicone Nitride Mesh and Films**.....152-158

- DuraSiN™ Film and Mesh for TEM...152-156 • DuraSiN™ Customization...157
- Pyrolytic Graphite...158

6. **Calibration Standards, Specimens, and Aids**.....160-174

- Color Calibration System for Optical Microscopy...160-163
- Low Magnification Calibration Standards for SEM and LM...164-165
- SEM Calibration Specimens...164-165 • Resolution and Gray Level Test Specimens...164-165 • Back-Back-Scattered Electron and EDS...165
- Calibration Specimens for TEM and STEM...165-166 • MAG*¹CAL®...168
- Diffraction Standards...168 • Measuring Aids...168 • Tip Check and Nioprobe for SPM...169 • Magnification References SPM, AFM, SEM...170-174

7. **Microscope Accessories**.....176-190

- Apertures and Aperture Cleaning...176-177 • Recoating TEM Viewing Screens...178 • Standard Loop Filaments...179 • Lanthanum Hexaboride LaB₆ Cathodes...181 • Denka LaB₆ Cathodes...180 • Applied Physics Lanthanum and Cerium Hexaboride CeB₆ Cathodes...182-185 • Pt and "PTFE" Crucibles...190 • Apezion Vacuum Greases and Diffusion Pump Oils...186-189

8. **Nanomanipulation and FIB Lift Outs**.....192-194

- Nanomanipulation Probe Tips...192 • Lift-Out Grids, TEM Holders, and Thinning...193-194

NEW: Athene Grids, see page 112

NEW: Color Calibration System for Optical Microscopy, see pages 160-163

Table of Contents

NEW: FLOWMI™
Cell Strainers,
see page 271

NEW: Slide Printer,
see pages 312-313

NEW: Fiber Lensing &
Polishing Instruments,
see pages 414-419

9. MAC Standards196-204

- MAC Reference Standards for X-ray Microanalysis...197-204
- MAC X-ray Microanalysis for TEM...198
- Compound, Pure Metal, NBS, and BAS Standards...198-199
- MAC Reference Materials for Auger Electron Microscopy...200-201
- MAC Standards for X-ray Fluorescence Spectroscopy...202
- SEM PSEM Performance Standards...203-204

10. Mailers and Shippers.....206-212

- Laboratory and Diagnostic Mailing Systems

11. Specimen Preparation and Embedding Supplies.....214-367

- General Supplies...214-217
- Beakers and Bottles...217-224
- Vials, Racks, Holders, and Lyophilization Containers...223-228
- Plastic, Pasteboard, and Cocoon Boxes...230-233
- Sample Storage Sets, Membrane Boxes, and Gel-Pak® 234-236
- Embedding Capsules and Holders...237-241
- Biopsy Pads, Cloth, Lens Tissues, Towels...244-245
- Scribes, Slide Coating, and Release Agents...248-250
- Molds, Chucks, and Holders...250-253
- Weighing Boats, Canoes, Dishes, and Paper...254
- Glass Knife Making Supplies and microtomy supplies...255-257
- Laboratory Gloves...258-259
- Ultramicrotomy Aid Tools...255-258
- Netwell, Cell Strainers and Glass Bottom Boats...269-271
- Cell Culture, Petri, Permanox Dishes, and Seals...263-268
- Tissue Grinders...271-274
- Lab-Tek® Chamber Slide Products...275-280
- Wells, Plates, Covers, Tissue Culture Inserts...281-283
- Mica Sheets and Disks...284-285
- ACLAR®—Fluoropolymer Films...286
- Pipettes and Pipette Fillers...287-293
- Dissecting Kits...295
- Razor Blades, Scapels, and Saws...296-302
- Tissue Matrices and Sampling Tools...303-308
- Slide Markers, Liquid Blockers, Bio-Imager, and PAP Pens...309-311
- Slide Printer, Bar Code Scanner...312-313
- **Microscope Slides...313-322:** - Plastic and Glass Microscope Slides...314-323 - Micro Cover Glasses and Cover Slips...324-327 - Microscope Slide Storage Boxes, Trays, and Holders...328-335 - Microscope Slide Mailers, Files, Drains, and Container...328-335
- Microarrays and Hybridization...336-361
- Filtration, Filters, Syringes, and Hypodermic Needles, Swabs...362-366
- Gel Electrophoresis and X-ray Autography...367

12. Material Sciences and Metrology370-430

- Cold and Hot Mounting Media, Molds, and Pressure Chamber...370-372
- Adhesives and Mountants...373-375
- Replicating Films and Membrane Boxes...375-377
- Polishing Supplies...378-382
- Cloths, Lapping Films, and Film Discs...378-382
- Powders, Pastes, Suspensions and Diamond Compounds...378-382
- Sample Grinding and Sectioning...382-383
- Micro & Mini-tools...384-391
- Tools - Probes, Scribes, Pin Vise, Cleavers, Sharpeners...392
- **Instrumentation...392-430:** - Micro-Manipulators, Micro Drilling Systems, and Disc Punch...392 - Grinder, Otolith Polishing, and Micro Polisher...394-395 - Spark Cutter and Accessories...396-398 - Rotary Disc and UltraSonic Cutters...398 - Electropolisher and Electrolytic Jet Thinning...399 - Diamond Wheel Saws...400-401 - Wire Saws...402-406 - Dimpler for TEM Preparation...407 - Tripod Polishers for SEM TEM Preparation...408 - Lapping and Polishing Machines and Fixtures...412-421 - Rail Polisher, Twin Jet Electropolishing System and UniDisc...422-424 - Plasma Cleaning and Etching and Ion Beam Sputter...425-429 - Crystal Orientation...429
- Micro Cleaving...430

Table of Contents

13. Silicon Wafer Cleaving System, Tools and General Accessories432-444

- Cleaving System...432-435
- General Supplies...436
- Adhesives...437
- Omni Grids...439
- Membrane and Gel Boxes...440-441
- Hand-held Micro & Mini Tools...438
- Wafer Tweezers...442-444

14. Histology and Light Microscopy446-610

- Reagents for Fixing, Dehydrating, Clearing and Staining...446-465
- Chart of Dyes and Stains for Histopathology...466-467
- Certified Dyes/Stains...468-471
- Staining Solutions...472-475
- **Prepared Staining Kits...476-491:** - *Bacterial, Fungal and Inclusion Body Stains - Stain for Blood and Hematological Elements - Bones and Calcium- Carbohydrate and Mucosubstance- Connective Tissue- Cytoplasmic Granule - Fat and Lipid- Mineral & Pigment- Neurological Tissue- Nuclear Stains- Papanicolaou, General & Misc*
- Embedding Media...492-495
- Aldehyde Control Systems...494
- **Tools and Gadgets for Histology Preparation...496-510:** - *Scalpels Blades and Knives...496-498 - Scissors and Probes...498-502 - Loops, Needles, Sterilizers and Spatulas...502-510 - Bone Rongeurs, Cutters, Shears, and Saws...508-512 - Forceps and Dissecting Kits...511*
- Adhesives and Mounting Media...512-517
- Staining Apparatus...518-526
- General Supplies...527-531
- Marker Pens...532-534
- Tissue Embedding and Processing Cassettes...540-545
- Cryo-Embedding...546-547
- Cytology Funnel Sample Chambers...548-549
- Embedding Supplies, Capsules, Molds, and Markers...550-555
- Slide Printer, Bar Code Scanner...556
- **Microscope Slides...558-571:** - *Plastic and Glass Microscope Slides...558-567 - Micro Cover Glasses and Cover Slips...568-571 - Microscope Slide Storage Boxes, Trays, and Holders...572-575 - Microscope Slide Mailers, Files, Drains, and Container...576-579*
- Microtome Blades, Holders and Supplies...580-583
- Tissue-Tek® Tissue Processor and Embedding System...584-586
- Microtome and Microtome/Cryostat...587-594
- Cyto centrifuge...595
- Tissue Stainer and Embedding Center...596-600
- CRYO JANE: Cryostat Section Preparation Aids...600-601
- Paraffin Embedding and Section Mounting...602-604
- Slide Warmers and Ovens/Incubators...604-606
- Pathscan IV Digital Histology Slide Scanner...606
- Slide, Cassette, and Tissue Block Storage...607-610

15. Antigen Retrieval612-616

- Antigen Retrievers...612-614
- Retriever Slides...614
- Buffers...614-616

16. Scanning Electron Microscope Supplies618-676

- Scintillators...618
- Specimen Mounts...619-624
- Forensic Kits...626-628
- SEM Specimen and FIB and STEM Sample Holders...629-638
- Portable Storage Containers and Mount Storage Boxes...637-638
- Colloidal Compounds and Conductive Adhesives...640-645
- Conductive Adhesives Tabs, Tapes, and Sheets...645-649
- WETSEM® Capsules for Hydrated SEM Samples...650-664
- SPM, AFM, SEM Calibration Standards...665-669
- MeX 3D Scanning Electron Microscope...670-675
- Scanning Electron Microscope Digital Images...676

NEW: Silicon Wafer Cleaving Systems, see pages 432-435

NEW: CRYOJANE, see pages 600-601

NEW: HistoPro® 200 see page 598

NEW: Tools and Supplies for Forensics, see page 626-628

Table of Contents

17. Cryo Supplies and Accessories678-698

- Cryo Chambers...678
- Cryo Accessories including aprons, gloves, tissue freezing medium, cryogen spray, and dewars ...679-680
- Cryo Vials, Tubes, Storage and Racks...680-684
- Freezer racks...685
- Cooling Chambers and Ice Baths...686-689
- Cryo Dewars and Flasks...690-691
- Freeze Substitution...693-693
- Dry Ice Makers...693
- Cryogenic Labels, Tags and Markers...694-698

18. DiATOME Diamond Knives700-716

- Manufacturing...701
- Characteristics of the DiATOME knives...701
- The different knife types and ordering information and their applications...702-703
- DiATOME ultra...704
- DiATOME ultra sonic...705
- DiATOME cryo...706
- DiATOME cryo 25...706
- DiATOME cryo immuno...706
- DiATOME trimtool 20 and trimtool 45...707
- DiATOME AFM, ultra and cryoPage...708
- DiATOME histo and histo jumbo...709
- DiATOME histo-cryo...709
- manipulator...710
- Special DiATOME Diamond Knife Programs...711
- DiATOME Services ...712-713
- DiATOME Unique Characteristics and Justifications ...713
- Diamond Knife Handling and Use Manual...714-716

NEW: DiATOME manipulator, see page 710

19. Photography: Film and Supplies718-755

- Kodak Film including Electron Microscopy Film...718
- Instant Films and Film Holders from Fujifilm...720
- Photographic Papers from Ilford...720
- Photographic Chemicals from Ilford and Kodak...720
- Darkroom Exhaust Fans and Louvers...722
- Mohr Automatic Film and Print Processor...723
- Developing Tanks, Film Racks, Tongs, Squeegees, and Dryers...724-727
- Cutters and Rotary Trimmers...728-729
- Easels and Enlargers...729-733
- Enlarging Focusing Aids, and Light Gathering Magnifiers...734
- Film Safes, Film Cleaner, and Static Eliminators...735
- Tapes, Sprays, and Adhesives for Photo Mounting...736-739
- Darkroom Timers, Safe Lights, and Light Boxes...740-743
- Dry Transfer Lettering Sheets...744-745
- Negative Envelopes, Film Sleeves, and CD Slewing...746-747
- File Cabinet Systems and Portable Storage Chests...746-749
- Scanning Electron Microscope Digital Images...749
- INFINITY Digital Microscope Cameras...750-754

NEW: INFINITY 3-3UR Research-Grade Microscopy Camera, see page 751

NEW: EMS High-End Medical Tweezers, see page 756-757

20. Tweezers, Dissecting Tools, Instruments, and Gadgets756-853

- **EMS's Tweezer Line...756-771:** - Medical Tweezers...756-757
- High Precisions and Ultra Fine Tweezers...758-762
- Thin and Long...762
- Ergonomic...763
- Flat Tip...764
- ESD Safe...765
- Ceramic and Ceramic Tipped...765
- General Purpose Tweezers...766
- Fiber and Fiber Tipped...767
- EMS Synthetic Fiber Tweezers...768
- Surface Mount and Optoelectric...769
- Wafer...770-771
- **Dumont Tweezers...772-797:** - Positive Action Standard and Biological...772-781
- Medical...782-784
- Medical Tweezers; Clamp Style...785
- Diamond Tipped...788
- Negative-Action Standard and Biological...785-788
- Straight Positive Action Electronic Grade...788-791
- Curved and Angled Positive Action, Electronic Grade...792-793
- Negative Action Style; Electronic Grade...793-794
- Mini, ESD, and Wafer Handling Tweezers...794-796
- Tweezer Sets and Boxes...797
- **Rubis Steel, Plastic, and Wafer Tweezers...797-809:** - High Tech Tweezers (Nano, Ion, Grip)/Plastic Tweezers and Tweezer Accessories

continued...

Table of Contents

20. Tweezers, Dissecting Tools, Instruments, and Gadgets (continued)

- **Dissecting Tools and Instruments...812-820:** - *Diamond Dissecting Scalpel Blade...812* - *MicroPoint Scissors, Micro Forceps, and Micro Dissecting...813-816* - *Forceps, Scissors, Needles, and Dissecting Kits...816-828* • Files, Calipers, Scribes, Burnishing Tools, Sharpening Stones...829-831 • Flexible Shaft Machine and Abrasive Wheels...831-832 • Vises, Clamps, Wrenches, Screwdrivers, Pliers, and Tool Kits...833-835 • Micro Manipulators and Probes...836 • Mini-Tools, Pin Vise, Diamond Scribing Tools, and Spatulas...837-845 • Forceps Warmer, Heaters, Demagnetizer and Third Hand...846 • Timers, pH, Counters, Light Meters, Thermometers, Microwave Detectors...847 • Smart Tweezers, Vacuum Pick-up, and Pen Vac...852 • MicroSample Manipulation and Measurements: Tools...840-843

21. Illuminators, Magnifiers, Microscopes and Graticules854-930

- Compound Light Microscopes: Upright and Inverted...854-855 • Digital Microscopes; EVOS...856-861 • Microscopes for Educational and Clinical Uses...862-864 • Polarized and Metallurgical Light Microscopes...868-869
- Stereo Microscopes...865-868 • Digital Hand Held Microscope...870-877
- Mobile Device Microscope...878-879 • NightSea, Fluorescence Adapters, Lights...880-883 • Head Band Magnifiers, Loupes, Pocket Microscope, and Stereo Viewers...886-890 • Illuminated Magnifiers including Magnilite...890-894
- Measuring Magnifiers, Scales, and Focusing Eyepieces...895 • Microscope Graticules and Stage Micrometers...896-899 • Standard Reticles...900-902
- Eyepiece Graticules...903-914 • Stage Graticules...915-921
- Optical Resolution Charts, Ronchi Rulings and Grids...922-923
- Counting Chambers...924-930

22. Air and Environmental Sampling Tools..... 932-936

- Air and Environmental Sampling Tools / Equipment

23. Cleaning Solutions and Accessories.....938-954

- LAB-AIR System; Electronic Air Purifiers...938 • Laboratory Cleaning Solutions and Supplies...939-941 • Ultrasonic Benchtop Cleaners...942-943
- Duster Products and Pressure Sprayers...945-946 • Static Eliminators...947
- Laboratory Gloves...948-950 • Cloths, Tissue, Mini-Vac, Metal Polish, and Applicators...951-954

24. Vacuum Pumps & Evaporation Supplies.....956-962

- Vacuum Pumps...956-957 • Metal Wire, Foils, Baskets, and Boats...958-959
- Carbon and Graphite for Evaporation...960-961 • Sputter Coater Targets...962

25. Cell Stretcher964-968

- Computer Controlled Cell Deforming - Cell Stretcher

26. Vibration Isolation970-978

- Vibration Tables and Isolation • Isolation Platforms

NEW: Rotary Diamond Micro-Engraver Pen, see page 838

NEW: EVOS Digital Microscopes, see pages 856-861

NEW MODELS: Branson Ultrasonic Benchtop Cleaners, see pages 942-943

Table of Contents

NEW MODELS:
Vibrating Microtomes,
see pages 994-997

NEW: Turbo-Pumped
Sputter/Carbon Coater
for Glove Box, see
pages 1026-1029

NEW: AirChek® Badges,
see page 1120

27. Equipment and Accessories980-1100

- EMS-820 Precision Pulsed Laboratory Microwave Oven...980-981
- Supplies for the EMS 820 Laboratory Microwave Oven...981-982
- EMS 9000 Microwave Oven and Accessories...984-986
- EMS LYNX II Automated Tissue Processor...987-989
- EMS Oscillating Tissue Slicers...990-993
- Vibrating Microtomes...994-997
- Rapid Immersion Freezer...998-1000
- Cooling Stage for Scanning Electron Microscopes...1004-1105
- Thermocirculator and Recirculating Heater / Chillers...1006-1007
- Coaters and Coater Targets Replacement Parts...1008-1043
- “Mini” Sputter Coater Glow Discharge...1014-1015
- Rotary Pumped Carbon and Sputter Coating System...1018-1021
- Turbo-Pumped Sputter and Carbon Coater...1022-1025
- Turbo-Pumped Sputter/Carbon Coater for Glove Box...1026-1029
- Large Chamber Sputter Coaters...1030-1033
- Dual Head Turbo-Pumped Sputter Coater...1040-1043
- Plasma Ashers For Ashing, Etching, and Cleaning...1056-1057
- Freeze Drier and Turbo Freeze Drier...1044-1047
- Critical Point Driers...1048-1055
- Cryo-SEM Preparation System...1058-1063
- Desiccators and Desiccants...1064-1071
- Centrifuges, Tubes, and Racks...1072-1074
- Stirrers, Stirring Hotplates, and Digital Hotplates...1074-1080
- Dri Baths, Modular Blocks, and Fixed Baths...1081-1082
- Stirring Bars, Stirring Rods, and Hand Mixers...1083-1085
- Vortex Mixers, Microplate Mixers, and Magnetic Stirrers...1086-1087
- Tissue Rotators, Mixer Vortex, and Rotator/Rocker...1088-1093
- Oven/Incubator, Vacuum Ovens, and Incubators...1094-1097
- Cooling Chambers...1098-1099
- Freeze Substitution...1100
- Ultraviolet Lamps and Lab...1100
- Jacks...1100

28. Safety and Lab Organization1102-1124

- Spill Control, Stabilizers, and Cleanup...1102-1103
- Hand Care, Cleansers, and Germicidal Solutions...1106-1107
- Lab Organizers...1108-1111
- Lab Carts, Shelves, and Trays...1111-1112
- Drying Racks, Holders, Carriers, Turntables...1120-1121
- Lead Shields, Surface Protectors, Hot Mitts, and Wash Bottles...1122-1123
- Air Purifiers...1124

29. Labels, Tapes, Dispensers1126-1144

- Histology and Microscope Slide Labels...1126-1127
- Temperature and Specialty Tapes & Dispensers...1128-1138
- Tough-Tags Polyester Labels...1131-1137

30. Starter EM Kits1146-1147

- Kits for TEM Preparation...1146-1147
- CleanKit for SEM, TEM and Microtomy...1147

Technical Tips, Data Sheets1148-1151

- Technical Tips and Recommended Articles Listing...1148-1150
- Technical Data Sheets Listing...1151

ABOUT OUR CHEMICALS...

- Storage conditions of EACH chemical are noted in the box left of the catalog number. CODE: RT = Room Temperature
- For increased shelf life of room temperature stored chemicals, see equipment section for our complete line of Desiccator Cabinets. All chemicals must be kept away from direct sunlight.
- All specific gravities, unless otherwise specified are measured at water = 1
- All of the EMS stains are certified.
- For a chart of uses and applications of our Dyes & Stains, see pages 466-467
- EM Grade = ACS Reagent

➤ 4-Acetamido-4'-Isothiocyanato-2, 2'-Stilbenedisulfonic Acid Disodium Salt Hydrate

(Disodium 4 acetamido-4'-isothiocyanato-stilben-2, 2'-disulfonate; SITS)

$C_{17}H_{12}N_2O_7S_3Na_2$ F.W. 498.50 CAS #1023-76-8

SITS has been used as a vital stain, as a label for immunostaining, and as a neuronal tracer. SITS is also a non-penetrating fluorescent marker for erythrocyte membranes which acts as a potent inhibitor of anion transport. For more information related to the preparation and characterization of SITS, please refer to: Jakobsen, P. and Horobin, Richard W. (1989). Stain Technology, Vol.64, No.6 pg.301-313.

RT	10020		450ml
RT	10021		4x450ml

TECHNICAL TIP

Acetonitrile Is A Better And Safer Dehydrating Solvent For Transmission Electron Microscopy.

Propylene Oxide and Ethanol are commonly used dehydrating solvents for processing tissues for electron microscopy. But both solvents, however, have some undesirable properties: they are highly flammable, volatile, toxic and potentially carcinogenic. Acetonitrile is a direct substitute for ethanol and propylene oxide; furthermore, it is safer to use and requires shorter dehydration times. It is freely miscible with water, alcohol, acetone and epoxy resin and it does not interfere with epoxy polymerization. Harold H. Edwards, Yu-Yan Yeh, Betty I. Tarnowsky, and Gregory R. Schonbaum. (1992). Acetonitrile as a Substitute for Ethanol/ Propylene Oxide in Tissue Processing for Transmission Electron Microscopy: Comparison of Fine Structure and Lipid Solubility in Mouse Liver, Kidney, and Intestine. Microsc. Res. and Technique Vol 21, pg.39-50

ADHESIVES AND MOUNTANTS

➤ Acrytol Mounting Media

Acrytol is a rapid-drying mounting medium which enables slides to be screened immediately. It has a low viscosity, allowing the medium to flow easily. It also prevents air bubbles from becoming trapped.

Acrytol contains an antioxidant to inhibit stain fading and prevent the formulation of annual rings. A thin coating of Acrytol is all that is needed to adhere a coverglass to a microscope slide.

It is soluble in xylene, toluene and most xylene substitutes.

RT 13518 Acrytol Mounting Medium Pint

➤ Biobond; Tissue Section Adhesive

Having prepared the tissue specimen for immunolabeling it is then imperative to perform the incubations with a protocol designed to maximize the specific signal and minimize the background. Some incubation conditions may cause the tissue sections to be removed from the glass slide. Typical tissue section adhesives such as poly-L-lysine, Elmer's glue, chrome alum, etc... are not suitable for use with immunogold labeling because of the increased background caused by the attraction of gold particles to the adhesive on the slide. Furthermore, the surface of glass slides is uneven and it is activated by the silicon tetrahedral structure. It, therefore, provides active sites for absorption of proteins or reactions with chemicals and reagents. Thus, it is important to minimize this possibility by coating the surface with a material that is of low reactivity towards reagents. BIOBOND produces a very strong adhesion between the glass slide and the tissue section for subsequent incubations, as well as a protective layer to minimize the interaction between the charged glass surface with the reagents. BIOBOND is suitable for all kinds of tissue specimens including but not limited to paraffin wax, resin sections, cell smears, cytopins and cryostat sections. BIOBOND is supplied in a 20ml vial, which is sufficient to coat at least 1000 slides.

0-5°C 71304 Biobond 20 ml

➤ Aron Alpha®-Ethyl Ultra Speed Adhesive (Quickbond)

Aron Alpha®, type 200 is a one component, room temperature curing structural adhesive composed mainly of alpha cyanoacrylate monomer in a liquid state. When this monomer is applied in a single thin coating to the bonding surface of the material, it instantly solidifies through polymerization to produce an extra high strength, colorless bond with virtually no shrinkage. Aron Alpha bonds almost any non-porous material except fluorocarbons. Solvents such as gasoline, propane, oil, alcohol or benzene do not affect resinified Aron Alpha. The adhesive itself contains no solvents. The Aron Alpha bond has a high tensile strength but a relatively lower shear strength. Aron Alpha is not a gap filler. Good surface contact is essential. Meets MIL-A-46050 C. Ideal for the bonding of tissues to a tissue-slicer, tissue block or to a blank block etc.

CoreDish™

Multiple Biopsy Containers Half Prefilled with 10% Formalin

We are proud to offer a multi-compartment container in the shape of a dish and half prefilled with 10% Neutral buffered Formalin, for holding and transporting biopsies. It is supplied with a leak-proof closure with O-ring ensuring total protection of contents. It conforms to OSHA directives.

For more information, see page 42. >>>>>

ADHESIVES AND MOUNTANTS**➤ Biomeda™ Substitutes****➤ Fluoro-Gel (A Direct Substitute for BioMeda™ Gel-Mount)**

Fluoro-Gel is a water based mounting medium designed for the permanent mounting of fluorescent stained tissues, which may either be damaged or soluble in organic solvents, such as xylene or toluene. This unique formula prevents rapid photo-bleaching of FITC, Texas Red, AMCA, Cy2, Cy3, Cy5, Alexa Fluoro 488, Alexa Fluoro 594, Green Fluorescent Protein (GFP), Tetramethylrhodamine, Redox, Phycoerythrin (RP-E), Phycocyanin (PC), and Allophycocyanin (APC). The fluorescence is retained during prolonged storage at 4°C in the dark.

Application: Immunofluorescence, confocal microscope.

For our original formula:

0-5°C	17985-10	Fluoro-Gel, (with Tris Buffer)	20 ml
0-5°C	17985-11	Fluoro-Gel, (with Tris Buffer)	100 ml

For a more stable pH:

0-5°C	17985-30	Fluoro-Gel, (with TES Buffer)	20 ml
0-5°C	17985-31	Fluoro-Gel, (with TES Buffer)	100 ml
0-5°C	17985-40	Fluoro-Gel, (with PIPE Buffer)	20 ml
0-5°C	17985-41	Fluoro-Gel, (with PIPE Buffer)	100 ml

➤ Fluoro-Gel II Mounting Medium

Fluoro-Gel II is similar to Fluoro-Gel, but Fluoro-Gel II contains DAPI (4, 6-diamino-2-phenylindole), which is a counter stain for DNA. This product is to be used in in situ hybridization techniques or other methods where fluorescence of DNA staining is required. DAPI excites at 360 nm and emits at 460 nm, producing blue fluorescence. RNA is also stained with DAPI.

Application: Immunofluorescence, confocal microscopy.

0-5°C	17985-50	Fluoro-Gel II	20 ml
0-5°C	17985-51	Fluoro-Gel II	100 ml

➤ Fluoro-Gel III Mounting Medium

Fluoro-Gel III Mounting Medium is similar to Fluoro-Gel, however, Fluoro-Gel III with the addition of PI (Propidium Iodide) which is a counterstain for DNA, makes this a unique mounting medium, which prevents rapid photobleaching of FITC, Texas Red, AMCA, Cy2, Cy3, Cy5, Alexa Fluoro 488, Alexa Fluoro 594, Green Fluorescent protein (GFP), Tetramethylrhodamine, Redox, Phycoerythrin (RP-E), Phycocyanin (PC), and Allophycocyanin (APC). The fluorescence is retained during prolonged storage at 4°C in the dark. This medium does not contain Phnylenediamine, which destroys immunofluorescence of Cy dyes, RP-E, PC, and APC. This product is to be used in in situ hybridization techniques or other method where fluorescence of DNA staining is required. PI excites at 535 nm, emits at 615 nm, producing a red fluorescence. RNA is also stained with PI.

Application: Immunofluorescence, confocal microscope

0-5°C	17985-60	Fluoro-Gel III	20 ml
0-5°C	17985-61	Fluoro-Gel III	100 ml

**➤ Fluoro Gel with DABCO™**

Fluoro Gel with antifading agent 1, 4-Diazobicyclo-(2,2,2-octane (DABCO™) is an aqueous mounting medium for preserving fluorescence of tissue and cell smears. This unique formula prevents rapid photobleaching of FITC, Texas Red, AMCA, Alexa fluoro 488, Alexa fluoro 594, Cy dyes, tetramethyl rhodamine, and Redox. The fluorescence is retained during prolonged storage at 4°C in the dark. Refractive Index: 1.366 +/- 0.002

Application: Immunofluorescence, confocal microscopy.

Reagent: Ready to use mounting medium with anti-fading agent

Storage: 2-8°C is recommended

2-8°C	17985-01	Fluoro Gel with DABCO	20 ml
2-8°C	17985-02	Fluoro Gel with DABCO	100 ml
2-8°C	17985-03	Fluoro Gel with DABCO	250 ml
2-8°C	17985-04	Fluoro Gel with DABCO	1000 ml

➤ Fluoro-Gel with Anti-Fading Mounting Medium

Fluoro-Gel Mounting Medium with a strong anti-fading agent 1,4-phenylenediamine is an aqueous mounting medium for preserving fluorescence of tissue and cell smears. This unique formula preserves rapid photobleaching of FITC, Texas Red, AMCA, Cy2, Cy3, Cy5, Alexa Fluoro 388, Alexa Fluoro 594 tetramethyl rhodamine, and Redox. The fluorescence is retained during prolong storage at 4°C in the dark. This medium contains Phnylenediamine and is not suitable for immunofluorescence of Cy dyes, Phycoerythrin (R-PR) phycocyanin (PC), and allophycocyanin (APC). Refractive index: 1.366 +/- 0.002

Application: Immuno-fluorescence, confocal microscopy.

Reagent: Prepared from TRIS buffer. Ready-to-use mounting medium with dark coffee color, this is normal, and does not interfere with immuno-fluorescence

Storage: 2 – 8°C is recommended. Protect from light. DO NOT FREEZE.

	Cat. #	Description	Qty
2-8°C	17983-20	Fluoro-Gel with Anti-Fading Agent	20 ml
2-8°C	17983-100	Fluoro-Gel with Anti-Fading Agent	100 ml

➤ In-Situ Mount (A Direct Substitute for BioMeda™ Situ Mount)

In-Situ mounting medium is a unique mounting medium designed for permanent preservation of tissue sections and cell smear with alkaline phosphatase chromogens like NBT/BCIP and red stain.

Application: Mounting tissues and cell smears.

0-5°C	17988-30	In-Situ Mount	30 ml

*The names *BioMeda Gel Mount*, *Crystal Mount*, *Clarion*, *Situ Mount* are all owned by BioMeda Corporation

ADHESIVES AND MOUNTANTS

➤ Biomeda™ Substitutes (continued)

➤ Clear-Mount (A Direct Substitute for BioMeda™ Crystal Mount)

Clear-Mount is a water based mounting medium designed for the permanent mounting of hydrated tissues, which may be damaged by organic solvents. Such samples include cell smears, with peroxidase and alkaline phosphatase chromogens.

This mounting medium preserves Fast Red, Aminoethylcarbazole (AEC), NBT/BCIP, INT/BCIP chromogens and is also compatible with counter-stain such as Hematoxylin and Nuclear Fast Red. It is also suitable for chromogens like DAB and DAB with Nickel and Cobalt. It is not compatible with H & E staining.

Application: Mounting of Immunohisto slides.

For our original formula:

For a more stable pH:

0-5°C	17985-12	Clear-Mount, (with Tris Buffer)	30 ml	0-5°C	17985-16	Clear-Mount, (with PIPE Buffer)	30 ml
0-5°C	17985-15	Clear-Mount, (with Tris Buffer)	250 ml	0-5°C	17985-17	Clear-Mount, (with PIPE Buffer)	100 ml

➤ Limonene-Mount (A Direct Substitute for BioMeda™ Clarion Mount)

This mounting medium is made with limonene, a natural product from orange peels. It preserves tissues and cell smears that can be dehydrated with organic solvents in immunohistochemistry, e.g. DAB and DAB with nickel or cobalt. Our Limonene-Mount also works well with alkaline phosphatase chromogens, and organic solvent resistant Supper Fast Red. It is also a good choice for mounting H & E stained slides.

Application: Mounting tissues and cell smears.

0-5°C	17987-01	Limonene-Mount	100 ml
0-5°C	17987-06	Limonene-Mount	6x100 ml/bx
0-5°C	17987-25	Limonene-Mount	250 ml

➤ EMS-Mount

EMS-Mount is a non-permanent, low viscosity aqueous mounting medium designed for mounting of tissue sections and cell smears with peroxidase and alkaline phosphatase chromogens that cannot be dehydrated with organic solvents. This mounting medium preserves Fast red, Aminoethylcarbazole (AEC), BCIP/NBT, BCIP/INT chromogens and is also compatible with counterstain like Hematoxylin and Nuclear fast red (NFR). It is also suitable for chromogens like DAB and DAB with nickel and cobalt. (It is not compatible with H and E staining). Refractive Index: 1.372 +/- 0.002

Application: Mounting of chromogens that cannot be dehydrated with organic solvents.

Reagent: Ready to use mounting medium

Storage: 2-8°C is recommended

2-8°C	17985-05	EMS-Mount	30 ml
2-8°C	17985-06	EMS-Mount	100 ml
2-8°C	17985-07	EMS-Mount	250 ml
2-8°C	17985-08	EMS-Mount	1000 ml

➤ EMS Shield Mount

EMS Shield Mount is an aqueous non-permanent, low viscosity mounting medium for immunofluorescence. This unique formula prevents rapid photobleaching of FITC, Texas Red, AMCA, Cy2, Cy3, Cy5, Alexa fluoro 488, Alexa fluoro 594, Green fluorescent protein (GFP), tetramethyl rhodamine and Redox. The fluorescence is retained during storage at 4°C in the dark. This medium does not contain phenylenediamine, which destroys immunofluorescence of Cy dyes. Refractive Index : 1.380 +/- 0.002

Application: Immunofluorescence, confocal microscopy.

Reagent: Ready to use mounting medium for Immunofluorescence.

Storage: 2-8°C is recommended

2-8°C	17985-09	EMS Shield Mount	30 ml
2-8°C	17985-100	EMS Shield Mount	100 ml

➤ EMS Shield Mount with Anti Fading

EMS Shield Mount with antifading agent 1, 4-Diazobicyclo-(2,2,2-octane (DABCO™) is an aqueous non-permanent, low viscosity mounting medium for immunofluorescence. This unique formula prevents rapid photobleaching of FITC, Texas Red, AMCA, Cy2, Cy3, Cy5, Alexa fluoro 488, Alexa fluoro 594, Green fluorescent protein (GFP), tetramethyl rhodamine and Redox. The fluorescence is retained during storage at 4°C in the dark. This medium does not contain phenylenediamine, which destroys immunofluorescence of Cy dyes. Refractive Index: 1.382 +/- 0.002

Application: Immunofluorescence, confocal microscopy.

Reagent: Ready to use mounting medium for Immunofluorescence.

Storage: 2-8°C is recommended

2-8°C	17985-150	EMS Shield Mount with DABCO™	30 ml
2-8°C	17985-200	EMS Shield Mount with DABCO™	100 ml

➤ Biomount™

Some mounting media oxidize rapidly upon exposure to air, forming carboxyl groups. This can be more pronounced when sections have been cleared in a solution containing aldehyde. It is sometimes observed that the immunogold/silver signal fades after a few weeks, or even in a shorter time, from sections that have been mounted with these media under cover slips. The silver is still present, but has formed translucent silver carboxylate salts. Visibility can be retrieved by removing the cover slip and washing in xylene and then immersing the slide in photographic developer, but this is a tedious procedure. BIOMOUNT is a specially formulated mounting medium that reduces fading of immunogold/silver signals in sections on glass slides. It is suitable for resins as well as wax embedded sections of tissue.

ADHESIVES AND MOUNTANTS

➤ Certified Conductive Adhesives

EMS introduces a new reliable line of conductive adhesives which are certified by the Bureau Veritas Quality International. **Quality Standards:** ISO 9001; EN29001; ANSI/ASQC Q91

➤ Silver Conductive 18DB70X

Silver Conductive Coating 18DB70X is a direct substitute for Silver Conductive Fluid 416, which is no longer available. This material was specially formulated for use in geographic areas that demand the use of low VOC (Volatile Organic Compounds) products. It provides low ohms at very thin dry film thickness on almost any surface, and exhibits excellent long term shielding and grounding properties.

Typical Properties:

■ **As supplied (Liquid)**

PigmentSilver
 BinderAcrylic
 Solids content by weight50.8% ± 5%
 Density13.9 lb/gal (1.67kg/l)

■ **As applied:**

VOC0.5 lb/gal (59.6g/l)
 DiluentAcetone (1:1 ratio by volume)

Drying time

5 minutes air dry to touch/10 minutes to handle then 5 minutes at 180°–225°F (82° – 107°C) or air cure for 24 hrs.

■ **When dried:**

Service temperature300°F (150°C)
 Sheet resistance0.015 ohms/sq. in./mil (25µm)
 Attenuation.....75 dB

RT 12684-15 Silver Conductive Coating 15 g

➤ Silver Conductive Adhesive Paste 478SS

Our adhesive 478SS is a conductive, silver-based polymer which is used for thick film coatings where liquid silver is not an option. Once cured, it offers a very high Tg (glass transition temperature) 153°F (67°C) to prevent blocking, and offers superior adhesion to polyester film. Adhesive 478SS can be cured at 200°F (93°C) within 15 minutes. Higher temperatures will reduce the time needed to achieve a final cure.

■ **Typical Properties (as supplied):**

PigmentSilver
 BinderPolyester
 ColorSilver
 DiluentCarbitol Acetate
 ConsistencyPaste (13,000-28,000 cps)
 Solid content.....72.5-75.5%
 Flash point230°F (110°C)
 Shelf life6 months under original seal

■ **Typical Properties (as cured):**

ColorSilver
 Sheet Resistance ..<0.025 ohm/square inch @1 mil

RT 12685-25 Silver Adhesive 478SS Thinner 25ml

➤ Silver Conductive Adhesive 503

A High Temperature Conductive Paint

Silver paint 503 is a flexible, high temperature conductive material designed for a wide variety of uses, and adheres to most substrates.

Advantages:

- Withstands ambient temperatures of over 500°F (260°C)
- Remains flexible over temperature range of -40°F to 500°F
- Highly conductive – good adhesion to substrates
- Dries at room temperature
- Ready to use – easy to apply

■ **Typical Properties (as supplied):**

PigmentSpecially Treated Silver 56%
 Binder.....Fluoroelastomer
 CarrierMethyl Isobutyl Ketone (MIBK)
 ColorSilver - Consistency: fluid
 Density.....14.6 lbs/gal (1.75kg/L)
 Solid content by volume18%
 Weight solids62%
 Viscosity.....1700cps

Shelf life for this product is two years under original seal. Store in cool place

■ **Typical Properties (as cured):**

Color.....Silver
 Service temperature525°F (275°C)
 Sheet resistance0.05 ohms/sq. in./1 mil dry film

Drying

Air dry coated part approximately 10 minutes (depending on humidity) before carrying out resistance checks. Air dry to touch in 30 seconds and it is ready for use in 2 minutes.

RT 12686-15 Silver Conductive Adhesive 503 15g

➤ Carbon Conductive Adhesive 502

A High Temperature Conductive Paint

Conductive Adhesive 502 is a combination of specially processed carbon particles in a fluoroelastomer resin system designed to provide high resistance values. In its cured form, it exhibits both high and low temperature flexibility and moisture resistance.

Advantages:

- Withstands ambient temperatures of over 500°F (260°C)
- Remains flexible over temperature range of -40°F to over 500°F (260°C)
- Cures at room temperature
- Good adhesion to a variety of substrate
- Excellent oxidation resistance
- Ready to use - easy to apply

■ **Typical Properties (as supplied)**

PigmentSpecially Processed Carbon
 Binder.....Fluoroelastomer
 DiluentMethylEthylKetone (MEK)
 ColorBlack
 ConsistencyFluid
 Density7.2lbs/gal (0.87 kg/l)
 Solid content by weight13%
 Viscosity600 ± 200 mPas
 (Brookfield RVT @ 20rpm)
 Flash point.....23°F (-5°C)

Shelf life for this product is one year under original seal. Store in cool place

■ **Typical Properties (as cured)**

ColorBlack
 Maximum service
 Temperature:525°F (275°C)
 Sheet resistance.....130 ± 100 ohms/sq.in./1 mil dry film

Drying

Air drying of the product is adequate for most applications. To assure complete solvent loss, the coating can be baked for 15 minutes at 302°F (150°C)

RT 12684-30 Carbon Conductive Paint 502 30 g

ADHESIVES AND MOUNTANTS

➤ Certified Conductive Adhesives (cont.)

➤ Graphite Conductive Adhesive 154

Adhesive 154 is an easy-to-apply resistance coating designed to provide high lubricity, conductivity, and excellent release properties to many non-conductive substrates, including most plastics. It is made from a dispersion of colloidal graphite in an isopropanol base which quickly air-dries, forms a uniform thin film adherent layer. Air dries to touch in 5 minutes and is ready for use in 30 minutes. After air drying, bake for 5 minutes at 167°F (75°C) to achieve optimum coating qualities in a shorter curing cycle.

■ Typical Properties (as supplied)

PigmentGraphite
 ColorBlack
 BinderCellulosic resin
 CarrierIsopropanol

➤ Colloidal Compounds and Conductive Adhesives

➤ A) Silver Adhesives

Liquid; Colloidal Silver: 1-Methoxy-2-propanol base. Fast drying. Average grain size less than 1 µm and Silver content is 60%. Sheet resistance is 0.02 ohm per square inch @ 1 mil thickness. Comes with a brush attached to the cap. Service temperature is 30 minutes at 200°C.

RT 12630 Silver Liquid 15g

RT 12641 Colloidal Silver Extender 25ml

Paste; Colloidal Silver: Clear Lacquer base. Thick base — ideal for non-flowing requirements. Easily applied with micro-spatula or wooden toothpick. Particle size ranging from 0.4–1 µm. 80% are less than 1 µm. Cure in 16–20 hours at room temperature or 30 minutes at 125–150°C

RT 12640 Silver Paste 25g

RT 12641 Colloidal Silver Extender 25ml

Wooden Picks, See Specimen Prep. page 366 >>>>

➤ B) Graphite Adhesives

Water Base: Flat surface texture. The average flake size is 1µm. Service temperature: 200°C.

RT 12650 Graphite, Water base 50g

Isopropanol base: Flat surface texture. The average flake size is 1µm. Service temperature is 65°C.

RT 12660 Graphite, Isopropanol base 30g

RT 12661 Graphite Extender 30ml

➤ C) CCC Carbon Adhesive

An electrically Carbon Conductive Cement for specimen mounting in all SEM work. After drying of the cement, immediate investigation of conductive specimens is possible. Non-conductive specimens need only to be coated with carbon or metal. Thinner is available if the cement viscosity is too thick.

RT 12664 CCC Adhesive 30g

RT 12665 CCC Thinner 30ml

➤ D) Leit-C-Plast

A special adhesive with very high electrical conductivity and permanent plasticity for the preparation of big specimens in SEM work.

RT 12667 Leit-C-Plast 15g

➤ E) Tempfix Adhesive

A thermoplastic adhesive for mounting powder specimens and small particles for SEM. It does not contain any solvents and it is stable in high vacuum. It is not sticky at room temperature but becomes adhesive at 40°C and melts at 120°C. Tempfix may also be used as an embedding medium.

RT 12668 Tempfix Adhesive Set each

TECHNICAL TIP

Mounting Powders, Granules, And Fibers

The thermoplastic adhesive, Tempfix (EMS Cat.# 12668), is an excellent smooth embedding medium for stabilizing powders, granules and fibers. Tempfix becomes sticky at 40°C and melts at 120°C. To use: spread a thin layer over a sample support disc and allow to cool. The sample is then sprinkled on the hard surface and the temperature is raised to 40°C for 30-60 seconds and allowed to cool again to room temperature. Excess particles are then removed by gentle brushing or compressed air. At room temperature Tempfix has a smooth featureless surface that allows specimens to be imaged and clearly distinguished from the support media. Silvio Marchese-Ragona, Renee Jobe, Aleda Jacobs. "AFM Preparation Techniques for Bulk and Powder Samples". EMSA Bulletin 22:3 Nov., 1992.

ADHESIVES AND MOUNTANTS

► Colloidal Compounds and Conductive Adhesives (cont.)

► F) EMS Conductive Epoxy Gold- Paste

EMS one part Epoxy Gold Paste is a gold-filled conductive bonding, exhibiting high electrical conductivity and bond strength. This Gold Paste is used in preference to silver-epoxy or other silver preparations to avoid silver migration problems, or when a higher signal is required.

This Gold Paste is well suited to all SEM work, and it bonds well to alumina ceramic substrate, phenolic circuit boards, and transistor headers. It is also useful in a variety of applications in solid state and hybrid circuits including attachment, bonding semiconductor devices, heat sinks, capacitor chips

Properties of Epoxy Gold-Paste:

Composition: 88% Gold System: One-part epoxy

Viscosity: 175,000 cps

Pot Life (25°C): 6 months

Cure: 15 hrs. @150°C, or 1 hr. @ 150°C

plus 2 hrs. @200°C

Elec. Resist (Ohm-cm): 4×10^4

Bond Shear Strength: 1000 psi

Outgassing (postcure): 0.70% 1000 hrs @125°C

Thinner: Butyl carbitol acetate or butyl cellosolve acetate

Serv. Temp. Range: -65°C to +200°C

RT	12640-01	Gold Epoxy Paste	2 g
RT	12685-26	Gold Thinner (Butyl Carbitol Acetate)	25 ml

► G) EMS Conductive Gold-Paste

This EMS Conductive Gold-Paste is a one part adhesive. Fast drying – dries at room temperature. Maximum service temperature is 65°C. This adhesive is not for permanent use, useful for testing and temporary work where a high signal is required from the adhesive.

Gold content is ~75%, including sphere sizes < 2 µm, and flake size <10 µm, in organic binders and a solvent. Keep refrigerated for good shelf life.

Sheet resistance is 0.02 to 0.05 ohm-cm @ 1 mil thickness.

RT	12642	EMS Conductive Gold-Paste	2 gm
RT	12643	Conductive Gold-Paste Extender	25ml

► Electrically/Thermally Conductive Adhesives (ETC/TC)

We offer a broad line of electrically and thermally conductive materials, which provide solutions to a variety of electrical, electronic, and thermal design problems throughout the laboratories and industries.

* Tested according to ASTM D1002-94. This is a standard test method for determining the shear strength of a single lap-joint metal coupons in tension loading.

Application Notes: Surface Preparation: All surfaces must be free of oil, dirt, corrosives, oxides, paint or other foreign matter.

Mixing: Two-component products should be mixed thoroughly to a uniform consistency. Preheat high viscosity epoxies to approximately 125°F to facilitate pouring and mixing.

Application: In most cases, the adhesive should be applied to both surfaces maintaining a glue line of less than 10 mils (25.4µm). After assembling the parts, pressure should be applied to the assembly to prevent warpage and reduce air entrapment. Refer to curing guidelines in above property chart.

RT	50380-525	ETC Bond 525—Electrically conductive, silver filled, one-part epoxy paste. Good chemical resistance and mechanical strength to 340°F.	5g

ADHESIVES AND MOUNTANTS

➤ EPO-TEK – Epoxy Conductive Adhesive

➤ EPO-TEK® EE129-4

Epo-Tek® EE129-4 is a room temperature cure, silver-filled epoxy, designed for making electrical connection in SEM mounting sample, circuit assembly, semiconductor, LCD applications.

Epo-Tek® EE129-4 comes with two parts: A & B and mixing ratio is 1:1. Shelf life is one year at room temperature

Works well with surface like Au, Ag-Pd, Cu, brass, Kovar, stainless steel, as well as ceramic, PCB, solder masks, most plastic and glasses

- Low temperature cures capable from 23°C to 80°C.
- Suggested for cryogenic cooling applications
- Works well in SEM, microscopy applications
- Works well in aerospace hybrid circuits and ITO electrodes in LCD packaging and assembly
- Reasonable pot life of 3 hours, allows for preparation.
- Smooth thixotropic paste allows for many way of application

Maximum Bond Line Cure Schedules:

100°C.....	15 minutes	23°C.....	24 hours
80°C.....	1 hour	Pot Life.....	3 hours
70°C.....	2 hours		

Typical Properties (to be used as a guide only, not a specification)

Physical Properties:	
Color:	Part A – silver; Part B – silver
Consistency:	Smooth, thixotropic – 4000 cPs
Viscosity (@ 100 RPM / 23°C):	2,000 – 4000 cPs
Thixotropic Index:	4.6
Glass Transition Temp (Tg):	≥ 45°C (Dynamic cure 20 – 200°C / ISO 25 Min; Ramp -10 – 200°C @20°C/Min)
Coefficient of Thermal Expansion (CTE):	Below Tg: 30 x 10 ⁻⁶ in/in/°C Above Tg: 227 x 10 ⁻⁶ in/in/°C
Shore D Hardness:	63
Lap Shear Strength @ 23°C:	1,110 psi
Die Shear Strength @ 23°C:	≥ 5 kg / 1,700 psi
Weight Loss:	@200°C: 0.18%; @250°C: 0.54%; @300°C: 2.06%
Degradation Temp (TGA):	303°C
Operating Temp:	Continuous: -55°C to 150°C Intermittent: -55°C to 250°C
Storage Modulus @ 23°C:	156, 318 psi
Ion:	Cl ⁻ 223 ppm; Na ⁺ 26 ppm NH ₄ ⁺ 22 ppm; K ⁺ 12 ppm
Particle Size:	≤ 45 microns
Electrical Properties:	
Volume Resistivity @ 23°C:	≤ 0.0003 Ohm-cm
Volume Resistivity @ 23°C (23°C/24 hour cure):	0.01 Ohm-cm
Thermal Properties	
Thermal Conductivity:	1.60 W/mK

➤ EPO-TEK® H20E

Epo-Tek® H20E is a two component, 100% solid silver-filled epoxy system, silver-resin paste and liquid hardener, mixing ratio is 1:1.

- Epo-Tek H22E features high thermal conductivity, and is very well suited for extensive high temperature applications (300 – 400°C)
- Epo-Tek H20E is also a conductive adhesive of choice for old or new applications.
- Its applications include: chip bonding and electronic bonding as well as SEM mounting.
- H20E contains no solvents and will not outgas.
- When cured, H20E is resistant to solvents, resin and moisture
- Long Pot life (2½ days)
- Shelf life is one year when store at 23°C

Maximum Bond Line Cure Schedules:

175°C.....	15 minutes	120°C.....	2 hours
150°C.....	1 hour	80°C.....	24 hours

Typical Properties (to be used as a guide only, not a specification)

Physical Properties:	
Color:	Part A – silver; Part B – silver
Consistency:	Smooth, thixotropic
Viscosity (@ 100 RPM / 23°C):	2,200 – 3,200 cPs
Thixotropic Index:	3.69
Glass Transition Temp (Tg):	≥ 80°C (Dynamic cure 20 – 200°C / ISO 25 Min; Ramp -10 – 200°C @20°C/Min)
Coefficient of Thermal Expansion (CTE):	Below Tg: 31 x 10 ⁻⁶ in/in/°C Above Tg: 158 x 10 ⁻⁶ in/in/°C
Shore D Hardness:	75
Lap Shear Strength @ 23°C:	1,475 psi
Die Shear Strength @ 23°C:	≥ 5 kg / 1,700 psi
Weight Loss:	@200°C: 0.59%; @250°C: 1.09%; @300°C: 1.67%
Degradation Temp (TGA):	425°C
Operating Temp:	Continuous: -55°C to 200°C Intermittent: -55°C to 300°C
Storage Modulus @ 23°C:	808, 700 psi
Ion:	Cl ⁻ 73 ppm; Na ⁺ 2 ppm; NH ₄ ⁺ 98 ppm; K ⁺ 3 ppm
Particle Size:	≤ 45 microns
Electrical Properties:	
Volume Resistivity @ 23°C:	≤ 0.0004 Ohm-cm
Thermal Properties	
Thermal Conductivity:	2.50 W/mK
Thermal Conductivity:	29 W/mK Based on Thermal Resistance Data: R=L x K-1 x A-1
Thermal Resistance:	(Junction to Case): TO-18 package with nickel-gold metalized 20 x 20 mil chips and bonded with Epo-Tek H20E (2 mil thick)
Epo-Tek®H20E:	6.7 to 7.0°C/W
Solder:	4.0 to 5.0°C/W

ADHESIVES AND MOUNTANTS**➤ EPO-TEK – Epoxy Conductive Adhesive (continued)****➤ EPO-TEK® H20S**

Epo-Tek® H20S is a modified version of Epo-Tek® H20E. Epo-Tek® H20S is a highly reliable, two component, silver-filled epoxy with a smooth, thixotropic consistency (mixing ratio 1:1). This modified version offers high electrical conductivity, short curing cycles, proven reliability, and the convenient mix ratio. Epo-Tek® H20S is extremely simple to use. Epo-Tek® H20S pot life is 2.5 days and shelf life is one year when store at room temperature.

Maximum Bond Line Cure Schedules:

175°C.....	45 seconds
150°C.....	5 minutes
120°C.....	15 minutes
100°C.....	45 minutes
80°C.....	90 minutes

➤ EPO-TEK® H22

Epo-Tek® H22 is a two component, silver-filled epoxy system. Mixing ratio of silver resin paste and liquid hardener is 100:4.5. Pot life 16 hours, and shelf life is 6 months at room temperature.

- Smooth, free-flowing, slightly thixotropic paste
- High Tg allows it to be used for high temperature applications ≤300°C)
- Contains no solvents – It is a NASA approved low outgassing epoxy.
- Excellent resistance to solvents, chemicals and moisture
- Extended pot life and fast curing at low temperature <100°C
- Designed for die bonding and sealing hybrid circuit. Recommended for SEM small angle cleavage and wafer bonding.

Maximum Bond Line Cure Schedules:

150°C.....	5 minutes
120°C.....	10 minutes
100°C.....	20 minutes
80°C.....	45 minutes

Typical Properties (to be used as a guide only, not a specification)**Physical Properties:**

ADHESIVES AND MOUNTANTS

➤ Mounting Medium for all Laser Scanning and Conventional Microscopes

A revolutionary new Mounting Medium which helps to control the effects of Refraction.

These Mountant Solutions:

- Have a refractive index of 1.52 to match the refractive index of your slides and coverslips
- Are simple to use – Just apply the solution to the specimen followed by a cover slip
- May be kept at room temperature – comes with dropper tip to aid in dispensing
- Are water miscible (aqueous glycerol based), and therefore the specimen does not need to be dehydrated prior to the addition of the mounting solution.
- Have a pH compatible with the specimens: CFM-1 has a pH of ~6.5, and CFM-2 has a pH of ~8.5
- Contain an antifadent to help reduce the bleaching of the fluorochromes (CFM-1 Plus Antifadent)
- May be used as a immersion oils in addition to being a mountant solution and since they are water-based, they facilitate cleaning the microscope optics.

➤ CFM-1 and CFM-1 Plus Antifadent

This glycerol-phosphate buffered saline based mountant solution has been specially formulated so as to have a refractive index of ~1.52 @ room temperature. The addition of antifadent retards the bleaching of fluorochromes. Its refractive index is similar to glass; therefore effects of refraction on image quality are minimized. The CFM-1 Plus antifadent will be particularly useful for high magnification work, where immersion oils are used to minimize distortion of the image due to the refraction of the viewing light and where bleaching of the fluorochrome occurs.

The solutions should also be very valuable for laser scanning microscopy where, three-dimensional imaging of specimens is carried out e.g. with confocal fluorescence microscopy where integrity of the image has to be maintained.

Both solutions are medium viscosity, and water-clear. CFM-1 Plus Antifadent have a pH of ~10. CFM-1 has a pH of ~6.5

➤ CFM-2 Mountant

This glycerol-tris-buffered based mountant solution has been specially formulated to have a refractive index of ~1.52 (at room temperature) i.e. a refractive index similar to glass so that the effects of refraction on image quality are minimized. This mountant solution may also be used as an immersion oil. The CFM solutions will be particularly

useful for high magnification work where immersion oils are used to minimize distortion of the image due to refraction of the viewing light. The solutions should also be particularly valuable for laser scanning microscopy where three-dimensional imaging of specimens is carried out e.g. with confocal microscopy.

The solution has a medium viscosity, and it is water-clear, and has a pH of ~8.5

➤ CITIFLUOR™ - Antifadent Mountant Solutions

A mounting medium for immunofluorescence, which overcomes the problems of fading.

This mounting media is designed to reduce the fading of the fluorescence of dyes used for labeling biological specimens.

In the technique of fluorescence microscopy, the fluorescence is stimulated by high intensity UV and/or visible light. Absorption of the light populates an excited state of the dye (usually a singlet state) and this leads to fluorescence. However, the excited state of the dye may undergo chemical reaction, which leads to destruction as evidenced by the fading of the fluorescence and consequent loss of the image. Citifluor™ mounting media is designed to solve this problem.

Selection of the appropriate product:

There is no universal antifadent due to the fact that biological material is so varied in nature that the fluorescence fading of fluorochromic conjugates is a complex process.

The general anti-fadents are AF1, AF2, and AF3. The AF87 is a specialist immersion oil-based antifadent.

AF1 (Glycerol-phosphate buffered solution containing an additive for use with labeled tissue sections). Should be used if you normally examine specimens in glycol solution. If you normally use saline solution with your specimens. Refractive Index is 1.46.

AF2 (Glycerol solution containing additives for use with labeled tissue sections) is simply a glycerol solution of the antifadent. Refractive Index is 1.47.

AF3 (Phosphate-buffered saline solution containing additives for examination of whole cell) is appropriate. Refractive Index is 1.34.

AF87, the antifadent, is contained in non-fluorescent immersion oil. It is designed for those requiring work at high magnification. It is useful for preventing the fading of such dyes as DAPI, which have the tendency to disperse in glycerol based mountant solutions.

CFPVOH is an aqueous solution of poly (vinyl alcohol) for use as a solid mountant. Apply a few drops of the solution to your sample, and allow drying to give a clear film. Refractive Index is 1.34–1.35.

AF100 is a solution of antifadents to be used with CFPVOH when fading of fluorescence in the poly(vinyl alcohol) is a problem. To prepare a CFPVOH solution containing AF100, add 0.1ml of Af100 to 0.9ml of CFPVOH. If more or less of the solid mountant solution is required, mix the reagent in the appropriate ratio. Once these solutions have been made up, they should be used within a period of days since the solution deteriorates on storage. Refractive Index is 1.34-1.35.

All of these products have a long shelf life, a minimum of 2 years. The solution can be stored at room

temperature. With LD50's >2000mg/kg (in rat), this product exhibits no toxicological problems.

ADHESIVES AND MOUNTANTS**➤ CitraMount® Mountant**

This butyl acetate and acrylic resin mixture is the first mounting medium developed for coverslipping directly from d-limonene based clearants. Superior results are also achieved with xylene. CitraMount® medium is recommended for manual coverslipping only as it may cause damage to the valves of automated coverslippers.

- Clear seal with drying time is less than 24 hours
- Refractive index is 1.42 – Viscosity is 90 cPs

➤ CMCP Macroinvertebrate Mounting Medium

CMCP is a colorless, non resinous, water miscible mounting medium for permanent transparent mounts. This medium used like Canada Balsam, it can be used to mount almost any material, provided it is not stained, calciferous material, or thin tissue sections. This mounting media has the advantage of allowing live or preserved specimens to be mounted directly from water or alcohol.

Free living nematodes and live parasitic worms are among the organism suitable for mounting with CMCP. The CMCP mounting provide them with rapid relaxation, death, and clearing action.

RT	18004-05	CMCP-10 High Viscosity Mountant	500 ml

➤ Crystalbond; Wafer Mount See page 372-373: 437 >>>>**➤ Cytoseal Mounting Medium See page 515 >>>>****➤ Entellan® A rapid mounting media for microscopy**

For long life preparations, without bubble formation at high ambient temperatures. It can be used for all dehydrated microscopic preparations. Cure time is 20 minutes at room temperature. It is colorless with an acid number less than 2.50 and a R.I. N_D^{20} approx 1.49-1.5. (Contains xylene).

RT	14800	Entellan®	100ml
RT	14802	Entellan®	500ml

➤ Eukitt™; Mounting Medium

Eukitt is a mounting medium (contains 45% Acrylic Resin and 55% Xylenes), used in microscopy. It is an adhesive and specimen preservative that can be used manually and in automated cover-slipping equipment. Adhesive and sealant for use with glass, non plastic and other non-reactive materials. Spreads quickly and evenly without forming any air bubbles.

**Properties:**

- Fast-drying (20 minutes)
- Refractive index close to glass (1.510)
- Chemically neutral
- Little sensitivity to water
- No reaction to staining
- Temperature limits: 42°C-17°C
- Passive to ultraviolet light
- Can be used in place of epoxy resins for mounting petro-graphic thin sections
- Used in fluorescence dyes in bones

RT	15320	Eukitt™	100ml
RT	15322	Eukitt™	500ml

➤ Fluoromount-G™ Slide Mounting Medium

A special mounting media for immunofluorescent staining procedures. It is a water soluble, non-fluorescing medium which is well suited for use when the staining procedure has an aqueous final step. It contains 10% polyvinyl alcohol in phosphate buffered glycerol with 0.1% sodium azide as a preservative. One bottle is sufficient to mount up to 500 slides. Refractive Index: 1.46

0-5°C	17984-25	Fluoromount-G	25 ml
-------	-----------------	---------------	-------

➤ DAPI-Fluoromount G™

DAPI-Fluoromont™ G is a water-soluble, instant blue nuclear probe fluorescing (455nm) compound for mounting fixed slides using a staining procedure having an aqueous final step. Mounting slides with DAPI Fluoromont™ G stains the cell nucleus and may reduce fluorochrome quenching during analysis of slides by fluorescence microscopy. This mounting medium also provides a semi permanent seal for long term storage of slide preparations.

0-5°C	17984-24	DAPI Fluoromount-G™	20 ml
-------	-----------------	---------------------	-------

➤ DPX Mountant for Microscopy

A mixture of Distyrene, a plasticizer, and xylene. A colorless synthetic resin mounting media which replaces Xylene-Balsam. It preserves the stain and dries quickly. R.I. 1.5175 @ 23°C.

RT	13510	100ml
RT	13512	500ml

➤ DEPEX Mounting Media

A colorless, neutral, xylene miscible mountant which is suitable for preparations where Canada Balsam is usually used. R.I. 1.5222 @ 23°C.

RT	13514	DEPEX Mounting Media	100ml
----	--------------	----------------------	-------

TECHNICAL TIP DEPEX (EMS Cat. #13514) is an Improved Mounting Medium

Most mounting media cause fading of histological preparations over time. A study was conducted to find the most suitable mounting media that would not fade. Depex as a Mounting Media appeared to have a conserving effect on the stain as compared to other available mounting media. The study was based on Araldite embedded semithin sections of rabbit cerebral cortex stained with Toluidine Blue and Pyronin G. The study also showed that the average optical density of sections prepared with DEPEX after one year was higher than the sections treated with other mounting techniques.

Cordula Schmolke (1993). Effects of Mounting Media on Fading of Toluidine Blue and Pyronin G Staining in Epoxy Sections. Biotech. & Histochem. 68/3, pg.132-136

ADHESIVES AND MOUNTANTS

➤ Histomount

A mixture of xylene - mixed isomers and non hazardous ingredients to offer a very good synthetic mountant. Once dried the refractive index is 1.58.

RT	17995-01	Histomount	100 ml
RT	17995-05	Histomount	450 ml

➤ Hydromount™

Ideal for frozen tissue sections

Hydromount™ is the traditional choice whenever a nonfluorescing aqueous medium is needed. Hydromount™ is water-based and is suitable for mounting specimens that have been processed in water. Hydromount™ is effective for frozen sections, amyloid, and immunofluorescent staining procedures. Should it become necessary, Hydromount™ may be removed by soaking the slides in warm saline.

RT	17966-01	Hydromount™	100ml
----	----------	-------------	-------

Histomount™ and Hydromount™ are Trademarked names of National Diagnostics

➤ Glycerin Jelly

For the mounting of hydrated sections.

RT	17998-10	Glycerin Jelly,	100ml
RT	17998-50	Glycerin Jelly,	500ml

➤ Krazy Glue™ Pen

The one we all know and have used. Ready to use. Requires no mixing or preparation. This pen contains cyanoacrylate. Clear in color and bonds immediately. Comes in a 3g tube.

RT	12646-05	Krazy Glue™ Pen	each
----	----------	-----------------	------

➤ Liquid Coverglass; SHUR/Mount™

Shur/Mount is a liquid coverglass and mounting medium. Its low viscosity minimizes bubble formation under the coverglass. An antioxidant present in the medium prevents fading of the stain even over years of storage. A UV absorbent present in our Shur/Mount prevents the yellowing of the resin.

Available in three types:

- A toluene-based acrylic resin; rapid drying. It is used for mounting and preservation of microscope slide specimens, and is ideal for manual coverslipping. Refractive index: 1.49
- A xylene-based formula which is used for automatic cover slipping instruments. Refractive index: 1.48
- A unique water based mounting medium for Immuno procedures.

RT	17992-01	Shur/Mount - Water Based	20ml
RT	17992-04	Shur/Mount - Water Based	4x20ml

➤ Loctite Adhesives

Loctite 409™ Super Bonder®

For a general-purpose gel adhesive, clear, gap fills 0.010"; surface insensitive Ethyl, tensile shear strength 3,200 psi, and temperature range -65°F to 180°F. Cure speed: fixture - 75 seconds, full - 24 hours.

Loctite 454™ Prism®

For use with porous surfaces, clear, gap fills 0.010", surface insensitive Ethyl, gel type, tensile shear strength 3200 psi, temperature range -65°F to 180°F. Cure speed: fixture - 15 seconds, full - 24 hours.

Loctite 4861™ Prism®

For use with flexible surfaces, clear, gap fill 0.008", surface flexible Alkyl, viscosity 4,000 cP, tensile shear strength 2465 psi, temperature range -65°F to 212°F. Cure speed: fixture - 25 seconds, full - 24 hours.

Loctite 349™ Impruv®

For bond glass/metal, appearance: clear/straw, cure type: UV, viscosity: 9,500cP, shore hardness: D70, temperature range: -65°F to 266°F

Loctite 4011™ Prism®

Designed for the assembly of difficult-to-bond materials, such as wood, paper, leather and fabric. Suitable for use in the assembly of disposable medical devices. The product provides rapid bonding of a wide range of materials, including metals, plastic and elastomers. Cure speed: 2 to 20 seconds depending on the material.

Chemical type: Ethyl cyanoacrylate, transparent, colorless to straw colored fluid. One part required no mixing. Low-viscosity (100 cP). Cure by humidity, and temperature range -65°F to 180°F

RT	72570-09	Loctite Super Bonder 409	3 g Tube
RT	72571-54	Loctite Prism 454 Adhesive	3 g Tube

RT	72573-11	Loctite Prism 4011 Adhesive	20 g

Loctite 404 Quick Set Tissue Adhesive

This adhesive is perfect for those applications where a quick-curing adhesive is needed. Comes in an applicator-tipped bottle, 0.33 oz. (10ml).

RT	12687-01	Loctite 404 Quick Set Tissue Adhesive	10ml
----	----------	---------------------------------------	------

Loctite™ 460 Adhesive

Our Loctite™ 460 is a quick curing low viscosity glue that can be used for mounting samples to any substrate (glass, metal and/or plastic). It is soluble in acetone. Comes in an applicator-tipped plastic bottle — 20 g.

RT	12646-08	Loctite™ 460 Adhesive	each
----	----------	-----------------------	------

Loctite® Fixmaster® Poxypak™, Fast Cure Epoxy

This fast cure, general purpose epoxy bonds virtually any material. It will also fill or seal cracks and rebuild worn surfaces. Comes in a 1 oz. syringe with a built-in plunger for easy dispensing without equipment. Working time is approximately 4 minutes. Includes nozzle and mixing stick. This unique adhesive may be made electrically conductive with the addition of any conductive powder (Silver, Carbon etc.)

RT	12646-09	Loctite® Fixmaster® Poxypak™, Fast Cure Epoxy	each
----	----------	---	------

ADHESIVES AND MOUNTANTS**► M-Bond System**

The M-Bond system includes M-Bond 43-B, M-bond 600 and M-Bond 610. These adhesives are high-performance epoxy resins, which are formulated especially for bonding strain gages and special-purpose sensors. When properly cured, these adhesives are useful in temperatures ranging from -452°F to +350°F (-269°C to +175°C) with M-Bond 43-B, and to +700°F (+370°C) for short periods with M-bond 600 and 610. In common with other organic materials, oxidation and sublimation effects at elevated temperatures limit life. M-Bond 43B is particularly recommended for transducer applications up to +250°F (+120°C) and M-Bond 610 for transducers up to +450°F (+230°C)

Shelf Life and Pot Life: At room temperature, M-Bond 600 has a useful storage life of approximately three months, while M-Bond 43-B and M-Bond 610 will last about nine months.

Once opened and mixed, M-Bond 600 and 610 have room temperature pot lives of two weeks and six weeks, respectively. Since M-Bond 43B is supplied already mixed, its pot life is about the same as its shelf life when kept in a tightly closed container. These periods of adhesive usefulness can often be doubled by refrigeration at +30° to +40°F (0 to +5°C). Never open a refrigerated bottle until it has reached room temperature.

Curing Time:

M-Bond 43B is about 2 hours at +375°F (+190°C)
M-Bond 600 is about 3.5 hours at +350°F (170°C)
M-Bond 610 is about 3 hours at 375°F (190°C)

0-5°C	50410-10	M-Bond 43B	Kit
0-5°C	50410-20	M-Bond 600	Kit

► Mascot® Instant Adhesive

A gel type, no-drip formula that fills the gaps and is ideal for use on vertical surfaces. A high performance, extended range cyanoacrylate adhesive that bonds metals, most plastics, rubber, ceramics, and glass, in seconds. It is optically transparent and sets in about 30 seconds depending upon the objects being joints. Pack 0.1 oz (3g) per dispensing tube.

RT	72587-01	Mascot® Instant Adhesive	3g
----	-----------------	--------------------------	----

► Cargille Meltmounts

- Instant thermal mountants that require "no-oven-time".
- 100% Usable; contains no solvents.
- Reversible, thermally, for particle retrieval or re-orientation
- Soluble in toluene for special techniques or clean-up.
- Fluid at 65°C, a temperature chosen because it makes permanent mount and protects the majority of specimens from thermal changes.
- PCB-Free.
- Direct replacement for old mountant mediums (Canada Balsam, Aroclor 5442, Naphrax...)

Cargille Meltmount™ (optical quality) is a series of mounting media which are specifically formulated for use in microscope slide mounting and in other optical coupling applications.

1. Meltmount™ 1.539

Has a refractive index (n_D @25°C) of 1.539 and an Abbe V dispersion of 45. Its optically similar to Canada Balsam and therefore ideal for mounting many biological specimens but without the long drying time of Canada Balsam.

RT	17994-10	Meltmount 1.539	1 oz.
RT	17994-11	Meltmount 1.539 Quick-Stick™	each

2. Meltmount™ for Chrysotile Asbestos

It has dispersion characteristics making it appropriate for mounting chrysotile asbestos.

RT	17994-20	Meltmount for Chrysotile	1 oz.
----	-----------------	--------------------------	-------

3. Meltmount™ 1.582

It has a refractive index n_D @25°C) of 1.582 and an Abbe V dispersion of 33. Its optical clarity makes it the preferred choice for minimum visible absorption.

RT	17994-30	Meltmount 1.582	1 oz.
RT	17994-31	Meltmount 1.582 Quick-Stick™	each

4. Meltmount™ 1.605

It has a refractive index (n_D @25°C) of 1.605 and an Abbe V dispersion of 30, making it appropriate for mounting Asbestiform Tremolite, Anthophyllite, and Actinolite.

RT	17994-40	Meltmount 1.605	1 oz.
RT	17994-41	Meltmount 1.605 Quick-Stick™	each

5. Meltmount™ 1.662

It has a refractive index (n_D @25°C) of 1.662 and an Abbe V dispersion of 26, optically similar to Aroclor 5442 but is PCB-free.

RT	17994-50	Meltmount 1.662	1 oz.
RT	17994-51	Meltmount 1.662 Quick-Stick™	each

6. Meltmount™ 1.680

It has a refractive index (n_D @25°C) of 1.680 and an Abbe V dispersion of 25, making it appropriate for mounting Amosite and Crocidolite asbestos.

RT	17994-60	Meltmount 1.680	1 oz.
RT	17994-61	Meltmount 1.680 Quick-Stick™	each

7. Meltmount™ 1.704

It has a refractive index (n_D @25°C) of 1.704 and an Abbe V dispersion of 24, similar to Naphrax.

RT	17994-70	Meltmount 1.704	1 oz.
RT	17994-71	Meltmount 1.704 Quick-Stick™	each

Melt Mount is also available in a Quick-Stick™ form which can be used to make permanent microscope slide mounts quickly. These Melt Mount sticks can be applied to a slide on a hotplate. As soon as the specimen and coverglass are positioned and the slide is cooled you have a permanent prepared slide that can be reversed by reheating, if you should wish to retrieve a particular particle. Each Quick-Stick™ weighs approximately ½ oz. (18g).

ADHESIVES AND MOUNTANTS

➤ Mikrostik™ Adhesive, Non-Conductive

Fast drying, ultrathin clear adhesive suitable for mounting small particles which can be submerged in other adhesives. It can be diluted with methyl ethyl ketone. Quick-drying. Comes in a bottle with an applicator brush. 14 ml.

12646-01 Mikrostik™ Adhesive, Non-Conductive 14ml

➤ Mount Quick, Solvent/Water Base

Mounting media for cover glass. It comes in a convenient dispensing tube or bottle. Solvent based media which is soluble in xylene and has a 10 minute dry time. Its viscosity is 33 cps at 25°C.

RT	18000	Mount Quick-Solvent Base;	30cc
RT	18002	Mount Quick-Water Base;	30cc

➤ Omnimount™

- Optical clarity combined with exceptional durability
- Compatible with HistoClear II
- Higher flash point and lower toxicity than xylene based mountants

Specially developed to provide compatibility with National Diagnostic clearing agents, HistoClear II. Omnimount™ combined outstanding optical characteristics with low fluorescence and exceptional durability. In addition to being the ideal partner for HistoClear II, Omnimount is a truly universal mounting medium compatible with all common clearing agents: xylene, toluene, limonene, and petroleum derived products.

The Omnimount solvent has a higher flash point and a lower toxicity than xylene based mountants, so Omnimount™ provides both a safer work environment and reduce shipping costs.

RT	17997-01	Omnimount™	100 ml
----	----------	------------	--------

MM 24® Mounting Media

Specially formulated for automatic glass coverslippers

MM 24 is a low viscosity mounting medium that is compatible with both aliphatic (eg Sub-X) and aromatic (eg xylene) clearing agents. It is specially formulated to achieve optimum results with automatic glass coverslippers, yet is also effective for manual slide preparation. Set up time before permanent filing is normally 24 hours with aromatic agents and 48 to 72 hours with aliphatics.

Cat No.	Description	Qty.

RT 13520-22	MM 24® Mounting Media, Pint	4/case
RT 13520-23	MM 24® Mounting Media, 4 oz. Dropper Bottle	12/case

➤ Permabond 910, Tissue Adhesive

See Specimen Preparation, page 216 >>>>

➤ Permout™* Mounting Medium

A toluene-based synthetic resin mounting medium. The right choice for both rapid mounting and long term storage of slides. Its low viscosity allows for a thinner mounting layer offering better optical quality and bubble-free preparations. It has a refractive index near that of a fixed protein which helps to keep images free of distortion. Ideal for mounting coverslips to slides with thick or thin specimens. Permout preserves most biological stains with little or no fading when the slides are stored in darkness. It contains an anti-oxidant to prevent the formation of annular rings and its high softening point (155°C/311°F) makes it suitable for microprojection.

RT	17986-01	Permout Mounting Medium	100ml
RT	17986-05	Permout Mounting Medium	500ml

➤ Quick Bond See page 216 >>>>

➤ Rubber Cement, Non-Wrinkle

Elmer's non-wrinkle rubber cement is a combination of isopropanol, heptane and natural rubber. Comes with a brush applicator for ease of use. Dries fast and it does not wrinkle.

72170 Non-Wrinkle Rubber Cement 4 oz

➤ Slide Coating Adhesive

See Specimen Preparation section, page 555 >>>>

➤ Sub-X Mounting Medium

Sub-X Mounting Medium is a toluene based low viscosity quick-drying, permanent mountant formulated to be compatible with all xylene substitutes on the market. It may be used for all coverslip preparations that are cleared in xylene and or toluene. It may be used for manual as well as automated coverslipping. Sub-X contains an antioxidant to inhibit fading of stains.

13519 Sub-x Mounting Medium Pint

➤ Tissue-Tack Adhesive

- Good for JB-4 and JB-4 Plus Sections.
- Improves permanent adhesion of sections to the glass slide during prolonged staining procedures and washes.
- Useful for immunofluorescent, immunoperoxidase and routine staining procedures.

RT	71301-01	Tissue-Tack Adhesive	100ml
RT	71301-05	Tissue-Tack Adhesive	500ml

➤ UV Mount Medium

- A mounting medium that is designed to match the refractive index of JB-4 embedded sections.
- Cures within 2 minutes when exposed to long wave UV light
- (365nm) when applied to moist sections.
- Sections are mounted after last staining water rinse.
- Slides must be coverslipped.

0-5°C	17996	UV Mount Medium	100ml

TECHNICAL TIP

Purification Of Alcian Blue

Commercially available Alcian Blue contains about 49% dye; the remaining constituents are boric acid, sulphates, dextrin, and other unknown organic substances. It can be purified by the following method, presented by McAuliffe. W.G. McAuliffe (1983) - A Note on the Purification of Alcian Blue. Stain Technology, 58, pg 374.

- One gram of Alcian Blue is placed in a flask to which is added 100ml of 9:1 mixture of acetone and distilled water.
 - This mixture is stirred for 1 hour and then filtered through No. 2 filter paper. Small quantities of additional acetone are used to wash the dye from the flask and down the side of the filter paper.
 - The filtrate has a faint yellow-green color. The residue is recovered from the filter paper and dried.
 - Small quantities of the dye should be purified as they are needed.
- The above method yields Alcian Blue containing about 78.7-83.5% dye, depending on the commercial source. Hayat, M. A. (Ed.), (1989). Principles and Techniques of Electron Microscopy. Third Edition. CRC Press Inc., Florida.

➤ Agarose SFR™ trademark of Amresco®

(C₆H₁₀O₅·C₆H₈O₄)_n CAS #9012-36-6

- Super fine resolution: Resolve 238 bp & 242 bp band
- Low melting point
- Consistent & reproducible results
- Nuclease & protease free
- Ideal for AFLPs, STRs & Tetranucleotide repeats.

Agarose SFR is a high resolution sieving agarose with unsurpassed clarity. DNA bands differing in size by 2% can be resolved in the range of 200 – 1,000 bp. This agarose is suitable for the analysis of AFLPs (Amplified Fragment Length Polymorphisms), STRs (Short Tandem Repeats) and tetranucleotide repeats. The low melting point of agarose SFR makes it an excellent medium for analytical and preparative electrophoresis.

(Acid Blue 22; China Blue; Cotton Blue; Marine Blue V; Soluble Blue 3M, 2R; Water Blue)

Solubility: 50% Water; 0.0% Alcohol; 4.5% Cellosolve; 7.8% Glycol; 0.0% Xylene. Used in connective tissue staining procedures to stain collagen. Used in differential staining. Snodgrass et al., Lab Invest. 26:329, 1972.

RT 10840 25g

➤ **Antibody Diluent**

Buffer for diluting your primary and secondary antibodies, especially if they were stored for a while, even at -20 in glycerol, or in refrigerator. Nonspecific binding of the antibodies, negative effects of disturbing substances and low or medium affinity cross-reactivities of the antibodies will be minimized, making your result more reliable. Excellent for IHC (frozen and formalin sections), flow cytometry on fixed cells, Western Blot and other immune assays.

When used in pathology, it also greatly reduces non-specific reactivity of human serum components and immunoglobulins in tissue, vessels and cells with mouse antibodies used on section.

For especially "trouble"-giving antibodies, as well as for in situ PCR applications, this diluent may also be used as a washing buffer, preventing secondary binding of your analytes during washing.

RT	13900	Araldite 502 Kit consists of: 450 ml Araldite 502 450 ml DDSA; Specially Distilled *50 ml DMP-30	kit
RT	13920	Araldite 6005 Kit consists of: 450 ml Araldite 6005 450 ml DDSA; Specially Distilled 100 ml BDMA 225 ml DBP	kit
RT	13940	Araldite-EMbed (Mollenhauer's Kit): 450 ml EMbed-812 450 ml Araldite 502 450 ml DDSA; Specially Distilled *50 ml DMP-30	kit

* Please note that wherever DMP-30 is listed as the accelerator in our embedding media kits you have the option to use BDMA in place of it. BDMA is less viscous, has a longer shelf life, and offers better penetration (it should be noted, however, that in order to achieve the optimum results when using BDMA in place of DMP-30 you must vary the amount. DMP-30: 1.5-2%; BDMA: 2.5-3%).

TECHNICAL TIP

For Araldite RD-1 see BGE (catalog # 12000) page 30.
 For Araldite RD-2 see BDE (catalog # 11800) page 30.

An amine accelerator for polymerization of epoxy resins.

A direct alternative to DMP-30 with a longer shelf life and better penetration. Purity: 98%

RT **11400** 100mlRT **11400-25** 25ml**TECHNICAL TIP****Accelerators For Epoxy Resins**

Embedding media for Electron Microscopy based on the epoxy resins Araldite and Epon (replacements) all require the addition of an amine accelerator to hasten polymerization (Glauert, 1974).

• DMP-30 • BDMA

Both of the above accelerators are equally efficient during polymerization, but BDMA has the great advantage of being much less viscous than DMP-30. This is important since accurate measurement of small amounts of the accelerator and its complete mixing with the other components of the embedding media are essential for the production of satisfactory blocks. See Audrey Glauert (Proc. Roy. Micros., Vol 22/5 Sept. 1987) NOTE: In order to achieve optimum results when using BDMA in place of DMP-30 you must remember that the amount of DMP-30 added is 1.5% - 2% of the final mixture and BDMA is 2% - 3%.

RT 11450 25g

➤ **Bismuth Stain Kit**

Bismuth specifically stains Golgi beads and interchromatin granules after fixation with glutaraldehyde, whereas it stains nucleoli, basic protein, and biogenic amines after formaldehyde fixation. Bismuth staining of sections is relatively nonspecific: it can stain glycogen, lysosomes, ribosomes, polysaccharides, ferritin, and DNA. M.A. Hayat, "Basic Techniques for TEM" p. 184 (1986).

1. Specific En Bloc Staining (Locke & Huie, 1977)

Kit contains:

10 x 5ml Solution A (Sodium tartrate, Sodium hydroxide and Bismuth Subnitrate,
 10x10ml solution B (.2M Triethanolamine-HCl buffer)

Procedures

Mix Solution A and B together (One part of A into two parts of B) then adjust to pH 7.0 with 1N HCl.
 Aldehyde-fixed tissue blocks are rinsed in the above buffer and stained en-bloc with Bismuth for one hour at room temperature on a gentle rotary shaker. Postfixation is carried out with 1% Osmium Tetroxide in 0.05M Sodium Cacodylate buffer, pH 7.2.
 Post-staining is not needed.

RT 11430 Kit

2. Enhancing Contrast in General (Riva, 1974)

Kit contains:

5 x 10ml Solution A(Sodium tartrate in NaOH)
 5 x 200mg ingredient B (Bismuth subnitrate)

Procedures

Drops of solution A are added into the ingredient B (Bismuth Subnitrate). The mixture is cleared after 6-8ml of solution A is added; and after the addition of all of solution A, all the Bismuth is chelated.
 Conventionally fixed tissue specimens are stained en-bloc with a saturated Uranyl Acetate aqueous solution for 20 minutes. Thin sections on grids are stained under cover for 3 minutes by immersion in the Bismuth Subnitrate chelated above, and then rinsed with distilled water.

RT 11434 Kit

3. Staining of Mucosubstances & Polysaccharides

(Ainsworth et al., 1972)

Kit contains:

10 x 10ml Solution A (Periodic acid, Ethanol, Sodium acetate)
 10 x 10ml Solution B (Sodium tartrate, NaOH, Bismuth subnitrate)

Procedures

Thin sections of conventionally fixed tissues are mounted on copper grids and floated on solution A for 10-30 minutes at room temperature. After being thoroughly washed 20-30 times for 5-10 minutes with distilled water to remove periodate, the grids are floated on solution B for 30-60 minutes at room temperature. They are then again thoroughly washed with distilled water.

RT 11436 Kit

READY-TO-USE PREPARED BUFFERS**All of our ready-to-use buffers are...**...**Conveniently packaged.**...**Prepared fresh for each order.**...**Economical and time-saving.****Desired pH should be specified when ordering.****➤ Acetate Buffer**

➤ Antibody Dilution Buffer with Immunoglobulin- Free BSA

This ready-to-use Antibody Dilution Buffer is designed for the dilution of antibodies in all immunoassays, including immunofluorescence, IHC, ELISA, WB. This buffer contains immunoglobulin free BSA and does not contain phosphate, sodium azide, or mercury preservatives. It can be used for the dilution of all antibodies, including peroxidase, and antibodies to phosphoproteins. However, it is not suitable for dilution of antibodies to S100 proteins. This buffer contains green food color.

■ **Reagent Supplied: Ready to use buffer**

■ **Application: Dilute antibodies, primary or secondary as recommended in the protocol by the manufacturer of these products.**

■ **Storage: 2 – 8°C. Diluted antibodies can be stored at 2° – 8°C for several weeks, depending upon the stability of antibodies.**

2-8°C	25886-01	Antibody Dilution Buffer, free BSA	100 ml
2-8°C	25886-05	Antibody Dilution Buffer, free BSA	500 ml

The buffer is a vehicle for the fixative and requires certain properties:

a.) To maintain constant pH during the time of the fixation. The pH of the fixative in EM is adjusted using the buffer system chosen; e.g. range 6.5-8.0.

b.) The ionic constitution to prevent the extraction of cellular components, or the deposition of precipitates of fixative chemicals.

➤ Borate Buffer

0-5°C	11492-06	Citrate Buffer 0.2M, pH 6.0	1 L

➤ Citrate Buffer pH 6.0 (10x)

Description: This buffer is intended for heat-induced antigen retrieval on formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. The use of this buffer on FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: 1X buffer solution is intended for heat-induced antigen retrieval in IHC. Please refer to primary antibody protocol.

Reagent: 10 X, pH 6 antigen retriever solution.

Preparation of Working Solution: Dilute this 10X buffer as needed (e.g. 90 ml of deionized or distilled water + 10 ml of this buffer), mix well, 1X buffer can be stored at 2–8°C

2-8°C	64142-07	Citrate Buffer pH 6.0	100 ml

➤ Millonig's Phosphate Buffer

Millonig (1964); Karlsson and Schultz (1965)

Ingredients: Sodium Phosphate, monobasic (NaH₂PO₄•xH₂O);

Sodium Phosphate, dibasic (Na₂HPO₄•xH₂O); 0.5% Sodium Chloride (NaCl)

Shipping Conditions: Ambient Temperature

The pH of this buffer is 7.4 (0.1M); the osmolarity is 440 mosmols, so this buffer is hypertonic to most body fluids. Millonig recommended to use this buffer for the fixation of very hydrated tissues with osmium tetroxide. For marine organisms, a higher concentration of sodium chloride (3%) is recommended. We supply it in a double strength (0.2M), pH 7.4. Dilution is needed before use.

0-5°C 11582-05	Millonig's Phosphate Buffer 0.2M	500ml

➤ Pepsin Reagent, Ready To Use

Description: Pepsin is used for proteolytic digestion of formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. Pepsin digestion of FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: Use as antigen retriever for some antibodies in IHC. Please refer to primary antibody protocol for IHC.

Reagent: Ready-to-use Pepsin reagent available in 2 sizes: 15 and 100 ml

Cat. #	Description	Qty.
2-8°C 64142-05	Pepsin Reagent	15 ml
2-8°C 62142-06	Pepsin Reagent	100 ml

READY-TO-USE PREPARED BUFFERS**➤ Phosphate Buffer, 0.1M***

Prepared from Sodium Phosphate Monobasic Hydrate and Sodium Phosphate Dibasic Heptahydrate Non-Sterile. Meant for research purposes only.

➤ Pronase Reagent, Ready To Use

Description: Pronase is used for proteolytic digestion of formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. Pronase digestion of FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2-8°C. **DO NOT FREEZE**

Intended Use: Use as antigen retriever for some antibodies in IHC. Please refer to primary antibody protocol for IHC.

Reagent: Ready-to-use Pronase reagent available in 2 sizes: 15 and 100 ml.

2-8°C	64142-03	Pronase Reagent	15 ml
2-8°C	62142-04	Pronase Reagent	100 ml

➤ R-UNIVERSAL Epitope Recovery Buffer (10x stock)

Properties: Clear, non-toxic solution.

Presentation: R-Universal Buffer is supplied as 10x concentrate. For epitope recovery dilute 1 part of stock with 9 parts of deionized water.

Application: For epitope recovery dilute 1 part of stock with 9 parts of deionized water.

Stability and Storage: The preparation is stable for 1 year when stored unopened at +4°C. Every lot is issued with a certificate indicating the expiry date. After opening, store at +4°C in the refrigerator and use within 6 months.

Certification: Each lot is certified for compliance to specifications. The product is produced under DIN EN ISO 9001: 2008 Quality Management system for the products in Immunoassay Development and Measurement, Products for Bioanalytics and Immunoassays.

0-4°C	62719-10	R-UNIVERSAL Epitope Recovery Buffer (10x stock)	125 ml
0-4°C	62719-20	R-UNIVERSAL Epitope Recovery Buffer (10x stock)	500 ml

➤ Section Block

A new class of blocking solutions based on chemically modified and fragmented ultra-pure casein. Effectively reduces unwanted binding of primary antibody and conjugates you use to charged surface of the slide and tissue section. Greatly reduces non-specific binding while preserving the specific reaction, by saturating potential non-specific protein-protein interactions. Moreover, in contrast to BSA-based, IgGm casein or serum -based blocking solutions there is no interaction of specific antibody and blocking protein itself. or oth ls not comparable to other commercially available or home-made blocking solutions. Recommended for research and diagnostic pathology, especially for retrieved sections and polyclonal antibodies..

62710	Section Block	50 ml
62711	Section Block	125 ml
62712	Section Block	500 ml

➤ Sodium Cacodylate Buffer

Prepared from Sodium Cacodylate Trihydrate (F.W. 214.02).

➤ Sym-Collidine Buffer Kit

2,4,6-Trimethylpyridine

N:C(CH₃)CH:C(CH₃)CH:CCH₃

CAS #108-75-8 F.W. 121.18

Bennett & Luft., Biophys & Biochem. Cytol., 6,113 (1959).

A very stable buffer, used with Osmium tetroxide; provides excellent fixation, better stability and buffering capacity. The pH can be adjusted by varying the amount of hydrochloric acid in the final volume of 200ml. Preparation Instructions: Pour 9ml of 2N HCl; add 5.34ml of Sym-Collidine, mix well and add distilled water up to 200ml for a pH 7.4 solution.

Set consists of:

1 amp 5.34ml Sym Collidine

1 amp 9.0ml of 2N HCl

RT	11500	Sym-Collidine Buffer Kit	One set

➤ **Tris Buffer pH 10.0 (10x)**

Description: This buffer is intended for heat-induced antigen retriever on formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. The use of this buffer on FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2-8°C. **DO NOT FREEZE**

Intended Use: 1X buffer solution is intended for heat-induced antigen retriever in IHC. Please refer to primary antibody protocol.

Reagent: 10 X, pH 10 antigen retriever solution.

Preparation of Working Solution: Dilute this 10X buffer as needed (e.g. 90 ml of deionized or distilled water + 10 ml of this buffer), mix well, 1X buffer can be stored at 2-8°C

Cat. #	Description	Qty.
2-8°C 64142-11	Tris Buffer pH 10.0	100 ml
2-8°C 62142-12	Tris Buffer pH 10.0	1000 ml

➤ **Trypsin Reagent**

Description: Trypsin is used for proteolytic digestion of formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin; mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. Trypsin digestion improves immunoreactivity of some antigens in FFPE tissue sections. For cytokeratin clone AE3 and AE1/AE3, this enzyme works much better than boiling the tissue with citrate buffer.

Storage: 2-8°C. **DO NOT FREEZE**

Intended Use: Use as antigen retriever for some antibodies in IHC. Please refer to primary antibody protocol for IHC.

Reagent: This enzyme is supplied as concentrated form along with buffer. The kit comes in 2 sizes. Small: Reagent B (Buffer) is 15 ml and the Reagent E (Enzyme) is 2 ml

Large: Reagent B (Buffer) is 100 ml and the Reagent E (Enzyme) is 10 ml

Cat. #	Description	Qty.
2-8°C 64142-01	Trypsin Kit Small	Kit
2-8°C 62142-02	Trypsin Kit Large	Kit

➤ **Universal Immunoassay Buffer™, 10X**

Immunoassay buffer is used as a 1X in all immunoassays (immunofluorescence, IHC, ELISA, WB etc.) as a washing buffer and it can be used as a dilution buffer for antibodies; however it does not contain any carrier proteins. This buffer also does not contain any phosphate, sodium azide or mercury as preservatives and can be used for dilution of all antibodies, including peroxidase, antibodies to phosphoproteins. It is not suitable for dilution of antibodies to S100 proteins.

■ **Reagent Supplied:** 10X Buffer

■ **Application:** Dilute this 10X buffer 10 times with DI water. (90 ml water + 10 ml this buffer – mixed well). Wash 3-5 times with this buffer in between the steps of your immunoassay protocol.

RT	25880-01	Universal Immunoassay Buffer, 10X	100 ml
RT	25880-10	Universal Immunoassay Buffer, 10X	1 L

➤ **Universal Antibody Dilution Buffer™**

This ready-to-use Universal Antibody Dilution Buffer is designed for dilution of antibodies in all immunoassays, including immunofluorescence, IHC, ELISA, WB. This buffer does not contain any mammalian proteins, phosphate, sodium azide, or mercury preservatives and can be used for dilution of all antibodies, including peroxidase, and antibodies to phosphoproteins. However, it is not suitable for dilution of antibodies to S100 proteins,

■ **Application:** Dilute antibodies, primary or secondary as recommended in the protocol by the manufacturer of these products.

■ **Storage:** 2 – 8°C. Diluted antibodies can be stored at 2° – 8°C for several weeks, depending upon the stability of antibodies.

ARTICLES OF INTEREST

The Use of Polyethylene Glycol; Carbowax

Polyethylene Glycol 1500 (Carbowax 1500) is an excellent embedding medium for immunohistochemical studies. It provides structural preservation superior to frozen sections and increased sensitivity of antigen detection compared with paraffin sections. One limitation of PEG embedment is that PEG sections are difficult to handle and adhere poorly to glass slides. This article will share with you a simple and effective method to overcome those limitations. **Refer to:** Kuixiong Gao and James D. Godkin. (1991) "A New Method for Transfer of Polyethylene Glycol-embedded Tissue Sections to Silanated Slides for Immunocytochemistry". The J. of Histochem. and Cytochem. Vol. 39, No. 4, pg. 537-540.

RT 12620-34	Non-filter 2% Collodion in Amyl Acetate	4x30 ml
RT 12620-50	Sterile 2% Collodion in Amyl Acetate (Ultra-Pure)	30 ml
RT 12620-55	Sterile 2% Collodion in Amyl Acetate (Ultra-Pure)	4x30 ml

➤ Conjugates; ImmunoGold Reagents,**See Section 2, Pages 72-90 >>>>****➤ Cresyl Fast Violet, Certified, C.N.#DcW-5**

(Cresyl Violet Acetate)

C₁₈H₁₅N₃O₃ F.W. 321.33 CAS # 10510-54-0

Solubility: 0.13% water Dye Contents ~ 75%

Certified Stain. To differentiate DNA and Nissl bodies in spinal cord and brain tissues.

For staining Nissl substances in nerve cells and for bulk staining of nerve tissue. Stain Technol., 30, 83 (1955)

Stain for fresh tumor tissue for biopsy. J. Lab. Clin. Med., 8, 250 (1923). Biological Stains 9th Ed., 601 (1987)

RT 12780	5 g
----------	-----

For Cresyl Fast Violet Solutions, see page 472 >>>>**➤ Cresyl Fast Violet, (FIRM)**

Rapid staining technique that provides high-contrast fluorescence microscopy imaging of resin embedded samples, reminiscent of low magnification transmission electron microscopy.

- Works with Epoxy and Acrylic type resins
- Simply mount your sections on glass slides, air dry, and overlay with 100 microliters FIRM for 30 seconds, wash and coverslip with water or an aqueous mountant. View in Rhodamine channel of a standard wide field Fluorescence Microscope.
- FIRM staining is unique in that the brightly fluorescent dye infiltrates the resin, revealing tissue structures in negative relief, with extremely high contrast and resolution.
- Perfect for previewing specimens prior to EM Analysis
- High Throughput, high contrast image phenotyping of model organisms such as drosophila
- Ideal for material and food science analytical microscopy

12780-05	FIRM for Acrylic Resin Sections	10ml
12780-06	FIRM for Epoxy Resin Sections	10ml

➤ Crystal Violet, Certified, C.N. #DcC-38

(Basic Violet 3; Gention Violet; Methyl Violet 10B; Hexamethyl Violet)

C₂₅H₃₀N₃Cl F.W. 407.99 CAS #548-62-9

Solubility: 9.0% Water; 8.75% Alcohol; 7.5% Cellosolve; 7.0% Glycol; 0.0% Xylene

Dye Contents ~88% min.

Certified Stain. For differentiating between gram-negative and gram-positive bacteria. Using Safranin O as a counterstain. Certified for staining chromatin and nucleoli in plant tissue. Biological Stains, 9th Ed. 586 (1977)

RT 12785	25 g

RT 22800-05	Deionized Water	5 gal

TECHNICAL TIP

The Use of Flexibilizers and Plasticizers

Flexibilizers such as Cardolite-513 and DER 736 helps embedding resins gain its stabilization under the electron beam. Plasticizers, such as DPB, prevents excessive brittleness and improves sectioning properties.

➤ **DER 736 Resin**

CAS #041638-13-5 Specific Gravity: 1.14

A light colored, flexible epoxy.

Epoxide equivalent weight: 175-205.

Used to simplify infiltration in combination with Epon 812 (Embed 812)

Kushida, J. Electron Micro., 16,278 (1964)

RT	13000	225ml
RT	13001	10x225ml lot

➤ **DER 732 Resin**

CAS #026142-30-3 Specific Gravity: 1.06

Used as a flexibilizer in Maraglas 655-epoxy formulation. Relatively low Viscosity (55-100 at 25°C).

Erlanson, J. Cell Bio., 22,704 (1964).

RT	13010	225ml
----	--------------	-------

➤ **DER 332 Resin**

CAS #001675-54-3 Specific Gravity : 1.16

A relatively soft embedding resin used when slower polymerization is needed.

Lockwood, Anat. Rec., 150,129 (1964).

RT	13030	225ml
----	--------------	-------

➤ **DER 332/732 Embedding Kit**

TECHNICAL TIP

Stability Of Special Staining Solutions

General Guidelines Concerning Solutions

1. Check stock solutions regularly for signs of deterioration.
2. All solutions should be dated and initialed by the person who prepared the solution.
3. Use caution to prevent cross solution contamination.
4. Use distilled or double distilled water to prepare solutions.
5. Use reagent grade chemicals.
6. Use dyes which are certified .
7. Keep solutions in well stoppered bottles at all times.
8. Refrigerated solutions should be poured into the staining jar, and the bottled solution returned to the refrigerator before it warms to room temperature.
9. Return all staining solutions to shelves soon after use to prevent mix-up.
10. Always use clean glassware.
11. Make sure that balance, pH meter, etc., are in proper working order.

➤ **(DAB), 3,3'-Diaminobenzidine, EM Grade, Purified free-base**

(3,3',4,4'-Biphenyltetramin)

C₁₂H₁₄N₄ F.W. 214.27 CAS #91-95-2

m.p. 173°C

Used as an ultrastructural protein tracer for immuno-cytochemistry.

A possible carcinogen.

0-5C	13060	1g
------	--------------	----

➤ **(TMB), 3,3,5,5-Tetramethyl Benzidine**

A non-carcinogenic substitute for Benzidine (DAB-HCl); used as a sensitive and specific reagent for the detection of blood.

J. Histochem. Cytochem., 26, 106 (1978).

See page 65 for more information. >>>>

➤ **(DAB-HCl), 3,3-Diaminobenzidine Tetra Hydrochloride, EM Grade**

C₁₂H₁₄N₄.4HCl F.W. 360.12 CAS #7411-49-6

m.p. 300°C

Used for histochemical localization of peroxidase with DAB and in immunocytochemistry.

Sternberger, et.al., J. Histochem, Cytochem., 18,215 (1970)

0-5C	13080	1g
------	--------------	----

We are now offering DAB 4HCl pre-weighed and packed in tablet form, to facilitate your work. Each tablet contains 10mg. Just break the tablet or tablets in a suitable bottle and add your buffer. All weighing and contact with the solid (DAB-HCl) is avoided.

Residue after evaporation0.01%

Water0.2%

RT 13390 450ml

TECHNICAL TIP**Cryo-Protectants**

Studies have shown that: Glycerol and Dimethyl Sulfoxide give good structural preservation for cryo-protectants, but they also cause gross physical damage to cells, and they should not be used in microanalytical studies. For better results, high-molecular-weight nonpenetrating cryoprotectants such as polyvinylpyrrolidone (PVP) and hydroxyethyl starch (HES) can give good morphological preservation, and only cause minimal perturbation to the functional physiology of the tissue. Sauberman, A.J., Riley, W., and Echlin, p. 1977a *SEM/1977/I,II* T Research Institute, Chicago, Illinois, p.347

► Divinyl Benzene, Mixed IsomersC₆H₄(CH:CH₂)₂ F.W. 130.19 CAS #1321-74-0

A cross-linking monomer. Inhibited with up to 1,500 ppm p-tert-butyl catechol.

Specific Gravity: 0.91

RT 13450 100ml

► D.D.S.A.

(Dodecyl Succinic Anhydride)

C₁₆H₂₆O₃ F.W. 266.38 CAS #25377-73-5

Specific Gravity: 1.005

RT 13700 450ml

RT 13701 Lot 4x450ml

► D.D.S.A., Specially Distilled

(Dodecyl Succinic Anhydride)

Much better than DDSA, we now offer an ultra pure DDSA, distilled by a new, slower process, which has a distinct effect on the color control of embedding resins, and offers complete infiltration of tissues. Produces blocks which are totally transparent.

➤ **EDTA Buffer pH 8.5 (10x)**

Description: This buffer is intended for heat-induced antigen retrieval on formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. The use of this buffer on FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: 1X buffer solution is intended for heat-induced antigen retrieval in IHC. Please refer to primary antibody protocol.

Reagent: 10 X, pH 8.5 antigen retriever solution.

Preparation of Working Solution: Dilute this 10X buffer as needed (e.g. 90 ml of deionized or distilled water + 10 ml of this buffer), mix well, 1X buffer can be stored at 2–8°C

Cat. #	Description	Qty.
4-8°C 64142-09	EDTA Buffer pH 8.5	100 ml
4-8°C 62142-10	EDTA Buffer pH 8.50	1000 ml

TECHNICAL TIP

The Search For The Epon-812 Replacement

Since the discontinuation by Shell of Epon 812 many replacements have been introduced. Many of these replacements have shown much closer characteristics to the original than others. For an in depth study of the work that has been done regarding many of the replacements for the original Epon 812 we highly recommend the following publications:

1. Mascorro, J.A. and Kirby, G.S. Physical Characteristics of "Old" Epon 812 and Various Epon Like Replacements". Proc. 44th Ann. Meet. EMSA., pp. 222-223 (1986)
2. Mascorro, J.A. and Kirby G.S. Novel/ Epoxy/Anhydride Alternatives for Biological Electron Microscopy: Physical and Performance Characteristics of Embed 812 and LX112 in Combination with NSA/NMA/DMAE. Proc. 47th Ann. Meet. EMSA., pp.1000-1001(1989)
3. Mascorro, J.A. and Kirby G.S. Viscosity Characteristics and Hardening Rates For Embed 812 and LX112 With Alternative Anhydride and Catalyst Choices. Proc. 49th Ann. Meet. EMSA., (1991)

➤ **EMS Cured Epoxy Remover**

Studies show that in order to get good results in positive staining of sections, the removal of cured epoxy (embedding material) as well as the reduced-osmium (fixation materials) from the sections is necessary; especially when double fixation with an Aldehyde and Osmium tetroxide is employed to process specimens for E.M. We offer a CURED-EPOXY-REMOVER kit, which removes the polymerized resin as well as the reduced-osmium. The structure of the resin free section will remain unchanged.

➤ Ferritin

CAS #9007-73-2

Cationized: This polycationic derivative of ferritin is useful in labeling negative charges on cell surfaces and to study membrane structure.

Cationized ferritin is prepared by coupling ferritin from horse spleen with N,N-dimethyl-1,3-propanediamine (DMPA). Sterile filtered solution in 0.15M NaCl.

Ferritin Concentration: 10mg per ml, coupled with DMPA.

A cationic derivative used to label negatively charged cell membranes for visualization by EM.Danon, D et al. (1972), *J. Ultrastruct. Res.*, 38, 500.

0-5C 15550 Cationized 1ml

➤ Fluorophore-Infiltrated Resin Microscopy (FIRM)

Rapid staining technique that provides high-contrast fluorescence microscopy imaging of resin embedded samples, reminiscent of low magnification transmission electron microscopy.

- Works with Epoxy and Acrylic type resins
- Simply mount your sections on glass slides, air dry, and overlay with 100 microliters FIRM for 30 seconds, wash and coverslip with water or an aqueous mountant. View in Rhodamine channel of a standard wide field Fluorescence Microscope.
- FIRM staining is unique in that the brightly fluorescent dye infiltrates the resin, revealing tissue structures in negative relief, with extremely high contrast and resolution.
- Perfect for previewing specimens prior to EM Analysis
- High Throughput, high contrast image phenotyping of model organisms such as *Drosophila*
- Ideal for material and food science analytical microscopy

RT 12780-05 FIRM for Acrylic Resin Sections 10ml

RT 12780-06 FIRM for Epoxy Resin Sections 10ml

FIXATIVES, PREPARED

Premixed, prebuffered fixatives, that are pH adjusted for immediate laboratory use. They are freshly prepared upon receipt of order to ensure maximum shelf life. The fixatives are filled in 20ml glass vials (10ml/vial). This allows for the immediate fixation of your specimens without costly and time consuming transfer associated with ampoule contained fixatives. **If you desire any prepared fixative that is not already listed in our catalog or you have special size and packaging requirements, please call us.**

➤ **Bouin's Fixative**

A fixative that is used in light microscopy for the preservation of soft delicate structure.

RT **15990** Bouin's Fixative 10x10ml

➤ **Bouin's Solution**

Bouin's solution can be used as a fixation and a staining fluid. Bouin's fixative is excellent for use on biopsy specimens of the gastrointestinal tract. Tissue from the endocrine system are well fixed and many antibodies react well with tissue fixed in Bouin's. Bouin's solution may be used as a routine fixative or a staining solution, but should not be used as a preservative for tissue. Tissue cannot be held in Bouin's solution for extended periods. The maximum fixation time in this solution should be less than 48 hours and should be transferred to alcohol. Packaged in leak-proof histo-containers, pre-filled and ready-to-use.

Formulated with Picric Acid saturated aqueous solution 75%, Formalin (40% aqueous formaldehyde) 25% and Glacial Acetic acid 5% in de-ionized water

RT **15990-01** Bouin's Fluid 1 L

RT **15990-04** Bouin's Fluid 4 L

Bouin's Fluid in Pre-filled cups:

RT **15990-10** Bouin's Fluid 50 x 10 ml/cs

RT **15990-20** Bouin's Fluid 50 x 20 ml/cs

RT **15990-30** Bouin's Fluid 20 x 30 ml/cs

➤ **Brasil Fixative**

Ethanol, Picric Acid, Formalin, Acetic Acid, Glacial

This fixative is most popular when glycogen is the target. The solution is similar to Bouin's Solution (alcoholic) offering quick hardening and good staining with acid dyes.

RT **15995-10** Brasil Fixative 10x10ml

RT **15995-20** Brasil Fixative 100 ml

RT **64130-50** Carnoy's Fluid Without Chloroform 500 ml

➤ **Carson's Phosphate Buffered Formalin**

Millonig's phosphate buffered formalin as modified by Carson, Martin and Lynn, by using 4% formalin in 0.1M sodium phosphate monobasic with sodium hydroxide to pH 7.2

RT **15732-05** Carson's Phosphate Buffered Formalin 500 ml

RT **15732-10** Carson's Phosphate Buffered Formalin 1 L

➤ **Carson's Phosphate Buffered Paraformaldehyde**

For some tissues, the use of formalin (contains 10 – 15% Methanol) is not suitable, we offer the alternative formaldehyde (prepared from paraformaldehyde – contains no methanol) for your convenience.

RT **15733-05** Carson's Phosphate Buffered Paraformaldehyde 500 ml

RT **15733-10** Carson's Phosphate Buffered Paraformaldehyde 1 L

➤ **CytoPrep Fixative**

CytoPrep Fixative forms a clear protective coating over specimens while fixing cells. It is ideal for cytological smears and it dries within 4 to 6 minutes. Good for safe storage and transportation of slides. It is water soluble and contains no chlorofluorocarbons. Comes in a 4 oz. spray can.

RT **64145-01** CytoPrep Fixative 4 oz.

RT **64145-12** CytoPrep Fixative 12 x 4 oz.

FIXATIVES, PREPARED

➤ Davidson's Fixative (Hartmann's/ Davidson's Fixative)

This is rapid fixative. Results with good nuclear detail and minimal formalin pigment. Hatmann's (Davidson's) Fixative is useful for preparing tumors, bone marrow, gynecologic specimen, fatty breast, medical biopsies. Fixation of small specimen is rapid. Exposure to the fixative should be limited to 24 hours (tissue may then be transferred to neutral buffered formalin or 70% alcohol for storage).

Based on the volume of 1125 ml solution, there is 2 part Formalin (35-39%), 3 part Ethanol, 1 part Glacial Acetic acid, and 3 part of tap water.

RT	15958-20	Dietrich's Fixative	100 ml

➤ Fast Frozen Fix

Prepared fixative – This is one step quick fix for frozen sectioned tissue. Fixes tissue to slide to allow for staining procedures. Apply to most tissue types.

RT	15280-01	Fast Frozen Fix™	100 ml
RT	15280-05	Fast Frozen Fix™	500 ml

➤ Fixative/Decalcifier

- A solution that fixes and decalcifies in one step.
- Prevents loss of cellular structure.
- Enhances hematoxylin staining.

RT	64148-01	Fixative/Decalcifier	1 L
RT	64148-06	Fixative/Decalcifier	6 x 1 L

For our RDO Rapid Decalcifier, see the Histology section, page 450-451 >>>>

➤ Formalde-Fresh Low Odor Solution; Histology Grade

A specially formulated odor-mask which neutralizes the formalin odor without affecting subsequent tissue processing, handling, or staining. Low odor, ready-to-use 10% formalin solution. May be used as a fixative or preservative of specimens. Its shelf life is 24 months.

RT	15678-01	Formalde-Fresh	4 L
RT	15678-04	Formalde-Fresh	4 x 4 L

➤ Buffered Formalde-Fresh, Low-Odor 10% Formalin Solution

Low odor, prepared w/v, pH 6.9 to 7.1 at 25°C. 10% formalin in Phosphate buffer according to the A.F.I.P. Manual of Histology. This solution allows for long-term storage of tissue specimens.

RT	15741-01	Low-Odor Formalin 10% Buffered	4 L
RT	15741-04	Low-Odor Formalin 10% Buffered	4 x 4 L

➤ Formalin, Neutral, Buffered 10% w/v in Acetate Buffer

Buffered with Sodium Acetate in accordance with the A.F.I.P. Manual of Histology. pH 6.0 to ph 7.1 at 20°C. Filtered and ready-to-use.

RT	15738-01	Formalin 10% Buffered in Acetate	1 L
RT	15738-04	Formalin 10% Buffered in Acetate	4 L

➤ Formalin, Neutral, Buffered 10% w/v in Phosphate Buffer

Buffered with phosphate in accordance with the A.F.I.P. Manual of Histology. pH 6.9 to 7.1 at 25°C. Filtered and ready-to-use.

RT	15740	Formalin 10% Buffered in Phosphate	450 ml
RT	15740-01	Formalin 10% Buffered in Phosphate	1 L
RT	15740-04	Formalin 10% Buffered in Phosphate	4 L

➤ TissuePrep Buffered 10% Formalin

Prefilled with 10% formalin Cat# 15740. Ready-to-use in pre-filled cups. Labeled in accordance to OSHA requirements, which gives you immediate information regarding handling and first aid procedures. Pre-measured in wide-mouth, leak-proof, opaque polypropylene containers which limits your exposure to formaldehyde and saves you time.

Handle Your Ampoules Safely...

➤ Break-Safe™ Ampoule Opener

EMS Introduces Break-Safe™ allowing you to safely open up to 3 ampoules at one time

Box style design allows one handed opening of up to 3 ampoules at a time. Gently pressing down on the lid snaps ampule necks clean while keeping them contained within the device and away from fingers. After removing ampoule contents, simply turn the device upside down over a trash receptacle to safely discard ampoules and tops.

Features:

- 4 inserts allow opening of 1ml, 2ml, 5ml and 10 ml ampoules
- Open ampoules easily and safely
- Transparency allows unobstructed viewing of ampoule contents at all times
- Copolyester plastic construction has broad chemical resistance

60607	Break-Safe™ Ampoule Opener	each
-------	----------------------------	------

➤ Ampoule Breaker; Soft Silicone

EMS EXCLUSIVE Reusable – Made from soft silicone. It offers a simple way to break pre-scored glass ampoules safely. Accommodates 5, 7, and 10 ml size ampoules. Reduces injury and spillage.

60600	Ampoule Breaker; Soft Silicone	each
-------	--------------------------------	------

➤ Ampoule Cracker™ Please see page 214 >>>>

➤ Formaldehyde

(Paraformaldehyde) GLUTARALDEHYDE (Karnovskys)

RT	15720	kit
RT	15730	box of 5 kits

➤ Formaldehyde/Zinc Fixative

Prepared: Ready-to-use.

- Preserves fine nuclear details.
- Good for immunostaining.
- Contains no mercury.
- Can be used with automated tissue processors.
- Works well with standard and special stains because zinc is a stain enhancing mordant.

RT	15675-01	Formaldehyde/Zinc Fixative	1 L
RT	15675-04	Formaldehyde/Zinc Fixative	4 L

➤ Formalin Spill Control; F-gard- ER

For the handling and disposing of formaldehyde containing solutions. It immobilizes, cools, and contains spills. As well, it reduces the escape of formaldehyde gas and significantly reduces formalin concentration. F-gard- ER aids in reducing exposure to formaldehyde gases by immobilizing the formalin and transforming it to an easily removed semi-solid mass. The mass cools rapidly minimizing formaldehyde off-gassing.

RT	24140-01	Formalin Spill Control	11 oz.
RT	24140-06	Formalin Spill Control	5 x 11 oz.

➤ Formaldehyde Aqueous Solution, 16% (Paraformaldehyde Aqueous Solution)

EM Grade

Paraformaldehyde - methanol free solution. A more efficient and rapid penetrant fixative used in combination with Glutaraldehyde and Acrolein fixatives. Easy to break, prescored, 10ml ampoules sealed under inert gas, or 100ml bottles.

16% Aqueous Solution

RT	15700	10 ml
RT	15710	10 x 10 ml

RT	15714-S	100 ml

METHANOL FREE

In addition to our complete line of Formaldehyde solutions shown above we have now added to the line.

Since the DOT (Department of Transportation) has changed the definition of what a non dangerous solution of formaldehyde is to under 10%, we are now offering an 8% and a 4% solution. This will allow us to ship overnight as well as overseas without any hazardous charges saving our customers a good deal of money.

The quality of our 8% and 4% aqueous Paraformaldehyde solution is as good as all of the other concentrations that we offer.

4% Aqueous Solution

RT	157-4	10 x 10 ml

➤ Perfusion Wash and Perfusion Fixative Ready to use

For all of the best results we offer ready to use Perfusion washes and fixatives which are recommended by the NeuroScience Association. All of our solutions are ready made and are of the highest quality.

We have three groups of solutions commercially available.

Group I : Perfusion wash and Fixative Technical Grade. To be used for Standard stains:

Perfusion Wash (1220SK):
Phosphate Buffered Saline 0.1M
Phosphate Buffer pH 7.2-7.4

Perfusion Fixative (1221SK): 10%
Phosphate Buffered Formaldehyde

Group II: Perfusion wash and Fixative Reagent Grade. To be used for Standard and ImmunoHistochemistry Stains.

Perfusion Wash (1219SK):
Phosphate Buffered Saline 0.1M
Phosphate Buffer pH 7.2-7.4

Group III: Perfusion wash and Fixative Superior Reagent Grade. For the best results use this group. This is Sodium Cacodylate based for NSA'S Disintegrative Degeneration Stain

Perfusion Wash (1222SK): 0.8% NaCl/0.4% Dextrose/0.8% Sucrose/0.023% CaCl₂/Sodium Cacodylate 0.034%

Perfusion Fixative (1223SK): 4% Paraformaldehyde/4% Sucrose/1.4% Sodium Cacodylate

For a complete procedure and protocol for the use of these washes and fixatives please see the following site:
www.neuroscienceassociates.com/perf-solution1 or 2 or 3.htm

1220SK	Perfusion Wash, Technical	1000 ml
1221SK	Perfusion Fixative, Technical	1000 ml

If you want a custom wash or fixative made, please just let us know and we will be happy to make you whatever you require.

FIXATIVES, PREPARED**► CoreDish™ Multiple Biopsy Containers Half Prefilled with 10% Formalin**

Few recommendations concerning how the biopsies should be handled have been published. Performing a large number of biopsies means an increase in the number of containers handled and consequently a technical overload of the transmission network, which occurs without any financial counterpart. A new approach had to be developed in order to increase productivity.

We are proud to offer a multi-compartment container in the shape of a dish and half prefilled with 10% Neutral buffered Formalin, for holding and transporting biopsies. It is supplied with a leak-proof closure with O-ring ensuring total protection of contents. It conforms to OSHA directives. These CoreDish™ measure only 15mm H x 95 mm Diameter. Each compartment is clearly identified to allow proper placement and visualization of the biopsy being inserted. Thanks to CoreDish™ it is no more necessary to use a multiple of individual containers, thereby reducing cost and risks of confusion.

CoreDish™ available in many configurations to serve in different biopsy, such as prostate, upper GI tract and lower GI tract. A label allows recording the related information, patient ID, doctor, date and time.

**► M970-D5B-2 CoreDish™ Breast Biopsy Container
Half Prefilled with 10% Formalin**

This multi-compartment container (out of five compartments, four are labeled: LUQ, RUQ, LLQ, RLQ) in the shape of a dish and half prefilled with 10% Neutral Buffered Formalin, for holding and transporting biopsies. It is supplied with a leak-proof screw closure with O-ring ensuring total protection of contents. It conforms to OSHA directives. The dish measures only 15 x 95 mm in diameter. Each compartment is clearly identified to allow proper placement and visualization of the breast biopsy being inserted. A writing area for patient information is provided.

Cat. #	For	Compartments	Qty
RT 15736-10	Breast	5	10/pk

**► M970-D8P CoreDish™ Prostate Biopsy Container
Half Prefilled with 10% Formalin**

For prostate biopsies. Eight compartments. Leakproof seal with O-ring lid. An area for patient information is provided. Seven labeled compartments: Base, Lateral Base, Medium, Lateral Medium, Apex, Lateral Apex.

Cat. #	For	Compartments	Qty
RT 15736-20	Prostate	8	10/pk

**► M970-D8UGI CoreDish™ Upper GI Biopsy Container
Half Prefilled with 10% Formalin**

For upper GI track biopsies. Eight compartments. Leakproof seal with O-ring lid. An area for patient information is provided. Seven labeled compartments: Gastric Card, Gastric Body, GE Junction, Gastric ATR, Distal Esophage, Pylorus, Duodeum.

Cat. #	For	Compartments	Qty
RT 15736-30	Upper GI	8	10/pk

**► M970-D8LGI CoreDish™ Lower Gi Biopsy Container
Half Prefilled with 10% Formalin**

For lower GI track biopsies. Twelve compartments. Leakproof seal with O-ring lid. An area for patient information is provided. Ten labeled compartments: Proximal Flexure Colon, Hepatic Fleure Colon, Distal Transverse Colon, Ascending Colon, Splenic flexure Colon, Cecum, Descending Colon, Terminal Ileum, Rectum, Sigmoid Colon.

Cat. #	For	Compartments	Qty
RT 15736-40	Lower GI	12	10/pk

**► M970-D12P CoreDish™ Prostate Biopsy Container
Half Prefilled with 10% Formalin**

For prostate biopsies. Twelve compartments. Leakproof seal with O-ring lid. An area for patient information is provided. TWelve labeled compartments: L Base, R Base, L Lateral Base, R Lateral Base, L Medium, R Medium, L Lateral Medium, R Lateral Medium, L Lateral, L Apex, R Apex, R Lateral Apex.

FIXATIVES, PREPARED

➤ Glutaraldehyde

OCH₂CH₂CH₂CHO F.W. 100.12
CAS #111-30-8

Specific Gravity @ 20/20°C: 1.131

**THE HIGHEST
PURITY!**

➤ EM Grade Distillation Purified

- The Universal Fixative for Electron Microscopy.
- Purified to EM Grade from commercial grade by "all-glass vacuum-distillation."
- THE HIGHEST PURITY, free from polymers and other contaminants.
- Each lot is tested and assayed in our lab before we ship and guarantee its purity.
- Sealed under dry nitrogen.
- Refrigerated prior to shipment.

After glutaraldehyde has been purified to EM grade, it has a high risk of polymerizing if it is not handled properly. Electron Microscopy Sciences takes special precautions to assure a polymer-free, pure glutaraldehyde.

Every lot of our EM grade glutaraldehyde is assayed prior to shipping assuring you consistent purity and the highest possible quality. If stored properly, our Glutaraldehyde has a very long shelf life.

We package our glutaraldehyde in 10ml, single dose ampoules, sealed under dry nitrogen, and kept refrigerated until it is shipped. We offer our glutaraldehyde in a wide range of percentages to simplify mixing procedures and avoiding waste.

EM grade glutaraldehyde, stored in volumes greater than 100ml, with repeated defrosting and recapping, will polymerize in time, producing an absorption peak of 235nm rather than the 280nm of pure EM grade. The presence of polymerized glutaraldehyde greatly reduces its efficiency as a cross-linking agent, preventing proper fixation. For this reason, we provide 10ml ampoules and 100ml bottle quantities for larger applications.

➤ Serum Vial Glutaraldehyde

Over the years, many of our valued customers have requested purchasing our Glutaraldehyde in serum vials. This packaging allows the user to puncture the special non-reactive seal with a hypodermic syringe and draw out the exact quantity of Glutaraldehyde needed without opening the container. This packaging assures freshness and purity of the Glutaraldehyde at all times

Please Note: This kit can be formulated to fit your requirements. Please contact us.**► Glutaraldehyde Spill Control; G-gard-ER**

Transforms glutaraldehyde to a nearly neutral solution and renders the solution acceptable for sewer disposal. Prepares glutaraldehyde for biodegradation. Reduces biocidal activity and odor. 65g G-gard pre-treats one gallon of 1% solution.

RT	24142-01	Glutaraldehyde Spill Control	64 g
RT	24142-10	Glutaraldehyde Spill Control	10 x 64 g

TECHNICAL TIP**The Use of Glutaraldehyde, Acrolein, and Paraformaldehyde Buffer**

2.5% Glutaraldehyde, 1.0% Acrolein, 0.1% Para-formaldehyde, 20mM MgCl₂ buffer with 0.09M Sodium Cacodylate to pH 7.4. This fixative preserves the structure of both hair cells and neurons of the organ of corti. (Siegel and Brownell 1986)

FIXATIVES, PREPARED

➤ HISTOCHOICE™ MB® *

The Molecular Biology Fixative

- **SAFE** - Contains no Formaldehyde, Glutaraldehyde or Mercury
- **NON-TOXIC** – Is completely odorless and can be safely disposed of down the drain

HISTOCHOICE™ MB® Tissue Fixative is the first fixative designed for the molecular biologist. It is specialty formulated to preserve antigenic sites for antibody probes and nucleic acid sites for immunohistochemistry. HISTOCHOICE™ MB® replaces formaldehyde based, alcohol based, Zenkers, B-5, B-3, Bouin's and other fixatives with superior results. Tissue fixed in HISTOCHOICE™ MB® exhibit vibrant staining, better nuclear and cytoplasmic detail, and will retain a crisp appearance even after long-term fixation.

Because this formula is designed specially for molecular biology applications, HISTOCHOICE™ MB® fixed sections do not require pre-digestion or other recovery procedures to make important sites available. This means you spend less time preparing slides and more time doing research.

More than a fixative, HISTOCHOICE™ MB® is a preservative that leaves antigens and nucleic acids in their native state, allowing binding for specific probes. Primary antibodies can often be diluted several-fold due to the increased number of preserved antigenic sites, saving cost on every slide you process.

HISTOCHOICE™ MB® fixed tissue retains a much more natural look and feel than formalin fixed tissue. It is important to remember that these tissues are not fixed by formalin, but rather preserved by HISTOCHOICE™ MB®.

RT	64115-01	HISTOCHOICE™ MB® Fixative	1 L
RT	64115-04	HISTOCHOICE™ MB® Fixative	4 L
RT	64115-44	HISTOCHOICE™ MB® Fixative	4 x 4 L

* HISTOCHOICE™ is registered name of Amresco

➤ Hollande's Fixative

A modification of Bouin's solution. It is stable and will decalcify small bone specimens. Tissue that is fixed with Hollande's can be stained successfully with most stains, and the cupric acetate in the solution stabilizes red blood cell membranes and eosinophil and endocrine cell granules so that less lysis occurs than with Bouin's solution. Hollande's is widely used as a fixative for biopsy specimens of the gastrointestinal tract.

Thorough washing of the fixative prior to placing the specimen in a phosphate buffered formalin solution is necessary because the salts present in the solution will form an insoluble phosphate precipitate. Packaged in leak-proof histo-containers; prefilled ready-to-use.

Cat.#	Cup Size	Filled	Pack/cs
RT 64120-10	15 ml	10 ml	50/cs
RT 64120-20	30 ml	20 ml	50/cs
RT 64120-30	60 ml	30 ml	20/cs

Bulk packaging is available:

RT 64120-01	Hollande's Fixative	1 L
RT 64120-04	Hollande's Fixative	4 L

➤ McDowell Trumps Fixative

RT 18030-05	McDowell Trumps Fixative	500 ml
RT 18030-10	McDowell Trumps Fixative	1 L

➤ Michel's Fixative, pH 7.0 – 7.4

RT 18040-05	Michel's Fixative	500 ml
RT 18040-10	Michel's Fixative	1 L
RT 18040-20	Michel's Fixative Pre-filled	20 x 10 ml

TECHNICAL TIP

Tissue Biopsy in Michel's Fixative

Place tissue biopsy in Michel's fixative for 24-48 hours and then wash the tissue with Michel's Buffer three changes a minimum of 10 minutes each change and freeze at -70°C.

➤ Mirsky's Fixative™

- **Saponin/Glyoxylate Fixative**
- **Preserves Immunohistological activity**
- **Contains no formaldehyde**
- **Fast-acting**

Mirsky's Fixative™ is a superior fixing agent for use in immunohistological and immunological protocols. Mirsky's contains no formaldehyde or glutaraldehyde. Therefore, it has considerably reduced toxicity and virtually no odor. Mirsky's Fixative is neutral, buffered, and isotonic (308 mOsmol). Additionally, Mirsky's Fixative does not contain toxic or hazardous buffers such as cacodylate or barbital. Hardening or shrinkage of tissue is considerably reduced.

Double reactive sites afford excellent cross-linking properties while maintaining sample enzyme activity. Samples processed in Mirsky's Fixative for light microscopy can subsequently be used in electron microscopy procedures. Special buffer systems may be used in place of the buffer provided.

Use as replacement for formalin and/or glutaraldehyde fixatives in immunohistological and immunocytological staining protocols. Tissue size is unlimited, as long as the sample is no thicker than 0.5cm in at least one plane to assure uniformity of tissue penetration. The gross visual appearance will be different than in formaldehyde and tissue may seem "raw". This is due to double site binding of the fixative with a resultant reduction in tissue shrinkage. Microscopic examination of tissue morphology will be noticeably improved. This material is intended to maintain enzyme and antibody activity. For best results, tissue section of high digestive enzyme content should be thoroughly rinsed in saline solution before fixation (e.g. trypsin in intestinal samples). Once fixed, tissue may be retained in Mirsky's Fixative and ethanol indefinitely.

Mirsky's Fixative is normally distributed as a concentrated two bottle system, although high through-put laboratories often use the single bottle ready-to-use format. The two bottle system is comprised of Mirsky's Fixative 10X Concentrated and Mirsky's Fixative 10X Buffer. To reconstitute to working strength, add 1 part Mirsky's Fixative 10X Buffer to 8 parts distilled or deionized water, mix thoroughly, then add 1 part Mirsky's Fixative 10X Concentrate and mix again.

The two bottle system has a shelf life of 12 months while the ready-to-use format has a shelf life of 30 days.

TECHNICAL TIP

Staining Tips With Hematoxylin

1. Check a slide from each batch of slides during times the workload is heavy to insure good staining by the Hematoxylin.
2. Do not allow the slides to dry out at any point during your staining procedure.
3. Increase your staining time in Hematoxylin for tissues that have been in fixative longer than normal.
4. Increase your staining time by at least 1/3 for autopsy tissues.
5. Do not agitate the slides if you are using Ammonia water to Blue. The tissues are more susceptible to washing off if you agitate the slides.
6. Check the pH of the Hematoxylin daily.

➤ Immersion Oils

Which Type—Which Application?

For Normal Light Microscopy:

Types A & B, with viscosities of 150 and 1250cSt respectively, meet these requirements. The greater the gap between the cover glass and objective, or condenser and slide, the more desirable high viscosity becomes. For extremely large gaps, type NVH should be used. All Cargille Immersion Oils can be blended for intermediate viscosities.

➤ Immersion Oils

Cargille PCB-Free Immersion oils were introduced in 1972. Today, no other immersion oil meets FDA criteria. Now four standard types are available with the introduction of Type NVH, a very high viscosity oil. All Cargille Immersion Oils meet DIN 58 884 (Deutsched Institut Fur Normung e.V.)

➤ 37°C Immersion Oils

A number of research projects require microscopic studies at internal body temperature. Since the index/temperature relationship is inverse, increasing temperature significantly reduces the index of the immersion oil and consequently the imagery deteriorates. This problem has been resolved by the formation of Cargille 37°C immersion Oils, which have an index of 1.515@37°C.

Consideration of these oils is also suggested where stage temperatures are elevated by sub-stage illuminators and high wattage projection equipment.

➤ Immersion Oil Type 300

Automated Hematology Systems: Use Type 300; Automated Hematology Systems depend on accurate, precisely controlled physical and optical properties of immersion oil for successful imaging and mechanical processing. Type 300 is designed and manufactured to meet the stringent requirements of this equipment, which include

specialized viscosity and exacting controls for its consistency.

For Horizontal, Inverted & Inclined Instruments and Project Equipment:

Higher viscosities are generally required. Type NVH meets the requirement, having a viscosity of 21,000cSt.

➤ Immersion Oils NVH and OVH Inverted, Inclined, Projection, and Long Focus

Intruments: Use type NVH or OVH; The greater the gap between the cover glass and objective, or between the slide and condenser, the more desirable high viscosity becomes. The very high viscosities of Type NVH at 21,000 cSt and Type OVH at 46,000 cSt give excellent results for these applications.

For Fluorescence Microscopy:

After years of development and field testing, we now have available two new PCB-Free Immersion Oils for Fluorescence Microscopy.

➤ Immersion Oil Type HF

Type HF provides low fluorescence and the correct optical properties.

➤ Immersion Oil Type FF

Type FF has virtually no background fluorescence which makes it ideal for observing low levels of fluorescence. It is highly stable, water white, and non-hygroscopic. Type FF can be substituted for all other fluorescence microscopy immersion oils in nearly all fluorescence applications.

➤ Immersion Oil LDF:

Extremely low fluorescence is achieved by Type LDF. It is the replacement of choice for the DF which is no longer being manufactured. The LDF possesses the highest resolution of the oils for fluorescence applications

Lead Solutions and Staining

I. Common Lead Stock Solutions

The following are some Lead Stock solutions, which are commonly used:

A. Lead Staining stock solution by Reynold's (1963)

- In a 50 ml volumetric flask add:
 Lead Nitrate Pb(NO₃)₂ 1.33 g
 Sodium Citrate Na₃(C₆H₅O₇)·2H₂O 1.76 g
 Boiled, cooled, CO₂ free dist. water 30 ml
- Cover the flask. Shake vigorously for at least one minute.
- Add 8 ml of 1N NaOH CO₂ free (EMS Cat. #21170).
- Mix until clear.
- Check the pH. It should be 12.0 ±0.1. If the pH is low add more NaOH to the clear solution. If the pH is above 12.1 start over this time adding a smaller amount of NaOH.
- Add CO₂ free water to bring the solution to a final volume of 50 ml.
- Let stand several hours before use.
- Store in amber, tightly covered bottle in refrigerator.

B. Lead Staining Stock Solution by Venable and Coggeshall (1965)

- In 12 ml sample bottles (EMS Cat. #64254) add 0.01g - 0.04g Lead Citrate (EMS Cat. #17800) to 10 ml CO₂ free distilled water.
- Add 0.1 ml 10N NaOH. Cap the bottle and shake well until clear.

To use, draw a small portion up with a syringe and use a syringe filter, or, centrifuge a small covered sample at 6000 rpm for 15 minutes.

NOTE: Removal of heavy metal precipitates (artifacts) Uranyl acetate (small, needle shaped), crystals or lead carbonate (large, spherical) is imperative. The reason being is these precipitates can obscure vital detail and the end result is poor quality micrographs. Kuo, et al (1981), suggested that these artifacts can often be removed by a 30 second dip into freshly prepared 10% glacial acetic acid followed by two rinses in distilled water.

II. A Stable Lead Staining Solution

A Stable Lead by Modification of Sato's Method Lead staining solution: Calcined lead citrate - long term storage lead solution. Since the first introduction by Watson (1958), various lead stains have been developed in order to increase contrast and reduce contamination in sections for electron microscopy. One of the disadvantages of lead stains developed to date is that the staining solution is apt to produce precipitates of lead carbonate, resulting in difficulty for long-term storage of the stains. Now there is a new stable lead solution which is free from precipitates when kept at room temperature for over 1 year.

The stock lead solution is made up as follows:

Calcined Lead Citrate	0.20 g
Lead Nitrate	0.15 g
Lead Acetate	0.15 g
Sodium Citrate	1.00 g
Distilled Water	41.00 ml

The calcined lead citrate is obtained by heating crystal lead citrate for several hours in a melting pot (200°C to 300°C) until the color changes to a light brownish yellow. **NOTE: Overheated Lead Citrate with a dark brownish or black color can't be used.**

The above reagents are placed in a 50 ml volumetric flask and mixed well to produce a yellowish milky solution. Then 9.0 ml of 1N NaOH is added to the solution and mixed well until the solution becomes clear with a light yellowish color. The solution is then transferred to an amber glass with a screw cap bottle for storage. The solution can be stored at room temperature or in the refrigerator for over 1 year. Takamasa Hanaichi et al. (1986) "A Stable Lead by Modification of Sato's Method". J. Electron Microsc., Vol. 35. No. 3. 304-306.

Handling of Lead Solutions

Prepare and store LEAD SOLUTION in plastics rather than glass containers. Avoid breathing on sections during LEAD staining in order to maintain a CO₂-free environment. REASON: Pb + CO₂ in the presence of Oxygen forms PbCO₃ a white precipitate.

III. Lead Staining

Lead stains are very sensitive and will precipitate quickly upon contact with CO₂. To prevent this from happening either during preparation, storage, or staining the following steps should be followed:

- Prepare CO₂ free water: boil double distilled water and store it at once (while still hot) in tightly capped bottles or glass stop-pered bottles. When these bottles are opened you should hear a hissing sound which indicates the bottles were sealed properly. The water bottle should be opened only prior to use. The above procedure needs to be repeated if ample amount of water remains in the bottle and the bottle was left open for an extended period of time (more than 10 minutes).
- Construct a staining apparatus: A sheet of dental wax is placed on top of wetted filter paper (1N NaOH) and it is surrounded with several NaOH pellets inside of a petri dish which serves as the staining chamber. The NaOH will quickly absorb CO₂ in the chamber, giving a CO₂ free area for lead staining.

For a detailed description and explanation of lead staining, please refer to the following book:

TECHNICAL TIP

Superior Methylene Blue-Azure II Stain for Semithin Sections

The most common stain used in the electron microscopy lab for thick sections is toluidine blue. Unfortunately its general lack of polychromasia makes it unsuitable for photomicro-graphy. Much better results are obtained for general work as well as for photomicrography (especially with the use of filters for black and white film) with the methylene blue, azure II combinations.

RT 19193	Same as 19192 (5 bxs + /lot)	bx

Special orders are encouraged for different solution concentrations and packaging requirements.

TECHNICAL TIP

Neutralization And Disposal of Osmium Tetroxide

A 2% solution of Osmium Tetroxide can be fully neutralized by twice the volume of oil (corn oil is preferred because of its high percentage of unsaturated bonds).¹ That is to say, for every 10ml of 2% Osmium solution, 20ml of corn oil is required.

Procedure:

1. Do all work under a fume hood.
2. Pour twice the volume of corn oil into used Osmium Tetroxide solution.
3. Wait for the oil to completely turn black.
4. Test to check that complete neutralization has taken place. (To confirm neutralization; take either a glass coverslip coated in corn oil or a piece of filter paper soaked in corn oil and suspend it over the solution. Blackening indicates OsO₄ is still present.)²
5. Dispose in accordance to local regulations. Contact your Disposal Agency or Environmental Health & Safety Office at your Institute to obtain local regulations.

References:

1. Cooper, K. (1988) Neutralization of Osmium Tetroxide in case of accidental spillage and for disposal. Bulletin of The Microscopical Society of Canada. 8:24-28
2. Lunn, G.; Sansone, E.B. Osmium Tetroxide. Destruction of Hazardous Chemicals in the Laboratory; Program Resources, Inc. Frederick, MD; pg. 211-213

- Inadequate dehydration of the specimen.
- Inadequate mixing.
- Inadequate addition of the accelerator to the mixture.

SAFETY TIP

An Air-Tight Container for Small Amounts of Osmium Tetroxide

An Air-Tight Container for Small Amounts of Osmium Tetroxide Osmium vapors readily leak out of many containers as is evidenced by the black precipitates on inside refrigerator walls in many E.M. laboratories. A convenient way to prevent such leakage is to store the osmium solutions in glass vacuum-type blood collection tubes. The osmium vapors will not penetrate past the rubber stopper and contaminate the surrounding area.

Lynn D. Gray, Ph. D., The University of Texas Health Center at Tyler, Dept. of Cell Biology and Env. Sci., P.O. Box 2003, Tyler, TX. 75710

Storage: Room Temperature in a desiccator, kept away from direct sunlight. For our full line of desiccators, see Equipment section, pages 1064-1070. >>>>

➤ **Paraformaldehyde, EM Grade, Purified**

(Polyoxymethylene)

OH(CH₂O)_nH F.W. Average: 600 CAS #30525-89-4

Paraformaldehyde is the condensation product of methylene glycol, a substance not so far isolated in its pure form; it is a white solid with a formaldehyde content between 78 and 98% and is supplied either as a Prills or Granular. All forms contain more than 95.5% paraformaldehyde content. The Prill and Granular forms are small, free-flowing, dust-free beads, the most desired by EM users. A fast-penetrating EM fixative used in combination with Glutaraldehyde, Acrolein, and Osmium Tetroxide. Karnovsky, M.J., J. Cell Biol., 27, 137A (1965). Hayat, M.A. Principles & Tech., of EM (Univ. Park Press), 68 (1981)

RT	19200	Prills	500g

➤ **Pepsin Reagent, Ready To Use**

Pepsin is used for proteolytic digestion of formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. Pepsin digestion of FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2-8°C. DO NOT FREEZE

Intended Use: Use as antigen retriever for some antibodies in IHC. Please refer to primary antibody protocol for IHC.

Reagent: Ready-to-use Pepsin reagent available in 2 sizes: 15 and 100 ml

2-8°C 64142-05 Pepsin Reagent 15 ml

2-8°C 64142-06 Pepsin Reagent 100 ml

➤ **Polyester Wax**

A synthetic polyester wax with a very low melting point (37°C). Invented by Dr. H.F. Steedman, as a ribboning embedding medium. Its main advantage over paraffin and ester waxes is its low melting point, which reduces tissue hardening, shrinkage, and eliminates the need for infiltration ovens.

The wax is soluble in most organic solvents, including alcohol, ethers, esters, ketones and hydrocarbons. The wax is water tolerant, almost opaque, and sections easily. No electrification of ribbons occurs during sectioning. Sections of 2 microns and more may be cut at room temperatures between 10 and 22°C. It is advantageous to keep the wax in its solid state prior to use.

RT **20260** 100g

► Pronase Reagent, Ready To Use

Pronase is used for proteolytic digestion of formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. Pronase digestion of FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2-8°C. DO NOT FREEZE

Intended Use: Use as antigen retriever for some antibodies in IHC. Please refer to primary antibody protocol for IHC.

Reagent: Ready-to-use Pronase reagent available in 2 sizes: 15 and 100 ml.

2-8°C	64142-03	Pronase Reagent	15 ml
2-8°C	64142-04	Pronase Reagent	100 ml

➤ **Ruthenium Tetroxide**

0.5% Stabilized Aqueous Solution

In Crystal form:

RuO₄ F.W. 165.70 CAS #20427-56-96
m.p. 25.4°C b.p. 40°C

Ruthenium tetroxide is very similar to Osmium Tetroxide, and is used as a fixation/staining agent for electron microscopy. Ruthenium Tetroxide offers excellent staining of saturated and unsaturated polymer materials as well as stabilizing thin sections under the bombardment of the electron beam.

NOTE: Penetration of ruthenium tetroxide into the tissue is poor.

➤ **Section Block**

A new class of blocking solutions based on chemically modified and fragmented ultra-pure casein. Effectively reduces unwanted binding of primary antibody and conjugates you use to charged surface of the slide and tissue section. Greatly reduces non-specific binding while preserving the specific reaction, by saturating potential non-specific protein-protein interactions. Moreover, in contrast to BSA-based, IgGm casein or serum -based blocking solutions there is no interaction of specific antibody and blocking protein itself. or oth ls not comparable to other commercially available or home-made blocking solutions. Recommended for research and diagnostic pathology, especially for retrieved sections and polyclonal antibodies..

➤ Sodium Ethylate

(Sodium Ethoxide) C₂H₅ONa F.W. 68.05 CAS #141-52-6

Used as an agent for flattening thick sections (0.5-2.0 micron) of epoxy embedded material.

Felix Sierra, Christa Hegele-Hartung and Henning M. Beier (1990).

An improved technique for flattening semithin sections of epoxy-embedded tissues used for high resolution light microscopy.

J. of Microscopy Vol 159, Pt 1, (July 1990), pp. 95-98

RT	21150	25g
----	-------	-----

TECHNICAL TIP

An Improved Technique For Flattening Semithin Sections Of Epoxy-Embedded Tissues Used For High-Resolution Light Microscopy

A stock solution (saturated sodium ethoxide in absolute ethanol) is stored in a dark, closed bottle, and is diluted prior to use with an equal volume of absolute ethanol. The exposure time is no longer than 2 minutes, and the section thickness is not more than 0.5 - 1.0 micron. Use with the above solution permits successful flattening of epoxy-embedded sections and therefore improves the staining properties of semithin sections and also offers better immunoreactions in immunocyto-chemistry. As well, it is a useful agent for removing folds and crumbles from semithin epoxy resin sections.

Felix Sierra, et al. (1990) J. of Microscopy, Vol. 159, Pt 1, pg. 95-98.

➤ **Sure-cut Surfactant**

Epoxy resins are easier to section with glass, as well as diamond knives, when the embedding medium contains 0.5-1.0% of our SURE-CUT. The life of the diamond knife will be extended with its use because it will reduce the friction of the plastic block during sectioning.

Flashpoint: 28°C

An organo-silicon compound tetramethylsilane (TMS) is used as an internal standard for nuclear magnetic resonance (NMR). It is chemically inert and has a boiling point of 26.6°C which is lower than acetone (53.6°C), and other highly volatile liquids, such as diethyl ether (34.5°C) and 1,2-epoxy propane (36.4°C). It is soluble in most organic solvents but insoluble in water. All of these properties make TMS an ideal solvent for tissue drying, which preserves excellent tissue surface details. RT 22050 50g

TECHNICAL TIP

A Toluidine Blue/Basic Fuchsin Stain For Gma Embedded Tissues

Solution A: Toluidine blue 0 (EMS #22050)/Sodium Borate Tetra (EMS #21130); 1% each in distilled water

Solution B: 1% Basic Fuchsin; 50% Ethanol in distilled water.

Both solutions are stable in amber glass-stoppered bottles for 6 months when stored at room temperature. The working solution is prepared by adding 3ml of Solution B to 60ml distilled water. The section is covered with a few drops of Solution A for 3 to 5 minutes on a hot plate at 55-60°C. Excess stain is washed off in running tap water. After drying on the hot plate, the sections are then stained by covering them with a few drops of Solution B for 1 minute at room temperature. They are washed well in running tap water, dried on a hot plate, and mounted with mounting medium (such as Entellan, EMS #14800; DPX, EMS #13510; Depex, EMS #13514; etc.) The colors that are obtained on human tissue with this staining technique are as follows: nuclei: stained dark-blue; cytoplasm and connective tissue fibers: stained in various shades and intensities of red.

URANYL AND URANIUM COMPOUNDS

Here at Electron Microscopy Sciences we have a complete range of Uranyl and Uranium compounds, such as Uranyl Chloride, Uranium Oxide (U₃O₈), Uranium Tri-Oxide (UO₃), Uranium Dioxide (UO₂), just to name a few.

All of our products are manufactured from depleted Uranium.

We also manufacture Uranium Mono Carbide and Uranium Di Carbide products for Ion Beam Research.

For any that are not listed please contact us today.

► Uranyl Acetate, Reagent, A.C.S.

UO₂(OCOCH₃)₂·2H₂O F.W. 424.14 CAS #541-09-3
Assay98.0-102.0%

Specifications:

Insoluble Matters0.01
Chloride0.003%
Sulfate0.01%
Alkalies (as SO₄)0.05%
Heavy Metals0.002%
Iron.....0.001%

A universal EM stain for thin sections, en-block staining, and negative staining.

RT **22400** 25g

► UAR-EMS Uranyl Acetate Replacement Stain

A non-radioactive substitute for uranyl acetate with comparable results. Avoids the tedious authorization, shipping and disposal issues involving uranyl acetate without sacrificing performance. Two lanthanide salts, samarium and gadolinium triacetate, effectively used for staining plastic-embedded animal and plant tissues. Also for negative staining of macromolecules. Not recommended as a fixative.

RT **22405** UAR-EMS Stain 25 ml

TECHNICAL TIP

EMS' UAR-EMS Stain is a new negative stain which may be used as an alternative to Uranyl Acetate

Procedure: The UAR Stain is supplied as a concentrate. Please use the following dilutions:

- For most samples, including but not limited to, virus', dilute by 4x in distilled water
- If you are working with Bacillus, then a dilution of 15-40x is needed.

Staining will take place in 30 minutes at room temperature. For increased contrast of the stain, simply adjust the staining time.

Reference Article: Nakakoshi, Masamichi, Hideo Nishioka and Eisaku Katayama, 2011. New versatile reagents for biological transmission electron microscopy that substitute for uranyl acetate. *Journal of Electron Microscopy*, 60(6): 401-407.

► Platinum Blue, an EM Stain

IBI Blue Platinum Stain Pt₄N₈H₆O₂₄C₂₀

An EM stain that may have the ability to replace Uranyl Acetate in some instances. If you have issues with having Uranium salts that are radioactive (depleted or not) in the lab this may be the answer for you.

An alternative for staining TEM thin sections

RT **22407** Platinum Blue 1 ml

► Uranyl Acetate Solution

We are now offering Uranyl Acetate Pre-Made and ready to use in solution making your work easier. The following Percentages are available off the shelf (1, 2, 3, 4,). All other percentages are available upon request.

RT	22400-1	1% Uranyl Acetate Solution	100ml
RT	22400-2	2% Uranyl Acetate Solution	100ml
RT	22400-3	3% Uranyl Acetate Solution	100ml
RT	22400-4	4% Uranyl Acetate Solution	100ml

TECHNICAL TIP

Contamination Of Ultra Thin Sections

Hilton H. Mollenhauer (JEMT 5:59-63, 1987) suggested two ways to eliminate contamination of ultra thin sections by precipitation when staining with uranyl acetate and/or lead citrate (lead acetate). One of the ways is as follows: Place each nickel or copper grid (with section) on a drop of 0.5N HCl for 0.5 minutes for Lowicryl K4M sections or for 1-2 minutes for Epon 812 (or replacement) sections. Then rinse each grid in deionized water and blot dry on filter paper. Now you can restain with uranyl acetate and/or lead as the HCl does have a tendency to bleach the sections.

- Suzanne J. Botkin. "A Staining Tip" *EMSA Bulletin* 22:3 Nov. 1992.

TECHNICAL TIP

Removal Of Lead Citrate And Uranyl Acetate Precipitates On L.R. White Sections

Pamela Neill, Center of Biotechnology, Baylor College of Medicine, The Woodlands, TX

INTRODUCTION: L.R. White (EMS cat. #14380) is a hydrophilic embedding agent which allows aqueous solutions to easily pass through thin sections. Conventional methods for eliminating uranyl acetate precipitates (Hayat, 1986) suggest treating sections with 0.5% oxalic acid for 12 sec., 10% acetic acid for 1 min., or 2% aqueous (or ethanolic) solution (EMS cat. #22400) of uranyl acetate for 1 min. Lead precipitates are eliminated by treatment with 2% aqueous uranyl acetate 2-8 min. at room temperature or 10% aqueous acetic acid for 1-5 min. Unfortunately, these methods may destroy the continuity of L.R. White sections. Our lab has modified the conventional methods of Hayat to avoid or eliminate stain precipitates on L.R. White sections before and after they have been under the electron beam, while keeping the section intact.

MATERIALS AND DISCUSSION: Our first objective is to prevent stain precipitates from forming during the staining process. Warm distilled water is used for the final rinse of the grid to avoid uranyl acetate precipitate. A 10ml beaker of distilled water is set into the curing oven (50°C) during the staining procedure and taken out for use prior to the rinse step. To avoid lead precipitate during the staining process, add one sodium hydroxide pellet in 10ml distilled water. Stain with lead, dip once in the solution, then wash with distilled water.

We have successfully removed uranyl acetate and lead salts from L.R. White embedded sections by dipping the grid in 0.25% filtered oxalic acid. Retain the section 3-4 times longer than the original stain time. This method has worked in our laboratory on sections that have not been under the electron beam for prolonged exposure (30 min. or longer).

- Hayat, M.A. (1986.) *Basic Techniques for Transmission Electron Microscopy*. pg. 225

URANYL AND URANIUM COMPOUNDS (CONTINUED)

➤ **Uranyl Formate**

UO₂(HCO₂)₂·H₂O F.W. 378.08 CAS #16984-59-1
 Purity99.9-100%
 Specifications:
 Specific Gravity:.....3.695
 AppearanceYellow Crystals
 Melting Point1100C
 For ultra fine grain structure, our Uranyl Formate offers amazing advancement in negative staining for microscopy.

RT	22450	1 gram
RT	22451	5 grams

➤ **Uranyl Magnesium Acetate**

UO₂Mg(CH₃COO)₄ F.W.530.0 CAS # 20596-93-4

► Xylene Substitute

A xylene substitute for use in histology and cytology. It is safer and a more preferable alternative to xylene. It can be used as a solvent and clearing agent, as well as for dissolving paraffin waxes, glues and adhesives.

PROPERTIES:

- Minimal tissue shrinkage.
- Dries faster with no residue.
- Non-corrosive and far less toxic than xylene.
- Soluble with alcohol, paraffin embedding media, and mounting media. It can be used in all procedures that require xylene. Biodegradable.

RT	23410-01	Xylene Substitute	1 gal
RT	23410-04	Xylene Substitute	4 x 1 gal

► Xylene Substitute – Hemo-De® *

An intensive study from 1992 throughout 2000 has shown that Hemo-De® (d-Limonene) a terpene-based chemical with a pleasant citrus fragrance, was able to replace many of the clinical laboratories toxic reagents, such as carbol-xylene, xylene, ethyl acetate and formalin.

In Parasitology – Hemo-De replaces ethyl acetate in the concentration procedure; Hemo-De replaces carbol-xylene, xylene and formalin in the trichrome procedure.

In Histology – Hemo-De replaces xylene in most all procedures. Hemo-De is a superior solvent and Clearing agent that can be used in all tissue processing, deparaffinating and slide preparation.

Hemo-De Features:

- Soluble with alcohol and mounting media
- Biodegradable, non-corrosive, non-flammable (Combustible)
- Low toxicity levels
- Contains no benzene and no toluene
- Minimal tissue shrinkage
- Reasonably fast drying and leaves no residue

Hemo-De Application:

In Research and Medical – Hematology, Cytology, Pathology, Microbiology, Histology, Pathology, Hospital

In Mechanical Applications – Cleaning of machine parts, cleaning tools, engines etc.

In Electronic Applications – Circuits boards, electronic components, tools.

General Applications – Clean metal and glass surfaces. Dilute with water can be used to clean all plastic surfaces. Removal of adhesives, glues, tars...

Hemo-De Information:

Chemical name:d-Limonene (Terpene Hydrocarbon, n.o.s.)

Composition:d-Limonene, CAS [5989-27-5]

98.0% Butylated Hydroxyanisole (BHA),
CAS [25013-16-5] <0.024%

Flash Point (TCC):121°F (49.4°C)

Boiling Point:349°F (176°C) @ 760mmHg

Freezing Point:-74°C

Shipping:Terpene Hydrocarbons, n.o.s. ID No. 04858003,
Flammable Liquid, Group III

RT	23412-01	Xylene Substitute	1 gal
RT	23412-04	Xylene Substitute	4 x 1 gal
RT	23412-05	Xylene Substitute	5 gal

NOTE: Hemo-De® is a product of Scientific Solvents

► Histo-Clear®/Histo-Clear II® *

Histo-Clear (Distilled essential oils – food grade) and Histo-Clear II (A mixture of Aliphatic Hydrocarbon and Distilled essential oils – food grade, reduced citrus odor) are excellent non-toxic clearing agents replacing Xylene.

RT	64110-01	Histo-Clear	1 L
RT	64110-04	Histo-Clear	1 gal
RT	64110-10	Histo-Clear	5 gal
RT	64111-01	Histo-Clear II	1 L
RT	64111-04	Histo-Clear II	1 gal
RT	64111-10	Histo-Clear II	5 gal

* Histo-Clear® is register name of National Diagnostics

► Histosol™ - Xylene Substitute

Histosol™ is the original high flash point (114°F TCC) histological clearing agent. It is intended to be used as a replacement for xylene where the hazards associated with aromatic hydrocarbon vapors are to be reduced. Museum-quality tissue slides can be prepared with Histosol without change in protocol or procedure. Histosol is manufactured from petrochemical products and is miscible in all proportions with ethanol, isopropanol, and t-butanol. It is also miscible with all paraffin-based tissue embedding media and all permanent mounting materials.

23405-01	Histosol – Xylene Substitute	1 gal
23405-04	Histosol – Xylene Substitute	4 x 1 gal

► Z6040 Embedding Primer

This unique primer affords you better adhesion between your resin and specimen that you are embedding and prevents the sample from pulling away from the resin during sectioning.

RT	50440-10	Z6040 Primer	100ml

**Electron
Microscopy
Sciences**

Dear Fellow Researchers,

Here at Electron Microscopy Sciences we are very proud to be the exclusive agents of Aurion, the leading manufacturer and developer of a complete line of ImmunoGold Reagents and Accessories in the Netherlands. Aurion is led by the renowned Dr. Jan Leunissen, whom many of you may know through his books that he has written on ImmunoGold labeling as well as the workshops he teaches throughout the world.

Over the years the Aurion line has grown and has been further enhanced to include many unique and exclusive products not available elsewhere. Today their line includes not only the more commonly known reagents for EM and LM but, as well, a newly introduced line of products such as Silver Enhancement specifically for EM, Ultra-Small Fab fragments, Blocking Solutions, and even a line of donkey gold conjugates. With all of the new additions to the line up Aurion and EMS have something for everyone in the ImmunoGold Field.

**Sincerely,
The EMS Team**

AURION R-Gent SE-EM Application Example

ER exit site in 60 nm-thin cryosection of Hepg2 cells, labeled for COPII (primary antibody against sec23 was obtained by ABR) and detected with Fab-goat-anti-rabbit, conjugated to ultra-small gold, silver enhanced for 30 minutes (from Aurion).

The arrows point to labeled COPII-coats on vesicular and tubular membranes, which are located close to the ER.

The information of a thin section is not sufficient to conclude how the membranes are related to each other- if they are still connected to the ER, or if they are free.

Therefore we performed 3D electron tomography on 400nm thick cryosections, which were labeled similar for COPII. (see next picture).

ER = endoplasmic reticulum, PM = plasma membrane, MVB = multi-vesicular body, Bar = 100 micrometer

2 views of a model of a COPII-labeled ER-exit site, resolved from 400nm thick cryo-sections of Hepg2 cells, labeled like described for the ultrathin section before.

Note that the labeling for COPII is assessable throughout the section.

Courtesy of: Dagmar Zeuschner, Judith Klumperman (Department of Cell Biology, UMC Utrecht, The Netherlands) and Willie Geerts, Abraham Koster (Molecular Cell Biology, Utrecht University, The Netherlands)

ER = light blue, Free membrane carriers of vesicular and tubular shape, partially labeled for COPII = yellow, COPII = silver enhanced-red

► Conventional ImmunoGold Reagents

Conventional ImmunoGold Reagents are available in four size classes. The monodisperse size population makes the conjugates suited for multiple labeling with no overlap. The Conventional ImmunoGold Reagents are the classical conjugates in immuno electron microscopy; they are a good choice when the antigen is abundant and the accessibility of the antigen is relatively good.

Introduction

The conventional labeling approach in transmission and scanning electron microscopy utilizes secondary immunogold reagents based on particles that can be observed without enhancement. These conjugates are suited for single and multiple labeling in electron microscopy, when the number of antigens available for binding is such that a relevant signal can be obtained.

The AURION Conventional ImmunoGold Reagents are built around colloidal gold particles with sizes of 6, 10, 15 or 25 nm. The particle population is monodisperse and thus shows minimal size variation and overlap. Typically, the coefficient of variance for the 6 and 25 nm particle size conjugates is less than 12%, whereas the 10 and 15 nm size conjugates show less than 10% variation.

The table below lists a few physical characteristics of gold conjugates.

Particle Diameter	+/- #Au atoms	+/- MWt. (daltons)	+/- #Particles /ml	+/- #Ab (/part)
6	6500	1.3.10 ⁶	2.4.10 ¹³	1-2
10	30.10 ³	6.10 ⁶	5.10 ¹²	7-12
15	100.10 ³	20.10 ⁶	1.5.10 ¹²	25-40
25	470.10 ³	92.10 ⁶	3.3.10 ¹¹	115-180

Features of Conventional Immuno Gold Reagents

- for single and multiple labeling
- gold particle sizes of 6, 10, 15 and 25 nm
- monodisperse particle population
- OD₅₂₀ nm of 1.0 to warrant cluster free storage using a dot-spot test system.
- minimal size variation and overlap
- coefficient of variance: <12% for the 6 and 25 nm conjugates and <10% for the 10 and 15 nm conjugates

Product Description

AURION Conventional ImmunoGold Reagents are tailored to contain 10-20 µg of specific protein/ml. The reagents are supplied in PBS with 1% Bovine Serum Albumin and 15 mM NaN₃ at an OD₅₂₀nm of 1.0 to warrant prolonged cluster free storage. The activity of each lot is determined using a dot-spot test system as described by Moeremans et al., J. Immunol. Methods, 74, (1984), 353. Actual lot specifications (size, variation and expiry date) are indicated on the accompanying package insert.

Regular package: for the labeling of 1000-2000 grids

Small package: for the labeling of 400-800 grids

Specificity

Aurion offers the widest range of Conventional

ImmunoGold Reagents.

AURION Conventional ImmunoGold Reagents are prepared using the highest quality antibodies or binding agents available. All antibodies are immuno affinity purified and immuno cross-adsorbed to reduce non-specific reactions.

Storage

AURION Conventional ImmunoGold Reagents have a guaranteed shelf life of 18 months from the date of quality control analysis.

The products should be stored at 4-8°C. Freezing is not recommended.

TECHNICAL TIP

Application Instructions:

On-Grid Labeling

For most applications grids are floated on top of drops of dilute reagent displayed on a sheet of Parafilm™. The use of gold or nickel grids is recommended.

Whole mount and intact cell labeling

Specimens are kept floating in dilute reagent on a rocking table.

Recommended Incubation Solution:

PBS, (10 mM Phosphate buffer, 150 mM NaCl),

0.1-0.2 % AURION BSA-C™

15 mM NaN₃

pH 7.4

Additional Information

For additional information please see the Aurion ImmunoGold Newsletter and Protocol sections.

TECHNICAL TIP

How to control background in a nutshell

Background Is Controlled by Three Independent Steps

1. Low Molecular Weight Block (before protein block)

Purpose: to inactivate residual fixative e.g. aldehydes, using

- amino acids such as glycine or lysine, or
- aldehyde inactivating compounds such as NaBH₄ and NH₂OH

2. High Molecular Weight Protein Block (before immunolabeling)

Purpose: to prevent stickiness to hydrophobic areas and domains with excessive positive charges based on multiple point interactions (high affinity protein binding capacity), using

- albumin
- normal serum

3. Incubation and Wash solution (during immunolabelling)

Purpose: to eliminate aspecific binding of immunoconjugates based on hydrophilic interactions ("oligo" point interactions) by competition, using

- acetylated albumin (AURION BSA-c™) in the incubation buffer

Abandoning BSA-c™ molecules compete with antibodies and secondary immuno reagents for aspecific binding to positively charged specimen compounds, thus minimizing background.

Please refer to our Newsletter 1 and Newsflyer 1 for more information on the subject of background.

You can find incubation protocols in "The Aurion method" section.

Immunolabeling of the periplasmic space in ultrathin cryosections of *Escherichia coli* with a protein A gold conjugate. Courtesy M. de Jong

TECHNICAL TIP**Why Ultra-Small Gold Conjugates?**

- More gold particles/secondary antibody instead of more antibodies/gold particle.
- Reduced Steric hindrance.
- More gold particles/surface area in the specimen.
- Maximum penetration.

Reduced Molecular Weight...

- Increased diffusion rates.
- Ultra-Small probes behave similar as uncoupled antibodies.

Reduced Probe Size...

- Reduced overall probe size.
- Reduced hydrodynamic radius.
- Significantly increases penetration into sections and tissues.

The Choice for Ligand Receptor Interactions...

- Each Ligand is separate.
- No capping or patching, each probe unit consists of a single ligand.

Universal Probes...

- Optimally suited for high resolution EM, immuno EM, immunohisto at the LM level, and suited for bio-assays as well.
- One probe for all purposes.

► Ultra Small ImmunoGold Reagents

Aurion Ultra Small Immunogold Reagents are prepared with subnanometer gold particles. These particles have far less influence on the adsorbed antibodies or detecting molecules, and consequently the conjugates behave as though they are uncoupled. In conjunction with the highly efficient and easy-to-use R-Gent SE-LM and SE-EM silver enhancement reagents, the Ultra Small Immunogold Reagents are the best choice for any application.

**Introduction**

Reduction of the gold particle size provides Ultra Small Immunogold Reagents with fundamentally different characteristics when compared with conjugates built around larger particles. While the Conventional Immunogold Reagents can be thought of as particles coated with proteins, Ultra Small Immunogold Reagents are proteins coated with one or more gold particles. With this structure, both the overall size of the conjugates, as well as steric hindrance are decreased.

Gold conjugates physical characteristics.

Particle Diameter	+/- #Au atoms	+/- MWt. (daltons)	+/- #Particles /ml	+/- #Ab (/part)
0.8	15	3.10 ³	5.10 ¹⁵	0.1-1
6	6500	1.3.10 ⁶	2.4.10 ¹³	1-2
10	30.10 ³	6.10 ⁶	5.10 ¹²	7-12

The small gold particles also have a tight particle surface curvature which makes it less likely that a structured water dipole layer will build-up around the gold particles. Hence, the hydrodynamic radius of the ultra small gold colloids is reduced. Finally, small gold particles carry less net negative charge; thus, they undergo less charge determined repulsion when approaching the sample surface.

Aurion offers Ultra Small Immunogold Reagents with an average gold particle diameter of 0.8 nm or less. These ultra small gold particles can be visualized directly in high angle annular dark-field-scanning TEM. However, the gold signal is normally visualized after increasing the particle diameter with silver enhancement. The reagents can be used in electron and light microscopy as well as in blotting experiments. The universal applicability makes it easy to compare results obtained with different procedures.

AURION Ultra Small Immunogold Reagents contain 60-80 µg of specific protein/ml for IgG conjugates. F(ab')₂, Fab and biotinylated albumin conjugates contain equimolar amounts of conjugated protein. The average gold cluster diameter is less than 0.8 nm.

AURION Ultra Small Immunogold Reagents are used in conjunction with AURION R-Gent SE-EM or SE-LM silver enhancement reagents, developed for electron microscopy and light microscopy/immunoblotting respectively.

The reagents are supplied in PBS with 1% Bovine Serum Albumin and 15 mM NaN₃.

The activity of each lot is determined using a dot-spot test system as described by Moeremans et al., J. Immunol. Methods, 74, (1984), 353.

The products are available in two package sizes:

Regular package: for 1200 grids or 600 slides

Small package: for 480 grids or 240 slides.

Specificity

Aurion offers the widest range of Ultra Small Immunogold Reagents. The most commonly used reagent types are available as intact IgG, F(ab')₂ and Single Fab conjugates.

AURION Ultra Small Immunogold Reagents are prepared using the highest quality antibodies or binding agents available. All antibodies are immuno affinity purified and immuno cross-adsorbed to reduce non-specific interactions.

Storage

AURION Immunogold Reagents have a guaranteed shelf life of 18 months from the date of quality control analysis.

TECHNICAL TIP**Ultra Small ImmunoGold Reagents Application Instructions****Electron Microscopy Labeling:**

For post-embedding labeling, incubate thin sections by placing grids on drops of reagent arrayed on a sheet of Parafilm™. The use of nickel grids is recommended, especially if silver enhancement procedures are intended. For pre-embedding labeling, float specimens in dilute reagent on a rocking table. For more information on post and pre-embedding labeling see protocols.

Light Microscopy Slide or Coverslip Labeling:

Apply a few drops of dilute reagent to cover the specimen.

Recommended Incubation Solution:

PBS,
(10 mM Phosphate buffer, 150 mM NaCl)
0.1-0.2 % AURION BSA-c™
15 mM NaN₃
pH 7.4

Additional Information

"Ultra Small Gold Reagents and R-Gent SE-EM in Pre-embedding Single and Double Labeling" Hong Yi and Jan L.M. Leunissen

"Optimised Immuno Labelling using AURION BSA-c™ and AURION Blocking Solutions" by J.L.M. Leunissen and P.F.E.M. van de Plas

TECHNICAL TIP**Blocking Solutions Application Instructions**

Detailed information is provided on the package inserts.

Electron Microscopy**On-Grid Labeling**

Placing grids on top of drops of Blocking Solution arrayed on a sheet of Parafilm™ after they have been treated for aldehyde inactivation.

Pre-embedding Labeling

Floating specimens in Blocking Solution, preferably on a rocking table.

Light Microscopy**On-slide or -coverslip Labeling**

Applying a few drops of Blocking Solution to cover the specimen.

Bio Assays

Incubating specimens (e.g. immunoblot strips) in Blocking Solution on a rocking table in screw-cap sealed disposable tubes.

Additional Information

For additional information please see the Aurion ImmunoGold Newsletter and Protocol sections.

N-Cadherin detection in heart muscle cells

Immunofluorescence using Alexa 568 labeled Fab goat antimouse. For reasons of comparability areas of specific labeling are pictured with similar density (arrowheads).

Courtesy of Lauren Hruby and John Harris; Dept. Physiology, University of Otago, Dunedin, New Zealand

Left hand panel:

Background using a commonly used protocol obscures sites of specific labeling.

Right hand panel:

N-Cadherin immunolabelled areas obtained using Aurion Blocking Solution and BSA-c™ stand out with much clearer definition.

**► Blocking Solutions**

The signal-to-noise ratio determines the quality of any detection experiment. This ratio is in principle determined by the characteristics of specimen and detection reagents. With adequate blocking and incubation media, background reactions are minimized whereas specific reactions are not hampered.

Aurion has developed Blocking Solutions which effectively block 'sticky' surfaces by multi-point hydrophobic and charge-based interactions. The Blocking Solutions are specifically designed to meet the characteristics of each type of secondary conjugate.

Introduction

The AURION Blocking Solutions are used to prevent immunoreagents from binding non-specifically to specimens with "sticky" surface properties.

Procedures to eliminate background comprise three main steps:

- **To suppress residual aldehyde activity**
- **To saturate multipoint hydrophobic moieties and positive charges with high molecular weight compounds such as those present in the AURION Blocking Solutions**
- **To reduce aspecific binding of immunoreagents caused by hydrophilic interaction with competing molecules in the incubation and washing solution. AURION BSA-c™ is a particularly effective reagent for this purpose.**

These steps should be balanced for optimum results.

Product Description

AURION Blocking Solutions are prepared using specially selected compounds. All ruminant proteins are obtained from healthy livestock.

AURION Blocking solutions contain Bovine Serum Albumin and Cold Water Fish Skin Gelatine in phosphate buffered saline with sodium azide as preservative. Normal serum may have been added as indicated on the label. The blocking capacity of each lot is determined using a dot-spot test system as described by Moeremans et al., J. Immunol. Methods 74, (1984), 353.

Each package contains 30 ml of solution. It accommodates 300 specimens for light microscopy at 100 µl/specimen (~ 3 drops), or 1000 EM grids at 30 µl/specimen (~ 1 drop).

Specificity

Blocking Solutions are available in the following specificities:

- **serum-free: for use with Protein A and Protein G Gold conjugates.**
- **with Normal Goat serum: for use with reagents based on secondary antibodies raised in Goat.**
- **with Normal Rabbit serum: for use with reagents based on secondary antibodies raised in Rabbit.**
- **with Normal Sheep serum: for use with reagents based on secondary antibodies raised in Sheep.**
- **with Normal Donkey serum: for use with reagents based on secondary antibodies raised in Donkey.**

Storage

AURION Blocking Solutions have a guaranteed shelf life of 18 months from the date of quality control analysis.

The products should be stored at 4-8°C. Freezing is not recommended.

TECHNICAL TIP**Recommended Incubation Solution:**

PBS,
 (10 mM Phosphate buffer, 150 mM NaCl)
 0.1-0.2 % AURION BSA-c™
 15 mM Na₃
 pH 7.4

After addition of the BSA-c™ concentrate the pH should be checked and adjusted to 7.4 if necessary.

This Incubation Solution is used throughout the whole set of reactions and washing steps (i.e. from immediately after the blocking step, through the primary antibody incubations, in-between washing steps, secondary incubation and the final washing steps).

Additional Information

"Optimised Immuno Labelling using AURION BSA-c™ and AURION Blocking Solutions" by J.L.M. Leunissen and P.F.E.M. van de Plas

For additional information please see the Aurion Immunogold Newsletter and Protocol sections.

Storage

AURION BSA-c™ concentrate has a guaranteed shelf life of 18 months from the date of quality control analysis. The products should be stored at 4-8°C. Freezing is not recommended.

➤ Incubation Solution Additive AURION BSA-c™

In the blocking step, hydrophobic moieties causing "stickiness" in the specimen surface are rendered hydrophilic to minimize background. Nevertheless, the more dynamic charge-based interaction between the specimen surface and immunoreagents also needs to be controlled in order to eliminate background.

Aurion has developed BSA-c™, a unique incubation buffer additive with an unparalleled ability to effectively prevent charge based background. BSA-c™ is prepared by acetylation of bovine serum albumin (BSA). Polycationic sites in the specimen interact readily with negatively charged acetylated BSA molecules. This significantly reduces the risk that such sites might bind negatively-charged immunoreagents and immunogold conjugates and thus reduces the risk of background.

**Introduction**

Procedures to eliminate background comprise three main steps:

- **To suppress residual aldehyde activity**
- **To saturate multipoint hydrophobic moieties and positive charges with high molecular weight compounds such as those present in the AURION Blocking Solutions**
- **To reduce non-specific binding of immunoreagents caused by hydrophilic interaction with competing molecules in the incubation and washing solution.**

AURION BSA-c™ is a particularly effective reagent for this purpose.

AURION BSA-c™ is a buffer additive that helps prevent immunodetection reagents (i.e. primary antibodies and secondary reagents) from binding nonspecifically to charged moieties within the specimen. Thus, it suppresses background competitively with little or no effect on the specific reaction. Its successful application is not limited to immunogold detections but it is equally efficient in fluorescent and enzyme-based detection systems. AURION BSA-c™ concentrations as low as 0.01-0.1% inhibit binding of gold conjugate to polycationic poly-L-lysine coated grids almost completely (>99%).

The surface properties of the specimen can be simplified by division into four compartments:

- negatively charged (polyanions, proteins, especially after aldehyde fixation, lipids); 0 neutral; + positively charged (histone proteins, polycations) and H hydrophobic (lipids, fat droplets, resins). After an appropriate blocking step these areas are covered with blocking compounds.

In low ionic strength media negatively charged antibodies and gold conjugates are repulsed by negatively charged specimen areas which frequently may contain the antigens to be detected. Background does not likely occur in such areas. The positively charged areas attract antibodies and gold conjugates potentially leading to background.

In a moderate ionic strength incubation solution, repulsion and attraction are diminished due to the presence of ions. The negatively charged BSA-c™ competes with the negatively charged antibodies and gold reagents for non-specific binding to the positively charged specimen compounds, thus reducing background to the greatest possible extent without interfering with antigen detection.

**Product Description**

AURION BSA-c™ concentrated solution contains acetylated bovine serum albumin as the functional constituent. By acetylation of amines on basic amino acids these groups are no longer as easily protonated and the isoelectric point of such molecules is lowered and hydrophobicity is increased. BSA-c™ is a 10% solution of acetylated BSA at slightly alkaline pH with Kathon CG as preservative. The bovine serum albumin that Aurion uses to prepare BSA-c™ is obtained from healthy livestock.

The charge dependent background inhibition capacity of the BSA-c™ in each lot is determined using a dot-spot test system with polycationic compounds.

Two package volumes are available which yield 1.5 - 3 and 5 -10 litres of incubation buffer respectively

TECHNICAL TIP**How to control background in a nutshell**

Background is controlled by three independent steps

1. Low Molecular Weight Block (before protein block)

Purpose: to inactivate residual fixative e.g. aldehydes, using

- amino acids such as glycine or lysine, or
- aldehyde inactivating compounds such as NaBH₄ and NH₂OH

2. High Molecular Weight Protein Block (before immunolabeling)

Purpose: to prevent stickiness to hydrophobic areas and domains with excessive positive charges based on multiple point interactions (high affinity protein binding capacity), using

- albumin
- normal serum

3. Incubation and Wash solution (during immunolabelling)

Purpose: to eliminate aspecific binding of immunoconjugates based on hydrophilic interactions ("oligo" point interactions) by competition, using

- acetylated albumin (AURION BSA-c™) in the incubation buffer

Abandoning BSA-c™ molecules compete with antibodies and secondary immuno reagents for aspecific binding to positively charged specimen compounds, thus minimizing background.

Please refer to our Newsletter 1 and Newsflyer 1 for more information on the subject of background.

You can find incubation protocols in "The Aurion method" section.

► BSA/CWFS/ Tween 20/ Normal Sera

Many compounds have been added empirically to immunolabeling solutions for the purpose of minimizing background staining. Based on years of experience and controlled testing, Aurion has selected a group of compounds that are proven to be the most effective in their background reduction action. Researchers can obtain these items separately from Aurion and prepare blocking and incubation media to suit the needs of their own protocols.

Introduction

The ready-to-use Blocking Solutions and the incubation media additive BSA-c™ are tuned for optimum background prevention and signal-to-noise ratio. In-depth information can be found in the respective product data sheets.

AURION also offers a number of components that allow researchers to formulate blocking, incubation and wash solutions according to the needs of their own experiments.

Product Description

Aurion's Bovine Serum Albumin is obtained from healthy livestock. BSA should be dissolved in an appropriate buffer, such as phosphate buffered saline, taking care not to denature the protein by foaming. The addition of BSA may cause a drop in pH of the final solution and correction may be required. As a preservative the use of NaN₃ or Kathon CG is recommended.

The use of **Cold Water Fish Skin Gelatin** to prevent background reactions has been recommended by e.g. Behnke et al. (J. Cell Biol. 41, [1986], 386). The product is supplied as a liquid concentrate (40%).

Tween-20™ is a non-ionic detergent with a molecular weight of about 600 and a critical micelle concentration (CMC) of 0.06-0.07% in water at room temperature. Its working mechanism may in part be based on its action as a detergent, binding to the hydrophobic moieties of water insoluble compounds, rendering them hydrophilic. In addition, immuno-compounds may become incorporated into micelles when the Tween-20™ concentration is higher than the CMC, for instance at 0.1 % in PBS at pH 7.4.

Normal sera are used to counteract the non-specific interaction between the sample and immunoglobulins. They can be added to the blocking solution and the incubation media.

As a rule the normal serum species should be the same as the secondary antibody species (e.g. use normal goat serum with goat-anti-rabbit conjugates).

Note: normal sera should not be used in combination with Protein A and Protein G gold reagents.

TECHNICAL TIP

Application Instructions

The best results will be obtained with our Blocking reagents and with BSA-c as incubation buffer additive. Alternatively the recipes below may be followed:

Blocking Solution for protein A or G reagents

Phosphate buffered saline
(10mM Phosphate buffer, 150 mM NaCl)
5 % BSA
0.1% CWFS Gelatin
15 mM NaN₃
pH 7.4

Blocking Solution for secondary antibody reagents

Phosphate buffered saline
(10mM Phosphate buffer, 150 mM NaCl)
5 % BSA
0.1% CWFS Gelatin
5-10 % normal serum
(same species as in the secondary antibody reagent)
15 mM NaN₃
pH 7.4

Incubation solution for Conventional Immunogold Reagents

Phosphate buffered saline
(10mM Phosphate buffer, 150 mM NaCl)
0.1-0.2 % BSA
0.1% CWFS Gelatin
1-5 % normal serum
(same species as in the secondary antibody reagent)
15 mM NaN₃
pH 7.4

Incubation solution for Ultra Small Immunogold Reagents

Phosphate buffered saline
(10mM Phosphate buffer, 150 mM NaCl)
0.8 % BSA
0.1% CWFS Gelatin
1-5 % normal serum
(same species as in the secondary antibody reagent)
15 mM NaN₃
pH 7.4

Storage

The products should be stored at 4-8°C.
Freezing is not recommended.

Additional Information

For additional information please see the Aurion Immunogold Newsletter and Protocol sections.

► R-Gent SE-EM Silver Enhancement Reagents

For most applications the detection of ultra small gold particles in electron microscopy requires a particle enhancement procedure. Danscher's method has always been the standard for this purpose and for a long time attempts to improve the features of Danscher's system met with only limited success.

The goal in the development of AURION R-Gent SE-EM was to create a new system with enhancement efficiency and homogeneity at least comparable to Danscher's method, but with reduced acidity and light sensitivity. In addition, the reagents should have low viscosity for the suitability in pre-embedding immunogold labeling.

Introduction

The silver enhancement reaction is a gold particle-catalyzed reduction in which silver ions are reduced to metallic silver with a photographic developing compound as the electron source. In addition in many applications a "protective colloid" is added to the enhancement solution to limit diffusion of reagents to the gold particle surface, thus providing a means for controlling particle growth.

"...silver enhancement reaction is a gold particle-catalyzed reduction in which silver ions are reduced to metallic silver with a photographic developing compound as the electron source.."

Desmin labeling in heart muscle with Ultra Small Gold conjugate and AURION R-Gent SE-EM. Courtesy Prof. Dr. Müller Höcker, University Munich, FRG.

Product Description

AURION R-Gent SE-EM is a high efficiency silver enhancement reagent for electron microscopy. It intensifies the gold particles by homogeneous deposition of metallic silver on the particle surface. The resulting electron dense signal is easily detected and is compatible with heavy metal counterstaining. The reagent has extremely delayed auto-nucleation and can be used under standard laboratory light conditions. It also has low viscosity, which is especially advantageous for pre-embedding immunogold applications. The enhancement mixture has a pH of 8.1-8.2.

AURION R-Gent SE-EM has been tested intensively for the enhancement of AURION Ultra Small Immunogold reagents.

AURION R-Gent SE-EM is available in a kit containing the following:

- 30 ml or 90 ml of ready-to-use ENHANCER,
- 3 ml of concentrated INITIATOR and
- 30 ml of ACTIVATOR.
- a 3 ml empty dropping bottle, labeled "DEVELOPER".

The INITIATOR is a concentrated solution which must be diluted and activated before use, using the ACTIVATOR. This resulting mixture is the DEVELOPER.

The now ready-to-use DEVELOPER has a shelf life of one month. It is suggested to prepare fresh DEVELOPER at least every month.

The undiluted solutions have a shelf life of 10 months when stored at 4°C. INITIATOR can be stored at -20°C for prolonged shelf life.

For enhancement, 1-2 drops of DEVELOPER are mixed with 20 drops of ENHANCER. The typical enhancement time is between 20 and 40 minutes. Specimens may be contrasted according to standard procedures.

The kit with 30 ml of ENHANCER accommodates up to 1000 EM grid specimens. The kit with 90 ml of ENHANCER is suitable for pre-embedding immunogold labeling; the number of specimens it accommodates depends on the volume of reagent used per specimen.

For each lot, the specific enhancement activity and level of auto-nucleation are monitored by spectrophotometric techniques.

TECHNICAL TIP

R-Gent SE-EM for Electron Microscopy Post-embedding enhancement (on-grid)

Place grids on drops of the enhancement mixture arrayed on a sheet of Parafilm™.

Pre-embedding enhancement

Incubate specimens (e.g. vibratome sections) in Petri dishes or Eppendorf tubes containing the enhancement mixture, with agitation. When enhancement is completed, the specimens are washed with distilled water. A fixation step with photographic fixer is not required.

Storage

The AURION R-Gent SE-EM components are stored at 4°C and allowed to reach room temperature before use. SE-EM INITIATOR may be stored at -20°C for prolonged shelf life.

► R-Gent SE-LM Silver Enhancement Reagents

The Immunogold Silver Staining technique (IGSS) finds application both at the electron microscope and the light microscope level. In addition the technique can be equally used to identify proteins or nucleic acids after blotting.

Light microscopical and macroscopical visualization of the latent gold signal requires an enhancement system that renders a high contrast signal. Light insensitivity and negligible auto-nucleation are required for ease of handling and low background. AURION R-Gent SE-LM is a two-component reagent that meets these requirements.

Introduction

The silver enhancement reaction is based on the gold particle catalyzed reduction of Ag⁺ to metallic silver using photographic developing compounds as the electron source. For light microscopy and immunoblotting applications the generated silver signal should be of high contrast. Furthermore the signal should be permanent and compatible with counterstaining.

Product Description

The AURION R-GENT SE-LM components constitute a Silver Enhancement Reagent which increases the average gold cluster or particle size by deposition of metallic silver facilitating detection at the light microscopical level. The generated brown-black signal is also easily detected in bio assays and is compatible with counterstaining in light microscopy. AURION R-GENT SE-LM has been tailored for the enhancement of AURION Ultra Small Immunogold reagents and is equally suited for the larger sized particles in the AURION Conventional Immunogold reagents.

*Light microscopy evaluation of tubulin labeling with Ultra Small Immunogold Reagents and silver enhancement.
Upper panel: bright field mode
Lower panel: epi-polarization mode*

For enhancement, equal amounts of the DEVELOPER and ENHANCER are mixed well and applied to the specimen. The enhancement mixture is easy-to-use, exhibits extremely delayed auto-nucleation and can be used under standard laboratory light conditions. Typical enhancement times are between 15 and 30 minutes. Auto-nucleation becomes visible only after 40-60 minutes. Light microscopical specimens may be counterstained according to standard procedures. The enhancement mixture has a pH value of 8.3-8.5.

AURION R-GENT SE-LM is available as a kit in two unit sizes (2 x 30 ml or 2 x 250 ml) and consists of a separate DEVELOPER and ENHANCER. The supplied amounts accommodate 600 and 5000 LM specimens respectively at 100 µl/specimen, or 60 and 500 bio assay specimens at 1 ml/specimen. The reactivity is tested on dot-spots and the absence of auto-nucleation is monitored by spectrophotometric techniques.

Storage

The AURION R-GENT SE-LM components are stored at 4°C and allowed to reach room temperature before use.

TECHNICAL TIP

R-Gent SE-LM for Light Microscopy Slide or Coverslip Labeling

A few drops of the freshly prepared enhancement mixture are applied to cover the specimen. During enhancement the specimens are kept in a moist chamber. The ongoing enhancement may at intervals be monitored with an inverted light microscope. When enhancement is judged to be complete, the specimens are washed with distilled water. A fixation step with photographic fixer is not required.

Whole Mount Labeling

Specimens like floating (vibratome) sections can be enhanced in Petri dishes or 6-24 well plates.

Bio Assays

Depending on the type of assay the enhancement for bio assays can be performed in sealed plastic bags, Petri dishes or in disposable screw cap sealed tubes.

Additional Information

For additional information please see the Aurion Immunogold Newsletter and Protocol sections.

► COL-AURION: Colloidal Gold Based Protein Stain

Col-Aurion is a colloidal gold particle based total protein stain, developed for the sensitive staining of electrophoretically separated protein bands on nitrocellulose or PVDF[™] blotting membranes. Colloidal gold particles accumulate at the site of the protein bands on the membrane, generating an intense dark red staining pattern. The total protein stain assists in assessing immunoblotting results and to evaluate the effectivity of the blotting procedure.

Introduction

The negative surface charge of colloidal gold particles is responsible for their high affinity for positively charged macromolecules. This characteristic was the basis for the development of a total protein stain based on colloidal gold.

Product Description

Col-Aurion is a total protein stain consisting of a solution of coated gold

particles with an average particle diameter of 15 nm. The staining principle is based on the electrostatic binding of negatively charged gold particles to proteins with a positive charge present at low pH.

A unique feature of Col-Aurion is the use of BSA-c[™] to shield off the surface of the gold particles. Destabilization of gold particles that might occur as a result of interaction with detached protein is thus prevented. The strong negative charge of BSA-c[™] gives an additional increase in sensitivity of the stain.

Col-Aurion total protein stain has a pH of 3.2 and is ready to use. For removal of surplus of weakly bound protein from the membrane, a 10 ml vial of Tween-20[™] is included.

Storage

Col-Aurion has a guaranteed shelf life of 18 months from the date of quality control analysis. Store at 4-8°C. Do not freeze.

► Gold Sols

To prepare a high quality (immuno)gold conjugates it is important to have particles with uniform size and highly adsorptive surfaces.

The Aurion gold sols are prepared according to unique production protocols. This provides for sol particles with the same narrow size distribution and adsorption properties as employed in the Conventional Immunogold Reagents.

Introduction

The preparation of conventional gold reagents is based on gold particles with a diameter suited for direct electron microscopic visualization. Aurion offers a range of Conventional Immunogold Reagents which cover the majority of approaches in transmission and scanning electron microscopy.

Aurion Gold Sols (solutions of high quality unconjugated gold particles) provide opportunities for users to prepare conjugates with primary antibodies, ligands and other binding agents with the same particle characteristics as in the Conventional Immunogold Reagents.

Product Description

AURION Gold Sols are prepared according to a unique protocol, warranting narrow size distribution and reproducible adsorption characteristics.

The AURION gold sols are available in the same size range as the Conventional Immunogold Reagents: 6, 10, 15 and 25 nm. The particle population is monodisperse and thus shows minimal size variation and overlap. Typically, the coefficient of variance for the 6 and 25 nm particle size sols is less than 12%, whereas the 10 and 15 nm size sols show less than 10% variation. Actual lot specifications (size, variation and expiry date) are indicated on the accompanying package insert.

Package size: 100 ml of high quality gold sol at an OD_{520nm} of approximately 1.

Storage

AURION gold sols have a guaranteed shelf life of 12 months from the date of quality control analysis.

The products should be stored at 4-8°C.

Freezing is not recommended.

Particle size and size distributions of the AURION Gold Sols

► Gold Tracers

Aurion Gold Tracers are used to visualize charged moieties in specimens: anionic tracers bind to polycationic moieties (basic proteins e.g. histones, cationic tracers bind to polyanionic moieties (membranes, acidic proteins). "Neutral" BSA coated gold tracers are useful for detecting open connections and tissue damage. Under proper conditions and with suitable microscopical techniques the tracers can also be used to follow cellular events in time.

Introduction

The AURION Anionic and Cationic Gold Tracers are designed to detect charged areas; the anionic tracers detecting multiple positive charge moieties, the cationic tracers detecting multiple negative charges.

Product Description

The AURION Gold Tracers are available in the full range of particle sizes: Ultra Small, 6, 10, 15 and 25 nm. Anionic Gold Tracers are prepared with BSA-c™ as particle conjugated protein. Cationic Gold Tracers are prepared with methylated BSA. AURION Gold Tracers are available in 5 and 10 ml volume packages and are supplied at an OD_{520nm} of 2.0 for the conventional particle size range and at equivalent OD for the Ultra Small tracers.

The products are supplied in PBS, with 15 mM NaN_3 .

AURION Gold Tracers are also available in bulk and at different optical density if required.

AURION Gold Tracers are shipped containing NaN_3 as preservative. If they are intended for use in living organisms, the preservative has to be removed prior to use. This can be achieved either by dialysis or by buffer exchange using for instance a GE Healthcare Life Sciences Pharmacia PD-10 column.

Additional Information

For additional information please see the Aurion Immunogold Newsletter and Protocol sections.

Storage

Aurion gold tracers have a guaranteed shelf life of 18 months from the date of quality control analysis.

The products should be stored at 4-8°C.

Freezing is not recommended.

TECHNICAL TIP

In order to obtain a positive reaction when using these tracers the following should be kept in mind:

- 1) charge interactions are influenced by the presence of ions, di- and trivalent ions being of more influence than univalent ions. The influence is concentration dependent. Binding is stronger in low ionic-strength media.
- 2) charge interactions are influenced by pH. The charge of components in the specimen is dependent of their isoelectric point (IEP). Below the IEP the charge is positive, above the IEP negative. Significant binding will only occur at a pH at least one to two pH-units higher or lower than the IEP.

Anionic tracers are negatively charged at pH >5

Cationic tracers are positively charged at pH <10

BSA tracers are intended for tracking fine capillaries or connecting spaces in intact tissues.

► New Cross Adsorbed Products

NEWLY INTRODUCED

Cross reactivity can be a problem when working with primary antibodies sourced from animal species that are evolutionary closely related to the source of tissues or cells that antigens are to be detected in.

An example is using a mouse monoclonal on rat tissue. With many monoclonal antibodies of mouse origin and some of rat, and the prevailing animal cells and tissues being used in studies likewise originating from rat or mouse, it often happens that cross reactivity occurs, leading to false positive results.

A second problem that derives from cross-reactivity occurs in double labeling, when using primary antibodies from closely related animal sources. With this in mind, Aurion has developed two series of new conjugates:

Goat-anti-Mouse IgG (H+L)xRat (cross adsorbed against Rat immunoglobulins)

Particle Size	Cat #	Size(ml)	Cat #	Size(ml)
4-8°C EM-grade Ultra Small	25900	1.5	25901	0.6
4-8°C EM-grade 10nm	25902	2.5	25903	1.0

Goat-anti-Rat IgG (H+L)xMouse (cross adsorbed against Mouse immunoglobulins)

Particle Size	Cat #	Size(ml)	Cat #	Size(ml)
4-8°C EM-grade Ultra Small	25904	1.5	25905	0.6
4-8°C EM-grade 10nm	25906	2.5	25907	1.0

Secondary antibodies have been thoroughly purified using solid phase technique. These purified antibodies allow detection of antigens with mouse monoclonal antibodies in rat tissue or rat monoclonal antibodies in mouse tissue, without causing interfering binding to either endogenous mouse or rat immunoglobulins

The antibodies can be used for double labeling as well when both mouse and rat primary antibodies are used with other than mouse or rat tissue.

Please note:

Cross adsorption against closely related species may result in epitope recognition with reduced binding force and lower labeling density.

EMS and Aurion would like to inform you that the strongest labeling intensity is usually achieved with the least refined antibodies. Users are advised to take this into account when choosing a product from the Aurion range of anti-mouse or anti-rat conjugates. In case of doubt, our technical staff will gladly assist you in making the best choice.

► Donkey Conjugate Line

In many cases double labeling experiments are based on using two primary antibodies from different animal species, for instance mouse and rabbit. Of late, we have noticed an increasing number of users that have primary antibodies developed in goat. It is impossible to perform a double labeling experiment in combination with, for instance, a mouse primary antibody, since applicable secondary antibodies are either raised in rabbit or goat. Hence the Goat-anti-Mouse would be recognized by the Rabbit-anti-Goat, and it would be impossible to get reliable results. In the past, only using directly labeled primary antibodies would solve this. This would require researchers to go through the lengthy procedure of preparing such conjugates and even then with limited success. To overcome this difficulty we are proud to release the Aurion Series of Secondary ImmunoGold conjugates based on antibodies raised in Donkey, including Donkey-anti-Goat. It is then known that mixing Donkey-anti-Goat and Donkey-anti-Mouse provides a successful solution to the above mentioned case.

Donkey-anti-Rabbit IgG (H&L)

➤ Immunogold Reagent Kits – EM Grade

Complete kits with the following characteristics:

- Two non-overlapping gold particle sizes.
- Coupled to: either Goat-anti-Rabbit and Goat-anti-Mouse IgG/IgM antibodies.
- Affinity purified and cross adsorbed antibodies.
- Unparalleled low background levels.
- For use with rabbit and mouse monoclonal and polyclonal primary antibodies.
- Acetylated serum albumin with increased exposure of negative charges.

Benefits:

- Covering over 90% of all applications in EM.
- For single and double labeling in Electron Microscopy

4-8°C 25540 EM-kit GAR-6/GAM-10/BSA-c™

Kit consists of:

- 1ml Goat-anti-Rabbit 6nm
- 1ml Goat-anti-Mouse IgG/IgM 10nm
- 30ml BSA-c™ background suppressing agent

4-8°C 25544 EM-kit GAM-6/GAR-10/BSA-c™

Kit consists of:

- 1ml Goat-anti-Mouse IgG/IgM 6nm
- 1ml Goat-anti-Rabbit 10nm
- 30ml BSA-c™ background suppressing agent

4-8°C 25548 EM-kit PrA-6/PrA-10/BSA-c™

Kit consists of:

- 1ml Protein A 6nm
- 1ml Protein A 10nm
- 30ml BSA-c™ background suppressing agent

➤ Custom Kits

4-8°C 25540-05 Custom EM Kit

For customization of our EM Kits you get to choose the 2 vials of your EM Grade Reagent. Supplied with the kit as well is 30ml of BSA-c™.

4-8°C 25550-05 Custom Ultra-Small Kit

For customization of our Ultra-Small Kits we now have available a make it yourself kit where you get to choose the two vials of your Ultra-Small Reagent. Also supplied with the kit is 30ml BSA-c™ and 2x30ml SE-LM

4-8°C 25550-06 Custom Ultra-Small Kit

For customization of our Ultra-Small Kits we now have available a make it yourself kit where you get to choose the two vials of your Ultra-Small Reagent. Also supplied with the kit is 30ml BSA-c™ and 30ml SE-EM.

➤ Ultra-Small Kits

Benefits of our US-KIT:

FOR EM:

- For the most sensitive labeling in electron microscopy
- For the penetration in ultra thin cryosections resulting in enhanced detectability and sensitivity
- New possibilities for pre-embedding labeling
- For the labeling of at least 330 on-grid specimens

FOR LM:

- Premium reagents for penetration in hydrated sections (paraffin, cryostat) and in slightly fixed cells
- Permanent, non-fading silver signal
- Most sensitive reagents compatible with counterstaining
- For the immunolabeling of 200 slides

FOR IMMUNOBLOTTING:

- Highest sensitivity
- Black to brown/black signal suited for low level detection where colored precipitates fail
- For the immunogold labeling of 10-20 nitrocellulose immunoblot strips

4-8°C 25550 US-kit GAR/GAM/BSA-c™/R-Gent SE-LM

Kit consists of:

- 0.6ml Goat-anti-Rabbit GP-Ultra-Small
- 0.6ml Goat-anti-Mouse IgG/IgM GP-Ultra-Small
- 30ml BSA-c™ background suppressing agent
- SE-LM Silver Enhancement

4-8°C 25552 US-kit GAR/GAM/BSA-c™/R-Gent SE-EM

Kit consists of:

- 0.6ml Goat-anti-Rabbit GP-Ultra-Small
- 0.6ml Goat-anti-Mouse IgG/IgM GP-Ultra-Small
- 30ml BSA-c™ background suppressing agent
- SE-EM Silver Enhancement

4-8°C 25550-10 Ultra-Small Starter Kit

To give yourself the opportunity to make yourself familiar with our Ultra-Small Gold Conjugates – we have our Starter Kit. These kits are sufficient for approximately 50 specimens.

Kit consists of:

- 100 µl Ultra-Small Conjugate
- 10ml BSA-c™
- 2x2.5ml R-Gent SE-LM and a sample pack R-Gent SE-EM

➤ Blocking Solutions, Background Suppression, R-Gent Silver Enhancement

Frequently Asked Questions

We have collected answers to frequently asked questions from immunogold users. They are listed below. If your question is not listed on this page or you have further queries, please contact us directly by phone or e-mail. We remain at your disposal.

What kind of particle size should I use?

Always use the smallest particle size to fit your application. Conjugates based on smaller particles are more efficient than larger particle based conjugates. If visualization is difficult with smaller particles these can be enlarged with silver enhancement. Very sensitive specimens for SEM observation are best served with a larger particle size conjugate. This prevents ultra structural enhancement reagents.

Is it true that gold conjugates are more background prone than other conjugates?

No! This fairy tale comes from the fact that gold conjugates are based on particles and that visualization is also based on separate particles. Contrary to enzyme and fluorescent markers, gold conjugates are more like a digital system, either they are there and then you will see them, or they are not present. Enzyme and fluorescent markers are sooner to be considered as "analogue" markers, their visibility in detection increases with their local concentration or with the time the enzyme marker can produce a visible reaction product. An unbiased look at controls in fluorescence shows always a low level of light that is inherent to the presence of double bonds in biological compounds and on top of this comes the fluorescence from the labeled antibodies. Likewise will an unbiased look at control specimens incubated only with alkaline phosphatase or peroxidase labeled antibodies usually show a faint overall staining of the specimen. Such faint levels are easily accepted or even filtered out. You cannot do this with gold conjugates since they are based on particles.

Should I use a secondary gold conjugate or Protein A (or G)?

That depends on what your goal is. Using secondary conjugates results in a higher labeling density. Therefore it is often said that secondary conjugates are more sensitive than Protein A conjugates. This is partly true. Protein A (or G) recognizes only one site on a primary antibody molecule. Binding will occur only when this site is available and not obscured by its environment. Secondary conjugates recognize more sites on primaries and therefore the chance that a primary antibody will be detected is greater. Essentially this is the increase in sensitivity.

If all primary antibodies would be available to the same extent for binding to either Protein A or a secondary antibody conjugate, then the use of the latter would only result in more particles. This helps in localizing antigens at low magnifications, in other words this is an increase in detectability.

Is there a training program for immunogold (silver) staining where I can bring my own specimens?

EMS and Aurion organizes wet-workshops in Europe and the USA where you preferably work with your own specimens and primary antibodies. After all, that is where your interest lies. If required, we will expand our activities to additional venues. The workshops last for two days and give an in-depth view in immunogold (silver) staining. Detailed information on the setup of our workshops can be found in this publication.

Is it possible to do pre-embedding labeling of intracellular antigens?

Yes. Single cells are most suited. Plant material with a thick impenetrable wall is not. The Ultra-Small gold conjugates are the conjugates of choice. In many cases a permeabilization step with NaBH₄ suffices to open up the specimens and allow penetration of reagents. Low concentrations of mild detergents like saponin help. One thing should be emphasized: reaction times have to be prolonged since full penetration of the reagents to the internal antigens has to be achieved. To remove unreacted reagents after incubation wash procedures have to be adapted likewise! The Aurion Newsletter #5 deals with this topic.

How can I verify that my conjugates are still active?

There is a simple procedure to check this. It is described in great detail in Aurion's Newsletter #4. In short: you need a nitro-cellulose strip, apply dots from a dilution series of your primary antibody and incubate the strip with the gold reagent. The dots will stain red with the larger conjugates. When testing an Ultra-Small conjugate silver enhancement has to be applied for visualization.

How can I verify that the silver enhancement reagents are still fine?

Again, there is a simple procedure to check this. It is described in great detail in our Newsletter #4. In short: you need a nitro-cellulose strip, apply dots from a dilution series of your gold conjugate and incubate the strip with the silver enhancement reagents. The dots should become brown-black. During this period of time the mix of reagents should remain glass clear without any visible presence of silver caused by auto nucleation.

The activity of the Silver Enhancement reagent SE-EM for Electron microscopy can be tested by adding 10µl of the enhancement mix. The solution should turn yellow in 30-45 minutes.

Is it advisable to use outdated conjugates?

As long as their reactivity is OK and there are not too many clusters formed this is no problem. Gold conjugates are very stable. There may be some release of protein from the particle surface with time, but generally this does not result in reduced reactivity. The reactivity of the conjugate is easily checked with a dot-spot test as described in Newsletter #4. Cluster formation may increase with time, depending on the type of conjugated protein and the particle size. The larger the particles the more clusters. These can be removed by centrifugation of the diluted conjugate before use.

Frequently Asked Questions

Is it possible to double label using two antibodies from the same animal source?

Yes, there are ways to do this. One is by using Protein G or Protein A conjugates with different particle sizes. The procedure would be: first incubate with primary antibody I, detect this with Protein A (or G) with the smaller particle size. Then incorporate an incubation with excess free Protein A or G (50-100 µg/ml). This will block practically all binding sites for Protein A or G. Next, incubate for the second antigen with primary antibody II and detect this with the larger sized Protein A or G gold conjugate.

A second possibility is to use one-step incubations with a mix of primary antibodies, each labeled directly with a different gold particle size. We offer a custom labeling service. Details can be found in the section on custom labeling.

What kind of grids should I use for silver enhancement?

Nickel is the material of choice. Gold grids are out of the question as they will be neatly enhanced as well. The same with copper. Nickel grids are preferred to copper ones for immuno incubations anyway, since nickel is more inert and less poisonous to immuno or enzyme reactions.

Nickel grids can be annoying because of their magnetic properties. This is easily overcome by using either non-magnetic tweezers or by using a flattened loop to transfer grids from droplet to droplet during immuno incubations. We do sell a perfect-loop (70944) for this application.

What about silver enhancement and OsO₄?

OsO₄ fixation can be used before incubation, after incubation or after silver enhancement.

- Because of its destructive effect on antigens OsO₄ fixation is not often used when immuno incubations are intended. However, in general silver enhancing immuno incubated OsO₄ fixed specimens causes no difficulties.
- An Osmium fixation step can be introduced after incubation to improve contrast in specimens. As stated before, applying silver enhancement generally causes no difficulties.
- On occasion in the past, using OsO₄ fixation after silver enhancement used to lead to the removal of part of the deposited silver. However, with the introduction of SE-EM^{plus} this is no longer the case, as the resulting enhanced particles are no longer sensitive to oxidation.

I get no positive results, now what?

When your incubated specimens look as clean as your controls, either (one or more of) the reagents are inactive, or the antigens are destroyed, masked or absent. The cause is easily found by performing tests working backwards through the incubation protocol using dot-spot tests as described in Newsletter #4.

First test the activity of the silver enhancement reagents (if they

were used at all) on the gold conjugate that was used. If silver enhancement is fine, the next step is to test the gold conjugate on the primary antibody used and so on.

If it proves that the problem is not in the reagents, you will have to look into antigen preservation. Is a different fixation due? Or a different embedding medium? Using light microscopical evaluation of the results such questions are answered without tedious EM experimental work.

I am having background problems. Is this due to the gold conjugate?

When specimens are blocked correctly and the right composition and condition of incubation buffer is used, background levels should not be interfering with specific signals. Some background will always exist: to some extent all compounds have a certain affinity for other compounds and depending on availability and concentration an interaction may occur. There is no absolute black and white in this respect.

When you leave out the primary antibody incubation and only use the gold step and your background has become much reduced, then your primary antibody causes background. Remedy: purify the primary antibody by either affinity chromatography (in case of an antiserum) and/or by cross-adsorption. If you have unacceptable levels of background without using a primary incubation, then the specimen has a tendency to bind to gold conjugates.

Background may have many causes which are centered around three different types of interactions:

- Residual fixative activity, which is eliminated by using a NaBH₄ or Glycine block step prior to the protein block step.
- Stickiness to hydrophobic areas (embedding medium, lipid rich specimen compounds). This is reduced by using an adequate protein block step involving a partly hydrophobic protein like BSA or Casein.
- Charge-based interactions causing negatively charged reagents such as antibodies and gold conjugates to adhere to oppositely charged areas in the specimen (notorious are the histone proteins, some collagen types and poly-L-lysine that is sometimes used to make sections stick to surfaces). This type of interaction can only be overcome by adding an excess of negatively charged indifferent molecules to the incubation media. We have developed a chemically modified BSA especially for this purpose. Newsletter #1 gives in-depth information regarding it.

Frequently Asked Questions

Are there any fora which I can address with questions regarding labelling or microscopy?

Feel free to address our HELPDESK by e-mail with questions regarding immunolabeling.

There are a few newsgroups which may be of interest: **bionet.cellbiol**, **bionet.cellbiol.cytonet**, **bionet.molbio.methods-reagents** and **sci.bio.immunocytochem**. There is a microscopy listserver to which you can subscribe and which offers a platform to ask questions regarding light and electron microscopy in all its facets. You can subscribe by sending an e-mail message to **ListServer@MSA.Microscopy.Com**. The message only has to contain the words "subscribe microscopy".

How can I do a controlled silver enhancement with pre-embedding?

With pre-embedding there are 2 possibilities: either the enhancement is done before embedding or on the sections after embedding. We prefer to do the enhancement on sections (on nickel grids) since this gives more control over the degree of enhancement. Using longer enhancement times allows to observe larger (even ultra thin) sections in the light microscope. This facilitates searching for the area in the specimens where a reaction has occurred and allows easy targeting and trimming down to the area of interest for EM sectioning. Shorter enhancement is then used on sections for EM.

Using enhancement before embedding has the disadvantage that once enhancement proves to be too long (resulting in too large particles) this can not be reversed.

In which case should I use a Single Fab or F(ab')₂ conjugate instead of the complete immunoglobulin conjugate?

The size of a conjugate is co-responsible for its efficiency. The overall size is determined by the particle size and by the size of the proteins adsorbed onto the particle surface. That is why we introduced Ultra-Small particles in the first place. Whenever a specimen is relatively dense or intensely cross-linked immuno reagents will be more hindered in their action. If you are already using an Ultra-Small conjugate further improvement may result from using a single Fab or F(ab')₂ fragment of the specific secondary antibody instead of the intact Ig-molecule.

When should I use normal serum in the incubations?

It is a good idea to use normal serum as an additive to the blocking and incubation buffer when using secondary antibody conjugates. The normal serum should be the same species as the secondary antibody conjugate. Its action is similar to the action of BSA. Please be careful when using normal sera to suppress background with Protein A or Protein G conjugates. These conjugates detect several Ig-types from different species which, when used as normal serum additive, would lead to an impressive amount of gold particles all over the specimen. We offer several Blocking Solutions tailored for specific secondary antibody or protein A/G incubations.

What about sensitivity, signal-to-noise ratios and detectability?

Sensitivity can be considered at different levels in the total preparation and incubations. Ideally during preparation one would like to preserve all antigens present. In many cases this is not possible. But at least a representative fraction should be preserved and be available for immuno labeling. It all depends on the preparation procedure (fixation, embedding, temperature, etc.), which leaves you with a specimen or section with a given number of available and recognizable antigens. The ensuing detection protocol has 100% sensitivity if all the remaining antigens are detected, i.e. are represented by at least one gold particle or marker molecule. Again, due to masking and steric hindrance by the specimen composition this will only in exceptional cases be fully attained.

The immuno labeling sensitivity thus expresses the degree to which available antigens can be detected by the employed combination of primary antibody and secondary conjugate.

The quality of the primary antibody is the next important item. Theoretically the K_d-value of an antibody/antigen reaction is a measure for the dilution at which the incubations should be performed and for the stability of the ensuing bond. Sensitivity will go up with more concentrated antibody solutions up to a maximum level. However, when the primary antibody shows cross-reactivity there is not necessarily an improved signal-to-noise ratio. The reliability of the detection by the primary antibody improves in such cases with higher dilutions, probably leading to a smaller amount of antigens detected, but to an improved **signal-to-noise** ratio.

Thus, sensitivity at the level of the primary antibody has to be balanced against the signal-to-noise ratio.

The last step is the quality of the secondary reagent. In fact you will be looking at a number of gold particles which represents a number of secondary antibodies which have detected a number of primary antibodies. For the interaction between the secondary reagent and the primary antibody the same rules apply as indicated for the antigen/primary antibody reaction.

Detectability reflects the degrees to which the final result of all the reactions involved can actually be seen. This is depending on the right match between particle size and magnification. Ultra-Small particle-based conjugates for instances are among the most efficient detection systems, but you will only detect them after silver enhancement (in most applications).

What is epi-polarization microscopy?

Epi-polarization is a technique used for the very sensitive light microscopical observation of metal particles. Where bright field microscopy depends on contrast levels in discriminating signals, epi-polarization works differently: provided particles are large enough individual particles will be observed. So in fact you are evaluating your labeling results on the same basis as with an electron microscope by looking at individual particles. This makes this technique so valuable as it builds a bridge between the light level and the electron microscopical observation.

Frequently Asked Questions

What you need to do is this: a high-quality light microscope equipped with an epi-illumination source, preferably a high pressure Hg-lamp (although a halogen source may also do). Many laboratories have an epi-fluorescence microscope at their disposition with a 40X (or higher) oil objective. Such microscope equipment forms the correct basis. You only need to implement an epi-polarization filter (the so-called epi-block or IGSS filter) in the filter housing. The epi-block contains two polarizers, differing 90 degrees in orientation with respect to each other.

How does it work (in short)? High intensity light passes the first polarizer in the epi-block and becomes polarized. The polarized incident light passes the objective lens and interacts with the specimen. The biological material hardly gives any reflection, and the reflected light is unmodified. The metal particles mirror the polarized light, thereby randomizing the polarization angle.

Reflected light passes up through the objective lens. On its way to the eye pieces or the photo camera the light passes the second polarizer in the epi-block. While doing so, light with the original polarization angle (the way it was polarized in the first place before ever hitting the specimen) is extinguished, whereas light that has become randomly polarized (and which comes from the silver metal particles) passes the epi-block. As a result you will see individual bright stars (the gold/silver particles) against a dark background.

Epi-polarization observation can be combined in real time with bright field imaging, providing for a very sensitive detection of even extremely low amounts of antigen while still having the advantage of full morphological details in the specimen.

My specimens for pre-embedding have a lot more antigens than a corresponding ultrathin section. Should I use more concentrated reagents?

The increased amount of antigens should be balanced by a larger amount of reagent volume at an appropriate dilution (the same as used on sections with low amounts of antigen), and not by more concentrated reagents. The reason is that with increased concentration more cross-reactions may occur and signal-to-noise ratios will decrease.

Incubating specimens for pre-embedding in larger volume quantities is best performed on a rocking table for a prolonged time to warrant penetration to antigenic sites in the specimen.

Custom Labeling

The standard series of AURION ImmunoGold reagents is intended for the two and three step detection of antigens. Although these approaches cover the majority of applications occasionally there may exist a need for a direct label where the gold particles are coupled directly to the primary antibody or, more general, to a protein or peptide with specific binding properties.

To fulfill these needs AURION and EMS offers a custom labeling service for antibodies, antibody fragments, proteins, and peptides with gold particles of any requested size, including ULTRA SMALL gold clusters. AURION designs and manufactures such custom conjugates in close cooperation and in agreement with the principal investigator.

Starting material

As a rule AURION will only accept pure substances as starting material, either lyophilized or dissolved in a medium of known chemical composition. Interfering substances must not be present.

Quality control criteria

The custom prepared product is quality controlled by AURION according to our in-house standards with respect to size distribution and clustering. In agreement with the principal investigator the binding substance's specific quality control criteria are determined. These are tailored for each individual assignment. As a matter of course the custom conjugate is approved only when both sets of quality control criteria have been met.

A FEW EXAMPLES

- AURION successfully conjugated a number of polyclonal antibodies, mouse monoclonal antibodies, F(ab')₂ and F(ab) fragments, high and low density lipoproteins, as well as peptides such as an Angiotensin derivative (octapeptide), Interleukin II, Tumor Necrosis Factor and a number of peptide hormones.
- The efficiency of coupling (recovery of protein) for the above mentioned custom conjugates has been greater than 70% on all occasions, while efficiencies up to 90% are no exception.

No cure, no pay

The custom labeling service is on the basis of "no cure, no pay," with the exception that an intake fee applies to each actual laboratory attempt.

We invite you to contact us directly if you require information which is more tailored to your specific applications.

EMS and Aurion ImmunoGold/Silver Staining Workshops

Reactions of Participants

"We are very enthusiastic and will most certainly pursue this method!"

"The time for personal advice was excellent!"

"An abundance of practical info, built on the necessary theoretical background!"

During a 3 day training the theoretical and practical aspects of the most up-to-date methods and applications will be dealt with both for light and electron microscopy.

Preferentially participants work with their own specimens and primary antibodies so that applicability and advantages of the ImmunoGold Silver Staining technique are maximally exploited by each individual participant. Personal attention provides for optimum broadening of knowledge which is of permanent advantage in individual daily work situations in terms of time savings and improvements of results!

ImmunoGold Workshop

SET-UP	Theory and Practice
DURATION	3 days
PRACTICE	<ul style="list-style-type: none"> • labeling of own or Aurion specimens (LM & EM) • incubation methods • testing antigenicity/reactivity • principles of immunogold labeling • preparation of conjugates • LM & EM applications
THEORY	<ul style="list-style-type: none"> • immuno detections • in situ hybridisation • silver enhancement for LM & EM • background problems
TUTORS	<ul style="list-style-type: none"> • Ing. P. van de Plas, Dr. J. Leunissen

If you are interested in attending or sponsoring a workshop please give us a call and ask for Stacie Kirsch.

Embedding Media Kits

Durcupan, Epo-Fix, JB-4,
LR White, Histo-cryl,
and more...

Technovit GMA and MMA
Unicryl

Casting, Potting, and
Encapsulating Resins

Electron Microscopy Sciences

*Please note that wherever DMP-30 is listed as the accelerator in our embedding media kits you have the option to use BDMA in place of it. BDMA is less viscous, has a longer shelf life, and offers better penetration (it should be noted, however, that in order to achieve the optimum results when using BDMA in place of DMP-30 you must vary the amount. DMP-30: 1.5-2%; BDMA: 2.5-3%).

TECHNICAL TIP

DMP-30 and DMAE vs. BDMA

As has been stated in our first issue of NEWS AND VIEWS Issue 1 pg. 3, BDMA proves to be a much better choice for an accelerator than BMP-30. It is much less viscous, has a longer shelf life, and offers better penetration of the tissue. When using BDMA in place of DMP-30 more uniform embedding is obtained. Now it has been shown that the same holds true for BDMA vs. DMAE. It is highly recommended that when choosing and embedding medium and its corresponding accelerator you consider using BDMA in place of DMP-30 and DMAE. Here at ELECTRON MICROSCOPY SCIENCES we have now made available all of our epoxy resin (Araldite and Embed) kits that come with DMP-30 or DMAE., as standard, BDMA as an alternative to them.

PLEASE NOTE THAT IN ORDER TO ACHIEVE OPTIMUM RESULTS WHEN USING BDMA IN PLACE OF DMP-30 THE FOLLOWING PROPORTIONS SHOULD BE USED:
DMP-30: 1.5-2% ADDED TO THE FINAL VOLUME;
BDMA: 2.5-3% ADDED TO THE FINAL VOLUME.

➤ Araldite 502

Luff's Formula Polymerization takes place overnight so blocks can be sectioned the next day. J. Biochem. Biophys. Cytol. 9, 409 (1961)

RT	13900	Araldite 502 Kit consists of:	
		450ml Araldite 502	kit
		450ml DDSA; Specially Distilled	
		*50ml DMP-30	

➤ Araldite 6005

Also known as American Araldite.

The blocks are slightly harder than those produced by Araldite 502.

RT	13920	Araldite 6005 Kit consists of:	
		450ml Araldite 6005	kit
		450ml DDSA; Specially Distilled	
		100ml BDMA	
		225ml DBP	

➤ Araldite, Embed 812 (Epon-812)

Mollenhauer Epon-Araldite Formula. For hard blocks and high image contrast. Blocks are easily sectioned. Stain Tech., 39,11 (1964)

RT	13940	Araldite-EMbed (Mollenhauer's Kit) consists of:	
		450ml EMbed-812	kit
		450ml Araldite 502	
		450ml DDSA; Specially Distilled	
		*50ml DMP-30	

➤ DER 332-732

Three different mixtures: one for relatively soft blocks, one for harder blocks for collagenous tissue, and a tougher one if required. Lockwood, W.R. Anatomical Record, 150, 129 (1964)

RT	14000	DER 332-732 Kit consists of:	
		2x225ml DER 332	kit
		225ml DER 732	
		450ml DDSA; Specially Distilled	
		*50ml DMP-30	

➤ Durcupan, Water Soluble

A water soluble embedding medium for EM based on an aliphatic polyepoxide.
 A Fluka A.G., Buchs.
 Switzerland-Registered
 Trademark.

RT	14020	Kit 260g for a minimum of 10 embeddings	kit
----	--------------	--	-----

➤ Durcupan ACM, Epoxy Resin

An aromatic polyepoxide; a colorless resin of relatively low viscosity, with virtually no shrinkage.

RT	14040	Kit 1200ml:	kit
		Single Component A	
		Single Component B	

➤ Diethylene Glycol Distearate (DEGDS/DGD)

DGD is a removable embedding medium (for thin and thick sections) that provides embedment free sections. Good for immunolabeling and high resolution light microscopy.

Advantages:

- Thin or thick embedment free sections can be obtained.
- Sections are easy to cut and ribbons are easily obtainable.
- Enhances the integrity of the specimen as it floats on the water.
- Sections produce interference colors according to its thickness.

Ethanol and n-butyl alcohol are used as dehydrating agents

- Capco, Krockmalnic, & Penman (1984). A New Method of Preparing Embedment Free Sections For TEM: Applications to the Cytoskeletal Framework and Other 3D Networks. JCB Vol. 98, pp. 1878.

- Nickerson, Krockmalnic, He, & Penman (1990). Immuno-localization in Three Dimensions: Immunogold Staining of Cytoskeletal and Nuclear Matrix Proteins in Resinless Electron Microscopy Sections. PNAS Vol. 87, pp. 2259.

RT	14010	Kit consists of:	
		450ml DGD	kit
		450ml Ethanol	
		450ml n-Butyl alcohol	
		DGD Embedding Kit	

TECHNICAL TIP

Epoxy Resins

Common problems, causes, and solutions

Problems associated with poor embedding in epoxy resins:

- Blocks are difficult to section
- Sections may disintegrate upon contact with water or the electron beam
- Holes in the sections
- Unevenly cured blocks
- Blocks are either too soft or too hard

Factors that cause poor embedding in epoxy resins:

- The presence of water in absolute dehydration solvents and in the ingredients of the embedding mixture

Solutions to the causes:

- Use either fresh or well capped bottles of dehydration solvents.
- Embedding should be carried out at relative humidities below 50%. Dellman, H.D. and Pearson, C.B. (1977). "Better epoxy resin embedding for electron microscopy at a low relative humidity". *Stain Technol.*, 52:5
- Since epoxy resin is hygroscopic, extreme care should be taken to prevent contamination by water.
- Accurate measurement of accelerators.
- Complete mixing without incurring air into the mixture (Use a ptfе or glass rod for at least 20 minutes).

► EMBED-812/ DER 736

This mixture is less viscous than the final embedding mixture of EMBED-812.

RT	14130	Kit consists of:	
		2x225ml DER 736	kit
		450ml EMBED-812	
		450ml NMA	
		*50ml DMP-30	

► EMBED-812

Electron Microscopy Sciences' replacement for the discontinued Epon-812. Produces the same results in terms of preservation, handling, sectioning, and staining as the old Epon-812.

- Hayat, M. A. Principles & Tech. for EM. Second Edition (1981)
- Mascorro, J.A. and Kirby, G.S. Physical characteristics of "old" Epon 812 and various Epon-like replacements. Proc. 44th Ann. Meet. Electron. Microsc. Soc. Am., pp.222-223 (1986)
- Mascorro, J.A. and Kirby, G.S. Novel Epoxy/Anhydride Alternatives for Biological Electron Microscopy: Physical and Performance Characteristics of EMBED 812 and LX 112 in combination with NSA/NMA/DMAE. Proc. 47th Ann. Meet. EMSA., pp. 1000-1001 (1989).
- Mascorro, J.A. and Kirby, G.S. Viscosity Characteristics and Hardening Rates for EMBED 812 and LX 112 with alternative Anhydride and Catalyst Choices. Proc. 49th Ann. Meet. EMSA. (1991).

RT	14120	EMBED-812 Kit consists of:	
		450ml EMBED-812	kit
		450ml DDSA; Specially Distilled	
		450ml NMA	
		*50ml DMP-30	

Especially Formulated for MATERIALS SCIENCE

► Epo-Fix

Epo-Fix is an old product that has existed only in the metallographic field until now. After extensive testing in our labs we have found that it is a perfect embedding media for a majority of material specimens.

Until now, LR White has been the most commonly used embedding media for materials due to the block hardness it offered, but there are difficulties associated with LR White. For instance, the adherence to the specimen is poor and additives are required to improve its adherence. Another major problem is the inability to orient the specimen correctly in order to cut you block afterwards. This is due to the fact that LR White needs to be oxygen starved and gelatin capsules (vertical) are recommended by the manufacturer for use. Another problem is that polymerization time in the oven can take over 24 hours.

Epo-Fix remedies all of these problems. It has very good sectioning properties, good adherence to the sample, very low viscosity, easy curing in molds (no orientation problems), and quick cure times.

Epo-Fix Technical Data: A two component epoxy resin, characterized by negligible shrinkage during curing and good mechanical properties in its hardened state. It is particularly suited for embedding hard samples of complicated shape and for vacuum impregnation. Samples such as paper, silicon, ceramics, metals, wafers, and chips are suitable to be used with Epo-Fix. It has low viscosity, low vapour pressure, good wetting properties, and minimal shrinkage. It hardens at room temperature without significant generation of heat in approximately 8 hours (no damage from heat or pressure), and at increased temperatures, 60°C, the hardening time is reduced to 2 hours. It should be noted that if you place Epo-Fix in a desiccator during curing you will eliminate any air bubbles.

RT	1232	Epo-Fix Kit consists of:	
		1kg resin,	kit
		120gm hardener,	
		15 cups,	
		15 stirrers,	
		1 x 5ml and 20ml syringes	

► Gach (Glutaraldehyde/Carbohydrazide)

A water and lipid-retaining embedding polymer for EM. Excellent preservation of lipids and ultrastructure.

Hechman, C.A. et al. (1973) J. Ultrastruct. Res. 42,156.

RT	15920	Gach Kit consists of:	
		10x10ml 50% EM grade Glutaraldehyde	kit
		10x1.5g Carbohydrazide	

► GMA, Water Soluble

Glycol Methacrylate embedding medium provides excellent preservation (especially enzymatic autoradiographic studies). Good for E.M., L.M., and Histo. Leduc. & Bernard, (1967) J. Ultrastr. Res., 4, 196-99.

RT	14200	GMA Kit consists of:	
		450ml GMA	kit
		225ml n-Butylmethacrylate	
		15g 2,4-Dichlorobenzoyl Peroxide paste	

► GMA/PEG

Polyethylene Glycol - Glycol methacrylate mixture. A water miscible embedding medium for cytochemical studies and enzyme localization when light and electron microscopy need to be correlated.

Spaur, R.C. & Moriarty, G., (1977) J Histochem. Cytochem., 23:163.

RT	14250	GMA/PEG Kit consists of:	
		450ml Glycol methacrylate, GMA	kit
		225ml n-Butyl methacrylate	
		50ml Ethylene glycol dimethacrylate	
		20ml Polyethylene Glycol 400	
		15g Benzoyl Peroxide Paste	

► Hard-Plus Resin-812

A newly formulated resin that enables the processing of specimens that have a tendency to wrinkle and be problematic.

In general, Hard Plus Resin-812 and its WPE numbers (weight per epoxide) do not vary much from batch to batch and it also has good stability under the electron beam and it stains well with heavy metals. Furthermore, the viscosity of the Hard-Plus Resin-812 is lower than the original Epon-812, making infiltration of the tissue more complete. For processing and embedding, it can be used exactly the same way as Epon-812, but normally, it is not necessary to use intermediate solvents, such as propylene oxide, hence, infiltration can immediately follow with absolute alcohol. Polymerization is normally at 60°C for 24 – 48 hours. Longer times or higher temperatures (70°C or more) will give a harder block.

For larger samples (>1x1mm³) the use of an intermediate solvent is recommended.

Hard-Plus Resin-812 is supplied only as a premix kit. All components are pre-measured, and you have to do is combine them in the right order and mix thoroughly. Each kit contains five separate mini-kits, making approximately 100g each.

RT	14115	Hard-Plus Resin-812 Kit consists of:	
		5x50g Hard-Plus Resin-812	kit
		5x50g Hardener Hard-Plus	
		5x 2.5ml Accelerator	
		Hard-Plus Resin-812 Kit	

► HPMA, Water Soluble

HPMA is a water-soluble resin used for cytochemical applications. Infiltration follows fixation of the tissue so there is no extraction of materials caused by dehydration in alcohols. Leduc, E.H. et al., (1965) J. Cell Biol., 26:137.

RT	14220	HPMA Kit consists of:	
		450ml HPM	kit
		15g Benzoyl Peroxide paste	

► Immuno-Bed™ Embedding Resin

■ A low viscosity media for light microscopy and immuno- histochemistry techniques.

■ It allows for the penetration of large immunoglobulins through the plastic sections for demonstration of antigenic sites.

J. Histochem, Cytochem., 35:595 (1987)

	14260-00	Immuno-Bed™ Embedding Resin Kit consists of:	
		7500 ml Solution A	kit
		50 ml Solution B	
		9 g Catalyst Kit	
0-5C	14260-01	Immuno-Bed Solution A only	750 ml
RT	14260-04	Immuno-Bed Solution B only	50 ml
RT	14260-06	Immuno-Bed Catalyst only	9 g

► JB-4™ Embedding Kit

A water soluble embedding media which is based on Glycol Methacrylate (GMA) plastic embedding. It is intended for use in preparing samples for high resolution microscopes (HRLM). The catalyzed monomer acts as a dehydration and infiltration agent; therefore, complete dehydration through 100% ethanol is not necessary (although recommended for large or dense tissues). Conventional paraffin sections have a greater degree of shrinkage and produce inadequate morphology when compared to JB-4.

Features:

- Thin sections (.5-2.0 micron) with excellent morphological structure preservation.
- Water-clear blocks; casts in 90 minutes max. at room temp.
- Good lipid and enzyme retention when processing at low temperatures (4°C).
- Removal of JB-4 resin prior to staining is not necessary.
- Clearing agents such as xylene and chloroform are not needed.
- Higher clarity and contrast than with paraffin sections.
- Easy processing of difficult specimens such as calcified bone and delicate embryonic tissue.
- It produces harder blocks which is ideal for dense samples, such as bone

RT	14270-00	JB-4 Kit Consists of:	
		800 ml Solution A	kit
		30 ml Solution B	
		12 g Catalyst	
RT	14270-01	JB-4 Solution A only	800ml
RT	14270-04	JB-4 Solution B only	30ml
RT	14270-06	JB-4 Catalyst	12g

► JB-4 Plus™ Embedding Kit

JB-4 Plus offers all of the same features as JB-4 with the following additions:

- It produces less of an exothermic reaction than JB4 which is good for temperature sensitive tissues.
- It produces harder blocks which is ideal for dense samples, such as bone.

RT	14272-00	JB-4 Plus Embedding Kit Consists of:	
		500 ml Solution A	kit
		15 ml Solution B	
		8 g Benzoyl Peroxide Catalyst	
RT	14272-01	JB-4 Plus Solution A only	500ml
RT	14272-04	JB-4 Plus Solution B only	15ml
RT	14272-06	JB-4 Plus Catalyst	8g

➤ **LR Gold Resin**

The London Resin Company's acrylic "LR Gold" offers the histochemist and immunocytochemist the advantage of working with unfixed tissues at low temperatures, thus allowing many fixation-sensitive procedures to be carried out in 1-4 microns resin sections at -25°C using visible light. It is non-toxic and has a low viscosity.

RT	14370	LR Gold Resin Kit consists of:	
		500ml LR Gold Resin	kit
		100g Polyvinylpyrrolidone	
		50g Benzoyl Peroxide	
		50g Benzil	
RT	14371	LR Gold Resin only;	500ml

TECHNICAL TIP

LR White Technical Tips

1. If you are having difficulty locating your tissue in LR White after it polymerizes due to the fact that the color of your tissue is the same as LR White once polymerized, there is a solution. Dye the LR White using any oil soluble dye. Remember, however, that the intensity of the dye needs to be very high if contrast is to be seen at high magnification. Dyes with phenol or tertiary amine groups should be avoided because they effect the rate of cure of the resin.

It is our experience that Sudan Black (cat. # 21610) is the best dye to use due to its color intensity.

To make up a stock solution, add the dry stain to the resin until a saturated solution is obtained. Then proceed as usual.

2. If you require the pH of LR White to be neutral (the standard is 5) you can adjust it by adding small amounts of caustic soda or a primary amine. The best primary amine to use is Ethanolamine (absolute) for it will mix into the resin very easily. Small amounts are to be titrated into the resin and the pH should be constantly checked until 7 is reached. Do not add more than 50ml.

TECHNICAL TIP

Adherence Of LR White Sections To Glass Slides For Silver Enhancement Immunogold Labeling

A continuing problem in immunogold labeling of 1 micron thick sections from blocks embedded in the hydrophilic acrylic resin LR White for Light Microscopy is the lack of adherence of the sections to the glass slide during the silver enhancement. This problem can be solved by using a 2% formvar solution to coat the glass slide.

- Cleaned glass slides are dipped in a solution of 2% formvar in chloroform and left to dry horizontally.
- Mark the coated surface with a diamond tip scribe and clean the under side of the slide with acetone.
- Transfer the section to the coated slide, which will then be placed in an oven to dry at 50°C.
- Use the Pap-Pen (EMS Cat. #71310) to draw a water repellent circle around the section, which will facilitate the labeling procedures.

Slater, M. (1989) Adherence of LR White Sections to Glass Slides for Silver Enhancement.

Immunogold Labeling. Vol. 65, No. 6 Stain Technology. pp. 297-299

➤ **LR White Resin**

A very low viscosity (8cps), non-toxic resin, suitable for both Light and Electron Microscopy.

LR White is a polar monomer polyhydroxylated aromatic acrylic resin. It can be cured by heat or by UV light. Sections of polymerized LR White resin are hydrophilic. This character allows immuno-cytochemistry reagents to easily penetrate into the sections and etching of the sections is not necessary (etching sections will effect delicate tissue antigens). LR White sections also show minimal non-specific staining. Its low viscosity makes it ideal for infiltrating decalcified bone and teeth as well as plant tissues. It is available in medium and hard grade.

LR White Resins

- Newman, G.R. (1987). Use and abuse of LR White. *Histochem. J.*, 19:118
- Newman, G.R. (1989). LR White embedding medium for colloidal gold methods. In: *Colloidal Gold: Principles, Methods, and Applications, Vol.2* (Hayat, M.A., Ed.). Academic Press. San Diego and London

Note for ordering and using LR White:

LR White supplied by EMS as a standard already is catalyzed to make it convenient for the end user (For those customers overseas, you do have a choice to receive the LR White with the catalyst on the side, with instructions showing you how to catalyze the resin).

For most biological embeddings, the LR-White-resin-only is needed.

When the accelerator is used only 1 drop of accelerator is added to 10 ml of LR White resin. This mixture polymerizes at room temperature in a short period of time (<1 hour) Infiltration with this mixture is poor.

This mixture is mainly intended for one who embeds rocks, metals, minerals etc. where infiltration is not needed.

Kit consists of: 500ml LR White Resin, 10ml UV accelerator

0-5°C	14380	Medium Grade (14381, 14385)	kit
0-5°C	14382	Hard Grade (14383, 14385)	kit
0-5°C	14381	LR White resin only; Med. Grade	500ml
0-5°C	14381-UC	LR White resin only; Med. Grade Uncatalyzed	500ml
0-5°C	14383	LR White resin only; Hard Grade	500ml
0-5°C	14383-UC	LR White resin only; Hard Grade Uncatalyzed	500ml
0-5°C	14384	LR White resin only; Soft Grade	500ml
0-5°C	14384-UC	LR White resin only; Soft Grade Uncatalyzed	500ml
0-5°C	14385	LR White UV accelerator	10ml

➤ **PTFE Flat Embedding Mold 70143 Series**
See page 253 >>>>

➤ **Histocryl Resin**

Histocryl acrylic resin has been specially formulated for light microscopy. It is water clear, and because it is hydrophilic (polar) it permits the use of most routine staining techniques without prior removal or etching.

RT	14390	Histocryl Resin Kit consists of:	
		500ml Histocryl resin	kit
		25g Histocryl Catalyst (B.P.)	
		10ml Histocryl Accelerator	

► Lowicryl Resin

Lowicryl resins are highly cross-linked acrylate-based embedding resins, designed for use over a wide range of embedding conditions. These resins provide low viscosity at low temperatures.

The K4M kit is usable to -35°C and is a polar (hydrophilic) medium, while the HM20 kit can be used down to -70°C and is nonpolar (hydrophobic).

Lowicryl's K11M and HM23 have properties similar to K4M and HM20, but can be used at temperatures 20 degrees lower than others: K11M at -60°C, HM23 at least -80°C. All of these resins are photopolymerized by long wavelength (360nm) ultraviolet light. Since the initiation of the polymerization is largely independent of temperatures, blocks may be polymerized at the same temperatures used for infiltration. The resin may also be chemically polymerized at 60°C.

RT	14330	Lowicryl K4M	kit
RT	14340	Lowicryl HM20	kit
RT	14350	Lowicryl K11M	kit
RT	14360	Lowicryl HM23	kit

► Lowicryl MonoStep Single Component Embedding Media

The same as our Lowicryl complete kits but this new formulation allows you one stop embedding without all of the cumbersome preparation and mixing. This pre-mixed, ready to use resin, saves you time and minimizes chemical contact. MonoStep Lowicryl is ideal for use in Immunohistochemistry and immunolabeling.

RT	14335	Lowicryl K4M Polar Embedding Medium; Monostep	225g
RT	14345	Lowicryl HM-20 Non-Polar Embedding Medium; Monostep	225g

TECHNICAL TIP

Improved Polymerization Of Acrylic Resins

Acrylic resins (Lowicryl, LR White, LR Gold, JB4) have become common embedding media for immunocytochemistry. A common problem in handling and disposing of these media is that oxygen inhibits their polymerization. Bubbling dry nitrogen gas through the resin mixture before infiltrating and embedding drives off oxygen and insures consistent polymerization. Specimens embedded in gelatin capsules can be placed in a small chamber or vacuum oven which can be purged with nitrogen to insure complete polymerization of blocks and avoid the tacky block surface and noxious, volatile vapors from incompletely cured blocks.

E. Ann Ellis, Ellis EM Consulting Service, 1316 SW 61st Terrace, Gainesville, FL 32607.

For the polymerization of our UV curing resins, see our UV light sources on page 1100 and our UV Cryo Chamber on page 678. >>>>

► Low Viscosity, as reported by Dr. Spurr

Provides excellent penetration for embedding biological tissues and rapid infiltration. Easy to prepare. The hardness is adjusted by changing the proportion of the flexibilizer (DER 736). The blocks have good trimming and sectioning qualities. Thin sections are tough under the electron beam. Spurr, A.R., (1969) *J. Ultrastruct. Res.* 26, 31-42.

RT	14300	Low Viscosity Kit consists of:	
		450ml NSA	kit
		225ml ERL 4221	
		225ml DER 736	
		25ml DMAE	

ARTICLE OF INTEREST

As many of our valued customers know ERL4206 has been replaced by ERL 4221. Although they should work exactly the same as each other we have found the following recommendations help to obtain much higher quality results. Please feel free to contact us regarding these tips or any of the tips in our catalog

Mixing Directions :

ERL 4221	18ml
DER 736	14ml
NSA	48 ml
DMAE	0.6ml

For Biopsies from Kidney/Liver/GI/Esophagus Dehydration:

50%, 70%, 95% ETOH for 20-30 minutes each change
2 x 100% ETOH for 30 minutes

Infiltration*:

1 part Spurr to 2 parts ETOH for 3 hours
1 TO 1 overnight/over weekend
3 to 1 (Spurr to ETOH) 3 hours
100% Spurr 6-8 hours

Polymerization:

Then Polymerize overnight (12 hour Max) at 70-80 Degrees C
*All infiltration Procedures shall be run on a Rotator.

For Biopsies from Muscle.Nerve/Skin Dehydration:

50%, 70%, 95% ETOH for 20-30 minutes each change
2 x 100% ETOH for 30 minutes

Infiltration* (Spurr/ETOH 100%)

1 part Spurr to 2 parts ETOH 24 hours (over weekend)
1 TO 1 24 hours (over weekend)
3 to 1 (Spurr to ETOH) 24 hours
100% Spurr 24 Hours

Polymerization:

Then Polymerize overnight (12 hour Max) at 70-80 Degrees C
*All infiltration Procedures shall be run on a Rotator.

M-Bond Kit, see Material Science section, page 374 >>>>

➤ **UltraBed Kit**

A Newly Introduced Low Viscosity Epoxy Embedding Kit

A Modification of the Dr. Spurr's Formula for Biological, Material, and Mineralogical Specimens

Versatile! Easy to use! Save Time and Money with this one-step-preparation low viscosity embedding kit.

The kit consists of two components, equal amount, very low viscosity, (~65cps), in convenient dispenser top bottles. To prepare the Embedding Resin, just mix equal amounts of the two components. The resin readily infiltrates into specimen and polymerizes to a clear, hard block overnight at 60°C

- **Convenient – by weight just disperse equal amount of the A and B that you need, and mix together**
- **Save time – Mixed resin can be used for both infiltration and embedding**
- **Less Hazardous – All components are shipped together as Non-Hazardous substances**

Kit comes with 100 ml each component A and component B

RT **14310** UltraBed Low Viscosity Kit 2x100ml

➤ **Methyl Methacrylate/Butyl Methacrylate**

The mixture of Butyl and Methyl Methacrylate offers many advantages over the standard GMA and HPMA embedding mediums:

- **It can be UV cured in the cold with the addition of benzoin methyl ether, or heat cured by the addition of benzoyl peroxide.**
- **The resin can be removed from the sections with a solvent (acetone) before staining.**

RT **14520** **Kit consists of:**
 225 ml Methyl Methacrylate kit
 225 ml Butyl Methacrylate
 15 g Benzoyl Peroxide Paste

➤ **Micro-Bed™ Resin**

Micro-Bed resin is a newly developed water-soluble resin which is a mixture of acrylate and polyester resins. It is a very universal embedding medium and may be used for either light or electron microscopy.

Due to its non-crosslinking characteristics, its hydrophilic nature, and roughness of its section surface, our Micro-Bed Resin is excellent in preserving tissue structure, offers good results in immunolabeling, and stands up well to conventional stains.

In light microscopy, tissues were stained with conventional histological stains (e.g., hematoxylin-eosin) and embedded in Micro-Bed: the results were comparable with those provided on paraffin embedded tissues. Further, polychrome silver-based and cytochemical stains (e.g., PAS) were also feasible. In transmission electron microscopy, images as good as those obtained with similar acrylic resins, (e.g., Lowicryl K4M), were obtained.

Micro-Bed is supplied as a single component-ready to use pre-mixed resin. Micro-Bed can be polymerized in either EMS embedding capsules or gelatin capsules by either heat (55-65°C) or UV (wavelength 365nm) light at low temperatures (-10 to 20°C) for 72 hours.

Scala C. et al. (1992). Development of a new acrylic resin ideally suited for light and electron microscopy. Electron Microscopy. Volume 3. EUREM 92, Granada, Spain. pg. 271

0-5°C **14210** Micro-Bed Embedding Resin 500ml

➤ **Polyester Wax**

See Histology section, page 493. >>>>

➤ **Quetol 651 - NSA**

A water miscible epoxy resin used for both light and electron microscopy. Its low viscosity permits easy infiltration and embedding, and yields light-colored blocks.

Kushida, H. et al., (1986) Pro. 11th Int. Cong. Electron Microsc., p. 2177. Kyoto

0-5°C **14640** **Kit consists of:**
 225ml Quetol 651
 450ml NMA
 450ml NSA
 *50ml DMP-30 Kit

ARTICLE OF INTEREST

The addition of 1% water to the epoxy resin Quetol increases the labeling intensity of the sample. The significant decrease of the curing temperature of the epoxy resin may assist in preservation of antigens. Water may also reduce the cross-linkage of the resin allowing more antigen to be available to the antibodies. The modified Quetol resin is an option for use in immunocytochemistry studies.

Refer to:

Andre R. Abad, (1992). Medium Temperature Epoxy Resin for Immunocytochemistry: Quetol 651 with Water. Microsc. Res. and Techn. 20:274-280.

➤ **Styrene Monomer, Polyester Resin**

Very low viscosity; monomeric styrene which penetrates rapidly into the tissues. It is soluble in ethanol and acetone. The infiltration and embedding can be done by styrene alone, and there is no need to dilute it with solvents. Polymerization can be done either by UV light (340-400nm) or heat (60°C) within 2-3 days without benzoyl peroxide added; 24 hours with 1% benzoyl peroxide added as a catalyst.

Delamater et al., (1971) Pro. 29th Ann. Meet. EMSA, p. 488. Claitor's Pub. Div., Baton Rouge, La.

Kushida, H. (1962b) J. Electron Microsc., 11:128

Kushida, H. (1961a) J. Electron Microsc., 10:16

RT **14650** **Kit consists of:**
 450ml Monomeric Styrene
 100ml Methyl Ethyl Ketone (UV activator)
 225ml Dibutyl Phthalate (plasticizer)
 225ml n-Butyl Methacrylate
 20g Benzoyl Peroxide (catalyst) Kit

► Technovit By Kulzer — The Resins and Accessories for all Methacrylate Embedding

Technovit® is one of the most sought after name in Methacrylate embedding medias in the world due to its diversity and availability of different kits and properties there is a media for each of your applications.

The systems developed by Heraeus Kulzer in collaboration with renowned scientists and institutes to embed tissue in plastic material for histological studies have proven themselves in practice for decades. They are successfully used for diagnostic and research purposes in medicine, veterinary medicine and botany. They are also successfully used in cutting technology for industrial applications and biomaterials.

The systems fulfill important requirements such as embedding at low temperatures, thin and semi-thin section techniques and optimal division and abrasion properties. The sections can be easily stretched, and under the light microscope the stained preparations show excellent morphology.

The scientific and economic conditions for histological studies of tissues are significantly improved with Heraeus Kulzer's histology technology.

- Simple, rational handling, as all components are compatible with one another.
- Due to the special material properties, the standard stain methods, enzyme chemistry and immunohistochemistry used in histological laboratories can be used, including in-situ hybridization.

Why plastic?

In contrast to all other embedding materials used in light microscopy in histological technology, uniform thin and semi-thin sections can be made after plastic has been embedded. In the process morphological details remain excellent. The mineralized and cellular structures can be better determined in undecalcified specimens embedded in plastic. The mineral matrix and the cartilaginous and ligament tissues are very well maintained.

The results of enzymatic immunohistochemical studies and in-situ hybridization show more sensitive and specific activity because all Technovit® plastics harden at low temperatures and below freezing temperatures due to the special composition of the polymerization systems.

► Technovit® 9100

Technovit® 9100 is an embedding medium system based on methyl methacrylate (MMA), which hardens at low temperature. It is designed for the embedding of mineralized tissues with extensive possibilities of staining for light microscopy.

Applications:

Hard-cutting technique for making thin layers

Examples: Iliac crest biopsies, smaller, spongy and compact bone tissue specimens.

Division thin section technique (division procedure in point contact technology)

Examples: Tooth/jaw areas with and without implants, non-cemented endoprostheses with shaft bones.

Combined division-thin section technique and hard-cutting technique (target preparation)

Examples: Boundary layer and environment assessment for metal implants and non-cemented endoprostheses.

Properties:

Technovit® 9100 Polymerization takes place under the exclusion of oxygen with the help of a peroxide/amine catalyst. Additional components such as PMMA-powder and a regulator allows for a controlled polymerization at temperatures between -8 and -20°C , which guarantees for the dispersion of the heat generated during polymerization. The polymerization time is between 18 and 24 hours using a volume between 3 and 15 ml in the above temperature range. All the routine techniques such as preparation tissues, staining, immuno- and enzyme-histochemistry, in-situ hybridization techniques can be performed.

Basic Solution — is composed of organic monomers, with at least one carbon-carbon double bond (C=C). The stabilizer added to this solution is for storage-stability. Hydrophilic properties are improved by the addition of a special hydrophilic generating agent.

PMMA-Powder — is an internal filler and it is made up of PMMA-micro pellets. It is used to:

- Reduce the polymerization shrinking effect.
- Reduce the heat generated during the polymerization process.
- Improve the quality of the polymerization block.

Hardener 1 — is one of the components of the polymerization initiation system. It is a derivative of dibenzoyl peroxide, which in combination with Hardener 2, makes the polymerization take place.

Hardener 2 — it works catalytically upon Hardener 1 to allows for a controlled polymerization, even at temperatures below 0°C .

Regulator — is composed of a reactive organic compound, which allows a controlled polymerization, even with large volumes of polymer, without increases in the temperature during the polymerization reaction.

PMMA-Granulate, EXART® — this granulate acts as an additional internal filler when larger amounts (500–1000ml) of polymer are to be used, for example, in the case of femur shaft with non-cemented endoprostheses. The amount of monomer (basic solution) is thereby reduced, at the same time making the polymerization easier to control.

Technovit® 9100 consists of:

- 1000ml Basic Solution (stabilized)
- 120g PMMA-Powder
- 8 Bags @ 1g Hardener 1
- 10ml Hardener 2
- 5ml Polymerization Regulator
- 500g PMMA-Granulate, EXART*

Section of stent.

➤ **Technovit® 7100 and 8100 Embedding Kits**

Technovit® Glycol Methacrylate embedding kits developed by Kulzer in Germany are the most convenient to use, and offers the best embedding results.

Features:

- **Technovit® GMA kits give better results offering improved morphology, and allows for 1 micron serial sectioning.**
- **Technovit® 7100 GMA is less sensitive to O₂ during polymerization so sealing of the molds is not necessary.**
- **The polymerization temperature never exceeds 40°C, which makes either kit a potential choice for enzyme histochemistry. Initiation chemistry of Technovit® 8100 GMA makes polymerization at 4°C possible for improved signal during immunohistochemistry.**
- **The initiator is prepackaged, eliminating messy handling of dry components, and by eliminating aromatic amines from the formation, the components are significantly less toxic.**
- **The consistent high quality of raw materials used to make the resin allows for a permanent clear colorless block and, most important, reproducible results.**

Technovit® H7100 –GAM kit consists of:

- 500ml Glycol Methacrylate monomer
- 5 x 0.6g packs Hardener I
- 40ml Hardener II

RT	14653	Technovit® H7100-GMA	kit
----	--------------	----------------------	-----

Technovit® H8100 – GMA kit consists of:

- 500ml Glycol Methacrylate Monomer
- 5 x 0.6g packs Hardener I
- 30ml Hardener II

➤ **Technovit 4000**

The low shrinkage embedding medium

Technovit 4000 is a fast curing, cold polymerizing, three-component resin, which is based on a modified polyester, and it is available in the form of powder, syrup I, and syrup II. It is mixed at a ratio of 2:2:1 (powder:syrup I:syrup II). Syrup I and Syrup II are mixed together first and the powder is mixed in last. The color is white opaque.

Properties:

Technovit 4000 is distinguished by its low shrinkage when polymerizing and its perfect margin fit. Due to its excellent flow characteristics, Technovit 4000 guaranteed that geometrically demanding samples are optimally embedded. Its excellent adhesion properties with regard to metal are a guarantee of gapless embedding of all metal samples. These properties are of particular importance when working with samples that require good edge definitions.

- **Excellent margin fit**
- **Optimum grinding, polishing properties**

Application:

After mixing, Technovit 4000 can be used for casting for approximately 4 minutes and takes approximately 8 minutes to cure.

Technovit® 4000 Kit consists of:

- 750g Powder
- 500ml Liquid I
- 250ml Liquid II

RT	14656-02	Technovit 4000, Medium	kit
----	-----------------	------------------------	-----

➤ **Technovit® 3040 – Mounting Medium**

Technovit 3040 yellow is a fast curing methyl methacrylate-based resin, whose chemical composition warrants a firm, durable bond between Technovit and the specimen.

Technovit® 3040 consists of two components – powder and liquid – allowing simple mixing, easy adherence to the specimen, and fast curing. For fixing the mount, a high viscous consistency is required(i.e. a mixing ratio of approximately 2-3 parts per volume powder: 1 part per volume liquid) has proven to be the most advantageous.

Technovit® 3040 Kit consists of:

- 1 x 100g Technovit® 3040 powder
- 1 x 80ml Technovit® 3040 liquid

RT	14652	Technovit® 3040	kit
----	--------------	-----------------	-----

➤ **Technovit HistoBloc**

Due to the special demand for the thinnest possible sections, polymerized Technovit® 7100 is most elastic and it is therefore recommended to fix the embedded specimen on a universal stable mount, to insure optimum clamping and cutting.

To avoid a subsequent complicated removal of the specimens from the mount, an inexpensive disposable version was developed.

Features:

- **Fixed easily, securely and permanently**
- **Clamped into all rotary microtomes without adapter**
- **Embedded in the elastic Technovit in such a way that thinnest sections may be cut**
- **Optimally fixed using Technovit® 3040 at low cost (polymerisation in 5 to 10 minutes)**
- **Easy to write on**
- **Link together for storage**

► Technovit By Kulzer – continued

Appendix for pentachrome staining in accordance with Movat

► Technovit Embedding Molds

An important prerequisite for easy-to-cut specimens is a mold with a special profile which will provide specimen blocks for easy application and simple cutting. This is achieved with Histoform S, an embedding mold composed of new material with a special shape.

All essential requirements such as:

- Material-saving volume
- Easy-to-cut shape
- Unlimited shelf life
- Easy removal of the embedded specimens because of the conical shape and the PTFE material
- Excellent temperature dissipation by way of refined steel bottom
- Accurate and easy fixing of the specimen blocks by special grooves were achieved with Histoform S, in cooperation with renowned users.

Curing temperature measurements have confirmed that at this volume the combination of PTFE and refined steel will result in a considerably lower polymerization temperature.

Three types are available: the Histoform Q and the Histoform S and the Histoform N. The Histoform Q was developed for the embedding of larger specimens; the characteristics are identical to Histoform S. These PTFE molds allow for easy removal of 10 plastic blocks when using the Histobloc system.

The mold cavities measure 10mm wide x 16mm high x 6.5mm deep in the "S" and 20mm wide x 16mm high x 10mm deep in the Q and in the "N" 9mm W x 18mm H x 5mm D.

TECHNICAL TIP

Preparation Of Embedding Mixtures

It is essential to mix the components of viscous embedding medium (Araldite + Epon replacements) very thoroughly to obtain uniform polymerization. Inadequate mixing is one of the main causes of sectioning problems with epoxy resins. The simplest way to obtain good mixing is to warm the resin, the hardener, and the containers to be used for stirring at 60°C. A uniform mixture is obtained in a few minutes by this method and no special stirring apparatus is required. The warm components are easily poured from their containers for measurement. It is best to prepare the complete mixture just before use but if necessary it can be stored at 4°C in a bottle with a well fitting cap for several weeks, or for many months at -20°C. During infiltration of the specimens, the embedding mixture is kept at room temperature and warmed to 60°C.

CAUTION: WHEN WORKING WITH CHEMICALS IT IS WISE TO ALWAYS WEAR GLOVES AND WORK UNDER A FUME HOOD.

Glauert, A.M. Epoxy Resins: An update on Their Selection and Use. Microscopy and Analysis, September 1991, pp. 15-20.

► **Unicryl™**

A New Universal Resin for:

- Light Microscopy
- Electron Microscopy
- Immunolabeling
- In-Situ Hybridization
- Histochemistry

UNICRYL is a single component and easy to use resin which gives excellent structural preservation of tissues without chemically interacting or crosslinking with them. UNICRYL is largely hydrophilic, allowing good access to polar solutions and exhibiting low background staining or labeling from hydrophobic materials. It also minimizes the denaturation of proteins, allowing true antigenic properties to be maintained.

The excellent polymerization properties of UNICRYL are largely due to the fact that all of the components of the polymer have similar molecular weights, ensuring even penetration into the tissue.

In addition, the enhanced labeling, staining and hybridizing qualities arise from the fact that sections are cleaved from the block face ahead of the knife edge, thus exposing more of the tissue components at the surface. UNICRYL is premixed and supplied as a single component. The resin has a long shelf life when stored in the cold. It is miscible with alcohol and has a low viscosity even down to -50°C. The resin can be polymerized by heat (50-60°C) or by UV irradiation at low temperatures (-10 to 20°C).

The polymerization of the resin is an exothermic reaction. Unicryl shrinks approximately 10% in volume during polymerization. Ethyl alcohol, acetone and many other solvents may be used as a dehydrating agent.

Complete instructions come with the kit.

Unicryl kit consists of:

	250 ml Unicryl Resin	
0-5C 14660	Unicryl Embedding Kit	kit

► **Casting-Potting-Encapsulating Resins**

► **Crystal Clear™ – Water Liquid Plastics**

The Crystal Clear™ Series of polyurethane resins were designed for applications that require absolute clarity. These are low viscosity resins that cure at room temperature with negligible shrinkage to a hard plastic. Cured products are UV resistant and are not brittle.

Applications include potting, encapsulating, making prototype models, and lenses, object duplicating etc.

CAUTION: This product is NOT for home use, for research and industrial use only.

TECHNICAL OVERVIEW:

Pot Life	Full Cure	Casting Thickness
Crystal Clear 200 10 min.	16 hours	½" –3" (1.27–7.62cm)
Crystal Clear 204 120 min.	48 hours	3 – 6 (7.62–15.24cm)
Crystal Clear 206 180 min.	48 hours	> 6" (15.24cm)

Ordering: Each kit consists of 1 gallon resin A and adequate curing agent B

Cat. #	Description	Quantity

► **Acrylic Plastic Casting**

Simply place your object in a mold, mix and pour Acrylic Plastic over it. In an hour it is hard and your object is firmly embedded in a clear, stable plastic. For high-gloss finish, it can be polished with a soft cloth. Mold making and casting can be done in two hours. Acrylic Plastic Casting is a thermosetting acrylic-polymer plastic with excellent clarity and stable characteristics.

The kit is available with 1 pint of resin and hardener, or 1 quart of resin and hardener.

TECHNICAL TIP

The Storing Of Embedding Resin Mixtures

Our experience over the years shows that the best way to store remaining embedding resin mixtures is in disposable plastic syringes.

PROCEDURE:

Take a fresh "all plastic" syringe (EMS Cat. #72520-72529- choose the appropriate size syringe depending on the volume mixture to be stored), remove the tip cover, slowly draw in the mixture. Remove any air space by holding the syringe with the tip in the upward position pulling the plunger slowly to clear the resin from the tip as well as letting the air move towards the tip; slowly push the plunger upward until the resin appears at the end of the tip; put on the tip cover. Wrap the syringe with aluminum foil, label it (name, mixture, and date) and store it in the refrigerator.

This method protects the mixture from contamination by condensation, and it is also more convenient for future use.

TECHNICAL TIP

Microwave Ovens and Embedding

Using a microwave oven of 400W, output rating at 2450 MHz, cumulative short exposures with seven 15s pulses and two 30s pulses, separated by 30s cooling intervals gives acceptable polymerization of embedding resins.

McLay, A.L.C., Anderson, J.D. and McMeekin W. (1987). Microwave polymerization of epoxy resin: rapid processing technique in ultrastructural pathology. J. Clin. Path., 40:350

► Casting-Potting-Encapsulating Resins (continued)

- Extremely high tear strength
- Excellent chemical resistance
- Long pot life
- Good dielectric properties
- Low shrinkage
- Excellent shelf aging
- Insensitive to inhibition
- Low viscosity
- Color coded catalyst
- Variable cure rate

Ordering: Blue Silicone Rubber comes as a kit consisting of 1 gal (9 lb) silicone base and 1 pt (1lb) blue catalyst.

Cat. #	Description	Qty
RT 24230-B	Blue Silicone Rubber Kit	1 gal

Curing: allow the mold to cure overnight (at least 16 hours) at room temperature (77°F/25°C) before de-molding. Do not cure rubber where temperature is less than 65°F/18°C. Post Curing the mold will aid in quickly attaining maximum physical and performance properties. After curing at room temperature, expose the rubber to 80°C for 2 hours and 100°C for 2 hours. Allow mold to cool to room temperature before using

NOTE: This clear silicone will cause rubber to yellow when applying post curing.

► Silicone – Room Temperature Cured

Per the requests of our customers we are introducing a series of room temperature cured silicones that are used in the labs.

1. Blue Silicone Rubber

Blue Silicone Rubber is extremely high tear, high tensile strength, two components, and tin catalyzed RTV silicone rubber. It is designed for casting polyurethane foam, polyester and epoxy parts. It is a superior product with the following advantages over the RTV silicones:

TYPICAL PROPERTIES

Un-catalyzed Compound	Base	Activator
Color	White	Blue
Viscosity (cps)	50,000–70,000	300–400
Specific Gravity	1.10	.99
Working time (hours)	1.5 to 2.5	
Cured Time (hours)	16 to 18	
Shelf Life (months)	6	

2. Clear Silicone Rubber

This silicone cures at room temperature with no shrinkage and offers a unique water clear see through rubber with excellent tear strength, chemical and heat resistance.

► Kwik-Gard Sylgard™ 184

The Kwik-Gard™ is specially packaged Sylgard184 silicone that offers a quicker and easier way to apply the silicone, eliminating the messy procedure of preparing the mixture before application. Its special cartridge controls the precise mixing ratio to ensure proper curing. The disposable tip mixes resin and hardener as they are dispensed. Since no air is introduced during mixing, the resin does not need degassing for most applications. The mixed silicone is applied directly to the site, reducing preparation time and material waste. Each Kwik-Gard™ cartridge contains 37 mL of resin and hardener. The dispensing tip has a dead volume of 0.75 mL. Curing time for this silicone is 24hrs@25°C, 15 min.@150°C.

Cat. #	Description	Quantity
RT 24236-01	Kwik Gard™ Start Up kit (Dispenser, 1 Cartridge and 5 tips)	each

RT 24236-04	Kwik Gard™ Dispenser	each

► Sylgard™ 184

The same as the Kwik Gard™ But in its original container. A two-part silicone elastomer, ideal for potting and encapsulating applications.

Very low dielectric constant sealing compound used in patch clamping and many other lab applications. After cure, will withstand -55° to 200 °C. Curing time for this silicone 24hrs@25°C, and 15 min.@150°C.

Cat. #	Description	Quantity

► Gilder Grids

A reliable support specimen grid source. Features well-defined grid bars, maximum open area, and a matt/shiny side. Each grid is individually inspected. Newly introduced are copper grids with palladium plating. This plating offers better grid strength and avoids tarnishing.

Standard Square Mesh

Diameter: 3.05mm, **Thickness:** 0.7 mil (18µm)

Material: Copper (Cu), Nickel (Ni), Gold (Au), Copper/Palladium (Cu/Pd=CP), Molybdenum (Mo)

G100 - G400

G200TH

G200T

G200T

- [1] A thickened version of the standard, G200TH with an asymmetric center. A mark on the rim allows for precise orientation of the grids.
- [2] A combination of thin and thick bar grids, with a mark on the rim for orientation.
- [3] The handle is designed for ease of handling and is easily removed if necessary. To remove the handle, just bend it over on a 90-degree angle.

Gilder Finder Grids

Diameter: 3.05mm, **Thickness:** 0.7 mil (18µm)

Material: Copper (Cu), Nickel (Ni), Gold (Au), Copper/Palladium (Cu/Pd=CP)

G200F1

G200F2

G200HF3

- [4] Thick bars dividing regions into 6 thin bar areas, which are identified by a numeric system.
- [5] Thick bars dividing regions into 9 thin bar areas, which are identified by alphabetical letters located in the center of the grid.
- [6] Each of the 322 grids squares, can be identified by reference to its unique combination of base 2 binary number and alphabet symbol (A-T). 0 is a short rounded solid pillar and 1 is a longer rounded solid pillar.

Standard Hexagonal Mesh

Diameter: 3.05mm, **Thickness:** 0.7 mil (18µm)

Material: Copper (Cu), Nickel (Ni), Gold (Au)

G100H & G200H

G150H; G300H & G400H

► Gilder Grids (continued)

NEW High Mesh Values

There is increasing interest in the use of high mesh value TEM specimen support grids in life science, materials sciences, semiconductor and nanotechnology. We introduce three new products designed to improve support for thin specimens and membranes. These have a high hole/bar ratios giving good transmission values.

Diameter: 3.05mm, **Thickness:** 0.7 mil (18µm)

Mesh Diameter: 2mm

Material: Copper (Cu), Nickel (Ni), Gold (Au).

Parallel Bars

Diameter: 3.05mm, **Thickness:** 0.7 mil (18µm)

Material: Copper (Cu), Nickel (Ni), Gold (Au)

Rectangular

Diameter: 3.05mm,

Thickness: 0.7 mil (18µm)

Material: Copper (Cu), Nickel (Ni)

Double Grids (Oyster)

These are used mostly in metallurgical applications for supporting thin metal foils. These grids have a curved securing tab which folds to the curvature of the 'sandwiched' grid.

Diameter: 3.05mm, **Thickness:** 0.7 mil (18µm)

Material: Copper (Cu), Nickel (Ni), Gold (Au), Copper/Palladium (Cu/Pd=CP), Molybdenum (Mo)

Four configurations are available:

► Gilder Thin Bar Grids

Thin Bar Grids have been developed using a new technology to produce ultra-fine grids with thinner cross bars than regular grids. The result is equally firm specimen support but with 40% more open area for viewing maximum specimen surface area.

REVOLUTIONARY SPECIMEN SUPPORT GRIDS					
In addition to our square and hexagonal mesh Gilder Thin Bar Grids, we are now able to produce a very fine mesh that values up to 2,000 lines/inch. There is an increasing need in TEM for support thin films, routinely carbon, as thin as 1.5 - 2.0nm.					
The pitch (the distance from the center of one bar to the center of the next bar) dimension in all grids remains constant, which allows them to be used as a lower magnification calibration aid.					
Type T600HH (hexagonal) and T600HS (square) represent our efforts to reduce the grid bar width (only 5 microns) enabling more of the specimen to be viewed. All new types, apart from one side being shiny, the other matte, have a large asymmetrical mark in the rim which gives the identification of which side the specimen is on. Grids are 3.05mm overall diameter; 2.05mm mesh area diameter.

► Veco Grids

With a wide variety of styles available, Veco Grids offer superior handling characteristics. Plus, with a 0.8 mil thickness, Veco Grids are the most rigid grids available.

TECHNICAL TIP

Removing a Charge from the Surface of Grids

Sometimes when you are trying to pick up sections, they won't adhere to the grid surface. If you don't have time to glow discharge clean the grid surfaces, try this little trick. Dip the grids in distilled water for a moment and wick off the excess with filter paper. Let them dry while you are arranging your sections. Your sections should now adhere to the grid surface. Some labs soak the grids they will use for the day in distilled water until they are needed. If this procedure fails, reclean your grids with acetone or chloroform or glow discharge clean the grid surfaces. Jeanette Killius, NEUCOM, Rootstown, OH.

TECHNICAL TIP

On-Grid Enhancement

The use of nickel grids is recommended for on-grid enhancement, as nickel is relatively insensitive to silver enhancement. Gold or copper grids should not be used.

TECHNICAL TIP

Shiny Side Or Rough Side?

Retention of sections on grids during poststaining and immunocytochemical procedures frequently is of crucial importance in the electron microscopy laboratory. Opinions differ regarding the side of grids most suitable for permanent adhesion. The controversy is easily solved by examination of the surfaces involved. Grids are manufactured with a dull or rough side, and a shiny or smooth side. Epoxy sections exhibit a bumpy surface when viewed in the boat. Scanning electron microscopy images of epoxy sections without embedded material also reveal an uneven surface. Let us imagine a grid to be a single sided piece of sandpaper and the section to be a double sided piece of sandpaper. Sandpaper grips another piece of sandpaper much more readily than it does a smoothly polished metal surface. For the most secure adhesion of sections to grids **SECTIONS SHOULD BE PICKED UP ON THE ROUGH SIDE OF THE GRID.**

► TEM Specimen Supports in Molybdenum

We have extended our range of TEM grid materials to include four types, which are now available in Molybdenum. The new products are manufactured using a process known as chemical 'milling' (etching) instead of the more familiar technique of 'electroforming' (deposition) that is used in the manufacture of copper, nickel and gold products. Molybdenum is used principally in applications where it's high temperature, hardness, expansion of coefficient and corrosion resistance characteristics are considered important. The material which is used has a purity of 99.9%.

Symbol: Mo
Atomic number: 42
Melting point: 2617.0°C (2890.15°K, 4742.6°F)
Boiling point: 4612.0°C (4885.15°K, 8333.6°F) –
Density: 10.22 g/cm³

► Maxtaform Grids

High Grade Maxtaform Grids with clean and smooth edges, firm support, and a large open area. Our copper grids are available with one surface coated with inert Rhodium. This coating will eliminate tarnishing, give side identification, and reduce the bar thickness.

a: pitch b: hole c: bar

Square Mesh and Oval Hole

Diameter: 3.05mm, **Thickness:** 0.75 mil

Material: Copper/Rhodium (Cu/Rh = CR), Nickel (Ni), Gold (Au)

► Athene Grids

EMS is pleased to now offer the Athene range of grids, renowned for decades for the highest quality standards, exceptionally refined grid bars, and good handling characteristics.

Square Mesh

Diameter: 3.05mm, **Material:** Copper (Cu), Nickel (Ni), Gold (Au)

Thin Bar with Center Mark

Diameter: 3.05mm, **Material:** Copper (Cu), Nickel (Ni)

Thick and Thin Bar with Center Mark

Diameter: 3.05mm, **Material:** Copper (Cu)

Hexagonal Mesh

Diameter: 3.05mm, **Material:** Copper (Cu), Nickel (Ni)

Slotted

Diameter: 3.05mm, **Material:** Copper (Cu)

► Index Grids

► Alpha Numeric Index Grid

By employing a rectangular mesh the support value of the grid has been increased, offering a value intermediate between the most commonly used grid (200 Lines/" and (300 Lines/"). Each grid rectangle is asymmetrical having different outlines in all four corners. This allows for the orientation of the grid to be determined at microscopic levels. The index feature enables the position of each grid to be identified with reference to the letters A-O along the horizontal axis and the numbers 1-15 along the vertical axis. The logo in the rim allows for precise orientation and aids in the identification of each side. Grids are available in Copper, Copper/Palladium, Nickel, and Gold.

SPECIFICATIONS:

	Horizontal Axis:	Vertical Axis:
Mesh:	200 Lines/"	250 Lines/"
Pitch:	125 microns	105 microns
Bar Width:	20 microns	15 microns
Hole Width:	105 microns	90 microns
Overall Diameter:	3.05 mm	3.05 mm

CORNER OUTLINE WITH REFERENCE TO LOGO IN THE RIM:

Top Right:	Right Angle
Top Left:	Inverted Quadrant
Bottom Right:	Diagonal Line
Bottom Left:	Quadrant

► SEM Finder Grids

These new SEM grids are designed to aid in the identification and localization of SEM specimens when placed on standard SEM stubs. The SEMF2 allows for easy characterization and analysis of particles and suspensions.

The SEMF3 uses an alpha-numeric index, allowing up to 25 predetermined specimens to be fixed and then located in a SEM.

Type SEMF1

Referring to the annular rim identifies north, south, east and west. The four quadrant markers are tapered towards the centre. 100 Radial sectors are identified by reference to decimal numbers in the annular rim and alphabet letters in the four quadrants.

Overall Diameter: 10 mm
Overall Thickness: ~50 µm
Material: Copper, Nickel or Gold

Type SEMF2

The larger cells are identified using numbers from 1 – 57. Each large cell is sub-divided into 4, making a total of 228 identifiable cells by reference to their number and geographical location.

Overall Diameter: 10 mm
Overall Thickness: ~50 µm
Material: Copper, Nickel or Gold

Type SEMF3

25 cells are identified by reference to their alpha-numeric position. The large asymmetric cut-out feature in the rim enables the right view to be easily obtained when placing on a SEM stub.

Overall Diameter: 10 mm
Overall Thickness: ~50 µm
Material: Copper, Nickel or Gold

80101-Cu	SEMF1, Copper	10/vial

► For Beryllium Planchets, see page 637

► Synaptek™ Grids

Very reliable under the electron beam- Synaptek® unflexible grids, made of a special alloy (Beryllium-Copper). Offers extreme stability for coating with support film. 4 mil thick (100µm), 3.05mm diameter, this standard 2x1mm oval slot grids are contamination free and reusable after cleaning. 0.5x2mm oval slots are also available.

NUM grids: Numbered grids are in random order. Numbers may be duplicated.

DOT grids: 2 dots are marked on one side of the grid for identification. Dots are visible to the naked eye.

NOTCH grids: A mark, stamped on one side of the grid to facilitate the handling of the grids. Notch is available with NUM or DOT grids.

GILDED grids: completely Gold-Plated grids, suitable for immunology research, autoradiography, as well as special needs.

► Beryllium Grids for Transmission Electron Microscopy

Beryllium grids are superior to all other materials for in situ analysis in transmission electron microscopes because for practical purposes they give off no detectable background radiation which could interfere with the analysis. **Purity:** 99.97%, **Size:** 3.05mm

0200-Be Beryllium Grids 200 Mesh each

► EMBRA Grids

Diameter: 3.05mm, **Thickness:** 16µm for meshed and 5-20 µm for oval hole grids

Material: Copper (Cu), Nickel (Ni), Gold (Au), Stainless Steel (SS), Titanium (Ti), Molybdenum (Mo), Aluminum (Al)

EMBRA electroformed grids combine a high open area with a rigid construction which allows for relatively easy handling. We offer these grids in a series of hard to find materials, which are not available from other manufacturers. They are as follows: Stainless Steel (SS), Titanium (Ti), Molybdenum (Mo), and Aluminum (Al)

SUPPORT FILM ON GRIDS

Support Film on grids has become a main product line for us since the demand for high quality coated grids has increased. To make your microscopy work easier and to save you a great deal of time we offer you a complete line. All of our coated grids are optically checked followed by batch testing in the EM. Packed in grid storage box.

All the grids below (except for the Beryllium Support Films) are available with the following options:

- Molybdenum grids in place of Au, Cu, or Ni
- As Silicon-free
- With ultra-thin thickness (thickness can be requested)
- Extra thick thickness

NOTE: All of our film is laid on the shiny side of the grid.

Support Film on Grids Application Guide

Which support film is best for your particular application? Are there any alternatives? What about Lacey Films?

ARTICLE OF INTEREST

A simplified method for handling EM grids is described. This new method not only offers safety and identification of your samples but offers you improved handling, temporary storage, and identification of grids bearing ultrathin sections as well as a novel method for preparing bulk samples.

Refer to: Gorycki, M.(1992). A Simple Method for Handling Grids. Biotechnic & Histochemistry 67/5, 313-314.

TECHNICAL TIP

How do Nickel and Copper grids react with Periodic Acid?

Periodic Acid + Ni... Ni-Periodate + H₂
 Periodic Acid + Cu... Cu-Periodate + H₂
 In this case you should use Gold Grids.

SUPPORT FILM ON GRIDS

➤ 2. Carbon Film Only

A thin film of pure carbon deposited on one side of the grid. The thickness range is as follows:

Standard: Approx. 5-6nm, **Ultra-Thin (UL):** 3-4nm, **Thick (TH):** 10nm, **Extra Thick (ET):** 20-30nm

TECHNICAL TIP

The Preparation of Adhesive Coated Grids for Picking Up Carbon Film to Make Carbon Coated Grids

The following steps should be followed in the preparation of adhesive coated grids:

1. Submerge about 2" of Scotch clear tape (3M) into 10ml of Dichloroethane (Ethylene Dichloride); shake and discard the tape.
2. The solution now becomes "grid-glue"
3. Place the grids (dull side up) on a piece of filter paper (dust-free room).
4. Take a pipette and place a drop of "grid-glue" on top of each grid.
5. Let the grids dry.
6. The grids are now ready to pick up the carbon foil and make the carbon coated grids.

➤ For more Technical Tips on Grids, see pages 108, 109 >>>>

Check out our Most Revolutionary Products...

Introducing DuraSiN™, revolutionizing the way samples are prepared and analyzed in the transmission electron microscope.

DuraSiN™ Film and Mesh products are affordably-priced, durable, nonorganic, low scatter support grids for quantitative TEM and X-ray analysis. Unlike other support films and grids, DuraSiN™ Film and Mesh products can withstand harsh chemical and temperature environments.

For more information, see page 152-157. >>>>

ARTICLE OF INTEREST

A simplified method for handling EM grids is described. This new method not only offers safety and identification of your samples but offers you improved handling, temporary storage, and identification of grids bearing ultrathin sections as well as a novel method for preparing bulk samples.

Refer to: Gorycki, M.(1992). A Simple Method for Handling Grids. Biotechnic & Histochemistry 67/5, 313-314.

TECHNICAL TIP

How do Nickel and Copper grids react with Periodic Acid?

Periodic Acid + Ni... Ni-Periodate + H₂
 Periodic Acid + Cu... Cu-Periodate + H₂
 In this case you should use Gold Grids.

SUPPORT FILM ON GRIDS

► 3. Formvar/Carbon Film

A formvar coated grid, stabilized with evaporated carbon film. This type of coating is excellent for specimen support, especially for ultra thin sections. The thickness range is as follows:

Standard Option A: 10nm Formvar and 1nm Carbon

Standard Option B (SB): 10nm Formvar and 3-4nm Carbon

Standard Option C (SC): 10nm Formvar and 20-30nm Carbon

Ultra-Thin Option A (UA): 5-6nm Formvar and 1nm Carbon

Ultra-Thin Option B (UB): 5-6nm Formvar and 3-4nm Carbon

Ultra-Thin Option C (UC): 5-6nm Formvar and 20-30nm Carbon

Thick Option A (TA): 15-20nm Formvar and 1nm Carbon

Thick Option B (TB): 15-20nm Formvar and 3-4nm Carbon

Thick Option C (TC): 15-20nm Formvar and 20-30nm Carbon

Extra Thick Option A (EA): 25-50nm Formvar and 1nm Carbon

Extra Thick Option B (EB): 25-50nm Formvar and 3-4nm Carbon

Extra Thick Option C (EC): 25-50nm Formvar and 20-30nm Carbon

SUPPORT FILM ON GRIDS

Guide to Thickness Ranges

Standard Option A: 10nm Formvar and 1nm Carbon

Standard Option B (SB): 10nm Formvar and 3-4nm Carbon

Standard Option C (SC): 10nm Formvar and 20-30nm Carbon

Ultra-Thin Option A (UA): 5-6nm Formvar and 1nm Carbon

Ultra-Thin Option B (UB): 5-6nm Formvar and 3-4nm Carbon

Ultra-Thin Option C (UC): 5-6nm Formvar and 20-30nm Carbon

Thick Option A (TA): 15-20nm Formvar and 1nm Carbon

Thick Option B (TB): 15-20nm Formvar and 3-4nm Carbon

Thick Option C (TC): 15-20nm Formvar and 20-30nm Carbon

Extra Thick Option A (EA): 25-50nm Formvar and 1nm Carbon

Extra Thick Option B (EB): 25-50nm Formvar and 3-4nm Carbon

Extra Thick Option C (EC): 25-50nm Formvar and 20-30nm Carbon

► 4. Formvar/Silicon Monoxide

A formvar film stabilized with a thin film of Silicon Monoxide. Silicon Monoxide produces a desirable support film because it offers low background contrast and it is stable under the electron beam and it is more hydrophilic than carbon film.

Cat. #	Type	Qty	Cat. #	Type	Qty
FSF200-Cu	200 mesh	50/box	FSF200-Ni	200 mesh	50/box
FSF300-Cu	300 mesh	50/box	FSF300-Ni	300 mesh	50/box
FSF400-Cu	400 mesh	50/box	FSF400-Ni	400 mesh	50/box

► 5. Silicon Monoxide Film Only

A thin film of pure Silicon Monoxide (15–30 nm) is deposited directly on top of the grid.

Cat. #	Type	Qty	Cat. #	Type	Qty
SF200-Cu	200 mesh	50/box	SF200-Ni	200 mesh	50/box
SF300-Cu	300 mesh	50/box	SF300-Ni	300 mesh	50/box
SF400-Cu	400 mesh	50/box	SF400-Ni	400 mesh	50/box

SUPPORT FILM ON GRIDS

➤ 6. Lacey Carbon Film

This carbon coated film on a broken pattern consists of woven-mesh-like holes of different sizes and shapes. Average hole sizes are 50, 100 and 150 microns. This type of pattern provides support but does not interfere when observing specimen sections.

Cat. #	Type	Thickness	Qty	Cat. #	Type	Thickness	Qty	Cat. #	Type	Thickness	Qty

➤ 9. Beryllium Support Films

A deposition of 250 Angstroms thick Beryllium onto the 0.005" thick, 25x25mm squares of a Cu substrate. The Be can be removed by dissolving the substrate in nitric acid (50:50). The Be film will then be removed from the acid, washed in distilled water and mounted on TEM grids. A Be support film will reduce background interference to a minimum and it is particularly useful where analyses for C or Si are required, so that these alternative supports cannot be used. Another advantage of the Be support is its very fine grain size which produces a very sharp ring pattern for in-situ calibration.

Cat #	Description	Qty
76030	Beryllium Support Film, 25x25mm	each

➤ C-flat™ Holey Carbon Grids for Cryo-TEM

The premier holey carbon grid for cryo-transmission electron microscopy

Overview

C-flat™ is an ultra-flat, holey carbon-coated TEM support grid for transmission electron microscopy (TEM). Unlike competing holey carbon films, C-flat™ is manufactured without plastics, so it is clean upon arrival and the user has no residue to contend with.

The C-flat™ Advantage

C-flat™ leads to better data sets.

Made with patent pending technology, C-flat™ provides an ultra-flat surface that results in better particle dispersion and more uniform ice thickness. Patterning is done using deep-UV projection lithography, ensuring the most accurate and consistent hole shapes and sizes down to submicron features. The precise methods by which C-flat™ is manufactured eliminate artifacts such as excess carbon and edges around holes.

C-flat™ is affordable

C-flat™ is available in 25, 50, and 100 packs at a per-grid price less than competing products.

Applications

C-flat™ holey carbon grids provide the ideal specimen support to achieve high resolution data in cryo-TEM making them an ideal choice for single particle analysis, cryo electron tomography and automated TEM analysis.

Cryo-electron tomography (cryoET) and Single Particle Analysis (SPA):

Numerous researchers have reported that the ultra-flat surface of C-flat™ leads to even ice thickness and uniform particle distribution within the hole areas. This optimal particle distribution results in superior data being collected as compared with other holey support films. 2µm hole sizes are standard but custom hole sizes are available so C-flat™ can accommodate the common magnifications used for quantitative TEM analysis.

Automated TEM:

C-flat™ provides a regular array of analysis sites compatible with automated data collection software such as Legikon. This compatibility, in combination with the more uniform ice thickness and particle distribution reported by numerous researchers, results in more high-quality target sites per grid.

Publications using C-flat™:

Does contamination buildup limit throughput for automated cryoEM? , Journal of Structural Biology, Volume 154, Issue 3, June 2006, Pages 303-311 Anchi Cheng, Denis Fellmann, James Pulokas, Clinton S. Potter and Bridget Carragher

Automated cryoEM data acquisition and analysis of 284 742 particles of GroEL , Journal of Structural Biology, In Press, Uncorrected Proof, Available online 22 May 2006, Scott M. Stagg, Gabriel C. Lander, James Pulokas, Denis Fellmann, Anchi Cheng, Joel D. Quispe, Satya P. Mallick, Radomir M. Avila, Bridget Carragher and Clinton S. Potter

Product Line

C-flat™ is a holey carbon film supported by a standard TEM grid. C-flat™ products are fully specified by 4 parameters: the hole diameter and pitch of the holey carbon film and the material type and mesh size of the TEM grid. The following image illustrates these parameters:

Standard Products

The breadth of applications in cryoTEM necessitate a wide range of holey carbon film patterns. And now, with the recent expansion of the product line, a C-flat™ holey carbon film is available for almost any application. Whether 600nm holes are needed for very high magnifications with ultra-high resolution cameras or large open areas are needed for larger specimens, C-flat™ is the perfect holey carbon grid.

C-flat™ is immediately available in several standard array patterns including hole diameters/hole spacings of 0.6/2, 1/1, 1/2, 1/4, 1.2/1.3, 2/1, 2/2, 2/4, 4/2, and a multihole pattern. C-flat™ is supported by your choice of a 200 mesh or 400 mesh copper TEM grid and sold in quantities of 25, 50, or 100.

Thick Products

C-Flat™ is available in a thick option that doubles the carbon thickness from approximately 20nm to 40nm. Thick C-flat product numbers end in -T, catalog numbers contain "CFT". Available in quantities of 50 and 100 per pack.

Cryo Preparation Using C-flat™

Product Overview

C-flat™ is a holey carbon support film, manufactured using a patent pending semiconductor-based technology without plastics, resists or other soft materials. As a result, the carbon films are flat, uniform and free of residues or plastics. C-flat™ is designed to be an "out of the box" solution, and should require minimal sample preparation. Extensive plasma cleaning is not needed, and could potentially thin the carbon, making it too fragile for blotting or freezing.

Plasma Preparation

If you are using C-flat™ for the first time, it is recommended that no plasma preparation be used initially. As with any carbon film, plasma preparation is sometimes necessary to make the surface more hydrophilic. If your initial results dictate making the films more hydrophilic, below are some guidelines for preparation using several common systems.

Fischione Model 1020

- 25% Oxygen/75% Argon
- Use 5 grid holder and dampening shield
- Plasma clean grids for 10-30 seconds

Note: It is recommended that the dampening shield be used when cleaning C-flat™ using the Fischione Model 1020 plasma cleaner. The shield will dampen the effect of the plasma, reducing the erosion rate of the carbon while allowing the film to become more hydrophilic.

Gatan Solarus™

- 25% Oxygen/75% Argon
- Place grids on a support (e.g. glass slide)
- Set slide in the bottom of the chamber
- Set RF power to 25 watts
- Plasma clean grids for 10-20 seconds

Glow Discharge

These systems vary widely depending on the manufacturer. Typically, keep the glow from the plasma dim and the clean time approximately 10-30 seconds.

Plunge Freezing

Recommended settings for plunge freezing with the Vitrobot™

- **Temperature:** 4°C
- **Humidity:** 100% (can vary between 90–100%)
- **Blot Time:** 3-5 seconds
- **Volume on Grid:** 3µL (can vary)
- **Drain Time:** 0 seconds
- **Offset:** 0 for regular samples, -1 for viscous

When using the Vitrobot™, it is recommended that the filter paper be changed regularly (generally after freezing 4-5 grids or 10 minutes, whichever comes first.) The filter paper can become saturated in the high humidity environment of the chamber.

Working with Viscous Samples

Generally, lowering the volume of solution on the grid can help to eliminate the need for multiple blots, which can damage the carbon film. As little as 1µL of solution can cover a 3mm grid area if the pipette tip is used to spread the drop, but reducing the volume to 1.5 or 2.0µL will help as well. Once the sample is on the grid, it should be blotted within a few minutes before further evaporation occurs. If a Vitrobot™ is used, changing the offset from 0mm to -1 or -2mm can also help.

Hydrophilicity/Hydrophobicity

Increasing the hydrophilicity of the carbon film will help a droplet spread evenly over the carbon, rather than pool on the surface. The most common method for achieving this is by plasma or glow discharge; recommended settings for various equipment are given. Keep in mind that C-flat™ is manufactured without any plastics or soft materials in the process, therefore plasma or glow discharge steps are only needed to make the surface more hydrophilic, not to clean. For this reason, a lower power and time is generally used.

Adding Carbon to C-flat™

Many C-flat™ parts are now offered in both the standard as well as a thicker carbon film, designed to give each lab the option to choose not only the most appropriate hole geometry and size, but also the ideal carbon thickness for their application. In addition, carbon can be added to C-flat™ either to thicken the existing hole pattern, or as a thin continuous overlay across the hole pattern. Overlays are often used when particles have a strong affinity towards the carbon material.

Keeping the Carbon Intact

C-flat™ is designed to be an "out of the box" solution. Extensive sample preparation steps are generally not required, and often carbon that is torn or broken is a sign of plasma cleaning that is too long and/or at too high a power setting. Please refer to the suggestions on plasma cleaner settings, as well as on working with viscous samples.

C-flat™ Customization

We realize that each customer has unique needs since specimens vary greatly in composition and size. To meet the diverse and demanding needs of the cryoTEM community, C-flat™ can be customized to meet a user's specific requirements. For example, C-flat™ can be manufactured on other grid types such as Gold grids, 100x400 mesh grids, or London Finder grids. The size, shape and spacing of the holes perforating the carbon film can also be customized. For examples, those using electron tomography techniques might desire a larger hole size to allow for increased tilt angles; those using very high magnifications might find a smaller hole size desirable; 2D crystallographers might prefer a sparse hole pattern to take advantage of the clean and ultra flat surface of C-flat™; and based upon the specimen preparation and imaging protocols, grid metals other than copper might be required.

C-flat™ can be customized to meet all of these needs.

Please contact EMS with any custom C-flat™ requests. We will be glad to provide you with a quote for specialized C-flat™ grids. Requests for customized parts can be made directly to EMS via e-mail to sgkcck@aol.com

* The Multihole device has a staggered pattern of six features consisting of three circle patterns of 1 micron, 1.4 micron and 2 micron diameter and three ellipse patterns of 1x4 microns, 1.4 x 5.6 microns and 2x8 microns.

QUANTIFOIL® – Holey Carbon Films

QUANTIFOIL® is a perforated support foil with pre-defined hole size, shape and arrangement. It has advantages in electron microscopy (EM) or low-energy electron point source (LEEPS) microscopy when compared with conventional holey film.

QUANTIFOIL® is offered with circular and square, orthogonal arranged holes. Films with different hole sizes and bar widths are available. Carbon is the standard material that makes the foil.

QUANTIFOIL® is a superior quality of holey carbon film, which facilitates the use of automation in TEM. (e.g. The National Resource for Automated Molecular Microscopy, at the Scripps Research Institute, has developed a system, called Legimon, for automatically acquiring images from a transmission electron microscope).

The surface properties of **QUANTIFOIL®** holey carbon support film, especially the wetting properties, may have to be adapted according to one's particular requirements. Untreated aging **QUANTIFOIL®** tends to be hydrophobic. Hydrophilicity of the foil can be achieved by glow discharging in residual air or by metal coating.

QUANTIFOIL® in low-energy electron point source (LEEPS) microscopy. **QUANTIFOIL®** with a regular pattern is required in order to be able to distinguish an object, which is spanned over a hole. An object cannot be discriminated from the support in the case of conventional holey support film. (H.W. Fink & C. Schonenberger, University of Basel, used **QUANTIFOIL®** for the measurement of electrical current through DNA molecules.)

The foil is ~12 nm thick and mounted on either copper, nickel or gold grids with either square or round holes of different sizes.

Holey films with 2 μ round holes are used at magnifications between 30,000x and 40,000x.

QUANTIFOIL® is generally delivered as a carbon foil; it can be reinforced with plastic film. The standard thickness for the carbon foil is 12 nm; other thicknesses between 10 and 25 nm can be made upon request.

QUANTIFOIL® is supplied with 200 mesh copper, nickel or gold grids. Other meshes are also available upon request as a special order. All special orders are available in quantities of a minimum of 100 grids or multiples of 100.

➤ **QUANTIFOIL® with Circular Holes**

QUANTIFOIL® with circular holes is used in cryoelectron tomographic reconstruction. The roundness of the holes is advantageous with respect to the formation of an ice layer of constant thickness. The whole size chosen depends on the magnification used, and on whether or not one wishes to include support film in the image. Assessment of the image quality is easier when foil is included in the picture, because the power spectrum of a foil is stronger than that of unsupported ice.

QUANTIFOIL® R 3.5/1

QUANTIFOIL® R 3.5/1 may be preferred over foils with smaller holes if the carbon film should be outside the frame of the image. This option can be desirable in the case of extended objects, such as filamentous objects, for example.

QUANTIFOIL® R 1/4

QUANTIFOIL® R 1/4 may be preferred over R 1.2/1.3, when an increased tolerance with respect to the position of beam, and a larger beam diameter are desired, such as in the case of automated image acquisition.

QUANTIFOIL® R 0.6/1

Hole size is 0.6 μ . Space between holes is 1 μ . Center to center is 1.6 μ (hole size may be as large as 1 μ).

QUANTIFOIL® R 5/20

Hole size is 5 μ . Space between holes is 20 μ . Center to center is 25 μ .

QUANTIFOIL® R 2/4

QUANTIFOIL® R 2/4 may be preferred over R 2/2, when an increased tolerance with respect to the position of beam, and a larger beam diameter are desired, such as in the case of automated image acquisition.

QUANTIFOIL® R 2/2

Holey films with 2 μ circular holes are used at magnifications between 30,000x and 40,000x.

QUANTIFOIL® R 2/1

QUANTIFOIL® R 2/1 has more open area than R 2/2. It is used when focusing is carried out on the edge of a hole burnt in the ice in a neighboring hole instead of on the foil adjacent to the hole.

➤ **QUANTIFOIL® R 1.2/1.3**

A foil with ~1.2 μ circular holes and a spacing of ~2.5 μ between the holes. This type is used at magnifications around 50,000x.

➤ **QUANTIFOIL® with Square Holes**

QUANTIFOIL® with square holes and relatively narrow bars can be used in EM to support a thin carbon film, which by itself is too fragile to span a grid square.

Alternatively, this holey film can directly support an object that is larger than the holes.

QUANTIFOIL® S 7/2

QUANTIFOIL® S 7/2 constitutes an optimum between a maximum of open area on the one hand, and mechanical stability on the other hand.

➤ **QUANTIFOIL® with Different Hole Shapes**

QUANTIFOIL® Multi A

QUANTIFOIL® Multi A is a holey film, which consists of various pattern hole sizes, shapes and arrangements is repeated. In addition to round holes, the pattern includes ovalshaped ones, which appear round at high tilt angles (~70°). The diameters of the round holes are about 1, 1.4 and 2 μ , and the bar widths range from 0.5 to 4 μ . The oval holes in the foil have a dimension of 8 x 2 μ and 4 x 1 μ .

➤ **QUANTIFOIL® with Hexagonal Geometry**

This type of **QUANTIFOIL®** is meant for slot grids. It was especially designed for supporting serial thin sections. It offers an optimum between mechanical stability on the one hand and backgroundfree area on the other hand. The foil is thin enough to allow those parts of the sections that lie on the bars to be interpreted. In this way, the information in the sections can be interpreted to the maximum.

QUANTIFOIL® Hex 15

A foil with hole size of 26 μ (diameter of inscribed circle) and a repeating distance of 41 μ , the side length of the holes and the bar width are 15 μ .

New AND Exclusive

Overview

Graphene is a single atomic layer of carbon atoms tightly packed in a two-dimensional honeycomb lattice. This novel material is atomically thin, chemically inert, consists of light atoms, and possesses a highly ordered structure. Graphene is electrically and thermally conductive, and is the strongest material ever measured. These remarkable properties make graphene the ideal support film for electron microscopy.

➤ Graphene Support Films for TEM

Synthesis

the substrate-free gas-phase method

Graphene is a single atomic layer of carbon atoms tightly packed in a two-dimensional honeycomb lattice. The novel material has generated great interest throughout the scientific and technological community because of its remarkable properties and numerous potential applications. However, obtaining pure and highly ordered graphene has been a challenge. Small quantities of ultrahigh-quality graphene have been isolated through an unwieldy and time-consuming process involving the mechanical exfoliation of highly oriented pyrolytic graphite. Alternative methods require substrates or graphite to create atomically-thin sheets, and these techniques involve multiple steps, expensive substrates, or non-ambient conditions. Furthermore, the sheets produced by these alternative methods exhibit defects, disorder, and oxygen functionalities that have a detrimental effect on the properties of graphene.

The substrate-free gas-phase method is the first and only process that can synthesize ultrahigh-quality graphene in a single step, without the use of substrates or graphite [1]. Graphene sheets are created through the delivery of liquid alcohol droplets directly into atmospheric-pressure microwave-generated plasmas. Extensive characterization of the synthesized graphene has proven that the sheets are oxygen-free and exhibit a highly ordered structure [2]. The graphene produced by this unique method can immediately be utilized for graphene applications.

A typical TEM image of graphene sheets freely suspended on a lacey carbon TEM grid.

An atomic-resolution image of a clean and structurally perfect graphene sheet synthesized by the substrate-free gas-phase method. Individual carbon atoms appear white in the image.

Elemental analysis by FT-IR reveals that the synthesized graphene sheets are free of detrimental oxygen functionalities. The FT-IR spectrum of synthesized graphene is similar to that of highly oriented pyrolytic graphite (HOPG).

► Graphene Support Films for TEM (continued)

Application

Direct imaging of soft and hard nanomaterials

The interfaces between soft and hard nanomaterials have been the subject of extensive research.

Nanoparticles coated with molecular layers have been shown to self-assemble into novel structures that could potentially be used in electronics, sensors, and photonics. Self-assembly is influenced by the nature of molecular coatings and thus more detailed characterization of these soft materials is needed.

However, imaging surface molecules and their interfaces with nanoparticles at the atomic scale is a significant challenge. The transmission electron microscope (TEM) imaging of functionalized nanoparticles has been attempted.

However, it has not been possible to observe molecular surface layers and their interfaces with nanoparticles at the atomic level. Modern aberration-corrected TEMs can produce atomic-resolution images of soft and hard nanomaterials. However, conventional TEM support films (e.g. ultrathin amorphous carbon) limit the capabilities of these advanced microscopes because they contribute to overall electron scattering and diminish the contrast of low-atomic number specimens. The TEM imaging of the interfaces between soft and hard nanomaterials therefore requires better support films that have a lower dynamical interference with an imaging object [3].

Graphene is the ideal TEM support film. The material possesses a highly ordered structure and is atomically thin, chemically inert, structurally stable, and electrically and thermally conductive. The ultrahigh-quality graphene produced by the substrate-free gas-phase method [1, 2] has enabled the unsurpassed TEM imaging of organic molecules and the interfaces between soft and hard nanomaterials. The pure and highly-ordered sheets were used as a near-invisible support film to directly image the atoms in a gold nanoparticle and its surrounding citrate coating [3]. The results showed that the synthesized graphene can be used to directly observe nanoparticles functionalized with a diverse range of molecular coatings, such as proteins and DNA

A low-magnification image of a (1) gold nanoparticle 10 nm in diameter on a (2) transparent synthesized graphene support film, (3) the vacuum, and (4) a lacey carbon support.

We offer ultrahigh-quality graphene that is produced through the substrate-free gas-phase method[1]. The graphene created by this technique possesses a highly ordered structure that is composed of 99% carbon by mass (1% hydrogen)[2]. This graphene was used to directly image gold nanoparticles and their organic surface molecules in both conventional and atomic-resolution TEMs at a level that greatly surpasses any current TEM support film[3].

Our graphene provides an invisible, crystalline background that enables the unrivaled TEM characterization of organic and inorganic nanomaterials.

Ordering Information

Graphene products come available in five different ways, allowing you to choose which is best for you

a) As a solution of 0.1 mg Graphene in 1 ml of Ethanol. A homogeneous solution will take less than 30 seconds to create by sonicating the Graphene-solvent mixture. One is able to coat their own grids using this solution.

b) As Graphene-enhanced lacey carbon TEM grids. 200 and 300 mesh. These grids are created by coating our existing lacey carbon grids with graphene. Through a unique drop method, solution is dispersed onto the Lacey Carbon Grid.

c) As dry, synthesized Graphene powder, 1 mg.

EMS #	Description	Quantity
GF1200	0.1 mg Graphene in 1 ml of Ethanol	each
GF1201	Graphene-Enhanced Lacey Carbon TEM Grid 200 # Cu	each
GF1202	Graphene-Enhanced Lacey Carbon TEM Grid 200 # Ni	each
GF1203	Graphene-Enhanced Lacey Carbon TEM Grid 300 # Cu	each
GF1204	Graphene-Enhanced Lacey Carbon TEM Grid 300 # Ni	each
GF1205	Synthesized Graphene Powder, 1 mg	each

OTHER POTENTIAL APPLICATIONS:

*biodevices • single molecule gas detection • graphene nanoribbons
integrated circuits • transparent conducting electrodes • ultracapacitors*

GRID PREPARATION SUPPLIES AND ACCESSORIES

► Pinholes

These pinholes are prepared from pure copper foil, 3mm in diameter, 25 microns thick. They possess very high roundness and edge retention. Blackened on one surface. Mounted in black anodized aluminum discs. Mounted in a recessed hole in an anodized holder, 16 mm in diameter.

Applications

- Spatial filtering
- Controlling the diameter of light beams
- Creating point light sources
- Image analysis
- Etc.

Hole Range	Tolerance
101-500µm	+/- 2µm
25-100µm	+/- 1µm
1-25µm	+/- 0.5µm

Part Number	Pin Hole	Diameter	Quantity
PH-C1	Pin Hole 0.001mm	(1µm) diameter	each
PH-C2	Pin Hole 0.002mm	(2µm) diameter	each
PH-C5	Pin Hole 0.005mm	(5µm) diameter	each
PH-10	Pin Hole 0.01mm	(10µm) diameter	each
PH-C25	Pin Hole 0.025mm	(25µm) diameter	each
PH-C50	Pin Hole 0.05mm	(50µm) diameter	each
PH-100	Pin Hole 0.1mm	(100µm) diameter	each
PH-C250	Pin Hole 0.25mm	(250µm) diameter	each
PH-C1000	Pin Hole 1.0mm	(1000µm) diameter	each

► Grid Storage Box, 50 Capacity

Storage for 50 grids in deep diamond-shaped wells. All wells are identified. The base is resistant to organics and reactions can be carried out on grid-mounted samples in the wells. Complete with grid recording card. Measures: 3"(L) x 1 1/16"(W) x 5/16"(H) (77x40x8mm)

71150

71150	Grid Storage Box, 50 Capacity	each
71152	Grid Storage Box, 50 Capacity	1 dozen

► Grid Storage Box, 100 Capacity

100 grids can be stored in identified diamond-shaped wells for daily handling or long-term storage. Complete with grid recording card. Measures: 3 3/16"(L) x 2 3/16"(W) x 5/16"(H) (85x58x7mm)

71140

71140	Grid Storage Box, 100 Capacity	each
71142	Grid Storage Box, 100 Capacity	1 dozen

► TEM-Specimen Grid Box – SB50

This newly designed TEM grid storage box, for routine handling and long term storage of 50 standard size TEM grids. This new ergonomic design incorporates several features that overcome the disadvantages associated with storage boxes of the more conventional 'sliding cover' design. This new box has a unique number on the face and on one end.

Features

- The blue arrow at the 12:00 o'clock position indicates the park position for the cover when not in use. This is a firm grip 'click' position and it cannot be moved accidentally thus preventing spillage.
- The clear cover can be rotated smoothly through 360 degrees once the slight initial resistance of the park position has been overcome exposing a maximum of 2 or 3 diamond shaped slots at any one time.
- The 50 diamond shaped slots have an alphanumeric referencing system. Each box is supplied with an index record card for additional information.
- The material the bases are made from have been chosen due to their anti-static properties. The clear cover has self-lubricating properties, which reduces friction, enabling the cover to move freely while remaining in close contact with the face of the base.
- The storage boxes are designed to be stacked, the base locating precisely over the face of another box.

Specifications:

Size75mm (L) x 65mm(W) x 6.5mm(D)
 Weight.....22 grams
 Materials: Base:.....ABS-PHAT (Acrylonitrile Butadiene Styrene + Anti-Static Additive)
 Cover:CAB (Cellulose Acetal Butyrate)

71135-01	SB50 Grid Storage Box	each
71135-12	SB50 Grid Storage Box	12/bx
71136-01	SB50N Grid Storage Box with Unique Number	each
71136-12	SB50N Grid Storage Box with Unique Number	12/bx

► Grid Storage Box, 100 Capacity

A newly designed grid storage box similar to the original LKB box. Made from a special plastic that minimizes static. Complete with grid recording card.

Measures:
8cm(L) x 5cm(W) x 7mm(T)

71155

71155	Grid Storage Box, 100 Capacity	each
71156	Grid Storage Box, 100 Capacity	1 dozen

GRID PREPARATION SUPPLIES AND ACCESSORIES

► Multipurpose Electron Microscope Specimen Box – MEM Grid Box

A newly designed Grid Box with safety, ease and convenience in mind – this multipurpose electron microscope specimen grid box is one of the most desirable boxes on the market.

- Eliminates the chances of tweezers insertion damaging the grids – The ‘tweezers slot’ and ‘grid slot’ are in a separate location. The tweezers are only able to grip the edge of the grid enabling it to be picked up
- Grids stored no longer jump out of the box while you remove the cover – Between the body of the box and the sliding lid, there is a separate plastic cover, which allows for only four slots being exposed at a time
- The Grid Record Card is stored safely by insertion along the reverse side of the box
- MEM-96 – will able to store up to 96 grids
- MEM-32 – will able to store up to 32 grids with 8 Blocks
- Measures: 81mm L x 54mm W x 6mm thick

1. Pick up a grid

Removes the problem of inserting the tweezers too deep or damaging the tissues. The tweezers slot and grid hole connect. The tweezers insertion slot grips the edge of the grid, so does not damage the tissues and membrane.

2. Move Plastic sheet

Prevents grids from jumping out of the grid hole and mixing together. Between the body of the box and lid, there is a plastic cover piece so that when you pick up the grid, only four grid holes are exposed at once; the others remain covered by the plastic cover piece and lid.

Safeguards against loss of samples, or information of stored samples becoming separated.

3. Record Card

Three different components (semi-thin section, thin section, block) and record card are all stored in one box (MEM-32 grid-8 block). You can find everything and store all of your samples in one box.

1. Record card is stored underneath the box

2. When moving lid and plastic cover pieces only four holes are exposed at once

3. The tweezers insertion slot grips the grid edge

4. Slot grids should best be gripped by curved tweezers. Mesh grids can be gripped by straight or curved tweezers.

5. MEM-96 grid contain 96 grids (left)
MEM-32 grid-8 block contain 32 grids and 8 blocks (middle).

6. Small semi-thin section can be stored by sliding into the block cavity (right).

Cat. #	Description	Qty.
71164-01	MEM-96 Grid Storage Box	Each
71164-10	MEM-96 Grid Storage Box	10/pk.
71165-01	MEM-32 Grid Storage Box	Each
71165-10	MEM-32 Grid Storage Box	10/pk.

► Numbered Grid Storage Box, 100 Capacity

The standard 100 capacity grid storage box with a unique number printed on the face and on one end.

Advantages

- Eliminates the placement of the specimen grid in the wrong box.
- Easy retrieval of grid box from storage.
- Complete with grid recording card.

71137	Numbered Grid Storage Box, 100 Capacity	each
71138	Numbered Grid Storage Box, 100 Capacity	10/lot
71139	Numbered Grid Storage Box, 100 Capacity	100/lot

GRID PREPARATION SUPPLIES AND ACCESSORIES

► THE ORIGINAL LKB Grid Storage Box

For years, The LKB Grid Storage Box is the one that everyone is looking for. Now it is available again from EMS. The box is made from ABS (a copolymer of Acrylonitrile, Butadiene and Styrene) which will not tolerate temperatures above 70°C, while the lid is made of Polymethacrylate (Flexiglas, Perspex), which should not be exposed to temperatures above 45°C. Neither the box or the lid will resist organic solvents. The box consists of 100 diamond shaped holes for storing up to 100 EM grids, either 3.05mm or 2.3mm in diameter. The box measures 3" (75mm)(L) x 2½"(55mm)(W) x ¼"(7mm)(H) and it comes complete with 10 index cards.

71147-01	LKB 100-Grid Storage Box	each
71147-12	LKB 100-Grid Storage Box	10/pk

► EMS 50 and EMS 100 Capacity Inexpensive Grid Storage Boxes

The EMS50 and EMS100 TEM Grid Storage Boxes are used for the storage of TEM grids for routine grid handling, transport and long term TEM grid storage for standard grids that are 3.05mm in diameter.

The box has a simple number/letter combination printed on the side of the body. Dimensions for both boxes are: 3"(75mm) x 2½"(55mm) x ¼"(6.5mm) and they are anti static treated.

71146-01	EMS 50 Grid Box	each
71146-02	EMS 100 Grid Box	each

71146-01

71146-02

► Dial-A-Grid Storage Modules

A two tone color coded plastic box with insert which has 24 letter-labeled crossed slots, where the grids can be stored. A rotating protection plate covers the slots and allows for exposure of one grid at a time.

Measures: 2½"(L)x1¼"(W)x½"(H)
(57x45x12.5mm)

71148-01

► BEEM® Dial-A-Grid and Block Storage Modules

The same as Dial-A-Grid Module but with two additional cavities for block storage.

71149-01

71148-01	BEEM® Dial-A-Grid Storage Box	each
71148-05	BEEM® Dial-A-Grid Storage Box	50/pk

► Grid Transporting Box

This unique Box allows for the storage and transportation of grids without any worry of them moving around or being damaged. The Plate is made from Silicone and has 54 individual compartments 10mm in size. Each compartment can hold 3 grids and the grids can be easily picked up from the Silicone surface.

71173-01	Grid Transporting Box	each

GRID PREPARATION SUPPLIES AND ACCESSORIES

➤ **Cryogenic Grid Storage Box**

This specimen grid box is a tool for storing or transferring cryogenic TEM specimen grids.

■ Four diamond shaped slots

■ Non-static cover held in place by stainless steel screw, which is tapped in the center of the box.

■ Box fits the FEI Vitrobot™, Gatan 626™, Gatan 3500™.

Available with lid or without lid.

71166-10	Cryo Grid Box, Round, w/Lid	each
71166-20	Cryo Grid Box, Square, w/Lid	each
71166-30	Cryo Grid Box, Round, wo/Lid	each

➤ **Cryogenic Grid Box Handling Tool**

This tool has one end which is threaded and fits into the center hole of the Cryogenic Grid Storage Box (where the screw goes in to secure the lid) for moving the box in and out of the cryogenic chamber.

71165-50	Cryogenic Grid Box Handling Tool	each
----------	----------------------------------	------

➤ **Grid Mats**

White silicone rubber mats, with numbered compartments. Good for organizing grids. They will not slide or jump between compartments. Also ideal for staining grids. Easy to pick up grids without damaging forcep tips. Mats are available for square and round petri dishes, (100mm diameter, 115mm high).

71160	Square Grid Mat	each
71162	Square Grid Mat	1 dozen
71170	Round Grid Mat	each
71172	Round Grid Mat	1 dozen

➤ **EMS Domino Rack**

The EMS Domino rack is "U" shaped and made from an aircraft alloy sheetstock with serial perforations; thermally bonded spaceage copolymer; 5mm diameter holes, 28 holes per rack. The formvar film cast on the rack will stretch across a series of smooth edged holes forming a flat, wrinkle free film that is ready for grid mounting.

The Domino Rack allows the sections within the slot to dry flat and wrinkle free; it reduces the film and section contamination to negligible levels. The size of the rack is 54mm (L) x 17.5mm(H) x 25.5mm (W) Moran, D.T., and Rowley, J.C., (1987). "Biological Specimen Preparation for Correlative Light and Electron Microscopy in Biology: Microscopy and Methods, ed. M.A. Hayat. Academic Press, New York./ pg 1-22

70620	EMS Domino Rack	each
70621	EMS Domino Rack	10/lot

➤ **Grid Staining Matrix System**

This unique staining device allows you to stain up to 25 grids at one time or as little as one. The Matrix system has a simply alpha-numeric identification system. The unit is not solvent or chemically resistant to acids so all stains should be aqueous based only.

The system requires very little stain and you may use different vessels for each stain.

The amount of Volume of stain required is as follows:

21-25 grids 11ml	11-15 grids 7ml	01-05 grids 3ml
16-20 grids 9ml	06-10 grids 5ml	

71179-01	Grid Staining Matrix System Kit	each
71179-05	Matrix Body with handle and cover	each
71179-06	Staining Vessels, 1 red and 1 blue	2/pk
71179-07	Staining Vessel, blue	each
71179-08	Staining Vessel, red	each

Each system includes the following:

- Matrix Body
- 2 each of the Staining Vessels (Red and Blue)

ARTICLE OF INTEREST

A simplified method for handling EM grids is described. This new method not only offers safety and identification of your samples but offers you improved handling, temporary storage, and identification of grids bearing ultrathin sections as well as a novel method for preparing bulk samples.

Refer to: Gorycki, M.(1992). A Simple Method for Handling Grids. Biotechnic & Histochemistry 67/5, 313-314.

TECHNICAL TIP**A Fool-proof Method for Mounting Serial Sections on Single Hole Grids**

I did serial sectioning for years on large single hole grids using a very simple technique that made the potential problems of film thickness, wrinkles and section loss very minor. I was not the original developer of the method and do not remember who originally gave it to me. It goes as follows:

- 1) Have your machine shop cut some thin pieces of Plexiglas into the size of glass slides. At one end, drill about a dozen holes, roughly 5mm in diameter, in an area about the size of a formvar film cast on glass slides. These slides will serve as your template for holding your films.
 - 2) Cast the formvar films onto glass slides using your normal method. Usually a good silver film, not gray, will work fine I routinely used 0.2% formvar in dichloroethane when casting by immersing the slide into the solution in a small jar, etc. We now use a film caster that lets us hold the slide in the dichloroethane vapors after lowering the formvar solution level. This method tends to give you thinner films consistently so the correct solution percentage and timing would have to be redetermined.
 - 3) Float the film off the glass slide and pick it up with the Plexiglas slide so the film covers the holes. Then draw the water out of the holes by pressing the plastic slide down onto filter paper, or using small pieces of filter paper and capillary action to draw the water out of individual holes. The films should hold nicely over the holes in the slide. Store slides until needed.
 - 4) Next, cut your sections using a block diameter that is fairly similar to the size of the slit in the grid. Pick up the sections on UNCOATED grids by gently lowering the grid to the surface of the knife boat. I put the dull side down on the premise that the rough surface would grab the film better during step 6. The surface tension of the water will hold the sections in the grid opening. Transfer the grid to a droplet water until you have finished sectioning. Do invert grid. It important the of grid (shiny side) stay dry so that the grid will float on all subsequent solutions.
 - 5) Transfer the grid + sections + water droplet to a drop of stain. A small amount of water will be transferred but this will not interfere with staining. If you are concerned about the dilution effect, increase your staining time slightly. Allow the section to stain, then wash by transferring through a series of droplets of clean water. Continue to if desired and wash the same way. Never let the grid dry. There is minimum problem with stain precipitation if you use very clean water and transfer the grid through a sufficient number of water droplets (6-12 recommended).
 - 6) The final step is to transfer the grid to a film suspended over the hole in a Plexiglas slide and let it dry down. The sections will now be stuck to the film with NO wrinkles and minimum breakage. When ready to view, just punch out around the grid with the tip of your forceps, grab the grid and insert into the microscope. Believe me....the sections will still be there at the end!
- I found that as long as the sections cover a substantial portion of the open area of the grid, carbon coating was not essential. I used to do 50-100 grids worth of serial sections without loosing any. The films on the plastic slides would hold for months so I could make a lot and store until needed.

► Plexiglas Microscope Slides

A Fool-Proof method for the mounting of serial sections on Single Hole Grids 1

These plexiglass slides are 3x1" (75-25mm) and 1 mm thick. They prevent wrinkling and section loss while mounting sections on the grid. The procedure is simple

71891-10 Plexiglass Microscope Slides 5/pk

► Five-Slide Gripper

- The Five-Slide Gripper accommodates five microscope slides in one staining procedure.
- Fits most coplin and round-open staining jars.
- No need to remove slides for drying.
- Made from a special material which is resistant to all chemicals and solvents which are used in staining.
- Withstands drying temperatures up to 80°C

71410-06 Five-Slide Gripper 6/pk

► For Mica Sheets & Glass Slides, See pages 284-285 & 314-323 >>>>**► Film Casting Device**

An all glass apparatus. It casts uniformly thin films of parlodion, formvar, or butvar directly onto 1x3 microscope slides. The film casting solution can be used repeatedly. A built-in fine-pressure-release valve helps control the speed of drainage. The thickness of the film is controlled by the concentration of the film solution and the rate of the drainage. The unit requires 100mls of film casting solution to start.

**The unit comes complete with:**

- 500 ml capacity flask with built-in valves; Air-in and Air-out.
- Film casting Cylinder with Cover.
- 75 cc Atomizer.

GRID PREPARATION SUPPLIES AND ACCESSORIES

➤ Perfect Loop

Using this PERFECT LOOP, you can place your thin sections, cut on the ultramicrotome, easily on the grid mesh without creases.

**EMS
EXCLUSIVE**

The Perfect Loop allows you to pick up sections consistently without causing any damage to the sections. It is the only loop that is currently available where the outside diameter of the loop is the same as the grid and the inside diameter is slightly larger than the observation area of the electron microscope. The thickness is about 40 microns. Due to the fact that the loop and the grid are of the same diameter they are attracted to one another when in water and attach together through the surface tension of the water. Even if the section touches the inside of the grid during blotting the touching area is minor and, therefore, the section is not damaged. When the grid is removed from the loop the section remains in place without fail. The area equals the observation field (about 2mm diameter) of the electron microscope; thus pieces can be fully observed.

➤ Perfect Loop for Ultra thin sections

70942	LM Loop only	5/each
70943	LM Loop Handle	each

➤ Grid-Stick Kit

A helpful device for multi grid staining. If the instructions are followed carefully you can say good-bye to precipitate and dirt. The Grid Stick is made from a thin, but rigid alloy that does not react with commonly used organic solvents or stains. The stick itself measures 4mm wide, 75mm long and has a slot along its center with small undercut notches on one side to make grid removal simple. A small area on the top of each stick is reserved for identification. The Grid Stick is coated with a specially-formulated pressure-sensitive adhesive. This adhesive is resistant to solvents used in conventional staining methods (e.g., water, alcohol, ethanol) and aggressively holds the grids in place during staining, emulsion coating, carbon coating, shadow casting, serial section collection, etc., yet will not remain on the grid once it is removed from the stick. During staining the grids are held in the same plane as the solution flow, minimizing the risk of breaking the formvar film and, or collecting surface debris. Grids may be stored, handled, and examined with minimal effort. For example, if your grids are on SynapTek Grid Sticks you can simply place the stick on the stage of a phase microscope, identify the material (you will see outlines of large cells), and determine its condition (i.e., holes in material, dirt on grids) in only a few seconds without disturbing a single grid. In short, you will find that the SynapTek Grid Stick is simple, easy to use, and most importantly, highly reliable.

SynapTek Grid-Stick consists of:

- 5 coated Grid Sticks ■ 10 Staining Pipettes (modified)
- 2 flow-limiting Plugs and Bulbs ■ Instructions

1. Center the LOOP above the sections

2. Slowly lower the LOOP over the sections and touch the water.

3. Gently lift up the LOOP with the sections in a droplet of water

4. Lower the LOOP onto a grid and lift up again.

5. The grid holds to the LOOP by surface tension.

6. Lower the LOOP to the filter paper to remove water.

7. For coated grids, touch with the filter paper to remove water.

8. Separate the grid from the LOOP with an eyelash.

72679-03	Replacement Tips			Set of Three Variable Tips	

72678

72679

► Grid Coating Pen For TEM; Coat Quick "G"

The Coat-Quick "G" pen improves the adherence of tissue sections onto the grids. With a touch of the pen to the grid, a thin layer of coating is applied to the grid. Drying takes place in approximately 1-2 minutes at room temperature.

After it has dried the grid is ready for tissue mounting. The pen is also used in pretreating grids prior to mounting supporting films such as formvar and carbon; it minimizes dislodging, widening, or breaking of the support film.

► Micro-Test Staining Dish

This staining dish is made from clear glass and has 10 cells in 2 rows of 5 each. Each cell is 2mm deep and holds 0.15ml of solution. Very useful in specimen preparation, EM staining, and Boerner-Jones-Lukens microfluocclulation test. Measurements: 108 X 57mm (4¼" x 2¼").

71564	Micro-Test/Staining Dish	each
-------	--------------------------	------

► 3-Well Glass Slide – Micro Spot Plate

Pyrex brand Micro Spot Plate is ideal for microchemical applications. With three concave depressions. Cavities measure ⅝" O.D. x ¼" Deep (22 x 7mm). Plate overall measures 3⅝"(L) x 1⅜"(W) (85 x 34mm)

Catalog #	Description	Pack
71561-01	3-Well Slide	each
71561-06	3-Well Slide	6/pk

► White Porcelain Plate

12 cavities on a white porcelain plate. Used for staining and color reactions.

They measure: 4⅝"(L)x3½"(W) (118x90mm). Cavity depth: ¼" (6.4mm).

71562-01	White Porcelain Plate	each
71562-06	White Porcelain Plate	6/pk

► Glazed Porcelain Plate

Our economical glazed porcelain plate is made from high purity raw material, uniform in quality and resistant to acids and alkalis. It can withstand sudden temperature changes without cracks, explosion or deformation. Under normal conditions, the glazed plate can sustain a temperature of up to 1050° C. Available in two models: 1. 6 well with overall measurements of 3¼"(L) x 2⅝"(W) x ⅜" thick, and 2. 12 wells with overall measurements of 4½" (L) x 3½" (W) x ½" thick.

Cat. #	Description	Well Measures	Pack
71575-06	6-Well	20mm Dia x 5mm Deep	each
71575-12	12-Well	20mm Dia x 5mm Deep	each

► 12 Cavities Spot Plate, Polypropylene

Very similar to the white porcelain plate, this PP plate comprises 12 cavities of approximately 1ml capacity and is economically priced. This plate is very high quality, unbreakable as well as autoclavable.

71572-01	12-cavities Spot Plate, Polypropylene	each
71572-10	12-cavities Spot Plate, Polypropylene	10/cs

GRID PREPARATION SUPPLIES AND ACCESSORIES

➤ 3-Cavities Spot Plates, LDPE

These spot plates have three depressions 21mm diameter x 7mm deep. The tray is 28mm x 85mm. Made from low density polyethylene and will withstand temperatures up to 80° C.

71574-05	3-cavities Spot Plate, Polypropylene	5/pk
71574-40	3-cavities Spot Plate, Polypropylene	40/cs

➤ Pyrex® Plate

A 9 cavity Pyrex pressed plate which offers a clear view for observation by transmitted light. The plate measures: 4"(L)x3¾"(W) (100x85mm). The cavity is ¼" (6.4mm) deep with a ⅜" (22mm) opening.

71563-01	Pyrex Plate	each
71563-06	Pyrex Plate	6/pk

➤ Silicone Staining Pad

Made from white silicone, a non-reactive material. Pad has 40 cells in 5 rows of 8 each. Each cell is half-sphere shaped with an opening of 6mm dia. and 5mm deep. A few drops of staining solution is added to the wells and grids are then immersed and retrieved as per staining procedure. A watch-glass plate comes with each dish to reduce oxygen and evaporation. Measures: 5"(L)x3"(W)x ½"(T) (127x76x13mm)

**EMS
EXCLUSIVE**

71565	Silicone Staining Pad	each
-------	-----------------------	------

➤ Syracuse Watch Glass

A clear watch glass which measures 65mm(OD)x50mm(ID)x 10mm(Deep). The glass is grooved and has a recessed bottom which allows for stacking and prevents scratching. It is ideal for staining and specimen preparation.

71570-01	Syracuse Watch Glass	each
71570-06	Syracuse Watch Glass	6/pk

➤ The EMS Staining Plate

The EMS Staining plate for Electron Microscopy was developed by Dr. Miguel Berrios, at SUNY at Stony Brook, Dept of Pharmacological Sciences, School of Medicine, New York.

The chemical etching process, antibody incubations and final staining with heavy metal salts of each grid is performed in the small cone-shaped wells on the EMS staining plate.

The EMS Staining Plate for electron microscopy post-embedding staining and immunohistochemistry offers several advantages over all other commercially available staining devices. The base plate is a solid piece of chemical-resistant silicone 127.5mm long, 85.5mm wide, 11.5mm thick with 96 cone-shaped wells organized (like the microtitration plate) in parallel rows of eight, using the lid of a 96-well Falcon 3072 Microtest™ III Plate as a cover. The base has two notches to serve for orientation and a 1.5mm X 4.4mm deep lip where the cover rests. Each well is an inverted cone 7mm in diameter and 2mm deep. Grids either float or rest at the bottom of

each well. The wells allow incubation of a grid in 12-60 microliters of solution without reagent loss due to adsorption or cross contamination, even when the plate is tilted up at 70°. Due to the shape of the well, the flat surface of the grids never come into contact with the walls of the well, both facilitating sample staining and grid recovery.

**EMS
EXCLUSIVE**

Plates made from silicone offer two advantages:

- Resistant to all chemicals and solvents
- During manipulation of the grids in the well there is no risk of damaging the fine points of the tweezers.

GRID PREPARATION SUPPLIES AND ACCESSORIES

► Vacuum Pick-Up System

Handle delicate miniature objects without scratching, breaking or pinching. The system avoids contamination of parts and performs functions that tweezers does such as sorting, picking up, holding, carrying, and trans-ferring. As well it is an alter-native way for handling cover slips without the use of forceps.

Features:

- Picks up grids faster and easier than tweezers –
- WARNING: Never use this device on coated grids.**
- Quiet operation.
- Eliminates all tweezer damage to grids.
- Good suction (produces 14" Hg vacuum and an air flow of 125 cubic inches/minute); Can pick up aluminum stubs.
- Can be used as a tool to pick up glass slides, cover slips, wafers, thin film samples, etc.

Double-insulated (115–120V, 60Hz, 2-wire). Light weight, completely assembled and ready for immediate operation as soon as the proper tip is selected and installed. Vacuum is created at the tip by placing the finger over the control hole on the anodized aluminum vacuum pen. To break the vacuum, just remove your finger from the hole. The vacuum generator measures 4½" (H) x 2¾" diameter (114 x 70mm), and it has an adjustable vacuum pressure control from 1" Hg to 15" Hg.

Vacuum Pick-up System complete set: Vacuum Generator, Aluminum Vacuum Pen, Five Vacuum Tips, Set of eight Rubber Vacuum Cups (size ranging: ⅜", ⅝", ½", ⅞", ⅝", ⅝", ¼" and ⅜"), an In-Line Filter, and 4 ft (122cm) of Vacuum Tubing.

Cat. #	Description

► Pen Vac™

Pen-Vac™ is a new improved way to handle small, flat surface objects. Beside the electronics assembly industry, jewelers, model builders etc. Pen-Vac is ideal for EM work as well. It can be used to handle grids, pick up stubs, align membranes, work with glass slides, cover slips and much more. Holds up to one minute.

Features:

- Lifts up to 50 grams.
- Totally self-contained vacuum.
- Light-weight, less than one ounce.
- Fits in your pocket like a pen.
- Brushed aluminum body.
- Optional storage compartment for vacuum tips and cups.
- No power supply needed.
- Available in various sizes.
- Interchangeable vacuum probes.

Pen-Vac™ comes with:

- A variety of Vacuum Probes, complete with a vacuum cup attached and it is available with plastic or aluminum hubs. Straight and angled to suit your applications. The stainless steel needle portion of the probes are one-half inch long.
- Vacuum Cups come in a wide range of materials. We offer the Static Dissipative and the Conductive Cups that provide ESD protection for electrostatic discharge of sensitive components. Cups comes in three sizes: ⅝" (3.17mm); ⅞" (6.35mm); and ⅝" (9.52mm).

Set consists of:

One Pen with 6 Probes and Cups. (6 Probes: 3 angled, ⅝", ⅞", ⅝" and 3 straight ⅝", ⅞", ⅝")

71914	Complete Pen-Vac System	set
71915	Same as 71914 with Deluxe Case	set

Probes and Cups:

71916	⅝" Straight and Bent, Small	2/pk
71917	⅞" Straight and Bent, Medium	2/pk
71918	⅝" Straight and Bent, Large	2/pk

Silicon Nitride Mesh & Films

DuraSiN™ Film and Mesh for TEM

DuraSiN™ Customization

Pyrolytic Graphite

**Electron

Sciences**

► DuraSiN™ Film and Mesh for TEM

DuraSiN™ Film and Mesh products have revolutionized the way samples are prepared for and analyzed in the transmission electron microscope.

Applications

Quantitative Analysis of Carbon-Containing Specimens

- Photoresists
- Polymers
- Foods
- Oils
- Dyes

Particle Analysis

- Powders
- Aerosols
- Nanoparticles
- Airborne particles

Chemical Reactions

- Catalysis
- Active sites

Chemical Deposition and Growth

- Nanowires
- Carbon Nanotubes
- Colloids
- Self-assembled monolayers

New Material Discovery

- Multianalysis
- High Temperature
- Acidic/Basic Sample Prep

- Designed to aid microscopists and micro-analysts in TEM and multi-analysis work
- Fully customizable frame & window dimensions, hole patterns and membrane thickness
- Affordable
- Ultra-flat
- Robust to glow discharge high energy plasma cleaning
- Robust to solvents, bases, acids & high temperatures (up to 1000 °C)
- Large viewing area free of grid bars
- Compatible with integrated functionality

Introduction

DuraSiN™ Film and Mesh products are affordably-priced, durable, nonorganic, low scatter support grids for quantitative TEM and X-ray analysis. DuraSiN™ products are made of a thin, high quality, low-stress silicon nitride membrane supported around its perimeter by a rigid silicon substrate.

Unlike other support films and grids, DuraSiN™ Film and Mesh products can withstand harsh chemical and temperature environments. For example, DuraSiN™ Film or Mesh products could be used as a substrate onto which nanowires could be directly grown from a strong acidic solution. Once the nanowires are grown, the specimen is immediately ready for imaging and analysis in the TEM. With direct deposition, no longer will you have to prepare a sample on one substrate only to then have to transfer it to a support grid for imaging.

Overview

DuraSiN™ Film and Mesh products are affordably-priced, durable, non-organic, low scatter support grids for quantitative TEM and X-ray analysis. When seeking the highest possible resolution, DuraSiN™ Film and Mesh products provide the ideal platform for imaging and analysis.

DuraSiN™ Film

The DuraSiN™ Film support grids are composed of two materials. The area for specimen observation is fabricated from chemically robust, low-stress, planar silicon nitride films and this area is supported by a rigid silicon frame where the frame thickness available for these products ranges from 200 - 600 microns. The DuraSiN™ Film support grids provide a cost-effective and durable platform for sample preparation, cleaning, imaging and analysis.

SEM image of a DuraSiN™ Film (taken from the back side)

Perfect for the analysis of colloids, powders, aerosols and polymers. The DuraSiN™ Film provides durable, non-organic, low scatter substrates for quantitative TEM and X-ray analysis at affordable prices. DuraSiN™ Film substrates are fabricated from high quality, low-stress silicon nitride and supported on a rigid silicon substrate. DuraSiN™ Film products are robust to most cleaning procedures, including acetone, alcohol and oxygen plasma/UV ozone. Products are available in sizes ranging from standard TEM (2.65mm diameter) to greater than 10mm for x-ray applications.

DuraSiN™ Mesh

DuraSiN™ Mesh support grids are also fabricated from chemically robust, low-stress, planar silicon nitride films and are supported by a rigid silicon frame. However, DuraSiN™ Mesh has a regular array of small, dense holes fabricated across the observation area thereby providing truly electronbeam transparent regions for specimen imaging and analysis. DuraSiN™ Mesh support substrates offer the unique combination of an inorganic support film and regions completely transparent to an electron beam.

SEM image of a DuraSiN™ Mesh (taken from the back side)

These two features provide the microscopist and micro-analyst with unparalleled capability for imaging and analysis. Like other holey or lacey support films, DuraSiN™ Mesh support substrates provide regions completely unobstructed by the support film. However, the fact that the DuraSiN™ Mesh is made from inorganic silicon nitride provides the ability to thoroughly clean (e.g. with an aggressive oxygen plasma) a specimen already fixed to the support substrate and to assure that the imaging and analysis is done only upon on the specimen rather than unintended contamination. For example, when analyzing carbon nanotubes, DuraSiN™ provides a clean, carbon-free support to isolate the specimen from carbon contamination.

➤ DuraSiN™ Film and Mesh for TEM (continued)

Features & Advantages

DuraSiN™ Films and Mesh products are chemically and mechanically robust support films for X-ray and TEM microscopy and they are available at more affordable prices than any other product in their class. DuraSiN™ offers unparalleled advantages over the traditional carbon-based support grids. If your research involves materials that are grown or deposited in harsh environments, DuraSiN™ may be the perfect support film for you. Capable of withstanding virtually any acid, base or solvent, DuraSiN™ allows the deposition or growth of colloids, fibers, nanoparticles, powders, polymers or wires directly onto the support film itself. Its temperature stability up to 1000 °C even allows direct deposition using standard physical and vapor deposition techniques common in the semiconductor industry, including CVD, sputtering, e-beam and resistive evaporation. With direct deposition or growth onto DuraSiN™, any ambiguity introduced from sample transfer to a less robust support film is eliminated. The temperature stability of DuraSiN™ also allows the observation of dynamic processes when several samples are removed for analysis at various times in the deposition, growth or anneal process.

The mechanical stability of DuraSiN™ offers a support film that is ideal for multi-analysis, in particular, TEM or X-ray and AFM. DuraSiN™ Film and Mesh products are not only robust enough to allow direct deposition and growth, but are also strong enough to allow AFM directly on the membrane, giving microscopists the ability to analyze both internal structure and surface detail in the exact same viewing area. In addition, DuraSiN™'s mechanical strength offers wide area membranes without the need for underlying grid bars eliminating the unwanted roughness, contamination or obstruction of other support grids.

Where cleanliness is a concern, particularly for compositional analysis using EDAX, etc., DuraSiN™ can be vigorously cleaned using processes previously not possible with carbon-based supports. DuraSiN™ can be cleaned in sulfuric acid to remove organics, as well as glow-discharge and high-energy oxygen plasma. Using these techniques, a pristine, carbon-free surface can be obtained for subsequent specimen deposition or growth and analysis.

Nanowire STEM image on DuraSiN™ Mesh at 35,000x. Image courtesy of Mike Salmon, NCSU AIF

Nanowire STEM image on DuraSiN™ Mesh at 1,000,000x. Image courtesy of Mike Salmon, NCSU AIF

DuraSiN™ is available in both continuous films and patterned meshes, in a variety of shapes and sizes, many customizable. DuraSiN™ Mesh is the only support available with hole sizes down to 1 micron in diameter, allowing the observation of the shortest fibers or wires. It is the highest quality, most affordable product in its class.

Top 10 Reasons to Use DuraSiN™ Film and Mesh Products

- 1. DuraSiN™ products are affordable**
Since they are sold in single grid quantities and in multi-grid packs, customers can try several different products at an affordable cost to optimize sample preparation and imaging conditions
- 2. DuraSiN™ products allow multiple microscopy techniques to be performed on the same specimen**
The mechanical stability of DuraSiN™ products allow direct deposition and growth of specimens and are strong enough to allow AFM directly on the membrane giving microscopists the ability to analyze both internal structure and surface detail in the exact same viewing area
- 3. DuraSiN™ products are robust to solvents, bases and acids**
Samples grown under strong acidic or basic conditions can be grown, deposited or synthesized directly onto a DuraSiN™ Film or Mesh
- 4. DuraSiN™ products can withstand high temperatures (up to 1000°C)**
Samples grown or deposited directly onto DuraSiN™ can be annealed or cured at elevated temperatures while mounted to a support grid
- 5. DuraSiN™ products are robust to glow discharge high energy plasma cleaning**
Glow discharge can be used to modify the surface of DuraSiN™ products and high energy plasmas can be used to aggressively remove any organic residuals from the sample preparation process
- 6. DuraSiN™ has an ultra-flat surface**
Reduce both specimen preparation time and imaging artifacts introduced by other non-planar support grids
- 7. DuraSiN™ provides a large viewing area free of grid bars**
Examine specimens through large tilt angles without losing data from grid bars
- 8. DuraSiN™ can be produced with extended functionality integrated onto the support film**
In-situ characterization is possible with advanced features such as integrated electrodes
- 9. DuraSiN™ Mesh products provide a regular array of micron-scale holes**
The regular array of micron-scale holes available only with DuraSiN™ Mesh enables the highest resolution possible for nanowires, carbon nanotubes, fibers, powders and colloids
- 10. DuraSiN™ can be manufactured with fully customizable frame & window dimensions, hole patterns and membrane thickness**
The DuraSiN™ product family offers the maximum flexibility to meet specific customer needs

Applications

DuraSiN™ Film and Mesh products are robust over extreme temperatures and in harsh chemical environments making them an ideal choice for many applications

NEW – Tissue Culture

-- DuraSiN is compatible with standard tissue culture techniques, sterilization procedures, and surface modification chemistries.

NEW – Solid State Nanopores

-- DuraSiN film products are ideal substrates for molecule translocation studies using solid state nanopores. Through various methods, nanopores can be applied to the 30 or 50 nm silicon nitride film for the quantitative analysis of DNA and other macromolecules.

Quantitative Analysis of Carbon Containing Specimens

-- DuraSiN™ Film and Mesh provide a carbon-free support allowing more accurate compositional analysis of carbon-containing compounds

-- The continuous, ultra-planar surface of DuraSiN™ Film is ideal for the deposition of polymers allowing the nanostructure of ordered polymer layers to be quantified

Chemical Deposition and Growth

-- Surface modification of DuraSiN™ Film or Mesh silicon nitride membranes allows attachment and analysis of target materials

-- Liquid samples can be dried on and supported by DuraSiN™ Film

-- The large, regular array of holes for imaging on DuraSiN™ Mesh provides numerous electron-transparent analysis sites

Nanoparticle Analysis

-- Fine powders can be deposited and imaged over the electron-transparent holes of DuraSiN™ Mesh

-- Atomized nanoparticles can be deposited and imaged at near-atomic resolution on continuous DuraSiN™ Film

Chemical Reactions

-- The impact of particle size & separation can be quantified with DuraSiN™

-- Oxidation and reduction reactions can be observed in-situ or ex-situ with DuraSiN™ Film and Mesh

New Material Discovery

-- Multiple analysis techniques (e.g. TEM, STEM, XRAY, SEM, XPS, AES and AFM) can all be performed on the same specimen when it is supported by DuraSiN™ Film or Mesh

► DuraSiN™ Film and Mesh for TEM (continued)

DuraSiN™ Film

DuraSiN™ Film products are specifically designed to give TEM/STEM and X-ray microscopists a support film that can withstand virtually any environment needed to grow or deposit a specimen. If your specimen requires exposure to high temperatures, acids, bases and/or solvents, consider growing them directly on DuraSiN™ Film - samples will not need to be transferred to another support for imaging and the presence of imaging artifacts introduced by specimen preparation can be virtually eliminated. Self-assembled monolayers can be formed on a DuraSiN™ Film membrane for subsequent attachment of nanoparticles.

Perfect for the analysis of colloids, powders, aerosols and polymers. The DuraSiN™ Film products provide a durable, non-organic, low scatter substrate for TEM and X-ray analysis at affordable prices. Sandwich them together and form a closed environment for wet cell applications. Our films are even robust enough to allow multianalysis, including AFM and TEM using the same grid.

DuraSiN™ Mesh

DuraSiN™ Mesh products are a completely novel product, offering all the advantages of the Film products but with the benefit of having completely electron transparent regions (holes) in the film. Holes are available in a variety of shapes and sizes, down to even submicron features.

DuraSiN™ support films are ideal for **multianalysis of samples**, including fibers, colloids, nanowires and powders. The rigid silicon frame provides an area for AFM analysis, just microns from the transparent window regions for TEM, STEM and X-ray. Remove the experimental ambiguity of analyzing different

specimens when combining microscopy techniques. A specimen can be deposited or grown directly on DuraSiN™ Films and then a single specimen can be analyzed with TEM, STEM, AFM and X-ray. Depending upon the DuraSiN™ window thickness and AFM stylus force, some users have even been able to AFM their specimen directly on the membrane itself.

Product Line

Based upon low-Z, inert silicon nitride, the DuraSiN™ Film and Mesh products are specifically designed to give TEM/STEM and X-ray microscopists a support film that can withstand virtually any environment needed to grow, deposit and/or image a specimen. DuraSiN™ Film and Mesh products are ideal if your specimen requires exposure to high temperatures, acids, bases and/or solvents. If your samples are grown in these conditions, consider synthesizing them directly on support films to prevent transferring to another support for imaging.

DuraSiN™ Film products are fully specified by 4 parameters: window size, frame thickness, film thickness and frame size. DuraSiN™ Mesh products require two additional parameters: hole size and center-center hole pitch. There are several standard and immediately available DuraSiN™ products specifically designed for TEM and X-ray applications as outlined below. Of course given their mechanical durability and robustness to temperature and chemicals, all of the DuraSiN™ products make ideal substrates for performing and then correlating the results from multiple microscopy techniques all on the same specimen.

DuraSiN™ Film for TEM

Description	DTF-05523	DTF-1523	DTF-2523
Film Thickness	50nm	100nm	200nm
Window Area	0.5mm	0.5mm	0.5mm
Frame Diameter	2.65mm	2.65mm	2.65mm
Frame Thickness	300µm	300µm	300µm

DuraSiN™ Film for X-ray

Description	DX-2513
Film Thickness	200nm
Window Area	2.5mm
Frame Diameter	5mm
Frame Thickness	300µm

DuraSiN™ Mesh for TEM

Description	DTM-25231
Film Thickness	200nm
Window Area	0.5mm
Frame Diameter	2.65mm
Frame Thickness	300µm
Hole Size	2µm
Hole Pitch	12µm

Customization

We realize that each customer has unique needs. Because specimens vary greatly in composition and size, and because DuraSiN™ finds use in numerous analytical and imaging techniques, there is no “ideal” product shape and size. To meet the diverse and demanding needs of the research community, DuraSiN™ Film and Mesh products were designed to facilitate customization and meet a user’s specific requirements. For example, X-ray microscopists may be interested in DuraSiN™ products with a larger window area and with a thicker silicon nitride membrane. Users with microscopes that have a unique sample support fixturing may be interested in DuraSiN™ products with a larger frame diameter. Finally, for the most demanding applications, ultra-thin silicon nitride membranes (<50nm) may be required.

DuraSiN™ products can be customized to target a specific silicon nitride membrane thickness, silicon frame thickness, window area, and/or frame area. Most custom dimensional changes can be accommodated in only 3-4 weeks, and most other custom requests can be completed within 4-6 weeks. Please note that customized products may be more expensive, and minimum quantities may apply.

While almost any parameter defining the structure of DuraSiN™ products can be customized, there are ranges for these parameters that generally need to be considered:

Description	DuraSiN™ Film for TEM	DuraSiN™ Mesh for TEM	DuraSiN™ Film for X-ray
Film Thickness	30nm - 200nm	30nm - 200nm	100nm - 200nm
Window Area	0.2mm - 0.7mm	0.2mm - 0.7mm	0.5mm - 10mm
Frame Diameter	2.65mm	2.65mm	2.65mm - 15mm
Frame Thickness	200µm - 600µm	200µm - 600µm	200µm - 600µm
Hole Size	N/A	>0.8µm	N/A
Hole Pitch	N/A	depends on hole size and shape	N/A

Membrane Thickness

Standard DuraSiN™ products are available with 50nm, 100nm, and 200nm silicon nitride membrane thickness. Custom membranes can be manufactured with silicon nitride film thickness ranging from 20nm up to several microns thick. Typically, very thin windows (<50nm) are compatible with small window area while thicker windows can be used with any window area, including large area windows. It should be noted that extremely thin windows must be handled very carefully due to their fragile nature.

Window Area

Standard DuraSiN™ products have square windows are available with edge length ranging from 500µm to 5mm. Custom window areas can be manufactured with window area ranging from µm to mm. The maximum window area is a function of the membrane thickness, and larger windows can produced from thicker nitride. Very small windows can also be manufactured, but, due to process constraints, these small windows may exhibit a larger window size variation among samples, for example 50µm +/- 20µm. Rectangular windows (sometimes known as “slot grids”) with custom dimensions can also be produced.

Frame Diameter

Standard DuraSiN™ products have frame diameter ranging from 2.65mm to 10mm. Custom frame diameters can be manufactured with frame diameter ranging from 2.65mm to 10mm. Typically, larger window areas require a larger frame diameter. The minimum frame diameter that can be produced is the TEM size (2.65mm), presently offered through EMS along with 5mm and 10mm frame sizes. However, any size between 2.65mm and 15mm can be custom ordered.

Product Comparisons

DuraSiN™ vs. copper, molybdenum, formvar and carbon TEM grids

DuraSiN™ silicon nitride membranes are the “high-tech” alternative to standard metal TEM grids. Using the tools and techniques of semiconductor manufacturing, DuraSiN™ is created as a silicon nitride membrane supported by a silicon frame. Samples deposited on to the membrane can be imaged using TEM, X-ray, STEM, SEM and other techniques. Compared to standard TEM grids, DuraSiN™ offers the user several advantages. DuraSiN™ membranes are extremely thin – from 200nm down to 50nm and thinner. DuraSiN™ products are extremely planar. DuraSiN™ products are resistant to acids, bases, solvents, and plasma cleaning.

DuraSiN™ products can withstand a wide temperature range. These attributes are critical in a variety of applications. The planarity and strength of the silicon nitride membrane allows the user to perform multi-analysis (i.e. the use of several complementary microscopy and analytical techniques on the same sample, for example AFM/TEM or SEM/TEM). DuraSiN™ silicon nitride membranes also allow imaging of wet samples via SEM/TEM/XRM by placing the sample between two membranes (this configuration is commonly known as a “wet cell”). Since silicon nitride can withstand acids, bases, solvents and high temperatures, DuraSiN™ membrane supports can be used to image a wide variety of reactions on the membrane surface in-situ. In short, DuraSiN™ allows the user to obtain high-quality images in ways that are impossible with standard TEM grids.

DuraSiN™ vs. competing silicon nitride TEM grids

DuraSiN™ silicon nitride membranes have properties similar to competing silicon nitride sample supports. They are offered in standard form factors, are based on low-stress silicon nitride membrane technology, and have similar chemical resistance/temperature properties. DuraSiN™, however, offers customers two key differences.

DuraSiN™ is available through EMS in quantities as small as a single grid – this enables users to sample a variety of grids at reasonable cost without the constraint of large minimum orders. More importantly, the availability of singlegrid packs allows customers to quickly and inexpensively determine which product is ideal for their particular application.

DuraSiN™ products also offer the customer the highest level of customization. Frame size, window size, and nitride thickness can all be adjusted to meet specific research needs using a set of proprietary manufacturing techniques. Moreover, since DuraSiN™ is designed and manufactured in the United States, we can provide customization of all products faster than the competition, whose products are manufactured elsewhere. This flexibility and rapid response makes DuraSiN™ the ideal choice for silicon nitride membrane supports.

Property	DuraSiN™ Silicon Nitride Support Films	Copper TEM Grids	Molybdenum TEM Grids	Formvar/ Carbon Coated TEM Grids

► DuraSi™ Film and Mesh for TEM (continued)

Technical Data

Surface Roughness

Surface roughness AFM data for 100nm thick DuraSi™ films is shown below. The data was acquired from a 5µm scan across the surface. The average surface roughness in the boxed area (ignoring the dust particle to the left) is 3.39 angstroms. Although some variation is expected from device to device, DuraSi™ 100 and 200nm films typically have an average surface roughness in the 3.0-angstrom range.

DuraSi™ products with 50nm films typically have a slightly larger average roughness than the 100nm and 200nm films. As determined by AFM, the 50nm DuraSi™ films typically exhibit average surface roughness of about 1.2nm.

Surface Flatness

Flatness is a measure of how warped or bowed the surface is. As measured though a 20X DI microscope objective, the images do not demonstrate any measurable deformations. The regions around the 2-micron holes are completely flat, without any lip or curl around the edge of the hole allowing specimens to lay flat across the holes. The image of the film also does not show any deformations. As a reference, the pieces of dust viewable in the image stands out because of the difference in surface height with respect to the film.

Solvent and Acid Robustness

DuraSi™ Films and Meshes are robust to most solvent and acid treatments, and can be cleaned with virtually any process required by your specimen preparation protocol. Solvents such as methanol, ethanol and acetone have no effect on the film. Acids, including sulfuric and nitric, also do not affect the film. Other common cleaning procedures such as the J.T. Baker solution and RCA cleaning are also acceptable.

Plasma and Glow Discharge Robustness

DuraSi™ Film and Mesh products are made from silicon nitride and are extremely robust to glow discharge cleaning and high-energy oxygen plasma. This is particularly useful when there is a need to completely remove organic residues that could either affect the image quality or EDAX measurements. The products have been exposed to high-energy, 300W oxygen plasma systems typically used for removing up to microns of photoresist in the semiconductor industry, and no etching was observed in spectroscopic thickness measurements. In addition, no degradation was observed when inspected through a high-power optical microscope.

Electron Transparency

Monte Carlo simulations on models of 100nm thick DuraSi™ films, under the presence of a 120 and 200keV electron beam and probe size of 1 angstrom show almost zero electron scattering even after 10,000 trajectories are simulated. With standard available thicknesses from 50nm to 200nm and because of the amorphous structure of the film, atomic-scale resolution has been obtained with DuraSi™ products, depending on the exact specimens under evaluation.

Chemical Robustness

The only acids which might adversely affect the films are 49% hydrofluoric acid when exposed for several minutes, or phosphoric acid when heated to temperatures greater than 150 °C. The need for these chemicals at these conditions is generally quite rare.

Because the films are in the nanometer thickness range, it is also not recommended that the grids be exposed to an ultrasonic bath. Cleaning

SURFACE ROUGHNESS DuraSi™ (100nm thick) AFM data

SURFACE FLATNESS DuraSi™ Mesh image taken through a DI 20x objective, white light source

for 30 minutes in concentrated sulfuric acid will generally remove organics and dust particles. Sometimes a final treatment in oxygen plasma or glow discharge is also applied.

Temperature Robustness

DuraSi™ has been tested to temperatures near 500 °C in ambient, and near 800 °C in vacuum. No degradation, warping or bowing was observed using a 20X DI microscope objective. DuraSi™ is expected to be stable at temperatures up to 1000 °C, which make the grids well suited for high temperature deposition steps.

► PYROID® Pyrolytic Graphite Product Line – Vitreous Carbon Substrate

Our PYROID® pyrolytic graphite is a very light weight, 5'9's pure, solid crystal composition, with no granular components, extremely smooth surface, capable of withstanding cryogenic temperatures as well as temperatures in excess of 3000°C

The material is extremely anisotropic, meaning it conducts heat and electricity in the a-b plane like cooper but acts like a ceramic in the normal direction. In an annealed state, the thermal and conduction properties increase up to four to eight times that of aluminum and cooper respectively.

The material has zero porosity making it extremely stable and exhibits no outgassing. It is ideal for use in corrosive environments including acids and chlorine, and is highly transparent to organic samples and electrons, for analytical work, such as x-ray investigation, metallurgical, crystal growth, medical imaging technology etc.

Pyroid® is trade mark name of MINTEQ

► Pyrolytic Graphite Stripper Film

Smooth pyrolytic graphite stripper film is used in radiation sources, nuclear particle high energy density research, and medical diagnostic imaging instruments

Pyrolytic graphite film offers major customer benefits relative to alternative materials such as amorphous carbon film or polycrystalline graphite films.

Pyrolytic graphite film is:

- Stable at high temperature and vacuum.
- Easy to flex due to inherent higher flexural modulus.
- Erodes very slowly.

Resulting in:

- Higher strength than alternative materials.
- Last 5 times longer than alternative materials.

PYROID® Pyrolytic Film Thickness/Real Size Conversion

Thickness, in.	Wt/sq in.	Thickness, μm	Wt/sq cm
0.0002	0.0065 g	5	1.0 mg
0.0004	0.0129 g	10	2.0 mg

Ordering:

EMS #	Film Size, in. (mm)	Thickness, μm	Pack
76040-05	0.75 x 0.75 (19 x 19)	5	each
76040-10	0.75 x 0.75 (19 x 19)	10	each
76041-05	1.0 x 1.0 (25.4 x 25.4)	5	each
76041-10	1.0 x 1.0 (25.4 x 25.4)	10	each

We can custom make foils up to 1.5 inch wide and 3 inches long from 5μm and up thicknesses.

➤ Datacolor ChromaCal™ Color Calibration System for Optical Microscopy

A Calibration Standard for Brightfield Images

The Datacolor ChromaCal™ system is an innovative new solution that enables researchers, scientists and technicians to establish and preserve the color integrity of their digital transmitted, brightfield microscopy images.

Datacolor ChromaCal™ integrates three components to establish a color profile for the microscopy system:

- Proprietary software
- Color calibration microscope slide
- Computer monitor calibration device

Together, the Datacolor ChromaCal™ system establishes a color profile for the microscopy system and applies that profile to your specimen images to ensure consistent and reliable color representation. The outcome is improved comparability of images and enhanced communication and collaboration for better decision making.

Key Features

- Standardizes color reproduction in digital brightfield images
- Delivers consistent, reliable basis for evaluation, communication, quantification, documentation and publication
- Performs image and monitor calibration for consistency throughout the imaging process
- Compatible with most microscopes, scientific cameras and acquisition software

Datacolor ChromaCal™ easily integrates into your microscopy workflow.

Simply acquire your specimen images and an image of the calibration

slide. Launch the Datacolor ChromaCal™ software, select the calibration image and apply the calibration to any or all of your specimen images. All original images are preserved, and "ChromaCal-ibrated" images are saved separately.

See how it works... Learn how to do it...

We've added video content to our website to help you get to know our latest products even better!

Stop by and see what it's all about.

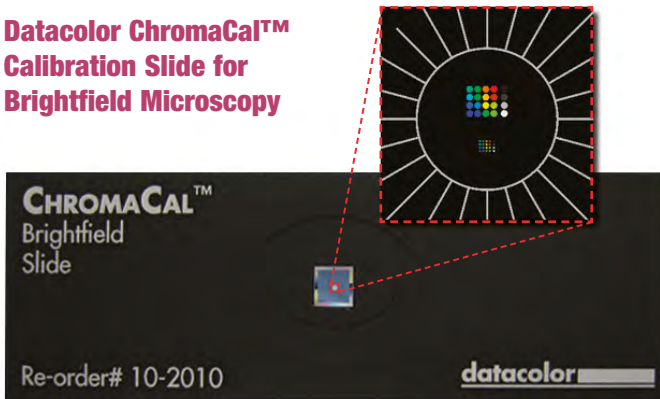

The Datacolor ChromaCal™ color calibration system for optical microscopy provides a color profile foundation from which images can be more easily compared and analyzed. Working with your existing microscope and imaging system, the calibration system fits easily into the imaging workflow - simply acquire an image of the calibration slide (required, and available separately) and using the proprietary software, apply the calibration to your specimen images. Your original files are preserved, and a complete audit trail is saved in the metadata of the calibrated images. Better consistency. Higher confidence. Color integrity for better decision making.

Includes both the image calibration software (a license to install on one workstation) as well as the monitor calibration set (a license to install on three workstations). Additional workstation installations can be purchased and activated directly through the software.

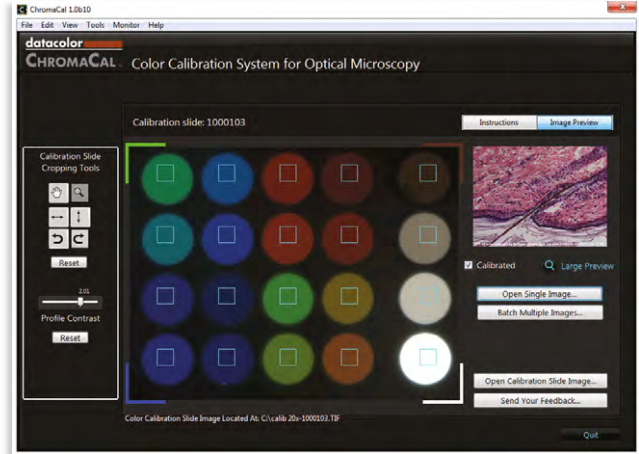

Datacolor ChromaCal™ Calibration Slide for Brightfield Microscopy

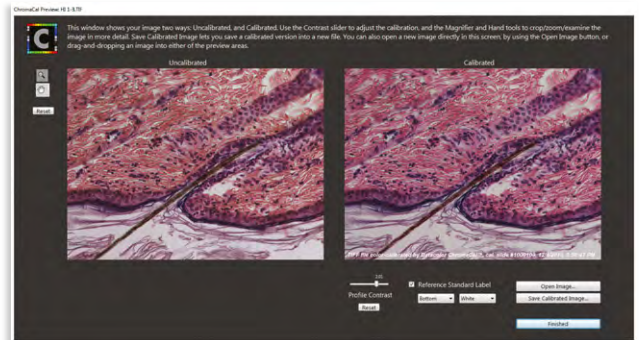

The Datacolor ChromaCal™ brightfield calibration slide is a unique, precision-engineered tool that is used in conjunction with the Datacolor ChromaCal™ brightfield microscopy calibration system and your microscope to establish a baseline color profile that is unique to your imaging session. The process is simple - acquire your specimen images and an image of the calibration slide. Using the proprietary Datacolor ChromaCal™ software just click to apply the color profile to your specimen images for a standardized approach to seeing colors.

The Datacolor ChromaCal™ Color Calibration Slide is designed exclusively for use with the Datacolor ChromaCal™ Color Calibration System for Optical Microscopy.

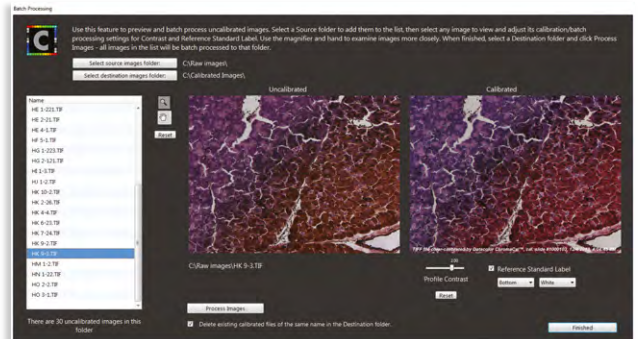

Each Datacolor ChromaCal™ slide is uniquely identified and corresponds to a specific color measurement file associated with the proprietary Datacolor ChromaCal™ chip at the center of the slide. The measurement file contains information that is utilized by the Datacolor ChromaCal™ Color Calibration System when calibrating brightfield images.

Align Calibration Matrix

Single Calibration

Batch Calibration

Applications*

Datacolor ChromaCal™ is suitable for any specialty that utilizes brightfield images:

- Agriculture/Botany
- Histology
- Biology
- Material Science
- Bone Metabolism
- Neuroscience
- Cytology
- Pathology
- Dermatology
- Veterinary and others
- Forensics
-
- Hematology
-

*Datacolor ChromaCal™ is not intended for clinical diagnostic use in the U.S.

Before CHROMACAL

After CHROMACAL

➤ Datacolor ChromaCal™ (continued)

Located on the Datacolor ChromaCal™ chip are the following:

- Protective plastic slide holder
- Color calibration slide
- Color calibration slide on microscope stage
- Alignment pattern on slide
- Small grid
- Large grid
- One larger color matrix consisting of 20 color circles in a 4 x 5 configuration. This matrix is generally intended for magnifications up to 40X.
- One smaller color matrix consisting of 20 color circles in a 4 x 5 configuration. This matrix is generally intended for magnifications above 40X up to 100X.
- Numerous location lines pointing to a circle surrounding both color matrices. These are meant to assist in locating the color matrices.
- In the upper left-hand corner of the chip there is a 4 x 4 micrometer grid consisting of 250 μ divisions. Within the lower right-hand division is a 10 x 10 sub-grid with 25 μ divisions. This micrometer grid is unrelated to the color calibration system but is provided as an additional value-add.

The Datacolor ChromaCal™ slide is not suitable for use with oil immersion objectives. The Datacolor ChromaCal™ slide should be handled with care.

The Datacolor ChromaCal™ brightfield calibration slide is sold separately, and is required for the Datacolor ChromaCal™ Color Calibration System.

Datacolor ChromaCal™ Monitor Calibration Set

The Datacolor ChromaCal™ monitor calibration set uses a precision color sensor to ensure a consistent and standardized color profile on any computer display. With monitor calibration, your images will look the same on the display by your microscope, at an analysis workstation, on your laptop, and on a colleague's display whether down the hall or across the ocean. In contrast, just look at the variability between televisions on display in an appliance store.

Includes monitor calibration sensor, software and license to install on three workstations. Additional workstation installations can be purchased and activated directly through the software.

Monitor Calibration Sensor in use

Process

Good microscopy practices are essential to achieving quality images. Here are a few things to remember. These steps won't guarantee perfect images, but they reduce the number of variables to address in downstream image analysis.

Always be certain to clean the microscope of dust and oils as these can create artifacts and aberrations.

Establish Koehler illumination as a matter of routine - this practice sets an illumination baseline for consistency and reproducibility.

Use a scientific-grade camera (CCD or CMOS), not a consumer camera, for imaging. Scientific cameras are designed for sensitivity and the magnifications employed by microscopes.

Always white balance the camera. Simply move to a region of the slide where no specimen is located (e.g. white background) and choose white balance in the camera software, imaging software or even by pressing a white balance button on the camera head itself, if present.

System Requirements

- Windows XP 32/64, Win 7 32/64, Win 8 32/64 or Max OSX (10.6 or higher)
- USB Connection
- Monitor resolution 1024x768 or greater
- 16-bit video card (24-bit recommended)
- 128MB of available RAM; 100MB of available hard disk space
- Unaltered TIFF or JPEG images acquired with scientific-grade camera
- For maximum workflow efficiency, internet connection required

10-2010	Datacolor ChromaCal™ Color Calibration Slide	each
10-3010	Datacolor ChromaCal™ Monitor Calibration Set**	each

*System includes:

- Image calibration software (with license to install on one workstation)
- Monitor calibration software and sensor (with license to install on three workstations)

**Set includes:

- Monitor calibration software and sensor (with license to install on three workstations)

FREQUENTLY ASKED QUESTIONS

Q1. Are there any microscope requirements or restrictions?

A1. Your microscope should be configured for transmitted light illumination of the specimen. Datacolor CHROMACAL works independently from the microscope hardware and can be used with any manufacturer's microscope system.

Q2. Does Datacolor CHROMACAL work with any camera?

A2. A scientific grade camera is recommended for image acquisition. Most consumer-grade cameras are intended for landscape and portrait imaging. Also, pixel sizes in a scientific grade camera are optimized for microscope level resolutions. Datacolor CHROMACAL requires raw TIFF images for calibration.

Q3. Is white balancing sufficient to standardize the color of my images?

A3. Although white balancing is a necessary step in calibrating color, it is not sufficient. Datacolor CHROMACAL utilizes a standardized color matrix to establish and apply a color profile to white balanced images. With these capabilities, color can be standardized throughout your lab, and among your facilities.

Q4. Do I have to use a calibrated display?

A4. To achieve a consistent viewing and communication experience, it is highly recommended to calibrate all of the monitors that are used to display your specimen images.

Q5. Can I use Datacolor CHROMACAL on more than one microscope or monitor?

A5. The Datacolor CHROMACAL monitor calibration set provides three workstation installations, so you may want to calibrate the monitor at your microscope, at your analysis workstation and at your desk. Monitor calibration sets are also available separately, and they also include 3 installation licenses. The Datacolor CHROMACAL application software can only be installed on one computer, and additional licenses are available through the software. The Datacolor CHROMACAL calibration slide is highly portable and can be used on any microscope.

Q6. Does Datacolor CHROMACAL alter my original image file?

A6. No, your original image file is preserved. All calibration adjustments are made to a duplicate copy of your original image file. This copy is saved using the naming convention "[original file name] ChromaCal-calibrated" added to the file name.

► Low Magnification Calibration Standards Available for SEM and LM

► Silicon Test Specimen

This Test Specimen is made of a 5mmx5mm square of single crystal silicon. It is photo-etched and the squares repeat every 10 μ m. The dividing lines are 1.9 μ m wide. A broader etching line is written every 500 μ m, which is useful in light microscopy. This is an excellent test specimen for comparing magnification and assessing any distortion in the image field. It is ideally useful in the context of automated counting systems to check for unsuspected distortions. Where critical measurements must be made the sample can be mounted directly onto the calibration specimen so that an internal calibration is obtained on the micro-graph.

► SEM Calibration Specimens

Magnification Calibration

► Chessy; Test Specimen

A precise SEM test specimen for most all calibration applications.

The Structure

There are more than 1.6 million gold squares of 1 μ size on silicon forming a 4-fold checkerboard pattern in an area of 5 mm square. The smallest metric checkerboard has a size of 10 x 10 μ . Such checkerboards form larger metric checkerboards of 100 x 100 μ - These again form checkerboards of 1 mm square. Finally, such 1mm squares are arranged in the same manner covering a field of 5 mm square.

The edges of the empty corners in 0.1 and 1 mm checkerboards are additionally marked. The surrounding frame is 10 μ wide and has an outer side length of 5.04 mm. The pattern was directly written by e-beam lithography using the new ZBA 31/32 from JENOPTIK.

Applications

Imaging

- Calibration of SEM magnification in all ranges between 20x and 50,000x.
- Check of equal scaling in X and Y.
- Check of orthogonality and distortion.
- Resolution test at high magnification on the edges of the gold squares.

Motorized Stages

(especially for use with ESCOSY)

- Measurement of reproducibility using stored positions.
- Calibration of stage orthogonality.
- Calibration of readings in X and Y.
- Measurement of absolute positioning accuracy.

Experimental Electron

Lithography (use with attachment ELPHY or PROXY-WRITER)

- Generation of metric writing fields between 10 μ and 5mm square via mark recognition and alignment.
- Measurement of SEM distortion at any magnification via mark recognition on different places.
- Check of defocusing in outer areas.

79503-01	Chessy Test Specimen	each
----------	----------------------	------

► Resolution and Gray Level Test Specimens

SEM resolution is tested in terms of a combination of criteria, namely resolved gaps and the number of gray levels in the image. This is to ensure that the resolution has not been distorted by using the contrast to maximize visibility of edges. High resolution images ideally should show fine detail together with a lack of noise evidenced by a good range of gray levels.

1. High Resolution Gold on Carbon Test

For resolution test of SE and BSE imaging and also for chemical mapping in high-resolution systems such as an Auger scanning instrument. Each test specimen has a square grid pattern with large crystals in the center of each square, and very fine crystals at the edges of each grid. Thus medium and high resolution gap tests are performed on the same specimen. Meantime, the larger crystals show facets which allow an assessment of the gray level reproduction available at high resolution. Gold particle range from 5nm to 150 nm approximately.

79510

2. Very High Resolution Gold (<2nm - 30nm) on Carbon Test

For very high resolution performance testing this specimen has a smaller gold particle size ranging from 2 nm to 30 nm as compared to the high resolution test above. Ideal for testing at instrument magnifications of 50,000x and above.

79511

► Resolution and Gray Level Test Specimens (continued)

3. Ultra High Resolution Gold (<1 nm - 20 nm) on Carbon Test

With gold particles ranging from <1 nm to 20 nm, this test is suitable for ultra high resolution SEM tests such as field emission electron source.

A magnification of at least 80,000x is required for this test.

79512

79512-01	Ultra High Resolution Au-C Test on 12.5mm Pin Stub	each
79512-02	Ultra High Resolution Au-C Test on JEOL Stub	each
79512-03	Ultra High Resolution Au-C Test on ISI Stub	each
79512-04	Ultra High Resolution Au-C Test on Hitachi Stub	each
79512-05	Ultra High Resolution Au-C Test on Carbon Planchet	each

These gold on carbon calibration specimens have been specially produced to enable the ultra high-resolution capabilities of the current generation of high performance scanning electron microscopes to be assessed. In particular, the series 79512- sample with its ultra small gold particle size (<1nm - 20nm) is designed for use with SEM 's equipped with field emission guns.

Until experience has been gained, these specimens should be used in conjunction with the standard gold on carbon specimen, 79510-series. Many of the instructions given on the 79510- technical leaflet apply also to these ultra high-resolution test specimens, but it should be noted that the instrumental magnification required to resolve the smaller particles, would be higher.

4. Medium Resolution - Aluminum-Tungsten Dendrites

The various spacings created by the dendritic structure give the gap test, and the topographical arrangement of the dendrites leads to the gray level test. The specimen is non-magnetic, vacuum clean. It is most useful for working in the probe size range of 25 to 75 nm. Supplied unmounted.

79514

79514-01	SEM Aluminum-Tungsten Dendrites Test	each
----------	--------------------------------------	------

5. Tin On Carbon

Tin on Carbon is an alternate test specimen for medium resolution, and for the daily basic checking of your instrument performance. This specimen consists of a dispersion of tin spheres, within the size range 10 - 40 nm, on a carbon substrate. Ideal for astigmatism correction, it is also recommended for use in SEM's employed in the semi-conductor industry where the usual gold on carbon specimen cannot be used because of the risk of gold poisoning.

► Reference Samples for Back-Scattered Electron Detection Systems

► Reference Standards

When equipped with a back-scattered electron detector, an electron microscope has the capability to produce images in which the contrast is controlled by differences in atomic number across the specimen. Three reference samples are now available for testing the differences of atomic number. Each of the reference samples consists of two high purity elements that have an atomic number difference of 1. They are in form of a wire of the low Z element embedded in a matrix of the high Z element. The samples are mounted onto 5mm diameter blocks.

79520-02	BSE Reference, Palladium (Z=46)/Silver (z=47)	each
79520-03	BSE Reference, Platinum (Z=78)/Gold (Z=79)	each

► Duplex Specimen

An alternative and very sensitive test is by means of an alloy with two major Copper/Zinc phases separated by an atomic number difference of 0.1. The light phase illustrated in the micrograph has a mean atomic number of 29.47 and the dark phase a mean atomic number of 29.37.

79521-01	Duplex Reference Specimen	each
----------	---------------------------	------

► X-Checker™

The X-Checker was the first and remains the only complete calibration aid for SEM/EDS Systems. When time is short but you want to know how well your system is performing you need the X-Checker. Each X-Checker comes with the following:

1. X-Checker Standard
2. X-Checker w/Boron
3. X-Checker Extra

- Manganese to measure full width at half max detector resolution
- Aluminum and copper to perform spectral calibration.
- Carbon to monitor calibration at the low end of the spectra for thin window detectors.

You also get two grid sizes for checking the accuracy of your image analysis software and an easy test for monitoring the amount of vacuum pump oil contamination on your detector window.

- The X-Checker™ BN comes with boron nitride for those who need a more sensitive monitor of low end performance on thin window and windowless detectors.
- The X-Checker™ Extra is the ultimate performance monitor for the latest state of the art X-ray detectors. In addition to the standard features and boron nitride, there is a fluorine source to test resolution at the fluorine K-alpha peak (industry standard for measuring low end resolution). As well it comes with a beryllium grid for the ultimate test of detector performance.

80058-EX	X-Checker™, Extra	each

► Calibration Specimens for TEM & STEM

Magnification Calibration

► Fine Mesh Grids

These fine mesh grids are carefully checked. They are suitable for the low magnification range of a TEM. Available as a sandwich in a folding 3.05mm mesh grid, or in a square mesh 25mm.

79525-01	1000 mesh on Sandwich Grid, 3.05mm dia., Copper	each
79525-02	2000 mesh on Sandwich Grid, 3.05mm dia., Copper	each
79526-10	1000 mesh, 25mm x 25mm, Nickel	each
79526-20	2000 mesh, 25mm x 25mm, Nickel	each

► Grating Replicas: Parallel and Crossed Lines

Shadowcast carbon replicas of diffraction parallel line gratings with spacing of 462.9nm, 2160 lines per millimeter onto 3.05mm grid. The same ruling 2160 lines/mm, cross at 90° to one another give additional accuracy to magnification checks and aid in checking distortion. Ideal for calibration electron-optical magnification up to the x80000/ 100000 range.

Parallel Lines

Crossed Lines

80050	Grating Replica, Parallel Lined	each
80051	Grating Replica, Crossed Lined	each

► Line Grating Replicas with Latex Spheres

The latex sphere is 0.261 microns and the grating replica is 2160 lines/mm.

This calibration aid allows you to double check the accuracy of magnification calibration.

80055	Grating Replica on Latex Spheres	each
--------------	----------------------------------	------

The addition of Latex Spheres to the Grating Replica provides a double check of the accuracy of magnification calibration. It is particularly useful at higher magnifications where only a few squares of the replica pattern can be photographed together.

Note: The latex particles in this specimen have a diameter of 0.261 micron.

To use both the Replica and Latex Spheres for Magnification Calibration:

- (1) Calculate the magnification using the diffraction grating replica pattern by the following formula:

$$\text{Magnification} = \frac{\text{Distance in mm between limiting lines} \times 2,160}{\text{Number of spaces between limiting lines}}$$

- (2) Calculate the magnification by measuring the magnified image of the 0.262 micron diameter latex spheres, applying the following formula:

$$\text{Magnification} = \text{Diameter (mm)} \times 3831.4$$

(Measure as many latex spheres as possible and calculate the average diameter. Ignore any latex spheres which are distorted.)

► Holey Carbon Film:

For measuring and correcting astigmatism and for evaluating the resolution of the transmission electron microscope. A thin film of carbon has been treated to obtain numerous round holes of various sizes. On a 3.05mm copper grid.

80010	Holey Carbon Film	1 grid/vial
--------------	-------------------	-------------

► Evaporated Platinum/Iridium

Evaporated Pt/Ir on Holey carbon film. Holey carbon film support provides holes for ease of focus and astigmatism correction. The dots of evaporated Pt/Ir provide dense particles for resolution checks through the particle separation test.

80020	Evaporated Platinum/Iridium	1 grid/vial
--------------	-----------------------------	-------------

► Polystyrene Latex

Uniform polystyrene latex (size 0.312µm) is suspended on a Formvar/Carbon grid and is useful for checking magnification and calibration.

80030	Polystyrene Latex	each
--------------	-------------------	------

► Combined Test Specimen

A holey carbon film is shadowed with gold and graphitized carbon particles are deposited on a 3.05mm grid. These particles viewed over the holes may be used for assessment of factors limiting the microscope performance.

The evaporated gold forms small polycrystalline islands and within these islands lattice fringes can be resolved. Also use this specimen for the measurement of contamination rates in the EM by noting the deposition rate of carbon within the holes found in the gold film.

80043	Combined Test Specimen	each
--------------	------------------------	------

► Gold Shadowed Latex

These latex particles have a diameter of 0.204µm and are shadowed with a coating of gold. Measure the finest migrated gold particles in the shadow to determine the resolution of the STEM. Gold shadowed latex on formvar/carbon film, mounted on a copper grid, 3.04mm diameter.

80040	Gold Shadowed Latex	1 grid/vial
--------------	---------------------	-------------

► Catalase Crystals

Catalase crystals are mounted on a grid (3.05mm) and negatively stained. They display very clear lattice plane spacings of approx. 8.75nm and 6.85nm. Ideal for high magnification calibration. J. Ultrastructure Res.24, 454., 1968

80014	Catalase Crystals	1 grid/vial
--------------	-------------------	-------------

► Particle-Size Standards

Particle-size standards are certified for mean diameter and are trace-able to the National Bureau of Standards (NBS). Our line of stand-ards in the submicrometer size range is called Nanosphere Size Standards™, and Monosized Polymer Microspheres.

■ Nanosphere Size Standards are highly uniform polystyrene spheres calibrated in billionths of a meter (nanometer) with NBS traceable methodology.

■ Nanosphere Size Standards are used in the calibration of electron microscopes, aerosol and liquid particle studies, chromatography columns, and laser light scattering studies. The 20 to 1000 nm range is suitable for checking the size of bacteria, viruses, ribosomes and sub-cellular components. Nanosphere Size Standards are packaged as aqueous suspensions in dropper-tipped bottles.

Specific gravity :1.05g/ml
Refractive index of 1.59 @ 589nm (23°C).

► Lattice Plane Specimens

80037 80038

Since crystal lattice plane spacings is accurately known from X-ray measurements, they provide a good test of microscope stability and a calibration of magnification in the upper range of magnification of the instrument.

1) Plane Spacing 0.9nm and 0.45nm - Asbestos Crocidolite

The 0.9nm spacing (020) will be found along the axis of the crocidolite fibers. The 0.45nm spacing appears at an angle of about 60°, in suitable crystal orientations. Because of the hazard of asbestos, this sample is sandwiched between formvar and carbon films, than mounted onto a 3.05mm grid.

80035 Crocidolite Crystals each

2) Plane Spacing 0.56nm - Potassium Chloroplatinate

80036 Potassium Chloroplatinate Crystals each

3) Plane Spacing 0.34nm - Graphitised Carbon Black

80037 Graphitised Carbon Black Crystals each

4) Plane Spacing 0.204nm, 0.143nm and 0.102nm - Oriented Single Crystal Gold Foil

These gold foils are mounted on gold grids, a valuable tool to check resolution, image quality, magnification and instrument stability.

80038 Oriented Gold Crystals each

► Gold Particle on Carbon Film

This high resolution TEM test specimen is an arrangement of finely-dispersed thin gold particles on carbon film. As with gold foil, image quality, magnification, and instrument stability are readily

assessed; however, for the determination of resolution capabilities this gold particle specimen is superior since it offers a choice of crystalline orientation on static or low tilt stages. In addition, the thickness of the crystalline material is easily calculated from the projected shape of the gold crystal. The background noise arising from structure in the support film helps with determinations of the operating transfer function.

80041 Gold Particles on Carbon Film each

► TEM Checker™

TEM analysts also need to monitor the performance of their x-ray detectors. The TEM Checker contains 5 manganese

disks in a standard grid storage box. Each disk is 3 mm in diameter and fits into the sample holder. The discs are not transparent to the beam but will give you a strong manganese peak to check the resolution of your EDS detector.

80059 TEM Checker™ each

► MAGICAL™ - TEM Calibration Standard

MAG**I**CAL is the world's smallest ruler and have been inducted into the Guinness Book of World Records, A genius standard to perform the three major calibrations of a TEM:

- Image Magnification Calibration
- Camera constant Calibration for Indexing Diffraction Patterns
- Image/Diffraction Pattern Rotation Calibration (crystal relation features)

MAGNIFICATION CALIBRATION STANDARD FOR TEM
Layer Thickness Values Surface

MAG**I**CAL™ consists of an ion milled cross section of a silicon single crystal consisting of a series of atomically flat layers of Si and SiGe, which have been grown epitaxially by MBE (molecular beam epitaxy). When the calibration structure is viewed in a TEM, it appears as a series of light and dark layers where the layer thicknesses are accurately known. The calibrated thickness measurements of these light (silicon) and dark (SiGe) layers are based on careful TEM measurements of the <111> lattice spacing of silicon, which is visible on the calibration sample itself, and are supported by x-ray diffraction measurements. The layer spacing are designed so that the sample can be used to calibrate the entire magnification range in a TEM, from 1,000X to 1,000,000X. As the sample is also a single crystal of silicon, the calibrations requiring electron diffraction information such as the camera constant and image/diffraction pattern rotation can also be performed easily and unambiguously. One single calibration sample can therefore be used to provide all three of the major TEM instrument calibration at all magnifications and all camera lengths.

For a complete reference and technical information on MAGI**CAL™, see our interactive website.**

80069 MAG**I**CAL® each

► Diffraction Standards

► Camera Length

The nominal value of the effective camera length of an EM operating in the selected area mode is not sufficiently accurate for any calculations of lattice spacing. The actual value of camera length must be calibrated as the same accelerating voltage and objective lens setting by reference to a known substance with well defined diffraction spacings. The normal specimens are evaporated films on a 3.05mm grid of aluminum or thallos chloride. The very small crystalline size yields ring patterns suitable for calibration purposes.

80044 Evaporated Aluminum Film each
80045 Evaporated Thallos Chloride each

80044

80045

► Image Rotation

When changing from a selected area image of a specimen to a diffraction pattern, the strength of the intermediate lens is changed, producing an image rotation between the image and the diffraction pattern. The amount of this rotation can be measured by photographing a crystal whose shape gives a clear indication of orientation. A molybdenum oxide crystal is very suitable for this purpose. Evaporated on a 3.05mm grid.

80046 Molybdenum Oxide each

80046

► Ultrastructure Size Calculator

A slide-guide-calculator used to determine the real-life size of a structure from a micrograph in micrometer, nanometer or angstrom units. It computes the real-life dimension/mm at magnifications from 1,000 to 100,000 by introducing a multiplication factor of x2 or x½. The magnification range can be extended. Waterproof card, printed in English, German and French.

74804 each

74804

► Photomicrograph Scale Marker

A slide-ruler used to apply scale marks to photomicrographs. There are four scale lines for producing scale marks of 10 microns, 1 micron, 0.1 micron (100nm) and 10nm. The scale marker is also used in measuring the real life size of an object in a micrograph. It is made from a clear flexible plastic and it is protected by an enclosed pouch. Instructions are included. Printed in English, German, and French.

74802 each

➤ Calibration Tools for Atomic Force or Scanning Probe Microscopy (AFM/SPM)

The Tipcheck device is used for examining the shaft of the tip probe or for determining the tip breakage etc.

➤ 1. TIP CHECK:

The Problem

Imaging a new sample in an AFM, it may be difficult to know whether one has obtained an accurate representation of the surface. Even in the case that a fairly clear idea of expected feature topography exists, an independent means of assessing the influence of the probe tip on the image is desirable.

Consider the following:

■ A broken or misshapen probe tip results in inaccurate rendering of samples. Extra time from an already busy schedule can be consumed in further clarification work that wouldn't have been needed otherwise. Worse, if the tip damage goes undetected, the true topographical nature of your samples may inadvertently go unnoticed.

■ Using microscopy techniques such as SEM to look for breakage in tips is neither convenient nor economical enough to be done routinely.

A simple, convenient means to prescreen all of one's AFM tips is certainly desirable! You and your team can thereby save time and effort, and avoid frustration. Fortunately, there is a simple and effective means to prescreen your tips, and assess used tips as well.

The Answer is TipCheck (TC)

TipCheck exploits reverse imaging to provide a fast and simple way to assess new and used tips without the need for SEM inspection. TipCheck helps you to categorize your tips on the spectrum at right, and permits qualitative comparisons between tips.

The microstructure of the TipCheck film is ideal for the detection of tip morphology in the vicinity of the tip apex. The AFM images shown here were obtained by imaging a TipCheck surface with (left) a broken tip and (right) a reasonably good tip.

The film is supplied on a chip of silicon, ready to be placed in your AFM. Instructions are provided with examples of images to aid you getting started with your own sample library.

80130-Ti AFM/SPM TipCheck Calibration each

Fig. 1: This image of a TipCheck surface was acquired with an unbroken, sharp, silicon nitride contact mode tip. Note the smooth planar sides of the features, the well-defined edges & peaks, and the good correspondence between the topographical image (top) and the lateral force map (bottom).

Fig. 2: An image acquired by a used, somewhat worn tip. Topographical features are still produced reasonably well but are not quite as sharp. The lateral force map has changed in appearance. There is no evidence of tip breakage.

Fig. 3: Another image acquired by a tip duller than ideal. The tops of features are beginning to look rounded. Compared the lateral force image to that of Fig. 1.

The Nioprobe device is used to determine the shape at the very apex of the tip probe for microscopy measurements.

➤ 2. Nioprobe

The Problem

The physical probe used in AFM imaging is not ideally sharp. As a consequence, an AFM image does not reflect the true sample topography impartially, but rather represents the interaction of the tip with the sample surface. There is no avoiding this imperfection, which sets real limits on what may be validly inferred from an AFM image.

Whether one is engaged in detailed, quantitative metrology or is simply using AFM images as an interpretive aid, it is imperative be able to assess these limits. The key here is to possess a reliable estimate of the sharpness of the tip apex. Reverse imaging of the probe is the most convenient means of obtaining the effective radius of the probe. For this purpose, the ideal characterization sample would consist of small, stiff, spiked features.

The Practical Answer is NioProbe (NP)

Consider the following advantages of NioProbe

- Tiny peaks densely populate the surface structure of the NioProbe film. This makes the film very suitable for the small piezo movement's characteristic of precision AFM work.
- Feature peaks exhibits imaging radii of less than 5 nm, as sharp as anything else available. This permits one to obtain the accurate apex radius desired for medium-to small-scale work (such as biomolecular imaging).
- The random orientation of the NioProbe features is suitable for applying blind tip reconstruction methods.
- The sample is resistant to the duress of contact mode scanning.
- The film is supplied on a silicon chip, ready to be placed in your AFM. Instructions are provided to allow easy determination of the apex radius. If stored in a clean, dry place, the sample can provide years of service.

80130-NB AFM/SPM NioProbe Calibration each

Fig. 4: Another example of an image acquired by a new, unbroken tip.

Fig. 5: If the tip becomes broken or severely worn, the features will appear very globular or flattened. As an initially new tip becomes wrong with use, the image quality will gradually degrade to this stage from that of Fig. 4.

Fig. 6: This image was acquired with a defective tip. The doubled features throughout the scan suggest that tip apex may be notched, resulting in unwanted artifacts in images.

► Magnification Reference Standards – SPM, AFM, SEM Calibration Standards

EMS offers a series of calibration standards with one and two dimension calibrated patterns. The standards come in two grid spacings – 300 nanometers and 700 nanometers. These standards are created utilizing holographic interference of a particular laser frequency. They are typically accurate to <1% across the entire surface of the standard.

Background

EMS MXS "CE" and "BE" series SEM magnification reference gratings and grids set new standards for sub-micron accuracy and ease-of-use. Designed to meet the requirements for a reasonable cost, accurate sub-micron reference standard, "CE" Series Reference Standards can be tailored to meet a variety of needs.

- They are ideal for student practice and instruction, testing new ideas or applications, or other uses where you need a good quality standard but do not want to put an expensive sample at risk.
- Exceptional accuracy, repeatability, and uniformity are assured since each individual standard is an original or master produced directly from a holographic interference pattern.

These reference standards are remarkably durable under typical operating conditions. The surface contamination behavior is also very good. There are no better sub-micron reference standard available in this price range.

One test site indicated that on a scale of 1 to 5 with respect to ease of use, contrast/brightness, durability, and accuracy, "CE" series reference standards earn a 4.7 out of 5 average in comparison to other available standards. Comments from various other test sites included "very good contrast/brightness levels at all voltages used," "easy to use," and "could become my secondary standard of choice."

Application

EMS's MXS "CE" series reference standards provide a calibrated dimension of either 300 nm or 700 nm nominal length. ("BE" series available only 300 nm)

- The larger dimension provides accurate, multiple period measurement from about 5000X to over 45,000X, while
- The smaller dimension is useful from about 10,000X to over 100,000X.

Throughout this magnification range, these standards provide excellent image contrast, an enormous useful calibration area, and a 3-sigma accuracy of at worst 3%, with typical values around 1%.

MXS "CE" and "BE" series reference standards are available as unmounted 3 mm x 4 mm pieces to be mounted by the microscopist, or pre-mounted

White area material: Tungsten.

Black area material: Tungsten or other metal.

Materials: The calibration specimen consists of a silicon chip with a thin (100nm) thick polymer layer containing the pattern and a thin tungsten film over-coating the entire surface. The tungsten film varies from 20nm to 60nm in thickness, depending on the particular model.

This structure has been proven under a wide variety of beam conditions, from 30kV to sub 12 kV.

Dimensions: 300nm or 700nm nominal (exact dimension will be provided with sample). Measurements are made from leading edge to leading edge, etc. Width of individual bars and spaces is not calibrated.

for easy insertion in your SEM. Mounting one of these calibration standards is straightforward. The front surface of the sample and the silicon substrate are conductive. Experience indicates that there is, in general, no need to make a special effort to ground the front surface. The use of conductive silver or carbon-loaded paint, conductive epoxies, conductive tape, etc. have all been used to successfully mount "CE" Series standards.

With EMS's MXS "CE" and "BE" Series Reference Standards, you can:

- Quickly check dimensional measurements by mounting one on your specimen stage;
- Perform periodic calibration and performance checks of your microscope;
- Obtain high magnification, sub-micron scale dimensional accuracy for the first time;
- Accurately determine dimensions from 0.3 μ m to 30 μ m all with one calibration artifacts;
- Analyze your images for pincushion distortion, small-scale vibration, or small magnetic field distortions.

The accuracy of the "CE" Series Reference Standards, allows the microscopist to use them as a secondary standard. Their accuracy and uniformity make it easy to obtain and document traceability of measurements without placing an expensive, hard to obtain, difficult to use primary calibration standard at risk of contamination or damage.

Certification and Accuracy

MXS "CE" Series Reference Standards provide a calibrated dimension of either 300 nm or 700 nm nominal length. The actual dimension of the artifact as delivered will generally not be exactly

these values. Both the fabrication process determines the actual dimension and by a second, independent measurement after the calibration artifact is manufactured.

The expected accuracy of the holographic technique used in the manufacturing process is $\pm 0.1\%$. Unfortunately, subsequent processing steps degrade this initial accuracy, leading to the 3-sigma accuracy of 3% for the finished product. The second, independent measurement technique has an expected 3-sigma accuracy of 1% or better. Our experience is that the two measurement techniques applied to a particular artifact will agree with each other within 0.5mm.

It is important to remember that the certified dimension in an MXS "CE" and "BE" Series Reference Standard is not just at one unique position on the artifact, but is known at all locations on the standard.

Durability and Charging Effects

EMS MXS "CE" and "BE" Series Reference Standards have been tested and evaluated over a broad range of operating conditions, from those found in a tungsten filament system to the highest resolution FEG system. These standards have been found remarkably durable during use, with no beam-induced distortion in the calibrated pattern after as much as one-half hour of imaging time at 50,000X and 20 KV. Charging is minimal to non-existent, though edge-effect can be seen under some conditions. The high contrast and brightness, which can be obtained using these reference standards guarantees good contamination tolerance.

➤ Magnification Reference Standards – SPM, AFM, SEM Calibration Standards (continued)

➤ 1. MXS 301CE and MXS 701CE

The calibrated dimension is the spatial period of a series of parallel ribs running across the surface of the sample. The significant height of the ribs (>100 nm) provides excellent image contrast. The top surface of the rib structures is somewhat rounded rather than completely flat. The edges of the ribs are readily discernible, with over 75% of the 3 mm by 4 mm sample area exhibiting an edge location variation, which is less.

Use and Imaging

The exceptionally clean and uniform pattern provided in an MXS 301CE or MXS 701CE standard displays few imperfections, which can be used as focusing and stigmation aids. For this reason, care in setting up the image before measurement is important. To assist in the setup process, an instruction sheet is provided with each standard. This sheet provides several example images, which can be used to determine if the image of the sample is correctly set up. Especially with the MXS 301CE and MXS 701CE line-space pattern standards, obtaining the proper stigmation is crucial since improper stigmation is not readily apparent when imaging a pattern of straight line. Once a proper focus and stigmation are obtained, the image can be shifted to an appropriate area and the desired measurements made.

➤ 2. MXS 702CE

The calibrated dimension is the spatial period of a series of a 2-dimensional grid spread across the surface of the sample. This grid consists of a series of cylindrical posts rising from the surface of the sample. The significant height of the ribs (>100 nm) provides excellent image contrast. The top surface of these posts is somewhat rounded rather than flat and there are also slight departures from a perfect circle in the shape of some posts. Measurement techniques must be used which take these characteristics into account. The center-to-center distance of any pair is the most accurate measurements.

Use and Imaging

The exceptionally clean and uniform pattern provided in an MXS "CE" series 2-dimensional calibration standard displays few large scale imperfections which can be used as focusing and stigmation aids. For this reason, taking care in setting up the image before measurement is important. To assist in this process, an instruction sheet is provided with each standard. This sheet provides several example images which can be used to determine if the image of the sample is correctly set up.

The characteristics of the MXS 702CE standards make it easier to image than the 1-dimensional standards. The 2-dimensional grid facilitates setting the stigmation of the image properly. Once proper focus and stigmation are obtained, the image can be shifted to an appropriate area and the desired measurements made. Since the pattern covers the entire sample area, it is possible to make over 1,000,000 measurements utilizing the standard without using the same area twice.

Cleaning for "CE" Series

Cleaning is possible using dry air or other clean gases, high purity distilled or deionized water, and soft brushes. **Rubbing with soft tissues, or any other firm physical contact, or the use of solvents, such as acetone or alcohol will damage the surface of the reference standard.**

➤ 3. MXS 301BE

The calibrated dimension is the spatial period of alternating lines of Titanium and Silicon. The use of two different elements provides excellent image contrast, and the titanium layer thickness is kept to 20 nm to control edge distortion effects in the SEM image. These physical characteristics make the edges sharp and readily discernible. The calibrated pattern covers the entire sample, providing over 1,000,000 measurement sites. Because the pattern is a direct recording of a laser-generated interference pattern which has been transferred into the 20 nm thick Titanium film, these calibration samples are the most accurate available.

Imaging and Applications

The exceptionally clean and uniform pattern provided in an EMS MXS "BE" series calibration standard displays few imperfections which can be used as focusing and stigmation aids. For this reason, care in setting up the image before measurement is

important. To assist in this process, an instruction sheet is provided with each standard. This sheet provides several example images which can be used to determine if the image of the sample is correct. Once a proper focus and stigmation are obtained, the image can be shifted to an appropriate area and the desired measurements made.

The full screen image provided by an EMS calibration sample provides a unique advantage. Most calibration standards really verify accuracy of one portion of the image, while the entire screen is part of the measurement tool. With an image that fills the screen, you can quickly diagnose all types of image distortions, including problems due to vibrations, external fields, etc. A common problem is distortion caused by missadjusted CRT's or scanners in which the magnification in one part of the image is different from another part of the image. Such problems are easily found and corrected using these calibration samples.

Cleaning for "BE" Series

Titanium on Silicon produces a very durable calibration pattern. The calibration standard can be cleaned using common solvents such as acetone or alcohol, detergents, deionized water, etc. Gentle physical rubbing with soft tissues, brushes, etc., should not damage the sample. In extreme cases, cleaning by oxygen plasma may be possible.

► SPM Calibration Specimens

Overall Benefits:

- Easier testing of your SPM.
- Improved accuracy of critical dimension measurements.
- Accuracy: 0.5% (1 std. dev.).

Features:

- Holographic fabrication - assures high accuracy and precision.
- Pattern height > 100nm - provide excellent image contrast.
- Uniform coverage of entire chip - save time (can image anywhere).

Description:

Nominal calibrated dimensions: 300 or 700nm.

Calibration certificate: supplied with each sample, stating the dimension to the nearest 1nm.

Pattern types: 1- or 2-Dimensional. The calibrated dimension is the same for both axes for the 2-D standard.

Feature geometry:

- parallel ridges (1-D, 300 or 700nm)
- cylindrical posts (2-D 300nm)
- diamond-shaped posts (2-D 700nm)

Physical Size: 3 mm x 4 mm x 0.5mm

Substrate: Silicon wafer

Top Surface: Tungsten film

The 1-D standards can be scanned using any AFM mode, including contact mode. The 2-D standards can be scanned using modes such as Tapping Mode™, intermittent contact, and non-contact.

Model 150-1D

► Model 150-1D

Accurate measurements of sub 0.5 micron features are increasingly important as nanotechnology develops and as conventional microfabricated structures (semiconductors, magnetic data storage devices, optical data discs) shrinking. The model 150-1D with a nominal period (pitch) of 150nm, one dimensional, fabricated on a transparent substrate (Aluminum lines on glass) is the new tool to support this work.

Model 750-HD

► Model 750-HD

High Durability Calibration Reference Specimen for AFM and STM

Each specimen is supplied with a calibration certificate.

Can be used for AFM, STM and SEM. Has been used successfully in a hot water AFM.

Nominal pattern dimensions:Pitch 750 nm
Height 100 nm

Nominal specimen dimensions:6.35 m diameter,
0.3 mm thick

Composition:Solid Nickel

► Model PT

Phase Imaging Test Specimen (verify TappingMode™ phase contrast and resolution).

Phase Imaging is a sharp probe, which is brought into proximity with the specimen surface. The probe is oscillated vertically near its mechanical resonance frequency. As the probe lightly taps the surface, the amplitude of oscillation is reduced and the AFM uses this change in amplitude in order to track the surface topography. In addition to its amplitude, the probe motion can be characterized by its phase relative to a driving oscillator. The phase signal changes when the probe encounters regions of different composition. Phase shifts are registered as bright and dark regions in phase images, comparable to the way height changes are indicated in height images.

Phase images often show extraordinary contrast for many composite surfaces of technological and scientific interest. These include contamination deposits, discontinuous (i.e. defective) thin films, devices built of composite materials (e.g. magnetic recording heads), and cross-sectional specimens of composite materials. Both inorganic and organic materials can be examined. We have found that phase imaging is more convenient and gentler than other methods, which are based on contact mode operation. It routinely achieves lateral resolution of 10 nm.

► Models 300-2D, 300-1D, 700-2D and 700-1D

All mounted on 15 mm steel disk.

► **SPM Calibration Specimens** *(continued)*

► **Model 150-2D** — *Very High Reference and Traceable Standard for Resolution Calibration AFM, SEM, Auger, and FIB*

General Purpose – High Precision

A precision, holographic pattern provides accurate calibration in the horizontal plane for very high resolution, nanometer-scale measurements.

Period: 144 nm pitch, two-dimensional array. Accurate to ± 1 nm. Refer to calibration certificate for actual pitch.

Surface: Aluminum bumps on Silicon, 4x3 mm die. Bump height (about 90 nm) and width (about 75 nm) are not calibrated.

For SEM, an independent analytical lab has tested this specimen in a FE-SEM (field emission scanning electron microscope). They found that the pattern was very uniform and the specimen was easy to image. No significant charging was observed in the voltage range 1-20 kV.

Usability: the calibrated pattern covers the entire chip. There is sufficient usable area to make tens of thousands of measurements without reusing any areas altered or contaminated by previous scans.

► **MODEL 150-2D:**

This Calibration Reference specimen comes with a non-traceable, manufacturer's certificate. These state the average period, based on batch measurements.

► **MODEL 150-2DUTC:**

This traceable, Certified Standard is a select grade. Each standard is individually measured in comparison with a similar specimen calibrated at PTB. (PTB, Physikalisch-Technischen Bundesanstalt, is the German counterpart of NIST). The uncertainty of single pitch value is typically ±1,4 nm (95% confidence interval). Multi-pitch measurements provide the usual square-root of N improvement in precision.

Easy to use

We recommend Model 150-2D because of its unique characteristics which make it especially easy to use. The specimen is durable and it allows you can scan in contact mode, offering you faster calibration and measurements. This is the only high resolution 2D calibration specimen we have seen that offers the following characteristics:

- 2-dimensional array for simultaneous calibration of X and Y axes.
- Pitch <500 nm.
- Array of pumps mean the image contrast is high even when the probe tip is slightly dull.
- High contrast in contact mode scans.
- The pattern covers the entire die so that you don't have to hunt for the scan area.

AFM Tapping Mode Scan

The bump height is about 90 nm. This specimen is not recommended as a height reference because it is not easy for the standard AFM probes to reach the substrate level between the pumps.

SEM High Magnification

The following image was captured with a magnification setting of 100kX and accelerating voltage 10 kV

SEM Medium Magnification

At 5 kX, the individual bumps were still well resolved. Large fields of view show how few defects are present. The most common defects are single missing bumps or a single extra bump inserted between lattice positions. Two vacancies are present in the image shown here.

► Very High Resolution Calibration Reference and Traceable Standard for AFM, SEM, Auger, and FIB

For General Purpose and Metrology Microscopes

A precision pattern providing accurate calibration in the horizontal plane for very high resolution, nanometer-scale measurements.

Period: 70 nm pitch, one-dimensional array. Accurate to +/- 0.25 nm. Refer to calibration certificate for actual pitch.

Surface: Silicon Oxide ridges on Silicon, 4x3 mm die. Ridge height (about 35 nm) and width (about 35 nm) are not calibrated.

For AFM, use in contact, intermittent contact (TappingMode™) and other modes with image sizes from 100 to 3000 nm. Available unmounted or mounted on steel disks.

For SEM, this specimen works well at a wide range of accelerating voltages (1 kV to 20 kV have been tested) and calibrates images from 25 kX to 1000 kX. Normally supplied unmounted. Can be mounted on a stub of your choice.

Usability: The calibrated pattern covers a 1.2x0.5 mm area. There is sufficient usable area to make thousands of measurements without reusing any areas altered or contaminated by previous scans.

► Model 70-1D.

This Calibration Reference specimen comes with a non-traceable, manufacturer's certificate. This states the average period, based on batch measurements.

► Model 70-1DUTC.

This Traceable, Certified Standard is measured in comparison with a standard calibrated at PTB. (PTB, Physikalisch-Technischen Bundesanstalt, is the German counterpart of NIST. The standard is "NIST-Traceable" by virtue of the mutual recognition agreement between NIST and PTB.) The uncertainty of single pitch values is typically +/- 0.5 nm (95% confidence interval). Multi-pitch measurements provide the usual square-root of N improvement in precision.

AFM Tapping Mode Scan

The ridge height is about 35 nm. This specimen is not recommended as a height reference because the standard AFM probes may not always reach the substrate level between the ridges. Nevertheless, the image contrast is high, even when the probe tip is slightly dull. You can scan in contact mode, which means you can calibrate and measure faster.

Easy to find Patterned area

The patterned area is easy to find. The three rectangles shown in the sketch below are visible in reflected light, with either the unaided eye or an optical microscope. In a low magnification SEM image, the contrast is reversed. The central rectangle, which is the grating pattern, is relatively bright. The grating lines are parallel to the long side of the rectangle, as suggested by the high magnification SEM image.

Die and location of pattern within die:

Low magnification SEM image:

SEM High Magnification Image

Magnification= 200 kX
Voltage= 5 kV.

Ordering for the Very High Calibration and Traceable Standard:

Available in the following ways: unmounted, 15mm steel disk (for AFM), SEM pin stub, or any other type of SEM stub.

► Self Cleaning Gold Foil Disc Apertures

Advanced techniques of thin metal film application permits the apertures to retain a clean hole edge during prolonged beam exposure. Ultra-thin, half-micron design discourages contaminant accumulation and stabilizes astigmatic conditions to provide longer life. Conventional mechanical cleaning involving costly down-time is no longer necessary. Because the foil is ultra thin, care must be taken when handling the gold foil apertures.

Gold foil aperture tolerances vary as follows:

- Nominal hole size from 1 to 60 micron: +/-1micron
- Nominal hole size 70 micron and up: +/-10%

► Platinum and Molybdenum Discs, Drilled Apertures

Platinum apertures are easily cleaned by either an aperture flamer or over a bunsen burner in the open air. We maintain a wide variety of Platinum Drilled Apertures in stock with different configurations suiting all of your needs.

Platinum Apertures size tolerances vary as follows:

- Nominal hole diameter: +/- 1 micron
- Disc diameter: +/- 10 microns
- Disc thickness: +/- 10 microns

► **Wehnelt Apertures**

Made from 0.004" tantalum foil. Replaceable tantalum apertures for some microscopes (Amray and Philips). They improve the performance of the electron gun.

49020-Ta	Wehnelt Aperture, 200µm Hole	each
49030-Ta	Wehnelt Aperture, 300µm Hole	each
49040-Ta	Wehnelt Aperture, 400µm Hole	each
49050-Ta	Wehnelt Aperture, 500µm Hole	each
49075-Ta	Wehnelt Aperture, 750µm Hole	each
49100-Ta	Wehnelt Aperture, 1000µm Hole	each

► **Strip Apertures:**

All the following multi-hole strip aperture are made from Platinum-Iridium (95:5) and are standard in our line.

► **HITACHI Strip Apertures**

Measures: 41.0 x 4.0 x 0.10mm – 4 holes

49211-01	Hole Sizes: 10-10-20-70µm	each
49211-02	Hole Sizes: 30-20-20-70µm	each
49211-03	Hole Sizes: 70-70-50-50µm	each
49211-04	Hole Sizes: 30-50-70-100µm	each
49211-05	Hole Sizes: 10-50-100-200µm	each

Measures: 45.0 x 4.0 x 0.10mm – 4 holes

49212-01	Hole Sizes: 20-20-30-30µm	each
49212-02	Hole Sizes: 30-70-100-200µm	each
49212-03	Hole Sizes: 10-30-50-70µm	each

► **JEOL Strip Apertures**

Measures: 9.0 x 2.35 x 0.10mm – 3 holes

49210-01	Holes Sizes: 10-30-80µm	each
49210-02	Hole Sizes: 10-20-100µm	each
49210-03	Hole Sizes: 30-50-150µm	each
49210-02	Hole Sizes: 100-200-300µm	each

► **Other Strip Apertures**

Measures 10.0 x 2.5 x 0.10mm – 3 holes

49213-01	Hole Sizes: 20-60-100µm	each
----------	-------------------------	------

Measures 31.0 x 5.0 x 0.10mm – 4 holes

49214-01	Hole Sizes: 20-30-30-50µm	each
----------	---------------------------	------

Note: These are our standard strip apertures. For all other strip apertures or any custom made ones please inquire.

► **Metal Foils**

For aperture cleaning, vacuum evaporation.

73820	Molybdenum foil, 0.002" thick, (0.05mm); 6x6"(15.2 x 15.2 cm)	each
73822	Tantalum Foil, 0.003" thick, (0.075mm); 6x6"	each

For All Other Evaporation Supplies And Accessories, See pages 966-970 >>>>

► **Aperture Flamer**

For holding aperture discs or strips while flaming. Small discs can be flamed in the 3/16" diameter cup made from 6 mil platinum foil with a 1/2" diameter hole in the bottom to induce a good flow of air. The cup is attached by a 30 mil platinum wire to a heat resistant handle. The aperture can be hung from the hook for flaming.

40001	Aperture Flamer	each
-------	-----------------	------

For holding 1/4" to 1/2" diameter aperture discs while flaming. The flat pan is made from 6 mil platinum foil with a 1/2" diameter hole in the bottom to induce adequate air flow. A 30 mil platinum wire attaches the pan to a heat resistant handle.

40002	Aperture Flamer	each
-------	-----------------	------

► **Metal Boats**

For disc aperture cleaning, vacuum evaporation.

Thickness: 0.05mm (0.002") Overall length: 75mm (3") Trough Measures: 12mm (1.2") long x 5mm (5/16") wide x 1mm deep

73810	Molybdenum Boat	5/pk
73812	Platinum Boat	1/pk
73814	Tantalum Boat	5/pk

For Our Complete Line of Metal Wires, See page 967 >>>>

► **Molybdenum Boat for Strip Apertures**

Thickness: 0.05mm (0.002") Overall Length: 75mm Trough Measures: 50mm (L) x 5mm (W) x 1mm (D)

73818	Long Molybdenum Boat	5/pk
-------	----------------------	------

► **Tantalum Boats**

See Evaporation Supplies page 966-968 >>>>

► **Tungsten Boat**

Thickness: 0.05mm (0.002") Overall Length: 32mm (1 1/4") Trough measures: 12mm (1/2") long x 5mm (5/16") wide x 1mm deep.

73816	Tungsten Boat	5/pk
-------	---------------	------

For our complete line of Tungsten Boats see Evaporation Supplies pages 966-967 >>>>

► Recoating T.E.M. Viewing Screens; Phosphor Coatings

A proprietary process where 1 to 2 micron particles of phosphor are deposited on the screen and produce the highest possible resolution. Because of our high quality, our coated viewing screens are now being supplied to many of the TEM manufactures in the market, including JEOL, Phillips, Zeiss, Hitachi, Topcon, and Siemens.

Viewing Screen Surfaces 2000 X

Typical factory-produced coating of a major electron microscope manufacturer

Surface of a GRANT recoated screen

Features of the Service

- Calibrated Screen for Asbestos Analysis (AHERA)
- TEM Viewing Screens
- Fiber Optic Plates
- CCTV Detectors
- Digital Detectors
- RHEED System Screens
- SEM Kikuchi Screens
- SEM Kikuchi Screens
- Image Intensifier Screens

Why Recoat?

Viewing screens are easily damaged by the electron beam, especially at high accelerating voltages where knock-on damage can be severe. For optimum viewing, fluorescent screens should be recoated regularly because coating efficiency decreases with prolonged electron irradiation. Burning may be evident, but also, the inefficient state of the coating may go unnoticed due to the gradual damage that occurs with use.

Recoating Process:

Recoating usually takes 3 to 5 days and involves:

- stripping off the old phosphors.
- polishing and cleaning the surface.
- applying a new phosphor coating.
- deposition of film format marks (factory standard) custom markings, such as asbestos analysis circles (additional charge, ranging from 130.00, dependent on your specifications).

Special Services:

For those customers whom do not have a spare screen and can not afford any down time we do offer a special weekend express service (by prior arrangement). Briefly, your screen must be received by us on Friday, and we will ship it back to you on Monday for Tuesday delivery. For this service, an additional 25% will be applied to the recoating price.

Service Information:

For custom markings, please furnish us with your specifications.

Phillips:

Cat. No.	Description
2300	Main Large (200, 300, 400, CM series)
2310	Small Focusing (all series)
2320	Alignment
2330	New Main Large (300, 301, 400, 420, CM)

Zeiss:

Cat. No.	Description
2340	EM9 Large & Small Combination

2570	Large Viewing
2580	Focusing

RCA

Cat. No.	Description
2600	Viewing

AEI

Cat. No.	Description
2610	Not Glass

* All other screens that are not listed are available upon request.

► Standard Loop Filaments

Features

- A rigid attachment of the filament wire to the post — no possibility of waving.
- Minimum tip radius for coherent beam.
- Polished post ends.
- Precise dimensioning.
- Bases can be cleaned and rebuilt many times.
- Better long-term economy.

*Rebuilding Services

The base assembly of all of our new filaments are guaranteed to be rebuildable for the lifetime of the electron beam instrument. All of our filaments, new or rebuilt, are inspected for consistent quality and performance before being shipped to you. Return the base and we will rebuild it to meet its original specifications.

Filament Rebuilding Services include: Reconditioning of the base; cleaning and/or replacement of necessary parts; Installation of new standard loop or special filament tip; Pre-centering; Vacuum normalizing; and Microscopic inspection.

Ordering Information

► Standard Denka Model 3 Lanthanum Hexaboride (LaB₆) Cathodes

Lanthanum Hexaboride is the optimum cathode material for use in:

SEM • TEM • X-Ray Microanalysis • Electron Beam Lithography

Features

- Low potential barrier (work function)
- High melting point and stability at high temperatures
- Low vapor pressure – reduces evaporation lost
- Chemical stability
- **High brightness:** LaB₆ beam is ten times brighter than tungsten, has superior resolution – wide range of acceleration voltages. It provides sharp and clear pictures even to the smallest details. The initial brightness of a Denka Model 3 cathode (1 x 10⁶ A/cm².Str) is substantially better than that of competing mini-vogel type cathodes (typically 5x10⁵ A/cm².Str)
- **Long life:** Heat and vacuum are the final determinants of any cathode tip's life, but at 1550°C and a vacuum of 10⁻⁷ Torr, a service life of about 500 hours can be achieved.
- **Stability:** Every Denka Model 3 cathode offers a stability of better than 3% per hour at 1550°C
- **Interchangeability:** Denka Model3 LaB₆ cathodes are designed as direct replacement for tungsten filaments.

Tip Selection

Standard (Round) Tips

Provided with a 90° cone and 15μ radius round tip.

Flat (Truncated) Tips

Flat tips are recommended for applications where stability and long lifetime are the prime considerations, and where some degree of brightness can be sacrificed. Flat tips are available in eight configurations:

90° Cone Angle	60° Cone Angle
20μ radius	20μ radius
40μ radius	40μ radius
60μ radius	60μ radius
100μ radius	100μ radius

Sharp Tips

Sharp tips are recommended for applications where initial brightness is the foremost consideration and where shorter lifetime can be accepted. Sharp tips are available in two configurations.

60° Cone Angle	60° Cone Angle
5μ radius	10μ radius

Specifications	Flat Tip	Standard (Round) Tip	Sharp Tip
Brightness	About 10 times that of tungsten, 2-5 x 10 ⁶ A/cm ² . Str	About 10 times that of tungsten, 1x10 ⁶ A/cm ² . Str	Twice as bright as standard tips, 2 x 10 ⁶ A/cm ² . Str
Saturation	Monepot at about 1,400°C	Mono spot at about 1,500°C.	Almost the same as standard tips
Crossover	Large (11-13μ)	Small (7-10μ)	Small (7-10μ)
Angular Distribution	3.3 to 10 ⁻² rad	Sharp, 1.6 x 10 ⁻² rad	Sharp, 1.6 x 10 ⁻² rad
Used Temperature	temperature	Low temperature	High temperature.
Lifetime	Long life, usable at low temperatures and crystallized end changes slowly.	Long life but shorter than flat tips.	Short
Operation	Easy, thanks to its large spot size and broad adjusting range.	Not so difficult.	Difficult; Point adjustment needed!
Stability	High, vulnerable to thermal expansion or vibration.	High	Middle, vulnerable to the thermal expansion or vibration. Adjustment is sometimes necessary.
Technology Needed	Ordinary	High	Very high

► Kimball Physics Lanthanum Hexaboride (LaB₆) Cathodes

Features

- **Extended Life** — Thousands of hours in clean vacuum. Guaranteed life (measured in surface loss). Guaranteed against mounting structure failure.
- **Exceptional Stability** — Thermal/Chemical/Electrical. Precision machined carbon mounting. High over-temperature tolerance.
- **High Brightness/Low Energy Spread** — Oriented single crystal. Best-quality/high-purity material.
- **Accurate Microflats** — Superior optics/controlled source size standard diameter available.

For Use In:

- Scanning Electron Microscopes
- Transmission Electron Microscopes
- Electronlithography Systems
- X-Ray Sources

The new improved Kimball Physics Model ES-423E (Extended Life) LaB₆ Cathode is a high performance, resistively heated, thermionic electron source. The improvement stability of the LaB₆ crystal, results in less exposure of LaB₆, which reduces Wehnelt aperture contamination. Its lifetime is in excess of 6 months with continuous operation. Continuous operation at the full operating temperature improves the thermal stability of the gun and hence beam current stability. It is no longer necessary to wait hours for stable beam conditions in order to perform quantitative EEL or EDX measurements.

Specifications

The emitter is machined to 15+/-2µm diameter (standard), microflat alignment to the instrument base can be provided (on request), oriented single- crystal, <100> surface.

Mounted on the end of a single-piece, stress-free, carbon heater rod, held in place by a carbon ferrule.

A high degree of axial symmetry provides great mechanical stability.

The rod has a 100µm slot along the axis, which allows the heating current to go up one side and down the other.

In SEM type instruments, its lifetime is up to 3000–4000 hours In TEM instruments the lifetime can be even longer.

Mounting structure will last more than 10,000 hours.

Chemical reactivity and mechanical drift problems have been eliminated.

Instrument Conditions

While the cathodes can be fitted to virtually any instrument, there are several requirements needed for achieving quality results.

The most important requirement is for clean vacuum, with partial pressures of oxidizing gases being kept below 10⁻⁷ torr in the electron gun. The condition of the cathode itself, along with that of the Wehnelt aperture, may often be used to verify the partial pressures in the gun.

The cathode must be accurately and correctly positioned behind the Wehnelt aperture.

There must be controllable bias resistors which can reach adequately high values; some instruments are limited by values which are too low.

Ordering Information

For most SEMs and TEMs, the standard Styles 90-15 (90° included angle with a 15µm flat) is recommended.

Style 90-15 (90° included angle with a 15µm flat) is recommended for Leica/Cambridge.

Style 90-06 (90° included angle with a 6µm flat) is for high resolution, and selective TEMs. This cathode provides higher brightness, but with some compromise in lifetime.

To Order...

Specify Model: Model ES-423E & Style

- i.e. Style 90-15: Standard Microflat
- Style 90-20: Standard for Leica, Cambridge
- Style 90-20: 90° Angle w/non-standard microflat
- Style 60-06: 60° Angle w/non-standard microflat

Specify Instrument Manufacturer and Model No.

Specify Type of Instrument: SEM, TEM, STEM.

Example

Model ES-423E, Style 90-15 Standard for JEOL 820 TEM

Cat. #: **81080-15**

Cat. #	Description	Qty.

► Applied Physics Technologies Lanthanum Hexaboride (LaB₆) and Cerium Hexaboride (CeB₆) Cathodes

Building the World's Best Cathodes

LaB₆ and CeB₆ cathodes are ideal for many small spot size applications such as SEM, TEM, surface analysis and metrology, and for high current applications such as microwave tubes, lithography, electron-beam welders, X-ray sources and free electron lasers.

Applied Physics Technologies has decades of experience in research, development, and manufacturing of LaB₆ and CeB₆ cathodes.

We can provide the cathodes you need for replacement, OEM, and custom applications.

Lanthanum Hexaboride (LaB₆) and Cerium Hexaboride (CeB₆) Cathodes

The unique properties of hexaboride crystals provide stable electron-emitting media with work functions near 2.65 eV. The low work function yields higher currents at lower cathode temperatures than tungsten, which means greater brightness (or current at the beam focus) and longer cathode life. Typically, these cathodes exhibit 10 times the brightness and more than 10 times the service life of tungsten cathodes. In electron microscope applications, these characteristics translate to more beam current in a smaller spot at the sample, improved resolution, and less frequent cathode replacement.

For applications with large beam spot sizes, where large total current and current density are required, large, flat crystal faces of LaB₆ or CeB₆ can be the cathodes of choice. This regime is unsuitable for point sources such as field emitters, which are unable to provide sufficient total current, and has been thought of as the realm of the dispenser cathode. However, LaB₆ and CeB₆ may be more suitable, being particularly robust and resistant to chemical poisoning. They have modest vacuum requirements and long shelf life, and need only be brought up to operating temperature to provide emission, eliminating the activation procedure required of dispenser cathodes. They can provide long-term, stable operation at current densities up to 50 A/cm², and may be fabricated in a variety of shapes and with many different heating and mounting configurations.

LaB₆ and CeB₆ are the materials of choice for high current cathodes in a variety of advanced and custom applications.

The performance and lifetime of the hexaboride cathode are determined by several factors: vacuum level, cathode temperature, impurity level, crystal orientation, tip shape, and mount design. Vacuum requirements are more stringent for hexaboride emitters than for tungsten in order to minimize carbon contamination. In laboratory tests, CeB₆ has proven to be more

resistant to the negative impact of carbon contamination than LaB₆, which gives it an edge in potential cathode lifetime.

Excessive operating temperatures accelerate evaporation, thus decreasing the life of the cathode. Care must be taken to properly optimize cathode temperature to obtain the required emission without overheating the crystal.

CeB₆ has another advantage over LaB₆ relating to lifetime: its evaporation rate at normal operating temperatures near 1800 K is lower than that of LaB₆. So long as care is taken to operate the cathode below 1850 K, CeB₆ should maintain an optimum tip shape longer, and therefore last longer.

Crystal Growth

Impurities in the crystal will reduce both brightness and lifetime of the emitter because impurities increase both work function and volatility. We grow and fabricate our own high quality, single-crystal materials using a well-defined process called Inert Gas Arc Float Zone Refining. An electric arc melts a pressed-powder stick of LaB₆ or CeB₆ in a controlled atmosphere of inert gas, allowing the liquid-phase zone to freeze onto a selected orientation seed crystal as the arc is moved along the stick. The finished crystal assumes the desired orientation of the seed with less than 30 parts per million by weight metal impurities. Correct melt zone temperature and process speed minimize excessive boron evaporation to achieve the optimum ratio of metal to boron atoms in the grown crystal.

Crystal Orientation

Crystal orientation can be selected to match the cathode design or application. For electron microscopy, the <100> orientation is most desirable due to its brightness and crystal plane symmetry about the optical axis. As the cathode ages, the plane symmetry ensures an even evaporation rate relative to the axis, maintaining a centered, flat emitting surface (see figure). Also, the emission patterns from the symmetric crystal planes will remain consistent as they become more exposed by evaporation, contributing to a brighter beam spot.

A comparison of electron emission characteristics of LaB₆, CeB₆ and Tungsten at typical operating temperatures

	CeB ₆ <100>	LaB ₆ <100>	Tungsten Filament
Brightness (A/cm ² -sr)	107	107	106
Short-Term Beam Current Stability % RMS	<1	<1	<1
Typical Service Life (hr)	1,500+	1000+	30-100
Operating Vacuum (torr)	10 ⁻⁷	10 ⁻⁷	10 ⁻⁵
Work Function (eV)	~2.65	~2.70	4.5
Evaporation Rate (g/cm ² -sec)	1.6 x 10 ⁻⁹	2.2 x 10 ⁻⁹	NA

Cathode Tip Design

The design of the cathode tip is critical for maximum lifetime and optimum performance. Tip design must also match the specific application's requirements for beam current, spot size, and brightness. For electron microscopy, a conical tip with a flat emitting surface at the apex has proven to be the optimum design. With the flat-tipped cone design, changes in both cone angle and flat diameter affect emission characteristics. In general, the small cone angle (60°) results in higher brightness, but a larger angle (90°) provides longer life and easier alignment. Small flat diameters also result in higher brightness plus a smaller source size, but larger flats provide longer lifetimes and more beam current.

These trends allow us to tailor our cathodes to the requirements of practically all thermionic cathode applications. For example, SEM and most transmission electron microscope (TEM) applications are best served by a 90° cone angle and a 16 mm flat tip. This combination provides high brightness, a moderate source size, and very good lifetime. High resolution TEMs require a 60° cone and a 5 mm flat tip for very high brightness and a small source size.

In applications requiring high total current in a large beam spot, a <310> oriented crystal in a "top hat" configuration may be preferred, providing a slightly lower work function and large emitting surface. We excel at developing specialized cathodes for custom applications and research purposes. Contact us for your custom cathode needs.

The "tophat" design cathode provides a large area crystal face electron source for maximum total current.

Hexaboride crystals are grown and purified in an inert gas atmosphere to specified crystal orientations.

The cathode's mount design has a significant impact on performance.

The design must be simple, durable and precise. It must resist any movement of the crystal, despite the high operating temperatures, yet be easy to install and align. We feel we employ the best mount design in the industry, the Mini Vogel Mount.

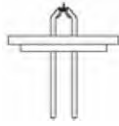

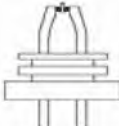

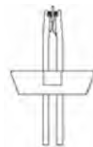

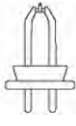

In 1988, FEI of Hillsboro, Oregon introduced the Mini Vogel Mount (MVM) to provide the benefits of the original Vogel mount in a smaller, simpler, and more elegant design. Twin posts are rigidly fixed in a thick ceramic base, and bent towards the center in an inverted "V". The posts are made of a molybdenumrhenium alloy that maintains a high modulus of elasticity even at high temperatures. The posts are spread slightly during assembly to allow placement of small pyrolytic graphite blocks between the crystal and posts. The blocks act as resistive heaters, and help thermally isolate the hot crystal from the highly conductive posts. When the compressive force of the posts is released, the crystal is held with strength and precision. The clamping force of the posts will remain near 5,000 psi for the life of the cathode.

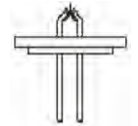

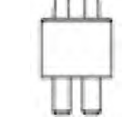

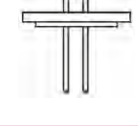

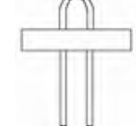

The structure of the MVM is amazingly robust, sustaining reasonable impact without deviating from structural specifications. Because the graphite pads shield evaporation of the crystal in the direction of the clamping force, the emitter crystal can be fully utilized without degradation of the mount. Structural failure of the MVM is not a concern when the cathode is operated within the correct temperature and pressure range. Typically, the beam stability of the Mini Vogel Mount cathode exceeds the specifications of the system in which it runs.

► Apiezon Greases

Apiezon Greases are unique products, designed for use in high vacuum work

- Excellent lubricants.
- High purity, low vapor pressure - non-contamination in analysis.
- The working temperature range of each grease is dependent on the grade that is used.
- Easily applied, easily cleaned off.
- Silicone free. This benefits scientific users because the risk of sample contamination and consequently the risk of interference in analytical techniques such as infra-red or mass spectrometry, etc. is avoided.
- Approved by NASA and NATO

► Apiezon AP100 Grease

Silicone-free ultra high vacuum lubricating grease

Apiezon AP100 Grease is a silicone-free vacuum grease and lubricant. Containing PTFE, AP100 exhibits extremely high levels of lubricity and has been shown to provide eight times the level of lubrication offered by standard, petroleum-based lubricating greases.

Apiezon AP100 is designed for use at ambient temperatures (generally between 10 to 30°C / 50 to 86°F). If you are looking for a grease capable of performing at higher temperatures, Apiezon AP101 or Apiezon H Grease may be more appropriate.

Benefits of Apiezon AP100 Grease

- Has anti-seize properties, making it an effective protector and lubricant in ultra-high vacuums
- Exhibits extremely high levels of lubricity
- Demonstrates an extremely low vapour pressure of 7×10^{-11} Torr at 20°C
- Recommended for use at ambient temperatures
- Does not suffer from contamination problems associated with silicone based greases such as “creep” or “carry over”
- Easy to clean and remove using hot water and an aqueous glassware detergent, hydrocarbon or chlorinated solvents

Applications of Apiezon AP100 Grease

The unique properties of Apiezon AP100 lubricating vacuum grease mean it is frequently used to protect stepping motors and gearboxes from corrosion and abrasion, particularly when they are subjected to high load conditions. AP100 is also used to prevent seizure in stopcocks, taps and small metal fastenings.

The creep resistance of Apiezon AP100 benefits scientific and semiconductor users alike. AP100 helps to increase the accuracy of analytical techniques and improve yields in semiconductor manufacture by contamination avoidance.

In addition, AP100 is used for surface coating applications where silicone contamination can lead to poor surface adhesion and incomplete coating defects

--------------	------------------------	-----------

► Apiezon Grease, Type AP101

Type 101 is an excellent general purpose, hydrocarbon grease, which is intended for a variety of industrial and scientific applications.

- **Anti-Seize Properties:** The AP 101 contains PTFE which confers superior anti-seize properties providing long lasting lubrication and ensuring smooth operation of stop cocks and taps. The value of AP 101 anti-seize properties are not limited to laboratory or glassware use, but are equally effective when used on metal equipment which may be subject to seizure or corrosion.
- **Non silicone Grease:** Being hydrocarbon based AP 101 does not suffer from the problems of “creep” or “carry over” which is traditionally associated with silicone greases. It reduces sample contamination and the risk of interference in analytical techniques such as infra-red and mass spectrometry.
- **Wide temperature range:** It can be used over a very wide range of temperatures, possessing its optimum consistency over the -15 to +150°C temperature range, but is usable down to -40°C and, for limited periods, up to +180°C.
- **Solvent resistant:** Both PTFE and the lithium stearate gel base in AP 101 are insoluble in most solvents. They ensure that AP 101 shows resistance to water, alcohols, ketones and esters. In addition AP 101 resists attack from aqueous acid and alkali solutions, alcoholic alkali solutions and corrosive gases.
- **Under vacuum:** AP 101 exhibits good vacuum properties, down to 10^{-4} torr.
- **Easily remove AP 101 by wiping it with a soft cloth. Any residues of grease can be washed away with an aqueous glassware detergent.**

60706-40	Apiezon Grease AP 101	4 kg

► Apiezon Grease; Type L

Grease L is a petroleum hydrocarbon grease, containing no additives. Very low vapor pressure (@20°C of 8×10^{-11} torr), high vacuum grade. Type L is widely used in the stationary phase of gas liquid chromatography, and may be used on all ground joints in a vacuum system (not for stopcocks). Its solubility is as follows: in Ethanol at 20°C-0.003%; 60°C-0.005%; 100°C-0.011%; 150°C-0.011%. Grease L softens and melts at about 47°C and it is not recommended for joints where temperatures exceed more than 30°C in use. Grease T is recommended for these higher temperatures.

60702	Apiezon Grease L	25g tube
--------------	------------------	----------

➤ Apiezon Greases (continued)

➤ Apiezon Grease; Type M

Similar to grease type L, but it contains more wax. Grease M has an estimated vapor pressure @ 20°C of 2×10^{-9} torr, higher than Type L. Type M is recommended for applications where a grease of moderately low vapor pressure is required; such as for sealing ground joints on the backing side of oil diffusion pumps.

60700 Apiezon Grease M 25g tube

➤ Apiezon Grease, Type N

Similar to Type L and Type M, but Type N grease has a special additive which gives it a tenacious, rubbery consistency and provides an extra cushioning effect which absorbs vibrations in equipment, making N grease invaluable in fragile glass to glass joints, like burette taps, which continually risk fracture. Grease N is widely recognized and recommended as the cryogenic vacuum grease of choice

60701 Apiezon Grease N 25g tube

➤ Apiezon Grease, Type H

Type H grease is designed for high temperatures (-10 to +240°C) in a wide range of applications in both science and industry. With good "friction", grease H is ideal for use with laboratory glassware, but combined with properties of high thermal conductivity, it is the perfect choice for the electronics and space industries where heat sink media require adhesion.

Grease H is a filled hydrocarbon which exhibits excellent thermal conductivity, and strong absorption properties. The capability to absorb greasy or chemical impurities on metal and glass surfaces is a value "tool" required by electronic industries.

60703 Apiezon Grease, Type H 25g tube

➤ Apiezon Grease; Type T

Type T is designed for lubricating glass taps and for general purposes. Has a melting point of 125°C and has an estimated vapor pressure @ 20°C of 5×10^{-9} torr. Although type T is useful at higher temperatures, it can also be used at ambient temperatures.

➤ Apiezon Greases (continued)

➤ Apiezon PFPE 501 Grease

High temperature lubricating vacuum grease, inert

EMS is happy to announce the release of a brand new revolutionary grease specifically for high temperature applications. PFPE 501 is a chemically inert, high temperature and extreme pressure lubricant. With an upper operating temperature of 250°C and vapor pressure of 1.3×10^{-12} at 25°C, it is robust, versatile and can be used for sealing and lubricating under the most extreme operating conditions. This includes environments where aggressive chemicals and strong oxidising agents are regularly used.

Why Use Apiezon PFPE 501 Grease?

- PFPE based
- High temperature lubricant
- For oxygen rich environments
- Ultra high vacuum
- Chemically inert
- Extreme pressure
- Wide temperature range

Benefits of Apiezon PFPE 501 Grease

- Extended equipment life
- High temperature lubricant
- Reduced equipment downtime
- Lower service costs
- Life-time lubrication
- Guaranteed Apiezon quality
- Expert technical support

➤ Apiezon Vacuum Sealing, Mounting, and Etching Waxes

➤ Apiezon Q Compound

Apiezon Q Compound is an effective temporary vacuum sealant that is used as a short term solution in situations which do not allow for the immediate dismantling of a system for repair.

Why Use Apiezon Q Compound?

- Temporary vacuum sealant
- Versatile product suitable for a multitude of uses
- Excellent waterproof medium
- Easy to use and to remove
- 10 year shelf life

➤ Apiezon Wax W

The Apiezon range of waxes features three products including the popular Apiezon Wax W, also known as 'Black Wax'. All three waxes in the Apiezon range can be used as permanent or semi-permanent vacuum sealants or mounting media. Apiezon Wax W is also a perfect etch resist.

Why Use Apiezon Waxes?

- Versatile products suitable for a multitude of uses
- Etch resist (Wax W only)
- High purity combined with powerful "gettering" & clean meltdown properties
- First-rate vapor pressure characteristics
- Excellent waterproof media
- Easy to use and to remove
- 10 year shelf life

Apiezon Waxes and Q Compound Applications

Apiezon Wax W.....Hard Vacuum Sealing/ Mounting Wax, Etch Resist

► **TorrLube® Vacuum Oil and Lubricant**

TorrLube® vacuum lubricants are manufactured to perform better than any other vacuum grease or oil available.

- TorrLube® has no non-metal solids, e.g. silicone ball filters
- TorrLube® has high thermal conductivity to minimize temperature difference between surface exposed to heat flux and heat sink surface
- TorrLube® is extremely stable up to 350°C
- TorrLube is 500 cSt oil at 40°C. TorrLube® has high viscosity so that no fluid flows out between the solid surfaces.

TorrLube® Oil is an extremely pure PFPE (Perfluoropolyalkether) blend which is thoroughly distilled and then filtered through a submicron screen. TorrLube® Oil has the ability to withstand thermal expansion and contraction as well as chemical and mechanical stress, while still maintaining consistent viscosity. These properties make TorrLube® the ideal lubricant for bearings, automated slides, and screws that have a tendency to gall or cold weld while working under extreme conditions.

TorrLube® Extreme Grease is white, odorless, nonflammable, and chemically inert products based on TorrLube® Oil and the most advanced PTFE thickener available. It does not contain Sodium or Iron. TorrLube® Extreme Grease remains stable and will not break down under mechanical stress and lose its ability to hold TorrLube® Oil. TorrLube® Extreme Grease helps prevent sticking, jumping, and mechanical noise, securing smooth, controlled movement.

TorrLube in 1cc syringe – Each syringe contains 1 cc of TorrLube® lubricant with a #22 gauge blunt needle attached for close application. This size is ideal for use in small research units and for maintenance and service tool kits.

Syringes are packaged in a clean room environment and the needles are sealed to prevent contaminant or leakage.

Appearance	White grease

60750-01	TorrLube® 1cc Syringe	each
60750-20	TorrLube® 2 oz Cartridge	each

► **TorrLube® Oil**

A set of two small bottles, each containing 60cc of TorrLube® lubricant. Every bottle comes with a sealed cap. A luer lock cap and a #22 gauge blunt needle are provided for closed application. The bottle set is appropriate for larger manufacturing units and production fabs. Each twin pack of TorrLube® 60cc bottles is sealed to prevent leakage and contamination.

Physical Properties of TorrLube® Oil

60752-02	TorrLube® Oil, 2x 60cc Set	each

► **Dow Corning® Vacuum Grease**

A silicone lubricant for glass-to-glass joints and glass-to-rubber connections. It is resistant to most chemicals and it is inert and heat stable.

60705	Dow Corning Grease	150g tube
--------------	--------------------	-----------

► **Invoil Oils (formerly known as Apiezon Oils)**

Consists of esters or specially selected hydrocarbon fractions. They were developed for vapor-diffusion pump fluids:

- High purity, very low pressure, very stable.
- Pressures lower than 10⁻⁷ torr obtainable
- No need for cold trap.
- Good pumping speed.
- No corrosive deposits or vapors.

Physical Properties of Invoil Oils	Type B	Type BW	Type C
Vapor Pressure, torr @20°C	10 ⁶	10 ⁶	10 ⁷
Boiling Point, °C @ 1 torr	220	225	225
Flash Point (open cup) °F	470	480	510
Pour Point (ASTM) °F	15	10	5
Density, g/ml	@ 20°C	0.872	0.882
	@ 40°C	0.859	0.869
	@ 100°C	7.0	10.1
Viscosity, kinematic, cS	@ 20°C	142	361
	@ 50°C	49.3	98.1
	@ 100°C	7.0	10.1
Coefficient of Expansion per °C over 20-30°C (ASTM)	0.00073	0.00070	0.00069
Thermal Conductivity Btu/in	0.91	0.89	0.96

► **Invoil Oil B**

Good for small or large vapor diffusion pumps. Good pumping speed and high backing pressure. If a cold trap is used, oil B can obtain a higher vacuum than oil C does.

60720	Apiezon Oil B	500ml
--------------	---------------	-------

► **Invoil Oil BW**

A water-white oil with a higher pumping speed than oil B, although all other characteristics are similar to B. Because it has an extremely high purity it is suitable for use in the evacuation of mass spectrometers.

60722	Apiezon Oil BW	500ml
--------------	----------------	-------

► **Invoil Oil C**

Obtains the highest vacuum pressure (10⁻⁷ torr) of all of the oils without the need of a cold trap.

60724	Apiezon Oil C	500ml
--------------	---------------	-------

For all other Oils and Greases see Vacuum Pumps, Accessories and Supplies, page 965 >>>>

► Santovac® 5

A Polymethyl Ether, designed for an ultra high vacuum range: 10^{-10} torr.

Ultra low vapor pressure results in low ultimate pressures; there is no need for a cold trap and it is suitable for diffusion pumps. Santovac 5 may discolor with use but it will maintain its physical properties.

Typical Physical Properties of Santovac® 5

Vapor Pressure, @ 25°C	4 x 10 ⁻¹⁰ torr	
Boiling Point, @ 0.5 torr	275°C	
Density, @ 25°C	1.198	
Viscosity, cS	@ 27°C	1000
	@ 38°C	363
	@ 99°C	13.1
	@ 149°C	4.5
	@ 260°C	1.2
Flash Point (open cup)	288°C	
Pour Point	5 °C	
Autogeneous Ignition Temp.	590° C	
Refractive Index, n _D 25	1.6306

For all other Oils and Greases see Vacuum Pumps, Accessories and Supplies, page 965 >>>>

► Platinum Crucibles

Platinum has excellent resistance to chemical attack by acids and fusion mixtures. This is what has made platinum an essential tool in chemical analysis; flux fusions which are widely used on a routine basis for the preparation of samples for x-ray fluorescence etc.

All crucibles are made from platinum with an approximate weight in grams and an approximate in millimeter with a tolerance of $\pm 5\%$.

Lids are sold separately and in single units.

Crucible Cat. #	Lid Cat. #	Capacity ml	C mm	A mm	D mm	Base Thickness	Standard Weight	Lid Weight	Qty

Thinning

**Electron
Microscopy
Sciences**

This section is dedicated to the accessories and consumables from the Omniprobe family of Nanomanipulation Systems, including: **AutoProbe™ 200**, **AutoProbe™ AutoProbe™ 250, 300**, **Short-Cut™**, **OmniGIS™** and **SST™ 400-1**

► Probe Tips

► Tungsten/Nickel Probe Tips

Custom tip designed with a nickel tube shank and tungsten tip. Tip radius is $0.5\mu\text{m}$ with 13° taper angle for maximum lifetime service.

75960-01 Tungsten/Nickel Probe Tip 10/bx

► Tungsten Probe Tips

Custom tip designed from tungsten. Tip radius is $0.5\mu\text{m}$ with 13° taper angle for maximum lifetime service.

75960-02 All Tungsten Probe Tip 10/bx

► In-Situ Probe Tips

Custom tungsten tip with a stainless steel shank, for use with AutoProbe™ 300, in-situ probe tip exchange systems and Short-Cut™. Tip radius is $0.5\mu\text{m}$ with $8-10^\circ$ taper angle.

[This tip is also Short-Cut™ compatible]

75960-03 in-Situ Probe Tip 20/bx

► Xtreme Access 1/2" Tungsten Probe Tips

Custom tip designed from tungsten. Tip radius is $< 0.5\mu\text{m}$ with 13° taper angle for maximum lifetime service.

75960-04 XA 1/2" Tungsten Probe Tip 10/bx

► Autoprobe 250 Tungsten Probe Tips

Custom tip designed from tungsten. Tip radius is $< 0.5\mu\text{m}$ with 6° taper angle for maximum lifetime service. [Compatible with Short-Cut™ system for direct conversion to TEM grid]

75960-05 AP250 Tungsten Probe Tip 10/bx

► Xtreme Access Short-Cut™ Probe Tips

Custom tip designed from tungsten. Tip radius is $< 0.5\mu\text{m}$ with 6° taper angle for maximum lifetime service. [Compatible with Short-Cut™ system for direct conversion to TEM grid]

75960-06 XA Short Cut Tungsten Probe Tip 10/bx

► Xtreme Access Compatible

► XA Probe Point Holder

Xtreme Access Probe Tip Holder for use with 1/2" tungsten probe tip, #75960-04 and #75960-06. Comes with a storage vessel.

75961-10 XA Probe Point Holder each

► AP250 Probe Tip Holder

AutoProbe™ 250 probe tip holder uses the tungsten probe tip 75960-05. Compatible with the Short-Cut™ for direct conversion to TEM Grid. Comes with a storage vial and hand!

75961-05 AP250 Probe Tip Holder each

► XA Short-Cut™ Probe Tips

Custom tip designed from tungsten. Tip radius is $< 0.5\mu\text{m}$ with 6° taper angle for maximum lifetime service. [Compatible with Short-Cut™ system for direct conversion to a TEM grid]

75960-06 AP250 Tungsten Probe Tip 10/bx

► End Effector Type 3 (Straight)

Straight End Effector for Xtreme Access probe shaft. Available in two versions: Copper (Cu) and Molybdenum (Mo)

75981-Cu Cu Straight End Effector Type 3 12/bx

► **Omni Grids**

► **Copper Lift-Out Grids**

Custom copper lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations with both vertical bars and "V" shaped attachment surfaces. 3mm diameter.

75964-01 Copper Lift-Out Grids 100/vial

► **Molybdenum Lift-Out Grids**

Custom molybdenum lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations with both vertical bars and "V" shaped attachment surfaces. 3mm diameter.

75964-02 Molybdenum Lift-Out Grids 25/vial

► **Beryllium Haft-Ring Grids**

Custom beryllium haft ring grids. 3mm diameter.

75964-03 Beryllium Haft Ring Grids 10/pk

► **Copper 5-Post Lift-Out Grids**

Custom copper 5-post lift-out grids specially designed for in-situ lift-out. These grids include multiple indexed mounting locations, all with vertical bars attachment surfaces. Now with lower profile sides for easier access to outermost posts. 3mm diameter.

75964-04 Copper 5-Post Lift-Out Grids 100/vial

► **Copper 4-Post Lift-Out Grids**

Custom copper 4-post lift-out grids specially designed for in-situ lift-out. These grids include multiple indexed mounting locations, two with vertical bars attachment surfaces and two with "V" shaped alignment surfaces. Sides have lower profile for easier access to outermost posts. 3mm diameter.

75964-05 Copper 4-Post Lift-Out Grids 100/vial

► **Molybdenum 4-Post Lift-Out Grids**

Custom Molybdenum 4-post lift-out grids specially designed for in-situ lift-out. These grids include multiple indexed mounting locations, two with vertical bars attachment surfaces and two with "V" shaped alignment surfaces. Sides have lower profile for easier access to outermost posts. 3mm diameter.

75964-06 Mo 4-Post Lift-Out Grids 25/vial

► **Copper 3-Post Lift-Out Grids, Side Access**

3 post copper lift-out grids, similar to 75964-01, in design but 35 micron thick with 1 edge lower for easy access. Packaged in glass vials

75964-07 Copper 3-Post Lift-Out Grids, Side Access 100/vial

► **Copper 3-Post Lift-Out Grids, Shallow Downset**

3 post copper lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations with both vertical bar and "V" shaped attachment surfaces. These grids have a shallower downset and slightly wider center post than 75964-01. Packaged in glass vials.

75964-08 Copper 3-Post Lift-Out Grids, Shallow Downset 100/box

► **Copper 5-Post Lift-Out Grids**

5 post copper lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations, all with vertical bar attachment surfaces. Now with lower profile sides for easier access to outermost posts. 3mm dia. Packaged in glass vials.

75964-09 Copper 5-Post Lift-Out Grids 100/box

► **Copper 4-Post Lift-Out Grids**

4 post copper lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations, two with vertical bar attachment surfaces and two with "V" shaped alignment surfaces. Sides have lower profile for easier access to outermost posts. 3mm dia. Packaged in plastic vials.

75964-10 Copper 4-Post Lift-Out Grids 100/box

► **Omni Grid Storage Box**

Storage box for 100 standard or haft grids—3 mm diameter – TEM grids. Box comes complete with base, lid and clips.

75965-01 Grid Storage Box each

Omniprobe TEM Grid Comparison Chart

Part Number	Number of Posts	Material	Thickness (Nominal) Microns	Nominal Post Downset Microns	Unique Feature
75964-01	3	Copper	30	10	—
75964-02	3	Molybdenum	30	10 Top Downset only	—

75964-10	4	Copper	30	5	—

► Grid & Sample Holders

► TEM Grid Dual Holders

Post Base TEM Grid Holder. Available in two versions: stainless steel (SS—very slightly magnetic), can affect imaging in UHS mode; and aluminum (Al-non-magnetic). Short post – standard is 1/8" (3.2mm) diameter x 0.15" (4mm) length.

75968-SS	EM, Grid Dual Holder, SS	each
75968-AI	TEM, Grid Dual Holder, Al	each

► TEM Grid & Sample Holders

TEM grid holder with stations for 2 TEM grids and 2 sample stubs. Available in two versions: stainless steel (SS – very slightly magnetic), and aluminum (Al-non-magnetic). Long post – standard is 1/8" (3.2mm) diameter x 0.32" (8.1mm) length. Comes with 2 sample stubs.

75969-SS	TEM Grid & Sample Holder, SS	each
75969-AI	TEM Grid & Sample Holder, Al	each

► Single Stub & Two TEM Grids Holders

This station is meant for 2 TEM grids and 1 sample Pin Stub. Available in two versions: Stainless Steel (SS – very slightly magnetic), and Aluminum (Al – non-magnetic). Long post – standard is 1/8" (3.2mm) diameter x 0.32" (8.1mm) length. Comes with an aluminum sample stub.

75971-SS	TEM Grid & Sample Holder, SS	each
75971-AI	TEM Grid & Sample Holder, Al	each

► Single TEM Grid Holders & Holder Base

Single TEM Grid Holder is made from aluminum with steel spring, holds one 3 mm TEM grid by the spring loaded vise, and has a raised edge which protects the sample from accidental damage. The holder has a 1/8" (3.2 mm) diameter x 0.32" pin (8.1 mm) length pin. It fits most standard pin stub holders. The Sample Holder Base securely holds the Single TEM Grid Holder above, under a stereomicroscope and permits viewing from two angles without changing focus.

75970-01	Single TEM Grid Holder	each
75970-50	Single TEM Grid Holder Base	each

► Short-Cut™ Coupons

► Frontside Thinning, 45°

Frontside Thinning, 45°, TEM sample grid coupon designed specially for use in the Short-Cut™ tool. The center portion is a standard 3 mm grid into which the sample loaded needle is swaged and cut 45°. Available in two versions: One is made from pure copper and the other is molybdenum coated copper.

75974-Cu	Frontside Thinning Copper, 45°	20/pk
75974-Mo	Frontside Thinning Mo/Cu, 45°	20/pk

► Backside Thinning, 45°

Backside Thinning, 45°, TEM sample grid coupon designed specially for use in the Short-Cut™ tool. The center portion is a standard 3 mm grid into which the sample loaded needle is swaged and cut 45°. Available in two versions: One made from pure copper and the other is molybdenum coated copper.

75975-Cu	Backside Thinning Copper, 45°	20/pk
75975-Mo	Backside Thinning Mo/Cu, 45°	20/pk

► Frontside Thinning, 26.5°

Frontside Thinning, 26.5°, TEM sample grid coupon designed specially for use in the Short-Cut™ tool. The center portion is a standard 3 mm grid into which the sample loaded needle is swaged and cut 26.5°. Available in two versions: One made from pure copper and the other is molybdenum coated copper.

75976-Cu	Frontside Thinning Copper, 26.5°	20/pk
75976-Mo	Frontside Thinning Mo/Cu, 26.5°	20/pk

► Backside Thinning, 26.5°

Backside Thinning, 26.5°, TEM sample grid coupon designed specially for use in the Short-Cut™ tool. The center portion is a standard 3 mm grid into which the sample loaded needle is swaged and cut 26.5°. Available in two versions: One made from pure copper and the other is molybdenum coated copper.

75977-Cu	Backside Thinning Copper, 26.5°	20/pk
75977-Mo	Backside Thinning Mo/Cu, 26.5°	20/pk

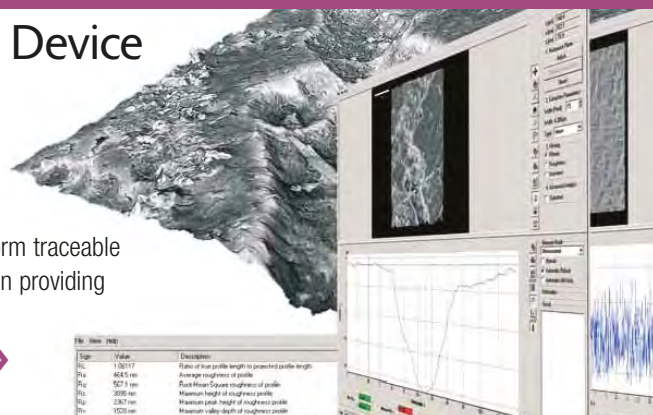

Turn Your SEM into a 3D Measurement Device

MeX 3d Surface Metrology With The SEM

MeX is a stand alone software package that turns any SEM with digital imaging into a true surface metrology device.

Using stereoscopic images the software automatically retrieves 3D information and presents a highly accurate, robust and dense 3D dataset which is then used to perform traceable metrology examination. The results are obtained irrespective of the SEM magnification providing metrology at macro and micro levels.

For more information, see pages 670–675. >>>>

► MAC – Reference Standards for X-Ray Microanalysis

We have approximately 200 standard materials to choose from. All of our standards are suitable for electron-beam energy dispersive or wavelength dispersive X-ray microanalysis systems. All of our standards are polished to a 0.25 micron diamond finish and carbon coated. They are supplied with fully authenticated certificates of analyses and a location map for standard identification. A Faraday Cup, for accurate specimen current measurements, is available as an optional extra on all mounts. The standards are available in different sizes of brass holders:

- 25mm or 32mm diameter, containing up to 60 standards of your choice.
- Carousels, 13mm diameter blocks (to fit pin stubs), and single standards of 5mm, 3mm, 2mm diameter, are also available.
- Specials can be “tailor-made” to suit individual needs and specific stage configurations.

► Customized Multi-Element Standards

(your choice from our list of compound, pure metal, NBS, or BAS Standards, etc.).

Pure metals and compounds mounted in brass blocks

Cat.#	Description	Pack	Cat.#	Description	Pack
80070-05	Block of 5 Standards	5/set	80070-30	Block of 30 Standards	30/set

All compound, BAS standards, Austenitic Steels, and NBS standards are available as single standards or grains.

➤ **MAC – Reference Standards for X-Ray Microanalysis (continued)**

➤ **Special Holders**

➤ **Type 1**

JSM 35 Standard Holder in brass, holds up to 21 standards of your choice.

80073-01 21 Standards for JSM 35 set

➤ **Type 2**

JEOL 100CX Standard Holder in brass for use in the STEM mode. Holds up to 7 standards of your choice.

80073-02 7 Standards for JEOL 100CX set

➤ **Type 3**

JXA 733 Standard Holder in brass; holds up to 12 standards of your choice.

80073-03 12 Standards for JXA 733 set

➤ **Type 4**

JEOL Temscan bulk Standard Holder made from plastic; holds 3-5 standards, fitted in a JEOL BR1 holder.

80073-04 3-5 Standard for JEOL Temscan set

➤ **MAC: X-Ray Microanalysis Reference Standards for Transmission Electron Microscopy**

We offer an extensive range of fully authenticated compounds and single element standards for the calibration of energy disperse X-ray detectors that are used in conjunction with transmission electron microscopes.

The standards available at present are:

- Any selection from Thin Film compound standards
- Universal Set of 25 compound standards
- Rare Earth Set
- Thin Foil Standards Set for S.T.E.M.

➤ **Thin Film Standards**

These standards are supplied as fine powders that are dispersed onto holey-carbon films and are selected from the range of certified natural and synthetic compounds already in use by us to prepare bulk analysis standards.

The holey-carbon films are supported by a 3.05mm copper grid (400 mesh). However, for analysis under critical conditions, we can supply alternative grid materials, such as beryllium or carbon composite. If requested, we can disperse the standards onto uncoated grids.

Universal Set of Thin Film Standards:

Ag ₂ Te	BaSO ₄	Be ₃ Al ₂ Si ₆ O ₁₈	Bi ₂ Se ₃	CaMoO ₄
CaWO ₄	CdTe	CeAl ₂	Cu ₂ S	FeCr ₂ O ₄
GaAs	Gd ₃ Ga ₅ O ₁₂	HgTe	InP	InSb
KAISi ₃ O ₈	LaB ₆	Li ₂ Ta ₂ O ₆	(Mg,Fe) ₂ SiO ₄	Na ₃ AlF ₆
Pb-Ge glass	SrTiO ₃	TlBr	ZnS	ZrSiO ₄

80080-25 Thin Film Universal Set 25/set

Thin Film Standards of your choice (from list) onto a 3.05mm diameter copper grid.

Cat #	Description	Pack
80080-01	1 Thin Film Standard	each
80080-05	5 Thin Film Standards	5/set
80080-10	10 Thin Film Standards	10/set
80080-15	15 Thin Film Standards	15/set
80080-20	20 Thin Film Standards	20/set
80080-30	30 Thin Film Standards	30/set
80080-40	40 Thin Film Standards	40/set
80080-50	50 Thin Film Standards	50/set

Note: For grid materials, other than copper, pricing is on request and delivery may be delayed.

➤ **Thin Foils for S.T.E.M.**

We have a selection of 25 high purity thin foils, 0.1mm thick, 3mm diameter to fit into TEM grid holders for use in the STEM mode. They are polished to a 3 micron diamond finish, and come in a variety of pure metals:

Thin Foils for S.T.E.M.:

Aluminum	Cadmium	Cobalt	Copper	Gold
Hafnium	Indium	Iron	Magnesium	Molybdenum
Nickel	Niobium	Palladium	Platinum	Rhodium
Silver	Tantalum	Tin	Titanium	Tungsten
Vanadium	Yttrium	Zinc	Zirconium	AISI 316 S/S

80082-25 Thin Foil Standards for S.T.E.M. 25/set

➤ **Rare Earth Set**

This set consists of 14 rare earth compounds dispersed onto holey carbon films (3.05mm, 400# copper grid).

Rare Earth Set:

LaF ₃	CeAl ₂	PrF ₃	NdF ₃	SmF ₃	EuF ₃	GdF ₃
TbF ₃	DyF ₃	HoF ₃	ErF ₃	TmF ₃	YbF ₃	LuF ₃

80086-14 Rare Earth Set 14/set

Special Ordering Information:

Please supply the following information when ordering:

- 1) Make and model of instrument in which standards are to be used.
- 2) Specify quantity and standard materials required.
- 3) Outer diameter of block or individual required.
- 4) Inner diameter where appropriate.
- 5) Thickness of block (5mm normally supplied).
- 6) Whether a Faraday Cup is required.
- 7) Any limitation of the x- and y- movements of the stage.
- 8) List of element Standards.

Delivery is normally 2-3 weeks.

► MAC – Reference Materials for Auger Electron Microscopy

MAC has developed multi-element blocks of reference materials suitable for the compilation of a reference library of Auger sensitivity factors when used with the Auger Electron Microscope (AES).

Auger Electron: one of the electrons ejected from an atom as a result of the internal conversion of its own X-ray in the auger effect. **Auger Effect:** a process in which an atom singly ionized by emitting one electron with energy in the X-ray range instead of emitting the usual X-ray photon on recovery undergoes a transition in which a second electron is emitted.

A carefully selected range of elements or compounds will enable the surface analyst to compile a valuable reference library of spectra for those materials of specific interest to his field of study. AES is of particular value in the investigation of the surface chemistry of electronic materials. A set of 33 relevant reference materials is designed for this purpose.

A Faraday Cup, for the accurate measurement of specimen current, is available as an option on all reference blocks.

Multi-element blocks containing up to 50 reference materials can be made to suit the configuration of the most instruments but, the actual number of materials and the shape and size of the reference block is determined by the physical limitations imposed by the specimen holder and chamber. The reference material each has an exposed area about 2 square mm.

Each block of reference material is made from AISI 304 grade austenitic stainless steel, set with elements and compounds of your choice and polished to a ¼ micron diamond finish. All blocks are supplied with certificates of analysis and a map showing the locations of the reference materials. The design of the reference blocks for AES is based upon that used for the production of our already established range of electron probes X-ray microanalysis (EPMA) standard blocks. For surface analysis in ultra-high vacuum (UHV) environments, the design of the AES blocks has three significant differences over the EPMA blocks:

- For EPMA, the reference standards are set into drilled brass blocks. However, for UHV, the brass would outgas, so non-magnetic stainless steel is used for the AES reference blocks.
- There is no coating of electrically conductive carbon on the AES blocks. For EPMA, this coating is needed to neutralize any electron beam induced charge.
- EPMA standards are mounted using epoxy resin, which would rapidly outgas under UHV conditions. The AES reference blocks are set with Wood's Fusible Metal. This is an alloy of bismuth, lead, tin, and cadmium.

Wood's Metal, being electrically conductive, also serves as an electrical connection between the reference material and the stainless steel block thereby dissipating any electrical charge. However, some of the reference materials are electrical insulators, so there must be charge neutralized using a high specimen tilt angle or a lower primary beam accelerating potential.

The results of using Wood's Fusible Metal as a mounting compound as follows:

Out Gassing

The chamber base pressure immediately prior to block admission was 6.4×10^{-10} bar. After 24 hours, the chamber pressure was 8.0×10^{-10} bar. This is the pressure that would be expected for a typical sample. Thus, the Wood's Metal is acceptable as a mounting compound for the blocks of reference materials.

Electron Beam Damage

No appreciable electron beam induced damage of the Wood's Metal was noted despite prolonged exposure to a beam of 10kV and 0.3 micro Amps.

Contamination

After the removal of Atmospheric contamination from the reference materials using a rastered argon ion gun, no evidence of cross-contamination by the Wood's Metal was found above a detection limit of 1 atomic weight %.

WARNING: The block of reference materials should not be baked prior to analysis. Wood's Metal melts at about 70°C and also, because of its high vapor pressure, cadmium vapor would be liberated into the specimen chamber.

A comprehensive library of spectra could be used to establish the relative contribution of various elements in an unknown sample by the application of a peak stripping routine.

For those AES instruments equipped with a solid state energy dispersive X-ray detector, a multi-element block of reference materials will enable the analyst to calibrate the E.D. system. (The problem associated with the charging of any electrically insulating materials must be taken into consideration before attempting this calibration). This ability to analyze an unknown sample using the E.D. system to gain prior knowledge of the elemental composition will ensure that the correct peak positions are set before depth profiling by AES.

Acknowledgment: The investigation was carried out on a JEOL-10S by Dr. M.D. Hill of British Telecom Research Laboratories, Martlesham Heath, Suffolk.

Ordering Information

Please supply the following information when ordering:

- 1) Make and model of instrument in which the reference materials are to be used.
- 2) Specify quantity and reference materials required.
- 3) Dimensions of the block (with drawing is preferred).
- 4) Whether a Faraday Cup is required.
- 5) Any limitation of the X and Y movements of the stage.

80095-MINA Mineral Block, 25 mm Diameter Set

80095-MINB Mineral Block, 32 mm Diameter Set

► D. Rare Earth (REE-Glass) Block:

The set is comprised of 15 standards, 25mm diameter block:

Y	Pr	Dy	Er	Ce	Eu	Ho	Tm	La
Sm	Gd	Yb	Nd	Tb	Lu			

80095-REG 15 Rare Earth Ree-Glass Block Set

► E. Rare Earth Block:

The set is comprised of 18 standards:

LaB ₆	NdF ₃	TbF ₃	ErF ₃	LaF ₃	SmF ₃	TbSi ₂	Tm	CeAl ₂
EuF ₃	DyF ₃	TmSi ₂	PrF ₃	GdF ₃	HoF ₃	YbF ₃	LuF ₃	LuSi ₂

80095-RE25 18 Rare Earth, 25mm Dia. Block Set

80095-RE32 18 Rare Earth, 32mm Dia. Block Set

► F. Semi-Conductor Block:

The set is comprised of 21 materials:

B	Si	Cu ₂ S	Ge	InSb	C	CaF ₂	ZnS	Ag ₂ S
HgTe	Mg ₂ Sn	FeSi ₂	GaP	CdS	PbTe	Al ₂ SiO ₅	FeS ₂	GaAs
InP	Bi ₂ Se ₃	Bi ₂ Te ₃						

80095-SC25 21 Semi-Conductor Materials 25mm Dia. each

80095-SC32 21 Semi-Conductor Materials 32mm Dia. each

► G. Biological Block:

The set is comprised of 18 materials with Faraday cup:

BN	Al	CaCO ₃	FeS ₂	BaSO ₄	C	SiO ₂	CaSO ₄	Se
Bi	NaCl	KCl	Ti	InP	MgO	KBr	V	BaF ₂
Faraday Cup								

80095-BI025 18 Biological Materials, 25mm Dia. Set

80095-BI032 18 Biological Materials, 32mm Dia. Set

► H. 42 Standard Universal Block:

The block is comprised of 42 materials:

Jade	Fe	SeF ₂	InAs	Ir	MgO	FeS ₂	Y	Sn
Pt	Al ₂ O ₃	Co	Zr	Sb	Au	Ortho	Ni	Nb
BaF ₂	HgTe	Wollas	Cu	Mo	LaB ₆	PbTe	Ti	Zn
Rh	CeAl ₂	Bi	V	GaP	Pd	Hf	Cr	Ge
Ag	Ta	Mn	Se	Cd	W			

80095-U25 42 Standard Universal, 25mm Dia Block Set

80095-U32 42 Standard Universal, 32mm Dia Block Set

► I/ 45 Standard + Faraday Cup Universal Block

The block is comprised of 45 materials and Faraday Cup:

B	V	GaP	Pd	Hf	BN	Cr	Ge	Ag
Ta	C	Mn	Se	Cd	W	Jade	Fe	SrF ₂
InAs	Ir	MgO	FeS ₂	Y	Sn	Pt	Al ₂ O ₃	Co
Zr	Sb	Au	Ortho	Ni	Nb	BaF ₂	HgTe	Wollas
Cu	Mo	LaB ₆	PbTe	Ti	Zn	Rh	CeAl ₂	Bi
Faraday Cup								

80095-UF25 45 Standard + FC, 25mm Dia Block Set

80095-UF32 45 Standard + FC, 32mm Dia Block Set

► J. 37 Standard + Faraday Cup

The block is comprised of 37 materials and a faraday cup.

B	Cr	GaP	InAs	Au	C	Mn	SrF ₂	Sn
PbTe	MgO	Fe	Zr	Sb	Bi	Albite	FeS ₂	Nb
BaF ₂	C	Si	Co	Mo	Hf	Al ₂ O ₃	Ortho	Ni
Pd	Ta	Wollas	Cu	Ag	W	Ti	Zn	Cd
Pt	Faraday Cup							

80070-37 37 Standard and FC Dia Block Set 25mm each

80070-37A 37 Standard and FC Dia Block Set 32mm each

► K. 55 Standard+ Faraday Cup

The block is comprised of 55 standards and a faraday cup

BEI	Si ₃ N ₄	Cr	GaP	Pd	Hf	Bi	B	SiO ₂
Mn	Ge	Ag	Ta	BN	Ortho	Fe	Se	Cd
PbTe	C	KBr	Fe ₃ C	SrF ₂	InAs	W	Albite	CaF ₂
FeS ₂	Y	Sn	Re	NaCl	Woll	Co	Zr	Sb

80086-30 Sulphide Minerals/Oxide Heavy Metals Standards Block each

► Quality Control Testing Standards

A new product that allows the user of the Scanning Electron Microscope to check the performance of their instrument to make sure that it is working within the manufacturer's specification.

A useful tool to all Scanning Electron Microscope users such as Researchers, Technologists, Quality Assurance Departments, and SEM. users with Energy Dispersive or Wavelength Dispersive X-ray systems fitted, because it enables them to readily assess the state of their instrument.

- 1. STANDARDS** — Co (Cobalt) is compulsory for checking Energy Dispersive analyzers. The customer can choose any other five from our lists, with the exception of the SRM 481, SRM 482 and SRM 1872. (see pages 198-199) for complete list)
- 2. DUPLEX BRASS** — Used for checking the contrast efficiency of Back Scattered detectors and it is capable of detecting two major copper/zinc phases of 0.1 atomic number difference.
- 3. FARADAY CAGE** — A Faraday cage is used for measuring the current of the beam at the specimen plane. The beam of electrons is focused inside the hole by increasing the magnification so that when the hole fills the screen all the electrons are trapped and a true measure of current is achieved. The Hole size in FC aperture — 150 microns.
- 4. S168T** — Is a sample of gold crystals on a carbon background which is useful for checking the performance of the SEM under high-resolution conditions i.e. finer than a 10 micron probe.
- 5. S1930** — Silicon test specimen with squares of periodicity 9.9 micrometers lines about 1.9 micrometers wide which has formed by electron beam lithography - used for magnification calibration and assessing image distribution.

All items 1 through 5 above (QCT A) can be mounted on a block 25mm diameter x 5mm thick

A larger version of the above is available with the following additions:

- (a) S168U Gold on Carbon used for low KV resolution check.
- (b) 1000 mesh and a 2000 mesh grid for magnification calibration of Scanning Electron Microscope.

This larger (QCT B) version is mounted on a brass block 32mm diameter x 5mm thick.

Quality Control Test Set A

80150-25 Quality Control Test Set A set

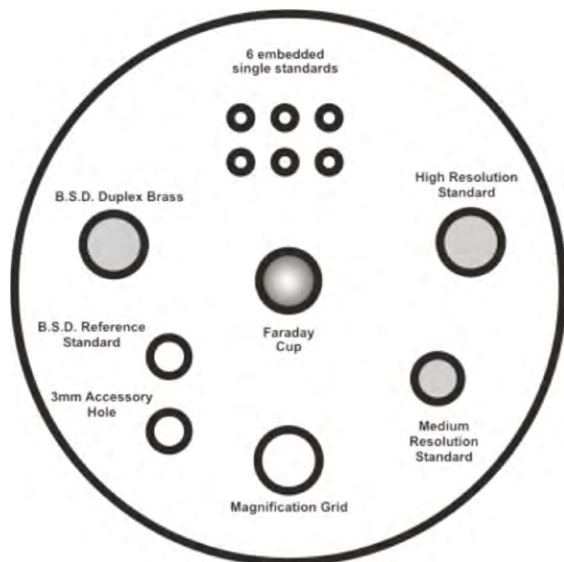

Quality Control Test Set B

80150-32 Quality Control Test Set B set

► Standard Test Specimen

The STANDARD TEST SPECIMEN keeps the Scanning Electron Microscope up to peak operating conditions. It is available in three models.

1. Three formats: *Metallurgical*
Biological
Geological

2. **32mm Diameter Brass Block** consisting of 6 standards. One being Cobalt the remainder is the customer's choice. (see pages 198-199 for list)

3. **Faraday cage.**

4. **B.S.D. Duplex Brass Reference Standard at No. Difference 0.1.**

5. **Resolution Grid** either High or Medium.

6. **Test Specimen for Magnification Calibration.**

7. **Certificate Booklet.**

80154-00 Standard Test Specimen set

► MAC – Repolishing Service

Every care has been taken with the production of your standards. Some materials (i.e. water soluble) can deteriorate rapidly if moisture is present. The materials used most readily can become contaminated over time. It is recommended that the standards are returned to us for repolishing and refurbishment every two years.

Please call for pricing on our refurbishment service.

► SEM Sample Holder

Custom Made to Your Choice!

The Sample Holder is perfect for keeping all important SEM test specimens together. All specimens can be individually and easily removed at any time for use.

The brass sample holder is 50mm diameter x 8mm thick and comes in MAC's standards presentation box.

It accommodates the following:

1. **A 25mm or 32mm Diameter x 5mm Thick Brass Block** containing your Analytical Standards, or other smaller sizes if required.

2. **Duplex Brass Single Standard**

Used for checking the contrast efficiency.

3. **Ni/Cu B.S.D. Single Standard.**

4. **Faraday Cage**

For measuring the current of the beam at the specimen plane.

5. **E.D. Test Standards**

Three standards of your choice for E.D. test set up of calibration center.

6. **Magnification Calibration Standard**

Used for magnification calibration and assessing image distortion.

7. **Resolution Standards**

High and Low resolution standards for checking the performance of the S.E.M. under high resolution conditions.

► Diagnostic Specimen Mailing Systems

These ready-to-use combination/triple packaging kits, have been tested and certified for transport of diagnostic shipments as defined by the applicable regulations, in compliance with IATA Packaging Instruction 650, US, Postal Service and DOT regulations.

Each kit includes: approved 10 ml specimen tubes; leak-resistant foam shippers that secure and protect 95kPa-certified specimen tubes; absorbent material—sufficient to absorb complete contents of approved primary receptacles filed with blood; waterproof tape; leak-proof pressure-lock poly bag; corrugated shipping carton; UN3373 Biological Substance label and step-by-step instruction sheet.

Model 473

outer dimensions: 5½" x 4" x 2"

Model 472

outer dimensions: 10½" x 5½" x 3"

Cat. #	Model	Holds	Includes	Qty
61510-73	473	3 x 10 ml tubes	Tubes, EPS mailer & lid, absorbent material, water proof tape, Corrugated shipping carton, press-lock poly bag, UN3373 label & instruction sheet	3 set
61510-72	472	8 x10 ml tubes		5 set

► Replacement Parts for Model 473 & 472:

Cat. #	Description	Qty
61510-76	For Model 473: Model 476 EPS mailer – 3 tube specimen mailer foam	3/pk
61510-70	For Model 472: Model 470 EPS mailer – 8 tube specimen mailer foam	10/pk

► Accessories for Model 473 & 472:

Pack includes: tubes, absorbent material, waterproof tape, press-lock poly bag, 200-lb corrugated shipping carton, and instructions

Cat. #	Description	Qty
61510-74T	For model 473: Model 474T accessory pack	3 sets
61510-71T	For model 472: Model 471T accessory pack	5 sets

► Flexible Mailers (Without Tubes)

Complies fully with US Postal Service, DOT and IATA regulations for transport of clinical and diagnostic specimens (UN3373) by air or ground; Domestic Mail Manual Part 8.6; Title 49 CFR, Part 173, 199; and IATA Packing Instruction 650. Includes all required secondary and outer packaging components. Users provide only leak-proof specimen containers (primary receptacles), such as tubes, vials, cups, etc. Accommodates any size and quantity of specimen containers that fit inside the flexible secondary envelope with required absorbent material. Maximum capacity is 300 ml or less.

*Accessories kit for Model 570 & 571

CytoSep™ Family

The CytoSep™ Family is a series of Cytology Funnel sample chambers specially designed to concentrate cells into thin layer preparation.

These Cytology Funnels are disposable and manufactured to use with numerous major models, such as Shandon Cytospin™ 4 Cyto-centrifuge, the Sakura Cyto-Tek™ Cyto-centrifuge, the Hettich Cyto-System. They are safer than reusable sample chambers and lower your risk of contamination to pathologic samples.

For more information, see pages 548–549 >>>>

► **LabMailer – ThermoSafe®**

Maximum breakage protection for known non-hazardous blood, serum, tissue, and other specimens. Accommodates VacuTainer® Microtainer® and other collection/transport tubes. Available in multi-tube, slide, and tube/slide combinations Lightweight polystyrene foam construction saves postage. Reusable and recyclable. (® is trademark of Becton Dickinson).

► **Histopathology Mailer**

This versatile combination mailer carries 10 vials, 2 slides packets, or 5 vials and 1 slide packet. Suitable use with Model 365 mailing sleeve

Cat. #	Description	Qty
61513-94	Model 394 Histopathology Mailer	10/pk

► **Drug Test Kit Mailer**

All in one, easy to use drug test mailing system that meets postal and courier service regulations for non-hazardous clinical specimens.

Kit consists of:

- 90 ml Specimen Bottle, Screw Top Cap and Temperature Indication Label 1 1/4" dia. X3"
- Pad of Absorbent Material 4" x 2 1/4"
- Press-Lock Plastic Bag, 5 1/8" x 9 1/8"
- Model 601, I.D. 6" x 3" x 2 1/2"; O.D. 7" x 4" x 3 1/2", 1/2" Wall
- Model 602, I.D. 6" x 3" x 2 1/2"; O.D. 7" x 4" x 3 1/2", 1/2" Wall
- Security Seal: 7" long x 1" wide

Magnifying Lights: Green-Lite™

EMS is proud to introduce the next generation of Magnifying Lights

Equipped with next generation, surface mount LEDs, these innovative designs create the new standard for illuminated magnifiers. Your investment in new technology quickly pays for itself through energy savings.

Made in the USA.

For more information, see page 890 >>>>

► **Mini Mailers for Temperature Sensitive Shipment**

- Compact protection for temperature sensitive shipments, ideal for serums, tissues, and reagents
- Accommodate tubes, vials, ampoules, small bottles, and tissue flasks with space for refrigerants
- Insulating, thick wall polystyrene foam construction
- Walls on model 440 are 1" thick; walls on model 312 are 1½" thick.

Cat. #	Model	Dimensions		Wall Thickness	Qty / Pk
		Inner	Outer

► Infectious Shippers – ThermoSafe®

■ Meet US Dept of Transportation (DOT) and IATA requirement for transporting infectious substances (UN2814 and UN 2900)

■ 4 Models – Accommodate shipments from 4-60 6 tubes/vials

■ Pre-assembled packaging includes everything needed for shipping infectious agents in accordance with DOT Regulation 49CFR Parts 171 to 178 and IATA Packaging Instructions 602.

Note: Compliance with UN/DOT regulations governing shipments of infectious substances in these approved shippers is contingent on the use of all supplied components. The shipper is ultimately responsible for determining the suitability of packaging for use with contents. Consult appropriate regulations.

"infecon" is a Trademark of Com-Pac International, Inc.

► Infectious Shipper – Model 630

ThermoSafe shippers include EPS foam container, flexible foam insert, clear plastic press-lock bag, secondary packaging and absorbent material for full capacity of blood, corrugated carton, and packaging instructions.

► Dry Ice Overpack – Model 670

Substance Shippers protect frozen samples for over four days. The EPS foam container and lid accommodates either Model 630 or Model 660B shipper plus 25 pounds of dry ice. Foam insert holds in place while dry ice sublimates. Includes one Class 9 Miscellaneous Dangerous Goods label (for dry ice) and shipping carton (Dry ice NOT included)

61535-30

61535-10

► Infectious Shipper – Model INF3000

Infectious shippers include pressure vessel with stop-lock lid, compartmentalized bubble pouch, 50 ml absorbent sheet, corrugate outer carton with required markings, shipper's declarations and easy-to-follow instructions.

61535-70

► **U-tek® - Ice-Packets**

Cushion fragile shipments, won't dilute ice baths or damage samples. They remain frozen longer than regular ice without the melting mess.

- May be refrozen and reuse, withstands pressure of 60 lb per square inch for 5 minutes or longer
- Refrigerant contains neutral pH distilled deionized water and proprietary materials certified by the US Food and Drug Administration as food grade chemicals; -1°C / +30°F-

61533-06

61533-06	406J	Single	Individual Packet	100/pk

► **U-tek® -Blue-Ice**

Superior protection for shipping temperature sensitive materials. Maintains critical temperatures of serums, test samples, live or frozen tissues, organs and pharmaceutical for extended periods. Laminated, metalized film exterior provides radiant heat barrier and resists punctures. U-Tek® -50°C / -58°F ultra low, high-tech phase change formula is ideal for products which require extreme cold but may not tolerance dry ice or CO₂. Eliminate dry ice hazmat hassles.

► **Insulated Shipper – ThermoSafe®**

© Tegant Corporation, ThermoSafe Brands

These shippers and containers offer the ideal solution for the safe storage and delivery of most refrigerated or frozen materials, including pharmaceuticals, laboratory specimens, serum and vaccines, human organs, culture packs, and nuclear and isotope materials.

When shipping dry ice or utilizing dry ice as a refrigerant, these shippers provide excellent dry ice sublimation – average dry ice usage in 1½" thick wall units is 5 lbs for the first 24 hours; 3 – 4 lbs thereafter.

THERMOSAFE® MAILING SYSTEMS

® Tegrant Corporation, ThermoSafe Brands

► Medical Transporters – ThermoSafe®

Insulated expanded polypropylene medical transporter is ideal for on-site collection, storage, and transport of temperature sensitive specimens, medications, medical devices and organs.

- Durable nylon clad transporter
- Stain and impact resistant expanded polyethylene container
- Lightweight – ergonomic design
- Extra space for crushed ice and refrigerant gel pack
- Washable, weather-resistant.

Model 931, 932

Includes removable, rigid, thermoformed tray—ideal for washing and reusing; prevents leaking inside and out of transport unit, reinforced durability. Adjustable, durable carrying strap for shoulder transport.

61537-31

Model 932: also features a comfortable sturdy hand strap.

Model 931: 0.3 cu. ft volume and 3/8" wall thickness

Model 932: 0.53 cu. ft. volume and 3/8" wall thickness

Model 960

For mobile blood collection, cools and stores whole blood units and other temperature sensitive materials

61537-60

- Qualified by ISC labs for temporary storage and transport of both platelet (20°C – 24°C for up to 8 hours) and non-platelet production (1°C – 10°C for up to 24 hours) whole blood with crushed wet ice.

■ Includes operating instructions and test data for cooling platelet and non-platelet production blood.

■ Volume: 1.60 cu. ft. and 1" wall thickness

61537-30

Model 930

For operating rooms storage and blood bank transport, provides temperature control for packed red blood cells and other temperature sensitive specimens

- Qualified by ISC labs for temporary storage and transport of packed red blood cells with three 32oz Polar Pack Rigid Bottle refrigerant and two 16oz Polar Pack refrigerant.

■ Maintains up to 8 packed red blood cell units at 1°C – 6°C while in storage for 6 hours or more and between 1°C – 10°C while in transit for up to 24 hours.

■ Including operating instruction and test data for storage of packed cells.

■ Volume: 0.95 cu.ft. and 1" wall thickness

Model 640, 641

Inner partition divides unit and separates specimens. Features built-in lid compartments for U-tec refrigerant packs. Adjustable nylon carrying strap for hand or shoulder. Model 641 includes a vial foam insert that holds twenty four 5–15ml vials and one model 418 U-tec®

Volume is 0.30 cu. ft. with 1/4" wall thickness.

GENERAL SUPPLIES

Handle Your Ampoules Safely...**► Break-Safe™ Ampoule Opener**

EMS Introduces Break-Safe™ allowing you to safely open up to 3 ampoules at one time

Box style design allows one handed opening of up to 3 ampoules at a time. Gently pressing down on the lid snaps ampoule necks clean while keeping them contained within the device and away from fingers. After removing ampoule contents, simply turn the device upside down over a trash receptacle to safely discard ampoules and tops.

Features:

- 4 inserts allow opening of 1ml, 2ml, 5ml and 10 ml ampoules
- Open ampoules easily and safely
- Transparency allows unobstructed viewing of ampoule contents at all times
- Copolyester plastic construction has broad chemical resistance

60607 Break-Safe™ Ampoule Opener each

► Ampoule Breaker; Soft Silicone

EMS EXCLUSIVE Reusable – Made from soft silicone. It offers a simple way to break pre-scored glass ampoules safely. Accommodates 5, 7, and 10 ml size ampoules. Reduces injury and spillage.

60600 Ampoule Breaker; Soft Silicone each

► Ampoule Cracker™

The Ampoule Cracker™ is a disposable plastic fracture and safety collar, which is specially designed to aid in the breaking open of pre-scored glass ampoules. Simply slip the Ampoule Cracker™ over the top at the pre-scored portion, snap it, and discard both the ampoule top and the safety collar to prevent cross contamination.

Cat #	Description	Pack
60605-04	Ampoule Cracker for Ampoule Size 1 – 4 ml	500/pk
60605-10	Ampoule Cracker for Ampoule Size 5 – 10 ml	500/pk
60605-20	Ampoule Cracker for Ampoule Size 10 – 20 ml	500/pk

► Aluminum Foil

Heavy duty foil, packed in a convenient box. Can be self cut to any length you desire. Comes 12" width, 500 ft. long each roll.

60400 Aluminum Foil each

► Apron; Disposable

A plastic, full length, bib-type apron. Handy protection in a compact envelope. Smooth finish, size 28" x 46". (71cm x 117cm; 1½ mil thick)

60900 Apron 100/bx

► Atomizer Rubber Bulb

A natural rubber bulb with 4" tubing on one end. Used for dusting surfaces which should not be wiped. A

two-way valve is inserted into one end to prevent suck back and a rubber nozzle prevents scratches on the surface that have to be cleaned. This device also reduces the need for freon dusters.

	TYPE A	TYPE B
Capacity	75cc	45cc
Center Diameter	53mm	52mm
Length without valve and tube	105mm	62mm
Base Diameter	–	35mm

60804 Atomizer Type A each
60806 Atomizer Type B each

► Easy Duster

EMS is pleased to release this small hand held device which easily blows clean air when the Duster is squeezed eliminating the need for dusting rags, brushes and even Duster compressed gas cans.

60805 Easy Duster each

► Cutemol Cream; Protective Hand Cream

Contains five skin softening compounds, plus allantoin to relieve dry, fissuring, peeling, chapped, or irritated skin.

EMS EXCLUSIVE

70550 Cutemol Cream 50g

GENERAL SUPPLIES

► **Brush; Red Sable**

Extremely soft and pliable. Perfect for the manipulation of pre-viously fixed, dehy-drated specimens into embedding capsules or molds.

Cat #	Description	Pack
66100-50	Brush, Red Sable, Size #5/0	each
66100-30	Brush, Red Sable, Size #3/0	each
66100-20	Brush, Red Sable, Size #2/0	each
66100-00	Brush, Red Sable, Size #0	each
66100-01	Brush, Red Sable, Size #1	each
66100-02	Brush, Red Sable, Size #2	each
66100-03	Brush, Red Sable, Size #3	each
66105*	Brush, Red Sable, Set of 3	set

*Set of 3 sizes: #2/0 (fine point), #1 (small), and #3 (medium)

► **Stirring Rods**

Available in two versions: pure PTFE solid rod with tapered end and pure PTFE with bendable steel core. The version with steel core can be bent into a permanent shape. Rods are inert and will not scratch, use up to 280°C.

Cat #	Rod Length	Rod OD, mm	Qty
PTFE with Steel Core Rods

66201-25	250 mm (10")	8	each
66201-30	300 mm (12")	8	each

► **Camel Hair Brushes**

Useful for dusting and cleaning embedding center, balances, and sensitive instruments. Camel hair is mounted on wooden handle with metal ferrule. Available with three styles:

- Round, camel hair portion has full body and slightly pointed tip. Brush size 3/4" diameter x 1 1/2" long. Overall length is 9".
- Paint brush style 1, camel hair portion is 1" long x 1" wide. Overall 6" long.
- Paint brush style 2, camel hair portion is 1 1/4" long x 2" wide. Overall 8 1/4" long.

Cat. #	Description	Pack
65575-01	Camel Hair Round Brush	each
65576-01	Camel Hair Paint Brush, Style 1	each
65577-01	Camel Hair Paint Brush, Style 2	each

► **Scratch Brushes with Metal Ferrules**

These pen shaped handles are available in four different types. They are offered with metal ferrules for improved durability. Used for fine deburring, polishing, as well as rust removal and the cleaning and removal of deposited wax.

The overall length is 4 1/4" long, and the brush is 1/8" wide. Refills are available and are packaged 12/box.

Brush Material	Cat.# Complete Brush	Pack	Refill	Cat.# for Pack
Steel Ferrules Brush	65582-01	each	65582-R1	12/pk
Nylon Ferrules Brush	65582-03	each	65582-R3	12/pk
Fiberglass Brush	65582-05	each	65582-R5	12/pk
Brass Brush	65582-07	each	65582-R7	12/pk

GENERAL SUPPLIES

► Notebooks, PolyPaper®

PolyPaper® is a Trademark of Nalgene® for a special spunbonded polyethylene "paper" designed for exceptional strength and resistance to moisture and chemicals. Records written or printed on PolyPaper® are virtually indestructible. PolyPaper® outperforms conventional papers, even with special coatings. It is unaffected by fresh or salt water. The non-absorbent, lint-free material resists mildew, tearing, fraying, curling, aging and discoloration. Chemical spills rinse off easily. PolyPaper® accepts any writing device. You can even write on it with No. 2 pencil under water.

► Laboratory Notebooks

Valuable notes and data are permanently secured in these hand cover, case-bound books – important for documenting research.

- Thick polyethylene cover, uncoated PolyPaper® pages
- Waterproof, and extremely chemical resistant
- 50 sheets are numbered and printed with a fine green ¼", grid or horizontal 3 lines per inch
- Pages include spaces for dates and signatures of workers and witnesses, for securing patent protection, measures: 9¼" x 11¼" (235 x 286mm)
- Other pages include instructions for keeping research records, table of contents, and the page for issuing the notebook

Cat. #	Mfr. #	Cover Color	Qty
38020-10	6300-1000	Lab Notebook, Black	each
38020-20	6300-2000	Lab Notebook, Blue	each

► Spiral Field Notebook

Coated PolyPaper® pages – Blue polyethylene cover

- Flexible yet durable cover, with sheets permanently bound with spiral binding
- Chemical and moisture resistance ideal for fieldwork
- Pages are printed on both sides with a fine green ¼" grid and numbered 1 through 96
- Title and table of contents pages. Each page has space for date and signatures of workers and witnesses to research records
- Page measures 9" x 11¼" (229 x 286 mm)

Cat. #	Mfr. #	Description	Qty
38021-10	6303-1000	Field Notebook	each

► Laboratory Paper Notebooks

Paper pages – Water Resistant Cover

- These notebooks feature permanently bound pages with grid lines
- Acid free pages with spaces for dates, title, project number, book number, and witness signatures
- Each Notebook contains periodic and conversion tables in the back
- Admissible as court evidence when used as prescribed by law
- Page measures: 8½" x 11" (216 x 279 mm)

Cat. #	Description	Qty
38025-10	Laboratory Notebook, 100 pages	each
38025-20	Laboratory Notebook, 200 pages	each

► Tissue Adhesive

Permabond 910.

Contains cyanoacrylate ester. Immediate bonding of biological specimens. It is not water soluble. Used for mounting specimens for Vibratome sectioning.

RT	72590	Tissue Adhesive	10z
----	-------	-----------------	-----

► Quick Bond

An ultra fast, room temperature curing adhesive; a cyanoacrylate monomer. It bonds with virtually no shrinkage to almost any non porous surface except fluorocarbons. Comes in a convenient dispensing tube, 2g each.

RT	72588	Quick Bond	5/pk
----	-------	------------	------

► Mascot® Instant Adhesive

A gel type, no-drip formula that fills the gaps and is ideal for use on vertical surfaces. A high performance, extended range cyanoacrylate adhesive that bonds metals, most plastics, rubber, ceramics, and glass, in seconds. It is optically transparent and sets in about 30 seconds depending upon the objects being joints. Pack 0.1 oz (3g) per dispensing tube.

RT	72587-01	Mascot® Instant Adhesive	3g
----	----------	--------------------------	----

For all other Adhesives and Mountants, See Chemicals Section, pages 9-21 >>>>

► Tri-Corn Beakers; *Plastic, Disposable*

Three dripless pouring spouts. Resistant to most chemicals. Autoclavable —The beakers can withstand temperatures up to 121°C. Metric graduations.

Cat.#	Size ml	Graduations ml	Height mm	Diameter mm	Pack
60968	50ml	5ml	55mm	44mm	100/pk
60970	100ml	10ml	73mm	53mm	100/pk
60972	250ml	10ml	90mm	72mm	100/pk
60974	400ml	20ml	110mm	80mm	100/pk

60978	1000ml	50ml	147mm	112mm	100/pk

► Beakers Staccup; *Plastic, Disposable*

- Resistant to most chemicals.
- Anti-drip ridge.
- Frosted marking area.
- Heavy gauge polypropylene.
- Customary and metric graduations.
- Suitable for parafilm cover.

60950	Staccup 120cc	25/pk
60952	Staccup 120cc	100/pk
60960	Staccup 500cc	25/pk
60962	Staccup 500cc	100/pk

► Tri-Corn Beaker Caps

The caps are available for all Tri-Corn beakers. The caps are wax impregnated, have lift-tabs, and may be written on for sample identification.

60969	Cap for 50ml Beaker	500/pk
60971	Cap for 100ml Beaker	500/pk
60973	Cap for 250ml Beaker	500/pk

60979	Cap for 1000ml Beaker	250/pk

► Discups™; Disposable Paper Beakers

With environmental awareness in mind these disposable paper beakers create less waste and is as economical as plastic.

- Graduated in English and Metric units (1/2 oz. or 10cc increments).
- Very economical.
- Made from unwaxed, plain finished paper.
- Most popular size: 4 oz. (120 ml)

60954-10	Discups™, 120cc	100/pk
60954-20	Polystyrene Lids	100/pk

► Beakers PTFE®

Is statically molded from virgin PTFE and machine finished to give a smooth surface for ease of cleaning and to eliminate contamination. Supplied with a pouring spout and they are virtually immune to chemical attack. Working temperature range is from cryogenic to 260°C (500°F). Ideal for use in wafer etching.

► Thermotech™ PTFE Beakers

This product features a unique combination of a pure PTFE Body with a specially formulated stabilized PTFE-Carbon base as a single molding to give the following:

- A totally inert pure PTFE inner surface
- Heatable to 270°C without distortion
- Improved heat transfer

All PTFE Beaker caps can be used for same-sized Thermotech™ PTFE Beakers.

EMS #	Description	Qty

60930-40	Thermotech, 400ml, 112mm H x 85mmOD	each

► Beaker-Store; Instrument Store

For the first time EMS introduces a unique beaker with a silicone bottom that allows you to store all of your tweezers and tools in cleaning solution and never damage the tips.

Instruments may be placed in the beaker with the tips only immersed in distilled water and or cleaning solution. This allows the instruments to be kept clean and safe and ready to use. The Silicone bottom prevents the tips of the instruments from being damaged and the top of the beaker is compartmentalized and segmented allowing for each tool to be kept separate.

The beaker measures 10 cm in diameter and it is 8 cm in height.

► Bio-Pure™ Sure-Footed Beakers

100% Biodegradable

- Sure-Footed - Innovative outer beaker base ensures stability with small volumes of liquid.
- Biodegradable - Made from the same environmentally conscious Bio-PET as our Bio-Pure reservoirs.
- Thermally Insulating - Air void allows beakers to hold liquid temperatures 30% longer than standard polypropylene beakers
- Unique Pipet Rest - Diametrically opposed grooves act as a pipet rest when not in use

Alternate Uses:

- The thermal retentive characteristics of the Sure-Footed Beaker allow it to be used as a small bucket for ice/dry ice.
- Allow beaker to sink in a water bath by piercing or melting a ventilation hole in the beaker rim.
- Beakers may be covered or piggybacked to increase thermal insulation.

Cat #	Description	Size ml	Qty
68553	Sure-Footed Beaker	250 ml	50/pk

► Glass Sample Bottles With Plastic Snap Cap

For collecting and exhibiting a wide variety of specimens in the lab or field. Caps snap over a special sealing ring to form an effective barrier to moisture, making these bottles especially suitable for hydroscopic materials.

Note: The following sizes are also available: 30, 40, 48, 60, 90, 120, and 180 ml. Please call for prices and availability.

Cat.#	ml	Dia. x Ht, mm	Cap Size	Pack
64250	4	23 x 27	22 mm	144/pk

64264-10	100	34	75	50/pk

► Fluid Dispenser Bottles

These ESD safe polyethylene solvent dispensers are available in three standard sizes. These dispensers have neither a stopper nor a cap to remove. Just touch the dispensing dish with a brush

cloth or applicator and solvent is brought to the surface instantly as needed. Stainless steel valves seal contents in bottle until used. The fluid pumps into the dish and it does not drip back into the bottle, keeping stored liquids uncontaminated. Surface resistivity of 10E⁷ to 10E⁹

Catalog #	Description	Qty/Box
64299-01	Fluid Dispenser, 120 ml	each
64299-02	Fluid Dispenser, 180 ml	each
64299-03	Fluid Dispenser, 240 ml	each

► Volume Labeled Narrow Mouth Wash Bottles

The volume (in millimeter) of each polyethylene wash bottle is silk screened in highly visible and chemical resistant ink. All have one piece polypropylene cap and nozzle assemblies. 4/pack.

64172	500 ml (16oz)	28mm Cap	4/pk
64173	1000 ml (32oz)	38mm Cap	4/pk

► Wash Bottles; Permanently Labeled

Permanently Labeled/Color-Coded Wash Bottles. These safe wash bottles, which are permanently labeled and color-coded, eliminate the risk of dispensing the wrong liquid by mistake. All of these wide-mouth (easy transfer liquid) polyethylene bottles have polyalomer caps and a fine-tip-nozzle that may be cut back for heavier flow.

Capacity is 16 oz (500ml), low density polyethylene.

64150	Acetone Wash Bottle	each

64296	500	74 x 196	10/pk

► Measure-Matic™ Dispenser

Makes repeated measuring and pouring easy!

- Adjustable for volumes from 5ml to 25ml
- Just squeeze and check the fluid level
- Dust cover included

To use:

Adjust the dispensing cup to the desired volume, then squeeze the 500ml (16 oz) reservoir bottle.

The desired volume of liquid will flow through the tube and into the cup.

Excess liquid will flow back into the reservoir bottle.

Cup and closure are made of rugged polypropylene

Reservoir bottle is made of squeezable low-density polyethylene

Cat. #	Description	Qty.
64299-08	Measure-Matic™ Dispenser	each

► Acid Pump/Reagent Dispenser

Dispense dangerous liquids safely and easily — no pouring!

Fits many different containers, including: 2.5 liter, 4 liter, 5 pint (80 fl. oz), 1/2-gallon, 1-gallon

- Reduces spills and potential for breakage and injury
- Two adapters included for short neck bottles.

Large bottle (pictured) not included.

Includes:

Dispenser Body:

Threads directly to bottles with GPS No. 38-430 or 38-400 threads

Outlet Tube:

A short length of 3/8" diameter polyethylene tube is supplied for the outlet.

Polyethylene Tubing:

1/4" O.D. included. Cut to required length and insert into the underside of the dispenser body.

Light pressure on the relief valve button on top of the dispenser quickly stops the flow of liquid.

Rapid but light finger tip squeezes on the small bottle will start fluid dispensing from the short tube.

Cat. #	Description	Qty.
64299-12	Acid Pump/Reagent Dispenser	each

► Autoclavable Carboys

Ideal for storing and dispensing large batches of double-distilled water, buffers and salts

- Excellent chemical resistance
- Large handles assist in transport
- Molded-in bung accepts easy-to-use polypropylene spigot
- 83mm polypropylene buttress screw cap includes a built-in silicone gasket for positive seal
- Steam autoclavable 121° C (250° F)
- Rugged polypropylene construction
- Spigot can be operated with one hand

FDA grade polypropylene compliant with 21CFR177.1520 for direct contact with food and beverages

USP Class VI Certified

Note: When autoclaving, do not engage cap threads.

Cat. #	Description	Qty.
64299-13	10 liters (2.5 gallons) with spigot	each
64299-14	20 liters (5.0 gallons) with spigot	each
64299-15	10 liters (2.5 gallons) without spigot	each
64299-16	20 liters (5.0 gallons) without spigot	each
64299-17	Replacement spigot for 64299-13 and 64299-14	each

► Carboy with Handle and Screw Cap

Gasketed closure for leakproof shipping and storage

- Smooth interior surfaces facilitate complete drainage
- Knurled cap creates a positive grip for secure tightening
- Smooth exterior accepts adhesive labels and can be marked with most indelible markers
- Rugged polyethylene resists acids and alkalis

Capacity:20 liters (5 US gal)
 Diameter:28cm (10.90")
 Height:49.8cm (19.6")
 Cap:83mm

Cat. #	Description	Qty.
64299-26	Carboy with Handle and Screw Cap	each

► Bellows Dropping Bottle (LDPE)

A low density polyethylene (LDPE) bottle supplied with a removable bellow-type dropping pipette. The pipettes are graduated for nominal indication of amount of liquid being drawn. Bellows-shaped bulb makes for easy use and provides excellent drop formation.

Cat.#	ml	Dia. X Ht, mm	Cap Size	Pack

64298-08	250	60 x 136	24 mm	10/pk

► Narrow Mouth Ground Glass Stoppered Bottles

New designed Ground Glass Stoppered Bottles feature a no-drip pour lip for clean pouring of contents. The most preferred container for storage of prepared chemicals, and stock solutions. Octagon-shaped ground glass stopper is included. The borosilicate '400' glass offers a high degree of protection from leaching and the amber '500' glass gives extra protection to light-sensitive contents.

► Mounting Media/Canada Balsam Bottles

Ideal for applying mounting media. The bottle comes with a glass applicator rod and glass cap. Cap is ground to the shoulder of the bottle to form a seal. Made from soda lime glass. 100 ml capacity.

Cat.#	Description	Pack
64211-01	Balsam Bottle, 100 ml	each
64211-06	Balsam Bottle, 100 ml	6/pk

► Barnes Dropping Bottles

The lower portion of the rubber bulb forms a tightly fitted stopper. Wheaton "400" borosilicate glass (meets USP Type I standards).

Average drop size is 46µl.

Bottle measures: 35 mm dia. x 103 mm high; 30 ml capacity.

The bottles can be autoclaved with either dry heat or chemicals.

The bulb and the pipette can be autoclaved in gas only.

Cat.#	Description	Pack
64215-01	Barnes Dropping Bottle	6/pk
64215-50	Replacement Bulb Only	10/pk
64215-55	Replacement Bulb and Pipette	10/pk

► All Glass Dropping Bottles

These bottles deliver stains and indicator solutions drop by drop from a projecting drip tip on the side of the stopper. A partial turn of the ground glass stopper will seal the bottle.

Cat.#	Type	Size (ml)	Measurements Dia. x Hgt. (mm)	Pack
64220-05	Clear	50	45 x 95	4/pk
64220-10	Clear	100	56 x 120	4/pk

► Alcohol Burner with Ground Glass Cap

This burner offers a low heat flame, which is well suited for microscopy purposes. For use with isopropyl and denatured ethyl alcohol. The unit is supplied with a ground glass stopper. Made from soda lime glass. Size: 100 ml; measures: 75 mm dia. x 100 mm high.

Cat.#	Description	Pack
64213-01	Alcohol Burner, 100 ml	each
64213-25	Replacement Wick, 6" long	25/pk
64213-10	Replacement Cork Stopper	10/pk

► Embryo Dishes

These dishes are molded from clear glass and come with a glass lid for the viewing or staining of free-floating specimens.

Cat.#	Description	Pack
70543-30	Embryo Dish, 30 mm Dia. x 12 mm Deep	each
70543-45	Embryo Dish, 45 mm Dia. x 12 mm Deep	each

► Media/Lab Bottles

Graduated bottles have a large opening, no-drip pour lip and sloping shoulders to facilitate pouring and cleaning. These bottles are widely used for mixing and storage of culture media, fixation and dehydrating materials. Bottles show approximate volume graduations, and have large frosted writing area.

► Clear Glass

Clear bottles are Wheaton '400' borosilicate glass. Low alkali content helps to prevent changes in pH and maintain purity of contents. Comes with Ptfе-lined cap. Autoclavable.

► Amber Glass

Amber bottles are manufactured from Wheaton '500' borosilicate glass to protect light-sensitive samples.

► Square Bottles - Polypropylene

Square polypropylene bottles with screw polypropylene closures. Repeatedly autoclavable and resistant to acids, alcohols and bases. Mouths are wider than conventional narrow mouth bottles. The square shape saves shelf space and the translucent color provides visual liquid level. Useful temperature is between 0°C and 135°C (32° and 275°F). Molded-in graduations and drip-proof spout for easier measuring and dispensing.

NOTE: remove closure or completely disengage threads before autoclaving. Ideal for buffers, cell culture solutions storage.

► Polyethylene Vials; Poly-Vials

Sample vials with a captive snap closure; flat bottom cylindrical vials with a friction-fit, flip-top closure which can not be lost. These vials are unbreakable and can withstand temperatures up to 90°C. The wall thickness is approx. 1mm and these vials are ideal for use as a specimen container for the storage of small samples, or as embedding capsules.

► Shell Vials, Glass

► 1. Clear Glass, Plain Top

These vials are optically clear with straight-sides. Made from Type1, N-51A borosilicate glass. Fixation, dehydration, and infiltration procedures can be done in the same vial. The larger size vials can be used as an embedding media mixture container or for sample storage. The vials come with polyethylene open bottom snap-caps, Titeseal®, which are packed separately. Except the 4- dram size vial which comes without a closure. We recommend the use of our cork stoppers.

► Vial Rack

This rugged polypropylene rack holds 48 vials, size 1 dram (15x45mm); or 4 ml tissue culture vials; or 2ml serum vials in 4x12 configuration with alpha-numeric indexing. The rack is constructed from chemically resistant, autoclavable (121°C for 20 minutes) polypropylene and features corner posts to assure stability when stacking empty.

Dimensions: 3¾" x 10½" x 1½" (94x266x28mm)

72641-01	Rack for 1 dram Shell Vial	each
72641-05	Rack for 1 dram Shell Vial	5/cs

► Liquid Scintillation Vials

► 1. Glass Vials

Wheaton "180"® low potassium borosilicate glass (meets ASTM Type I Class A and USP Type I standards). Vials are packed in individual cells in trays of 100. Vials are in trays are shrunk-wrapped in plastic, 5 trays to a case. Screw caps size 22-400 is made from Urea with Poly-seal cone liner. Caps are packed separately in polyethylene bags of 100. Vial measures 28mm diameter x 57mm height (with cap off), and 61mm height (with cap on). Size 20 ml.

► 2. High Density Polyethylene (HDPE) Vials

Opaque, high-density polyethylene vials are economically priced. They are 20ml in capacity and they measure 27mm diameter x 61mm height (with cap). The screw caps are 22-400 and they are made from polypropylene with a foam- polyethylene liner. The vials and caps are packaged the same way as glass vials.

► 3. Polyethylene Terephthalate (PET)

For optimal performance in the laboratory, PET plastic vials provide a combination of features previously unavailable in a counting vial. Safe disposal is accomplished by incineration. No harmful gas is generated (only CO₂ and H₂O are created). These vials are lightweight, virtually unbreakable and they have the clarity of glass. PET vials also offer low permeability to solvents and minimal background count. These vials hold 20 mls of fluid and they measure 27mm diameter, 61mm height (with cap on). The screw caps are 22-400 and are made from polypropylene with a foamed polyethylene liner. The vials and the caps are packaged separately.

► Scintillation Vial Racks

► (1) White Polypropylene Rack

The rack measures: 12 $\frac{1}{2}$ " x 6 $\frac{3}{4}$ " x 1 $\frac{3}{8}$ " High (32 x 17 x 3.5cm), and it has 50 cavities, 1.1" (28mm) diameter x .75" (20mm) deep. The cavities have a center drain hole 1/2" (13mm) in diameter. The racks are stackable when not in use and are steam autoclavable at 250°F (121°C).

► (2) Rack with Handle

Rugged and stackable. They hold 24 scintillation vials (30mm diameter). There is a handle on both ends for carrying. Autoclavable.

Measures: 11 $\frac{1}{4}$ " x 5" x 3 $\frac{3}{4}$ " High (298 x 127 x 95mm).

► (3) 100-Place Scintillation Vial Rack

Welded polypropylene rack holds 100 standard 20 ml scintillation vials. The rack is autoclavable and resists both nitric and hydrochloric acids. The hole measures 1 $\frac{1}{8}$ " diameter. Dimensions: 14 $\frac{1}{2}$ "(L) x 15"(W) x 2 $\frac{1}{2}$ "(H)

► Peti-Vial – Scintillation Vial

Peti-Vials are made from a special grade of polypropylene, which produces a product of optimum clarity. It's unique design offers users a leak-proof fit with only one-half of a turn of the cap.

FEATURES:

- Compatible with all major liquid scintillation counting system
- Dimple bottoms to facilitate filter paper counting
- Nominal Volume of 7ml
- Ideal for Sample storage
- Vials are autoclavable

► Multi-Vials – Scintillation Vials

Multi-vials are excellent multipurpose containers. They are primarily used for liquid scintillation counting, beta-gamma counting, and sample storage. They are made from a new type of polypropylene, which assures superior visibility. They come with white polyethylene caps and are perfect and convenient for easy marking.

FEATURES INCLUDE:

- Nominal volume of 5ml
- High density white polyethylene snap cap
- Alternate white plug cap

► Tooled Neck Vials

These vials are made from Type 1, Class B borosilicate glass. Their tooled necks ensure accurate fit with "snap-in" closures. They are ideal for storage of specimens and sample blocks. The 1 and 2 dram sizes come with an open-bottom closure and all of the other sizes come with a closed bottom, two-piece closure. Closures are packed separately.

72646-07	7 dr (25.9ml)	29 x 65	144/pk

► V-Vials®; Clear With Screw Cap

These vials are made from Wheaton-33 low extractable borosilicate glass and they safeguard against any change of product pH caused by alkali, which can be extracted from ordinary glass. Wheaton V-Vials are exceptionally sturdy vials with a conical interior bottom. Their special features insure maximum security and economy in handling, storing and shipping of costly micro and semi-micro samples.

V-Vials are ideal for: Micro Mixing, Homogenization, Centrifugation, Concentration, Extraction, Derivatization, Radiosynthesis, Hybridization, Anaerobic Reactions, and Catalytic Hydrogenation.

All components can be autoclaved. They come packed 12 vials in a hinged lid storage box. Graduated; clear; screw cap has solid top and Ptfе-faced white (styrene butadiene) rubber liner.

► Lyophilization Containers – Serum Vials/Bottles

These are the choice containers for Lyophilization.

There are three major factors for successful Lyophilization:

Heat Transfer, Sealability, and Water Vapor Transmission Barrier.

- **Heat Transfer** – a Wheaton Glass serum vial, as opposed to glass serum bottles, plastic serum bottles, and other containers has a very consistent thin wall and bottom. This attribute of a Wheaton glass serum vials allow the heating phase of the lyophilization process to take place rapidly and effectively
- **Sealability** – Wheaton glass serum vials feature a “blowback” feature in neck and bottom. This allows for a 2 or 3 legged lyophilization stopper to be securely and evenly seated in the mouth of the vial during the lyophilization process. An uneven stopper may result in water vapor entering back into the vial once stored. Additionally, these serum vials come in standard crimp finish sizes, for compatibility with various standard aluminum seals and crimping tools.
- **Water vapor Transmission Barrier** – Wheaton glass serum vials are made from premium, low extractable, borosilicate glass, which offers a superior barrier to water vapors. The vials are available in either clear and amber for UV light transmission applications.
- **Autoclavable** – These vials can be autoclaved, by dry heat, by chemical, by gas, or by radiation.

► Serum Tubing Vials – Clear

Manufactured from Wheaton “200” low extractable borosilicate glass tubing to hold uniform wall thickness. Glass meets ASTM Type I, Class A and USP Type I standards.

EMS #	Size ml	Mouth ID x OD mm	Dia x Hgt mm	Qty/case

► Wheaton M-T Vial File®

This filing system offers a clean, compact, and convenient alternative for the storage of biological samples. A clear polystyrene case, with hinged lid, alpha-numerical index, and individual partitions. Foam inserts are provided as well and they offer extra protection for the vials.

- M-T/40: stores up to 40 vials of 16mm diameter x 50mm height
- M-T/60: stores up to 60 vials of 13mm diameter x 50mm height

Dimensions: 6¾"(L)x3¾"(W)x2½"(H) (190x95x62mm).

60990-40	M-T/40 Vial File	each

60990-60	M-T/60 Vial File	each
60990-66	M-T/60 Vial File	6/cs

► Mini-File®

This mini filing system offers the convenience for transporting, displaying and storing sample vials. This reusable, clear plastic storage tray has ten 16mm x 16mm x 50mm cells for storage sample vials and V-Vials. The file comes with a hinged lid that seals securely with a snap-lock fit offering protection against spills while also allowing easy access. They can be stacked in a horizontal position and they require minimal space. Files are supplied empty.

Cat.#	Description	Pack
60998-05	Mini-File®, Clear Plastic	5/pk

► Sample Vials; Clear and Amber

Multi purpose glass sample vials. Specifically suited for research studies. These sample vials are economically priced and conveniently packaged in two shrink-wrapped packs of 100 vials.

These vials come with ptf lined caps and are packaged separately. The vials can be sterilized and stored at low temperatures.

Clear: Manufactured from Wheaton-33R a low extractable borosilicate glass which protects against changes in the pH and maintains sample integrity.

► Vial Caddy – 23mm

Heavy-duty vial caddy protects up to 48 of the popular 23mm diameter glass vials. Machined from a solid block of 1.25" HDPE sheet offering complete protection during storage and transport. The caddy is supplied with a snug fitting cover and non-skid feet. It is white in color.

Cat.#	Description	Pack
72642	48-Place Scintillation Vial Caddy with Cover	each

► Sample Vials In Mini-File®; Clear

Comes ten vials packed in a clean plastic thermoformed Mini-File and offers convenience in transporting, displaying and storing. The vials are made from Wheaton-

33R a low extractable borosilicate glass. The vials are supplied with a white (styrene-butadiene) rubber lined cap and both the vials and the caps can be autoclaved.

► EZFlip™ Conical Centrifuge Tubes (Patented*)

- Leak-proof — Hinged, flip-cap design.
- One handed opening and closing.
- Good chemical resistance — low protein binding.
- 15 ml and 50 ml — Sterile.
- Freezer/Refrigerator capability.
- Clarified polypropylene — good visibility of contents.
- Easily maintain aseptic conditions.
- Compatible with all major centrifuges and rotors.

EzFlip™ Conical Centrifuge tubes offers a safer alternative to screw cap tubes. A patented closure system improves ergonomics and versatility. An improved tube and cap design increases mechanical strength to withstand aggressive centrifugal forces. The 15 ml tube's maximum relative centrifugal force (RCF) is 8,500 x g, and the 50ml tube's maximum RCF is 9,500 x g.

Tubes are graduated and feature a writing area. All EZFlip™ tubes are available in rack or bag of 50, case of 500.

Ordering:

► Transport /Sample Collection Vials and Tubes

► 1. Transport Vials

Transport Vials are ideal for sample collection and storage. Made from virgin polypropylene, they are available in three sizes and sterile as well as non-sterile. Graduations provide convenient and accurate references. 5 ml and 10 ml sizes are supplied with white screw cap, 50 ml are supplied with blue cap, that has a molded-in sealing ring for a leak-proof fit.

FEATURES INCLUDE:

- Conical tubes with freestanding skirts
- Tubes are autoclavable
- Write-on area on side

► 2. Transport Tubes

Transport Tubes and ideal for rapid sample collection when a plug cap is needed. Made from virgin polypropylene (PP) or polystyrene (PS). The tubes work well in Olympus automated testing equipment. The tube volume is 12 ml and the plug caps are available in yellow with either a hollow top (HT) or hollow bottom (HB)

► Sticky Stand

Sticky Stand is a unique adhesive platform for temporarily securing micro-tubes, vials, cuvettes, and many other kinds of laboratory vessels. To use, simply press down on the vial(s) and contact between the bottom of a tube or vial and the adhesive bed is sufficient for establishing support. A twist or pull releases the vessel from the adhesive bed, without leaving any adhesive residue.

The adhesive bed is fabricated in a heat-resistant plastic tray and it can be rejuvenated by placing it in a conventional oven for one hour (Preheated to approx. 190°C or 375°F). For safety, always place the Sticky Stand in a containment tray during reheating.

The polyolefin adhesive and polyester tray are resistant to most organic solvents and caustic agents. Sticky Stand can be used under either low or high humidity conditions as well as in cold or warm environments (from 4 to 40°C).

Once adhesion is established, it is maintained even at much lower temperatures, -20°C.

The adhesive bed is approximately 0.5" thick, and it is available in either regular or high adhesive strength. Regular strength is often preferred for room temperature uses. High strength is preferred for low temperature uses.

► Smooth Rack™

SmoothRack™ is an improvement over the old fashioned 3-tier-wire-racks:

■ When using SmoothRack, tubes will never slip into an adjacent position

The SmoothRack is versatile and it accommodates a wide range of tubes: 10 to 16 mm diameter.

■ A drainage hole right on each tube position

■ Holds 72 tubes, available in Blue or White

■ Made from autoclavable polypropylene

■ Made in USA – Patent pending

■ Dimensions: 9.5" (L) x 5" (W) x 2.6" (H)

64640-W	SmoothRack™, color White	each
64640-B	SmoothRack™, color Blue	each

72644-5R Sticky Stand(Regular, 5"x7") each
72644-5S Sticky Stand (Super Sticky, 5"x7") each

► Plastic Boxes - Multi-Use

EMS Plastic Boxes are in demand!

Whatever your storage needs, there's an EMS Plastic Box that's perfect for you. Molded from polystyrene for optimum clarity and rigidity. They come in a variety of shapes, styles, and sizes.

► 1. Square Boxes:

They have two equal dimensions for length and width. The "squares" are available in a variety of sizes in both friction-fitting lids and hinged-lids with snap locks.

64350-06 - Plastic Box Tray Set

► 6. Tray Box and Tray Sets:

A compact, solid fiberboard Tray Box makes instituting a plastic box/sample storage system more convenient and efficient. To form a Tray Set, use plastic boxes for specimen storage, and then organize boxes within the fiberboard Tray Box. These sets eliminates misplacement or inadvertent sample loss, and allows for rapid retrieval of specimens. The tray boxes are available with or without accompanying plastic boxes.

Ordering Tray Box only

64338-07

Electron Microscopy Sciences is proud to announce the introduction of the highest quality line of

Microscopes

in the market place today.

With all of our research and comparing all of the Microscope manufacturers in the market place we found these to offer the best quality and price and they are 100% made AMERICAN!!!!

Our Microscopes incorporate advanced technology into a durable, cost effective solution for your microscope. All of the Microscopes that we are offering have:

- A Modern frame with enhanced stability for image documentation
- An Ergonomic single hand stage/focus control to minimize fatigue
- A Robust stainless steel/brass focus mechanism endures high use
- Brilliant images resolved with superb optics
- A Versatile performance - multiple techniques available, including polarization with First Order (Full Wave/Red) Retardation Plate, phase contrast, dark field and more

For more information, see pages 854-869 >>>>

► Pastebord Sliding-Boxes

Constructed from white pastebord; match box style and rectangular in shape. Available in different sizes to meet all of your needs. It is ideal for the storage of specimen blocks and many small items.

Pastebord Sliding Boxes, 64326-series

► Cocoon Box — A Smart Box *THE REVOLUTIONARY WAY FOR MAILING AND STORING SAMPLES*

Boxes - Made from polypropylene, envelope shape, available with or without an inner frame. These boxes are the safest way for mailing or storing fragile samples. They are impact and shock resistant. With a living-hinge, opaque-clear, reusable and recyclable. The boxes are available in many sizes and styles to fit your needs. Closing Clips and Security Seals are also available as an option.

Vials — are made from polystyrene and they are tough and crystal clear and come with a friction lid. Cocoon Boxes are also available to accept these vials for safe storing and/or mailing valuable samples.

Ordering:

1. BE3, BE3A, BE3B, and BE3D

Box BE3 comes with inner frame to form a cocoon; BE3A is without an inner frame offering more room inside of the box; BE3B comes with 8 round cavities, each 0.94"x0.62"H (24x16mm) for storing Vials DB20; BE3D comes with 6 round cavities each 1.29ix0.62ixH (33x16mm) for storing vials DDB30

► Vautainer® Storage Boxes

We now have two Sample Storage Boxes to accommodate our VACUTAINER® Tubes. Made from durable cardboard, medical laboratories, forensic laboratories, and hospitals will find these boxes extremely convenient for storing filled vials. These boxes are suitable for incubators, refrigerators, deep-freeze, and controlled atmosphere applications.

VACUTAINER® is a Registered Trademark of Becton Dickinson & Co.

Model 68-16-112 holds tubes from 10.25 to 16mm O.D. x 63 to 112mmL

Model 200-19-117 holds 200 tubes up to 19mm O.D. x up to 117mmL

64286	Vautainer® Storage Box, 68 Tubes	each	64287	Vautainer® Storage Box, 200 Tubes	each

► Sample Storage Sets

Compact space savers offered in a variety of sizes. Ideal for the storage of liquids, powders, small specimens, etc.... Each set includes a partitioned box, vials with caps, labels, reference chart, and an exterior card holder and card. Alpha-numerical indexing system allows quick identification and location of stored items.

► 1. Screw Cap Vial Series

Threaded glass vials with plastic lined caps.

■ Vial size 1 dram (3.8ml), 15mmx45mm, arrangement: 5x20;
Tray size 13"(L)x 3½"(W) x 2¼"(H)

64265 Sample Storage Set SCV1 100 vials/set

■ Vial size 2 dram (7.6ml), 17mmx60mm, arrangement; 5x20
Tray size 11¼"(L)x4¼"(W)x2¼"(H)

64266 Sample Storage Set SCV2 75 vials/set

► 2. Poly-Seal Screw Cap Series

The same as our screw cap series, but with Poly-seal caps and a cone shaped polyethylene liner.

■ Vial size 4 dram (15.2ml), 21mm x 70mm;
Tray size 9¼"(L) x 4¼"(W) x 3¼"(H), arrangement 5 x 10

64270 Sample Storage Set PSSC4 50 vials/set

■ Vial size 8 dram (26.6ml), 25mm x 95mm;
Tray size 10½"(L) x 5½"(W) x 4½"(H); arrangement 5 x 10

64271 Sample Storage Set PSSC8 50 vials/set

► 3. Snap Cap Shell Vial Series

Poly-plug, Knurled snap-caps are friction fitted with glass shell vial, straight sided, and a flat bottom.

■ Shell vial size 3 dram (10.4ml), 12mm x 114mm;
Tray size 13"(L) x 3½"(W) x 5"(H), arrangement 5 x 20

64276 Sample Storage Set SCSV3 100 vials/set

■ Shell vial size 4 dram (15.20ml), 25mm x 52mm;
Tray size 10½"(L) x 5½"(W) x 2½"(H), arrangement 5 x 10

64277 Sample Storage Set SCSV4 50 vials/set

■ Shell vial size 7 dram (36.6ml), 29mm x 65mm;
Tray size 13"(L) x 6¾"(L) x 3"(H), arrangement 5 x 10

64278 Sample Storage Set SCSV7 50 vials/set

For vial sizes of 10 and 12 dram please call us for prices and availability.

► 4. Square Bottle Series

A large size storage set. It comes with square clear glass bottles (1-ounce capacity) and black screw caps with plastic linings.

■ Bottle size 1 oz (29 ml), arrangement 5 x 10;
Tray size 12¼"(L) x 6½"(W) x 3¼"(H)

64281 Sample Storage Set SB1 50 bottles/set

■ Bottle size 2 oz (78 ml), arrangement 4 x 8;
Tray size 12"(L) x 6"(W) x 3½"(H)

64282 Sample Storage Set SB2 32 bottles/set

■ Bottle size 4 oz (116 ml), arrangement 3 x 7;
Tray size 12¼"(L) x 5½"(W) x 4½"(H)

64283 Sample Storage Set SB4 21 bottles/set

■ Bottle size ¼oz (7.5ml), 23 x 23 x 55mm, arrangement 5 x 10;
Tray size 9½" x 5" x 3½" (241.3x127x63.5mm)

64280 Sample Storage Set SB 0.25 50 bottles/set

► 5. Cork Stopper Vial Set

Most economical, straight-sided, flat bottom, glass shell vial with high quality cork closures. Ideally suited for storing small parts, geological specimens, soil and many other types of samples.

■ Vial size 3 dr (10.4ml), 12 mm dia x 114 mm H, arrangement 5x20.
Tray size 11½" x 3" x 5" (292.1x76.2x127mm)

64269 Sample Storage Set SK-3 100 vials/set

► Membrane Boxes

Our unique membrane storage boxes for the transfer, storage and shipping of many delicate items. Available in 5 different shapes and sizes these plastic containers, with a double elastic membrane on the top and bottom, offer security for all of your sensitive items. Once your item is placed in the box the elastic membrane conforms around the enclosed object and protects it from any movement.

► Gel-Pak® Storage/Carrier Box

Patented gel technology – the innovative solutions for storage and carrying delicate materials

The traditional Gel-Box, Gel-Tray® and Gel-Slide Carriers are perfect for applications where devices are manually offloaded by tweezers or by hand.

- **Gel-Box (AD Series)** - Hinged plastic boxes coated with Gel in the bottom.
- **Gel-Tray® (BD Series)** - A removable 2" plastic tray coated with Gel and contained inside a hinged plastic box.
- **Gel-Slide (CD series)** - A removable 2" glass slide coated with Gel and contained inside a hinged plastic box.

(Gel-Pak® is A Division of Delphon Industries)

► GEL-BOX (AD Carrier Boxes)

Gel-Box AD Series Carriers owe their unique device-holding capabilities to a proprietary GEL coating applied directly to the bottom of a hinged box. Devices are held once contact is made with the GEL surface and will stay in place, even if the carrier is tilted or jarred. The carriers are designed for manual off-loading with tweezers or by hand. GEL-PAK AD series are ideal for handling devices where no direct contact with the top of the device is important.

The GEL-BOX Carriers may also be used for bare die handling, such as GaAs, PETs, laser diodes, and beam-lead devices where the die size is small (less than 1mm) and tweezers or other specialized techniques are used for off-handling.

FEATURES:

- No need for custom-molded containers for each device size.
- Ideal for handling subassemblies, hybrid models and packaged devices.
- Available in Transparent, Conductive and Anti-Static carriers in multiple sizes.
- Retention Level available: x0, x1, x2, x3, x4, x5, and x8 (the higher the number the more retention capability)

We offer standard retention level X4. Other retention levels are available with the order of 100 or more, and at least two weeks for delivery.

► GEL-TRAY® (BD Series) And GEL-SLIDE (CD Series)

Same as the Gel-Box, the Gel-Tray and Gel-Slide products are intended for manual applications in which the devices are loaded and unloaded using tweezers or by fingers. The Gel-Pak BD and CD series of pocketless trays are both configured as a 2" carrier stored in a protective plastic hinged box. The Gel coating is applied directly to the surface of the plastic tray (BD Series) or glass slide (CD Series).

These products offer the same functionality as the Gel-Box, however the plastic tray or glass slide can be easily removed from the box allowing for convenient handling when loading or unloading fixtures are being used.

The Gel-Slide (coated glass slides) is designed for higher temperature applications such as bonding and reflow where a plastic tray will not work. The CD slide has a temperature capability up to 220°C. The CD glass slides are also ideal for backside inspection due to their optical clarity.

Both the Gel-Tray and Gel-Slide products are available in the standard retention levels (X0, X4, X5, and X8) to accommodate variations in device size, weight, and surface roughness.

The protective 2" hinged boxes are available in transparent styrene (T), conductive black (C) and antistatic (AS) materials. The boxes, trays, and slides may be customized with a print pattern (grid) or company logo. Standard available Prints can be viewed at Gel-Tray/Gel-Slide Print options

► The EMS Single and Multi Wafer Containers

EMS is proud to introduce our complete line of carriers for either storage and or shipping of a variety of sizes of wafers (Any material) from 1"-6" in diameter.

The Containers are made from polypropylene and they prevent all types of damage and contamination to the wafer during shipping and even storage. Each of the containers are packed in 1000 class clean room and bag. The set includes the Container, the cover and the spring

There is as well a single container that will accommodate a variety of sizes from 4-6" by simply adjusting the silicone supports in the box. These boxes are transparent in color and are made from Anti- Electrostatic Polycarbonate.

For the Multi Wafer containers they have a storage capacity of 25 wafers maximum and they come complete with the Base and the cover.

► Tissue Mounting Stub

Tissue Mounting Stubs

Machined from aluminum rods with one end tapered to 4.8mm in diameter. The specimen can be oriented and mounted to the tip with glue and it is ready for sectioning. The body size is "00" and it measures 11mm long.

70145-05	Aluminum Tissue Mounting Stub	50/pk
70145-10	Aluminum Tissue Mounting Stub	100/pk

► BEEM® Capsules; Embedding, Size 00, 8mm I.D.

Polyethylene embedding capsules with 1x1mm face at the tip of a truncated pyramid, each with a hinged cap.

► BEEM® Embedding Capsules; Special Shapes

Bottle Neck Embedding Capsules

BEEM Conical Tip Embedding Capsules

Available in two specially shaped capsules which are designed to overcome commonly encountered embedding problems; such as, small or thin elongated specimens and powder samples. These capsules are also good for centrifuging precipitated matters and allows for less trimming.

- The bottle neck capsule produces a 7.9mm OD block with a hemihyperpoloid (rather than faced) tip.
- The conical capsule produces a 7.9mm OD block with a conical (rather than faced) tip.

70022-06	EMS Capsule Holder	6/pk
70022-12	EMS Capsule Holder	1 doz.

► Multi Task BEEM Capsule Holder:

This Multi-Task BEEM Capsule Holder is an innovative holder designed to hold size "00" BEEM capsule during resin polymerization.

This holder is also a perfect tool when embedding and polymerizing resin by microwave, especially when the embedment needs to be performed under water. The direct contact of the microwave energy to the

resin inside the microwave is usually causes the resin to heat to quick and that leads to micro bubbles forming inside the resin block and this causes unknown damage to the tissues. To help eliminate this problem, the resin capsule should be immersed in the water bath during microwave irradiation of the resin. This 'indirect contact' of microwave energy to the resin will help the embedding block polymerize nicely and homogeneously and also avoids the overheating of the tissue.

Mold is machined from polyethylene block, comes in two parts: bottom part which holds the BEEM capsule, and the second part which is placed on top and is secured by two plastic screws to ensure the BEEM capsules are in place and capsule lid will not pop out during under water polymerization or microwave irradiation.

Accompanies is microwave transparent tray, which holds water and capsule holder for microwave processing.

Measures: 1-1/8" (L) x 3" (W) x 2" (H), accommodates 24 capsules.

You can order either the Multi-Task Capsule Holder only, or the set which includes one Capsule Holder and one Tray.

EXCLUSIVE

► BEEM® Capsule Holders

These holders are used to hold capsules upright during the resin embedding stage. The cavities (22) allow for illumination from the bottom of the holder for specimen orientation. Available in two sizes: one holds size "00", conical, and bottle neck capsules; the other holds size #3 capsules.

Measures 5-1/2" (L) x 4" (W) x 7/8" (H) 138 x 100 x 12mm

69916-01	BEEM® Capsule Holder size "00"	each

The Opaque BEEM Capsule Holder

► Capsules; Gelatin

Natural, hard gelatin capsules. To be used as an embedding mold for water miscible resins, or resins which need to be cured by transmitted light. Gelatin capsules dissolve or disintegrate within 5 minutes when immersed in a 0.5% HCl solution at 36-38°C, within 2 minutes in water at 37°C or in artificial gastric juice.

► EMS EM5 Embedding Molds

Introducing the EM5 - an innovative new design based on the widely used Ø8 mm size embedding mold. The unique two part design allows for easy removal of resin blocks, as well as incorporating many other advantages over currently available embedding products.

- Separate base and tube sections that clip together to form the familiar capsule shape.

- Care should be taken that each component is free of debris before attaching together, to ensure a proper seal.

- Easy removal of resin blocks achieved by simply pulling the mold apart by hand.

- The mold can produce blocks up to 20mm in length, however shorter blocks (~14mm) allow for easier removal. No razor blades or capsule presses are required.

- The detachable cap section allows for easier access and manipulation of a specimen.

- For more accurate specimen alignment a small amount of resin can be cured or partially cured before clipping to the body and completing the resin block. When fully cured they form strong homogeneous blocks.

- Each mold can be clipped to other molds, allowing for the creation of trays of desired size. For volatile resins, another cap section can be clipped on to the top of the mold, creating an air tight seal.

- Each cavity is numbered 1 < 5, whilst the end support stands have designated areas for writing indexing numbers or comments.

2 part - Ø8mm body with 2mm cylindrical cone cap

► Plastic Flat Embedding Mold

- Injected molded polyethylene.

- Resistant to most embedding materials.

- Easy peeled-off the blocks.

Mold fits perfectly inside the cocoon box BE8 (64300-8); See Cocoon Box section.

When the mold and the box BE8 are used together, the set allows for the use of oxygen-prohibited embedding materials (I.e: LR White) to be polymerized in a flat orientation.

These molds are reusable. Each cavity measures 12mm(L) x 5mm(W) x 3.5mm Deep.

Overall mold measures: 94 x 56 x 14mm.

► Easy-Molds™

Made from polyethylene, designed for convenience of use and offers better embedment. This tray-and-mold in one unit offers a unique specimen block that no other mold can.

FEATURES: (SEE ILLUSTRATIONS AT THE RIGHT)

1. **Trays-and-molds are self standing** — There is no need for a holding tray.
2. **Easy Orientation of Specimens** — The tip of each mold is only 0.3mm thick and is designed to be transparent. This facilitates the orientation of your specimen prior to polymerization.
3. **They form a Universal Block** — Many microscopists have to embed large specimens. The Easy Mold tip forms a flat block face which is wide enough for large specimens. This wide surface helps to prevent air bubbles being trapped around the specimen during polymerization. In addition, a positive guide form on the block offers an accurate position for clamping.
4. **Free Airflow for Even Polymerization** — Easy Mold trays raise the molds away from the surface of the oven, allowing air of a constant temperature to circulate freely and evenly around the specimen tip during the hardening process.
5. **Sealing of Capsules** — If you are using Acrylate or other volatile embedding mediums (LR White, GMA, HPMA), the molds can be sealed by placing another Easy Mold on the top, and by applying a little pressure you can seal the capsule completely.
6. **Easy to Remove the Polymerized Block** — Due to the softness of the bottom of the mold, to release the block simply push the bottom of the mold with your thumb and your block will just pop out. There is no need for razor blades or a Capsule Press!
7. **Convenient Storage and Identification of Sectioned Blocks** — Each cavity on the Easy Mold is numbered, and data can be written on the trays. Used Easy Molds can be used for the storage of blocks which have already been sectioned, and filed away by stacking one tray on top of another. There is no need for block storage boxes.

TECHNICAL SPECIFICATIONS:

Each tray contains 2x10 block molds and measures 87x66mm. They are available in two sizes:

- Size 5.6mm diameter, which corresponds to gelatin and BEEM* capsules size 3, and forms a block face of 1.6mm.
- Size 8mm diameter, which corresponds to gelatin and BEEM* capsule size "00" and forms a block face of 3mm.

Tough-Tags® on a Roll

Perfectly sized to fit microcentrifuge tubes and other containers in the laboratory

Compatible – Tough-Tags are pre-cut, peel-off labels that accept any marking instrument.

Convenient – Dispensing box assists in labeling individual tubes used in small experiments.

For more information, see page 1133 ▶▶▶▶

► BEEM® Specimen Block Storage System 2000®

- Are your bench-tops and drawers crowded with petri dishes and pillboxes full of various sized specimen blocks?
- Have you been spent hours to look for a block for re-sectioning?
- Do you wish you could neatly catalog, file and store all of those blocks in one convenient place?

If you answer yes to any of those questions, now you can organize and safely store all of your specimen blocks with the newly introduced BEEM® Specimen Storage System 2000®

The system consists of four newly designed Blocklock® storage modules (#69956, #69957, #69958, #69959) and a Covered Mounting Panel (#69950) that fits in a standard "D-Type" 3-ring binder (optional) – A 1-inch binder will accommodate two Covered Mounting Panels, and 1.5-inch binder accommodates three Panels.

Each Blocklock module has an adhesive backing which when exposed permits it to be permanently mounted on any grease-free surface.

All Blocklocks can be inserted in a Plastic Protective Box (EMS #69956-B & 69958-B, #69957-B, and 69959-B) or, by utilizing the adhesive feature, mounted in combination with other Blocklock modules on the BEEM® mounting panel (EMS #66950). This new Storage System 2000 permits blocks size "00", size "3", and BEEM® flat embedment to be indexed, combined under one cover along with any associated data sheets, and stored upright in 3-ring binders, on the shelf, at your reach for ready reference.

This system is infinitely expandable to high or low volume block storage. The choice is yours.

► 1. Capsule Blocklock Storage Modules

incorporate an innovation that allows blocks to snap into cavities specially designed to retain them so they cannot be inadvertently dislodged. Number and letter identify each cavity. Available with three configurations:

- Model 2006 measures 2 $\frac{1}{8}$ "L x 2" W x $\frac{1}{4}$ "H (74 x 50 x 8mm); accommodates 12 size "00" blocks
- Model 2007 measures 4 $\frac{1}{8}$ "L x 3 $\frac{1}{2}$ " W x $\frac{5}{16}$ "H (117 x 90 x 8mm), accommodates 40 size "00" blocks.
- Model 2008 measures 2 $\frac{1}{8}$ "L x 2" W x $\frac{1}{4}$ "H (74 x 50 x 6mm), accommodates 20 size "3" capsule blocks.

► 2. BEEM® Blocklock Storage Modules Model 2009

is the same features as Capsule Blocklocks. Measures 2 $\frac{1}{8}$ "L x 2" W x $\frac{1}{4}$ "H (74 x 50 x 8mm), accommodates 20 BEEM flat blocks. (BEEM flat embedding mold, EMS #70904-01

NOTE: Do to the rectangular shape of a BEEM flat embedment; it must be inserted into the cavity in a Blocklock module #69959 as follows: Introduce the front of the block at a slight angle into the rear of the cavity and gently push it forward until it nests in the recess.

► 3. BEEM® Blocklock Storage Boxes

Heavy-duty, two tone plastic boxes are supplied with indexed, translucent labels, which can be applied to the top or bottom of the box.

- Box #69906-B and #69908-B are the same size and are two-tone blue/clear. Overall measurement: 3"(L) x 2 $\frac{1}{8}$ "(W) x $\frac{1}{2}$ "(H) (78 x 54 x 13mm).
- Box #69957-B is two-tone blue/clear. Overall measurement: 4 $\frac{1}{4}$ "(L) x 3 $\frac{3}{4}$ "(W) x $\frac{1}{2}$ "(H) (120 x 94 x 13mm)
- Box #69959-B is two-tone black/clear. Overall measurements are the same as #69956-B and #69958-B

► 4. BEEM® Mounting Panel

with clear cover is designed to accept both Blocklock Storage Modules and BEEM original Dial-A-Grid (EMS #71148) and Block Storage Modules (EMS #69922), which can be attached to the panel using double sided adhesive tape. Grid storage boxes from other manufacturers may be attached this way also if they do not exceed 3/8" in height.

The panel inside measures: 10 $\frac{1}{2}$ "(L) x 7 $\frac{1}{2}$ "(W) x $\frac{3}{8}$ "(H) (270 x 190 x 12mm). The overall measurement is 11 $\frac{1}{2}$ "(L) x 8 $\frac{3}{4}$ "(W) x $\frac{5}{16}$ "(H) (290 x 225 x 22mm)

"D-Type" 3-Ring Binder, 1.5 inch		69960-15	each

► Microporous Specimen Capsules

These capsules measure 12mm in diameter and are 11mm high. They are available in three different pore sizes: 30, 78, 120-200 microns.

70187-10	Microporous Specimen Capsules, 78 microns	50/pk
70187-11	Microporous Specimen Capsules, 78 microns	100/pk
70187-20	Microporous Specimen Capsules, 30 microns	50/pk
70187-21	Microporous Specimen Capsules, 30 microns	100/pk

► Specimen Basket; Stainless Steel

Both the top and the bottom are made from a stainless steel mesh, which offers good fluid circulation. Has a male and a female threading for a secure closure.

Measures: 12mm(ID)x13mm(H) (1/2"x1/2")

70190-01	Specimen Basket	each
70190-06	Specimen Basket	6/pk

► Specimen/ Cleaning Basket

This basket is brass with a stainless steel mesh attached to both ends; the mesh opening is 300µm. (The inside diameter is 12.5mm, 15mm height. (16mm ODx17mmH). To use, simply screw both halves together and you can keep small specimens for long periods of time during the process of fixing, dehydration or even critical point drying. It can also be used to hold small parts for ultrasonic cleaning.

70190-21	Specimen/Cleaning Basket	each
70190-26	Specimen/Cleaning Basket	6/pk

► Critical Point Drier Accessories:

► 1. TEM Grid Holder

Machined from solid steel; has a stainless steel mesh on the top and the bottom. Featuring the most advanced design which assures no damage to the grids during processing. These holders are Brass-Nickel plated, very sturdy, and withstand all critical conditions. Holds 12 grids in numbered slots. Dimensions: 24mm(D)x24mm(H)

70192-01	Grid Holder	each
-----------------	-------------	------

► 2. Coverslip Holder

Brass/Nickel plated. Coverslips can be stacked with spacers (up to 15 coverslips with a thickness up to 2mm) with samples placed on top of each coverslip. Fluids freely exchange between coverslips. Both spacers and weights come with the unit. The upper part of the holder is grooved to accept tweezers.

Available in two configurations:

- Coverslip Holder 1: for 9 to 13 mm diameter coverslips; accommodates 10 coverslips. Dimensions: 16mm(D)x24mm(H).
- Coverslip Holder 2: for 16 to 22 mm diameter coverslips; accommodates 10 coverslips. Dimensions: 24mm(D)x25mm(H).

70193-01	Coverslip Holder 1	each
70193-02	Coverslip Holder 2	each

► 3. Specimen Holders

Machined from solid steel, brass/nickel plated; incorporates a stainless steel mesh top and bottom to allow for fluid exchange.

- 12 Specimen holder: comes with two sections; each section holds 6 specimens into 6 cavities, each cavity measuring 7.5mm (D)x6mm(H). The overall unit measures: 24mm(D) x 24mm(H).
- 24 Specimen holder: comes with two sections; each section holds 12 specimens into 12 cavities, each cavity measuring 4.5mm(D) x 6mm(H). The overall unit measures: 24mm(D) x 28mm(H).
- 4 Specimen holder: comes with one section which holds 4 or multiples of or large samples 4-9mm(D)x16mm(H) cavities. The overall unit measures: 24mm(D)x28mm(H).

70194-12	12 Specimen Holder	each
70194-24	24 Specimen Holder	each
70194-04	4 Specimen Holder	each

► Stainless Steel Baskets with Multiple Compartments

EMS has introduced and is now available a variety of Stainless steel baskets with lids and multiple compartments for critical point Drying. These baskets are either 15mm in diameter or 23mm.

Cat. #	Description	Pack
70194-26	Tissue basket with Lid 15mm(D) x 10mm (h)	each
70194-27	Tissue Basket with Lid 23mm(d) x 18mm (h)	each
70194-28	4 Compartment Tissue Basket with Lid 15mm(d) x 10mm (h)	each
70194-29	4 Compartment Tissue Basket with Lid 23mm(d) x 18mm (h)	each

► Stainless Steel Tissue Capsules

- A secure positive snap-on cover.
- Perforated on the top and bottom for easy fluid circulation.
- Can be partitioned for up to 4 sections.

The separator is not included.

Measurements: 37mm(I.D.)x6mm(deep) (1 $\frac{1}{16}$ "x $\frac{3}{16}$ ")

62320-01	SS Tissue Capsule	each
62320-06	SS Tissue Capsule	6/pk
62320-20	Tissue Capsule Separator	2/pk

► Plastic Tissue Capsules

- Molded from polyethylene; resistant to all processing chemicals, including Zenker's fixative.
- A three compartment divider which is removable for specimens up to 35mm.
- A weighted end floats the capsule in a upright position to conserve space.

Plastic Tissue Capsules

- Perforated on the top and bottom for better circulation of the fluid.

- Snap-on hinged cover.

They measure: 35mm(I.D.) x 35mm(I.D.) x 10mm(deep) (1 $\frac{3}{8}$ "x $\frac{3}{8}$ ")

62322-12	Plastic Tissue Capsules	12/pk
----------	-------------------------	-------

► Biopsy Foam Pads

A cellular polyester blue foam that has uniform air pockets throughout the pad for optimal fluid flow. It prevents either small or fragmented tissue specimens from being lost.

To Use: Place small samples or specimen fragments between the two pads and place the specimen in a cassette or capsule.

Cat. No	Foam Pad Size	Use With	Pack
62325-01	25mm Diameter	29mm Capsules	1000/pk
62325-04	35mm Diameter	38mm Capsules	1000/pk
62325-06	25mmx32mm	1x1 $\frac{1}{4}$ " Cassettes	1000/pk

► Biopsy Bags

- Made from nylon cloth, 0.2mm mesh diameter. All seams are heat-sealed.
- Allows for unrestricted fluid movement around the tissue.
- Reduces the loss of small biopsy specimens.
- Reduces cross contamination and pressure artifacts by using sponges.

Cat.#	Bag Measures	Qty
62324-35	Nylon Biopsy Bag 35 x 50mm	100/pk
62324-75	Nylon Biopsy Bag 45 x 74mm	100/pk
62324-98	Nylon Biopsy Bag 98 x 75mm	100/pk

► Paper Biopsy Bags

Due to the amazing demand from our customers, EMS is re-introducing the original Paper Biopsy Bags. These bags are made from porous paper which provides maximum tissue safety during processing. The bags permit proper fluid exchange and drainage.

To Use: Simply introduce the specimen into the bag and fold its end, enclosing the cassette or capsule – you are now ready to process as usual.

Bag measurement: Overall 1 $\frac{1}{4}$ " W x 3" L (45 x 75 mm), Inside Seam: 1 $\frac{1}{8}$ " W (35 mm)

Cat. #	Description	Qty
62326-01	Paper Biopsy Bags	100/pk.
62326-05	Paper Biopsy Bags	500/pk.

► **Cloth; Lint Free, Twill Jean**

A twill jean cotton wipe made from 100% cotton fiber that is woven in an extremely tight construction. The extractable trace elements are effectively reduced in the cleaning process which removes impurities in the cotton as well as any starches or binders used in the manufacturing process.

71750 - 71752 Lint Free Cloth

FEATURES:

- Highly absorbent
- Excellent wipeability
- Thermal stability; good for high heat applications
- Acid resistant and solvent compatible
- Low metallic ion content
- Low static generation

71750	Lint Free Cloth 9"x9"	100/pk
71752	Lint Free Cloth 9"x9"	300/pk
71753	Lint Free Cloth 12"x12"	150/pk

► **Cheese Cloth**

Cotton woven cloth in the pattern of 44x36 (44 lines/inch horizontally and 36 lines/inch vertically) which makes it suitable for cleaning and polishing. Supplied in 60 yard rolls (continuous) 36" in width; This configuration allows you to cut out the exact length you desire.

71748-00 Cheese Cloth

71748-00	Cheese Cloth	box
----------	--------------	-----

► **EMS Lens Tissue**

EMS Lens Tissue is the world's finest optical tissue. It's extremely soft and virtually lint-free. Safe for any optical surface such as camera lenses, microscopes, telescopes, and eye glasses. Each tissue is perforated for easy removal from the booklet.

71712-01 EMS Lens Tissue

Tissue size: 4" x 6", 50 sheets/bk

71712-01	EMS Booklet Lens Tissue	50/bk
71712-10	EMS Booklet Lens Tissue	10 bk/lot

► **Lens Tissue – EMS (Ross)**

EMS (Ross) Lens tissue does not lint or scratch and it is free from mineral or vegetable filler.

71700	Lens Tissue, 4½" x 5"	1000 sheets/box
-------	-----------------------	-----------------

► **Towel; Disposable**

A large size towel (13.3"x23") suitable for many uses around the lab. High absorbency and strong, even when wet.

72610	Towel; Disposable	45 towels/box

ProScope Mobile, the world's first handheld digital microscope, is now portable.

The Wireless ProScope, ProScope HR and ProScope HR2 Digital Handheld Microscopes

Wireless offers new practical applications, which include:

- Field scientists can examine specimens on site without destroying them in transit to the lab
- Doctors can show patients live images and add them into practice management apps and software
- Teachers can simultaneously show images to a classroom of students using iPads
- Crime scene investigators can send images from the iPhone to a colleague in the lab or to a collaborative agency

ProScope HR
high resolution handheld microscope

ProScope Applications

- Law Enforcement
- Science Education
- Quality Inspections

Designed and developed for law enforcement, the ProScope Stand will steadily hold the ProScope in a wide variety of positions. Perfect for law enforcement, industrial inspection, and biology when working at high magnification.

For more information, see pages 870–877 >>>>

► Disposable Bibulous Paper

- Highly absorbent white fiber paper
- Lint and dust free
- Recommended for drying microscope slides and other small lab glass items
- Size: 4 x 6"

Cat. #	Description	Qty.
70086-01	Disposable Bibulous Paper Book, each	50/pk.
70086-10	Disposable Bibulous Paper Book, 10 each	50/pk.

► Thirsty Stix

Sterile - Disposable - Absorbent filter paper sticks - great for absorbing, cleaning, and lubricating.

- Highly absorbent
- Adhesive, residue free
- Extremely low lint content
- Ideally to be used with the microtome to remove excess water from the boat
- Multiple uses
- Excellent to remove excess water or solution from tubes and plates
- Size: 6" long x 0.20" thick

Cat. #	Description	Qty.
70996	Thirsty Stix	250/pk.

► All Glass Nebulizer

An all glass unit for the simple production of microdroplets. An object is held vertically in front of the nebulizer outlet and by squeezing the atomizer a fine spray is created. The nebulizer set comes with an All Glass Nebulizer bulb and Atomizer.

70505-01	Nebulizer Set	Set
70505-05	Nebulizer Set	5 Sets
70506-01	Nebulizer Only	each
70506-05	Nebulizer Only	5/pk.
60804	Atomizer	each

► **Dip Miser,
for 3" x 1"
Slide Coating,
10ml Capacity**

Slide coating cup with stand and cleaning brush. Glass cup is Pyrex and is designed to conserve expensive autoradiographic emulsion when coating glass slides. Needs only ¼ the volume of solution previously required. Single piece holder permits immersion in a water bath and provides a stable darkroom stand to prevent spills, and faster temperature adjustment of the emulsion.

70510 Dip Miser Set

**EMS
EXCLUSIVE**

70510	Set	each
70520	Dip Miser Cup Replacement,	each
70530	Dip Miser Cleaning Brush, LOA 6", ½" diameter x 2¼" brush, Nylon turned tuft	1 doz

► **Liquid Release
Agent**

**EMS
EXCLUSIVE**

A hydrosoluble mold-release agent for use

in the flat embedding of micro-organisms, and as a replacement for the PTFE coating of glass slides to produce a smoother, even surface. The reference below describes the selection and precisely oriented sectioning of single cells by light microscopy, prior to examination by EM. Raymond, O.L. & Picket-Heaps, J.D., (1983) J. Microscopy, 130, 179.

70880	Liquid Release Agent	100ml
--------------	----------------------	-------

► **PTFE-like Spray/Mold
Release Spray**

A PTFE-like, TFE release agent, dry, lubricant. No discernible transfer, no migration, no build-up. Contains: Isopropanol, Poly-TFE, 1,1-Dichlorofluoroethane and Carbon Dioxide. Contains no silicones, CFCs or Methyl Chloroform. Its working temperature is up to 140°F.

72619

72619	PTFE-Like Spray	15 oz.
--------------	-----------------	--------

► **Cleaner and Remover**

*This All Natural Cleaner Removes
What Soap & Water Can't*

XENIT contains more than five high-performance ingredients such as Citrus 66, an all natural, highly refined extract of citrus fruit. XENIT is specially formulated to break down the complex molecules found in sticky materials. With this unique character, XENIT may be used to quickly remove labels, decals, and adhesive from glass, wood, vinyl and metals. XENIT removes chewing gum from carpet and upholstery. It cleans permanent marker, crayon, and lipstick from walls, woodwork, and counter tops. XENIT also remove shoe scuffs and heel marks from vinyl and wood flooring, and grease and dirt from carpet, fabrics and upholstery. It even removes dried latex paint.

► **XENIT Degreaser**

XENIT Degreaser is a powerful, non-flammable solvent cleaner that quickly removes grease, oil, carbon deposits, gums, varnish, and dirt from metal surfaces. It is fast drying and evaporates completely and leaves no residue.

► **XENIT Foaming Cleaner**

This is the fast, easy way to remove dirt, grime, and food stains, pen ink, soda pop, soap scum. Cleaned surface dry quickly and leave no marks.

► **XENIT Citrus Cleaner/Remover**

XENIT all natural citrus cleaner is the fast, easy way to remove sticky stuff, stains and gunk. XENIT removes greasy, grimy soils that soap and water can't. Cleans most surfaces in seconds. It cleans crayons, dry latex paint, gum, heel mark, ink, permanent markers, lipstick, shoe polish, sticker, tape, tar and sap.

Cat. #	Description	Qty.
60810-20	XENIT Foaming Cleaner	13 oz.
60810-30	XENIT Citrus Cleaner/Remover	10 oz.

► **Glass Cleaner – Invisible Glass**

Specially formulated, Invisible Glass quickly and easily removes dust, dirt, oil, grease, fingerprints, smoke film, haze and more from glass surfaces, such as windows, mirrors, computer screens, display cabinets, and photocopiers. Invisible Glass contains no water and soaps, surfactants or foams so it will leave no residue that will either streak or haze.

60811-01	Invisible Glass	19 oz.
-----------------	-----------------	--------

► Diamond Tip Scribers/Scribers

Sturdy scribers are in wide use throughout the laboratory. It leaves a permanent marking on virtually any surface, including metal, glass, or plastic. Each Scriber features a hexagonal aluminum pencil shaped body, mill finish, natural diamond tip and protective cap. Different styles are available to fit all of your needs.

► A. Straight Head:

Overall length 6", Shank Length 1/8", Handle 1/4" x 5 1/2", 60° tip finish.

70030	Straight Tip Scriber	each
70031	Straight Tip Scriber	6/lot

► B. Angled Head:

Overall Length 6 1/2", Shank 1/6" Dia. x 1/4" Long, Handle 1/8" x 6" Long, 75° tip finish.

70032	Angle Tip Scriber	each
70033	Angle Tip Scriber	6/lot

► C. Retractable Scriber:

This is a high quality chrome pen that features appearance as well as utility. The diamond is mounted in a stainless steel tip and refills are available. The tip is finished at a 60° angle.

70036	Retractable Scriber	each
70037	Retractable Scriber Refill	each

► High Precision Fine Diamond Scriber

This diamond scriber is the ultimate scribing instrument offering the most precision for the most delicate applications. It is available in straight or bent configurations.

APPLICATIONS INCLUDE:

- Fine scribing under the microscope - for silicon wafers and glass coverslips
- Precision scribing and repairing - for thin film circuits and microcircuits, etc.

These diamond mountings are 0.8mm diameter with a reduced shank size of 0.5mm or 0.25mm diameter, which holds the diamond stylus. The natural diamond has a 60° included angle and a 0.12mm tip radius. The integrated 6.35mm anodized hexagonal (non-rolling) aluminum handle has a positive finger grip in the form of grooves for easy control and non-slippage. Each diamond scriber is packaged in a protective plastic tube.

Cat. #	Configuration and Shank Size
62107-ST	Straight Mounting, 0.5mm diameter
62107-BT	Bent Mounting, 0.5mm diameter
62108-ST	Straight Mounting, 0.25mm diameter
62108-BT	Bent Mounting, 0.25mm diameter

► EMS Engraving Tool

Permanently be able to mark all of your important tools and samples. The Engraver comes with a Battery Pack and is operated on two "AA" Batteries

Our EMS Engraver Engraves Test Tubes, Bottles, Racks, Keys etc as well as anything made from glass, metal, stone as well as bone. Engravings are permanent and will not disappear in the presence of chemicals and solvents. The Engraver is 7" in Height (17.8cm)

We offer a Stand for the EMS Engraver that is made from polypropylene and it measures (3 1/2" x 3 3/4").

Cat. #	Description	Qty.
72096-01	EMS Engraver	Kit
72096-02	EMS Engraver Tool Stand	Kit

► The Glascribe® Pen

The Glascribe® Pen, with retractable tungsten carbide tip, lets you inscribe on glass, ceramics, and plastic. The pen has a pocket clip, so it is always handy when needed.

Cat. #	Description	Qty.
72151	Glascribe® Pen	each

► Tungsten Point Lab Pen

Permanently mark Glass Slides and all glass labware

These unique EMS pens have a sharp tungsten carbide tip which is able to etch glass, ceramic, and even plastic. The tip retracts for safe storage and it measures 9.8mm in diameter and the pen is 137mm long.

Cat. #	Description	Qty.
41148	Tungsten-Point Lab Pen	each

► Rotary Diamond Micro-Engraver Pen

An amazing tool that may be used to mark samples, engrave tools, indicate a sample area for finding in the SEM, deburring and so much more.

Easy to handle and control, this micro engraver is ideal for detailed engraving on almost any surface--wood, metal, ceramic, glass and more! The micro engraver features a contoured grip for comfort and control and a precision-ground stainless steel bit with a diamond point tip. This diamond-tipped ballpoint micro engraver is also as small as a pen, so it easily fits in your pocket or purse for easy transport.

- Contoured grip for comfort and control
 - Pen-type design fits in a shirt pocket or purse and goes anywhere
 - Precision-ground stainless steel bit with diamond point tip
 - Requires two AAA batteries, included
- Measures: 6 1/4" Product Weight 1.86 lbs.

Cat. #	Description	Qty.
50465-15	Rotary Diamond Micro-Engraver Pen	each

► High Precision Diamond Scribing Tools

A newly designed diamond scribing tool set containing eight precision natural diamond scribes in various sizes and configurations. This set is perfect for precision work in microscopy. The set consists of eight diamond tips, 3 mm in diameter and are mounted in interchangeable tool cones and an MT-1 tool handle. The tool and handle are all housed in a hardwood instrument case. Individual scribes can be purchased separately.

62105-S1	Straight tip, .02" (.50mm) dia. by .06" (1.5mm) tip length	each
62105-B1	Bent tip, .02" (.50mm) dia. by .60" (1.5mm) tip length	each
62105-S2	Straight tip, .01" (.25mm) dia. by .06" (1.5mm) tip length	each
62105-B2	Bent tip, .01" (.25mm) dia. by .06" (1.5mm) tip length	each
62105-SE	Straight extended tip, .02" (.5mm) dia. by .2" (5.0mm) tip length. Good for tight areas	each
62105-BE	Bent extended tip, .02" (.5mm) dia. by .2" (5.0mm) tip length. Good for hard to reach areas	each
62105-HS	Straight, heavy duty tip, .03" (.8mm) dia. by .12" (3.1mm) tip length	each
62105-HC	Bent, heavy duty tip, .03" (.8mm) dia. by .12" (3.1mm) tip length	each
62090-00	MT-1 Tool Handle, 4.75" (112mm) long, gold anodized	each
62105-00	High Precision Diamond Scribing Tools, (8 tools & handle)	set

► Precision Pin Vise Handle and Diamond Stylus

This high precision pin vise handle is machined from the finest material, non-rolling gold-anodized aluminum, which makes it lightweight and versatile. It comes complete with a precision drawbar for positive collets chuck clamping. It features an 8mm (0.31") hexagonal barrel dimension by 100mm (4") long (overall length is 115mm fully assembled) and it has a knurled finger-grip for positive precision control for handling and tool manipulation.

The vice is supplied with a standard collet chuck opening of 2mm (0.78") diameter and will hold a selection of our specially designed tools - and collets adapter 0.8mm (0.003") for diamond stylus chucking.

Cat. #	Description	
62140-00	Precision Pin Vise & Collets	each
62140-50	Diamond Stylus, 0.5mm	each
62140-25	Diamond Stylus, 0.25mm	each

Following are Diamond Scribing Tools, with a 0.80mm (0.003") diameter mounting shank, for use with above Precision Pin Vise and Collets:

Cat. #	Description and Configuration	
62140-02	Bent tip scriber, 0.010" (0.25mm) Diameter. 1.5mm tip length	each
62140-03	Straight extended tip scriber, 0.020" (0.50mm) diameter by 0.200" (5.0mm) tip length. This tool is a must for reaching into and in between high density components.	each
62140-04	Bent extender tip scriber, 0.020" (0.50mm) diameter by 0.200" (5mm) tip length. Use for tight places	each

► BUTLER Block Trimmer

A precision made device to aid in hand trimming resin tissue blocks to the desired shape for ultramicrotomy. The knurled knife guide swivels to help the trimming blade to cut the sides of the block. May be utilized with any stereomicroscope with epi-illumination. The trimmer is supplied with a standard chuck to accommodate the block size 00.

(Stain Technology, Vol. 49, No 4: pp. 129-132, 1974)

69945-01 BUTLER Block Trimming each

► Ultramicrotomy Chucks

Precision machined from aluminum. These special chucks are made to accommodate small specimen blocks, which have been polymerized in Eppendorf tubes. In addition, we also have chucks that hold all sizes of flat embedding blocks (fitting all Leica and RMC instruments), and chucks for LKB instruments.

69990 Flat embedding Chuck each
69991 LKB Chuck each
69992 Eppendorf Chuck for RMC each
69993 Eppendorf Chuck for LEICA each

► Chucks, Block Holders and Molding Cup Trays

► 1. Aluminum Chucks

70174-10 **70174-14** **70174-20**

Catalog #	Description	Pack
70174-10	ABH-JB Chuck for Hacker, A/O Reichert Rotary and Autocut, JB-4 and JB-4A, LKB Ultratomes and Shandon Hypercut. Stem measures: 11 x 11 mm	each
70174-14	ABH-LKB Huxley Chuck. Stem measures: 11 x 25 mm	
70174-20	ABH-JBA Chuck: with three point recessed block holder attachment for LKB Histo-Range and Reichert Super-Cut in addition to microtomes using ABH-JB chucks (70174-20). Stem measures: 11 x 11 mm	each

► 2. EBH-2 Block Holder

Molded from hard plastic. EMS# 70175-50, 6m thick is shown to the right.

- Easy to store block holders attached to Aluminum chucks (ABH)
- Frosted surface for easy marking.
- Large center hole prevents bubble formation.

70175-40 4mm Thin Embedding Stubs 100/pack
70175-50 6mm Thick Embedding Stubs (shown above) 50/pack
70175-60 10mm Thick Embedding Stubs, Mixed Colors 100/pack

► 3. Molding Cup Tray

These polyethylene trays are ideal for casting specimen blocks embedded with JB-4 or equivalents and are used with our block holders and chucks shown above.

Catalog #	Molding Cup Size	Cavities	Pack
70176-10	6 x 12 x 5mm	20	each
70176-15	12 x 16 x 5mm	20	each
70176-20	6 x 8 x 5mm Hexagon	9	3/pk
70176-25	2 x 15 x 5mm	9	3/pk
70176-30	13 x 19 x 5mm	9	3/pk

► Polyethylene Molds – Individual

Molded from polyethylene, three popular sizes are available to meet your needs. These Individual Molds can be used with EBH2 Block Holders, #70175-50, 70175-60, or with colored stubs 70175-70.

Aluminum Embedding Tray is available with 6-position to hold these Individual Mold during polymerization. Comes with anodized blue and natural color.

Suitable for JB-4®, JB-4-Plus®, Immuno-Bed, LR White, LR Gold® or Paraffin embedding.

70177-12	Individual Mold, 12 x 8 mm	100/pack
70177-16	Individual Mold, 16 x 8 mm	100/pack
70177-19	Individual Mold, 19 x 13 mm	100/pack
70178-04	Embedding Tray, Aluminum, (2 Blue & 2 Natural colors)	4/pack

► Chien Silicone Universal-Mold

A two-directional mold that allows for single embedded specimens to be sectioned both laterally and transversely. Tissues to be embedded are accurately trimmed and placed so that both sides of the tissue are against both edges of the cavity tip.

Chien, K., et al. (1985) Proc. Ann. EMSA Meeting 43, 460.

70140 Chien Silicone Mold each
70141 Chien Silicone Mold 10/lot

► Capsule Molds

Our molds are made from the strongest possible silicone rubber providing extremely high tear resistance. They are all reusable and produce embedding blocks of numerous shapes and sizes with a wide variety of tips. We also offer a mold which produces blocks to be used for re-embedding. Choose the one that best suits your embedding needs!

70150	Capsule Molds Type A: 10 cavities, 8mm diameter body, 5mm diameter tip, 11mm height, tapered tip	each
70160	Capsule Molds Type B: 12 cavities, 8mm diameter body, 5mm diameter tip 16mm height, tapered tip	each
70161	Capsule Molds Type C: 12 cavities cylindrical shapes, 8mm diameter 16mm height, flat tip	each

**EMS
EXCLUSIVE**

► The Embedding Capsule Substitute

This 24 cavity mold produces a block similar to the embedding capsule block but with the following advantages:

- Resin polymerizes better in silicone rubber than in polypropylene or polyethylene—the rubber heats more evenly and retains the heat better than in plastic.
- It is easier to see inside the well when centering the specimen in the tip.
- It is easier to remove the block from the well. There is no need for razor blades or press devices.
- The finished blocks have finer tips so when you trim deeper into the block the face doesn't increase in size rapidly; therefore, constant retrimming is not necessary.

**EMS
EXCLUSIVE**

70165	Embedding Capsule Substitute	each
--------------	------------------------------	------

70165: Block Shape

► The Mold for Long Tissues

This mold accommodates longer pieces of tissues (muscle, skin biopsies, and many plant specimens)

ADVANTAGES:

- Easy to embed long specimens and orient them properly. The tissues lie flat in the well; therefore, no horizontal trimming is needed.
- It is ideal for any specimen that needs immediate sectioning (e.g. cell monolayer).
- 24 cavities

**EMS
EXCLUSIVE**

70166	The Mold for Long Tissues	each
--------------	---------------------------	------

70166: Block Shape

► The Cell Culture Mold

This mold is designed primarily for embedding cell culture specimens grown either directly on the bottom of a dish or on the filter when cross sections of the cells are needed:

- (a) Cells grown on petri dishes are cut into strips just before the propylene oxide dehydration step; when Propylene Oxide is added, the strips lift right off the bottom.
- (b) When the strips are ready for embedment, they are rolled on an applicator stick into a wad and gently lowered into the well (the strips should not float).

**EMS
EXCLUSIVE**

ADVANTAGES:

- Many cells can be examined in cross section
- There is no need for trimming — sectioning can begin immediately
- The curved side makes the tip very strong in spite of its thinness
- Easy detection of a strip of cells
- The label is placed on the round part so as not to interfere with the specimen.
- 24 cavities.

70167	The Cell Culture Mold	each
--------------	-----------------------	------

70167: Block Shape

► Chang Monolayer Molds

Designed by Dr. J.P. Chang for the embedding of a monolayer of cells. This specially designed mold has proven useful in the processing of frozen sections, ascite cells, fresh imprints, as well as blood and marrow smears. J. of Ultrastructural Res., 37,370 (1971).

EMS
EXCLUSIVE

70910	Chang Mold 12 cavities, 20x10x1mm	each
70920	Chang Mold 9 cavities, 20x20x1mm	each

► Flat Embedding Molds

► Single Tapered Ends

A clear silicone rubber with very high tear strength. It can be reused more times than the conventional silicone molds. It is resistant to most epoxy resins and its clear base allows positioning of the specimen lighted from beneath.

70900	Standard flat embedding mold, 21 numbered cavities measures: 14mm(L)x5mm(W)x4mm(D). (Clear silicone)	each
70901	Same as #70900, but each of the 21 numbered cavities measures: 14mm(L)x5mm(W)x6mm(D). (Clear silicone)	each
70902	Same as #70900, but each of the 21 numbered cavities measures: 14mm(L)x5mm(W)x3mm(D). (Clear silicone)	each

► Small Flat Embedding Mold

Made from clear silicone, the overall measurements are 1.65" x 3" with 12 cavities. Each cavity measures 0.427"(L) x 0.25"(W) x 0.156" Deep (10mmL x 6mmW x 4mm Deep). This mold produces 12 embedding blocks with tapered ends.

70903	Small Flat Embedding Mold	each
--------------	---------------------------	------

► Double Tapered Ends

A standard flat embedding mold where both ends are tapered. This enables you to embed specimens in both ends of each casting. Made from clear silicone, 21 numbered cavities, each cavity measuring: 14mm(L)x4mm(W)x4mm(D).

70870	Double Tapered Ends Mold	each
--------------	--------------------------	------

► Triple Tapered Ends

A new design with 10 triple numbered, tapered tip cavities to save you time and handling. Holds firmly in a chuck during trimming or sectioning. Made from white silicone, each cavity measures 8mm from tip to center, 5mm deep.

70875	Triple Tapered Ends Mold	each
--------------	--------------------------	------

► BEEM* Flat Embedding Molds

Molded from polyethylene. The critical surfaces of the mold are transparent, facilitating accurate specimen orientation through bottom illumination. Molds are reusable and each mold is supplied with a protective box.

The cavity measures: 12mm(L) x 5mm(W) x 3mm(D) Overall mold measures: 52mm(L) x 40mm(W) x 5mm(H) Storage box measures: 2½"(L) x 1¾"(W) x ½"(H) (57 x 45 x 12.5mm)

70904-01	BEEM* Flat Embedding Mold	ea
70904-12	BEEM* Flat Embedding Mold	12/pk

*Beem Is A Registered Trademark of Better Equipment For Electron Microscopy, Inc.

► Flat Embedding with Convenient Box

No more stickiness with new storage box

Most resins are not a problem to flat embed when in combination with the cocoon box. The system withstands temperatures up to 70 Degrees C, and flat embedding of many resins is made easier.

70900-CB	4mm Flat Embedding Mold w/Cocoon Box	set
70901-CB	6mm Flat Embedding Mold w/Cocoon Box	set
70900-CB	4mm Flat Embedding Mold w/Cocoon Box	set
70870-CB	Double End Flat Embedding Mold w/Cocoon Box	set

TECHNICAL TIP Method for Slide Embedding Cat. # 70170

► **PTFE Embedding Mold**

Machined from PTFE block. This mold offers flat embedding for most resins, including LR White®, LR Gold®, JB-4, Immuno-Bed and Lowicryl®. This PTFE Flat Embedding Mold can be used for both UV/low temperature and thermal cure, and may be used as a substitution for the silicone molds. The individual cavities are pre shaped to reduce block trimming.

For curing anaerobic material, we recommend using Aclar® film, cut-to-size of the mold and lower on top of the mold after you "just over-fill" the cavities with embedding resin. Due to the flexibility of the PTFE, you just bent the mold to pop out the cured resin blocks. After all the cast blocks have been removed, reinsert the mold to its holder to re-shape the mold. The mold holder is machined from aluminum and anodized black.

Mold with 18 cavities, each cavity measures 5mm W x 14mmL x 4mm Deep
Overall mold measures: 5 1/2" x 3" x 1/4" (140x50x8mm)

Mold is available as a set (includes one PTFE mold and one aluminum holder).

70143	PTFE Flat Embedding Mold, set	each
70143-R	PTFE Flat Embedding Mold only	each

► **Stepped Microtome Embedding Mold**

EMS Embedding Mold is a new mold designed with Michael J. Dykstra Ph.D. from North Carolina State University Department of Veterinary Medicine. This Mold produces blocks of the best dimension to be held securely by Reichert/Leica Ultracut stepped microtome chucks. There are 24 cavities and the depth of each cavity is 4mm which will prevent breakage of the blocks during razor blade trimming.

Mold Measurements: 3 3/4" x 3" (85 x 77mm)

Cavity Measurements: 15mm x 7mm x 4mm deep

70907	Embedding Mold-Dykstra	each
--------------	------------------------	------

► **Plastic Flat Embedding Mold**

- Injected molded polyethylene.
- Resistant to most embedding materials.
- Easy peeled-off the blocks.

Mold fits perfectly inside the cocoon box BE8 (64300-8); See Cocoon Box section.

When the mold and the box BE8 are used together, the set allows for the use of oxygen-prohibited embedding materials (ie: LR White) to be polymerized in a flat orientation. These molds are reusable. Each cavity measures 12mm(L) x 5mm(W) x 3.5mm Deep. Overall mold measures: 94 x 56 x 14mm.

70905-12	EMS Molded Flat Embedding Mold	12/pk

► **Tissue Culture Monolayer Embedding Mold: Thompson Embedding Mold**

This invention is a mold used for embedding mammalian cells in monolayer culture in preparation of sectioning for light or electron microscopy. Tissue culture monolayer embedding molds eliminate the need for traditional Beem capsules. The improved molds can be used to transfer the majority of cells from the entire surface of a cover slip to avoid losses of large amounts of cellular information occurring only randomly. In addition, other problems such as surface blemishes caused by air entrapment associated with Beem capsules are eliminated. Each mold comes with references and an instruction sheet.

EMS EXCLUSIVE

ADVANTAGES:

1. The mold yields several individual blocks of resin from a single slip-cover.
2. The resin blocks fit directly into a chuck for flat specimens.
3. The embedded surfaces are free from blemishes caused by entrapped air.
4. The mold uses a minimum amount of resin.

70924	Thompson Mold	each
70925	Thompson Mold	4/lot

► **Slide Duplicating Molds**

Uses a 1x3" glass slide as a base, and duplicates the slide using the resin of your choice. Tissue sections are embedded against the flat glass surface. This duplicated resin slide can be studied under the Light Microscope, then cut, remounted, resectioned, and studied under the EM. A three cavity mold, each cavity measuring: 1"(W)x3"(L)x3/2"(D). References & Instructions come with each mold.

Slide with Cover Slip Duplicating Mold

The same design as 70170 but with the addition of three round cavities which are 17mm in diameter and 1mm deep.

EMS EXCLUSIVE

► Plastic Weighing Boats; "Anti-Static"

They are utilized to weigh liquid or solid samples. Anti-static. Recessed corners facilitate controlled pour-off. Square shape, contour bottom.

70040	Micro Boat 1 $\frac{1}{2}$ " x $\frac{3}{8}$ "H	500/pk
70041	Medium Boat 3 $\frac{3}{8}$ "x $\frac{3}{4}$ "H	500/pk
70042	Large Boat 5 $\frac{1}{2}$ "x $\frac{3}{8}$ "H	500/pk

► Plastic Weighing Canoes; "Anti-Static"

Flexible dishes for handling liquids or solids. Ideal for controlled pour-off. These Anti-Static Canoes with contoured sides provide a convenient non-slip gripping surface. As well, they allow for more accurate weighing and reading of a sample. The canoe shape enables pouring of weighed samples.

Dimensions:

- Small Canoe: 1 $\frac{1}{2}$ "x1 $\frac{1}{2}$ "x $\frac{1}{2}$ " deep
- Medium Canoe: 2 $\frac{1}{2}$ "x4 $\frac{1}{4}$ "x1 $\frac{1}{4}$ " deep
- Large Canoe : 3 $\frac{3}{8}$ "x6 $\frac{5}{8}$ "x1 $\frac{1}{8}$ " deep

70043-10	Small Canoe	500/pk
70043-20	Medium Canoe	500/pk
70043-30	Large Canoe	500/pk

► Glassine Weighing Dish

Weighing samples is made easier with these newly introduced Glassine Weighing Boats:

- No Static Build-Up – Glassine is free of static electricity that plagues disposable plastic weighing dishes.
- Contaminant Free – Pure glassine is an ultra-clean paper product
- Preformed 3.5" diameter Dish—convenient to use
- Color contrast – Chocolate-colored glassine reveals every particle of material
- Dish measures: 3.50" Dia x 0.5" Depth (87.5 x 13mm)

Cat. #	Description	Qty.
70084-01	Glassine Weighing Dish	150/pk.
70084-CS	Glassine Weighing Dish	24pks/case

► Aluminum Weighing Dish

Inexpensive, disposable aluminum foil dishes with crimped sides, flat smooth bottoms, and a finger tab handle on the rim. They may be used for routine weighing and moisture testing, as well as an embedding mold.

- Small Dish measures: 2" dia.x $\frac{1}{2}$ " deep (43 x 12mm)
- Medium Dish measures: 2 $\frac{1}{2}$ " dia.x $\frac{1}{2}$ " deep (57 x 16mm)
- Large Dish measures: 3" dia.x $\frac{1}{2}$ " deep (70 x 16mm)
- Tall Dish measures: 4.2oz, 2 $\frac{1}{16}$ " Dia x 1 $\frac{1}{8}$ " Deep (75mm x 47mmDeep)

Catalog #	Description	Qty

► Glassine Weighing Paper

Our glassine weighing paper is moisture-resistant and non-absorbent.

70080	Glassine Paper size 3" x 3"	500/pk
70081	Glassine Paper size 4" x 4"	500/pk
70082	Glassine Paper size 6" x 6"	500/pk

Aluminum Foil Squares Aluminum Foil Squares interleaved for easy separation.

- Weigh samples quickly and economically
- Cap labware for storage or autoclaving

Catalog #	Description	Qty/Box
70056-04	Aluminum Foil 4 x 4"x 0.001" Thick	500/box
70056-06	Aluminum Foil 6 x 6"x 0.001" Thick	500/box
70056-08	Aluminum Foil 8 x 8"x 0.0015" Thick	500/box
70056-12	Aluminum Foil 12 x 12"x 0.0015" Thick	500/box

► Foil Rolls

These foil rolls which are designed to work with out Mini Bin™ Foil Dispenser and offer minimal waste.

Custom sized pieces of foil can easily be created for covering small surfaces such as beakers, flasks, tubes, and Petri dish. Ideal for autoclaving, freezing, incubating, protecting lab ware, lining, sealing and general storage. Available in two sizes .

70058	Foil Roll 102mm (4") x 152.4m	each
70059	Foil Roll 153mm (6") x 152.4m	each

► Mini Bin™ Foil Dispenser

This Mini Bin Foil Dispenser allows you to safely cut foil to any size and it is a great alternative to wasteful giant-sized foil rolls and expensive pre-cut foil squares. Compact to fit in limited work space areas and easy to transport. Safe to use – load the foil roll, press the cover to activate the safety blade and cut to the desired length. For use with 102 mm or 153 mm (4 or 6 inch) foil rolls (sold separately- see below).The dispenser measures 19 x 10 x 12 mm.

The unit has a non-slip base, has a safe - unique cutter guard with a safety blade and it is compact – for limited spaced work areas . It is able to hold 102 mm or 153 mm (4 or 6 inch) foil rolls The unique – foam strip prevents the foil from retracting back into the unit.

70057	Mini Bin TM Foil dispenser	each
--------------	----------------------------	------

► Triangular Tungsten Carbide Knife

These Knives will fit most any ultramicrotomes and take the place of using glass knives. Perfect for trimming blocks, block facing, and for sectioning hard samples. The quality does compare to glass knives and these blades can be resharpened if desired.

SPECIFICATIONS:

Cutting edge length:38" (9.6 mm)
 Blade height:.....1.0" (25.4 mm)
 Blade thickness:38" (9.6 mm)
 Cutting angle:40°
 Material:100% high grade, solid Tungsten Carbide
 Section thickness:2-15 microns

Cat. #	Description	Qty.
71019-10	Triangular Tungsten Carbide Knife	each

► Glass Knife Making Pliers

These pliers are specially designed with its jaws ground to a special shape for ease of preparation when making glass knives.

62190-01	Glass Knife Making Pliers	each
-----------------	---------------------------	------

► Diamond Glass Cutter

Metal parts are made from nickel-plated brass, set into a maple handle. The rack can be used to crack single or double strength glass.

70038	Diamond Glass Cutter	each
--------------	----------------------	------

► Glass Knife Scoring Jig

These set of jigs assist in the production of making glass knives by hand.

T-square jig: when the edge of this jig is placed against the edge of the glass knife strip the subsequent score will be 26 mm or 1" long. After breaking, the square of the glass can be scored at a 45 degree angle by using the other jig.

62192-02	Glass Knife Scoring Jig	2/set
-----------------	-------------------------	-------

Tape to make Glass Knife Boat, see page 257 >>>>

► Glass Knife Strips ► Ultramicrotomy and Histology Glass Strips

Specially selected glass strips for making glass knives. Its hardness produces a durable and sharp edge suitable for thick, semi thin, or ultrathin sections.

Ultramicrotomy Grade:

71012	Size 6.4mm x 25mm x 400mm	30 strips/pk
71013	Size 8mm x 25mm x 400mm	24 strips/pk
71014	Size 10mm x 25mm x 400mm	18 strips/pk
71015	Size 12mm x 50mm x 100mm	16 strips/pk

Histology Grade:

71016	Size 6.4mm x 25mm x 400mm	30 strips/pk
71017	Size 8mm x 25mm x 400mm	24 strips/pk
71018	Size 10mm x 25mm x 400mm	18 strips/pk

Glass Knife Makers, see page 596 >>>>

► EMS Ultra-Microtome Aid

Made from hard plastic (Delrin) with a beautifully machined finish to handle many of your instruments that need to be at your fingertips during sectioning.

This EMS Ultra-microtome Aid is a safe place to rest your diamond knife, diamond trimming tool, tweezers, hair curl or eye lash, diamond knife cleaning rods, perfect-loop for picking up sections.

Note: This unit is not a safe device to store your sectioning knives, such as diamond or glass knives, after you're done the sectioning.

70612 EMS Ultramicrotome Aid each

► Finger Cots; Latex—Powder Free

Inexpensive, expandable finger cots. Seamless. Protective dexterity without covering the entire hand. Powderless, non-rolled. 3/8mil (0.0030"), 2 3/4" (40mm)L.

71130 Latex Finger Cots Small 1 gross/pk
71131 Latex Finger Cots Medium 1 gross/pk
71132 Latex Finger Cots Large 1 gross/pk

► EMS Diamond Knife Wash

**EMS
EXCLUSIVE**

This new concept of washing the Diamond knives using magnetic stirring action (with special stirring bar) gives you a fast, clean and safe method to remove particles that are left on the knives edge after sectioning.

Since most of the EM labs already have stirring plates, the Diamond Knife Wash has been designed for use with your existing unit, saving you the need to purchase an extra one. It is universal and can be used for all type and brands of Diamond Knives, including the Diatome Histo Knife. Warning: Never use on a hot plate. If used on a combination Stirrer/Hot Plate, make sure the heat is off.

70605 Diamond Knife Wash each

TECHNICAL TIP

When using wax to make trufs for glass knives, the wax sheet should be at room temperature or slightly above (70-80°F). Simply cut desired strip, form a truf to the knife, and melt the edges with a heat pen for a water seal.

► Dental Wax Sheets

We supply dental wax sheets. Pink wax: a hard and thick wax sheet that is ideal for mincing and cutting tissues. Approximately 31 to 35 sheets per pound. Each wax sheet measures: 5 3/4" x 2 7/8" x 1/16" thick

72660 Pink Wax 11lb/bx
72670 Pink Wax 5lb/bx

► Hot Pen – Wax Pen; A Tool for Separating Sections or Cauterizing

Powered by AA batteries. This pen helps to flatten and separate tissue sections and reduces compression in thin sections.

72678

Available in two models: Wax Pen 1 is powered by one AA battery; Wax Pen 2 is powered by two AA batteries.

72679

Both pens are using the same tip. Replacement tip (Cat. #72679-RT) is a straight one. Replacement tip (Cat. #72679-03) is a set of three different configurations: Straight, Hook, and 'U' Shaped Tips.

Cat #	Description	Length with		Diameter	Pack
		Tip w/o Cap	w/Cap		
72678	Wax Pen 1 (A)	6 1/2"	6 3/4"	3/4", 18mm	each
72679	Wax Pen 2 (B)	8 1/4"	8 3/4"	3/4", 18mm	each
72679-RT	Replacement Tip				each
72679-03	Replacement Tips	Set of Three Variable Tips			

► Portable Heat Pen; Soldering Iron

This portable heat pen is able to heat up to 700°C and automatically recharges every time it is placed back into its recharging stand. It will last approximately 40 minutes on a full charge. Tip length 1". It is useful for the sealing of wax onto glass knife boats and small soldering jobs around the lab. The set includes the heat pen and recharging stand.

72677-10 Portable Heat Pen Set each
72677-50 Replacement Fine Tip each
72677-51 Replacement Heavy Tip each

► Nail Polish; Clear

Used for sealing the boats made from tape to the glass knives.

72180 Nail Polish 1/2oz

72180

► Absorbent Paper Points

Machine rolled paper with a tapered end which offers good water absorbency, and assists you in the removal of surplus water from the knife boat, on the block face, and from the grids.

Available in two assortment sizes: (The bigger the number the larger the point.)

- **Selection 1:** contains 200 assorted points sizes 15, 20, 25, 30, 35 and 40.
- **Selection 2:** contains 200 assorted points sizes 45, 50, 55, 60, 70, and 80.

71011-01	Paper Points, Selection 1	200/bx
71011-02	Paper Points, Selection 2	200/bx

► Glass Knife Boats

These disposable plastic boats which easily attach to the triangular glass knife making a trough. To use: Simply slip the boat on the glass knife back and seal with either hot melted wax or nail polish.

Available in three sizes: To fit 6.4mm, 8.0mm and 10.0mm triangular glass knives.

71007	6.4 mm Glass Knife Boat	50/pk
71008	6.4 mm Glass Knife Boat	100/pk
71008-10	10.0mm Glass Knife Boat	100/pk

► Glass Knife Boat; Quick Boat

These boats are made from aluminum and are anodized black. They come complete with a set screw on one side. The area where the glass knife will be attached, is cut to fit to the width of the knife and is cushioned by silicone rubber to ensure a tight seal and no leakage.

71009-60	Quick Boat, for 6.0mm Knife	each
71009-64	Quick Boat, for 6.4mm Knife	each
71009-80	Quick Boat for 8.0mm Knife	each
71009-10	Quick Boat for 10.0 mm Knife	each

► Glass Knife Box

Has a soft silicone base, anti-slip pads underneath, and a clear plastic, hinged dust cover for storing glass knives. Holds 10 6.4mm glass knives. Measures: 6 1/8" (L) x 2 3/8" (W) x 1 1/2" (H) (115mm x 58mm x 37mm).

71010	Glass Knife Box	each
--------------	-----------------	------

► Hair Curl

Made from human hair; good for removing sections, and cleaning the diamond knife.

71180	Hair Curl	each
--------------	-----------	------

► Eyelash Manipulator; A Traditional EM Tool

For direct manipulation of sections and small tissue samples this tool is perfect for any occasion. May be used during ultramicrotomy to carefully tease sections that are in the Diamond Knife boat. The Eyelash comes on a Sable Brush handle made from the highest quality wood.

These Eyelashes may be cleaned and sterilized with alcohol and a tissue.

71182	Eyelash Manipulator	each

► Flat Emery Sticks

Cat. No.	Grit	Pack
62119-04	4/0	12/pk
62119-03	3/0	12/pk
62119-02	2/0	12/pk
62119-01	1/0	12/pk
62119-10	1	12/pk
62119-20	2	12/pk
62119-30	3	12/pk
62119-40	4	12/pk

Emery paper which is glued to a wooden handle. 11" long x 3/4" wide (279x19.1mm). Very useful for filing excess resin of sample block tips. Grit size ranges from number 4/0 (finest) to 3 (coarsest).

► Filing/Polishing Stick and Strips

A plastic handle, 10 1/2" (267mm) long, holds strips of emery paper or cloth 11"x1" (279x25.4mm). Strips are easily replaced.

Comes complete with 2 strips/set (grit 120 and 240).

Cat. No	Description	Pack
62118-02	Filing and Polishing Stick And Strips	set
62118-12	Emery Refills in 12 Assorted Grits	set

Emery Paper, see page 830 >>>>

► Silver Tape

Color Tapes, also see Photography and Tape Sections, page 738 >>>>

Silver coated polyester tape, 3/8" width, 72 yards long, 3" core; good for making glass knife boats.

77700	Silver Tape	each

► Cotton Gloves

These well tailored, high quality gloves are made from 100% cotton. They offer softness and comfort. A perfect choice for handling photographs.

Cat. #	Size	Qty.
71118-01	Small	6prs/pk
71118-03	Medium	6prs/pk
71118-05	Large	6prs/pk

► Gloves; Lint Free, Clean-room

Finest quality, stretch nylon, one size fits all.

Cat. #	Size	Qty.
71090	Mens	6 pair/pk
71092	Womens	6 pair/pk

► Lightweight Cotton Inspector Gloves

These gloves are un-hemmed and lint-free. They are tailored cotton gloves which are ideal for inspection jobs. These gloves are available in one-size fits all for either men or women.

Cat. #	Size	Qty.
71119-01	Women	12/pk
71119-05	Men	12/pk

► Gloves; Latex Exam Gloves With Aloe Vera and Vitamin E

Made from 100% natural latex with the addition of Aloe Vera and Vitamin E, offering the softness, tactile sensitivity and skin protection. Economical ambidextrous style, beaded cuff, and are chemically resistant to acids, alcohols, ketones and alkalis. Packed in a convenient dispenser box, 100/box. Non-sterile. Available either with powdered (biologically cornstarch dusting, ~ 2mg/glove) or powder-free gloves.

Latex Powder Free

► Nitrile Exam Textured Gloves

Powder-Free Green Gloves with Aloe Vera

Made from 100% synthetic nitrile, contains no latex. It is an extremely tough glove yet gentle on the hand. It offers superior textile strength and they are puncture resistant when compared to other similar thickness of latex or vinyl gloves. There are no natural rubber protein allergens as is present in natural latex rubber gloves. With the addition of Aloe Vera, the powder-free gloves will provide the user with superior comfort, excellent flexibility and dexterity. Textured gloves provide a positive grip on wet and or dry surfaces. The nitrile compound provides a broad range of hand protection against accidental chemical splashes.

► Cut-Resistant Gloves; Safeknit™

The comfortable choice when choosing a high performance cut resistant glove. Safeknit is a blend of abrasion-resistant Spectra® fiber and other synthetics. The mix of these fibers form a rugged cut resistant barrier that offers the histologist sensitivity for manipulation but with extreme comfort and productivity.

NOTE: These gloves are neither puncture proof nor water resistant. They should not be used to protect against intentional cutting. Avoid use near moving blades. For applications which are related to fluids where a water resistant glove is required, we recommend either double gloving or using Nitrile Gloves, (Cat # 71106-71109 or 71068.)

71066-06	Medium Duty Safeknit™ Glove	Size 6	each
71066-07	Medium Duty Safeknit™ Glove	Size 7	each

71066-10	Medium Duty Safeknit™ Glove	Size 10	each
71066-11	Medium Duty Safeknit™ Glove	Size 11	each

► Finger Cots; Latex– Powder Free

Inexpensive, expandable finger cots. Seamless. Protective dexterity without covering the entire hand. Powderless, non-rolled. 3/8mil (0.0030"), 2 3/4" (40mm)L.

71130	Latex Finger Cots Small	1 gross/pk
71131	Latex Finger Cots Medium	1 gross/pk
71132	Latex Finger Cots Large	1 gross/pk

SAFETY TIP

The standard latex surgical gloves do not offer adequate skin protection when handling glutaraldehyde. Nitrile or Neoprene gloves provide the protection that is needed. However, dexterity is inhibited with these gloves. Therefore, double-gloving with latex gloves is recommended for delicate work.

Raewyn Eager, Dept. of Zoology, Auckland University. EM News. Newsletter of the New Zealand Society for Electron Microscopy. No. 24, Dec. 1992

SAFETY TIP

In the past several years there has been documentation in the medical literature of numerous cases of latex allergy in medical and other laboratory personnel. Many people are experiencing itchy hands, shortness of breath or other signs of allergic reactions when they use latex gloves in their laboratory work. Some people are changing to powder free gloves with some relief; however, other people get relief only after changing to another type of glove.

E. Ann Ellis, Ellis EM Consulting Service, 1316 SW 61st Terrace, Gainesville, FL. 32607

► Perfect Loop

Using this PERFECT LOOP, you can place your thin sections, cut on the ultramicrotome, easily on the grid mesh without creases.

**EMS
EXCLUSIVE**

Perfect Loop for Ultra thin sections

70944	Set of Handle & Loop	set
70945	Loop only	each
70946	Loop only	5/each
70948	Handle only	each

Perfect Loop for Light Microscopy (large sections).

The outside diameter of the loop is 7mm.

70940	LM Set of Handle & Loop	set
70941	LM Loop only	each
70942	LM Loop only	5/each
70943	LM Loop Handle	each

TECHNICAL TIP

The Perfect Loop For Section Pick Up

The Perfect Loop (EMS cat # 70944) allows you to pick up sections consistently without causing any damage to the sections. It is the only loop that is currently available where the outside diameter of the loop is the same as the grid and the inside diameter is slightly larger than the observation area of the electron microscope. The thickness is about 40 microns. Due to the fact that the loop and the grid are of the same diameter they are attracted to one another when in water and attach together through the surface tension of the water. Even if the section touches the inside of the grid during blotting the touching area is minor and, therefore, the section is not damaged. When the grid is removed from the loop the section remains in place without fail. The area equals the observation field (about 2mm diameter) of the electron microscope; thus pieces can be fully observed.

► Deluxe Perfect Loop

As in our standard Perfect Loop this device allows you to pick up sections with ease. This set utilizes the Perfect Handle complete with protective collar (#70616-HD).

**EMS
EXCLUSIVE**

70939	Deluxe Perfect Loop Set	Set
70616-HD	Perfect Handle Only	each

► Perfect Scale

Made from Nickel alloy, 3mm in length with 1/10 mm divisions. The Scale fits the Perfect Handle(70616-HD). The Perfect Scale comes complete with one scale and a handle.

70617-10	Perfect Scale Set	each
70617-20	Perfect Scale Only	each
70616-HD	Perfect Handle Only	each

1. Centre the LOOP above the sections

2. Slowly lower the LOOP over the sections and touch the water.

3. Gently lift up the LOOP with the sections in a droplet of water.

4. Lower the LOOP onto a grid and lift up again.

5. The grid holds to the LOOP by surface tension.

6. Lower the LOOP to the filter paper to remove water.

7. For coated grids, touch with filter paper to remove water.

8. Separate the grid from the LOOP with an eyelash.

► Parafilm M and Dispenser

Laboratory film used to prevent evaporation, contamination and hydration. Seals labware quickly and efficiently. Used in EM for drop staining and to pick up thin films when coating grids.

70990	4"x250', 1" core	each
70991	2"x250', 1" core	each
70992	Cutter dispenser	each

► ABS Parafilm® Dispenser

Unique design for maximum safety

Store, dispense, and cut Parafilm®, tape, labels, and Tough-Tags®.

ABS plastic dispenser designed with a safety razor that slides and cuts with no danger to your fingers. Dispenser holds one or two 2-inch rolls, or one 4-inch roll. They measure 120x156x171mm (WxHxD)

Parafilm is a registered trademark of American Can Company.

70993-01	Parafilm Dispenser Blue	each
70993-02	Parafilm Dispenser Green	each
70993-03	Parafilm Dispenser Red	each
70993-04	Replacement Blades for Dispenser	5/Pack

► DuraSeal™

A Durable Heat-Resistant, Solvent-Proof Laboratory Stretch Film Heat-Resistant And Microwave Compatible -

Withstands temperatures up to 100°C (boiling water)

Chemically Resistant - Resists essentially all solvents and caustic agents

Tear Resistant - Film can stretch 500-800% before breaking or tearing

Clings - Film can cling to itself following stretching

Tight Sealing - Forms an airtight barrier

Permeability Information:

Oxygen:	125cc/100in2/24 hrs at 23°C
Carbon Dioxide:	1300cc/100in2/24 hrs at 23°C
Water Vapor:	1.0g/100in2/24 hrs at 38°C and 90% R.H.

70994-01	DuraSeal 1"x150ft	each
70994-02	DuraSeal 2"x500ft	each
70994-04	DuraSeal 4"x250ft	each
70994-05	DuraSeal 4"x500ft	each
70994-06	DuraSeal 5"x150ft	each
70994-20	DuraSeal Dispenser	each

► DuraSeal Cling

It Clings - Film can cling to itself and glass vessels.

Heat Resistant - Softens at 100°C.

Strong - Film can stretch 300-400% before breaking or tearing.

Tight Sealing - Forms an airtight barrier when stretched across openings.

70994-07	DuraSeal Cling for Test Tubes, 1" x 150'	Roll
70994-08	DuraSeal Cling, 2" x 500'	Roll
70994-09	DuraSeal Cling, 4" x 500'	Roll
70994-10	DuraSeal Cling, 5" x 150'	Roll

► Peel n' Seal

Pre-Cut, Breathable and Non-Breathable Sealing Membranes for Flasks

Breathable - A breathable option is available for cell culture applications

Non-Breathable - A non-breathable option is available for general sealing applications

Sterile - All membranes have been gamma irradiated to remove cytotoxins and other contaminants

Protects - Liquid-tight membranes keep solutions safe from outside contamination during storage

Proven - Non-breathable Peel-n-Seal is made from our Titer-Tops material and breathable Peel-n-Seal is made from our Breathe-Easier material; both are trusted and proven throughout the life science industry

Temperature Ranges

Breathable: -20°C to 80°C/Non-Breathable: -40°C to 100°C

Peel-n-Seal Utilizes: Breathe-Easier and Titer-Tops

Cat. No.	Description	Flask Size	Qty
Breathe-Easier			
77578-10	Breathable Peel-n-Seal, 1.50" (38.1mm) dia.	250ml	50/pack
77578-20	Breathable Peel-n-Seal, 1.63" (41.4mm) dia.	500ml	50/pack

77578-60	Non-Breathable Peel-n-Seal, 2.13" (54.1mm) dia.	1,000ml	50/pack

► SecurTainer™ I Tamper Evident Specimen Containers

Container made of polypropylene - Closure made of polyethylene

This shatter resistant, especially designed for collection, transport and specimen storage.

- Unique integrated leak resistant seal
 - High clarity to allow specimen to be viewed without opening
 - The magenta lids are ribbed for easy opening
 - Containers are stackable with straight side format.
 - SecurTainer™ I is a unique tamper evident to ensure no alter allow. (SecurTainer™ can be used without using the tamper evident locking mechanism)
 - For color coding purpose, use CapInsert (Cat. #68106-series)
- Both containers and caps are manufactured without the use of plasticizers or mold release agents. All material used are free from latex. All containers are 95kpa compliant. Non sterile, container and caps are packaged separately in bag of 100.

EMS #	Description	Qty
64236-02	SecurTainer I, Size 20ml	500/pk
64236-04	SecurTainer I, Size 40 ml	500/pk

64236-09	SecurTainer I, Size 90 ml	400/pk
64236-12	SecurTainer I, Size 120 ml	300/pk

► SecurTainer™ II Tamper Evident Specimen Containers

This model uses a different tamper evident concept compared to the SecurTainer I above. No locking tab to push up is necessary when the tamper evident is used. Simply screw the cap on the container and the tamper evident sealing ring is automatically locking in place. When unscrewed, the ring is detached from the cap. All other features are the same as SecurTainer I.

EMS Click-Leak-Proof Container

WE'VE ADDED A CLICK AND REMOVED THE LEAK.

Our new EMSClick container was designed to eliminate leakage that occurs during specimen transport. The container produces an audible "clicking" sound when the leak-proof seal has been properly engaged, assuring accurate closure and specimen integrity during transport.

Say Goodbye to Messy Clean-Ups and Unnecessary Exposure

- 100% virgin medical grade plastic(HDPE) provides consistent vial to vial performance
- Audible proof of closure confirms engagement of leak-proof seal
- Cap designed to enhance seal during positive and negative pressure differentials
- Rounded knurls on cap offer an easy gripping surface for users
- Vial "ears" prevent cap from backing off during rough transport
- Independently tested to perform with a 0% leak rate under requirements detailed in:

United Nations Model Regulations Packing Instruction 620/650

U.S. Department of Transportation's Title 49 Code of Federal Regulations, §173.196

International Civil Aviation Organization (ICAO) Packaging Instruction 620/650

International Air Transport Association (IATA) Packaging Instruction 620/650

International Safe Transit Association (ISTA) Random Vibration Under Low Pressure Test

The Vials are 20 ml in capacity and they measure 3.04 CM in Diameter and are 4.43 cm in height.

► FlexTainer™ Containers

Made of polypropylene

This is a space-saving expandable accordion-style jug with flattens down for easy transport and storage.

Great ideal for storing and carrying numerous types of fluids, it is suitable for any laboratory. Made of high strength polyethylene, it features comfortable carry grip and screw-on cap with on/off spout. It is available in many sizes up to 8 liters. Come with individually wrapped.

Cat. #	Description	Qty
64228-13	Flex-Tainer™, 3 L	12/pk

64228-48	Flex-Tainer™, 8 L	36/pk

► PetriStickers™

Stickers for Labeling Petri Dishes

Easy to Use - Label Petri dishes quickly, neatly, and reliably.

Temperature Resistant – Labels remain firmly intact in temperatures from 4°C to 42°C

Convenient – Instantly form an imprint Petri dish for quick reference, then remove if you wish

Ideally Sized - PetriStickers™ are 3" or 76 mm diameter.

70630-32	32 - Square Grid	36/pk.
70630-50	50 - Square Grid	36/pk.
70630-70	70 - Square Grids	36/pk.
70630-100	100 - Square Grids	36/pk.
70631-06	6 - Sector Pie	36/pk.
70631-08	8 - Sector Pie	36/pk.
70631-12	12 - Sector Pie	36/pk.
70631-16	16 - Sector Pie	36/pk.

► PetriSEAL™ and ContainerSEAL™

Ideal sealing Tapes for Petri Dishes, Microplates, Lids, Caps and other Lab Items.

Conformity – Stretches, conforms and seals the irregular perimeter of microplates or Petri dishes

Waterproof & Chemical Resistant – Tapes and adhesive resist most solvents and caustic agents

Temperature Resistant – Seal remains flexible in moderate freezer temperatures and withstands intermittent exposure to 100°C

NEW ContainerSEAL XL™

Enjoy all the benefits of PetriSEAL and ContainerSEAL in a new wider format. Container SEAL XL makes it easier to seal large containers and bottles and to cover wider gaps ensuring a tight seal.

70500-B	PetriSEAL, Blue	0.50 x 108	Roll
70500-C	PetriSEAL, Clear	0.50 x 108	Roll
70500-R	PetriSEAL, Red	0.50 x 108	Roll
70500-Y	PetriSEAL, Yellow	0.50 x 108	Roll
70500-W	PetriSEAL, White	0.50 x 108	Roll
70501-R	ContainerSEAL, Red	0.75 x 108	Roll
70501-W	ContainerSEAL, White	0.75 x 108	Roll
70501-Y	ContainerSEAL, Yellow	0.75 x 108	Roll
70502-R	ContainerSEAL XL Red	1" x 108'	Roll
70502-W	ContainerSEAL XL White	1" x 108'	Roll
70502-Y	ContainerSEAL XL Yellow	1" x 108'	Roll

High-Contrast PetriStickers™

Quick Reference - PetriStickers correspond to wells on a microplate for fast colony identification

High Contrast - Colored grid allows colonies to stand out from the Petri dish background

Updated Design - Rectangular shape leaves ample space above and below grid for writing on the dish

Two Layouts - Reference wells numerically (1-96) or alpha numerically (A1-H12)

Ideally Sized - PetriStickers are 2.8" x 1.75" or 71mm x 44.5mm, to fit most common Petri dishes

Alpha numeric sticker mimics well plate layout

1-96 layout assigns a number to each well

Cat. No.	Description	Qty.
70556-14	96-Well layout, 1-96	36/pk
70556-18	96-Well layout, A1-H12	36/pk

Petri Dish Support N Seal

Vertically Oriented Support Structure for Sealing Petri Dishes

Provides An Extra Hand - Support N Seal provides a stabilizing vertical slot in which the Petri dish and lid are held closely together while allowing rotation as a sealing tape is applied around the dish

Any Tape Any Time - Compatible with most sealing tapes including: Breathe Easy Breathable Strips, PetriSeal, DuraSeal and Parafilm®

Stable - A wide base and non-slip feet ensure that Support N Seal remains in place while in use

Universal - Fits Petri dishes up to 100mm in diameter and 15mm high (including lid)

Cat. No.	Description	Qty.
70556-12	Petri Dish Support N Seal	each

Petri-Sleeve™

Seal-To-Size Poly tubing for Petri Dish Storage

Cut-To-Size - Petri-Sleeve™ can be sized to accommodate any number of Petri dishes

Minimize Waste - Each length of sleeve can be sized to prevent baggy packaging and prevent excess waste

Separate Storage - Petri dishes pretreated prior to use can be stored labeled and stored in separate sleeves to prevent contamination

Labeled Stacks - 3" white squares every 6" allow for easy, high-contrast labeling

Versatile - 7" diameter easily fits a wide variety of popular dish sizes, as well as microplates

Cat. No.	Description	Qty.
60412-10	Petri-Sleeve™	each

► Petri Orienter and Stand

For Working Comfortably with Solid State Media

The Petri Dish Stand

Prevent Fatigue – 30 angle creates a more comfortable work surface for streaking, transferring, and counting.

Unique Design – Rear slot accepts all PetriOrienters to create a custom layout.

The Petri Orienter

Accuracy – Quickly create a consistent area of reference on your petri dish.

Clarity – Sharp characters and lines allow for fast and easy position recognition.

Flexible – PetriOrienters are available in several layouts of grids or pie sectors to accommodate colonies of any size.

70498-01	PetriDish Stand 88mm diameter	each
70498-02	PetriDish Stand 100mm diameter	each
70498-03	PetriOrienter, 32-square grid	Pack

► Petri Dish Dividers™

Adhesive Dividing Wells for Cell Growth

Flexible – Grow multiple cell types in one dish OR grow similar cell types and apply different treatments

Save Space – One dish does the job of many on the benchtop, at the microscope and in the incubator

Save Media – Smaller growth areas means less media needed to grow cells

Sterile – Gamma irradiated to ensure sterility

70632-20	Petri Dish Dividers 6-Sector Pie	15/pack
70632-30	Petri Dish Dividers 8-Sector Pie	15/pack

► Contact Plate

Made of polystyrene

These dishes are free from optical distortion. The dish has 16 of 10 x 10 mm square grids, which is marked numerically in one direction and alphabetically in the other. The model 70692-20 is designed with a convex bottom to save on culture medium. Dishes are packaged 20 per sleeve and are radiation sterile.

EMS #	Description	Vol.	Qty
70692-10	Contact Plate, 60x15mm	20 ml	500/pk
70692-20	Contact Plate, convex bottom, 60x15mm	15 ml	500/pk

► Petri Dishes –Sterile Petri Dishes

Made of polystyrene

Our Petri Dishes are available in a variety of shapes and sizes for use in routine procedures and with automated equipment. Economical, optical clarity, dishes are precision-molded from biomedical grade polystyrene so cultures are clearly visible without distortion. Dishes are packaged 20 each in sturdy polyethylene sleeves. These dishes are not recommended for tissue culture application, due to non treated by "corona effect".

EMS #	Model	Description (actual Dimension)	Vol	Qty
70678-10	D210-7	Dish 90x20mm – Commonly referred to as a 100x20mm dish. For unimpaird observation of specimen growth with raised straight ridge around top for stable stacking	500 ml	100/pk
70678-20	D210-7WL	Dish 90x20mm – Commonly referred to as a 100x20mm dish. This dish has three venting ribs into the underside of the lid to prevent condensation build-up	100 ml	500/pk
70678-30	D210-8	Dish 90x25mm – Commonly referred to as a 100x25mm dish. Accommodates deeper fills for longer culture periods. Used for fungal cultures, plant propagation. This dish has three venting ribs into the underside of the lid to prevent condensation built-up	125 ml	500/pk
70678-40	D210-8R	Dish 90x25mm – Commonly referred to as a 100x25mm dish. Similar to D210-8 but with no-vented lid having a raised straight ridge around top for stable stacking.	125 ml	500/pk
70678-50	D210-13	Dish 55x13mm – Commonly referred to as a 60x15mm dish. For use whenever a small quantity of culture is desirable. For unimpaird observation of specimen growth with raised straight ridge around top for stable stacking. Dish has three venting ribs on the edge of the dish to prevent condensation build-up.	28 ml	500/pk
70678-60	D210-14	Dish 50x8mm – Commonly referred to as a 60x9mm dish. Box type dish, for classroom studies, culturing of mycobacteria aerosol testing, membrane filter and immunodiffusion techniques. Tight lid prevents sample dehydration.	12 ml	500/pk
70678-70	D210-15	Dish 35x10mm – Commonly referred to as a 35x10mm dish. Selected for small quantities culture media. For unimpaird observation of specimen growth with raised straight ridge around top for stable stacking. This dish has three venting ribs into the underside of the lid to prevent condensation build-up.	9 ml	500/pk

► Square Petri Dish

Made of polystyrene – Radiation sterile
This dish commonly referred to as a 100 x 15 mm dish. Free from optical distortion and sterile, these dishes are ideal for phase typing, susceptibility testing, plate counts, and probe assays.

The square Petri dish with grid is consists of 36 of 13 x 13 mm squares, each 13 mm grid is marked numerically in one direction and alphabetically in the other. This dish has four venting ribs into the underside of the lid to prevent condensation build-up.

Cat. #	Description	Qty
70691	Square Petri Dish with Grid, 10/sleeve	100/pk
70691-CS	Square Petri Dish with Grid, 500/cs	500/pk
70690	Square Petri Dish, Plain, 20/sleeve	100/pk
70690-CS	Square Petri Dish, Plain, 500/cs	500/pk

► Bacterial Cell Spreader

Made of high impact polystyrene

No flame sterilization needed.
Designed for easy spreading of cells onto the surface of an agar plate. Supplied sterile in individually packs. Total length of handle: 176 mm, width of spreader: 36mm. Color green

EMS #	Description	Qty
62452	Bacterial Cell Spreader	100/pk

► Dissecting Dish

A silicone pad placed inside a 150mm x 20mm deep plastic petri dish. The mat can be removed, washed, and returned to the dish for reuse. The pins come in 10 different coded colors.

An optional Pyrex Glass Petri dish is available for use when sterilization is needed

70540	Dissecting Dish w/Plastic Dish	each
70540-50	Dissecting Dish w/Pyrex® Dish	each

► PYREX® brand, Culture, Petri Dish

These flat, clear dishes will withstand repeated sterilization (wet or dry). The edges are beaded to provide greater mechanical strength. The bead also provides a means to equally space the sidewalls of the bottom and cover, thereby reducing the capillary action of condensed moisture on the slides. They are not effected chemically or thermally by any of the methods commonly employed in laboratories where sterilization is a major factor in routine or in specialized work. The covered dish is not airtight.

The tops are marked in blue enamel and the bottoms are marked in white enamel to make sorting easier. Bottoms also have a triangular, enamel reference point for serial dilutions.

Cat #	Description	Size, mm	Approx. Dia x Hgt, mm	Qty
70648-10	Complete Petri Dish	60x15	58x15	12/pk
70648-14	Complete Petri Dish	100x15	98x15	12/pk
70648-18	Complete Petri Dish	150x20	148x20	12/pk

► Embryo Dishes

These dishes are molded from clear glass and come with a glass lid for the viewing or staining of free-floating specimens.

Cat. #	Description	Pack
70543-30	Embryo Dish, 30 mm Dia. x 12 mm Deep	each
70543-45	Embryo Dish, 45 mm Dia. x 12 mm Deep	each

► Petri Dish; Analyslide

Slide measures 3"(L) x 2"(W) x 1/16"(H), chamber is 3mm deep. The analyslide is like a petri dish on a slide. Use it as an examination and storage container for 47mm filters. Its rectangular base fits any microscope stage; an inner cover ring offers airtight security for the samples and it does not interfere with viewing. It is also ideal for drying coated grids and absorbing water from grids that are supporting sections.

70650	Analyslide	100/pk
-------	------------	--------

► Petri Dishes; Open with One Hand

A 50x9mm petri dish design that is easily opened with one hand, yet closes to a tight seal by its unique double rim. Specimen samples are preserved until you are ready to analyze them. Humidity remains locked in. When loaded with a 47mm absorbent pad, it is ideal for drying coated grids, removing water from grids that are supporting sections.

Available with or without absorbent pads. The dishes are sterilized by Gamma Irradiation.

70660	Without Absorbent pads	100/pk
70662	With Absorbent pads	100/pk
70664	Absorbent pad kit: (1000 pads, 47mm, and dispenser) Kit	

► Petri Dishes; Disposable

Our petri dishes are available in a variety of sizes and shapes for use in routine procedures and automatic equipment. Manufactured from Polystyrene, with excellent optical clarity. The dishes are sterile and each lot is tested to assure uniform quality and sterility.

70680	100x15mm Standard Round	100/pk
70682	100x15mm Bi-Petri	100/pk
70684	100x15mm Tri-Petri	100/pk
70686	100x15mm Quad-Petri	100/pk
70690	110x15mm Square	100/pk

► Specialized Dishes

► 35x10mm Untreated Polystyrene Dish

35x10mm dish for the culture of cells in suspension; radiation sterilized.

70340	35x10mm Suspension Dish	100/pk
70342	35x10mm Suspension Dish	500/pk

► 60x15mm Permanox Dish

Permanox is a strong, biologically inert material, resistant to nonchlorinated hydrocarbons, acetone, and many other EM reagents. Our EMbed-812 and other embedding resins can be used to embed cells in these dishes with excellent results. Permanox has not been shown to be autofluorescent, and has a low oxygen solubility which makes it suitable for experiments performed under anoxic conditions. The dishes have high optical quality that provide excellent and consistent viewing where microscopic examination is required.

70350	60x15mm Permanox Dish	40/pk
70353	60x15mm Permanox Dish	100/pk
70356	60x15mm Permanox Dish	500/pk

► Dissecting Pan and Mat

This dissecting pan is made from aluminum, which is rust free and easy to clean. It comes with a removable reusable vinyl pad, which accepts dissecting as well as push-pins to hold down your specimen during dissecting. The pad measures 13 3/8" x 9 3/8" x 2 1/4" thick

63313 Dissecting Pan & Vinyl Mat each

► Cover Glass Bottom Sterile Culture Dish

EMS introduces the High Quality Thin Glass Bottom Sterile Culture Dishes, meeting your research requirements.

IDEAL FOR:

- Fluorescence microscopy
- Confocal (laser) microscopy
- High resolution image analysis
- Cell culture
- Electrophysiology

A new series of sterile, optical quality, glass bottom dishes which provide exceptional imaging quality for many applications requiring the use of inverted microscopes. Conventional plastic or glass petri dishes and chambers limit the use of the inverted microscope for many applications because the thick plastic or glass bottom requires a long working distance objective available only in lower magnifications. Moreover, plastic dishes cannot be used for DIC or any polarization microscopes due to their inherent birefringence. EMS New

Glass Bottom Dishes eliminates these problems, making them ideal for applications such as: patch clamp recordings where fluorescent-tagged (GFP) receptors can be identified for selective study; and many other fluorescent microscopy applications, which require low background scattering of light and reduce intrinsic "auto" fluorescence that occurs when using standard plastic dishes. Furthermore, the glass bottom is designed flush with the whole base of the dish, therefore allowing direct contact between the entire glass surface and the warming stage. This eliminates any air gaps that may otherwise exist between the glass dish and the warming stage and hence optimize heat-transfer, allowing homogeneous heating and cooling of the glass bottom.

FEATURES:

- Non-cytotoxic, non-pyrogenic and sterile until opened.
- Dish diameters: 35 and 50 mm, with internal glass well diameter of 12, 22, 30 and 40 mm.
- Available sterile either individually packed in a medical-style blister or in sleeves of 20 dishes.
- Each dish has a flat (0.17mm thick) optical quality glass bottom.
- Production is carried on in a Class 10,000 clean room, certified under EN46001, EN 46002, ISO9001 and ISO 9002.
- All dishes are gamma irradiated (EN 552) and sterile.
- A typical dish is shown in Fig. 1

Figure 1

Figure 2

► **Cover Glass Bottom Sterile Culture Dish (continued)**

OPTICAL PROPERTIES

- Wide optical range of transmission – UV, IV and IR (300 nm to 2500 nm) **Figure 2.**
- Flat (0.17 mm thick) optical quality glass bottom provides the following advantages:
 - a. use of a much shorter working distance immersion objective.
 - b. larger numerical aperture (NA) objectives.
 - c. higher magnification (up to 100x).

MICROSCOPY, IMAGING AND SPECTROSCOPY

- Confocal (laser) microscopy.
- Two-/multi Photon Confocal Microscopy.
- DIC and Polarization Microscopy.
- High-resolution Imaging System.
- Infrared imaging (e.g., brain slide recordings).

SOME APPLICATIONS

- **Cell Biology:** STEM Cell Research, Cell growth cycle monitoring, cell culture.
- **Protein Chemistry:** Green fluorescent protein identification of Histotags, etc.
- **Molecular Biology:** Phenotyping and other complex Genetic Research.

3. Willco-dish™ Kit-Dishes

The WillCo-dish®KIT ("KIT") dishes, of which we have four (4) types in polystyrene (PS) and all four in both "transparent -" as well as in "black walled" dishes, we designed to offer Scientists the opportunity, to use any chosen "material - as well as different thicknesses", for the bottom of a "WillCo® dish".

As a standard, we offer our (German glass) Borosilicate cover slips, in Thickness: # 1.0 (130-160 micron), as well as # 1.5 (160-190 micron).

The WillCo-dish® KIT Glass Bottom dishes are composed of several components, each of the highest quality of their kind. Below please find a summary and description of these components..

Components

1. Dish (Polystyrene or polycarbonate surrounds and -lids, clean room molded, 500 units each).
2. Pressure sensitive Double Sided [Medical] Adhesive rings, FDA approved (500 units). This DSA-Adhesive reaches its maximum bonding quality after 4 hours, at room temperature.
3. Glass coverslips: German glass, 0.17 mm. - # 1.5 coverslips (500 units). Other thicknesses available on request.
4. One pair of tweezers, to protect fingers from these thin, razor-sharp glass coverslips.
5. Optional: Round, anodized, aluminum "Assembly Devices" for a quick, accurate and safe positioning and assembly of the glass coverslip and the adhesive ring.

Assembly Device:

Note: The 2 part aluminum ASSEMBLY DEVICE comes separate, because you need to purchase it only once per type, in a life time.

Again, using an ASSEMBLY DEVICE with the KIT-dishes makes assembling these fine dishes "easy, accurate and safe", also saving a lot of time and funds. The (glass) bottom of the WillCo-dish® KIT dishes is always flush with the warming-stage and flat, a requirement for High Quality Imaging.

These features ensure even distribution of the temperature inside the dish, as well as great imaging results.

We are sure you will very much appreciate working with the EMS WillCo-dish®KIT "Do-It-Yourself" Glass Bottom dishes

► Cellattice™ - Micro-Ruled Plastic Cell Culture Surfaces

Purposes:

Measure the Same Cell: Cell cycle, axon growth and differentiation
Direct Cell Count: Proliferation and cytotoxicity without removing attached cells

Introduction

Cellattice™ micro-ruled Plastic Cell Culture Surfaces consists of a cell culture surface with microscopic identification and measurement markers. It is manufactured with high optical quality plastic suitable for phase contrast and other standard cell-based assay measurement techniques. Cell cultures on the Cellattice™ are identifiable within 25 micrometers.

The built-in markers on the Cellattice allow direct measurement of cell growth and movement without image acquisition. Same cell or cell clusters can be measured throughout the time course of the experiment, even after each incubation period.

Cellattice™ can be used to monitor morphology, cell movement and differentiation at the individual cell level. Cell proliferation is measured directly with multiple reading.

► Cellattice™ Coverslips and Slides

BENEFITS:

- Measure axon growth directly without image acquisition and image analysis
- Count Cells after attachment
- Measure cell proliferation directly with multiple readings without detaching
- Monitor same cell or cell cluster for morphology, cell movement and differentiation

Catalog #	Size	Thickness	Grid Area	Pack

► EMS Immunofluorescence Chamber

A two well incubation chamber for use in immunocytochemistry (by Miguel Berrios, SUNY Stony Brook). Also available in a one well version.

This chamber accepts regular microscope slides or coverslips and is assembled without any bonding substrates. Antibody incubation and washing are done in the chamber wells. It is then taken apart before microscopic examination. It is a proven solution to contamination spills, non-specific fluorescent signals, and sample dehydration in indirect immunofluorescence assays.

Overall measurement: 4½"(L) x 2"(W) x ¾"(T) (113 x 51 x 12mm). Cavity: ¾" (dia.) x ¼"(D) (20mm x 6mm).

ADVANTAGES:

- Very reliable and will accept a variety of samples and antibody washing conditions.
- Drastically reduces non-specific backgrounds.
- Elimination of contamination.

70330	Immunofluorescence Chamber, 2 well	each
70331	Immunofluorescence Chamber, 1 well	each

**EMS
EXCLUSIVE**

► Tissue Processing Well; Netwell™

A modular and disposable system which can be used for the following procedures:

- Handling and processing of tissue slices.
- In immunocytochemical staining.
- In 3-dimensional tissue culture.
- In explant tissue culture.

Home made devices are no longer necessary. These tissue processing wells are ready to fill all of your needs with the added convenience of being able to process up to 12 tissue specimens at one time (with one unit) .

► Netwell™ Inserts

The Netwell™ is a polystyrene insert fitted with a polyester mesh bottom for use in 6 and 12-well plates. Available in two mesh sizes and two diameters; the Netwells provide ultimate flexibility in retaining fragile tissues during processing and staining.

► Netwell™ Carrier Kit

A set of carrier plates and handles for moving the Netwells in and out of the 6 or 12-well plates. The handle can be attached or detached to the plate at any time.

► Netwell™ Reagent Tray

Thermo-formed polystyrene. Holds 150ml of reagent solution. Netwells are transferred to the reagent tray by the Carrier kit, where fixing and staining is performed. Reagent trays are available in white for colorimetric reaction contrast, and in black for better visibility of tissue sections.

APPLICATIONS

- The polyester mesh acts as a tissue carrier and strainer for immunocytochemical staining and biological and histological fixation. It avoids the risk of losing valuable samples associated with paint-brush transfer.
- For 3-D tissue culture, the sterile Netwell provides efficient media permeation and support to cultures grown in gels.
- As well, Sterile Netwells allow for easy processing of tissue explants and microcarrier-grown cells.

► MeshWell Plates; Section Processing and Immunocytochemical Trays

These plates are made from polypropylene and the bottom of each of the wells is an ETFE monofilament screening fabric with a 500µm (0.0197) opening. These MeshWell Plates are available with 6, 12, and 24 well configurations, and they fit into the 6, 12 and 24 Costar/Corning Cell Culture Clusters listed above for processing tissue slices, otherwise, these MeshWell Plates are also able to process tissue slices with Reagent Trays (64730 - 64732). MeshWell Plates come with one Plate and two Reagent Trays, one Black and one white. For your convenience we offer a Meshwell Plate set which includes one Meshwell and one cluster plate.

64732-10	Reagent Tray, White	10/pk

► Costar® Brand Cell Culture Clusters

Tissue culture plates are designed and treated for a wide range of applications.

Plates are made from optically clear, medical grade polystyrene with flat bottoms of uniform thickness, allowing for distortion-free observation and microscopic examination. Alphanumeric coordinates are placed on the same focal plane as cell growth for easy referencing of well position.

These plates are also for use with our NetWells and our MeshWell Plates (see Tissue Processing Well; NetWells, and MeshWell Plates listed above.)

► Zerostat Anti-Static Gun

This device operates on a piezoelectric effect to emit positive (trigger squeeze) and negative (trigger release) charges to neutralize static on virtually any surface. The gun emits no radioactivity and it does not require electricity or batteries. The unit measures 4 x 6".

60610 Zerostat Anti-Static Gun each

► Falcon™ Cell Strainers

These nylon meshed devices provide more uniform cell suspensions, and are a perfect tool for separating

cells from either clumps or primary tissues. There is no longer a need to fabricate filters from gauze, cotton, paper or fabric. Cell strainers are compatible with 50ml conical tubes (#64760 or #64762). The strainers are available in 35, 40, 70 and 100 micron sizes. The 35 micron mesh comes in a non-sterile configuration and it is an integral part of the 6ml tube cap that can be used to collect the dissociated sample for downstream processing in instruments. Ideal for: dissociating clumped cells in separation for cell counting or sub-culture, separating enzymatically dissociated cells from undigested tissue for the initiation of primary cell growing, tissue processing such as fixation, dehydration, and staining. Each strainer is individually wrapped and gamma sterilized, except for the 35-micron mesh which comes with a 6ml tube and is packed 25/sleeve.

Ordering:

Catalog #	Mesh size	Sterile	Fit Tube	Units/cs
64750-00	35 µm	No	6 ml	500/case
64750-25	35 µm	No	6 ml	25/case
64751-00	40 µm	Yes	50 ml	50/case
64751-10	40 µm	Yes	50 ml	10/case
64752-00	70 µm	Yes	50 ml	50/case
64752-10	70 µm	Yes	50 ml	10/case
64753-00	100 µm	Yes	50 ml	50/case
64753-10	100 µm	Yes	50 ml	10/case

Clusters are commonly used in the following applications:

- Maintenance of stock cultures
- In vitro toxicology
- Cell cloning
- Drug binding studies
- Hybridoma fusions
- Virus isolation
- Scale up culture
- Viral plaque assay
- Clone expansion
- Transformation
- 3H-Thymidine
- Carcinogenicity testing
- 51Cr Release assay
- Mutagenicity testing
- MTT assays

▶ FLOWMI™ Cell Strainers (40µm Porosity)

*Disposable Cell Strainers
for P1000 pipette tips
(40 microns)*

These unique cell strainers provide quick and efficient filtering of small volume samples (up to 1000µl) prior to FLOW or FACS Analysis.** FLOWMI is compatible with most 1000µl tips including Fisherbrand Sure-One, VWR brand, Axygen, Nichiryo, Eppendorf, and more. Flowmi™ strainers are sterile and packaged in re-sealable, zip-style bag. Product sterility can be maintained when opened and re-sealed in a laminar flow hood. Compact, covered tray holds 50 Flowmi™ strainers oriented for direct press and fit attachment to the pipette tip

- Preserve volume when filtering small samples
- Decrease the potential for clogging of FLOW or FACS* instruments by effectively filtering cellular debris
- Tray features a sliding cover for easy, one handed use
- Patent pending.

* FACS is a registered trademark of Becton-Dickinson Corporation

** FLOWMI is recommended for use with samples having a maximum concentration of 2MM cells/ml.

▶ Tissue Grinders

Wheaton Tissue Grinders enable primary cells to be prepared from excised tissues, as well as sub-cellular components from harvested cell packs. Tissue grinders are used to extract DNA, RNA and proteins for blot or other procedures. They are also used to enhance recovery of other cell products. Capacities on the grinders range from 0.1 ml to 55 ml. There are many grinders to suit your needs.

- Tapered Tissue Grinders are ideal for connective tissue including heart, muscle, and lung. These glass-on-glass grinders feature a long taper design that minimizes grinding efficiency.
- Potter-Elvehjem Tissue Grinder incorporates a serrated pestle design to disperse homogenate into the mortar cylinder. Standard unit with PTFE pestles are well suited for soft tissue, such as brain and liver.
- Tenbroeck Tissue Grinders have a hollow handle that allows packing with ice, making them suitable for tissues such as liver, intestines and heart.
- Dounce Tissue Grinders are supplied with two types of pestles: a loose-fitting pestle for sample reduction and a second, tighter pestle for complete homogenization. The ball-shaped pestles leave cell nuclei intact in soft tissue.
- The Wheaton Micro Tissue Grinder Kit offers a complete selection of micro tissue grinders.

All Wheaton tissue grinders are manufactured from Wheaton 33 low extractable borosilicate glass that conforms to USP Type 1 and ASTM E-438 Type 1, Class A requirements. Replacement parts can be purchased separately.

▶ Dounce Tissue Grinder

- Ideal for soft tissue
- Provide with loose and tight pestle
- Wheaton 33 low extractable borosilicate glass
- Autoclavable.

This grinder designed to retain a high percentage of cell nuclei and mitochondria in soft tissues from cell cultures. When use, the pestle ball is encircled in liquid, which is avoid heat buildup by reducing friction. This grinder is ideal for enzyme studies. The initial grinding is performed using the "loose" pestle. The grinding process is completed using the "tight" pestle.. This grinder is used by moving the pestle up and down, and work best with cell suspensions or very soft tissues. The mortar has a large reservoir and pouring lip and is supplied with "loose" and "tight" pestles.

Tight Pestle "A" Specification: 0.0010 – 0.0030" (0.025 – 0.076 mm)
Loose Pestle "B" Specification: 0.0035 – 0.0055" (0.089 – 0.14 mm)

► Tissue Grinders (continued)

► Dounce Dura Grind[®] Tissue Grinder

- Rugged alternative to glass Dounce Tissue Grinder
- Precision machined from No.316 stainless steel
- Mortar and Pestle provided as a matched set
- Not autoclavable.

Wheaton Dura-Grind[®] Stainless Steel Dounce Tissue Grinder provides a rugged alternative to glass Dounce tissue grinders. Smooth pestle action requires less effort than glass tissue grinders. This unit is precision machined of No. 316 stainless steel to the tolerance of 0.0005 in. (0.013mm). The mortar has flat bottom allowing it to stand upright. Single pestle and mortar are supplied as a matched set; they are NOT autoclavable. Weight 2 lb (0.9 kg)

► Potter-Elvehjem Tissue Grinder

- Ideal for tissue homogenates
- Use with power homogenization
- Parts interchangeable
- PTFE pestle
- Autoclavable

These grinder are precisely constructed with completely interchangeable parts to allow easier cleaning or replacement of damaged mortars. They are designed for use in preparation of tissue homogenates and other similar applications. The PTFE pestle is for soft tissues such as brain or liver. The stainless steel rod is 0.25" (6.3mm) diameter. The grinding chamber clearance is 0.004" to 0.006" (0.1 to 0.15mm). This unit is autoclavable and can be used for power homogenization as with overhead stirrer. However, we strongly recommend the use of safety-coated tissue grinder (64793-series) for added safety. This unit is manufactured from Wheaton 33 low extractable borosilicate glass that conforms to USP Type 1 and ASTM E-438 Type 1, Class A requirements.

► Potter-Elvehjem Tissue Grinder

With Radial Serrations

All features are similar to the series 64792-series, with additional:

- Radial serrated PTFE pestle
- This grinder has a serrated PTFE pestle that disperses homogenate into the mortar cylinder more efficiently. Depth of the serration is 0.20" to 0.25" (0.1 to 0.15 mm).

► Potter-Elvehjem Safe-Grind[®] Tissue Grinder

All features as the same as 64792-series, with the addition:

- Exterior plastic coated glass mortar provide greater safety

Wheaton Safe-grind plastic coated tissue grinders afford an added measure of safety over uncoated glass tissue grinders. The heavy plastic coating protects the mortar from becoming scratched or checked, and assures you of sure grip. The transparent coating allows an unobstructed view of the homogenate during grinding. The grinders are fully autoclavable.

► Tissue Grinders (continued)

► Potter-Elvehjem Micro Tissue Grinder

- Made from Wheaton 33 low extractable borosilicate glass
- Micro size for extremely precise work
- Reservoir and pouring lip are incorporated into the design
- Autoclavable

Similar to the all glass Potter-Elvehjem style, but micro size is for extremely precise work. This unit is designed for delicate hand operation. Clearance between pestle and tube is 0.004" to 0.006" (0.1 – 0.15 mm)

64794-80	0.1 ml size Mortar only	2/pk

► Tapered Tissue Grinder

- Homogenizes connective tissue including heart, muscle and lung
- Made from Wheaton 33 low extractable borosilicate glass
- Interchangeable components takes the hassle out of matching parts
- Autoclavable

This is new design grinder with longer tapered surface on both the mortar and pestle, offering grinding more efficient and less time require. The conical surface allows initial size reduction followed by passage through the cylindrical section for the final homogenization step.

When the pestle is "bottomed" within the mortar, the clearance is uniform 0.004" to 0.006" (0.1 to 0.15 mm)

The components are interchangeable. Therefore no need keep parts matched during cleaning. The ground glass surface on both the mortar and pestle are capable of homogenizing connective tissue such as heart, muscle and lung, as well as skin and plant tissue.

► Tapered Tissue Grinder

With Stainless Steel Rod Pestle

- PTFE pestle with stainless steel rod fir power homogenizer
- Homogenizes soft tissue such as brain
- Mortar made from Wheaton 333 low extractable borosilicate glass
- Interchangeable components
- Autoclavable

This unit is the same as the 64796-series, but with a PTFE pestle for soft tissues. The stainless steel rod is 0.25" (6.3 mm) diameter and is suit for use with Wheaton Overhead Stirrer.

► Micro Tissue Grinder Kit

- Complete kit includes 7 micro tissue grinders
- Made from Wheaton 33 low extractable borosilicate glass
- Replacement parts available separately
- Autoclavable

This complete selection of Wheaton Micro Tissue Grinders is conveniently packed in a lightweight protective carrying case. The 0.5 ml micro tissue grinder with screw cap can be used for tissue grinding as well as for additional procedures. This particular tissue grinder mortar can be safely joined with another threaded glass component if needed, using the Wheaton Connection[®]. The Kit is packed in high-density polyethylene case with foam inserts.

► Tenbroeck Tissue Grinder

- Ideal for grinding liver, heart, and intestine tissue
- Made from Wheaton 33 borosilicate glass
- Hollow pestle can be pack with ice
- Pour lip on mortar – Autoclavable

All glass Tenbroeck tissue grinders are precision made, interchangeable pestles and tubes, no need to keep to keep component matched, also offer easier replacement of damaged parts. The clearance between pestle and tube is 0.0035 to 0.0065" (0.09 – 0.16 mm) While this grinder is designed for hand operation, it can be slow speed motor-driven by inserting a rubber stopper (side 00) and metal rod into pestle. This unit also features an expanded reservoir and pouring lip.

► Overhead Stirrer

- Allow for power homogenization or mixing
- Speed control capable of RPM / Torque combinations
- Use only with tissue grinders with stainless steel rods
- Keyless chuck accepts shaft size to 7.9 mm
- One year warranty

The Wheaton overhead stirrer is a compact unit with solid state speed control capable of providing RPM/torque combinations for most laboratory operation such as homogenizing or mixing. This Over Head Mixer should be attached only to Tissue Grinders with PTFE pestles and with stainless steel rods. Unit and motor are mounted in a housing with epoxy finish and is provided with 6" aluminum rod and clamp for attachment to support stand. Keyless chuck accepts shaft sizes up to 5/16" (7.9 mm). Support stand is not included. One year warranty.

Specifications:

Speed Range:300 – 5,000 RPM (Under load)
 Electrical:120 VAC, 50/60 Hz, 50 watts
 Dimensions:4½" x 5" x 12" (11.5 x 13 x 30 cm)
 Weight:6 lbs (2.7 kg)

► Lab-Tek® Chamber Slide™ System

- Developed for microscopy of in situ cell culture.
- DCells grow on a standard microscope slide.
- DMedia chamber can be removed when culturing is complete.
- DUseful for viral and mycoplasma testing, chromosome studies toxicity tests and immunocytology.
- DPermanox® plastic and glass do not interfere with fluorescent labels.

Permanox® is a special molding resin, which meets the growing requirements of most anchorage dependent cells; also excellent chemical resistance allows for cell fixation and the staining of organic solvents for EM and other techniques. Low oxygen permeation makes Permanox® ideal for anoxic cell growth.

Chamber slides combine a media-containing chambered super-structure with a standard soda lime glass slide or Permanox® plastic slide, sealing the two together with a biologically inert silicone gasket. After cells are grown, the chamber and gasket are easily removed. The slide may then be fixed, stained, cover slipped, and filed with the usual convenience. These slides, once fixed and stained, can be embedded using our Slide Duplicating Mold (Cat. 70170).

Lab-Tek® Chamber Slide™ System all come packed in a sterile sealed tray, 8 units per tray, 2 trays per pack and 12 trays per case.

Lab-Tek II Chamber Slide

► Lab-Tek® II Chamber Slide System

- Sterile, Chamber Slide™ products have removable, polystyrene media chamber of 1, 2, 4, and 8-well configuration
- Low fluorescent glass microscope slide (25 x 75 x 1.2 mm) with rounded corners
- Biocompatible adhesive
- Polystyrene cover
- Inert hydrophobic well border printed on slide
- SuperFrost printed area

Removal of Medium Chamber from Slide

Lab-Tek® II Chamber Slide™ products offer optimal surface for excellent attachment and growth of cells, easily distinguished by the blue mark. This design allows for the removal of the media chamber and adhesive from the slide, using a separation device. The blue hydrophobic border is raised slightly and isolates the individual wells, and prevents cross contamination. The slide can be coverslipped. Lab-Tek® II CC2™ Chamber Slide™ products are the newest addition to our Lab-Tek® II Chamber Slide™ family. CC2 shares several similarities with the original Lab-Tek® II Chamber Slide, however, it's pronounced difference is that the glass growth surface has been chemically modified. This modification provides an optimal surface for growing fastidious cells such as primary neurons or poorly adherent cell lines. CC2 also are non-auto fluorescent making them ideal for fluorescent applications such as FISH (Fluorescent in situ Hybridization). The growth surface remains stable without refrigeration. Lab-Tek® II and Lab-Tek II CC2™ Chamber Slide™ Systems all come packed in a sterile sealed tray, 8 units per tray, 2 trays per pack and 12 trays per case.

► **Lab-Tek® Chambered Coverglass System**

Lab-Tek® and Lab-Tek® II Chambered Coverglass products are intended for high magnification examination of living cells using an inverted microscope. The growth surface of the Lab-Tek Chambered Coverglass products are #1 Borosilicate Coverglass from American origin. The Lab-Tek® II Chambered Coverglass products are #1.5 Borosilicate Coverglass of German origin. The thin glass growth surface allows optimal optical clarity when viewing living cells with high resolution of an inverted microscope. The media chambers are available in 1, 2, 4, and 8 well formats and cannot be removed from the coverglass surface.

The Chambered Coverglass is provided sterile and ready to use.

► MicroWell® Plates

MicroWell Plates are used in a broad spectrum of applications, including cloning experiments, sample incubations, and in tissue culture based analytical systems. Our MicroWell Plates have excellent cell attachment. All styles are designed to be stackable and are radiation sterilized.

► 10µl Well Plates

They are Terasaki format plates measuring 56x82mm and having 60 or 72 wells. Wells are shaped like inverted truncated cones, each with a working volume of 10ml. The well surface is Nunclon® treated for good cell attachment. Lids incorporate a stacking feature and are tight-fitting, which reduces evaporation.

► 96 Well Plates

These plates measure 86x128mm and come in either flat or round bottom wells. Vented lids allow for gas exchange and have condensation rings to control evaporation and retain condensate. Lids are keyed so they cannot be accidentally reversed. Plates have alpha-numeric markings on its two edges. In addition, flat bottom plates have individual well coordinates beside each well for easy well identification when using an inverted microscope. Plates also have raised well rims to provide proper attachment of adhesive sealing film.

# of Wells	Well Shape	Volume Well	Culture Area cm ²	Unit per Sleeve/cs
96	Round	0.3ml	0.36	1/50
96	Flat	0.4ml	0.328	1/50
60	Conical	10µl	0.013	10/150
72	Conical	10µl	0.013	10/150

► Cover Slips; Thermanox®; TMX Coverslips

NUNC™ Brand Thermanox®, or TMX coverslips are made from a polymer (in the polyolefin family) that is highly resistant to most chemicals. Thermanox® plastic is resistant to alcohols, aldehydes, hydrocarbons, dilute acids (<10%) and dilute alkalis (<2%). TMX has limited resistance to chlorinated hydro-carbons, however, it is not resistant to concentrated acids or bases. Thermanox® plastic is a flexible, trans-parent polymer that can be sectioned using a microtome and is able to withstand high temperatures (temperature range -70°C to +150°C). Thermanox® Coverslips are culture treated on one side for enhanced cell attachment and growth. The treated side is packaged face up toward the label.

FEATURES:

- Flat and remain flat
- 0.2mm (No. 2) thickness
- Resistant to commonly used solvents
- Safe and easy to handle
- Auto fluorescent in the range 380 to 545 nm
- Thermanox® cover slips can be autoclaved at 20 minutes steam, 20 minutes dry at 120°C

TECHNICAL TIP

Permanox plastic is nonfluorescent and may be used with most fluorescent labels. Permanox has better chemical resistance to fixation and staining solvents than polystyrene. An aqueous based mounting medium must be used when cover slipping to prevent warping.

TECHNICAL TIP

A simple method to determine which side of the coverslip is treated is the "droplet" test. A drop of water or culture medium will spread on the hydrophilic, treated side. - If the droplet forms a bead, then the side of the coverslip is not treated. - If the droplet spreads evenly over the coverslip, the side is treated.

► Press-to-Seal Chamber and Well, see pages 354-355 >>>>>

► Multidishes Nunclon™ Surface

- Useful in all areas of cell culture including scale-up and cloning
- Raised well rims to lower risk of cross contamination
- Excellent optical quality
- Nunclon™Δ certified
- Multidish 6 is available coated with Poly-D-Lysine or Collagen

► Optical Bottom Microwell® Plates

The NUNC™ Coverglass Optical Bottom 96- and 384- Well Plates have the same quality design of existing NUNC well products, plus an optically clear polystyrene plate bottom. This clear base permits microscopic viewing and reading of well content from the top, bottom or both.

The plate's upper structure is offered in black (for fluorometric detection) or white (for luminescence detection).

► 1. 96 Well Optical Bottom Plates Polystyrene/Coverglass Sterile. External dimensions 128 x 86 mm.

FEATURES:

- White or black upper structure with #1.5 borosilicate coverglass
- Minimum light scatter and low autofluorescence
- Optical clarity for viewing well contents
- Flat bottom well geometry for plate reader access
- Footprint compatible with standard equipment and automated systems
- CC2™ surface modification closely mimics Poly-D-Lysine and it superior for attachment and growth of fastidious cells
- Non-treated plates are optimized for fluorescence
- Sterile for cell culture
- Working range: 50 – 200 µl/well

► Well Orienter, Stand and Pad

For Easy Pipetting and Identification of Samples in Microplates

The Well Orienter

- Convenient visual aid for pipetting and identification of samples in microplates
- Sharp, alpha-numeric characters compatible with 96-, 48- or 24-well microplates
- No more cross-referencing headaches!

The Well Plate Stand

- View samples at a comfortable 30° angle and pipette without strain
- The neoprene pad and rubber feet prevents slippage of the plate and stand

The Well Pad

- A convenient note pad that corresponds to the layout of a 96-, 48- or 24-well plate
- Keep accurate records of samples in a microplate
- Adhere sheets into a notebook to create a quick reference guide

Cat. #	Description	Qty.
70490-10	96 - Well Orienter	4/pk.
70490-11	48 - Well Orienter	4/pk.
70490-12	24 - Well Orienter	4/pk.
70490-20	Well Plate Stand	Each
70490-30	96 - Well Pad (7" x 5")	50/pad

► 96-Well & 384-Well Color Orienters

- Bright colors make it easy to distinguish between columns and rows
- Fits most standard flat and round bottom 96-well and 384-well plates
- Ideal for use with The Pipetter Guide for efficient and stress-free identification of rows and columns

Cat. #	Description	Qty.
70490-18	96 - well Vertical Orientation	2/pk.
70490-17	96 - well Horizontal Orientation	2/pk.
70490-16	384 - well Vertical Orientation	2/pk.
70490-15	384 - well Horizontal Orientation	2/pk.

► Adjustable Well Plate Stand

A Convenient, Adjustable-Angle Stand for Pipetting

- Achieves accurate pipetting by allowing the flexibility to adjust the angle of the microplate
- Convenient knob easily adjusts the angle (45° max. tilt) required to fully view every well
- Compact design takes up little bench-top space measuring only 6" L x 4½" W x 2½" H
- Durable acrylic material will last for years if properly cared for

Adjustable Well Plate Stand shown with a 96-well Color Orienter (sold separately).

Cat. #	Description	Qty.
70493-01	Adjustable Well Plate Stand	Each

► Silver Bioguard Anti-Microbial Mats

Neutralize & Protect

— Nanoscale Silver particles bind with proteins to neutralize 99.9% of common microbes

Better Results —

Ensure consistent sample reproduction and results by significantly minimizing workspace contamination

Reliable — Silver is used extensively in medical applications where microbial contamination is a concern

Use Anywhere — Mats are less than 1mm thick and are backed with an anti-skid coating making them perfect for the benchtop or culture hood

Cat. #	Description	Qty.
77519-1	Silver Bioguard Mat, 10" x 8"	each
77519-2	Silver Bioguard Mat, 15" x 10"	each
77519-3	Silver Bioguard Mat, 24" x 20"	each
77519-4	Silver Bioguard Mat, 30" x 22"	each

► Well Orienter Stickers

- Permanently label multiple microplates
- Wells are clearly marked with its corresponding row number and column letter for quick cross-referencing
- Scored paper backing makes aligning quick and easy

The markings of each filled well are easily readable.

Cat. #	Description	Qty.
70490-14	96 - well Orienter Sticker	50/pk.

► Sealing Films

Pre-Cut-Adhesive Films For Microplate Sealing Needs

Sterile – Gamma irradiation ensures that sealing films are free of cytotoxins.

Prevent Contamination – Films eliminate well-to-well contamination, microbial and viral contamination, evaporation (excluding breathable membranes) and sample spillage.

Ideally Sized and Designed – 6" x 3.25" rectangles fit all microplates. Two scored end-tabs make film positioning and removal hassle-free.

Thermal Stability – Designed to withstand a wide temperature range.

Easy Specimen Retrieval – Pierceable sealing films facilitate easy removal of samples with a pipet tip.

Breathe-Easier membranes permit rapid, consistent gas exchange of Oxygen, CO₂ and Water Vapor for uniform cell growth.

► Breathe-Easy®

An Adhesive, Gas-Permeable, Cell

Culture Membrane

Film Type	Breathe-Easy*
Ideal Use	Cell Culture
Temp. Range	-80°C to 100°C
Thickness	1 mil (0.001 in.)
Material	Polyurethane
Gas-Permeable	Yes
UV Transparent	To 300nm

70536-10 Breathe-Easy 100/pk

► Breathe-EASIER™

A Rapid Gas Transmissible Sealing Membrane for Cell Growth. Breathe-Easier membranes permit rapid, consistent gas exchange of Oxygen, CO₂ and Water Vapor for uniform cell growth.

Film Type	Breathe-Easier™
Ideal Use	Cell Culture
Temp. Range	-20°C to 80°C
Thickness	5.5 mil (0.0055 in.)
Material	Non-woven rayon
Gas-Permeable	Yes
UV Transparent	No

70536-20 Breathe-EASIER 100/pk

► AluminaSeal™

Pre-Cut Adhesive Foil Sealing Film

Film Type	AluminaSeal™
Ideal Use	Cold Storage
Temp. Range	-80°C to 110°C
Thickness	2.7 mil (0.0027 in.)
Material	Aluminum
Gas-Permeable	No
UV Transparent	No

70534-10 AluminaSeal 100/pk

► HotSeal

PCR Sealing Film

Film Type	HotSeal™
Ideal Use	PCR
Temp. Range	-40°C to 125°C
Thickness	2.3 mil (0.0023 in.)
Material	Polyester
Gas-Permeable	No
UV Transparent	No

70534-20 HotSeal 100/pk

► Breathable Tube Membranes

Micro-permeable Membranes for Microtubes

■ Ideal for cell growth and freeze drying.

■ Permits consistent gas exchange.

■ Easy microtube cap closure.

■ Will not bind in centrifuge rotors.

■ Easy-to-use finger tab for quick liner removal.

■ Pre-cut to fit a variety of popular tube sizes.

■ Sterile and free of cytotoxins.

1. Remove the paper liner and adhere the membrane to the tube opening.

2. Remove the top protective layer to expose the breathable membrane

70537-10 Breathe-EASY Membranes 100/pk

70537-20 Breathe-EASIER Membranes 100/pk

► Titer-Tops

Titer-Tops prevents sample evaporation, well to well contamination, external contamination and sample spillage. Titer-Tops are made from 4.4 mil polyethylene film with an FDA approved non cytotoxic acrylic adhesive. Each pre-cut rectangular sheet is 6"x3.25" with a paper liner. The center section of the liner measures 5"x3.25" and once it is peeled off it leaves two hand-grip extension tabs on the two ends. These tabs allow for easy application of the Titer-Top to the plate. Titer-Tops are chemically resistant and thermally stable. The acrylic adhesive is waterproof, solvent resistant, and compatible with all plastic microtiter plates.

Titer-Tops will stay in place even when exposed to 100% humidity and temperatures ranging from -40°C to 100°C. They are easily pierced with a micropipette tip to provide access to sample wells. Titer-Tops are gamma sterile.

70538-05 Titer-Tops, 6"x3.25" 50/pk

70538-10 Titer-Tops, 6"x3.25" 100/pk

► Microplate Brayer

Uniformly seal your films to microplates with this 4" Brayer. It's perfect for all your sealing films.

70534-40 Microplate Brayer

Each

► CC Inserts – Cell Culture Inserts

► Polycarbonate membranes

- Easy cultivation of most cell types without matrix coating
- Treated for cell culture
- Inserts with 0.02 µm membrane have maximum clarity for microscopy, and are non-auto-fluorescent and highly porous
- Polycarbonate membranes in larger pore sizes are adaptable to many uses in cell culture, including transport studies, toxicity tests, chemotaxis studies and electron microscopy
- Both membrane types are trans-parent when wet and suitable for phase contrast and Nomarski Optic Systems

► Polycarbonate membrane inserts pre-packed in multidishes

- For multidishes 6, 12, 24
- Treated and tested for cell attachment
- Easy cultivation of most cell types without matrix coating
- Used in a variety of applications, including transport studies, toxicity tests, chemotaxis studies and electron microscopy
- Non-toxic
- Packed in sterile Nunclon™ treated multidishes
- Packed in resealable bags
- Non-pyrogenic
- Tabs for better grip/handling

Typical applications for the TCI are:

- Epithelial polarization studies
- Electron microscopy
- Chemotaxis studies
- Toxicity testing
- Co-culture experiments
- Modeling of in-vivo barriers.
- Transport studies

Nunc CC Inserts

Polycarbonate membranes - Sterile. Pre-packed in multidishes.

Culture Flasks *Special Culture Flasks made from borosilicate glass and PTFE*

For all applications where gentle stirring is required, such as biological suspensions and micro-carrier cell cultures.

The unique stirring action uses a flexible PTFE shaft driven through a fully encapsulated rare-earth magnet to give even and complete mixing throughout the liquid. The height of the shaft is adjustable. Contact materials are PTFE and borosilicate glass only. The glass vessel has two side-arms with PTFE caps and the base is intended to aid mixing. Recommended for use up to 120 rpm max.

► Mica Sheets and Disks

The Highest Quality (V-1 or V-2) for AFM Applications to the Medium Quality (V4 to V-6) for Replication, Thin Film Deposition

Introduction

EMS Mica Sheets offer a clean surface for E.M. applications, carbon filming and particle spraying, as well as for AFM applications.

There are two types of mica: muscovite and phlogopite. Generally, one differs from the other by color (Muscovite is Ruby, Green or White; Phlogopite is Amber, Yellow, or Silver) The maximum operating temperature for Muscovite is about 500 – 600°C and for Phlogopite is about 800 – 900°C.

Our line consists of High Quality Muscovite Mica. This mica peels off very thin up to 0.0001" uniform layers, exposing "virgin" mica upon splitting.

Characteristics:

Muscovite, potash type mica, sometimes known as granitic mica, is the best of all micas in dielectric strength, perfection of cleavage, and transparency.

It has the following chemical formula: $H_2KAl_3(SiO_4)_3$.

Chemical composition:

Silica	45.5%
Alumina	37.5%
Potash	12.0%
Water	5.0%

It has a vitreous luster and is colorless to gray, brown, pale green, violet, dark olive green, or rose red. It may be transparent to translucent. It has strong double refraction and is optically negative. It loses water of constitution at 600°C and is practically non-magnetic. It exhibits pleochrism, which is the property of varying in color when viewed from different angles.

RUBY muscovite is harder than green and has a pale brownish red color in thin sheets (0.020") or ruby red in thick plates (0.4"). Ruby mica can be split easily into films of 0.001" or thinner because it has such excellent cleavage. In other colors, this thinness can be obtained but at a considerable risk of cracking.

Quality Determination:

The quality of muscovite mica is verbal determination by visual quality classification ASTM (D351-57T) from the best V-1 to the worst is V-10A.

- V i-1: Clear.** – Hard, of uniform color, nearly flat, free of all stains, foreign inclusion, cracks, and other similar defects.
- V-2: Clear and slightly stained.** – Hard of uniform color, nearly flat and may contain slight crystallographic discoloration, and very slight air inclusions and not more than one fourth of the usable area.
- V-3: Fair stained.** – Hard, of uniform color, may contain slight waves, slight crystallographic discoloration, and slight air inclusions and not more than one-half of the usable area.
- V-4: Good Stained.** – Hard, of uniform color, may contain medium waves slight crystallographic discoloration, and medium air inclusion in not more than two-third of the usable area.
- V-5: Stained A Quality.** – Hard, may contain medium air inclusions, uniformly distributed in the usable area; slight green vegetable stains, medium waviness, and heavy waves if specified.
- V-6: Stained B Quality.** – Hard, may contain heavy air inclusions and heavy waves, medium green vegetable stains, slight black and red dots (mineral), and clay stain.
- V-7: Heavy stained.** – Hard, and may contain heavy air inclusions and waves, slight light black and red dots (mineral) medium cloudy stains, clay stains and green stains (vegetable). Soft, buckles, ridges, and sand blast acceptable if specified.
- V-7A: Densely Stained.** – Hard and soft. May contain heavy waves and air inclusions, cloudy stains. High black and red dots (mineral). Medium black and red stained (mineral), buckles, and ridges. Also green stain (vegetable type), clay stains, herringbones, and sand blast.
- V-8: Black dotted.** – Hard, may contain medium waves, heavy air inclusions, cloudy stains, light black and red dots (mineral), and green stains (vegetable).
- V-9: Black spotted.** – Hard, may contain medium waves, heavy air inclusions, cloudy stains, light black and red dots (mineral), and green stains (vegetable type), slight black stains (mineral), and sand blast.
- V-10: Black Stained.** – Hard, may contain medium waves, heavy air inclusions, cloudy stains, light black and red dots (mineral), green stains (vegetable type), and sand blast, medium black stains (mineral), slight red stains (mineral), and clay stains.
- 10A: Densely Black and Red Stained.** – Hard and may contain heavy waves, air inclusions, cloudy stains, light black and red dots (mineral), red stains (mineral), black and red stains (mineral), green stains (vegetable type), and sand blast, very dense black and red stains (mineral), and slight clay stains. Soft if specified

Physical Properties:

Hardness: Moh's scale:	2.8 – 3.2
Shore's Test	80 – 150
Specific Gravity, g/cm³	2.6 – 3.2
Tensile Strength, kg/cm²	~ 1750
Compression Strength, kg/cm²	1900 – 2850
Refractive Index (air=1)	1.56 – 1.60/61
Dielectric Strength	
@20°C in volt/mil	3,000 – 6,000
Max. Thermal Resistance	625°C (1,157°F)
Modulus of Elasticity, kgf/cm²x10⁻³	1400 – 2100

Optic Axial Angle	50° – 75°
Coefficient of Expansion per °C	Perpendicular to cleavage plane 9 x10 ⁻⁴ – 36 x10 ⁻⁴
Calcining Temperature	700 – 800°C
Thermal Conductivity, gm.cal/sec/cm2/°C/cm	~0.0013 (Perpendicular to cleavage plane)
Water of Constitution, %	4 – 5
Moisture Absorption	Very low

Apparent Electric Strength (0.001-0.003" thick)	120 – 200 kV/mm
Permittivity @ 15°C (60°F)	6 – 7
Power Factor (loss Tangent) @15°C	0.0001 – 0.0004
Volume Resistively @25°C (77°F), Ohm.cm	4x10 ⁻¹⁵ – 2x10 ⁻¹⁷
Acid Reaction	Affected by HF

► Mica Sheets and Disks (continued)

Applications:

In general, for those who are using mica for the making of carbon support films, thin films coatings research, and some AFM studies where HOPG are used to taking place, the mica V-4 or V-5 is recommended. (Mica must always use freshly cleaved surfaces).

For AFM and SPM calibration, V-1 or V-2 is recommended.

However, we believe that it is important that you know what kind of mica is being used in your lab. The information on the mica is given above should be used to make your choice.

Here at EMS we try to stock a variety of sizes with different thicknesses and classifications of quality for convenience.

Ordering Information:

Muscovite Mica V-1 Quality:

Cat.#	Mica Size	Quality	Thickness (mm)	Pack
71855-01	50 x 75mm	V-1	0.15 - 0.21	each
71855-05	25 x 75 mm	V-1	0.26 - 0.31	each
71855-10	25 x 25 mm	V-1	0.15 - 0.21	10/pk
71855-11	25 x 25 mm	V-1	0.26 - 0.31	10/pk
71855-15	15 x 15 mm	V-1	0.15 - 0.21	10/pk
71856-01	9.5 mm Diameter	V-1	0.15 - 0.21	each
71856-02	12 mm Diameter	V-1	0.15 - 0.21	10/pk
71856-03	15 mm Diameter	V-1	0.15 - 0.21	10/pk
71856-04	20 mm Diameter	V-1	0.15 - 0.21	10/pk

Muscovite Mica V2 Quality:

Cat.#	Mica Size	Quality	Thickness (mm)	Pack
71857-01	50 x 75mm	V-2	0.15 - 0.21	each
71857-05	25 x 75 mm	V-2	0.26 - 0.31	each
71857-10	25 x 25 mm	V-2	0.15 - 0.21	10/pk
71857-11	25 x 25 mm	V-2	0.26 - 0.31	each
71857-15	15 x 15 mm	V-2	0.15 - 0.21	10/pk
71858-01	9.5 mm Diameter	V-2	0.15 - 0.21	each

Muscovite Mica V4 Quality:

Cat.#	Mica Size	Quality	Thickness (mm)	Pack
71853-01	50mm x 75 mm	V-4	0.26 - 0.31	10/pk
71853-05	25mm x 75mm	V-4	0.26 - 0.31	10/pk
71853-10	25mm x 25mm	V-4	0.15 - 0.21	10/pk
71853-11	25mm x 25mm	V-4	0.26 - 0.31	10/pk
71853-15	15mm x 15mm	V-4	0.15 - 0.21	10/pk
71854-01	9.5mm Diameter	V-4	0.15 - 0.21	10/pk
71854-15	12.7mm Diameter	V-4	0.15 - 0.21	10/pk

Muscovite Mica V5 Quality:

Cat.#	Mica Size	Quality	Thickness (mm)	Pack
71850-01	50mm x 75 mm	V-5	0.15 - 0.21	10/pk
71851-05	25mm x 75mm	V-5	0.26 - 0.31	10/pk
71850-10	25mm x 25mm	V-5	0.15 - 0.21	10/pk
71850-11	25mm x 25mm	V-5	0.26 - 0.31	10/pk
71850-15	15mm x 15mm	V-5	0.15 - 0.21	10/pk
71852-01	9.5mm Diameter	V-5	0.15 - 0.21	10/pk

For the storing of Specimen Discs, see Gel Pak, page 236.

► Metal Specimen Discs for use with the Atomic Force Microscope

These are high quality metal discs with smooth edges and flat surfaces for use in Atomic force Microscopy.

Cat. #	Description	Qty
75010-10	10 mm Specimen Metal Discs for AFM	50/pk
75010-12	12 mm Specimen Metal Discs for AFM	50/pk
75010-15	15 mm Specimen Metal Discs for AFM	50/pk
75010-20	20 mm Specimen Metal Discs for AFM	50/pk

► Specimen Mount Tweezers

Dumont Specimen Mount Tweezers, the finest tweezers available. Choose the one that best suits your needs.

Polished Dumoxel Antimagnetic Steel

Cat. #	Description	Qty.
76800	Specimen Mount Tweezers 2E½ (0=12.7mm)	each
76802	Specimen Mount Tweezers 2E¼ (0=6.4mm)	each
76804	Specimen Mount Tweezers 2E⅓ (0=3.2mm)	each

► SEM Mount Forceps

Made from stainless steel with a serrated handle and a guide pin. The tip is bent at a 45 degree and formed into a ring, which has a diameter of 10mm when fully closed. 150mm long.

76805	SEM Mount Forceps	each

► ACLAR®—Fluoropolymer Films

An Embedding/Cell Growing Film

ACLAR® is made from fluorinated-chlorinated resins. There are four basic film types—the homopolymer ACLAR® Rx Series, the copolymers ACLAR® 22A and 33C and the new ACLAR® Cx. (Honeywell/Allied Signal). The chemical make-up of all ACLAR® products provide an exceptional moisture barrier. ACLAR® is crystal clear, biochemically inert, highly resistant to most chemicals and sterilizable by heat or radiation. ACLAR® is used widely in pharmaceutical, medical, sensitive electronics and military packaging.

ACLAR® 33C is a copolymer film consisting primarily of chlorotrifluoroethylene (CTFE). It offers an outstanding moisture barrier, excellent chemical resistance and minimal dimensional change (2%), making it the best choice for use in microscopy.

Aclar® UltRx 2000 is a 2.00 mil (51 micron) PCTFE homopolymer, high performance barrier film for the pharmaceutical and medical markets. It thermoforms well on conventional blister packaging equipment and provides the best barrier of any clear film.

Features:

- Crystal clear, high UV transparency – ideal for use in UV curing of embedding resin in microscopy.
 - Chemically stable and biochemically inert – the product of choice for growing cell cultures.
 - Low dielectric constant, high electric strength and dissipation factor– offers excellent cell attachment, even through lengthy processing procedures.
 - Low surface energy – separates easily from epoxy.
 - Exhibits no detectable autofluorescence – ideal for fluorescent microscopy.
 - A non-flammable, non-aging co-polymer – which is suited for sterilization by heat or UV.
 - Crystalline melting point is 206°C (403°F) – stable in the SEM.
- Flexible and soft—can be sectioned without damage to the ultramicrotome knives.

► Disc (Tab) Punches

Produces discs (tabs) from sheet materials. Ticket punching type. Comes with adjustable side gauge for centering hole, 2" maximum reach. Weight 10 oz., 6½" long. Useful for punching adhesive tabs for specimen mounts, or producing circle cover slips from ACLAR® films (EMS #50425 or #50426) for growing cells. Maximum thickness for punching is up to 67-mil (1.7 mm). Disc size available: ⅝", ¾", ⅞" and 1". Complete unit includes one punch handle and one punching die.

77850-08	Punch, ⅝" (7.94 mm) Circle	each
77850-09	Punch, ¾" (9.54 mm) Circle	each
77850-12	Punch, ⅞" (12.7 mm) Circle	each
77850-25	Punch, 1" (25.4 mm) Circle	each

► Pasteur Capillary Pipette, Reusable

- Straight or bent tip ■ Borosilicate glass ■ 1.5 to 2 mm orifice
- Reusable ■ Body outside diameter is 8mm

Type	Catalog Number	Body Length Inches (mm)	Tip Length Inches (mm)	Pack
Straight Tip:	70930-04	4 (102)	4 (102)	288/pk
	70930-03	5 (127)	3 (77)	288/pk
	70930-02	6 (152)	2 (50)	288/pk
Bent Tip:	70931-04	4 (102)	4 (102)	144/pk
	70931-03	5 (127)	3 (77)	144/pk
	70931-02	6 (152)	2 (50)	144/pk

► Pasteur Pipettes, Disposable

Good for handling infectious materials, inoculating culture media and routine sampling. Available in either Borosilicate or Flint glass, with an outside body diameter of 7 mm.

Type	Catalog Number	Body Length Inches (mm)	Tip Length Inches (mm)	Pack
Borosilicate Glass:	70950-12	3.5 (89)	2.25 (57)	250/pk
	70950-15	4 (102)	5 (127)	250/pk
Flint Glass:	70950-52	3.5 (89)	2.25 (57)	250/pk
	70950-55	4 (102)	5 (127)	250/pk

► OXFORD® Benchmate® Pipettors

► UV Stable Adjustable Pipettors

- Entire pipettor is autoclavable – no need to recalibrate after autoclaving.
- Highly resistant to chemical reagents.
- Barrel is designed to minimized dead air space for increased pipettor accuracy.
- The lightweight, slender, design reduces operator fatigue.

Cat. #	Volume Range	Adjustable Increments	Accuracy	Reproducibility (CV)
72430-02	0.2µl – 2.0µl	0.001µl	±0.024µl - ±0.06µl	≤ 9.0 – ≤ 2.0%

► Pipette Tips—KENDALL Treated Pipette Tips

Low Binding Polymer Technology

A manufacturing process that binds a perfluorooctyl polymer to polypropylene resin—resulting in an exposed trifluoro-methyl surface.

Precision and accuracy are increasingly important in molecular biology labs. A pipetter can be 99% accurate and precise, but the tip can compromise performance by retaining or binding a sample. KENDALL's low binding tips ensure accuracy and precision by bonding a proprietary polymer to the resin.

- Reduces the surface energy of liquid and repels any substance.
- Not detectable/Non-reactive.
- Extracted only by a fluorinated solvent.
- Autoclaving will not compromise performance.
- Available in convenient hinged racked package.
- Tips and racks are fully autoclavable.

► A. P2/P10 Ultra Micro Tip – Natural

- Universal fit for ultra-micro pipettors.
- Graduation marks at 2µl and 5µl.
- Available with and without low binding surface.
- Available in QuickRack

Cat. #	Description	Packaging	Sterile	Low Retention
72440-01	0.1 -10µl P2-Micro	1000/bag - Bulk	No	No

72442-03	0.1 -10µl Crystal/Eppendorf	10 Racks/case (96Tips /Rack)	Yes	Yes

► C. 1 – 200µl Universal Tips

- Universal fit for research-grade pipettors.
- Yellow tips non-graduated, not-treated.
- Natural tips feature reference marks at 10µl, 50µl, and 100µl.
- Natural tips feature low binding surface (bulk not treated).
- Available bulk, racked, racked sterile, EcoStack racks and QuickRack tip reloading system.

Cat. #	Description	Packaging	Sterile	Low Retention

► E. Filter Pipette Tips (Barrier Tips)

WHY KENDALL FILTER PIPETTE TIPS?

- Certified RNase / Dnaee-Free, Human DNA-Free, and PCR Inhibitor-Free.
- Low Binding Surface reduces DNA and Protection retention.
- Liquid and aerosol barrier prevent pipetter contamination.
- A universal Fit on most research-grade pipetters
- CellPack keeps tips straight for multi-channel pipetters.

FILTER MATERIAL

- High-density polyethylene (Naturally hydrophobic)

TYPES OF MEMBRANES

- Aerosol Barrier: Prevents aerosol contamination
- Self-sealing Barrier (contains cellulose): Prevents aerosol and liquid contamination. Cellulose can contaminate samples.
- Liquid Barrier: Prevents aerosol and liquid contamination. Will not contaminate samples.

► Polyethylene Disposable Pipettes – The Value Choice – ISI-9001

THESE DISPOSABLE TRANSFER PIPETS:

- Sterile and non-sterile
- Attached bulb avoids cross-contamination
- Can be frozen in liquid nitrogen
- Low-affinity surface
- One step biohazard disposable

► General Purpose Transfer Pipet

These pipets are good for blood banking, reagent handling, viscous liquid sampling and transferring, etc.

The non-sterile pipets are bulk packed; the sterile are individually packed.

Product Description	Catalog Number for non Sterile Pipets

► Quick Release Pipette Filler

This pipetting device provides an easy, precise way of filling and releasing liquid. By rotating the knurled thumb wheel the liquid is drawn up or dispensed. The soft elastic chuck has a threaded collar that secures the plastic or glass pipette to the device. Sizes are color coded. Fits standard or disposable pipettes and disposable serological tooled-mouthpiece pipettes as per ASTM Standard E714-80.

70956*	Quick Release Pipette Filler, 0.2ml, Yellow	each
70957	Quick Release Pipette Filler, 2ml, Blue	each
70958	Quick Release Pipette Filler, 10ml, Green	each
70959	Quick Release Pipette Filler, 25ml, Red	each

*Note: the 70956 is not supplied with quick release valve, due to the small volume.

► Transfer Pipette; Polypropylene

It works as a syringe. Inexpensive and Disposable. Good for liquid transferring tasks. Each pipette has calibration markings from 0 to 12ml in 0.2ml increments. Tubing may be attached to the tip to suit your application, and tips may also be cut to facilitate aspiration and delivery of fluids of varying viscosities.

Useful for:

- Flushing lines in chemistry systems
- Delivers oil to machinery parts
- Aspiration of fluids
- Liquid delivery

Available in two configurations:

- Straight Tip
- Curved Tip

70986-00	Transfer Pipette, 12ml, Straight Tip 50/bx	each
70986-20	Transfer Pipette, 12ml, Curved Tip 50/bx	each

► Disposable Pipettes – Sterile

Crystal Grade polystyrene is used for consistency in manufacture and maximum clarity, with easy to read crisp black printed graduations enabling the pipettes to be used accurately to ±1%. Sterile by gamma irradiation. These Pipettes fit all Quick Release Pipette Fillers.

These pipettes are tested for pyrogenicity, and have pyrogen levels of less than 0.25 EU/ml.

► Graduated Measuring and Volumetric Pipettes

Made from translucent polypropylene. Resistant to breakage. Blue graduations, ring mark and inscriptions. Ideal for fluoro and silicate chemistry used. Recommended cleaning with mild alkaline detergent up to 60°C.

NOTE: Exposure to temperatures above 60°C may cause volume changes.

Cat. #	Capacity	Sub Divisions	Quantity
GRADUATED PIPETTES			
70951-01	1 ml	0.1 ml	6
70951-02	2 ml	0.1 ml	6
70951-05	5 ml	0.1 ml	6
70951-10	10 ml	0.1 ml	6
VOLUMETRIC PIPETTES			
70952-01	1 ml	0.1 ml	6
70952-02	2 ml	0.1 ml	6
70952-05	5 ml	0.1 ml	3

70952-25	25 ml	---	3
70952-50	50 ml	---	3

► Repetitive Syringe Dispenser

Syringe dispenser offers a fast and accurate way of dispensing multiple doses of a set volume. The volume delivered is determined by the volume-selector-dial and the size of the syringe chosen. A chart comes with the unit to help you to choose the size of syringe, volume, and the number of dispenses. The set dispenses 21 different volumes up to 58 times without refilling, with an accuracy of +/- 1.5% or better depending on the size of the syringe. All syringes are autoclavable, except 60ml size.

Technical Data: These tests (below) are based on water at a temperature of 25°C.

Syringes	Volume	Accuracy	Reproducibility
0.6 ml	10-50µl	+/-1.5%	<1.5% - <1.0%
1.5 ml	25-125µl	+/-1.2%	<1.0% - <0.8%
6.0 ml	100-500µl	+/-0.8%	<0.8% - <0.4%
15.0 ml	250-1250µl	+/-0.6%	<0.6% - <0.3%
60.0 ml	1000-5000µl	+/-1.0%	<1.0% - <0.5%

Dispensing Volumes:

Volume Adj't Number	Syringe Size			Max Number of Dispenses
	0.6ml	1.5ml	6.0ml	
1	10µl	25µl	100µl	58
2	20µl	50µl	200µl	28
3	30µl	75µl	300µl	18
4	40µl	100µl	400µl	13
5	50µl	125µl	500µl	10

Ordering Information:

72480	A set of one Dispenser and one each of 0.6ml, 1.5ml and 6.0ml Syringes	each
72482	Repetitive Syringe Dispenser Set	each
72483	0.6ml Syringe with tips	100/bx
72483	1.5ml Syringe with tips	100/bx
72484	6.0ml Syringe with tips	100/bx
72485	15ml Syringe with tips	50/bx
72486	60ml Syringe with adapter	50/bx
72487	Syringe Adapter, 60ml	each
72488	Syringe with Spacer for use with Microtiter Plates, 1.5ml	100/pk
72489	Syringe Assortment Pack, 20 each of 0.6, 1.5, 6.0, 15 and 60ml	100/pk

► Rubber Bulbs; Natural Rubber

For use with #70950 series of glass pipettes, 30mm length, 1ml capacity.

70980 Rubber Bulb 24/pk

► Safety Bulb

Rubber pipette filler. Natural rubber bulb allows safe, manual control of filling or discharging toxic liquids through a pipette by finger pressure (thus avoiding mouth contact). Guaranteed to be consistently flexible.

70982 Safety Bulb each
70984 Safety Bulb 4/lot

► Rota-Filler 3000™

The ideal pipette filler.

Adjustable – Patent-pending, five position adjustable nozzle for maximum pipetting control. Adjust nozzle to 0, 5, 10, 15 or 20°

Ergonomic – Curved, ergonomic grip for all-day comfort

Versatile – Use the adjustable speed dial or gravity mode

LCD Display – Easy to read, displays speed settings, mode and battery level

70955-01 RotaFiller 3000 each
70955-02 RF3000 Replacement Filters 5/pk

► **Pipetter Guide – Sliding Guide**

- Easily align a Pipetter with microplate wells using our Sliding Guide
- The Sliding Guide is clearly marked with row letters for fast and easy orientation
- Reduce eyestrain
- Adjust the guide height to accommodate flat or v-bottom microplate or PCR plates
- Compatible with multi-channel or single-channel pipettors

(70494-30 shown) with a 96-Well Color. Orienter (70491-11) for added pipetting ease

Cat. #	Description	Dimension	Qty.
70494-30	Single Place Sliding Guide	7 1/4" x 4" x 2"	Each
70494-40	Double Wide Sliding Guide	13 1/4" x 4" x 2"	Each

► **Pipette Support, Polystyrene**

This support is an efficient pipette rest and has an off-center support for short pipettes, syringes, etc. Measurement: 280mm(L) x 215mm(W) x 38mm(H).

70988 Pipette Support each

► **Angled Bottle Rest**

Compatibility – Ideal for use with a variety of pipets and pipettors, both manual and electronic.

Comfort – Reduces arm and wrist strain allowing pipetting at a comfortable 45° angle.

Ideally Sized – Unique design accommodates 200ml, 500ml and 1L square and round bottles.

70989-01 Angled Bottle Rest each

Electron Microscopy Sciences Announces their State of the Art
Scientific Equipment Repair Center

No equipment is too small or impossible to either
Repair, Refurbish, or Upgrade!

Our facility is equipped to handle the following Manufacturers:

- Balzers/Baltech
- Denton
- Edwards
- Emitech
- Emscope
- Bio-Rad
- Leica
- Reichert-Jung
- LKB
- RMC-Boeckeler
- And Many More...

Our unique service allows us to come to you, or you send the equipment to us, depending on the level of Repair/Refurbishment needed.

Equipment such as:

- Vacuum Systems
- Microtomes
- Ultramicrotomes
- Tissue Slicers
- Vibratomes
- Ovens
- Baths
- Shakers
- Tissue Processors
- Lynx
- Freeze Fracture Instruments
- High Pressure Freezers/Slammers/Propane Jet Freezers
- And Much More...

For more information on any of our services, a comprehensive quote, please call, write, or e-mail us today.

► Dissecting Tools and Instruments

► The Meyco Diamond Dissecting Scalpel Blade

**EMS
EXCLUSIVE**

We are aware that in order to achieve the finest results in your work, you continually have to search for the highest quality instruments. The quality that will allow you to meet the high demands of your respected field.

Here at **ELECTRON MICROSCOPY SCIENCES** we are dedicated to these needs. With this dedication in mind we have entered into an exclusive arrangement with our sister company, DIATOME Ltd., that enables us to offer you their experience in diamond instrument manufacturing. For many years DIATOME has been the leading manufacturer—"The Innovators" in diamond instruments for a variety of applications including, but not limited to; ULTRAMICROTOMY, FIBER OPTICS, AND EYE SURGERY.

DIATOME has now begun to manufacture for us diamond knives for microsurgery, dissection, and its related applications. The knives are of the same quality that DIATOME customers have become accustomed.

Distinctive designs combined with DIATOME'S expertise in diamond technology and manufacturing assures you the best quality knife and being able to use it for many years.

► Freehand Diamond Knife

Characteristics and Specifications:

- Our ultra-sharp blade cuts with minimum pressure, without tearing or damaging the specimen and reduces the risk of specimen distortion.
- Our UNIQUE PRESSURE MECHANISM allows blade actuation with one hand
- The handle is made of titanium and is coated by high vacuum with titanium nitride to harden the surface.
- The knife is corrosion free and is completely resistant to saline solutions.
- It can be sterilized in an autoclave up to 200°C.
- Special tray for sterilization is available
- If your diamond is damaged or broken, we can resharpen it or replace it and guarantee that the repaired knife will be of the same standards of perfection as the original.

The following cutting forms are available:

1) Type M; angled; .50mm thickness

72024 Diamond Dissecting Knife, Type M each

72024-R Resharpening, Type M each

72024-L Replacement Blade, Type M each

2) Type M-M; mini-angled; .20 thickness

For extremely fine work.

72025 Diamond Dissecting Knife, Type M-M each

72025-R Resharpening, Type M-M each

72025-L Replacement Blade, Type M-M each

3) Type L; lancet; .50 thickness

72026 Diamond Dissecting Knife, Type L each

72026-R Resharpening, Type L each

72026-L Replacement Blade, Type L each

4) Type M-L; mini-lancet; .20 thickness

For extremely fine work

72027 Diamond Dissecting Knife, Type M-L each

72027-R Resharpening, Type M-L each

72027-L Replacement Blade, Type M-L each

5) Type DL; double-lancet; .50mm thickness

72028 Diamond Dissecting Knife, Type DL each

72028-R Resharpening, Type DL each

72028-L Replacement Blade, Type DL each

6) Type M-DL; mini-double-lancet; .20 thickness

72029 Diamond Dissecting Knife, Type M-DL each

72029-R Resharpening, Type M-DL each

72029-L Replacement Blade, Type M-DL each

7) Type DS; tri-facet; .50mm thickness

72030 Diamond Dissecting Blade, Type DS each

72030-R Resharpening, Type DS each

72030-L Replacement Blade, Type DS each

8) Type M-DS; mini-tri-facet; .20mm thickness

72031 Diamond Dissecting Blade, Type M-DS each

72031-R Resharpening, Type M-DS each

72031-L Replacement Blade, Type M-DS each

9) Type R; round; .30mm thickness

72032 Diamond Dissecting Blade, Type-R each

10) Type HR-S; half-round; .20mm thickness

72033 Diamond Dissecting Blade, Type HR-S each

M / Angled

M-M / Mini Angled

L / Lancet

M-L / Mini Lancet

DL / Double-Lancet

M-DL / Mini Double Lancet

DS / Tri-Facet

M-DS / Mini-Tri-Facet

R / Round

HR-S / Half Round

► **Dissecting Kit, 8 pieces, Stainless Steel**

Kit includes:

- | | | |
|--|---|---|
| 1 4½" Dissecting forceps with curved and serrated tips | 1 4½" Dissecting forceps straight and serrated tips | 1 4½" Dissecting scissors, sharp, straight points |
| 1 Curved dissecting needle | 1 Dissecting scalpel, 6" long, 1½" cutting edge. | 1 Plastic ruler 6", ¼" div., millimeter and centimeter. |
| 1 Glass pipette with rubber bulb | | |

72950 Dissecting Kit set

► **Large Dissecting Kit**

Kit includes:

- | | | |
|--------------------------------------|---|--|
| 12 Scalpel Blades #11 with #3 Handle | 4½" Iris Scissors | Jaws Forceps |
| 6" (15mm) Clear Ruler | 5½" Dissecting Scissors | 5½" Straight Blunt tip Serrated Jaws Forceps |
| 6" long Light Small Probe, Blunt | Suture Hook | 2 mm Diameter Stainless Steel Punch |
| 5½" Kelly Hemostat, Straight | Set of Dissecting Needle, one Straight and one Bent | Large Wood Handle Spatula |
| 6¼" Kelly Hemostat, Straight | 4½" Straight Fine Point Serrated | |

72951-15 Large Dissecting Kit set

► **Dissecting Kit for Botany**

Kit includes:

- | | | |
|---|--|--|
| Dissecting teasing needle angular with metal chuck brass-chromed | Dissecting forceps 4.5" curved fine point with guide-pin | Glass dropper |
| Dissecting teasing needle straight with metal chuck brass-chromed | Dissecting forceps medium point 4.5" with guide-pin | Replacement dissecting needle straight, 6/pk |
| Ruler 6" | Dissecting Iris scissors 4.5" | Replacement dissecting needle angular, 6/pk |
| | Dissecting scalpel handle #3 | Vinyl storage, zippered case with liner. |
| | No. 10 scalpel blade, 10 pcs | |

72951-20 Dissecting Kit for Botany set

► **Anatomy Dissecting Kit 1**

Kit includes:

- | | | |
|--|--|---|
| Cartilage knife 2" blade | Iris dissecting scissors, 4.5" | Dissecting mall probe chrome, 6" |
| Dissecting scalpel 1.5"L blade | Dissecting scissor, 4.5", sharp/blunt points | Ruler 6" plastic, metric/English markings |
| Narrow blade scalpel 1.5"L blade | Dissecting teasing needle, straight, metal chuck | Dissecting chain & hook chrome |
| Dissecting forceps 4.5" with guide pin, medium points | Dissecting teasing needle, angular, metal chuck | Dissecting blow pipe, 6" |
| Dissecting forceps 4.5" with guide pin, curved, fine points. | | Double folded, vinyl storage case |

72951-25 Anatomy Dissecting Kit set

► **Anatomy Dissecting Kit 2**

Kit includes:

- | | | |
|--|--|---|
| Cartilage knife 2" blade | Iris dissecting scissors, 4.5" | Probe and hook, chrome |
| Dissecting scalpel handle #4 | Dissecting teasing needle, straight, metal chuck | Ruler 6" plastic, metric/English markings |
| Dissecting scalpel handle #3 | Dissecting teasing needle, angular, metal chuck | Dissecting chain & hook chrome |
| Scalpel blade #10, 1 piece | Dissecting forceps 4.5" with guide pin, fine points. | Dissecting blow pipe, 6" |
| Scalpel blade #24, 1 piece | Dissecting forceps 5" | Double folded, vinyl storage case |
| Dissecting scissor, 5.5", sharp/blunt points | | |

72951-30 Anatomy Dissecting Kit 2 set

► **Biology Dissecting Kit**

Kit includes:

- | | | |
|--|--|--|
| Dissecting mall probe, chrome, 6" | Dissecting forceps, 4.5", chrome plated | |
| Dissecting teasing needle, straight with metal chuck | Glass dropper | |
| Dissecting teasing needle, angular with metal chuck | Ruler 6", plastic, metric/English markings | |
| Dissecting scissors, 4.5" | Single folded vinyl storage case | |
| Dissecting scalpel | | |

72951-35 Biology Dissecting Kit set

► Razor Blades:

All types of razor blades are used extensively in the laboratory. We offer the widest assortment of blades at the lowest possible prices!

71940

71990

71950

71960

71974

► A. Injector Type

For Vibratome sectioning. Bulk packed or in a handy dispenser.

Uncoated Carbon Steel, 0.13" thick, 1½" long, ⅝" wide.

71940	Injector Type	500/bx
-------	---------------	--------

■ Same as #71940, but Stainless Steel PTFE Coated, .010" thick, packed 20 blades in a dispenser.

71990	Injector Blade in a Dispenser	box
71991	Injector Blade in a Dispenser	10/lot

► B. Single Edge, Gem Scientific

Carbon Steel, .009" thick, 1½" x ¾" size, packed 10 blades in a dispenser.

71950	Single Edge, GEM, Dispenser	box
71951	Single Edge, GEM, Dispenser	12/lot

► C. Single Edge, Carbon Steel, Regular Type, .009" thick

1½" x ¾" size, packed 100 blades in a drawer box.

71960	Single Edge Carbon Steel	box
71961	Single Edge Carbon Steel	10/lot

NEW: These blades come in a washed version (unwrapped) in a clamshell which reduces the amount of foreign material on the blade. Clean room classified.

71960-WA	Single Edge Carbon Steel, Washed Version, in Clamshell	115/pk
71961-WA	Single Edge Carbon Steel, Washed Version, in Clamshell	115/pk

■ Same as #71960, but PAL Extra-Keen Carbon Steel Blue blade offering long-lasting edge.

71974	Single Edge, PAL Extra Keen	100/pk
71975	Single Edge, PAL Extra Keen	10/lot

■ Same as #71960, but GEM Extra Keen type, Carbon Steel, packed 100 blades in a drawer box.

71962	Single Edge, GEM Extra Keen	box
71963	Single Edge, GEM Extra Keen	10/lot

NEW: These blades come in a washed version (unwrapped) in a clamshell which reduces the amount of foreign material on the blade. Bulk Packed.

71962-WA	Single Edge, PAL Extra Keen, Washed Version, Bulk	240/pk
71963-WA	Single Edge, PAL Extra Keen, Washed Version, Bulk	240/pk

■ Same as #71960, but heavy duty blade, .012" thick, Carbon Steel, packed 100 blades in a drawer box.

71964	Single Edge, Heavy Duty	box
71965	Single Edge, Heavy Duty	10/lot

► D. Single Edge, Gem PTFE Coated

■ Stainless Steel, Extra Keen, measures same as #71960. Packed 100 blades in a drawer box.

71970	Single Edge, GEM PTFE Coated	box
71971	Single Edge, GEM PTFE Coated	10/lot

NEW: These blades come in a washed version (unwrapped) in a clamshell which reduces the amount of foreign material on the blade. Clean room classified.

71970-WA	Single Edge, GEM PTFE Coated, Washed Version, in Clamshell	115/pk
71971-WA	Single Edge, GEM PTFE Coated, Washed Version, in Clamshell	115/pk

■ Same as #71970, GEM Uncoated. Stainless Steel, Extra Keen. Packed 100 blades in a drawer box.

71972	Single Edge, GEM Uncoated	box
71973	Single Edge, GEM Uncoated	10/lot

► E. Single Edge, Extra Long

- Sharp edge with better handling.
- Stainless Steel, .009" thick, 2¼"x½" size, packed 250 blades in a removable slide box.

71980	Single Edge Extra Long	box
71981	Single Edge Extra Long	5/lot

- Same as #71980, but super strong and super sharp. Made by SOLINGEN Carbon Steel, highest quality of stainless steel available. Packed 100 blades in a box.

71930	Solingen Long Blades	box
71931	Solingen Long Blades	5/lot

► F. Double Edge, Personna

Stainless steel; PTFE coated. PERSONNA brand .004" thick, wrapped individually, 250 blades in a box.

72000	Double Edge Coated Blade	box
72001	Double Edge Coated Blade	10/lot

NEW: These blades come in a washed version (unwrapped) in a clamshell which reduces the amount of foreign material on the blade. Clean room classified.

72000-WA	Double Edge Coated Blade, Washed Version	250/pk
72001-WA	Double Edge Coated Blade, Washed Version	250/pk
71998	Double Edge Non-Coated Blade	box

► G. Double Edge Razor Blades

FEATHER® Brand

Made from carbon steel. Feather® blades are well known to have super sharp edges. Easily breaks in half for use with any tissue slicing machine, or break smaller portions for use as a micro-scalpel with our Blade Breaker & Holder. (Catalog numbers 72005-20, 72005-24). Blades are available in packages of 10 blades per box or 500 blades per box.

Measurements: Width: 21.95mm (0.865") x Length: 42.96mm (1.69")

Thickness: 0.10mm (0.004")

72002-01	Feather Double Edge Blade	10/bx
72002-10	Feather Double Edge Blade	500/bx

► H. Double Edge Razor Blade Platinum Coated

Made from stainless steel, coated with Platinum. Super-sharp-edges. Measures: 42.96 mm (1.69") L x 21.95 mm (0.865") W x 0.10 mm (0.004") Thickness.

72003-01	Platinum Coated Double Edge Blade	100/bx
72003-10	Platinum Coated Double Edge Blade	10 bxs/lot

► I. Single Edge Razor Blade for Clean Rooms

These blades (and dispenser springs) are degreased in order to minimize particulates and residual grinding oils on the blades. The blades are made from surgical stainless steel (significantly more durable than carbon steel) with a steel back that produces less particulate than the aluminum back type. Packed 10 blades per dispenser, 200 dispensers per case. The blade (including steel back) measures 39 mm x 19 mm x 0.23 mm thick (1½" x ¾" x 0.009").

71952-01	Blade for Clean Rm., 10/Disp.	each
71952-10	Blade for Clean Rm., 10/Disp.	10/pk

► J. Breakable Double Edge Razor Blades

Breakable double edge razor blades made from carbon steel. The blades break easily and cleanly. Rectangular shape, square ends. Measures 43mm(L) x 22.2mm (W) x 0.10mm (T). Packaged 100 blades in a box.

72004	Breakable Double Edge Blades	box
-------	------------------------------	-----

► K. WecPrep Blades

Single edge, carbon steel razor blades which are long and very stable. Used for mincing and all other specimen preparation work.

Blade Width: 2.25" (57.15mm); Blade Thickness: .011" (.279mm)

71933-50	WecPrep Blades	50/pk
----------	----------------	-------

► L. Gem 3 Facet Aluminum Back SE Safety Dispenser

Sharp edge with better handling. Stainless Steel, .009" thick, 2¼"x½" size, packed 100 blades in a Dispenser. These blades offer precision, sharpness and safety and come in a dispenser which offers you safety

Safety – When it matters.

Single Edge Safety Dispenser
Easy Dispensing with
Safe Blade Storage!

Dispenser Options

- Gem Scientific Blade
- 3 Facet Blade
- Aluminum Back
- Uncoated
- Safety Dispenser pushes blades out backing first for safety
- On board used blade storage

71967	Gem 3 Facet Aluminum Back SE Safety Dispenser	each
71967-CS	Gem 3 Facet Aluminum Back SE Safety Dispenser	5/lot

► M. Razor Blade in Dispenser and Used Blade Storage Box in One

These GEM single edge carbon steel razor blades (0.009" thick) are in a compact, safe, pop-up blade dispenser and used blade storage all in one unit.

- Safe, easy to remove blade when needed
- Secure used blade storage in rear of unit
- Clear see through cover reveals remaining blades
- Push button dispenses blades
- 100 blades in dispenser

71955-01	Razor Blade in Dispenser/Used Storage Box in One	each
----------	--	------

► Feather™ Scalpel Blades Selection

► 1. Scalpel Handle with Blade; Disposable

Made by Feather. Sterile, stainless steel disposable scalpels with a handle. They are packed in aluminum foil, and are available in a variety of sizes.

Cat.#	Description	Qty/Box
72042-10	Disposable Scalpel Set #10	20/bx
72042-11	Disposable Scalpel Set #11	20/bx
72042-12	Disposable Scalpel Set #12	20/bx
72042-15	Disposable Scalpel Set #15	20/bx
72042-20	Disposable Scalpel Set #20	20/bx
72042-21	Disposable Scalpel Set #21	20/bx
72042-22	Disposable Scalpel Set #22	20/bx
72042-23	Disposable Scalpel Set #23	20/bx
72042-24	Disposable Scalpel Set #24	20/bx

► 2. Scalpel Blades/Feather

Sterile, stainless steel surgical scalpel blades, wrapped individually.

Cat.#	Description	Qty/Box
72044-10	Sterile Scalpel Blades #10	100/bx
72044-11	Sterile Scalpel Blades #11	100/bx
72044-12	Sterile Scalpel Blades #12	100/bx
72044-15	Sterile Scalpel Blades #15	100/bx
72044-20	Sterile Scalpel Blades #20	100/bx
72044-21	Sterile Scalpel Blades #21	100/bx
72044-22	Sterile Scalpel Blades #22	100/bx
72044-23	Sterile Scalpel Blades #23	100/bx
72044-24	Sterile Scalpel Blades #24	100/bx

➤ 3. Feather; Sterile MicroScalpels; Stainless Steel

- Micro precision, ultra sharp, points.
- Sure-grip aluminum or plastic handle-color coded for easy angle identification.
- Sterilized by gamma irradiation.
- Disposable.
- Available in 3 angle styles: 15, 30 and 45°.
- Comes in a carbonate plastic case.

Cat.#	Description	Blade Thickness	Qty
72045-15	Feather Micro Scalpel, 15°, Al Handle	0.1mm	5/bx
72045-30	Feather Micro Scalpel, 30°, Al Handle	0.1mm	5/bx
72045-45	Feather Micro Scalpel, 45°, Al Handle	0.1mm	5/bx
72046-15	Feather Micro Scalpel, 15°, Plastic Handle	0.1mm	5/bx
72046-30	Feather Micro Scalpel, 30°, Plastic Handle	0.1mm	5/bx
72046-45	Feather Micro Scalpel, 45°, Plastic Handle	0.1mm	5/bx

➤ 4. Scalpel Handles/Feather

- Handle #3; 100mm long, flat with corrugated grip. For use with scalpel blades #10, #11, #12 and #15.
- Handle #4; 105mm long, flat with corrugated grip. For use with scalpel blades #20, #21, #22, #23, and #24.
- Handle #7; 140mm long, slender, contoured with corrugations. For use with scalpel blades #10, #11, #12, and #15

Cat. #	Description	Qty.
72040-03	Scalpel Handle #3	each
72040-04	Scalpel Handle #4	each
72040-07	Scalpel Handle #7	each

➤ 5. Microsurgical Knife - Premier Edge™

Made from tool steel wire. Sharpened to microsurgical quality. The knife-edges are available in three different configurations: 45, 30 and 15 degrees angle. The handle is plastic and they come sterile and in a blister pack individually, 6 blister packs to a box.

Cat.#	Description	Blade Thickness	Qty
72047-15	Microsurgical Knife, 15°	0.11–0.19mm	6/bx
72047-30	Microsurgical Knife, 30°	0.11–0.19mm	6/bx
72047-45	Microsurgical Knife, 45°	0.11–0.19mm	6/bx

➤ Disposable Mini Scalpel - Sterile

Feather® Disposable Mini Scalpels are made from heat-treated stainless steel. The blades are smaller than standard blades, come with chemical resistant, slender plastic handle. Handle is 5¾" (145mm) long. Available in three popular styles: #11, #14 and #15, and packaged in a sterile pouch, 20 per box. ISO 14001 compliant, ISO 9001 certified and ISO13485 certified.

Cat. #	Description	Qty.
72041-11	Disposable Scalpel, Mini, #11	20/pk.
72041-14	Disposable Scalpel, Mini, #14	20/pk.
72041-15	Disposable Scalpel, Mini, #15	20/pk.

➤ Feather® Safeshield™

Disposable Scalpel – Sterile

Made from heat-treated stainless steel, these scalpels are excellent for delicate precise procedures. They fit the hand comfortably and are designed with safety in mind. They reduce injury and transmitted disease from contaminated blades. They feature a clear protective, retractable shield and have a color coded button on the protective shield which assists with blade size identification.

Individually packaged, 10 per box.

► BD* Carbon Steel Scalpel Blade 60

Made from surgical carbon steel, size 60 with convex cutting edge. The most useful in histology labs.

These scalpel blades are 2 1/8" (6cm) long and ribbed for extra rigidity. They are non-sterile and are wrapped individually. Bard-Parker brand.

72050-10 #60 Scalpel Blade (BD #371340) 150/cs

► BD* Disposable Blade Knife Handles

These strong, molded plastic handles provide a secure palm-fitting grip for postmortem work, trimming light plaster casts, and similar forceful cutting. Handle size #6 and #8 Bard-Parker* brand. Handles are sold separately from the interchangeable listed above.

Use blade sizes 10, 11, 12, 15 for handle size 5. Use blade sizes 20, 21, 22, 23 for handle size 6. Use blade size 60 for handle size 8

Cat.#	Size/Length	Pack
72040-05	#5/ 4 1/8" (12.4cm)	each

► The EMS Hobby Blade and Handle

Hobby blades are used in a wide range of applications

due to the simple but precise cutting tip. These 0.021" carbon steel blades fit most standard handles. They are precision ground for sharpness and durability.

The Handles are made from aluminum Construction for durability and they have a 4 jaw check which holds the blade securely

Blades are packaged 100 per box, 10 boxes per case.

Cat. #	Description	Qty
71982	Hobby Time Blades	100/Box

► Scalpel Blade Remover

This device is designed for safe and easy removal of used disposable blades from any size or type of scalpel handle. It improves safety and hygiene by the elimination of direct hand-blade contact. Depending on the size, it can store 150-300 used blades.

72070	Scalpel Blade Remover	each
72071	Scalpel Blade Remover	5/pk

► Trimaide; Safety Aid

**EMS
EXCLUSIVE**

A razor blade holder for trimming blocks. Holds all types of razors.

It gives you a better hold on the blade while you trim your blocks. The blade slides sideways in the holder allowing use of the entire edge. **IT PROTECTS FINGERS!!!**

72550	each
72560	1 dozen

► Sapphire Knife

A unique high-precision knife for use with all Vibratomes and Tissue Sectioners, as well as our Oscillating Tissue Slicers, EMS 4000 and EMS 5000.

Our Sapphire Knife offers smooth, consistent and thinner sections than are usually obtainable with stainless steel blades. The blade allows for sectioning as thin as 10 microns. Offering many years of cutting surface, the durability of our sapphire knife far outlasts other comparable blades on the market.

Specifications:

Material: Synthetic Single Crystal Sapphire Size: 1.5" x 0.4" x .03"

93060	Sapphire Blade/Knife	each
--------------	----------------------	------

► Classic Guillotine

- Hand-honed stainless steel blades decapitate rats, mice and other small animals instantly, with one stroke.
- Can be completely washed without disassembly.
- Reversible handle allows for right- or left-handed operation.
- Opening is 1.75" along each side.
- Base can be mounted to a bench or board.

Cat. No.	Description	Qty.
93251	Classic Guillotine	each

► Nemi Guillotine

- Manufactured with the highest-quality materials
- Replacement blades available for all models
- Can be used with optional mounting plates
- Cost effective

Cat. No.	Description	Qty.
93252	Rats & Mice, 2" opening along side	each

93257	Replacement Blade only, 4" opening along side	each

For Rats & Mice

For Larger Subjects

► The EMS Tissue Chopper

The TC-1 Tissue Chopper is designed to facilitate the cutting of 100-1000 micron thick brain tissue slices for use in recording experiments. The chopper includes a guillotine arm with adjustments to assure blade alignment. The brain sample is moved in respect to the arm with a stage whose position can be read with 2 to 3 micron precision on a digital micrometer scale. The stage is made with a removable "PTFE" surface plate to facilitate cleaning.

93100	TC-1 Tissue Chopper	each
93102	TC-1 Tissue Chopper with electronic digital micrometer	each
93110	Replacement "PTFE" Plate	each

► Saw; Jewelers

Swiss-made; A fully adjustable frame with a depth of 2¼" (57mm) that permits the tightening of the blade as well as using broken blades. Comes with 12 blades, size 3/0

72010 Jewelers Saw Frame with 12 Blades each

► Diamond Wire

SuperLok™ Diamond Wire starts with tensile core wire. This wire is specially drawn to Diamond Wire Technology specifications. It is heat-treated, stretched, and has a

tensile strength in excess of 400,000 pounds. The diamond wire has an added electro copper sheath in which the diamonds, from 20 to 120 microns in size are impregnated. An additional overstrike is applied to provide greater bonding to the core. Diamond wire technology uses electronic measuring equipment to guarantee consistency in diamond impregnation. The wire has an average diameter of 0.008" (0.20mm).

The wire is cut to 6" (150mm) in length.

This diamond wire may be used with the Saw Frame #72009 shown above.

Cat. #	Description	Quantity
72009-10	Diamond Wire	10/pk

► Adjustable Saw Frame

A Swiss made saw frame lightweight and perfectly balanced. Its ergonomic wooden handle reduces fatigue and provides greater dexterity. Patented blade-lock design eases blade insertion and maintains perfect alignment which eliminates wobble and reduces blade loss during use. It measures 2¼" (70mm) deep and accepts saw blades up to 1.2mm diameter and 130mm long.

This Saw Frame may be used ideally with the Diamond Wire and Spiral Saw Blades shown below.

Cat. #	Description	Quantity
72009	Deluxe Saw Frame	each

► Matrices

► Tissue Matrices; (TM)

The Tissue Matrix is designed to aid the basic research scientist in the free-hand dissection of a wide variety of different tissues and repeatedly slice fresh tissue at intervals as small as 1mm. The TM's are constructed from high grade aluminum to allow for rapid temperature equilibration, ease of cleaning or sterilization and withstand the rigors of daily use.

Features:

- Channels at 1mm intervals
- Channel width is .3mm
- Removable end caps
- Available in 3 basic configurations

Applications:

Biochemical Pharmacology: The reproducible removal of small regions for biochemical analysis, such as the determination of drug and metabolite concentrations. Individual tissues may be either dissected or micropunched from slices formed.

Anatomy: Precise blocking of tissue prior to microtome sectioning.

Physiology: Reproducible blocking prior to vibratome sectioning enzymatic dispersion.

Overall Measurements: 90mm(L) x 36mm(W) x 37mm(H)

Cat. #	Cavity Size,	Tissue Shape
69010	TM 10mmx10mm	Rectangular
69011	TM 15mmx15mm	Rectangular
69012	TM 20mmx20mm	Rectangular
69013	TM 25mmx25mm	Rectangular
69014	TM 10mm Diameter	V-Shaped Block
69015	TM 4mm diameter	Spherical
69016	TM 6mm diameter	Spherical

► Rodent Brain Matrices; (RBM)

RBM are designed for similar purposes as the above TM but only for rodent brains. It allows the investigator to slice either coronal (perpendicular to center line) or sagittal (parallel to center line) sections through the brain at intervals as small as 1mm. All RBM's are identical and durable to insure reproducible sections in the day-to-day, year-to-year, or on a between laboratory basis.

Applications:

Biochemical Pharmacology: The reproducible removal of small brain regions (i.e. discrete terminal fields or nuclei) for biochemical analysis, such as the determination of neurotransmitter and metabolite concentrations. Individual brain areas may be either dissected or micropunched from the slices formed.

Anatomy: Precise blocking of the brain prior to microtome sectioning.

Neurophysiology: Reproducible blocking of the brain prior to vibratome sectioning.

Technical Data:

The RBM's are constructed from high grade zinc to allow for rapid temperature equilibration, easy cleaning, and sterilization. The matrices are designed to accommodate the brains of rodents placed ventral side up. The channels are precisely cut at 1mm intervals and 0.3mm wide.

Overall Measurements: 2.75"x2.75"x1.5"H

Tissue & Rodent Matrices

Optional Sizes: Tissue dissection matrices are available in any type or size on request (i.e. heart, kidney, lung, liver, eye...). Please inquire for further information and pricing.

Optional matrices available: Turkey Brain Matrix, Chicken Brain Matrix, Canary Brain matrix, Rabbit Heart Matrix, Rat Heart Matrix.

► Stainless Steel Brain & Heart Matrices with 0.5mm Thick Slices

When your rodent brain, heart, and other similar organs need to be sliced as thin as possible, these new stainless steel matrices with 0.5mm channel, you can manually achieved these slices - coronal or sagittal - with ease.

- Made of high-quality stainless steel
- Accurate sectioning
- They can repeatedly use, cleaning, autoclave and frozen
- Easy cleaning and easy handling.
- Produce fine slices

► Acrylic Matrices

- Highly polished
- Precision machined
- Precise blocking of the brain
- Reproducible 1 mm segments
- Cost saving

Low cost acrylic matrices are precisely machined and highly polished to ensure reproducible results. These matrices allow the investigator to slice either coronal (perpendicular to center line) or sagittal (parallel to center line) sections through the brain at 1 mm intervals.

► Brain Blocker One™

A Perfect Cryosectioning Method — Brain Blocker One™ with these features:

- Easily reproducible alignment in atlas planes
- Section one or multiple brains with each knife pass
- Time saving in Tissue sectioning
- Time saving in Microscope analysis

Brain Blocker One is a set of gel blocks, left and right half, with an internal cavity cast originally an actual mouse brain. Drop a fresh or fixed brain in to displace the liquid in the one half cavity, add another half on top and the brain is now fully encased, as if it had been embedded. The brain cavity is in stereotaxic orientation, top surface of the gel parallel to skull flat. The gel expands slowly with hydration, and the cavity accommodates different brain sizes simply by the length of the presoak time, 1 to 4 hours for fresh adult brain, less for fixed or young brain, more for aged brain.

The entire block can be frozen and sectioned. The cryostat pedestal need never be readjusted from parallel to the blade plane of motion, and every brain will come out sectioned in the same plane as the atlas.

Multi-blocks can be frozen and mounted on the same pedestal together. Each pass of the cryostat knife, produces the same thickness sections, same orientation from every brain are mounted on that pedestal. Up to 24 brains can be sectioned with each pass of the knife using the whole body cryostat and Macro Tape Transfer system.

Gels will come in packages of 12 pairs, slightly dehydrated. Soak in water, saline, or buffer to fit the brains.

69100	Brain Blocker One™ Mouse Brain	12/pk
69102	Brain Blocker One™ Rat Brain	12/pk

Brain Blocker One™ is trade mark of McCormick

► Brain Matrix Razor Blades:

These razor blades are specifically made to work and fit all of our Brain Matrices. They measure 118mmx19mmx.2286mm(4.65x.75x.0089"). They are packed 25 blades in a box.

70933-70	Brain Matrix Blades	25/pk

► Sampling Tools – Harris Micro-Punch™ and Harris Uni-Cores™

The Harris Micro-Punch™ and Uni-Cores are designed to serve research scientists with a dissection tool for small pre-defined regions of the tissue or the specimen.

Applications

- **Forensic** — Punch cut, retrieve, store and preferentially eject cored samples from source materials such as paper, gels, cloth, leaves, paint chip, films, etc.
- **Electrophysiology** — Punch dissection of discrete regions prior to acute dissociation for patch recording
- **Biomedical Pharmacology** — Punch removal of discrete brain regions for analysis of neurotransmitters and metabolite changes in response to different pharmacological agents.
- **Anatomy** — Punch out small brain regions for analysis of neurotransmitter concentrations of mRNA levels or for subsequent use in electron microscopy.
- **Others** — Positioning samples inside the quartz pyrolysis gel tubes, or on FTIR diamond cell sample stages.

Operating

For most forensic samples, position source of materials (i.e. blood cards, paint chips, paper, leaves, gels, etc.) on the self-healing cutting mat. Remove the protective cover cap from the punch. Firmly grip the punch. The tip is then positioned at a right angle above the target area – DO NOT DEPRESS THE PLUNGER. The tip is pushed downward into the source material until it makes contact with the cutting mat. Lift the Harris Micro-Punch™ away from the source material with the cored sample stored in the cutting tip.

For most biology samples – Typically tissue to be punched is first sliced into 1-2mm thick sections. (Our Tissue and Brain Matrices are specially designed for this purpose,) The section to be punched is then placed on a saline-soaked filter paper disc (EMS #70662 – Petri dish with absorbent paper) on an ice-cold dissection plate (EMS #62536-01 – Cold Plate) Then follow the above procedure.

Sample Storage And Ejection

After coring, the sample is temporarily stored in the hollow cutting tip ready for the preferred ejection. The Harris MicroPunch™ can be rested on its side without loss of sample from the hollow tip. To eject sample, position tip over target area and depress plunger.

Cleaning

Clean the tip between each sample extraction by coring blank filter paper, rinsing with ethanol or spraying with compressed air to remove dried artifacts. Rinse mat with ethanol after each sample extraction.

► A. Harris Micro-Punch

The tips and plungers are made from high-grade 440c stainless steel. Tips are heat-treated to a Rockwell hardness of Rc-58 and then individually sharpened to a razor edge for a long cutting life. Tips are replaceable and available in sizes 0.50, 1.0, 1.20, 2.0, and 3.0 mm. The barrel and knob screw assembly are constructed from injected molded, high-tech, lubricated plastic to eliminate sticking. Length: 140mm (5 1/2"). Sterilization temperature up to 180°C (360°F)

► C. Harris Uni-Cores

See Miltex Punches for possible replacement of Harris Uni-Cores

The Harris Uni-Core™ is a disposable multi-purpose sampling tool for soft substrates. They are made from polypropylene, including a hollow body with built-in tool steel razor sharp cutting tip, with a plunger for the expelling of the punched sample. Uni-Core comes individually wrapped and sterilized by ethylene oxide. Uni-Core can also be reusable by rinsing the tip with ethanol after each use and autoclaving for 20 minutes at 250°F/15 psi.

► Sampling Tools – Harris Micro-Punch™ and Harris Uni-Cores™ (continued)

► D. Cutting Mats

These cutting mats are inert, self-healing and can be sterilized with ethanol. Available sizes 6 x 8" and 2½ x 3"

Cat. #	Description	Qty
69037	Cutting Mat, Size 6 x 8"	each
69037-23	Cutting Mat, Size 2½ x 3"	each

► E. Harris e-Core™

Cuts, retrieves and stores cored samples in one operation

The Harris e-Core is an electric coring device created to bridge the gap between the lower cost, manual Harris Micro-Punch and Harris Uni-Core and the automated bench top punching platforms. The ergonomic "joy stick" grip and the e-Core's simple operation provide comfort and efficiency, integrating smoothly into all levels of laboratory sample throughput. The user has complete management of the disc recovery process, the coring speed and disc delivery.

The Harris e-Core, like the Harris Micro-Punch and Harris Uni-Core, continues to offer the same unique combination of patented simultaneous sampling features: coring, retrieving and storing in a single operation, but with dramatically increased processing times.

The Harris e-Core has been designed to utilize dedicated replaceable Harris Micro-Punch Tips which thread to the Harris e-Core drive shaft.

The e-Core kits contain:

1. One Harris e-Core with tip and cover cap in place.
2. Two extra Harris Micro-Punch tips of same size.
3. Optional cord wrist strap.
4. Multi-plug set includes Europe (EU), United Kingdom (UK), Australia (AUST) and North America (NA) adapters.
5. Power supply.
6. 6 x 8" Harris Cutting Mat.
7. Harris e-Core Carrying Case.
8. User Guide.

► Brain Punch Kit

For Microdissection of Frozen Brain Sections

The kit is available in 2 different sets: Complete with either 3 punches or 5 come complete with spring loaded nylon expellers, and a convenient handle, facilitates the "Palkovits Punch" technique of dissecting out specific brain nuclei for neurochemistry.

The nuclei are punched from frozen brain sections on glass slides, and expelled into the reagents. The spring-loaded expellers avoid risk of contamination that might be caused by expelling with breath.

Each punch has an electro polished sharp end for smooth cuts and minimal tissue adhesion. Punch sizes are 0.25, 0.50, 0.75, 1.0, 1.25, 1.50, 1.75 and 2.00 ($\pm 5\%$, slight variation due to electro polish etching to sharpen). The smaller tubes are reinforced by an outer layer of concentric tubing except at the tip.

Replacement punches available individually.

Applications:

The Brain Punch Kit is a set of electropolished and sharpened punches for the Palkovits' punch technique. Note that the smaller punches are reinforced, as these can tend to bend under the force of the punching action. The set includes a handle and 5 sizes of punches. Sizes are shown in the table below. Each punch consists of the stainless steel punch column, the holder body, and a button which operates a spring loaded expeller to force the micro dot of tissue from the punch.

Select the punch to be used and install it in the handle so that the black body holder on the punch is flush with the lower surface of the handle. Tighten the locking screw. If the punch body holder extends below the handles bottom surface, the action of the expeller may be blocked. Check that the expeller end can be seen when the button is pressed, and then proceed.

Method:

To prevent deterioration of the proteins, the tissue must be kept frozen as much as possible. The brain or other tissue to be punched is dissected from the anesthetized animal and dropped into liquid nitrogen. The frozen specimen is mounted on a sectioning pedestal, placed in a cryostat, and allowed to equilibrate to the cryostat temperature. At this time, glass slides for collection of the sections are also placed in the cryostat to equilibrate to the temperature.

The specimen must be adjusted to the correct plane of section, taking preliminary sections to check the angle, and then the critical sections from the desired region are collected.

Thick (~200 micron) are taken and placed on the prechilled glass slides. The frozen slices will lie on the frozen glass without adhering, so care must be taken not to spill them. When the slide is full, press a finger against the bottom of the slide to cause the tissue to partially thaw into contact with the slide, and refreeze promptly in the cryostat.

Remove the slides from the cryostat and place on a cold plate or petri dish chilled with dry ice. Select the punch needed, position the tip over the area to be removed, and press down. The dot of tissue, whose volume can be calculated, will pull away from glass slide and stay in the punch. Press the spring loaded button on top of each punch to expel the tissue into the collection media.

► Sterile Disposable Biopsy Punch

A possible replacement for the Harris Uni-Cores™. The Miltex® Biopsy Punch with Plunger is a single-use, disposable multi-purpose sampling tool for soft substrates. The plastic exterior is ribbed for comfort and control. The stainless steel cutting tip is seamless and razor sharp to avoid tearing or pulling of the sample. The plunger easily expels the specimen from the barrel. These sterilized punches come in color-coded blister packs with a 5-year shelf life. In addition to the color-coding, the size is also clearly marked on each punch.

These tools are perfect for tissue processing or forensic applications. For applications where contamination is not an issue, the Miltex® Biopsy Punch with Plunger is reusable after cleaning. To clean the cutting edge, rinse with ethanol or spray with compressed air to remove any contaminants.

► Aqua-Hold Pap Pen

The Aqua-Hold Pap Pen draws a liquid repellent barrier around a section of tissue. Used like a paint pen, you just draw a well on a slide. The barrier creates the proper surface tension to hold aqueous solutions such as costly antibody and other valuable specimens. After application, the barrier material is insoluble in alcohol and acetone but can be removed after staining with xylene. Each pen holds 13ml of long-lasting material, making hundreds of wells. Red tint distinguishes the well drawing on the slide to easily view.

71311 Aqua-Hold Pen each

► Liquid Blocker-Super PAP PEN The Newest Staining Guard Pen

New and improved... The Super PAP PEN outperforms the original PAP Pen. The Super PAP PEN may be used at temperatures as high as 120°F. (The old style PAP PEN worked only up to 90°F). With this high temperature feature, one can now use the Super PAP PEN to per-form the peroxidase method, ABC method, and Fluorescent antibodies method with satisfactory results.

71310 Super PAP PEN, Large each
71312 Super PAP PEN, Small each

► Para-Marker

A wide tipped pen, designed for use with paraffin sections. The pen provides a sticky membrane to the glass slide which not only prevents paraffin sections from falling off but also keeps the sections flat on the slide.

71313-20 Para-Marker each

► Tissue Capture Pen

With one swift application of the EMS Tissue Capture Pen, you are able to change your plain glass slide into a coated one.

The EMS Tissue Capture Pen is a coating pen with a wide point (18mm) for fixing various tissue sections (paraffin embedded, frozen and formalin sections, etc.) The unique pen is unaffected by heat up to 120°C so it offers secure and firm adhesion of the tissue section. It may be used in Microwave staining, immunostaining, in situ etc....

One application is all that is needed, and after it is applied, allow to dry for 1-2 minutes. The EMS Tissue Capture may be used in conjunction with our Pap-Pen (71310) and will allow for easy placement of adherent as well as non-adherent cells on a glass slide. Immunostaining/ISH can be performed by applying a few drops of tissue suspension or liquid media onto the glass slide which is circled by the Pap-Pen, and then your section can be placed.

71314-10 EMS Tissue Capture Pen each

► Fro-Marker

A wide tipped pen designed for use with frozen sections. The pen provides a sticky membrane which when applied to the slide and onto which the section is placed it eliminates the section from falling off,

moving, or wrinkling on the slide during immunostaining procedures. The membrane is stable up to 110°C and is suitable for vigorous applications such as in-situ hybridization.

71313-10 Fro-Marker each

TECHNICAL TIP

BENEFITS of using PAP Pen

DISADVANTAGES without PAP Pen guard

► Solvent-Resistant Pens & Teeny Writers

Solvent Resistant Pens feature an ultra-permanent ink.

- Resistant to xylene, alcohol, acetone and formalin
- Ideal for histology and cytology
- Markings will not run on embedding cassettes or frosted/painted slides and labware, even after repeated washes and solution treatments
- Remove markings with acetic acid, an ethanol/xylene mixture or paraffin. Testing advised before use

Teeny Writers are perfect general use lab markers.

- The Twin-Tip Teeny Writer has a fine tip and an ultra fine tip
- The original Teeny Writer has an extra fine tip
- Both are ideal for writing on Tough-Tags and Tough-Spots
- Use for labeling samples stored at room temperature and not exposed to chemicals and/or caustic agents

The Twin-Tip Too laboratory marking pen provides a new option for all writing needs. It is the best of both worlds. It is resistant to most mild laboratory chemicals and gives the flexibility of a twin tip pen for fine tip writing on small tubes and labels. Keep it close by utilizing the included handy pocket clip.

Testing is recommended.

Cat. #	Description	Color	Tip (Millimeters)	Qty.
62053-B	Solvent Resistant	Black	Extra Fine (0.6)	each
62053-R	Solvent Resistant	Red	Extra Fine (0.6)	each

62052-B	Teeny Writer	Black	Extra Fine (0.4)	each

Twin-Tip
Teeny Writer

► Manomark™ Pen

Writes on all plastic, glass, metal, wool, paper and cloth, including PTFE, fluoropolymer resins. With its precision seal valve the pens life is preserved and as well it allows for a smooth flow of ink even if it's left uncapped. Once dry, the solvent base ink is temperature resistant from 0°C to 155°C (32°F – 310°F) > Markings are insoluble in water or hydrocarbons, resist many solvents, and are easily removed with alcohol.

72127-AS	Manomark Pen Assorted (4 black, 2 red, 2 green, 2 blue, 2 orange)	12/pk
72127-B1	Manomark, Black only	each
72127-B12	Manomark, Black only	12/pk

► Wet Surface Pen

This unusual pen will write clearly on wet surfaces, such as marking slots on wet Southern, Northern, and Western blots Use it for marking alignment dots on blotting filters placed over agar plates containing bacterial colonies or phage plaques. Mark lanes on wet plots prior to cutting the filter into strips to be incubated separately with different antisera or probes. It can be used to correct or write on wet labels that were kept in a water bath, in liquid nitrogen or in a freezer at 0 degrees. The Wet Surface Pen is extremely useful for marking filters during processing under water-based buffers. The pen can, of course, also can be used to write on dry paper as a standard ball pen.

72120	Black Felt Tip	box/12
72130	Red Felt Tip	each
72140	Red Felt Tip	box/12

► Slide Markers - SHUR/Mark™

A perfect marker designed to mark glass slides and cassettes with priming action; comes with a replaceable felt tip.

- Quick drying; will not smudge or smear.
- Consistent ink flow with effortless writing.
- Chemically resistant; especially to alcohol, xylene and many other solvents.
- Replaceable priming tip, which eliminates clogged and/or worn out tips.

TO USE: Simply depress the tip until the tip is saturated with ink.

► StatMark Pen

Permanent ink in an ultrafine tip is ideal for labeling microscope slides and cassettes. StatMark Pens are made of rigid nylon that allow for precise hand marking on glass slides as well as on most tissue embedding cassettes. This quick drying ink is highly resistant to aqueous based stains, alcohols, xylene and xylene substitutes. StatMark Pens do not dry out easily and last twice as long as many of the leading 'laboratory' pens.

► Tissue-Tek® SmartWrite Color Slide Printer

On-Demand Color Slide Printing is what you get with this unit

Features and Benefits

- High resolution color printing - reduces need for managing multiple color slide inventory, lowering costs
- On-demand slide printing - streamlines workflow and reduces specimen identification errors
- Small footprint - fits perfectly on a microtome work station or next to a cytology slide processor
- Prints directly onto slides - eliminates errors from hand writing and label application
- Scannable 2D and 1D bar code, alphanumeric and graphic printing capabilities — optimizes flexibility for now and in the future
- Optional SmartWrite™ Software - provides configurable label design and is interfaceable to LIS systems
- Print resistant to Xylene, alcohol, histology reagents, stains, heat, and chemicals*. Ensures reliable identification of slides now and in the future

Applications

- On demand slide printing - color or black labels printed directly onto slides

Height	8.6" (218.4mm)
Width	7.08" (179.8mm)
Depth	12.58" (319.5mm)
Weight	16.8 lbs. (7.62 kg)
User Interface	
Power Button	One power switch with LED indicator, located on the upper right side of the control panel on the front of the instrument
Slide Feed Button	One button with LED indicator located on the upper right side of the control panel on the front of the instrument beneath the power button
Lid Open Button	One button located on the upper left side of the instrument
Blue Slide	Illuminates blue slide holder indicating

Holder Light	Proper loading
Diagnostic Function	Self diagnosis, error messages and codes
Functional Printing Technology	Thermal transfer
Print Speed	Up to 9 slides/minute (monochrome) Up to 5 slides/minute (solid colors) Up to 4 slides/minute (blended colors)
Print Resolution	300 dpi
Ink Type	Resin thermal transfer
Ribbon Types	CMYK: 1000 prints; Black: 5000 prints
Printable Colors	Multiple solid colors; others available via software
Slide Types	3" x 1" standard or positive charged, smooth surface white frosted end, clipped corners
Slide Capacity	100 slides - Blue Slide Holder
Output Tray Capacity	15 slides
Construction	Steel frame with powder-coated steel and plastic covers
Data Interface	USB 2.0
Printer Drivers	Windows™ XP/Vista/7
Warranty	One year parts and labor

Applications
On demand slide printing — color or black labels printed directly onto slides

Standard Accessories

- One Operating Manual
- One Quickstart Guide
- One Printer Driver
- One Blue Slide Holder
- One Black Print Cartridge
- One Color Print Cartridge
- One Print Head Cleaning Pen
- One USB Cable
- One Power Cord
- One Power Converter

Optional Accessories

- 2D Bar Code Scanner with Stand
- Tissue-Tek® SmartWrite™ Software
- Touch Screen PC
- Blue Slide Holder one
- Black Print Cartridge 6/case
- Color Print Cartridge 6/case

Ordering Information

Electron Microscopy Sciences Announces their State of the Art
Scientific Equipment Repair Center

No equipment is too small or impossible to either
Repair, Refurbish, or Upgrade!

Our facility is equipped to handle the following Manufacturers:

- Balzers/Baltech**
- Leica**
- Denton**
- Reichert-Jung**
- Edwards**
- LKB**
- Emitech**
- RMC-Boeckeler**
- Emscope**
- And Many More...**
- Bio-Rad**

Our unique service allows us to come to you, or you send the equipment to us, depending on the level of Repair/Refurbishment needed.

Equipment such as:

- Vacuum Systems**
- Lynx**
- Microtomes**
- Freeze Fracture Instruments**
- Ultramicrotomes**
- High Pressure Freezers/ Slammers/ Propane Jet Freezers**
- Tissue Slicers**
- Vibratomes**
- Ovens**
- Baths**
- Shakers**
- Tissue Processors**
- And Much More...**

For more information on any of our services, a comprehensive quote, please call, write, or e-mail us today.

► Microscope Glass Slides -Esco

Our microscope glass slides are manufactured by Esco - Erie Scientific Co, where reliability and quality are recognized to be the best.

- Made from the highest quality glass sheets; white glass.
- The dimensions of the slides have been standardized to millimeters according to the U.S. Government Specifications.
- They are packed with care to assure cleanliness.
- The glass is fully annealed to minimize chipping.

Our microscope glass slides are precleaned and are made from clear-white glass. They are individually inspected and free from moisture, dirt, and film. All of our slides are flat, uniform and durable. They are packed 72 slides/bx and cellophane wrapped.

Microscope Slide Specifications: Soda Lime Glass

Chemical Makeup	Green (%)	White (%)
Silicon Dioxide	72.2	72.15
Sodium Oxide	14.5	14.25
Calcium Oxide	6.5	6.25
Magnesium Oxide	4.4	4.1
Aluminum Oxide	1.5	1.12
Potassium Oxide	0.3	1.15
Sulfur Trioxide	0.3	0.3
Iron Oxide	0.1	0.3
Titanium Oxide	0.05	0.05

Physical Properties:

Glass Density:	2.4024g/cm ³
Softening Point:	724°C
Annealing Point:	545°C
Strain Point:	511°C
Dispersion Value (Nu Value):	.64
Dimensional Variance:	±1.5000
Thermal Expansion:	(0 -300°C) 8.36x10 ⁻⁶ /°C
Dielectric Constant:	@20°C (68°F) (1MHz):ET =6.7
Young's Modulus:	E = 10,000,000 lbs/sq"
Torsion Modulus:	G = 4,000,000 lbs/sq"
Poisson's Ratio:	μ = 0.2
Luminous Transmittance:	@ 0.040: 91.8%
Refractive Index:	1.517 @ 546.07 nm wavelengths

► 1. Microscope Slide, Plain End

Cat.#	Thickness	Size,mm	Pack
71880-01	1.2 mm	25x75	Gross
71880-10	1.2 mm	25x75	10 Gross
71880-20	1.2 mm	25x75	20 Gross

► 2. Microscope Slide, Frosted End

These slides have 3/4" sandblasted frosting on one end which allows for easy marking.

Cat.#	Thickness	Size,mm	Pack
71870-01	1.2 mm	25x75	Gross
71870-10	1.2 mm	25x75	10 Gross
71870-20	1.2 mm	25x75	20 Gross

► 3. Microscope Slide, SUPERFROST® End

With a superfrosted end. These slides have one side which is frosted with a brilliant white opaque coating that will take and retain all pen markings. They offer superior readability and they are permanent.

Cat.#	Thickness	Size,mm	Pack
71867-01	1 mm	25x75	Gross
71867-10	1 mm	25x75	10 Gross
71868-01	1.2 mm	25x75	Gross
71868-10	1.2 mm	25x75	10 Gross

► 4. Microscope Slide, SUPERFROST® PLUS - Adhesion Slide

These Superfrost Plus(+) glass slides are made by a new process offering the following features:

- They place a permanent positive charge in the microscope slide.
- They electrostatically attract frozen tissue sections and cytology preparations, binding them to the slide.
- They form a bridge so that covalent bonds develop between formalin fixed sections and the glass.
- Tissue sections and cytological preparations adhere better to the Plus glass slides without the need for special adhesives or protein coatings.

continued >>>

➤ Microscope Glass Slides -Esco (continued)

➤ 4. Microscope Slide, SUPERFROST® PLUS - Adhesion Slide (continued)

BENEFITS:

- Plus glass puts an end to background staining.
- It eliminates blue or red background staining which is often encountered in hematoxylin and eosin staining of tissue sections mounted on albuminized glass.
- No brown background staining occurs when immuno-peroxidase or in situ DNA procedures are performed on our Plus glass. A higher degree of enzyme digestion can be performed on plus glass without the loss of tissue sections.
- Cytological preparations placed on Plus glass resist cell loss during enzyme digestion, DNA denaturation and RNA hybridization.
- Plus glass improves tissue adherence in microwave staining.
- Chromic acid washes are redundant for molecular hybridization because the slides are RNase-free.
- Plus slides are Color coded to help keep track of specimens during processing as well as filing.

The slides measure: 25x75 mm, 1 mm thick.

➤ 5. Superfrost® Plus Gold Slides

These slides are specially designed for the application of fresh or formalin fixed frozen tissue. They are inherently tissue binding so there is no need to add sprays or adhesives to the slides.

FEATURES:

- Securely attach frozen breast, brain, skin and other normally difficult to bond tissue sections to the slide.
- Ideal when special stains, immunocytochemical and in situ DNA hybridization techniques are applied on fresh and fixed frozen tissue.
- Assist tissue adherence during immunocytochemical analysis of estrogen and progesterone receptors in fresh frozen breast tissue.
- They are compatible with both toluidine blue and hematoxylin and eosin rapid frozen section stains.

➤ 6. Colormark™ Plus Glass Slide

Specimen Slide identification is VITAL. Automated etched slide labeling instruments ensure specimen slide integrity but are difficult to read on ordinary slides. To clearly read diamond scribed slide labels against any surface, you need the only slide designed to be used with your automated slide labeling instrument. You need COLORMARK slides. These brightly printed slides greatly improve etched labeling visibility and offer all the advantages of Superfrost® slides. A bright contrasting color has been printed on the back of the Superfrost end so that patient or specimen information etched through the painted end on the front is clearly visible. Colormark Plus slides are adhesive coated therefore ensuring the adhesion of the section to the slide during staining procedures.

► 7. Control Slides

Use our Histology Control Slides and you will always know for sure which specimen is the Patients and which is the Control.

- Patient and Control tissue samples on the same slide.
- Positive identification of control and patient samples.
- Utmost adhesion of samples to slide throughout staining procedure.
- Proof of correct staining procedures.
- Easy and permanent identification of slides.

Available in two configurations: Style #329+ with 3/4 inch of frosted area; style 334+ with 1 inch frosted area.

71878-08	3.12-3.22mm	2	12/pk

► D. Slides with Etched Rings

Useful for Fluorescent Antibody Examination. The size of the slide is 3"x1", approximately 1 mm thick, with an etched frosted end. Pre-cleaned. Packed 72/bx.

71879-10	Two Etched 10mm Circle Slide	1 gross
71879-11	Two Etched 10mm Circle Slide	10 gross
71879-15	Two Etched 15mm Circle Slide	1 gross
71879-16	Two Etched 15mm Circle Slide	10 gross

► 9. SuperFrost™ Clipped Corner Slide

Designed specially for the Sysmex SP-100 slide prep unit and recommended for the Diagnostics. The 45 degree clipped corner slide offers exceptional cleanliness and resistance to sticking. The tight tolerances for the length and width help to reduce accumulation of glass chips within the instrument. The pre-cleaned slide is 25 x 75mm and approximately 1 mm thick.

Ideal for technicians, who routinely prepare large number of slides.

► Microscope Slide – Gold Seal®

In our line of slides we proudly introduce GOLD SEAL® microscope slides for your convenience. GOLDSEAL® slides are made from pure white glass (soda-lime) and at accurately cut sizes. To preserve the highest quality from manufacturer to ultimate user, all GOLD SEAL® slides are hermetically sealed in our Moisture-Barrier™ system, providing a dry-slide environments during shipment and storage.

UltraStick™ (adhesion coating: APTES, 3-Aminopropyl Triethoxysilane)– Adhesion coated micro slides- one of the best from GOLD SEAL®- are ideal for histological and cytological applications demanding superior specimen-to-slide adhesion. The enhanced silane coating eliminates tedious procedures and special additives to your water bath. Procedures such as immunoperoxidase, in situ DNA hybridization, enzyme digestion and frozen tissue processing will benefit from the amplified adhesion characteristics of this product. Overall cost savings and assured quality of your prepared specimen will be recognized with UltraStick™ from Gold Seal®

► Large Glass Slides

In addition to our comprehensive collection of glass slides manufactured by ESCO we now carry large glass slides which are available in 75x38mm and 75x51mm. These slides are precleaned, individually selected and are suitable for large specimen sections such as, brain tissue.

71860-01 75x38mm Glass Slide, 1mm Thick 1 gross/pk
71862-01 75x51mm Glass Slide, 1.2mm Thick 1 gross/pk

► Quartz Microscope Slides

There are many applications that require slides that have absolute UV transparency and high temperature properties. EMS now is introducing the highest quality, clear fused quartz microscope slides to meet all of these requirements.

- The window of highest transparency to UV is between 0.15µ to 5µ.
- Typical flatness measured 2" to 4" bands per inch.
- Soften point is about 1250°C (2282°F).
- Standard microscope slide thickness is 1mm.

Cat.#	Description	Pack
72250-01	Slide, 1" x 1" (25 x 25 mm)	each
72250-02	Slide, 2" x 1" (50 x 25 mm)	each
72250-03	Slide, 3" x 1" (75 x 25 mm)	each
72250-04	Slide, 2" x 3" (50 x 76 mm)	each
72250-05	Slide, 10mm x 10 mm	each

These slides have all of the same properties of the ones above with the only difference is these are 0.5mm thick:

72250-06	1" x 1" (25x25mm)	each
72250-07	1" x 2" (25 x 50mm)	each
72250-08	1" x 3" (25x76mm)	each

For Quartz Coverslips, see page 325 >>>

► Excell™ Adhesion Slides

The Excell slide was developed with superior adhesion and wettability properties, and has been shown to perform very well in most applications.

■ **Excell™ Adhesion Surface for Heat Induced Epitope Retrieval** – Excell™ was developed for use in the HIER methods that require high pH antigen retrieval solutions, including EDTA. Formalin fixed paraffin embedded tissue demonstrated more consistent attachment when performing these procedures on the Excell™ surface.

■ **Automated Staining** – Excell™ has a uniform hydrophilic surface that works extremely well with automated staining equipment.

■ **Cell Culture** – Excell™ surface technology conditions the surface to enhance the attachment of anchorage dependent cell lines, including many fastidious lines, such as primary neuronal cells. Attachment and proliferation is increased so cells achieve a confluent monolayer sooner

■ **Plastic** – Excell™ works well for both Epon and Methyl Methacrylate sections. Its uniformly hydrophilic surface allows the sections to spread well during initial attachment. Section adherence is maintained throughout lengthy staining procedure.

■ **Laser Capture Microdissection** – Excell™ gives you the advantage of excellent tissue adherence of all tissue types, yet it easily releases those area of interest identified for Laser Capture Microdissection.

► Retriever Tissue Slides

Retriever Tissue Slides are high adhesive glass microscope slides for paraffin-embedded tissue section, including tissue arrays. The slides were designed and optimized for the EMS Antigen Retriever (62700 series) to preserve the section attachment and tissue morphology during heat-induced epitope recovery in Retriever in pH6 (Low), pH9 (High), or Universal Retriever buffer.

Slides can also be successfully used in any other epitope-recovery technology (autoclave, microwave, proteolytic) and show superior performance over positively charged or polylysine-coated slides, especially in high pH buffers and recovery buffers containing EDTA.

71880-50	Retriever Tissue Slides	72/pk

► Adhesion Slide – TruBond™

Adhesive slides with proven performance under high temperature and pH conditions

These adhesive, including the hydrophilic TruBond™ 360, slides work well with automatic IHC applications. EMS is confident that the quality of these slides will exceed your expectations. For problems with tissue loss try our TruBond™ 380.

Available colors: White, Blue, Green and Yellow.

General Properties

- Retriever Tissue Slides are made from soda lime glass
- Dimensions approximately 76 x 26mm, Thickness 1.0mm.
- 90° ground edges
- Colored or white marking area 20mm, at one end, on one side
- Pre-cleaned, ready for use

- Autoclavable
- Supplied in plastic boxes of 72 pieces (call for carton price, 20 boxes in a carton)
- Carry recommended best before date and batch number for comprehensive information and traceability

For more information on the Retriever, see pages 612-613 >>>>

► Poly-L-Lysine Coated and Silane Treated Microscope Slide

Our premium glass slides with a frosted end are now available pre-coated with either Poly-L-Lysine or Silane (aminoalkylsilane). These slides improve the adhesion of tissues to the slide.

63410-01	Poly-L-Lysine Coated Slides	72/bx
63410-02	Poly-L-Lysine Coated Slides	144/bx
63411-01	Silane Coated Slides	72/bx
63411-02	Silane Coated Slides	144/bx

TECHNICAL TIP

Poly-L-Lysine Coating Of Slides

Poly-L-Lysine with a molecular weight greater than 150,000 (150,000-300,000) should be used. To make a stock solution: Take 0.1% Poly-L-Lysine in distilled water and store it in a dispensing vial and freeze it at -20°C. A drop (10-15ml) is dispersed at the end of a clean glass slide and smeared along its length with the end of another clean glass slide in the same way as blood film. Make sure that the film of Poly-L-Lysine is thin enough for interference colors to be seen as it is being smeared. The slide is ready to use within minutes of drying. If the Poly-L-Lysine is properly applied, it will not affect immunostaining, but it may cause precipitation in some silver impregnation methods. Therefore, it should be avoided if immunogold-silver methods are to be used.

► Polysine™ Microscope Adhesion Slide

The permanent bio-adhesive material on our Polysine™ slide attracts frozen and paraffin embedded sections, centrifuge preparation and cytology smears.

Cat.#	Description	Qty
63412-01	Polysine™ Adhesion Slide	72/bx
63412-02	Polysine™ Adhesion Slide	2x72/bx

► Permanox™ and Polystyrene Microscope Slides

Permanox™ is a strong, biologically inert material resistant to non-chlorinated hydrocarbons, acetone, and other EM reagents. Permanox™ slides allow you to do cell fixation and staining on the slide; they can be cut with scissors. Permanox™ has not been shown to be autofluorescent. All of the microscope slides are 1" x 3".

NOTE: Long exposure to solvents will cause the slide to warp. Xylene and Toluene based mounting media should be avoided. Glycerol, gelatin, and other aqueous based media are recommended.

71885	Permanox™ Microscope Slide	20/pk
71886	Permanox™ Microscope Slide	100/pk
71888	Polystyrene Microscope Slide	20/pk
71889	Polystyrene Microscope Slide	100/pk

► Borosilicate Capillary Micro Glass Slide

Made from Corning® 7740 borosilicate, low expansion, type I glass.

Micro glass slides are precision rectangular glass capillary tubes for use in microscopic viewing of liquid samples. Capillary action instantly collects the sample and the thin glass walls minimize evaporation. The design of these cells eliminates the needs for cover glass and the hanging drop method. These micro glass slides can withstand heat up to 500°C. Samples can be retained for future reference by sealing or cementing open ends. Micro glass slide are packaged in plastic vials.

I.D. tolerance ± 10%, Wall tolerance ± 20%

TECHNICAL – CORNING® GLASS 7740

Common Names – Borosilicate, Low Expansion, Type I Glass.

Standards – Type I, Glass A

Borosilicate conforming to federal specification DD-G-541b and ASTM E-438. Also meets the U.S. Pharmacopodia specs for Type I Borosilicate Glass.

Properties:

Coeff. Of Exp.32.5 x 10⁻⁷ cm/cm/°C
 Strain Point510 °C
 Anneal Point.....560 °C
 Soften Point821 °C
 Density.....2.23 g/cm³
 Youngs Mod6.4 x 10³ Kg/mm²
 Refract Index1.74 @ Sodium D Line
 Temp Limits490°C (Extreme service)
230°C (Normal Service)
 Max. Thermal Shock160 °C

Composition: % Approximate

SiO₂80.6
 B₂O₃10
 Na₂O4.0
 Al₂O₃2.3

EMS is proud to introduce...

► BrightSlide™ D and BrightSlide™ DB

Fluorescence Enhancing Slides and Versatile, (bio)-functionalized coatings for Glass, Metal Oxides and ITO

Fluorescence Enhancing Slide

Fluorescence systems (e.g. microscopes) are today widely used in the life science research. For many applications an increased sensitivity compared to existing glass slides is required. The BrightSlide™ technology uses a proprietary dielectric coating to significantly enhance the signal intensity of fluorescence molecules from the surface. It can be read out with all systems that illuminate and detect from the top. The technology makes use of purely optical principles and substitutes conventional glass substrates.

The BrightSlide™ D (Dielectric) provides a bare SiO₂ surface.

Benefits

- Better signal to noise ratio
- Less sample material can be used
- More genes can be detected
- Existing instrument platform can be used
- Purely optical amplification of fluorescence signal
- Dielectric, high quality SiO₂ surface ready to apply AziGrip4™ or customer bio-functional coating (use your own bio-functional coating, no change of chemical protocol required)

Applications

- Universal detection platform for fluorescence detection on planar surfaces, e.g. fluorescence detection of ultra thin samples
- Differential gene expression using Cy3 and Cy5 labels simultaneously
- Gene expression using Cy3 or Cy5 labels independently

The BrightSlide™ D (Dielectric) comes standard as a bare SiO₂ Surface. However you may also have the slide with the Biofunctional coating (AziGrip4™)

The following is the standard configurations of the slides

1. BrightSlide™ D

Specification

Fluorescence Enhancing Slide optimized for 488nm and 590nm excitation wavelengths (other wavelengths on request)

Both polarizations (s and p-polarization) can be used for excitation and emission

0° - 3° angle of incidence for excitation light

Ultralow fluorescence background

Durable and chemically resistant label with a unique serial number

Suitable for most of commercially available fluorescence microscopes with illumination and detection from the top

Substrate material

D263T eco (other materials on request)

Substrate format

75 ±0.05mm x 25 ±0.05mm x 1.1 ±0.1mm (other formats on request)

Active area

63mm x 22mm

Cosmetic

5/2x0.4; C2x0.4; E1.0 according to DIN ISO 10110

Chemical composition of the top surface

Clean, dielectric, SiO₂ surface (ITO and/or AziGrip4™ bio-functional coating on request)

Environmental stability

Stable against temperatures up to 200°C
All strongly oxidizing cleaning protocols can be used
All organic solvents can be used
Chemical reagents which etch SiO₂ (HF, NaOH, KOH) can destroy the enhancement effect of the BrightSlide™

Storage

Store in clean environment at room temperature

2. BrightSlide™ DB

Specification

Fluorescence Enhancing Slide with Bio-functional coating on the top

Suitable for most of commercially available fluorescence microscopes with illumination and detection from the top

Versatile, (bio)-functionalized coatings for Glass, Metal Oxides and ITO

The AziGrip4™-Bio-functional coating platform is a versatile tool for functionalizing surfaces for Life Science, Fluorescence and Medical Applications. Glass, metal oxides, ITO and plastics can be treated in order to bind different amounts of macromolecules, tune specific cell-adhesion, reduce non-specific binding background, provide better signal-to-noise ratios and patterned surfaces with multi-functionalities.

Benefits

- Provides amino or carboxy functionalized surfaces for high density binding of biomolecules through standard procedures (EDC/NHS)
- Enables direct linking of macromolecules without further functionalization
- Improves adhesion of cells by use of specific binding sequences
- Simplifies depositions of phospholipid by-layers
- Reduces unwanted, non-specific binding to improve signal-to-noise
- Provides patterned surfaces with multi-functionalities

Applications

- Diagnostics
- Bio-analytics
- Lab-on-a-chip
- Fluorescence microscopy
- Cell culture
- Support for lipidic membranes and other emerging application

► BrightSlide™ D and BrightSlide™ DB (continued)

Durable and chemically resistant label with a unique serial number

Optical coating

Optimized for 488nm and 590nm excitation wavelengths (other wavelengths on request)

Both polarizations (s and p-polarization) can be used for excitation and emission

0° - 3° angle of incidence for excitation light

Ultralow fluorescence background

Bio-functional coating

Full surface monolayer with integrated functionality (patterned coating on request)

1-2 nm dry coating thickness

Robust and chemically stable (increased stability in comparison to aminopropylpolysiloxane)

Substrate material

D263T eco (other materials on request)

Substrate format

75 ±0.05mm x 25 ±0.05mm x 1.1 ±0.1mm (other formats on request)

Active area

63mm x 22mm

Optical coating

5/2x0.4; C2x0.4; E1.0 according to DIN ISO 10110

Chemical composition of the top surface

Optical coating

Clean, dielectric, SiO₂ surface (ITO coating on request)

Bio-functional coating

AziGrip4™ with Amine functional group (other AziGrip4™ bio-functional coatings, e.g. brush-like hydrophilic, brush-like non-fouling, hydrogel-like,

with Carboxy, Epoxy, Biotin, NTA, NHS, Cholesterol, ss-DNA or Peptide bio-functionality on request)

Environmental stability (optical coating only)

Stable against temperatures up to 200°C

All strongly oxidizing cleaning protocols can be used

All organic solvents can be used

Chemical reagents which etch SiO₂ (HF, NaOH, KOH) can destroy the enhancement effect of the BrightSlide™

Storage

Store in clean environment at room temperature

Technical Data

- Substrate material D263T eco, other materials on request
- Substrate format 75mm x 25mm x 1.1mm, other formats on request
- Active area 63mm x 22mm
- Fluorescence enhancement optimized for one to three customer specific dyes on one slide
- Both polarizations (s and p-polarization) can be used for excitation and emission
- 0° - 3° angle of incidence for excitation light
- Ultralow fluorescence background
- Ultraclean SiO₂ surface
- Laser scribed, durable and chemically resistant label with a unique serial number
- Suitable for most of commercially available fluorescence microscopes with illumination and detection from the top
- Stringent batch to batch reproducibility
- Packed under clean-room (class 100) conditions

Enhancement of the fluorescence on BrightSlide™ Image of 150nm thick section of biological material using BrightSlide™

Fluorescence signal on standard, glass slide Image of 150nm thick section of biological material using standard, glass slide

► Microscope Slide-Wells

Disposable Liquid-Holding Wells

Convenient Pre-cut, twin adhesive well stickers (1cm diameter) firmly adhere to microscope slides. Examine specimens with or without cover slips. Available in depths of 0.25mm and 0.50mm.

Multiple Applications Examine or count tissue culture cells, yeast, bacteria and other microorganisms. Piggy-back with Microscope Slide-Grids to facilitate counting and sizing.

Versatile - Compatible with different styles of microscopes (conventional, inverted or dissecting).

Chemically Inert - Made from polyester with an acrylic adhesive.

Microscope Slide-Wells are inert and stable under most laboratory conditions.

70366-12	Slide Wells, 0.25mm thick	25/pk
70366-13	Slide Wells, 0.50mm thick	25/pk

► Microscope Slide-Grids

Disposable Adhesive Grids

Convenient - Easy-to adhere stickers having side-by-side twin grids (20mm x 20mm each with 1mm line spacing) for microscope slides. Count or measure cells and estimate the size or length of microscopic or semi-micro objects

Versatile - Compatible with different styles of microscopes (conventional, inverted or dissecting). Virtually all cells and specimens placed on top of Slide-Grids can be counted and/or sized.

Dry Or Wet - Use with dry specimens or suspended specimens such as cells held in buffer under cover slips. Separate cover slips can be placed over each Slide-Grid.

Chemically Inert - Made from polyester with an acrylic adhesive. Slide-Grids are inert and stable under most laboratory conditions.

70366-14	Slide Grids, 20mm x 20mm	40/pk
-----------------	--------------------------	-------

► Gridded Microscope Slides

These 3 x 1" slides have an indexed grid on the reverse side of the frosted end. The ink is resistant to stains and common laboratory solvents. Each square grid fills one low-powered-field (approximately 100X

magnification). These slides make it easy to locate an organism or cell every time. There are 64 squares in total. The slides are available with coatings of Poly-L-Lysine or Silane, or they can be purchased plain (uncoated). Packaged 72 slides/box.

The grid measures 2 mm square-16mm total. Numbers 1-8 and alpha A-H.

► 1. Gridded Microscope Slides without hydrophobic coating.

63405-01	Grid Slides, Uncoated	72/pk
63405-02	Grid Slides, Uncoated	144/pk
63406-01	Grid Slides, Poly-L-Lysine	72/pk
63406-02	Grid Slides, Poly-L-Lysine	144/pk
63407-01	Grid Slides, Silane	72/pk
63407-02	Grid Slides, Silane	144/pk

► 2. Gridded Microscope Slides with hydrophobic coating.

63408-01	Grid Slides, Round well	72/pk
63409-02	Grid Slides, Square well	72/pk

► Lovins Micro-Slide Field Finder

Marking a microscope slide to identify a particular field of interest for future reference has always been a difficult problem for many microscopists.

The Field Finder has a precision rectangular-coordinate grid pattern, which is accurately positioned on a special microscope slide. The slide has been carefully edge ground to provide straight edges and square corners to ensure repeatable results

Lovins Micros-Slide Field Finder helps you to index points of interest on a microscope slide the same way you find them on a road map. A standard 75 x 25mm glass slide has a photo etched grid pattern of 1mm squares, subdivided into 0.1 mm intervals. Each square is marked with a letter and a number. You center the detail in the field of the microscope, replace the specimen slide with the field finder, and read the coordinates. Note reading on slide, and you can find that detail immediately by reversing procedure.

The pattern is imaged in vacuum deposited chrome for durability.

Cat.#	Slide Size	Qty
72266-01	Micro-Slide Field Finder, 75 x 25 mm	each

► PTFE Printed Slides

PTFE Printed Slides, are extremely hydrophobic, acetone proof, chemical resistant and autoclavable. They are perfect for controlling cross-contamination in staining, immunolabeling and immunofluorescence tests. All printed slides are precleaned. The well surface is 100% wettable, which enhances cell attachment and increases its spreading capabilities within the well. These slides minimize the use of expensive purified antigens and antibodies. The slides measure 3x1" (76x26x1mm).

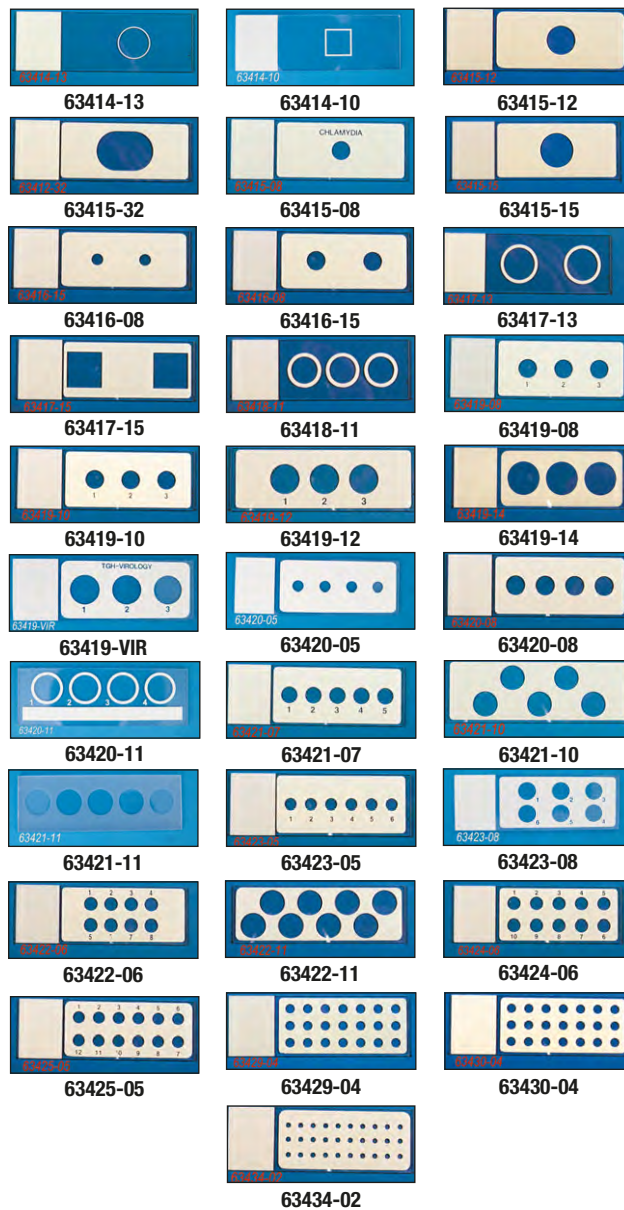

EMS Printed Slides are manufactured to order offering maximum shelf life. The shelf life of PTFE Printed Slides range from 18 months to two years. However, it is recommended that all glass slides (Printed or Un-printed) be used in a timely manner to avoid glass "weathering", (slides becoming cloudy or hazy even with proper storage. All of our Printed Slides are autoclavable and have a frosted end. They are intended for one time use only.

All EMS printed slides are printed with White PTFE other colors are available upon request.

FEATURES:

- Super Hydrophobic Mask
- Clean, Wettable Wells
- A Bioadhesive Surface Treatment to Enhance Cell and Tissue Attachment

For the handling of glass slides, see pen vac; grid section page 150 >>>

► Micro Cover Glasses

Manufactured from clear white, borosilicate glass. They offer super clarity, are perfectly flat, and corrosion resistant. All cover glasses are uniform in size and thickness.

72196-25	25 mm	#1 (0.13 to 0.16mm)	160	1 oz

► Round Cover Slips – German Glass

These coverglass which are made from German glass can be used for growing and culturing cells that normally have poor adhesion to plastic or regular glass surfaces. The 5mm size will fit inside the 96 well plates and still have enough room to pick up from the bottom of the well with forceps. The 8 mm size fits inside the 24 well plates. Available with #1.5 (0.16 – 0.19 mm) thickness. Packaged in convenience size: 100 per box

Cat.#	Description	Qty
72296-05	5 mm Round Coverglass, #1.5 Thickness	100/bx
72296-08	8 mm Round Coverglass, #1.5 Thickness	100/bx

► Quartz Microscope Slides and Coverslips

There are many applications that require slides and coverslips that have absolute UV transparency, and high temperature properties. EMS now is introducing the highest quality, clear fused quartz microscope slides and coverslips to meet all of these requirements.

- The window of highest transparency to UV is between 0.15µ to 5µ.
- Typical flatness measured 2 to 4" bands per inch.
- Soften point is about 1250°C (2282°F).
- Standard microscope slide thickness is 1 mm.
- Standard coverslip thickness is 0.2 mm.

Quartz Microscope Slides

Cat.#	Description	Pack
72250-01	Slide, 1" x 1" (25 x 25 mm)	each
72250-02	Slide, 2" x 1" (50 x 25 mm)	each
72250-03	Slide, 3" x 1" (75 x 25 mm)	each
72250-04	Slide, 2" x 3" (50 x 76 mm)	each
72250-05	Slide, 10mm x 10 mm	each

These slides have all of the same properties of the ones above with the only difference is these are 0.5mm thick:

72250-06	1" x 1" (25x25mm)	each
72250-07	1" x 2" (25 x 50mm)	each
72250-08	1" x 3" (25x76mm)	each

Quartz Coverslips

Cat.#	Description	Pack
72255-02	Round 1" (25 mm) dia.	each
72256-02	Square 1" x 1" (25 x 25 mm)	each
72256-03	Round, 18mm (0.71") x 0.2mm Thick (#2)	each
72256-04	Round, 25.4mm (1") x 0.2mm Thick (#2)	each
72256-05	Round, 33.02mm (13.0") x 0.2mm thick (#2)	each
72256-06	Round, 25mm (0.984") x 0.15-0.18mm thick (#1)	each
72256-07	Square, 25.4mm (1") x 0.2mm thick (#2) thick	each
72256-08	Square, 25.4mm (1") x 0.15-0.18mm thick (#1)	each
72256-09	Square, 25mm (0.984") x 0.075-0.125mm thick (#0)	each

► Superslip® Micro Glasses

Finally, your automated coverslipper has the right coverslip to allow it to run smoothly.

These "Superslip®" coverslips are designed to work in automatic coverslip machines and humid environments without sticking or jamming up in the middle of a run.

These new superslips combine specialized production procedures with our unique moisture-resistant packaging which brings you superior coverslips.

72236-40	Superslip, 24x40mm, #1	1 oz
72236-41	Superslip, 24x40mm, #1	10x1 oz

72236-60	Superslip, 24x60mm, #1	1 oz
72236-61	Superslip, 24x60mm, #1	10x1 oz

► Cover Slips; Thermanox®; TMX Coverslips

NUNC™ Brand Thermanox®, or TMX coverslips are made from a polymer (in the polyolefin family) that is highly resistant to most chemicals. Thermanox® plastic is resistant to alcohols, aldehydes, hydrocarbons, dilute acids (<10%) and dilute

alkalis (<2%). TMX has limited resistance to chlorinated hydro-carbons, however, it is not resistant to concentrated acids or bases. Thermanox® plastic is a flexible, trans-parent polymer that can be sectioned using a microtome and is able to withstand high temperatures (temperature range -70°C to +150°C). Thermanox® Coverslips are culture treated on one side for enhanced cell attachment and growth. The treated side is packaged face up toward the label.

FEATURES:

- Flat and remain flat
- 0.2mm (No. 2) thickness
- Resistant to commonly used solvents
- Safe and easy to handle
- Auto fluorescent in the range 380 to 545 nm
- Thermanox® cover slips can be autoclaved at 20 minutes steam, 20 minutes dry at 120°C

Thermanox® is Nalge/Nunc product.

► Disposable Rinzl Plastic Micro Slides

- Made from optical clear vinyl with a refractive index of glass.
- Ideal for wet mount, urines, etc.
- Economical, they can be used and discarded.
- Available standard size 3 x 1" and packaged 144 per box.
- Will not break, scratch or cut fingers.
- Not auto-fluorescent.
- Thickness 0.0180 to 0.022" or 0.46 to 0.56mm.

71890-12	Rinzl Plastic Micro Slides (A)	12/bx
71890-01	Rinzl Plastic Micro Slides (B)	144/bx
71890-10	Rinzl Plastic Micro Slides (B)	10x144/bx

► Rinzl Plastic Coverslips

- Made from clear vinyl plastic.
- Unbreakable, will not scratch or cut fingers.
- Used in Biological and Medical labs, etc.
- Thickness 0.01" or 0.28mm.
- Refractive index of glass.
- Economical and half the price of glass.
- Not autofluorescent.

Cat.#	Description	Pack
72261-18	Rinzl Plastic Coverslips, Size 18 x 18mm	100/pk
72261-19	Rinzl Plastic Coverslips, Size 18 x 18mm	1000/pk

72261-60	Rinzl Plastic Coverslips, Size 24 x 60mm	1000/pk
72261-100	Rinzl Plastic Coverslips, Size 24 x 100mm	1000/pk

TECHNICAL TIP

Permanox plastic is nonfluorescent and may be used with most fluorescent labels. Permanox has better chemical resistance to fixation and staining solvents than polystyrene. An aqueous based mounting medium must be used when cover slipping to prevent warping.

TECHNICAL TIP

A simple method to determine which side of the coverslip is treated is the "droplet" test. A drop of water or culture medium will spread on the hydrophilic, treated side. - If the droplet forms a bead, then the side of the coverslip is not treated. - If the droplet spreads evenly over the coverslip, the side is treated.

► Plastic Cover Slips

Unbreakable .007" (1.57mm) flexible cellulose acetate, square 22x22mm. Trusal, L., Baker C., & Guzman, A., Stain. Tech., 54,2 pg. 77.

72260 Plastic Cover Slip 100/bx

► Photoetched Coverslips

These coverslips are made from pure white glass and photo etched on the surface for a permanent gridded pattern.

- Using No. 2 (.17 -.24mm) thickness cover slips.
- Grid contains 520 alphanumeric coded squares, each square 600 x 600µm (0.6mm x 0.6mm). Numbered 1–200.
- Used to facilitate mounting of micromanipulated cells or chromosome spreads.

► Correlative Microscopy Coverslips®

EMS introduces a simple coverslip with a grid image that allows cells to grow and later be analyzed under brightfield or fluorescence microscopy before being further processed and sectioned for EM or other analysis. These unique coverslips do all that.

Applications

Light Microscopy, Fluorescence, Scanning Electron Microscopy (SEM), Transmission Electron Microscopy (TEM), High-Pressure Cryofixation

Features

- Reticle film has been thoroughly tested with cell culture
- Good growth of cell culture (equivalent to conventional media)
- Good adhesion to the substrate without cell polylysine
- Resistant to normal chemicals used in electron microscopy
- No oxygen retention, compatible resin LR White
- Good optical quality in bright-field & UV fluorescence
- Excellent transparency
- Does not deform at temperatures (positive 100C and negative liquid N₂)
- Rigid, does not float in the middle of culture
- Easy to handle and cut with a knife or micro-punch
- Simple sterilisation using alcohol or UV
- Detaches easily from resin after polymerisation
- Low cost

66108-01 10x10 grids of 0.1mm squares at 5 positions. Indexed 1-10 along top, A-J down side

66108-02 20x20 grid of 0.5mm squares. Indexed 1-20 along top, A-T down side and centre cross

66108-03 10x10 grids of 1mm squares. Each square individually indexed 0-99

All of the PS-XO series of Calibration Slides is Green Float Glass, Bright Chrome Image

1. PS300-XO

High definition 300mm scale in 0.1mm divisions with extended 0.5mm, 1.0mm and 5.0mm lines to allow calibrations in those increments too. Series of dots and crosses, at 10mm intervals, included for calibrations where these shapes are preferred. Supplied in polished wooden case.

Features

300mm high definition scale in 0.1mm divisions with additional dot and cross series at 10mm centers

2. PS150-XO

High definition 150mm scale in 0.1mm divisions with extended 0.5mm, 1.0mm and 5.0mm lines to allow calibrations in those increments too. Series of dots and crosses, at 10mm intervals, included for calibrations where these shapes are preferred. Supplied in polished wooden case

Features

150mm high definition scale in 0.1mm divisions with additional dot and cross series at 10mm centers

3. PS100-XO

High definition 100mm scale in 0.1mm divisions with extended 0.5mm, 1.0mm and 5.0mm lines to allow calibrations in those increments too. Series of dots and crosses, at 10mm intervals, included for calibrations where these shapes are preferred. Supplied in polished wooden case.

Features

100mm high definition scale in 0.1mm divisions with additional dot and cross series at 10mm centers

► Microscope Slide Dispenser

Molded from attractive gray ABA plastic. This dispenser provides a method of releasing clean, dust free 1"x3" slides, one at a time. Comes with a clear molded plastic cover to allow for visual checking of unused slides. Measurements: 4 $\frac{3}{8}$ "x4 $\frac{7}{8}$ "x5 $\frac{1}{2}$ ". Holds approximately 72 slides.

71300 Glass Slide Dispenser

each

► Levered Micro Slide Dispenser

- Holds a full box of 72 slides.
- Get a clean, fingerprint-free slide every time
- Avoid breakage
- Loading is simple
- Made from stainless steel and has suction cup feet to keep the unit in place.

Measures 3"(L)x5"(W)x4"(H) (8x13x10cm)

71298-01 Levered Slide Dispenser

each

► Slide Holder Block

Made from solid high density polypropylene blocks with 13 slanted channels (on a 10° angle), $\frac{7}{16}$ "(1.5mm) (W) x $\frac{3}{8}$ " (9mm) (D). It is made to hold 3x1" (75x25mm) slides during cleaning, draining excess immersion oil, and even drying. They are white in color and are chemically resistant. Available in 40 or 90 capacity (vertically held).

71532-40 40-Slide Holder Block, 4"(W)x12"(L)(10x30.5cm) each

71532-90 90-Slide Holder Block, 7"(W)x12"(L)(18x30.5cm) each

► View-Pack™ Microscope Slide Holder With 3-Ring Binder

For the orderly visual display and safe transport of microscope slides. This loose-leaf binder has ten vinyl View-Pack™ pages (hold 160 slides). Each page holds 16 slides 3x1" (75x25mm) in individual pockets with a white back and clear front. A flap in the center keeps slides from falling out. Simply fold the page at the center crease to retrieve slides. The 8 $\frac{1}{2}$ " x 10 $\frac{1}{2}$ " (22x27cm) View-Pack pages comes with a standard 9"x12" (23x30cm) 3-ring binder.

71544-01 View-Pack With 3-Ring Binder each

71544-50 Refill View-Pack 10/pk

► Slide Stand

Made from stainless steel. Stand consists of four rails, which supports various microscope slides almost vertically. Accommodates 68, 3x1" slides

71533-01 Slide Stand, 455x100mm (18x4") each

► Compact Glass Slide Storage Box; The Mini Box

Made from rigid polystyrene, with a removable lid. This 25 capacity slide box measures only 3.625" (92mm)(L) X 3.25"(83mm)(W) X 1.25"(32mm) (H). The box is available in either white, red, or blue.

71455-W 25-Compact Slide Box, White each

71455-B 25-Compact Slide Box, Blue each

71455-R 25-Compact Slide Box, Red each

► Secured Hinge Microscope Slide Boxes

Made from durable polystyrene (with heavy walls). This material is unaffected by humidity and is thoroughly insect proof. Each box is secured with a rust-resistant nickel-plated clasp and hinge pin. The cork lining prevents damage to the stored slides. To ensure proper slide identification, each slot is numbered to correspond to the slide inventory sheet on the inside cover of the box. To save space the boxes are stackable. Each box stores up to 100 3x1" or 25x75mm microscope slides. Available in 5 color coded boxes making the boxes easy to identify Each box measures: 210x162x33mm (8 $\frac{1}{4}$ x 6 $\frac{1}{2}$ x 1 $\frac{1}{4}$ ")

71471-Y Hinged 100 Slide Box, Yellow 10/pk

► Molded (Living Hinge) Microscope Slide Boxes

Molded one-piece polypropylene construction with an integral living hinge. Numbering in the base corresponds to the printed index in the covers for slide identification purpose. Boxes are designed to be stackable to save space. The tensioned clasp insures a secure closure. Available in 25 or 100 capacity. Fits 1 x 3" (25.4x75mm) microscope slides.

Cat.	Description	Outside Dimensions L x W x H" (mm)	Pack
71472	Molded 100-Slide Box	8 7/8"x6 1/4"x1 1/2"	each
71473	Molded 100-Slide Box	(220x175x38mm)	10/pk

► Carolina™ Blue Box

Molded from blue high-impact styrene, the Carolina™ Blue Box is manufactured to our exacting specifications. Compared to conventional wooden boxes, the Carolina™ Blue Box is smaller in size, lighter in weight, and held to closer dimensional tolerances. The 75x25mm (3x1") slides fit the slots and will not slip out once in place. A shoulder on each box excludes dust and identifies the top of the box. The boxes are available in two sizes: 3 1/4" x 4 1/4" x 1 1/16" (for 25 slides) and 3 1/4" x 2 1/4" x 1 1/16" (for 12 slides).

► 100-Capacity Slide Box

Same construction as (#71470), but with a slip-on cover; gray in color. The box measures: 9"x7 1/4"x1 1/4" (230x185x32).

71474	Slip-on Cover 100-Slide Box	each
71475	Slip-on Cover 100-Slide Box	10/lot

► 50-Capacity Slide Box

Same construction as (#71470), but with a slip on cover; stackable and gray in color. The box measures: 9"x3 3/4"x1 1/4" (230x95x32mm)

71462	Slip-on Cover 50-Slide Box	each
71463	Slip-on Cover 50-Slide Box	10/lot

► Compact 25 Slide Box

Same characteristics as (#71470), but with a slip-on cover; Holds 25 1x3" slides. The box measures 1 1/4"(H) x 3 1/2"(W) x 5 1/2" (L).

71460	Slip-on Cover 25-Slide Box	2/pk
71461	Slip-on Cover 25-Slide Box	10pks/lot (20 bxs)

► Large Glass Slide Storage Box

These storage boxes are available in two sizes.

1. 100-Slide Capacity:

Durable, wood frame, covered with heavy black embossed paper. The hinges and latches are Nickel plated. A numbered plastic insert provides spacing for the handling of the slides. The box accommodates 100 of 3x2" slides. The box measures 9 3/4" (L) x 2 1/4" (H) (24.7x19.7x5.7cm).

71480-01	100 Slide Box, 3x2" Slides	each
71480-10	100 Slide Box, 3x2" Slides	10/pk

2. 25 Slide Capacity:

Made from wood with numbered partitions which correspond to the index card. Very durable and has a detachable lid. The box accommodates 25 of 3x2" slides. The box measures: 9 3/4"x3 3/4"x2 5/8" (174x92x67mm).

71481-01	25 Slide Box, 3x2" Slides	each
71481-10	25 Slide Box, 3x2" Slides	10/pk

► Large Slide Microscope Slide Boxes

Specially designed for the 3 x 2 slides

This reinforced ABS material is rugged and designed not only for storage but transport of slides as well.

- Grooved slots hold individual slides in place
- A soft cork liner ensures that slides will not slip
- Identification card, lining and grooved slots are numbered
- Stackable . The box measures 208mm (L) x 175mm (h) x 60mm. They have a capacity of 100 slides and they are blue in color

► ^mBox® in Microarray Slide Handling

Using ^mBox – microarray handling without removing slides!

- Immerse 20 slides in liquid during blocking, denaturing, and post-arraying.
- It separates and prevents slide damage during shipping and processing.
- Optimally designed rack spacing for easy slide removal.
- Fits standard microtiter plate formats for centrifuging.
- Manufactured to prevent slide contamination.
- A convenient removable handle available.

Technical

- Material: Polypropylene
- Maximum continuous use temperature: 220°F (104°C)
- Melting point: 334°F (168°C)
- ^mBox withstand boiling water without softening
- Measures 5" L x 3½" W x 1½" H (127mm x 89mm x 38mm)

71530	12-Slide Holder	6/pk
-------	-----------------	------

► Microscope Slide Folder

Made from heat resistant injection molded plastic

The Slide Folder™ will hold up to twenty standard microscope slides 75 x 25mm (3x1") and is made of two parts: a base holding the slides horizontally offering numbered space for easy identification, and transparent doors which can either cover the slides or be swung behind the SlideFolder™ for space conservation while using the tray. The base is available in 5 different colors, offering color-coding for each job. Each slide location is identified with a number from 1 to 20. Removal of the slides is made easy by simply pressing on one end, which will lift the other end up. The two transparent hinged covers offer a full view of each stored slide, even bar codes can be read without removing of the slide. All units are stackable and will resist temperatures between -80°C and +100°C. They are not autoclavable.

Measures 7¾ x 11¾".

► LockMailer™ - Microscope Slide Jar

This is tamperproof multi purpose container for mailing, staining or storing microscope slides.

Constructed of extra strong and opaque clear polypropylene, and high density polyethylene leakproof tamper evident screw cap (The LockMailer can also be used without the tamper evident feature by not used the lock tab), it will hold up to 4 standard 3 x 1" or 25 x 75mm slides vertically. Inside chambers are slotted to keep slides safely separated. For color coding purposes, use Capinsert™ (#61805-series) that may be inserted on top of closure.

This LockMailer™ can be used as small staining vessel. This unit is designed for maximum stability on a bench top with liquid volume only 14 ml. Each standard volume of one slide is 2 ml, therefore when you want to stain 4 slides in this vessel you need only 6 ml of staining solution.

Dimensions: 35 x 87mm H (1⅜" x 3⅜"H). Packaging: 100 per pack.

► The UniMailer™

Following many suggestions made to us from our customers in the labs—The UniMailer™ is a truly versatile new model mailer which can easily be used for handling and shipping one or as many slides as needed with one type of mailer.

Made from high impact polystyrene, the UniMailer™ is a one-slide tray. Not only do they fit snugly on top of each other but they are also secured by an innovative locking mechanism. You may also want to insert a tamperproof tie or attach an ID label. Each tray allows for the placing of slide in a horizontal position for full visibility. Slides can be easily inserted or removed. As well UniMailer™ can also be used to provide safe storage for those valuable slides you want to protect.

It accommodates 25 x 75 mm (1" x 3") slides with or without cover glass. The mailer measures 89 mm x 29 mm x 6 mm (3½" x 1½" x ¼").

Identification can be made on three sides or on top. The mailer is available in many popular pastel colors for easy identification. Packaging: 50 per box, 200 per case.

► The SlideFile™

The most convenient, organized and versatile way of storing 3" x 1" (75 x 25 mm) microscope slides vertically. This impact resistant SlideFile™ Storage System can hold up to 400 slide per unit in just 1720 cm³ (105 cu. in.) and are stackable for space saving.

Each SlideFile System includes a slide box and two removable trays. A transparent hinged cover makes it easy to see at a glance the content of the box.

Features:

- SlideFile™ System is a removable tray inside the storage box having 100 numbered slots. All slides are stored vertically for easy insertion and removal.
- In the upright position, one is able to read bar codes without having to remove the slide from the box.
- For space saving purposes, you can double the amount of slides simply by storing two slides side-by-side per slot. And for maximum storage space—long-term storage—simply remove the SlideFile Tray and line up 400 slides in three rows.
- Six drain holes incorporated into the tray ensure complete emptying of the liquid when using the slide holder for drying purposes.
- Two index cards numbered from 1 to 100 are included to allow for slide recording titles.

Dimensions: 86 mm x 248 mm x 83 mm high (3 3/8" x 9 3/4" x 3 1/4" high)

The SlideFile™ System is available in five colors: White, Blue, Green, Pink and Yellow

► SlideFile™ Jr. – Storage System

Similar to the SlideFile™, the junior model can hold up to 200 slides per unit in just 860cm³ (53 cu. in.), and it is stackable to save space. Each SlideFile™ Jr. includes a slide box and a removable tray. A tinted hinged cover makes the contents of the box easy to see at a glance.

Removable tray inside the storage box having 50 individual numbered slots. All slides are stored upright for easy insertion and removal as well as reading the bar codes without removing the slides.

To save space, you can double the amount of the slides simply by storing 2 slides per slot. And for maximum storage space, simply remove the tray and line up 200 slides in 3 rows for long term storage. This system is not autoclavable. The system measures: 82mm x 140mm x 86mm(H). (3 1/4" x 5 1/2" x 3 3/8"H)

► Drain Rack™

Made from high impact polystyrene.

This rugged tray used as a drain rack can hold up to 200 microscope slides in 100 individual numbered slots. All slides are stored upright for easy insertion and removal. A unique feature with the DrainRack™ is the ability to read bar codes without having to remove the slides from the rack. For space saving purposes, you can double the amount of slides simply by storing 2 slides per slot, giving you a capacity of 200 slides per tray instead of 100. The racks are not autoclavable.

They measure: 75mm x 231mm x 25mm H (3" x 9" x 1" H)

Cat.#	DrainRack™ Color	Qty	Cat.#	DrainRack™ Color	Qty
71446-B	Blue	10/pk	71446-W	White	10/pk
71446-G	Green	10/pk	71446-Y	Yellow	10/pk
71446-P	Pink	10/pk			

► DrainRack Jr.

Made from high impact polystyrene

This model is similar to the DrainRack™ above but can hold up to 100 microscope slides in 50 individual numbered slots. The rack is autoclavable. Dimensions: 75mm x 125mm x 25mm H (3" x 5" x 1" H)

Cat.#	DrainRack™ Color	Qty
71445-B	Blue	10/pk
71445-G	Green	10/pk
71445-P	Pink	10/pk
71445-W	White	10/pk
71445-Y	Yellow	10/pk

► Slide Tray Racks & Aluminum Slide Trays

Stainless Steel slide tray racks that accept aluminum slide trays. The rack allows air to circulate over the slides and both sizes of racks hold up to 100 slides. The aluminum slide trays have elevated ridges to separate 76 x 26mm slides and finger holes for easy removal. Ideal for drying fresh mounts. THE Aluminum slide trays are available in two configurations: 10 slide position and 20 slide position.

71506-10	Aluminum Slide Tray, 10-Slide – 13"L x 4" W (330 x 100mm). Accommodates 10 slides	each
71506-20	Aluminum Slide Tray, 20-Slide – 13"L x 7½" W (330 x 190mm). Accommodates 20 slides	each
71508-10	Stainless Steel Slide Tray Rack for 10-Slide Tray Accommodate 10 Aluminum Slide Tray, 10-Slide - 13"L x 8¾"W x 4¾"H (330 x 212 x 112mm)	each
71508-20	Stainless Steel Slide Tray Rack for 20-Slide Tray Accommodate 5 Aluminum Slide Tray, 20-Slide - 13"L x 7¾"W x 4¾"H (330 x 197 x 112mm)	each

► Slide Tray for 100 Slides

Made from tough, resilient ASB plastic which offers long life. Holds 100-standard 1 x 3" slides positioned vertically for easy insertion in pre-numbered grooves allowing for simple identification and retrieval. Dimensions: 14¼"L x ¼"W x 3¼"H (360 x 38 x 100mm).

A cover which is optional is made from clear polystyrene offering full visibility and it protects the slides from dirt and dust when they are not in the drawer.

71510-01	100-Slide Tray, Vertical	each
71510-10	100-Slide Tray, Vertical	10/pk
71511-01	100-Slide Tray Cover	each
71511-10	100- Slide Tray Cover	10/pk

► Specimen Mailers

1. Single Mailing Container, These fiberboard screw cap mailing cases meet all US Postal Regulations in mailing biological specimens. It also meets IATA regulations regarding shipments of infectious substances. They are constructed of heavy duty fiberboard and have crimped metal rims and seamed metal bottoms. The metal screw caps are autoclavable and offer a secure closure.

Available in several sizes:

61003	SM2, size 1¼"ID x 7"L	12/pk
61004	SM3, size 2¼"IDx 5½"L	12/pk

2. Double Mailing Container

The set consists of an inner aluminum screw cap container and an outer fiberboard screw cap mailing tube. This double type unit is required by US Postal for mailing of etiologic agents or biohazard specimens. Each aluminum container is autoclavable and the cap is lined to prevent leakage.

61011	DM2, tube size 1¾" x 7" Alum. can size 1½" x 6"	12/pk
61015	DM4, tube size 2¾"x 6¼" Alum. can size 2½" x 6"	12/pk

► Histology Containers

- Designed for the storage and transport of histology specimens in fixatives.
- Made from durable polypropylene (except 8L size, which is made of polyethylene)
- Leak-proof self-seal caps

All of the containers (except the 5ml size) have graduated markings on three sides. 2L to 8L sizes are supplied with snap-top lids and carrying handles, and has no graduations.

Cat.#	Visibility	Inside Height x Top I.D.	Size	Pack

64233-26	White	7½" x 8¾" (190 x 126mm)	5000ml	10/pk
64233-28	White	9¾" x 9" (245 x 230mm)	8000ml	10/pk

► Quality Products for Microarray/Hybridization Systems

► A. LifterSlip™ Premium Printed Coverglass

LifterSlip™ offers a simple solution to the problem of hybridization nonuniformity. An innovative raised edge design provides separation and allows for even dispersal hybridization solution between the DNA chip and coverslip.

LifterSlips™ allow for increased data quality by eliminating gradients caused by floating standard coverslips on hybridization solution under the pre-positioned coverslips.

Capillary attraction ensures that LifterSlip™ stays in place.

Depending on size and design configuration LifterSlip™ can hold a range of volumes.

LifterSlip™ is #2 thickness (0.20-0.22 mm) and the bar height is 0.04-0.06 mm.

Catalog No.	Bar Width (mm)	Approx. Volume	Size (mm)	Approx. Pieces per oz.

► B. mSeries LifterSlip™

Features:

- 1 mm thick.
- Uniform disposal of hybridization solution.
- Reduced hybridization fluid volume variations.
- Superior flatness – substrate does not flex or bow.
- Precision cut edges.
- Superior surface quality.
- Consistent flatness.

Solving the problem of hybridization non-uniformity

mSeries LifterSlip™ are manufactured from 1mm thick glass specially drawn for flatness and superior surface quality. The 1mm thickness has increased stiffness that reduces variation in hybridization fluid volume. Precise ink printing provides an innovative raised edge design for consistent dispersal and easy injection of hybridization solution under the pre-positioned lifterslip.

Catalog No.	Size (mm)	Approx. Volume	Pieces / Box
72181-25	22 x 25	20 µl	50/pk

72183-75	25 x 75	68 µl	50/pk

► mBox® in Microarray Slide Handling

Using mBox – microarray handling without removing slides!

- Immerse 20 slides in liquid during blocking, denaturing, and post-arraying.
- It separates and prevents slide damage during shipping and processing.
- Optimally designed rack spacing for easy slide removal.
- Fits standard microtiter plate formats for centrifuging.
- Manufactured to prevent slide contamination.
- A convenient removable handle available.

Technical

- Material: Polypropylene
- Maximum continuous use temperature: 220°F (104°C)
- Melting point: 334°F (168°C)
- mBox withstand boiling water without softening
- Measures 5" L x 3½" W x 1½" H (127mm x 89mm x 38mm)

72188-01 The mBox®

each

► Premium Substrate for Microarray™

Premium substrates for microarray™ is used on a standard microscope slide 1 x 3", selective glass. All of the following slides are pre-packaged in a secure, no-contact mBox™, then vacuum-sealed in a foil barrier bag prior to shipping. Each package contains 20 slides.

► 1. UltraClean™ Glass Slide

A premium substrate ready to coat with your chemistry.

UltraClean™ substrate provides users with a pristine glass surface which can be used in any coating process compatible with glass such as silanization and polylysine. Manufactured from the highest quality low fluorescence glass.

UltraClean substrates are manufactured in a precise and controlled process incorporating HEPA filtration. This ensures a clean and consistent surface for optimum performance in microarray applications.

Options:

- Slides are available with ES – Enhanced Surface Treatment. ES Surface treatments produce a smaller, more uniform spot size without having to change your protocol
- Bar Coding – Ability to print all standard bar code formats

Glass Specifications:

- Flatness is <10µ variation over a 76mm diagonal interval
- 60/40 scratch-dig surface quality
- Standard size: 25.10 x 75.36 ±0.38 mm
- Thickness: 1.00 ±0.02 mm
- Soda-lime silicate glass
- 0.98 – 1.02 mm thickness
- Edges: plain cut
- Maximum edge chip: 0.05 mm
- Coating: none
- Printable area: 20 x 70 mm

EMS #	Description	Qty
63472-UC	UltraClean Slide	20/bx
63472-BC	UltraClean Slide with Barcode	20/bx
63472-ES	UltraClean Slide with ES Coating	20/bx

► 2. Aldehyde Silane Coated Substrates

Offers a uniform coating of aldehydes for attaching amine-modified DNA

EMS #	Description	Qty
63476-AS	Aldehyde / Silane Slide	20/bx
63476-ES	Aldehyde / Silane Slide, ES Glass	20/bx
63476-EB	Aldehyde/Silane Slide, ES /Barcode	20/bx

► 3. Epoxy Silane Coated Substrate

A uniform coating of epoxide groups for attaching amine modified DNA with an amine end. This is a vapor-coating process on UltraClean™ slides, which yields a uniform surface free from impurities (as a conventional liquid dip processes)

EMS #	Description	Qty
63477-AS	Epoxy / Silane Slide	20/bx
63477-ES	Epoxy / Silane Slide, ES Glass	20/bx

► 4. Poly-L-Lysine Coated Substrates

Using premium select, low fluorescence glass with a consistent uniform coating of poly-L-lysine these slides yield a dense layer of amine groups for initial ionic attachment of the negatively charged phosphate groups in the DNA backbone. The DNA can subsequently be attached covalently to the slide by either baking or by UV irradiation. Our aging and packaging techniques ensure a product with a shelf life in excess of 6 months. Each lot is tested for background uniformity prior to shipping. The slides arrive ready for spotting – no pre-washing required.

EMS #	Description	Qty
63478-AS	Poly-L-Lysine Slide	20/bx
63478-EB	Poly-L-Lysine Slide, ES /Barcode	20/bx

► 5. Aminopropylsilane Coated Substrates

SuperChip™ Aminopropylsilane coated substrates are designed for microarrays fabricated with the PCR products as probes. Manufactured from the highest quality, low fluorescence glass, SuperChip features a consistent, superior surface coating to provide

a uniform DNA immobilizing surface. The result is the slide that binds an optimal amount of probe while minimizing nonspecific binding of labeled targets assuring high density of reactive groups and eliminating virtually all surface artifacts. These SuperChip substrates are compatible with commercial microarray spotting and detection system.

The SuperChip cleaning and coating process is tightly controlled in a HEPA filtered environment. Quality control includes contact angle and background fluorescence measurement of representative samples.

Glass Specifications:

- Edges: plain cut
- 60/40 scratch-dig surface quality
- Contact angle: 40° ± 5°
- Standard size: 25.10 x 75.36 ±0.38 mm
- Thickness: 1.00 – 0.02 mm
- Flatness is <10µm variable across a diagonal of 21mm x 75mm slide
- Thickness: 1.00 ±0.02 mm
- Maximum edge chip: 0.5 mm
- Coating: Aminopropylsilane
- Printable area: 20 x 70 mm

EMS #	Description	Qty
63475-AP	Aminopropylsilane (APS) Slide	20/bx
63475-BC	Aminopropylsilane (APS) Slide, Barcode	20/bx
63475-ES	Aminopropylsilane (APS) Slide, ES	20/bx

► 6. Gold Coated Substrates

BioGold® substrates offer a high level of microarray performance through the use of a specialized thin-filmed gold coating. This specialized gold coating improves the adhesion of biological active cells to the substrate while its background reflective properties provide significant optical advantages for the detection of each cell's unique light-wave signature.

Glass Specifications:

- Glass Type: Soda Lime White Glass
- (Dimensions: 2.992" ±0.005") x (0.984" ±0.040") x 1mm Thick
- Edges: Plain Cut
- Gold Purity: 99.999%
- Coating Application: Vapor Deposition
- Thickness of Coating: 1200 Å ±20%
- Reflective properties: 83%

EMS #	Description	Qty
63479-AS	Gold-Coated Substrates	20/bx

► NUNC™ MaxiSorp™ 96 Well Plates

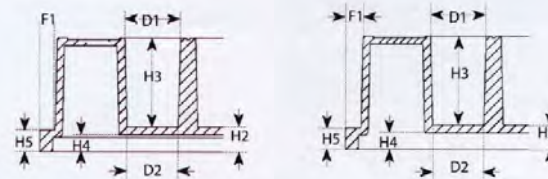

NUNC MaxiSorp plates have been the certified* ELISA plate industry standard for years. This same surface now sets a new standard for protein multiplexing.

- Hydrophilic MaxiSorp™ surface binds antibodies, protein and biomolecules.
- Flat bottom, solid polystyrene plates.
- Excellent for chemiluminescent, fluorescent and luminescent arrays.
- Standard plate footprint is compatible with exiting readers.

► Pronto™ Epoxide Slide Spotting Solution

The Microarray spotting solution is optimized for printing short oligonucleotides (~30 mers) providing excellent spot morphology, extremely low background, and minimal evaporation when used in conjunction with above Epoxide Slides (#63477-series). Higher density arrays can be printed due to the smaller spot size achieved using the spotting solution

EMS #	Description	Qty
63500-25	Pronto™ Spotting Solution	250 ml

Pronto is a Trade Mark of Corning

► Pronto™ Universal Slide Spotting Solution

The Microarray spotting solution is optimized for printing both long oligonucleotides (>50 mers) and cDNA providing excellent spot morphology, extremely low background, and minimal evaporation when used in conjunction with Aminopropylsilane Slides (#63475-series). The hygroscopic formulation minimizes evaporation to < 5% after four hours of exposure allowing more arrays to be printed from the same source plate during extended printing runs.

► **ONCYTE® Film Slides**

Nitrocellulose-coated (NC) slides for protein microarrays, cell lysate arrays, tissue printing and other applications

ONCYTE® is a three-dimensional microarray comprised of a combination of nitrocellulose polymer and proprietary chemistry that provides increased protein affinity and binding. It is also provides enhanced fluorescent chemiluminescent, radiographic, colorimetric and visual signal compared to glass or other coated glass surfaces.

We provide nitrocellulose-coated products that include anything from standards 25 mm x 75 mm glass microscope slides to SBS microtiter plate substrates in standard and custom formats. Nitrocellulose film excels in various applications including:

- Protein Microarrays
- Immuno-arrays
- Analyte Microarrays
- Cell Lysate Arrays
- Antibody Arrays
- Tissue Printing

Our nitrocellulose film surfaces are manufactured and quality tested to the most exacting standards. To provide an optimal balance between binding capacity and fluorescence sensitivity, we offer two variants of nitrocellulose coatings.

- The ONCYTE® AVID™ nitrocellulose-coated substrates are for applications that require the highest possible protein binding affinity and capacity. Therefore AVID™ slides are characterized by unparalleled protein binding capacity and affinity, making them ideal for colorimetric and infrared applications that require extremely high levels of binding.
- The ONCYTE® NOVA™ nitrocellulose-coated substrates are recommended for applications that require the greatest fluorescent sensitivity but can accept reduced binding capacity. Therefore NOVA™ slides extremely low background fluorescence and an elegant, clean surface make them the most sensitive slides available for fluorescence –dependent arrays.

We offer two distinct nitrocellulose film coatings:

ONCYTE® AVID™ for applications that require the highest possible binding capacity and affinity

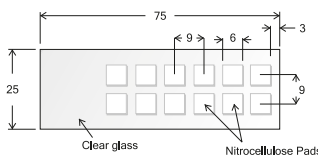

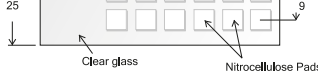

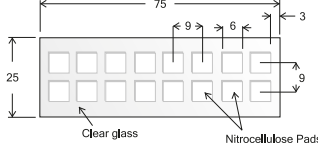

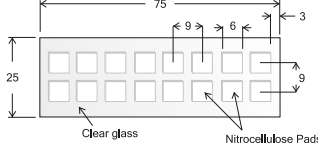

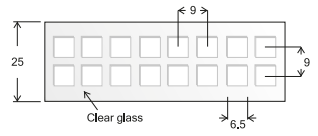

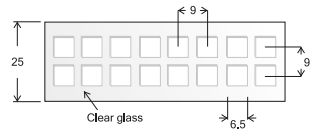

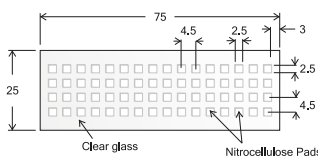

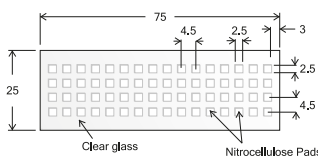

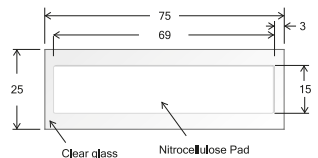

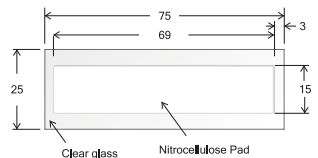

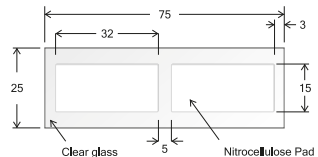

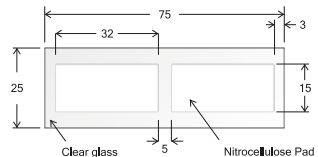

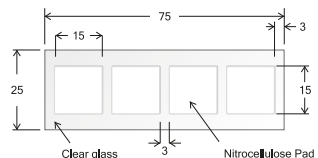

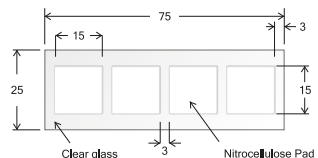

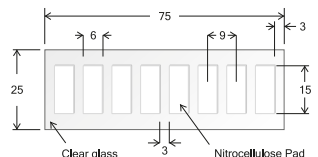

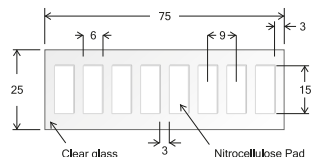

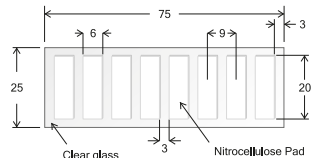

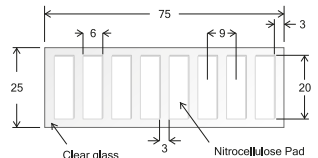

ONCYTE™ NOVA™ for applications that require the greatest fluorescence sensitivity

MICROARRAYING

► ONCYTE® Film Wells

Film Well™: Slide based low volume, removable chambers for protein binding.

A combination of our SecureSeal™ chambers and ONCYTE® nitrocellulose film coated slides that provide an easily removable, low volume chamber and the protein binding benefits of a nitrocellulose coating.

ONCYTE® is a 3-dimensional microarray substrate bound to a standard 25mm x 75mm glass slide. A combination of nitrocellulose polymer and proprietary chemistry maximize protein binding and stability. The film is compatible with virtually all detection systems, including fluorescent, chemiluminescent, radiographic and colorimetric.

Please refer to the SecureSeal™ chambers (pages 350–352) and ONCYTE® Film Slides (pages 339–341) for ordering information.

How to Use ONCYTE® Film-Wells/Film-Slides

- Specimens may be applied to a Film-Slide by any conventional method including centrifugation, cryostat mounting, tissue printing pipetting, and array depositors.
- Film-Slides provide superior specimen adherence, out performing silane and protein treated glass slides.
- Soluble analyte may be bound to Film-slides by air drying, UV crosslinking, baking or microwaving. Film-slides are autoclavable.
- Specimens may be chemically fixed using aqueous fixatives or compatible alcohols.
- Film-slides are ideally suited for use in most cytochemistry assay protocols including ICC, ISH, ISPCR and HTS.
- Film-slides are chemically resistant to reagents typically used in most assays for cell analysis including 50% formamide.
- Film-slides are not recommended for use with acetone, ethanol & methanol. Isopropanol and butanol are common substitutes.
- Bi-directional access to specimen by reagents may reduce incubation times and reagent concentrations.
- Film-slides are compatible with a variety of counterstains including Mayer's hematoxylin, nuclear fast red and light green SF. Gill's hematoxylin is recommended (0.05% HCl may be used to de-stain). Eoin (0.5%, diluted in isopropanol). In some cases counterstains may bind to the film, this usually does not interfere with the microscopic examination of specimens.
- Film-Slides are made transparent for microscopic and imaging applications by xylenes or immersion oil with a refractive index of 1.515. For aqueous mounting Vectashield (Vector Labs), Slow Fade & Slow Fade Light (Molecular Probes, Inc.) are recommended.
- Permanent sections may be made by coverslip mounting specimens using non-aqueous media after dehydration through alcohol or by air drying.

User Protocol:

Instructions for Immunohistochemical Staining

1. Apply specimen to Film area (see side A).
 2. Air dry
 3. Fix specimens using appropriate fixative for the antigen studied. Commonly recommended fixatives are:
 - A. Paraformaldehyde: 4% in phosphate buffered saline (PBS). 0.05M magnesium chloride, 0.3% Tween-20, pH 7.4. Fix at 4 C. Fixation time may vary according to specimen thickness and specific antigen.
 - B. Zamboni's: Nature 216:174-175, 1967.
 4. Wash with three changes of PBS containing Tween-20 (0.1%) pH 7.5 (TPBS).
 5. Block non-specific binding of primary antibody: -
 - peroxidase based detection:* incubate specimens for 15 minutes with 0.3% hydrogen peroxide prepared in de-ionized water.
 - alkaline phosphatase based detection:* incubate specimens 15 minutes at room temperature in TPBS containing 1% normal serum from the species in which the secondary antibody is made.
 6. Blot excess serum from specimens.
 7. Incubate specimens for 30 minutes with primary antibody diluted in TPBS containing 1% serum.
 8. Wash Film-slides with 3 changes of TPBS.
 9. Incubate with secondary antibody diluted in TPBS containing 1% normal serum.
 10. Repeat Step 8.
- Note: remaining steps refer to alkaline phosphatase based detection.*
11. Incubate specimens in alkaline phosphatase labeled reagent.
 12. Repeat Step 8.
 13. Equilibrate specimens for 2 minutes in 0.1M TRIS pH 9.5.
 14. Incubate in substrate or solution 20-30 minutes.
 15. Rinse with tap water.
 16. Counterstain if desired (see side A).
 17. Air dry or dehydrate through isopropyl alcohol series.
 18. Clear with 3 changes of xylenes.
 19. Coverslip using non-aqueous mounting medium.

ONCYTE® Film-Slides & Film-Wells are Intended for Laboratory Use Only

ONCYTE® is a registered trademark of Grace Bio-Labs, Inc.

➤ **ProPlate™ Multi-Array Slide System**
Integration of microplate and biochip technologies

ProPlate™ Integrates microscope slide based array technology with automated microtiter plate processing. Up to 64 individual arrays can be assayed per slide. Four slide fit into a tray, producing a modular plate with a standard microtiter plate footprint and well spacing allowing automated robotic processing of up to 256 arrays.

- Up to 64 leak-proof wells on any slide surface without the use of adhesive
- Microtiter plate well spacing facilitates use with multichannel pipettes
- 7 x 7 mm square well are ideal for high content arrays
- 5 – 350 µl well volumes accommodate small reagent and large wash volumes
- Available in Chip Chip™ compatible formats.

MICROARRAYING

► ProPlate Microtiter Plate (MP)

Patented ProPlate™ technology for high throughput robotic processing of microarrays

Grace BioLabs developed bottomless SBS compliant microtiter plate superstructures for use with robotic processors. The Superstructures come in a permanently affixed well format – the ProPlate MP™, or a removable well format – the FlexPlate MP™.

The ProPlate MP™ SBS compliant microtiter plate features a SecureSeal™ Plus adhesive bonding system applied to a bottomless 96-round well, black, polystyrene microtiter plate. Simply peel off the protective polyliner and apply large format array for automated processing.

The proprietary adhesive forms a water-tight seal between a microarray substrate and the bottomless microtiter plate. Grace Bio Labs offers plate with SBS standard spacing in both 96-well (shown) and 384-well formats.

Key product features include:

- Guaranteed flat SBS compliant microtiter plate format which enables robotic processing of assays
- Water-tight seal between superstructure and substrate
- Compatible with glass or plastic substrates.
- Available in 96 round or square or 384 square well format
- Available as a complete microtiter plate with microcellulose film coated substrate, uncoated substrate or as an adhesive superstructure alone.
- Plates are available with SBS standard spacing in both 96-well and 384-well formats.

► Chambers for Microarrays

Versatile Hybridization Chambers for Genomic and Proteomic Arrays

- Versatile sizes and styles
- Ideal for high throughput screening of genomic and protein arrays on microscope slides
- Designed to minimize reagent volume, eliminate evaporation and promote reagent mixing for uniform hybridization
- Materials are nuclease free and temperature resistant

► HybriSlip™ Hybridization Coverslips

(See page 355 for ordering)

- Specially selected hydrophobic plastic covers do not bind probes to surfaces like glass coverslips
- HybriSlips™ are lighter weight than glass, minimizing friction and facilitating uniform reagent distribution
- HybriSlips™ are ready-to-use without pretreatment
- Working surfaces are protected with clean release liners to prevent contaminations
- HybriSlips™ remain flat and will not curl, even at high temperatures

Note: HybriWell™ and SecureSeal™ are recommended for most protein and nucleic acid assays. If you are using CY5® or Alexa Fluor® 647 direct-labeled DNA probes, please refer to our new "fluorescent friendly" chambers for DNA microarrays or see page 323 for details.

► HybriWell™ Hybridization System

(See pages 351-352)

- Seals securely to a microscope slide surface in seconds
- Access ports in the chamber surface allow the addition of reagents
- Ports are easily sealed using seal tabs provided with each order
- Sealed chambers are water tight
- The disposable chamber removes cleanly and easily even after heating.

► SecureSeal™ Hybridization Chambers

(See pages 348-350 for ordering)

- Gasketed chambers provide optimum surface volume fluid dynamics for hybridization assays.
- Designed to minimize friction especially when active mixing is employed during assay
- Partially filled chambers may be sealed and rotated continuously for superior mixing

► FlexWell™

(See page 347 for ordering)

- Silicone gasket forms wells on slides using clean release adhesive to isolate up to 16 specimens per slide
- Slides fit into a reusable slide tray organizing wells into the footprint of a SMS compliant microtiter plate
- Gasket may be sealed for mixing and to prevent evaporation. Available 8-wells and 16-wells.

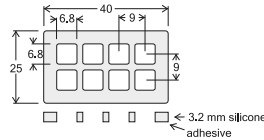

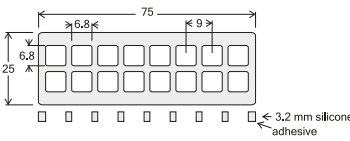

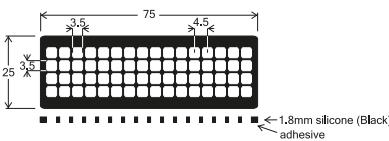

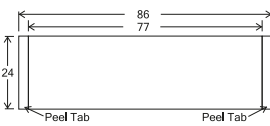

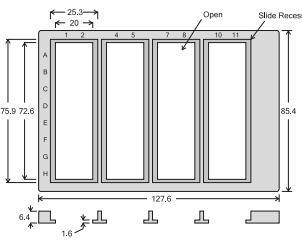

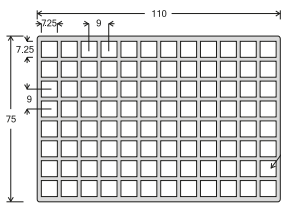

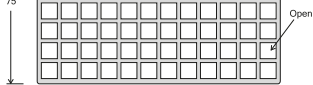

► FlexWell™ Removable Incubation Chambers for Microarrays Using ONCYTE® Slides

- Silicone FlexWell™ forms well on slides using a clean release adhesive to isolate up to 16 specimens per slide
- Slides and FlexWell™ fit into a reusable slide tray organizing wells into the footprint of a SBS compliant microtiter plate
- Gasket may be sealed for mixing and to prevent evaporation
- Available in eight-well and 16-well formats

HYBRIDIZATION AND INCUBATION

► SecureSeal™ Hybridization Chambers

SecureSeal™ hybridization chambers provide optimum surface to volume fluid dynamics

SecureSeal™ adhesive chambers form peel-and-stick enclosures to isolate specimens affixed to glass microscope slides. RNase free, gasketed chambers provide optimum surface-to-volume fluid dynamics for hybridization assays on large or multiple specimens and genomic arrays on glass slides or film coated slides.

FEATURES:

- Design minimize friction, promotes reagent mixing, and facilitates uniform hybridization.
- Sealable access ports (1.5mm) in the chamber surface allow for the addition and removal of reactants.
- Adhesive seal tabs create leak-proof chambers that are temperature resistant
- SecureSeal™ adhesive bonds chambers to glass in seconds and removes cleanly and easily even after heating.
- SecureSeals™ are ideally suited for protocols utilizing autoradiographic, fluorescent or cheminescent end points.
- Polycarbonate HybriSlip used, 0.25mm thick

HYBRIDIZATION AND INCUBATION

► HybriWell™ Sealing System

HybriWell Sealing Chambers System seals securely to a microscope slide surface in seconds – for most protein and nucleic acid assays

FEATURES:

- Enclose a single or multiple specimens in a small reagent volume
- Access ports in the chamber surface allow for the addition or removal of reactants
- Ports are easily sealed using Adhesive Seal Tabs (provided) to prevent reagent evaporation.
- Sealed chambers are watertight and ideally suited for water-bath incubations.
- RNase free, hydrophobic surfaces will not trap or bind probes.
- Disposable chamber remove cleanly and easily even after heating.
- Come with Non-Adhesive Peeling Tab

**RNASE
FREE**

1. Peel off liner

2. Enclose Specimen

3. Fill

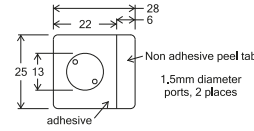

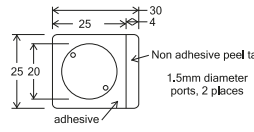

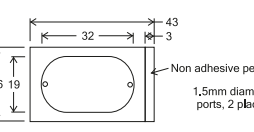

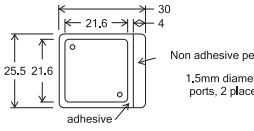

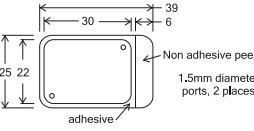

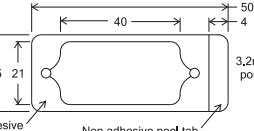

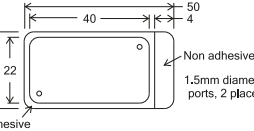

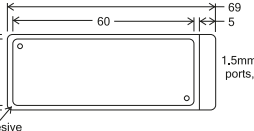

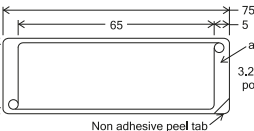

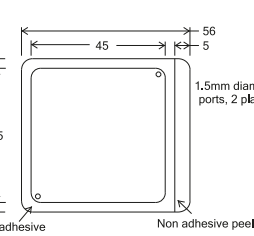

4. Seal

5. Remove

► HybriWell™ Fluorescent Friendly Chambers for Sensitive DNA Microarrays

These new microarray chambers are designed specially for compatibility with Cy5® or Alexa Fluor 647 direct labeled DNA probes for hybridization assays. These chambers as well as the original HybriWells may also be used with all other fluorochrome labeled probes.

Each package included illustrated instructions for use, applicator and 200 adhesive port seals. (Additional seal tabs are sold separately m, Cat #70328-00)

HYBRIDIZATION AND INCUBATION

► CoverWell™ Incubation Chambers

CoverWell™ incubation reusable chambers – exceptionally secure seals during incubations

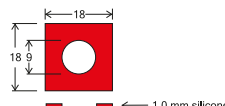

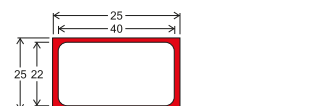

FEATURES:

- CoverWell™ incubation chambers are reusable, easy to apply incubation chambers that attach without the use of adhesive
- Microwavable for permeabilization and retrieval steps. (J. Histotechnology 18:115-117, 1995)
- Preserve kinetic (non-capillary) fluid dynamics for better reagent mixing and lower backgrounds. (CellVision 2:165-169, 1995)
- Eliminate precipitate deposits on specimens by incubating slides and specimens upside down during enzymatic color precipitation reaction.
- Provides an exceptionally secure seal during submerged water bath and/or high temperature incubations.
- RNase and DNase free
- Hydrophobic
- Easy removed – reusable
- Adheres to wet or dry surfaces

**RNase
FREE**

► FastWells™

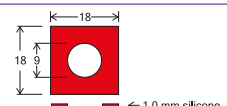

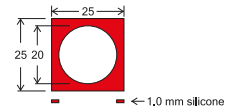

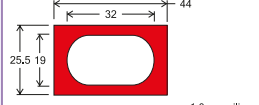

FastWell™ stickable, stackable, sealable, peelable and reusable reagent barriers!

FEATURES:

- Sticky, flexible silicone gaskets form hydrophobic reagent barriers around specimens without messy adhesives or special slides
- FastWells may be stacked to increase depth and volume
- They remain sealed during agitated washing steps
- They can be washed, autoclaved and reused
- FastWell™ can also be sealed to form incubation chambers using flexible HybriSlip™ Covers

Ordering: FastWells™

► CoverWell™ Modular Hybridization System

An assortment of flexible, press-to-seal gasket and coverslip enclosures which can be quickly assembled and disassembled for the specialized challenges of hybridizing and imaging thick and free-floating specimens.

All steps - from permeabilizing to image analysis are made easy and trouble free with chambers you assemble from modular components.

For neural explants, plant or animal specimens of any texture and thickness.

Build up to three chambers on one microscope slide. Ideally suited for overnight hybridizations and agitated washing steps. The screen is made from polyester and is 1.6mm square.

HYBRIDIZATION AND INCUBATION

► Press-to-Seal Silicone Isolators

Isolate specimens using press-to-seal silicone isolators with removable hydrophobic barriers

Silicone isolators allow researchers to isolate specimens using removable hydrophobic barriers. They may be used to isolate cells grown in culture dishes or separate multiple specimens affixed to microscope slides.

**RNASE
FREE**

FEATURES:

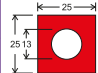

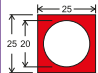

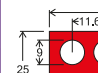

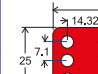

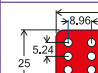

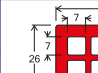

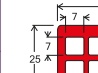

- Silicone isolators are available in silicone thickness 0.5 to 2.5 mm
- Isolators are pre-cut into gaskets or as sheet materials with and without SecureSeal™ clean release adhesive on one or both surfaces.
- Isolators remain sealed to smooth surfaces during washing steps.
- Non-adhesive isolators are autoclavable and reusable.
- Closed chambers may be formed using flexible RNase free, HybriSlip™ covers.

Ordering: Isolators are available without coverslips, and packaged 25 per pack. They are available with either:

- Silicone (S) / Silicone (S) – press-to-seal silicone gasket only, no adhesive
- Silicone (S) / Adhesive (A) – press-to-seal silicone on one side and adhesive on the other side.
- Adhesive (A) / Adhesive (A) – press-to-seal adhesive on both sides.

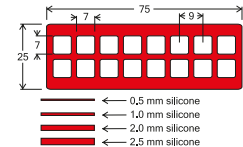

To fulfill your needs, we also offer the SHEETS MATERIAL they will serve to your own design chambers

► HybriSlips™

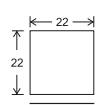

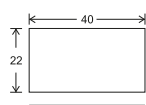

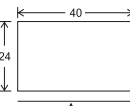

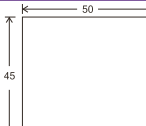

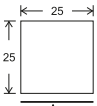

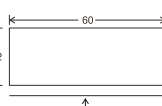

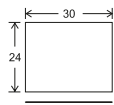

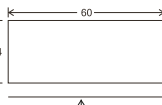

HybriSlips™ - ideally suited for *in situ* hybridization, *in situ* PCR and hybridization to genomic arrays on glass slides.

HybriSlips™ are flexible, thin (0.25mm) covers that minimize fluid friction and facilitate uniform reagent distribution. RNase free, hydrophobic covers will not trap or bind probes to their surfaces like coverglass. Product is ready-to-use without pretreatment. Working surfaces are protected with clean release liners to prevent RNase contamination. HybriSlips™ remain flat and will not curl, even at high temperatures.

FEATURES:

- RNase and DNase free
- Hydrophobic
- Disposable
- Will not chip or break
- Clear – stay flat

IMAGING AND MICROSCOPY

► CoverWell™ Perfusion Chambers

CoverWell Perfusion Chambers allows up to 16 different specimens on one coverglass

"Press-to-Seal" covers form water-tight, multiwell cell incubation or cytochemistry chamber when pressed to coverslips or microscope slides. Reagents can be quickly added and removed through dual access ports (1.5mm Dia) without disturbing or cross-contaminating specimens in adjacent wells.

FEATURES:

- Chambers are removable for permanent mounting of specimens
- CoverWell™ chambers are made from medical grade silicone bonded to clear, UV transparent plastic
- Available in multiple designs allowing up to sixteen different specimens or analytical test on one coverglass.
- Ideal for cell imaging on upright or inverted microscopes.

► **Imaging Spacers**

Confine specimens without compression with SecureSeal™ imaging spacers

SecureSeal™ imaging spacers are ultra thin adhesive spacers which peel and stick to coverglass or microscope slides to confine specimens without the need for compression.

► **CoverWell™ Imaging Chambers**

Designed to stabilize and support thick and free-floating specimens for confocal microscopy and imaging applications.

Reusable press-to-seal silicone chamber forms removable enclosure for repeat staining or specimen repositioning. Polycarbonate CoverSlip

CELL CULTURE

**KEY PRODUCT DIMENSIONS INCLUDE:**

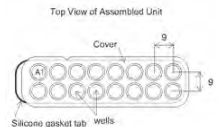

- Coverslip gasket thickness is 0.5 mm
- Interior diameter of each well is approx. 6 mm
- Volume per gasket well (upper structure removed) is approx. 9 μ l
- Volume per well with the upper structure is 250 μ l

► **CultureWell™ Chambered Coverglass**

With removable chambered coverglass – ideal for cell culture and fluorescence imaging applications.

The 2 x 8, 16 chambered coverglass is like a chambered slide with the imaging advantages of a removable coverglass substructure. It is designed with standard 96 well plate volumes and well spacing. The non-cytotoxic silicone well gasket forms a leak-proof seal between the polystyrene upper structure and the coverglass. CultureWell™ Chambered Coverglass is shipped sterile and ready to use.

- The growth surface is No. 1.5 German borosilicate coverglass.
- Inert, non-cytotoxic silicone permits complete edge-to-edge growth of cells.
- Well spacing allows use of multi-channel pipettes for ease and speed of handling
- Cell growth characteristics are optimal due to the use of inert silicone materials and manufacturing process.
- Quality test for non-leakage, cell growth and coverglass removal to ensure consistent results
- Silicone well gasket remains attached to coverglass after separation, allowing wells to be used as reagent reservoirs
- Gasket well design is ideally suited for small volume incubations, in-situ hybridization and immunostaining
- Black well gasket reduces light scatter, enhancing fluorescence applications. The gasket can easily be removed from the coverglass for mounting
- Frosted microscope slides are provided for mounting

► **CultureWell™ Coverglass**

Optimal for high resolution microscopy

Chambered coverglass products consists of removable / reusable non-cytotoxic silicone gaskets secured to 24 mm x 50 mm, #1.5 German coverglasses. They may be placed in sterile culture plates or 100 mm diameter culture dishes.

- The thin flat coverglass is the optimal platform for high resolution microscopy and high- sensitivity, quantitative, fluorescent imaging
- Gaskets stabilize coverglass and provide convenient handling using conventional microscope slide holders and accessories
- Gaskets are removable for high resolution imaging
- Gasket may be re-sterilized and reused
- Leak-proof design eliminates well-to-well cross contamination
- Well spacing facilitates liquid handling utilizing multichannel pipettes and robotic dispensers

► CultureWell™ Chambered Coverglass Inserts

Each CultureWell™ insert is comprised of four chambered coverglass assembled in a disposable frame which is placed in a standard 86 mm x 128 mm culture plate. All are sterile and ready to use.

The stabilizing insert design and accessory hardware allow fragile coverglass to be easily integrated into protocols for high throughput handling of microscope slides and SBS compliant microtiter plates.

► SecureSlip™ Cell Culture Coverglass

Convenient, secure coverglass that will not move during cultivation

The coverglass is affixed to a thin microscopically transparent silicone base which secure to culture vessels by an electrostatic charge, not an adhesive, to prevent movement during cultivation.

The silicone also acts as a hydrophobic barrier to isolate liquid reagents on glass. Individual coverglass with silicone backing can be adhered to a petri dish or plate. These can be easily removed one at a time from the dish during culture. Once removed, coverglass can be affixed to a microscope slide by means of the tacky silicone backing for routine processing, or placed cell side down onto a drop of reagent using the silicone backing as a cover to prevent evaporation.

- Silicone backing peels off easily for conventional mounting on microscope slides
- During culture, cells may be imaged without interference from the optical grade silicone

- Eliminates coverglass overlapping during culture. Handle SecureSlips™ with forceps by the silicone backing to avoid damage to glass or cells
- Easily identify “cell side” of coverglass

CELL CULTURE

► MultiSlip™ Cell Culture Coverglass Inserts

Sterile, ready-to-use MultiSlip™ for culture of cells where pretreatment with a biological coating of glass surface is required.

MultiSlip™ insert with 8 (18mm x 18mm) or 15 (12mm x 12mm) number 1.5 thickness German coverglass per insert are sterile and ready to use in conventional 86mm x 128mm culture plates.

Staining and washing procedures may be performed with MultiSlip™ inserts in the plate, or silicone backed coverglass may be removed individually and affixed to glass microscope slides. Alternatively, inserts may be easily removed for batch processing in glass staining dishes.

MultiSlips™ are ideally suited for the culture of cells where pretreatment of glass surfaces with a biological coating is required. Simply add sterile solution to the plate incubates and aspirate. Coating is applied evenly to one side of the glass only, with no over-lapping, handling with forceps.

PROTEIN CRYSTALLIZATION

CREATIVE TOOLS FOR THE STUDY OF CELLS

► ProCrystal™ Protein Crystallization Covers

Hanging drop microtiter plate seals with unmatched drop formation and segregation and no noticeable x-ray diffraction

ProCrystal™ covers are designed for high throughput protein x-ray crystallography to generate atomic resolution structures of protein molecules¹. They fit SBS compliant microtiter plates and are TTP Mosquito®* compatible. They are packed dust-free, ready-to-use in packs of 5 with either pre-cut or uncut seals.

The seals sit directly over the microplate crystallization wells. The seals are validated to be incorruptible and materials will not ingress into samples. They are available in either an individual well pre-cut format so that one can easily remove crystals using a forceps from individual wells without affecting neighboring wells or uncut format.

The plate seals are UV compatible with the highest optical quality available. They are exceptionally hydrophobic which maintains drop footprint and segregation even with the use of MPD, Glycerol or detergents.

FEATURES:

- Two Formats: - Individually cut & single sheet un-cut seals
- TTP LabTech Mosquito®* compatible
- Ready-to-use, dust-free
- UV Compatible
- No noticeable X-ray diffraction
- Accommodates up to 3 protein drops per well

► Syringe Filters

Syringe filters with high burst strength for assured performance. Manufactured to ISO 9002 and GMP standard and 100% integrity tested.

Syringe filter sizes include 4, 15, 25, or 26mm diameter to handle volumes ranging from 0.5 to 100 ml. The 50mm diameter PTFE syringe filter are ideal for protecting the vacuum line and pump. These disposable filter units are ideal for tissue culture media, buffer solution, stain solution, biological fluids, and most other aqueous solutions and reagents that are used daily in the EM lab.

Pore size and membrane type are printed on every syringe and the filters are certified non-cytotoxic and non-pyrogenic. Sterile syringe filters are individually blister-wrapped in cases of 50. Non sterile syringe filter are packaged in cases of 50. The 50mm PTFE syringe filter is supplied in a case of 12.

► Disposable Sterile Vacuum Filter Units

Vacuum filtration units fit standard threaded bottle tops. Designed for use on glass or polystyrene media bottles. The unit includes membrane filter, glass fiber pre-filter, and graduated funnel of clear polystyrene with polyethylene neck adapter. Attaches to most popular 33 and 45mm diameter bottle's necks with standard GPI threads. Systems are individually packed, gamma irradiation sterilized and certified non-pyrogenic. Comes with tubing adapter that fits most vacuum hoses. Units are color coded by membrane type (CA: Orange; NYL: Red; CN: Blue; and PES: Yellow).

Choice of membrane media: Cellulose acetate (CA), for low protein binding. Nylon (NYL), for low extractable. Cellulose Nitrate (CN), for general-purpose filtration. Or polyethersulfone (PES), for fast flow rates and low protein binding. Membranes come in 0.20, 0.22 or 0.45µm pore sizes. All four-type membranes are detergent-free, tissue culture compatible, and heat-sealed to the support grid to maximize flow rate, reduce foaming and protein denaturation. Ideal for filtration of tissue culture media, biological fluids, fixation buffers etc. (not for parenteral use.)

► 1. Plastic 150 ml Tube Top Filter 50 mm Membrane Diameter

These tubes minimize unnecessary transfer by filtering directly into the centrifuge tube. Each case comes with two centrifuge tube stands. The polypropylene tube is supplied with an individually wrapped cap for storage. Individually packaged, sterile, certified non-pyrogenic.

► Centrifugal Filter Devices – Costar™ Brand

Filter samples in microcentrifuges

Choice of cellulose or nylon membrane

For volume up to 500 µl

Spin-X* centrifuge tube filters utilize centrifugation for the filtering of small volumes. The unit consists of a polypropylene filter insert and a centrifuge tube. It handles volumes up to 500µl. They have a **cellulose acetate** membrane for aqueous solutions which is ideal for the removal of bacteria, particles, and cells from media. They are also effective for DNA removal from agarose or acrylamide gels.

Spin-X LC units have a **nylon** membrane for applications such as HPLC sample preparation. Both have retained volume of <5µl, and withstand relative centrifugal force (RFC) to 16,000xG

Tube Size	Pore Size	Sterile	Catalog#	Case

► Syringe Filters, for use in Immunolabeling

Cellulose Acetate membrane with 4mm diameter Polypropylene housing with 7mm² filter area. This 1ml syringe filter is very useful in sterilization of micro/immunological reagents, enzymes, antibodies and immunolabeling. Non-sterile, bulk pack: 100/pkg, 400/case, autoclavable. Filter pore size is 0.2µm.

67015	Immunolabeling Syringe Filter	100/pkg
67016	Immunolabeling Syringe Filter	400/cs

► Fiberglass Pre-filters

Fiberglass pre-filters for use in Bottle Top and Vacuum Filtration Systems above.

Recommended filter size dependant on apparatus used. The Pre-Filters are available in two sizes: 50mm and 70mm diameters. Packaged: 12/pkg, 96/case

67070-series

67070-50	50mm, for use with 150ml & 250 ml Filter Funnels	96/pk
67070-70	70mm, for use with 500ml Filter Funnels	96/pk

► Plastic Syringes; Disposable

► 1. Syringes Without Needles – Rubber Piston

These high quality disposable rubber piston syringes offer substantial savings. A lubricated synthetic rubber piston allows for a smooth draw while a positive stop prevents accidental pull out. Bold graduations are easily read and resist wipe-off. Syringes are ETO gas sterilized, latex and pyrogen free. All syringes are packaged in individual sterile strip packs.

Cat. #	Size and Description	Pack
72508	2.5 ml, Luer Slip Centric	100/pk
72509	5 ml, Luer Slip Centric	100/pk
72510	10 ml, Luer Slip Eccentric	100/pk

72515	1 ml x 25G x 5/8", Tuberculin	100/pk
72517	5 ml x 21G x 1 1/2", Luer Lock Centric	100/pk
72518	10ml x 21G x 1 1/2", Luer Lock, Centric	100/pk

► 3. All Plastic Syringes Without Needles

These syringes are latex free; contain no rubber, no silicone oil or styrene. They are the choice for any situation needing an inert, hypoallergenic syringe. Because of their purity, they are indicated for IVF, embryo transfer, chromatography and many laboratory procedures. Manufactured only from laboratory grade polypropylene and polyethylene, these unique plastic syringes have a positive safety stop to prevent accidental spills. These syringes are individually sterile strip packed.

► Hypodermic Needles

These sterile-disposable regular wall hypodermic needles with a plastic translucent hub are individually wrapped and color-coded.

Cat. #	Needle Gauge and Length	Pack
72530	Hypodermic Needle, 18G x 1"	100/pk
72532	Hypodermic Needle, 19G x 1"	100/pk
72534	Hypodermic Needle, 20G x 1"	100/pk
72536	Hypodermic Needle, 21G x 1"	100/pk
72538	Hypodermic Needle, 22G x 1"	100/pk

► Puritan® - Wood Products

► 1. Wooden Sticks – Tongue Depressors

These sticks are made from closed-grain Northern White Birch. This selective wood provides a smooth, splinter-free finish with good tensile strength. In addition to medical uses, these sticks are ideal for spreading ointments and salves, stirring and mixing etc.

Cat. #	Descriptions	Pack
72320	Wooden Sticks, 5 1/2" x 3/8"	500/pk
72322	Wooden Sticks, 4 1/2" x 3/8"	1000/pk

► 2. Wooden Applicators Sticks, Orange Sticks

Manufactured from closed-grain Northern White Birch these sticks are ideal for use in specimen transfer, as a mixing rod, and for general laboratory applications.

Orange Sticks are 7 inches long and 5/8" diameter, choice of beveled ends.

Cat. #	Descriptions	Pack
72300	Applicator Stick, 6" x 1/2"	1000/pk
72303	Applicator Stick, 12" x 3/8"	500/pk
72304-10	Double Bevel Both ends Orange Stick	100/pk
72304-30	One Single Bevel, one Double Bevel End Orange Stick	100/pk

► Caps for Syringes

One size fits-all syringe caps that can be used with either a luer slip or luer locking syringe tip. These tips make the syringes suitable for usage as embedding media storage vessels.

72500-05	Caps for Syringes	500/pk
72500-10	Caps for Syringes	1000/pk

From Left : 72538 - 72530

(1) 72300 & 72303 Applicator Sticks
(2) 72322 Small Wooden Stick
(3) 72300 Large Wooden Stick

Double Bevel End

Single Bevel End

► 3. Cotton Tipped Applicators

■ **Medical Quality:** The cotton is carded, spun, and applied in an ISO 9002 Registered facility to assure you consistent quality.

Handy Vial Packs: 3" (8cm) wooden shaft, small-tipped applicators come pre-packed in a plastic-capped vial, a handy way to keep a supply of swabs available anytime on the bench top. Packed 100 per vial

Cat. #	Descriptions	Pack
72310	Cotton Tipped Applicator, Wooden Shaft, Single End, 6" x 1/2", Regular Tip. Non Sterile	100/pk
72310-10	Same as above	10x100/pk
72310-S	Same as 72310 but Sterile	10x100/pk
72307	Handy Vial Pack, 100/vial	10Vials/pk

■ **Industrial Cleaning Applicators:** 6" Cotton Tipped Applicators, Choose from different cotton tipped sizes. Tips are specially processed to resist tears and pulls and leave your cleaning environment virtually lint-free. Available with a wooden shaft or a polypropylene shaft.

Cat. #	Descriptions	Pack
72308	Double Tips. Tapered Tip 3/16" Dia. Tapering to 1/32" Dia. x 5/8" L, Regular Tip 3/16" W x 5/8" L. Wooden Shaft	100/pk
72308-05	Same as above	5x100/pk
72309	Large Tip 1/4" Dia. x 1 1/8" L. Wooden Shaft	5x100/pk
72306	Anti-Static, Lint-Free. Regular Tip 1/4" Dia. x 1 1/8" L. Polypropylene Shaft.	10x100/pk

► Wooden Picks

They are round and double tapered; used for cleaning pole pieces and parts of the EM. Also used for orienting the specimen during the embedding stage.

72340 Wooden Picks 100/bx

► 4. Foam Tipped Applicators

Tips are made from shred-resistant, 100% urethane foam with 100PPI porosity. Except where wood is noted, all shafts are polypropylene.

Newly introduced PurSwab Popule, which is filled with 91% isopropyl alcohol and 9% deionized water. Simply squeeze the handle to break the patented seal and allow liquid to flow to the foam head.

Cat. #	Descriptions	Pack
72317	Foam Tipped Applicator, Wooden Shaft. Tip 3/8" Dia x 1" L	50/pk
72314	5" Shaft, Rectangular Foam Tip 1/8" W x 7/8" L, Polypropylene Shaft	50/pk
72315	6" Shaft Arrow End Tip 3/8" Dia x 7/8" L	50/pk
72312	6" Wooden Shaft, Tip 3/8" Dia x 1 1/8" L. Foam-over-Cotton Tip	50/pk
72330	Popule, 4 1/2" Self-Saturating Foam Swab with 91% Isopropanol in DI Water	50/pk

► 5. Chemical Resistant Applicators

The tips on these applicators are specially designed to withstand many of the chemicals and solutions commonly use in labs and clean rooms. Tips are resistant to deterioration – they won't swell or break apart.

Cat. #	Descriptions	Pack
72325	6" Wooden Shaft, Foam over-Cotton. Tip 3/8" Dia x 1 1/8" L	50/pk
72326	6" Polypropylene Shaft, Foam-over-Cotton Tip 3/8" Dia x 1 1/8" L	50/pk

► 6. Antistatic Foam Tipped Applicators

Choose from swabs that feature an antistatic foam head – or swabs with completely static-free construction. Static-dissipative swabs attract dirt and dust for easy cleaning, while reducing and dissipating static electricity. Antistatic properties will not decay over time. Swabs meet all industry standards and requirements, including ASTM-D257 and Federal test method 4046, standard #101C.

Cat. #	Descriptions	Pack
72316	6" Wooden Shaft, Anti-Static Foam-over-Cotton. Tip 3/8" Dia x 1 1/8" L	50/pk
72318	6" Polypropylene Shaft, Anti-Static, Foam-over-Cotton Tip 3/8" Dia x 1 1/8" L	50/pk

► Gel, Electrophoresis, Chemilluminescence, and Autography

► Synergel™

Improving Agarose Gel Performance

- Superior Sieving – Better sieving than agarose alone, 1 gr Synergel = 2 gr agarose
- High Resolution – Synergel / Agarose gels exhibit improved spatial separation and tighter banding for DNA fragments of 50-2000bp
- Easy To Use – Mix, boil and pour!
- No Background Fluorescence – The superior optical clarity permits high quality photo-documentation
- Increased Load Capacity – Accommodates greater quantities of DNA reducing band tailing and smearing

(A) 1.5% Synergel and 0.7% agarose (SeaKem LE)
(B) 4% NuSieve Agarose (FMC)

68500-10	Synergel - Agarose Additive	100g
----------	-----------------------------	------

► Gel Handler™

Flexible UV Transparent Sheets for Handling Gels, Visualizing and Photo Documentation

- Ideally sized at 8.5" x 11" (216mm x 279mm)
- Thin sheet easily slides beneath a gel
- Flexible sheets eliminates air bubbles
- Protects the surface of transilluminators from cuts & scratches
- Polyolefin composition allows acid washing and autoclaving without a chemical reaction
- Optical densities for the 5 mil thick sheets at 254 and 300nm emission wavelengths of the transilluminator are 0.14 and 0.04 respectively

68510-10	Gel Handler - 5 mil thick	10/pack
68510-20	Gel Handler - 10 mil thick	5/pack

► RadTape™ and RadTape Plus™

An easy way to identify autograms – radiological & chemilluminescence

- Versatile – phosphorescent, non-radioactive adhesive labels that may be cut to the specific size and shape needed for each individual membrane, dried gel or microarray
- Fast and Easy – marking system is great for documentation and archiving and ideal for chemilluminescence and radiological autography (patented)
- Use an ordinary pen to mark the label using the investigator's own codes and symbols
- Simply peel the custom label from its backing and affix it to the membrane, gel or microarray
- Permanent - exposes a negative image of the markings directly
- RadTape Plus is finer grained and waterproofed

68520-10	RadTape; 4 x 6" sheet	10/pack
68520-20	RadTape Plus; 4 x 6" sheet	10/pack

► Glow Writer™

Fine-Point Phosphorescent Marking Pen for Laboratory Autography

Glow Writer is a phosphorescent pen for marking chemiluminescent and isotope-labeled substrates for X-ray film autography. The unique marker delivers a phosphor-containing ink through a fine point porous nib. Before exposure to X-ray film, the phosphorescent writing is excited by room light. The pen utilizes a phosphor ink having an optimum concentration of phosphor and a relatively short afterglow half-life (approximately 2-3 minutes) has been selected so that upon exposure to X-ray film, autographic exposures of almost any duration will be easily readable on the film. The fine point nib is easily replaceable if it dries out.

68551-01	Glow Writer Pen	each
68551-RT	Glow Writer Replacement Nibs	4/pack

► Gel, Electrophoresis, Chemilluminescence, and Autoradiography (continued)

► FlowMesh™

A Permeable Support Mesh for Gels and Membranes

Protects - Place FlowMesh above or below a gel or filter to protect from tearing, bending or folding

Sturdy - Supports gels during incubation with nucleic acid probes, antibody probes, equilibration buffers, stain, destain solutions, etc.

Versatile - Use as a permeable spacer for stacking as well as for staining and destaining procedures

Access - Both sides of a container or plastic bag are assured of constant solution access, which improves the uniformity of hybridizations and binding assays.

Convenient - FlowMesh is re-usable and easily cut to size

68505-20 FlowMesh Sheet - 8.50" x 11.00" / 216mm x 279mm 20/pack

► Fluorescent Ruler Kit

No more guesswork – Accurately measure the mobility of electrophoretic markers and ethidium bromide-DNA complexes during electrophoresis

Thin - At 7mm wide they require only a single lane of an agarose gel

Fluorescent ink markings are sharp and photograph well under UV light (300nm & 350nm)

Rulers are made of a flexible, UV-clear plastic so only the fluorescent markings will show under UV light

68552-04 (2) 10cm & (2) 20cm 4/pack

► Gel Drying Frames™

Gel Drying Frames allow researchers to quickly and easily dry gels between two sheets of cellophane without the use of expensive heat/vacuum gel dryers. The 24 x 24cm frames allow for drying of larger format gels, while the 14 x 14cm frames are ideal for mini gels and other smaller formats.

Each kit includes

- 2 open frames,
- 2 solid back plates,
- 12 side clips and
- 50 sheets of pre-cut cellophane

68510-14	14 x 14cm Gel Frame	Kit*
68510-24	24 x 24cm Gel Frame	Kit*
68511-14	14 x 14cm Cellophane	50/pack
68511-24	24 x 24cm Cellophane	50/pack

► Autoradiography Ruler Set

Phosphorescent, Non-Radioactive Metric Rulers for Radiographs

The Autoradiography Ruler Set (ARS) is an orientation and measurement device that exposes metric ruler markings directly onto X-ray film

Ideal- Utilizes a specially formulated phosphorescent dye compound and a unique emission filter which serves as an ideal non-radioactive substitute for ink markings

Easy- Make easy electrophoretic mobility calculations

Re-usable- The phosphorescent emission of each ruler can be regenerated indefinitely and can be reused any number of times

High Resolution - Produces a high resolution image that is unaffected by intensifying screens or pre-flashed film

68550-04 20cm length rulers 4/pack

► Rapid Coomassie Stain

Fast - Complete in 30-60 minutes

Easy - Destaining is not necessary

Highly Sensitive - Detects as little as 30ng of protein

Quality - Bands are sharper than those stained with conventional Coomassie Blue

Versatile - Gels can be restained with Silver

68511-25 Rapid Coomassie Stain, 100ml Each

► Mounting and Embedding Media:

EMS introduces a selective range of embedding and mounting medium on the market for both HOT MOUNTING and COLD MOUNTING - for literally all kinds of material specimens.

For a complete line of all of our Embedding Media Kits see pages 92-102.

► 1. Hot Mounting

When preparation requirements include less expensive, uniform size and shape, and short processing times, hot mounting (hot compression mounting) is ideal.

Hot mounting takes place under pressure in a mounting press, where the specimen is placed in a cylinder together with the appropriate mounting resin. A temperature of up to 200° C, and a pressure of up to 50kN are then applied during the embedding of the specimen. There are two types of hot mounting processes: thermoplastic resins and thermo-setting resins.

- **Thermoplastic Resins** melt when heated, offering the opportunity of repeating the process with the same specimen if the result is not satisfactory the first time. Thermoplastic resins harden during a chemical reaction with or without pressure. That means high pressure is not necessary during heating and cooling. This process is good when mounting fragile specimens.
- **Thermo-setting Resins** cure at elevated temperatures under pressure. Thermo-setting resins cannot be re-melted after mounting.

1210

1212

1214

Hot Compression Mounting Resins Selection Guide

Resin	Recommended Use	Specific Properties	Comments	Resin Color
Gray Resin	Electropolishing Electrically conductive mounts	Electrically conductive Very low shrinkage	Acrylic resin with iron filler Thermoplastic powder	Gray
Clear Resin	Glass clear mounts Porous samples Surface electrical insulator for Gray Resin	Translucent Medium Shrinkage	Transparent acrylic resin Thermoplastic	Clear
Green Resin	High Edge retention needed Planeness Very Hard Mount	Low shrinkage Low removal rate Granular	Diallyl phthalate with glass fiber filler Thermosetting	Green

Ordering Hot Mount Resins:

Cat #	Descriptions	Pkg. Size
1210	Gray Resin - Thermoplastic	1 kg
1212	Clear Resin - Thermoplastic	1 kg
1214	Green Resin - Thermosetting	1 kg

For our pressure chamber see page 372 >>>>

► 2. Cold Mounting

Cold mounting or embedding is when a resin is mixed with a hardener (or accelerator) to provide the mounting compound, and then the polymerization process take place to form the block. In some cases, this process gives-off heat. However this heat generation can be controlled by the use of ice or cool air blow setting. Cold mounting compounds are preferred for specimens that are sensitive to the heat or pressure, which applies during the hot mounting process. There are three types of cold mounting:

1. **Epoxy Systems** - Epoxies have the lowest shrinkage of all cold mounting resins. The curing time is relatively long, but the adhesion to most materials is excellent. They are also used for vacuum impregnation. The hardened epoxy is duroplastic and not affected by moderate heat or chemicals.
2. **Acrylic System** - Acrylics are easy to use resins with short curing times and negligible shrinkage. They consist of self-polymerizing components that harden with the addition of catalyst. Hardened acrylic is thermoplastic and resistant to most chemicals.
3. **Polyester Systems** - Polyester belongs to the catalyzed system, like acrylics. Curing times are relatively short and the hardened specimen is duroplastic.

1232

Electron Microscopy Sciences offers a full range of equipment used in materials preparation for a variety of technological fields. Electron microscopy, metallography, wafer lapping and polishing, failure analysis, crystal orientation, plasma processing, MEMS and many other applications are facilitated by our equipment. Please contact us or see our comprehensive website, which includes our complete line.

Cold Mounting and Embedding Resins Selection Guide

Resin	Recommended Use	Specific Properties	Curing Time	Recommended Mounting Cup
EpoFix	Vacuum impregnation Porous & complicated specimens Mineralogical specimens	Transparent Epoxy Negligible curing heat Low viscosity Practically no shrinkage Excellent wetting and adhesion Peak temperature 43°C	8 hours at room temperature	Disposable Mold Cups (50480-10)
UniMount	Vacuum impregnation Porous specimens Mineralogical specimens Need more time to manipulating specimen	Transparent Epoxy Low viscosity Excellent penetration to cracks & pores No shrinkage Peak temperature 130°C	1½ - 2 hours at 70-80°C 4 hours at 40-60°C	Disposable Mold Cups (50480-10)
AcryMount	Routine work Single or small series of specimens	Translucent Acrylic	9 – 10 minutes at room temperature	Disposable Mold Cups (50480-10) Silicone Molds
PolyMount	Large series of uncomplicated specimens Used for specimens are not sensitive to heat.	Transparent Polyester Low viscosity Due to shrinkage, it's recommended for specimens without holes or cavities.	45 minutes at room temperature	Disposable Mold Cups (50480-10) Silicone Molds
PolyAcryMount	Edge retention Planeness Complicated specimens	Polyester/Acrylic Mineral filler White Peak temperature 114°C Excellent hardness Practically no shrinkage	25 – 18 minutes	Disposable Mold Cups (50480-10) Silicone Molds
Epoxy-Dye	For use with EpoFix and Unimount	Fluorescent dye for use in microscopy to make cracks and pores visible. Special filters for microscopy	N/A	N/A
Acrylic-Dye	For use with Acrylmount	For color-coding specimens Color include blue, red & yellow	N/A	N/A

1) All peak temperatures stated is a 30mm mount cured at room temperature of 23°C

Ordering Cold Mount Resins:

(a) Epoxy Systems

Cat. #	Description and Packaging
1232	EpoFix - Kit with 1L liquid resin; 130 ml hardening liquid kit

50486-00

► Silicone Rubber Molds, Reusable

These reusable molds for cold embedding are made from sturdy, flexible, white silicone, and are easily removed without the need for release agents. Much smoother than rubber molds, enabling easy identification of samples in clear resins. They hold their shape to produce consistent, reliable round embedding.

Round Silicone Rubber Molds, Reusable

1" high, 3/4" internal depth.

Cat. #	Description	Qty.
50484-10	1" (25.4mm) dia.	10/pk
50484-12	1-1/4" (31.75mm) dia.	10/pk
50484-14	1-1/2" (38.1mm) dia.	10/pk
50484-16	2" (50.8mm) dia.	5/pk

Rectangular Silicone Rubber Molds, Reusable

1" high, 3/4" internal depth.

Cat. #	Description	Qty.
50484-17	2-1/4 x 1"	5/pk
50484-18	3 x 2"	each

► Pressure Chamber

This chamber is designed in conjunction with our cold molded acrylic and epoxy media. After encapsulating the sample, they are placed inside the chamber. By applying between 30 to 40 PSI during the cure time, the mounting compound is compressed down and around the sample, forcing air up to the surface. This process helps eliminate shrinkage and increase clarity and edge retention. Comes with an air hose. As an option an air pump tank is available. This Air Pump is designed for hand pumping pressure. The chamber inside measures 6" deep x 6" diameter.

50465-10	Pressure Chamber	each
50465-20	Air Pump	each

► Adhesives and Mountants

► Crystalbond™/Wafer-Mount™

A temporary adhesive. These wash away adhesives are used as a temporary bond for holding delicate crystals, metallurgical specimens, glass components, and ceramic substrates for dicing, slicing, drilling and polishing. These materials adhere readily to metals, glass, ceramic and then can be washed after machining away using various solvents.

APPLICATIONS:

- Machining or slicing single crystal metal specimens.
- Grinding and polishing sapphire, ceramic, optical garnets, ferrites, and LCD glass.
- Dicing and slicing germanium and silicon wafers in semiconductor production.
- Holding beam leads in IC devices for pull-off tests.
- Dicing and slicing alumina and beryllia substrates for IC and micro-electronic production.
- Dicing subminiature chip capacitors and microwave IC substrates.

Crystalbond™ Properties and Ordering:

Type	509	555	590
Description	Thermo polymer*	Thermo polymer	Thermo polymer*
Form	7/8" Dia. x 7" stick	1/2" x 1" x 7" stick	3/8" x 1 1/4" x 7 1/2" stick
Softening	160°F (71°C)	125°F (52°C)	257°F (125°C)
Flow Point	250°F (121°C)	130°F (54°C)	302°F (150°C)
Viscosity at Flow Point	6,000 cps	500 cps	9,000 cps
Color	Clear/Amber	White	Brown
Solvent	Acetone or 509-S Stripper	Water	Methanol or 590-S Stripper

*Thermoplastic polymer

► **Crystalbond™ 509:** offers excellent adhesion to metals, glass, and ceramic. This material is the best for precise high purity work since it leaves no residue after dissolving and does not clog the diamond wheel as compared to conventional waxes. Each stick weighs about 90 grams.

50400-01	Crystalbond 509, Clear Stick	each
50400-05	Crystalbond 509 Clear Stick	5/pk
50400-50	Crystalbond 509 Amber Stick	each
50400-S1	Crystal Bond 509 Stripper	1 qt
50400-S2	Crystal Bond 509 Stripper	1 gal

► **Crystalbond™ 555:** the same as 509 but used in applications where it is desirable to have a temporary bond which is water soluble. Each stick weighs about 90 grams.

50401-01	Crystalbond 555	each
50401-10	Crystalbond 555	10/pk

► **Crystalbond™ 590:** the same as 509 but offers maximum adhesion to subminiature parts. Each stick weighs about 225 grams.

50402-01	Crystalbond 590	each
50402-02	Crystalbond 590	2/pk
50402-S	Stripper	100 g

► **Wafer-Mount™ 559:** is available in sheet form 10"x10" (254x254mm). To use, remove the paper backing exposing the adhesive layer. The substrate is positioned on the film and pressed down firmly so that it adheres to the plastic film. No heating is required. The wafer mounted on the plastic film can then be held down using a vacuum manifold or mechanical means for dicing or scribing. After dicing or scribing, the parts can be separated from the wafer-mount 559 film by washing in acetone or MEK. Ideal for holding down silicon wafers, alumina, or glass substrates for scribing.

50403-02	Wafer-Mount 559	2/pk
50403-10	Wafer-Mount 559	10/pk

► **Wafer-Mount™ 562:** a dry temporary adhesive film, 0.003" thick, which can be easily cut to size with either a razor or scissor. This mount permits pre-placement of the adhesive film exactly where the user wants it. It melts at 195-210°F. After application it can be dissolved rapidly in trichloroethylene or toluene. This material is particularly useful in applications where a pre-formed adhesive film is needed to assure uniform bonding and flatness or in bonding stacks of substrates such as LCD glass slides for slicing. Sheet size 8"x10".

50404-10	Wafer-Mount 562	10/pk
50404-20	Wafer-Mount 562	20/pk

For a complete line of Silicon Nitride Mesh and Film, see pages 152-157 ►►►

► QuickStick™ 135 Temporary Mounting Wax

- Acetone Soluble - Ideal for high purity work
- Low Melting Point - Flows at 135° C
- Crystal Clear - Good for applications utilizing transmitted light.

This temporary mounting wax is used in a variety of applications to bond samples during a processing application. After processing, the mounting wax is washed away in acetone leaving no residue.

TYPICAL APPLICATIONS INCLUDE:

- Single Microscopy Sample Preparation.
- Single Crystal Mounting
- Metallurgical Applications
- Wire Sawing
- Grinding and Polishing
- Ultrasonic Cutting

SPECIFICATIONS:

Thermoplastic polymer. Softening point is 71° C (160°F). Flow point is 135° C (275° F). Viscosity at flow point is 6,000cps. The color is crystal clear and it dissolves in acetone. QuickStick™ comes 20 sticks/tray and it weighs approximately 350 grams. Each stick measures 3"(L) x ¼" (W) x ¼"(H) (76mm x 6mm x 6mm)

50419-20	Quick-Stick™ 135	20/pk
----------	------------------	-------

► Mounting Wax 100

MWM100 Black Wax is designed for use as a masking material in jet polishing applications. As it is chemically inert, it is resistant to etching solutions such as hydrofluoric acid, perchloric acid and acetic acid. While it is resistant to many acids, it can be easily removed with hydrocarbon or chlorinated solvents. 100 Gram/Pkg (5 - 20 gram sticks). Moderate Hardness and a Melting Point of 100° C.

Diluent: Hydrocarbon or Chlorinated solvents

50390-100	Mounting Wax 100	100 Grams
-----------	------------------	-----------

► Mounting Wax 80

MWH080 is an amber colored wax, which is translucent in thin films. High hardness makes it ideal for sawing, ultrasonic cutting and lapping & polishing operations. Best suited to vitreous materials, polished metal surfaces, semiconductors and piezoelectric materials with large contacted areas. Chemical resistant. 100 Gram/Pkg of 4 sticks .5" x .5" x 7" long (12.5 x 12.5 x 175mm). Hard hardness with a Melting Point of 80°C.

Diluent: Ethanol and Acetone

50390-80	Mounting Wax 80	100 Grams
----------	-----------------	-----------

► Mounting Wax 70

MWM070 is a quartz type sticky, orange colored wax (translucent in thin films) used to hold crystals or other materials while they are being sliced, lapped or polished. Moderate hardness and strength make it useful for bonding small samples in diamond wheel sawing and wire sawing operations. Widely used for holding semiconductors, optical materials, ceramics and metals with medium to large contact areas. Chemical resistant. 100 Gram /Pkg of 29 sticks, .25" dia x 4" long (6mm dia x 100mm). Moderate Hardness and a Melting Point of 70°C.

Diluent: Warm soapy water

50390-70	Mounting Wax 70	100 Grams
----------	-----------------	-----------

► Mounting Wax 52

MWS052 is a tan colored wax, which is translucent on thin films. Softness makes it most useful with abrasive slurry cutting of materials. Best suited to non-porous surfaces such as glass or polished metal with a reasonably large area. Easily soluble in a variety of solvents. 113 Grams/1 Stick, 1" x 1" x 7.5" long (25 x 25 x 190 mm). Soft Hardness and a Melting Point of 52°C.

Diluent: Perchloroethylene

50390-52 Mounting Wax 52 1/pk

► Wax Stripper

WaxStrip™ is an environmentally safe powder compound prepared primarily for the removal of mounting waxes in semiconductor processing. WaxStrip™ is compatible for use on silicon, glass, iron, aluminum, zinc, brass, copper, magnesium and other materials. 1lb/bottle.

50392-01 Wax Stripper each

► M-Bond System

The M-Bond system includes M-Bond 43-B, M-bond 600 and M-Bond 610. These adhesives are high-performance epoxy resins, which are formulated especially for bonding strain gages and special-purpose sensors. When properly cured, these adhesives are useful in temperatures ranging from -452°F to +350°F (-269°C to +175°C) with M-Bond 43-B, and to +700°F (+370°C) for short periods with M-bond 600 and 610. In common with other organic materials, oxidation and sublimation effects at elevated temperatures limit life. M-Bond 43B is particularly recommended for transducer applications up to +250°F (+120°C) and M-Bond 610 for transducers up to +450°F (+230°C)

Shelf Life and Post Life: At room temperature, M-Bond 600 has a useful storage life of approximately three months, while M-Bond 43-B and M-Bond 610 will last about nine months.

Once opened and mixed, M-Bond 600 and 610 have room temperature pot lives of two weeks and six weeks, respectively. Since M-Bond 43B is supplied already mixed, its pot life is about the same as its shelf life when kept in a tightly closed container. These periods of adhesive usefulness can often be doubled by refrigeration at +30° to +40°F (0 to +5°C). Never open a refrigerated bottle until it has reached room temperature.

Curing Time:

M-Bond 43B is about 2 hours at +375°F (+190°C)

M-Bond 600 is about 3.5 hours at +350°F (170°C)

M-Bond 610 is about 3 hours at 375°F (190°C)

RT	50410-10	M-Bond 43B	(4x25 ml)	Kit
RT	50410-20	M-Bond 600	(4 x 10 ml A and 4 x 15 ml B)	Kit
RT	50410-30	M-Bond 610	(4 x 15 ml A and 4 x 10 ml B and Catalyst)	Kit

► Mikrostik™ Adhesive, Non-Conductive

Fast drying, ultrathin clear adhesive suitable for mounting small particles which can be submerged in other adhesives. It can be diluted with methyl ethyl ketone. Quick-drying. Comes in a bottle with an applicator brush. 14 ml.

RT **12646-01** Mikrostik™ Adhesive, Non-Conductive 14ml

► Loctite Adhesives

Loctite 409™ Super Bonder®

For a general-purpose gel adhesive, clear, gap fills 0.010"; surface insensitive Ethyl, tensile shear strength 3,200 psi, and temperature range -65°F to 180°F. Cure speed: fixture - 75 seconds, full - 24 hours.

Loctite 454™ Prism®

For use with porous surfaces, clear, gap fills 0.010", surface insensitive Ethyl, gel type, tensile shear strength 3200 psi, temperature range -65°F to 180°F. Cure speed: fixture - 15 seconds, full - 24 hours.

Loctite 4861™ Prism®

For use with flexible surfaces, clear, gap fill 0.008", surface flexible Alkyl, viscosity 4,000 cP, tensile shear strength 2465 psi, temperature range -65°F to 212°F. Cure speed: fixture - 25 seconds, full - 24 hours.

Loctite 349™ Impruv®

For bond glass/metal, appearance: clear/straw, cure type: UV, viscosity: 9,500cP, shore hardness: D70, temperature range: -65°F to 266°F

Loctite 4011™ Prism®

Designed for the assembly of difficult-to-bond materials, such as wood, paper, leather and fabric. Suitable for use in the assembly of disposable medical devices. The product provides rapid bonding of a wide range of materials, including metals, plastic and elastomers. Cure speed: 2 to 20 seconds depending on the material.

Chemical type: Ethyl cyanoacrylate, transparent, colorless to straw colored fluid. One part required no mixing. Low-viscosity (100 cP). Cure by humidity, and temperature range -65°F to 180°F

RT	72570-09	Loctite Super Bonder 409	3 g Tube
RT	72571-54	Loctite Prism 454 Adhesive	3 g Tube
RT	72572-61	Loctite Prism 4861 Adhesive	20 g
RT	72582-01	Loctite 349 Impruv Adhesive	50 ml
RT	72573-11	Loctite Prism 4011 Adhesive	20 g

Loctite 404 Quick Set Tissue Adhesive

This adhesive is perfect for those applications where a quick-curing adhesive is needed. Comes in an applicator-tipped bottle, 0.33 oz. (10ml).

RT **12687-01** Loctite 404 Quick Set Tissue Adhesive 10ml

Loctite™ 460 Adhesive

Our Loctite™ 460 is a quick curing low viscosity glue that can be used for mounting samples to any substrate (glass, metal and/or plastic). It is soluble in acetone. Comes in an applicator-tipped plastic bottle — 20 g.

RT **12646-08** Loctite™ 460 Adhesive each

Loctite® Fixmaster® Poxypak™, Fast Cure Epoxy

This fast cure, general purpose epoxy bonds virtually any material. It will also fill or seal cracks and rebuild worn surfaces. Comes in a 1 oz. syringe with a built-in plunger for easy dispensing without equipment. Working time is approximately 4 minutes. Includes nozzle and mixing stick. This unique adhesive may be made electrically conductive with the addition of any conductive powder (Silver, Carbon etc.)

RT **12646-09** Loctite® Fixmaster® Poxypak™, Fast Cure Epoxy each

► **Cargille Meltmounts**

- Instant thermal mountants that require "no-oven-time".
- 100% Usable; contains no solvents.
- Reversible, thermally, for particle retrieval or re-orientation
- Soluble in toluene for special techniques or clean-up.
- Fluid at 65°C, a temperature chosen because it makes permanent mount and protects the majority of specimens from thermal changes.
- PCB-Free.
- Direct replacement for old mountant mediums (Canada Balsam, Aroclor 5442, Naphrax...)

Cargille Meltmount™ (optical quality) is a series of mounting media which are specifically formulated for use in microscope slide mounting and in other optical coupling applications.

1. Meltmount™ 1.539

Has a refractive index ($n_D @25^\circ\text{C}$) of 1.539 and an Abbe V dispersion of 45. Its optically similar to Canada Balsam and therefore ideal for mounting many biological specimens but without the long drying time of Canada Balsam.

RT	17994-10	Meltmount 1.539	1 oz.
RT	17994-11	Meltmount 1.539 Quick-Stick™	each

2. Meltmount™ for Chrysotile Asbestos

It has dispersion characteristics making it appropriate for mounting chrysotile asbestos.

RT	17994-20	Meltmount for Chrysotile	1 oz.
----	-----------------	--------------------------	-------

3. Meltmount™ 1.582

It has a refractive index ($n_D @25^\circ\text{C}$) of 1.582 and an Abbe V dispersion of 33. Its optical clarity makes it the preferred choice for minimum visible absorption.

RT	17994-30	Meltmount 1.582	1 oz.
RT	17994-31	Meltmount 1.582 Quick-Stick™	each

4. Meltmount™ 1.605

It has a refractive index ($n_D @25^\circ\text{C}$) of 1.605 and an Abbe V dispersion of 30, making it appropriate for mounting Asbestiform Tremolite, Anthophyllite, and Actinolite.

RT	17994-40	Meltmount 1.605	1 oz.
RT	17994-41	Meltmount 1.605 Quick-Stick™	each

5. Meltmount™ 1.662

It has a refractive index ($n_D @25^\circ\text{C}$) of 1.662 and an Abbe V dispersion of 26, optically similar to Aroclor 5442 but is PCB-free.

RT	17994-50	Meltmount 1.662	1 oz.
RT	17994-51	Meltmount 1.662 Quick-Stick™	each

6. Meltmount™ 1.680

It has a refractive index ($n_D @25^\circ\text{C}$) of 1.680 and an Abbe V dispersion of 25, making it appropriate for mounting Amosite and Crocidolite asbestos.

RT	17994-60	Meltmount 1.680	1 oz.
RT	17994-61	Meltmount 1.680 Quick-Stick™	each

7. Meltmount™ 1.704

It has a refractive index ($n_D @25^\circ\text{C}$) of 1.704 and an Abbe V dispersion of 24, similar to Naphrax.

RT	17994-70	Meltmount 1.704	1 oz.
RT	17994-71	Meltmount 1.704 Quick-Stick™	each

Melt Mount is also available in a Quick-Stick™ form which can be used to make permanent microscope slide mounts quickly. These Melt Mount sticks can be applied to a slide on a hotplate. As soon as the specimen and coverglass are positioned and the slide is cooled you have a permanent prepared slide that can be reversed by reheating, if you should wish to retrieve a particular particle. Each Quick-Stick™ weighs approximately ⅓ oz. (18g).

► **Replication Materials**

► **Cellulose Acetate Films**

This acetate film softens in acetone and can be used for duplicating purposes. Acetate film which is wet with acetone can then be applied to a surface which has been wet with acetone. It is easily removed away from the object when dry. Acetate films come in 35µm thicknesses.

50420-30	Acetate Film 35µm, 10x15cm Sheet	20/pk
-----------------	-------------------------------------	-------

► **Triaphan Films**

An acetobutyrate film, 100µm thick, suitable for replicating rough surfaces. It is soluble in methylene chloride (plastisolve) or acetone.

50421-10	Triaphan, 100µm, 15x15cm Sheet	20/pk
-----------------	-----------------------------------	-------

► **Collodion (Parlodion), 2% in Amyl Acetate**

Highly purified nitrocellulose (parlodion strip) in glass distilled amyl acetate. Useful for forming a negative replica to very fine detail. Two types are available: Our sterile formula which is filtered down to 0.45 micron and our non-sterile formula.

RT	12620-00	Non-Filter 2% Collodion in Amyl Acetate	100 ml
RT	12620-10	Sterile 2% Collodion in Amyl Acetate (Ultra-Pure)	100 ml
RT	12620-30	Non-filter 2% Collodion in Amyl Acetate	30 ml
RT	12620-34	Non-filter 2% Collodion in Amyl Acetate	4x30 ml
RT	12620-50	Sterile 2% Collodion in Amyl Acetate (Ultra-Pure)	30 ml
RT	12620-55	Sterile 2% Collodion in Amyl Acetate (Ultra-Pure)	4x30 ml

For a complete line of Adhesives and Mountants, See Chemicals section, pages 9-21 >>>>

► Membrane Boxes

Our unique membrane storage boxes for the transfer, storage and shipping of many delicate items. Available in 5 different shapes and sizes these plastic containers, with a double elastic membrane on the top and bottom, offer security for all of your sensitive items. Once your item is placed in the box the elastic membrane conforms around the enclosed object and protects it from any movement.

► **Gel-Pak® Storage/Carrier Box**

Patented gel technology – the innovative solutions for storage and carrying delicate materials

The traditional Gel-Box, Gel-Tray® and Gel-Slide Carriers are perfect for applications where devices are manually offloaded by tweezers or by hand.

- **Gel-Box (AD Series)** - Hinged plastic boxes coated with Gel in the bottom.
- **Gel-Tray® (BD Series)** - A removable 2" plastic tray coated with Gel and contained inside a hinged plastic box.
- **Gel-Slide (CD series)** - A removable 2" glass slide coated with Gel and contained inside a hinged plastic box.

(Gel-Pak® is a Division of Delphon Industries)

► **GEL-BOX (AD Carrier Boxes)**

Gel-Box AD Series Carriers owe their unique device-holding capabilities to a proprietary GEL coating applied directly to the bottom of a hinged box. Devices are held once contact is made with the GEL surface and will stay in place, even if the carrier is tilted or jarred. The carriers are designed for manual off-loading with tweezers or by hand. GEL-PAK AD series are ideal for handling devices where no direct contact with the top of the device is important.

The GEL-BOX Carriers may also be used for bare die handling, such as GaAs, PETs, laser diodes, and beam-lead devices where the die size is small (less than 1mm) and tweezers or other specialized techniques are used for off-handling.

FEATURES:

- No need for custom-molded containers for each device size.
- Ideal for handling subassemblies, hybrid models and packaged devices.
- Available in Transparent, Conductive and Anti-Static carriers in multiple sizes.
- Retention Level available: x0, x1, x2, x3, x4, x5, and x8 (the higher the number the more retention capability)

We offer standard retention level X4. Other retention levels are available with the order of 100 or more, and at least two weeks for delivery.

► **GEL-TRAY® (BD Series) And GEL-SLIDE (CD Series)**

Same as the Gel-Box, the Gel-Tray and Gel-Slide products are intended for manual applications in which the devices are loaded and unloaded using tweezers or by fingers. The Gel-Pak BD and CD series of pocketless trays are both configured as a 2" carrier stored in a protective plastic hinged box. The Gel coating is applied directly to the surface of the plastic tray (BD Series) or glass slide (CD Series).

These products offer the same functionality as the Gel-Box, however the plastic tray or glass slide can be easily removed from the box allowing for convenient handling when loading or unloading fixtures are being used.

The Gel-Slide (coated glass slides) is designed for higher temperature applications such as bonding and reflow where a plastic tray will not work. The CD slide has a temperature capability up to 220°C. The CD glass slides are also ideal for backside inspection due to their optical clarity.

Both the Gel-Tray and Gel-Slide products are available in the standard retention levels (X0, X4, X5, and X8) to accommodate variations in device size, weight, and surface roughness.

The protective 2" hinged boxes are available in transparent styrene (T), conductive black (C) and antistatic (AS) materials. The boxes, trays, and slides may be customized with a print pattern (grid) or company logo. Standard available Prints can be viewed at Gel-Tray/Gel-Slide Print options

► Polishing Cloths

We offer a wide range of polishing cloths which are ideally suited for the preparation of metallographic specimens and other materials needing an extremely fine finish. They are available in a Pressure Sensitive Adhesive (PSA) as well as Plain Backing (PB); with 2½" diameter hole on the center or No Hole (N/H).

► Billiard***

100% virgin wool sheared pile. Recommended for intermediate and final polishing steps.

Cat. #	Description	Pack
50300-10	Billiard, 10" x N/H, PB	5/pk
50300-08	Billiard, 8" x N/H, PSA	5/pk

► KemPad*

A non-woven textile cloth which is both oil and water resistant. Recommended for intermediate and final polishing with diamond abrasive compounds. Excellent flatness.

Cat. #	Description	Pack
50310-05	Kempad, 8" x N/H, PSA	5/pk
50310-15	Kempad, 8" x 2½", PSA	5/pk

► Glendur*

A fine stainless steel mesh on an aluminum foil polyethylene backing. Extremely durable material and, excellent removable rate when used with a diamond compound in the 45 to 60 micron range. Recommended for coarse and intermediate polishing.

Cat. #	Description	Pack
50332-05	Glendur, 8" x N/H, PSA	5/pk

► Nylon

A durable napless nylon weave. It provides excellent intermediate polishing on most materials

Cat. #	Description	Pack
50314-05	Nylon, 8" x N/H, PSA	5/pk
50314-15	Nylon, 8" x 2½", PSA	5/pk

* Available with PSA backing only

** Available with Plain backing only

*** Available with PSA and or Plain backing

► Glenco***

This flocked cloth is made by binding a rayon flock to a woven cotton backing; it is the most popular in our line. It is excellent for Final polishing when used in conjunction with diamond or alumina polishing compounds.

Cat. #	Description	Pack
50318-05	Glenco, 8" x N/H, PSA	5/pk
50318-15	Glenco, 8" x 2½", PSA	5/pk

► Spec-Cloth***

A long napped rayon flock with a plastic barrier. This is a finer version of our Glenco cloth especially designed for superior final polishing. For best results, use with our diamond polishing compound.

Cat. #	Description	Pack
50320-05	Spec-Cloth, 8" x N/H, PSA	5/pk
50320-15	Spec-Cloth, 8" x 2½", PSA	5/pk

► Silk**

100% pure woven silk for intermediate, final, or skid polishing on friable materials.

Cat. #	Description	Pack
50312-05	Silk, 10" x N/H, PB	5/pk

► Final B*

This cloth has been especially designed for long life. Made from a rayon flock on a cotton canvas backing. It is recommended for all final polishing.

Cat. #	Description	Pack
50334-05	Final B, 8" x N/H, PSA	5/pk
50334-15	Final B, 8" x 2½", PSA	5/pk

► Diamond Lapping Film

A selective diamond particle resin bonded to a uniform 3-mil polyester film backing.

Excellent for polishing samples with differing hardness. Ideal for the preparation of cross sections for SEM/TEM analysis. Comes in 8" and 12" discs with a plain back (P/B) or pressure sensitive adhesive back (PSA).

Micron	Diamond Lapping Film				Pack

➤ Final Finishing Film

➤ True Blue™ Film

True Blue™ film is produced with a proprietary process combining a unique mixture of abrasive particle sizes and shapes that are bonded to a film backing which enable the film to produce finer surfaces than are commonly found in similarly graded micron films. True Blue™ film is typically used after the 1 micron diamond lapping film step and provides a flat, nearly scratch-free surface.

➤ Final Green™ Film

Final Green™ film is produced using a unique process, which is different from any other type of abrasive film. This process produces a film that is capable of removing even the finest scratches at the final stage of polishing. Final Green™ film is typically used after True Blue™ film and produces an ideal sample surface for analysis.

All films are 8" diameter, and available with either plain back (P/B) or pressure sensitive adhesive (PSA)

➤ Polishing Materials

➤ Alumina Powder:

EMS's Alumina Powders are accurately controlled for all specs and particle size distribution, assuring you the best polishing results. The following micron sizes are available: 0.05, 0.3, and 1.0.

TYPICAL APPLICATIONS ARE:

- Precision Optics
- Silicon Wafers
- Acrylic lenses
- Metallographic Sections
- Ferrite Components
- Electro-Optical Crystals
- Gem Stones

Type DX Alumina Powder is specially treated to reduce the number of agglomerates (group of particles in each grade of manufactured alumina). The result is fast polishing and improved quality of the finished products.

Type N Alumina Powder is recommended when these improvements are not necessary.

Cat. #	Description	Size
50360-01	Type N, Alumina Powder, 0.05µm	1 lb
50360-05	Type N, Alumina Powder, 0.3µm	1 lb
50360-10	Type N, Alumina Powder, 1.0µm	1 lb
50361-01	Type DX, Alumina Powder, 0.05µm	1 lb
50361-05	Type DX, Alumina Powder, 0.3µm	1 lb
50361-10	Type DX, Alumina Powder, 1.0µm	1 lb

➤ Diamond Powder

Made from synthetic diamond.

Cat. #	Description	Qty
50375-01	Diamond Powder, 0.1µm	10 carats
50375-02	Diamond Powder, 0.25µm	10 carats

50260-23	Silicon Carbide Powder, 23µm	11b
50260-35	Silicon Carbide Powder, 35µm	11b
50260-42	Silicon Carbide Powder, 42µm	11b
50260-50	Silicon Carbide Powder, 50µm	11b

► Boron Carbide Powder (B₄C)

Boron Carbide is one of the hardest materials known, ranking third behind diamond and cubic boron nitride.

- Extreme hardness, (Knoop 100g: 2900-3580 kg/mm²)
- Good chemical resistance
- Good nuclear properties
- Low density (2.52 g/cm³)

Due to the hardness, boron carbide powder is used as an abrasive in polishing and lapping applications.

Cat. #	Description	Qty
50510-08	Boron Carbide Powder, 8µm	1 lb
50510-10	Boron Carbide Powder, 10µm	1 lb
50510-14	Boron Carbide Powder, 14µm	1 lb
50510-18	Boron Carbide Powder, 18µm	1 lb
50510-23	Boron Carbide Powder, 23µm	1 lb
50510-35	Boron Carbide Powder, 35µm	1 lb
50510-42	Boron Carbide Powder, 42µm	1 lb
50510-50	Boron Carbide Powder, 50µm	1 lb

► Aluminum Oxide Powder - Al₂O₃

These are abrasive powders that are prepared from aluminum oxide, offering excellent coarse and intermediate polishing, with fast results.

Cat. #	Description	Size
50362-03	Aluminum Oxide Powder, 3.0µm	1 lb
50362-05	Aluminum Oxide Powder, 5.0µm	1 lb
50362-09	Aluminum Oxide Powder, 9.0µm	1 lb
50362-15	Aluminum Oxide Powder, 15.0µm	1 lb

► Alumina Slurry

These suspensions are water-based and contain no additives, which may interfere with polishing or contaminate the sample. All slurries are very stable and alumina is evenly dispersed. Excellent for the finest finishes

Cat. #	Description	Size
50368-10	Alumina Slurry, 0.05µm	6 oz
50368-20	Alumina Slurry, 0.3µm	6 oz
50368-30	Alumina Slurry, 1.0µm	6 oz

► Colloidal Alumina

As an acidic dispersion, Colloidal Alumina is a chemical-mechanical action, that provides superior surfaces on germanium, silicon, gallium arsenide, zinc sulphide, fluorides, sapphire, ferrite's and silicon carbide. Low scatter finishes can be obtained on pure metals such as nickel, tungsten, copper, beryllium, steel and aluminum. Epoxy resin materials and plastics have also been successfully polished with this versatile colloidal dispersion.

Properties: pH: 3 - 3.5; solids: 20%; viscosity: thixotropic.

Application: Depending upon the application, Colloidal Alumina can be used full strength or diluted. Dilution up to 1:1 or higher with deionized water is recommended. Polyurethane and short nap cloths are recommended. However, most commonly used laps and pads are compatible with colloidal alumina.

50365-05	Colloidal Alumina	1 pt
50365-06	Colloidal Alumina	1 gal

► Colloidal Silica

This non-crystallizing Colloidal Silica is made to be user friendly. It eliminates the problems that are caused by drying or freezing that are associated with other colloidal silica products which are used for chemical/mechanical polishing.

Colloidal silica is a first choice silica dispersion for optimizing polishing results such as silicon, fused quartz, fused silica, lithium niobate, YAZ, GGG, alexandrite, sapphire and many others.

Properties: pH: 9.6 - 9.9; Particle size : 20-60 nm; Solids: 40%; Viscosity: 20-40 cp.

Application: Colloidal silica can be used full strength or diluted. Dilution to 1:1 or higher with deionized water is recommended. Polyurethane and short nap cloths can be used.

50366-05	Colloidal Silica	1 pt
50366-06	Colloidal Silica	1 gal

Introducing Graphene, the ideal support film for electron microscopy.

Graphene is a single atomic layer of carbon atoms tightly packed in a two-dimensional honeycomb lattice. This novel material is atomically thin, chemically inert, consists of light atoms, and possesses a highly ordered structure. Graphene is electrically and thermally conductive, and is the strongest material ever measured.

For more information, see pages 140-141 >>>>

► Diamond Compounds

With great experience, technical knowledge, and modern facilities, we are able to manufacture superior diamond compounds and provide reliable service to every one.

Glennel® diamond products are specially formulated to help you prepare surfaces that are usually difficult to polish and require precision finish. To satisfy today's demand the diamond compounds must be complex with near perfect tolerances as is ours.

Types of Diamond:

We use three basic types of diamonds: natural monocrystalline, synthetic monocrystalline, and synthetic polycrystalline. Typical sizes range from 1/10µm to 60µm

MONOCRYSTALLINE diamonds provide a cost effective means for good stock removal and finish. The natural form has a blocky shape with a smooth surface. Synthetic diamonds have a slightly irregular shape with multiple edges. Precision grading and high quality standards guarantee consistent shape and size. This consistency and unique shape make this a popular diamond for many production-lapping applications.

POLYCRYSTALLINE diamonds are recommended for microscopy, materialography, and where surface finish is extremely critical. We use the highest quality polycrystalline diamonds, Dupont Mypolex(r). It has a uniform blocky shape with a rough surface. Precision micro fractures built into each particle provide uniform and consistent fracturing under stress.

Ultra-Precision Grading and Shaping of all Micron Sizes

Virgin Natural – Monocrystalline

Synthetic – Monocrystalline

Synthetic – Polycrystalline

► 1. Diamond Paste

Glennel® UB Formulation is excellent for most applications where a diamond compound is desired. It is soluble in either water or oil and works with all common extenders. UB compound is recommended for polishing laboratory specimens and lapping of materials such as carbide, ceramic, sapphire, composites, ferrite, and silicon.

Glennel® UC Formulation is an oil soluble compound recommended for finishing wire dies, molds, cold heading dies, and general shop applications where diamond compounds are required. UC provides fast cutting action and superior finish. Meant to be used with our Formula C extender for maximum efficiency.

Glennel® OS Formulation is an oil soluble compound designed for lapping large areas of hard material. Use alone or with an extender it cleans up easily, provides aggressive stock removal and an outstanding finish.

Ordering: All Diamond Pastes are available as a standard in 5 g size dispensing tube UB or UC and UBS or UCS. 18 g sizes are available upon request.

2. Diamond Suspension

Glennel® Diamond Suspension assures a consistent, uniform viscosity and dispersion of diamond without any shaking or stirring. The proprietary formulation guarantees that the particles will stay suspended indefinitely. It is ideal for automatic polishers and applications that require changing operators.

A versatile, water based suspension designed for most production applications. This special formulation provides:

- Excellent lubrication
- Uniform fast lapping action
- Maximum cutting action
- Compatible with all common extenders.

Ordering: All Diamond Suspensions are packed in 400g bottles and have Medium Concentration prepared with Premium Polycrystalline Diamond in either Propylene Glycol (Oil based) or Water based formulas

Diamond Particle Size	Oil Based Cat. #	Water Based Cat. #

3. Diamond Spray

Glennel® Diamond Aerosol Spray provides unsurpassed cutting action and finish. The inverted nozzle provides safe and easy access for difficult to reach areas while ensuring that every diamond particle is used. Special formulations allow the carrier to evaporate quickly, leaving a very uniform dispersion of diamond. This is especially useful when an operation requires a dry polishing cloth.

Ordering: Our Diamond Spray is available in 5 oz cans.

Diamond Particle Size	Polycrystalline Cat. #

4. Lapping Solutions

- **Glenoil Lube** - Lapping vehicle is the ideal lap oil for all Glennel® UB Compounds and Diamond Sprays. It assures continued separation of diamond particles and constant removal of lap debris.
- **Formula C** is made especially for oil soluble compounds, such as Glennel® UC and US listed above. This penetrating formula is specially designed to enhance cutting action and leave a superior finish

- **Formula B** is a universal lapping vehicle, compatible with both water and oil soluble compounds. It is ideal in an environment where materials change constantly. This very versatile formulation allows you to change materials and compounds and still provides excellent lubricity and cutting action.

50376-01	Glenoil Lube	16 oz
50376-05	Formula C Lube	16 oz
50376-10	Formula B Lube	16 oz

► Water Soluble Coolant

Use with a dilution 25:1 with water to cool saw blade or belt during cutting.

50378-01	Water Soluble Coolant	1 qt
----------	-----------------------	------

► SiC Dressing Stick

Made from silicon carbide. Use for cutting blade dressing.

50379-01	SiC Dressing Stick	1 stick
----------	--------------------	---------

► Premium Pregrinding Wet or Dry Abrasive Papers (Discs)

We offer the finest wet or dry abrasive discs for sample preparation with the following features:

- **Premium Resin Bonding System** for longer wear rates as well as for wet or dry operation.
- **Special adhesive on PSA*** backed discs that eliminates the need to transfer to plates.
- **Uniform mineral size.**
- **Pull tabs on all PSA backed discs** for easy use.
- **Large labels for easy product identification.**

* PSA: Pressure Sensitive Adhesive

Available in 9 different grit sizes, ranging from coarse to fine, on plain back or water resistant pressure sensitive adhesive back.

Available in 8" diameter discs as a standard, and 12" discs available upon request.

8" (203mm) Silicon Carbide Discs (SCD), Wet or Dry Plain Back		
50250-01	8" SCD, Plain Back, 60 Grit	25/Bx

► Diamond Discs

Dialok (Diamond Discs consists of a flat, stainless steel backing with sharp, blocky diamond particles electroformed onto the disc. The special hard nickel alloy that is used in Dialok is bonded rigidly and it locks the diamond particles in the disc thus providing fast cutting of all hard materials. The sharp particles cut cleanly with no edge rounding. The discs are supplied with pressure sensitive adhesive backing (PSA).

8" (203mm) (PSA) xN/H; Full Coat

► Precision Diamond Wafering Blades

(Precision Diamond Cut-Off Wheels)

These bonded blades are constructed of an inner metal core and an outer rim, this rim is bonded with diamond particles. These blades come in high and low concentrations of diamond particles, to handle various sectioning requirements:

- High Concentration (H/C) for general laboratory use, either low or high saw's speed.
- Low concentration (L/C) for sectioning hard and brittle materials, such as ceramics, silicon, glass, minerals.

► Tools

► Mini-Tools; Micro-Tools

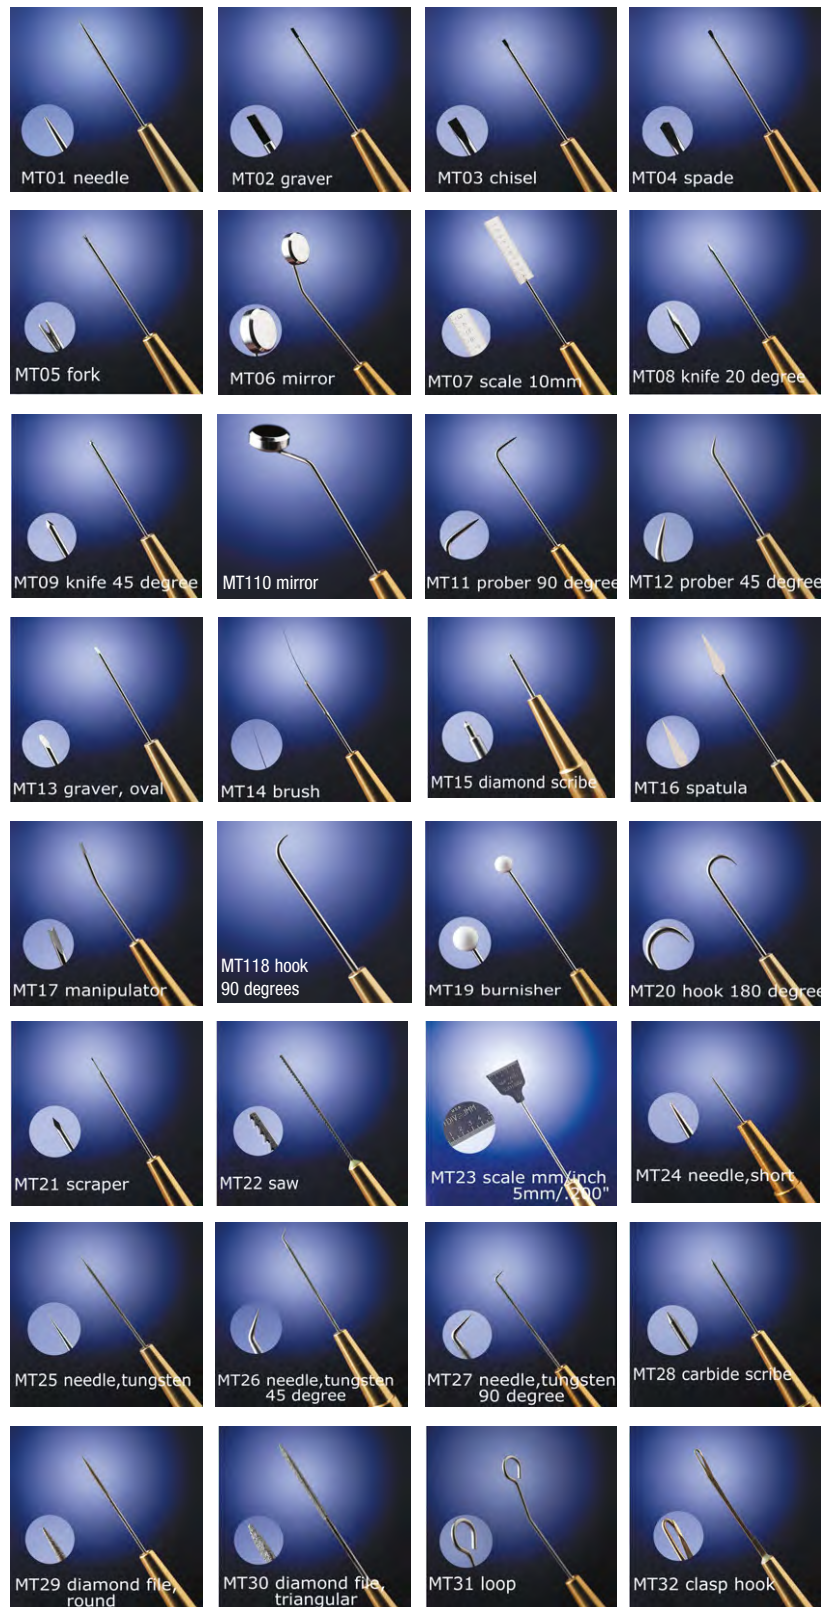

These tools are designed for anyone who is engaged in microscope work, miniature applications as well as specimen manipulation. Micro-Tools are the smallest known precision tools available for the laboratory and micro electronics industry. Micro-Tools are available in 32 different tip configurations with interchangeable handles. Micro-Tool consists of a threaded handle (MT1), and an interchangeable threaded base with tool tip. Tip material is hardened tool steel unless otherwise noted.

Ordering: Please specify Tip Size when ordering.

► Tools:

► Standard Micro-Tool Set - Assorted Sets

► A. Special Lab Set 6X

A special Minitool Laboratory set 6X contains all 32 standard micro-tools (0.5mm (0.020") nominal diameter) as well as other sizes (0.25mm or 0.12mm nominal diameters), 6 interchangeable MT-1 handles and one tool sharpening stone. Each set comes with a hand-milled finished case made from solid walnut. For safety and convenience, micro-tools are placed into individual PTFE bushings in a pivoted tool rack, which automatically swings into position when the lid is opened and retracts when closed. Six tool handles are rested in milled cavities.

62092-05 Micro-Tool Lab Set 6X, 0.5mm set

Select your own Micro-Tool Set

All standard micro-tools (0.50mm nominal diameter) as well as other sizes, 0.25mm or 0.12mm, can be selectively ordered to make up a set of your choice. Simply select the tools you desire, add the alderwood case (if the number of tools are equal or less than 8 tools) or solid walnut case (if the number of tools are more than 8 and up to 32).

If you chose the 0.25mm diameter, tools will be shipped in a special single tool container along with a storage case and handle.

► B. Standard Micro-Tool Sets (Tool size 0.5mm diameter)

Micro-Needle Probe Set

This set contains :

Tool #1	Micro-needle, long	Tool #11	Micro-needle, 90 degree
Tool #12	Micro-needle, 45 degree	Tool #18	Micro-hook, 90 degree
Tool #20	Micro-hook, 180 degree	Tool #24	Micro-needle, short
Tool #25	Ultra micro-needle, straight	Tool #15	Micro-diamond-scriber
MT-1	Micro-tool handle	MT-case	Micro-tool storage case

62093-01 Micro-Needle Probe Set set

Microscopist's Set

This set contains:

Tool #1	Micro-needle, long	Tool #3	Micro-chisel
Tool #8	Micro-knife, 20 degree	Tool #15	Micro-diamond-scriber
Tool #16	Micro-spatula, flexible	Tool #18	Micro-hook, 90 degree
Tool #23	Micro-scale, 2-sided: metric & inch	Tool #25	Ultra-micro-needle, straight
MT-1	Micro-tool handle	MT-case	Micro-tool storage case

62093-03 Microscopist's Tool Set set

Micro-tool Set (with 32 tools)
62092-05

Micro-Cutting Tool Set

This set contains:

Tool #2	Micro-graver, 3 sided	Tool #3	Micro-chisel
Tool #4	Micro-spade	Tool #8	Micro-knife, 20 degree
Tool #9	Micro Knife	Tool #13	Micro-graver, oval
Tool #21	Micro-scraper, triangular	Tool #28	Micro-scriber, carbide
MT-1	Micro-tool Handle	MT-case	Micro-tool storage case

62093-02 Micro-Cutting Tool Set set

Placement & Manipulating Set

This set contains:

Tool #5	Micro-fork	Tool #7	Micro-scale, 10mm
Tool #12	Micro-prober, 45-degree	Tool #14	Micro-brush
Tool #16	Micro-spatula	Tool #17	Micro-manipulator
Tool #18	Micro-hook, 90-degree	Tool #26	Ultra-micro-needle, 30 degree bent
MT-1	Micro-tool handle		
MT-case	Micro-tool storage case		

62093-04 Placement & Manipulating Tool Set set

► Hardwood Tool Case Only

A solid walnut hand-milled finished case. Designed to store 32 tools and 6 handles.

62092-CS Hardwood 32-Tool Case only each

► Alderwood Tool Case Only

Designed to hold 8 or less micro-tools and one MT handle.

62093-CS Alderwood 8 -Tool Case only each

► Tools:

► Stainless Steel Micro Tools

All tools are forged from the finest quality stainless steel and are precision hand ground, lapped, and polished. These tools are well suited for most applications in the field of microscopic science which demands the ultimate in precision miniature tools. Each tool may be ordered separately or in a set consisting of all 8 tools with mounted tips, one MT handle and one alderwood storage case.

62096-01	Micro Needle, straight Tapered from .5mm to a sharp tip	each
62096-02	Micro-Needle, bent 45 degree Bent section is 0.5mm long, sharp tip	each
62096-03	Micro-Needle, bent 90 degree Bent section is 0.5mm long, sharp tip	each
62096-04	Micro Knife, 20 degree Slanted design, 1.3mm cutting edge	each
62096-05	Micro-Chisel 0.5mm cutting width, sharp edge	each
62096-06	Micro-Hook. Guarded type, anti-snag guard, 0.3mm. ID, 1mm OD including clasp	each
62096-07	Micro Mirror. Polished stainless steel, 4.7mm diameter, 0.5mm stainless steel handle	each
62096-08	Micro-Ruler. Precision etched stainless steel with 0.5mm handle. Available in Metric or English	each

► Carbide Micro Cutting Tools

These unique micro cutting tools are made using the latest grinding and polishing technology producing the highest quality tool on the market today. Tools are available in solid carbide with the following tip sizes: 0.5mm (.020"), 0.25mm (0.010") and 0.12mm (.005") diameter. Tool Handles are inter-changeable in tool handle MT1. Each of the tool tips and handle can be ordered separately or in sets. Standard sets come with hardwood instrument cases and include the eight tool tips listed and one handle MT1.

Ordering:

► Assorted Carbide Tool Sets

Each set comes with a MT-1 Handle, instrument case, and 8 tips listed above.

62095-12	Carbide Micro-Tool Set 0.12mm	set
62095-25	Carbide Micro-Tool Set 0.25mm	set
62095-50	Carbide Micro-Tool Set 0.5mm	set

The following tip sizes .025mm (.001") and 1.0mm (.040") are available in a set only.

62095-02	Carbide Micro-Tool Set .025mm	set
62095-10	Carbide Micro-Tool Set 1.0mm	set

Note: The Carbide tool size 0.025mm is very fragile. The set contains only 7 tools (no tool #2) and these tools need to be stored only in the individual protection tubes – no storage box

► Needle Probe Set

Set consists of one lightweight precision handle and four interchangeable tools. Can be used for manipulating micro samples, scribing, spring assembly, and probing. The handle is finely balanced, non-rolling gold anodized with split collet and a knurled lock nut. The length is 120mm (4.7"). Precision forged and ground tools are hardened and nickel plated tool steel with sharp tips.

62130-00	Needle Probe Set	set
62130-01	Replacement Probe #1	each
62130-02	Replacement Probe #2	each
62130-03	Replacement Probe #3	each
62130-04	Replacement Probe #4	each
62130-HD	Probe Handle	each

► Miniature Measuring Scales

These unit measuring scales may be used directly under a microscope or magnifier for quick measuring of small specimens, parts, grooves, slots, line widths, holes, chambers, etc. Precision fabricated from stainless steel, the scales are welded to bendable stainless steel shafts and mounted in color coded, non-rolling handles. Each scale is individually packed in a plastic tube. Overall length of the scale is 83mm (3¼"), including handle.

1. Scale #1: Calibrated to 0.1mm, 5mm total measurement		
62135-01	Mini Scale #1	each
2. Scale #2: Calibrated to 0.005", 0.2 inch total measurement		
62135-02	Mini Scale #2	each
3. Scale #3: Calibrated to 0.1mm, 10mm total measurement		
62135-03	Mini Scale #3	each

► Mini -Tool Set

► 1. Mini Tool Set A

5 piece set includes scriber, chisel, knife, triangular scraper and oval graver - each razor sharp. Hexagonal anodized aluminum handles, 140mm (5.5") long. Hardened tool steel tips, 1.5mm (1/16") diameter, are easily sharpened or pointed. Comes with a protective plastic case.

62097-10	Mini Tool Set A	set
62097-11	Replacement Scriber	3/pk
62097-12	Replacement Chisel	3/pk
62097-13	Replacement Knife	3/pk
62097-14	Replacement Triangular Scraper	3/pk
62097-15	Replacement Oval Graver	3/pk

► 2. Mini Tool Set B

Contains eight tool tips with integrated, color-coded handles which are light-weight, non rolling and well balanced. Overall tool length is approximately 127mm (5"). Tip size is 0.8mm (.030"). Tip material is hardened tool steel, nickel plated.

Set contains: Straight Micro-Prober, 30° Micro-Prober, 90° Micro-Prober, Micro-Chisel, Micro-Knife, Micro-Graver, Micro-Diamond Scriber and, Micro-Measuring Scale.

62097-20	Mini Tool Set B	set
-----------------	-----------------	-----

► 3. Mini Tool Set C

Consists of three different tools: Straight Scriber with sharp tip, Sharp Triangular Scraper, Bent Prober with sharp tip - all with integrated hexagonal aluminum handles. Tip material is hardened steel, nickel plated. Tip size is 0.8mm by 25mm long. Overall length of tools is approximately 140mm (5.5")

62097-30	Mini Tool Set C	set
-----------------	-----------------	-----

For Our Entire Selection of Micro Tweezers, Forceps and Tools, See Tweezer section, pages 813-819 >>>>

► Diamond Tip Scribers/Scribers

Sturdy scribers are in wide use throughout the laboratory. It leaves a permanent marking on virtually any surface, including metal, glass, or plastic. Each Scriber features a hexagonal aluminum pencil shaped body, mill finish, natural diamond tip and protective cap. Different styles are available to fit all of your needs.

► A. Straight Head:

Overall length 6", Shank Length 1/8", Handle 1/4" x 5 1/2", 60° tip finish.

70030	Straight Tip Scriber	each
70031	Straight Tip Scriber	6/lot

► B. Angled Head:

Overall Length 6 1/2", Shank 1/6" Dia. x 1/4" Long, Handle 1/8" x 6" Long, 75° tip finish.

70032	Angle Tip Scriber	each
70033	Angle Tip Scriber	6/lot

► C. Retractable Scriber:

This is a high quality chrome pen that features appearance as well as utility. The diamond is mounted in a stainless steel tip and refills are available. The tip is finished at a 60° angle.

70036	Retractable Scriber	each
70037	Retractable Scriber Refill	each

► High Precision Fine Diamond Scriber

This diamond scriber is the ultimate scribing instrument offering the most precision for the most delicate applications. It is available in straight or bent configurations.

APPLICATIONS INCLUDE:

- Fine scribing under the microscope - for silicon wafers and glass coverslips
- Precision scribing and repairing - for thin film circuits and microcircuits, etc.

These diamond mountings are 0.8mm diameter with a reduced shank size of 0.5mm or 0.25mm diameter, which holds the diamond stylus. The natural diamond has a 60° included angle and a 0.12mm tip radius. The integrated 6.35mm anodized hexagonal (non-rolling) aluminum handle has a positive finger grip in the form of grooves for easy control and non-slippage. Each diamond scriber is packaged in a protective plastic tube.

Cat. #	Configuration and Shank Size
62107-ST	Straight Mounting, 0.5mm diameter
62107-BT	Bent Mounting, 0.5mm diameter
62108-ST	Straight Mounting, 0.25mm diameter
62108-BT	Bent Mounting, 0.25mm diameter

► EMS Engraving Tool

Permanently be able to mark all of your important tools and samples. The Engraver comes with a Battery Pack and is operated on two "AA" Batteries

Our EMS Engraver Engraves Test Tubes, Bottles, Racks, Keys etc as well as anything made from glass, metal, stone as well as bone. Engravings are permanent and will not disappear in the presence of chemicals and solvents. The Engraver is 7" in Height (17.8cm)

We offer a Stand for the EMS Engraver that is made from polypropylene and it measures (3 1/2" x 3 3/4").

Cat. #	Description	Qty.
72096-01	EMS Engraver	Kit
72096-02	EMS Engraver Tool Stand	Kit

► The Glascribe® Pen

The Glascribe® Pen, with retractable tungsten carbide tip, lets you inscribe on glass, ceramics, and plastic. The pen has a pocket clip, so it is always handy when needed.

Cat. #	Description	Qty.
72151	Glascribe® Pen	each

► Tungsten Point Lab Pen

Permanently mark Glass Slides and all glass labware

These unique EMS pens have a sharp tungsten carbide tip which is able to etch glass, ceramic, and even plastic. The tip retracts for safe storage and it measures 9.8mm in diameter and the pen is 137mm long.

Cat. #	Description	Qty.
41148	Tungsten-Point Lab Pen	each

► Rotary Diamond Micro-Engraver Pen

An amazing tool that may be used to mark samples, engrave tools, indicate a sample area for finding in the SEM, deburring and so much more.

Easy to handle and control, this micro engraver is ideal for detailed engraving on almost any surface--wood, metal, ceramic, glass and more! The micro engraver features a contoured grip for comfort and control and a precision-ground stainless steel bit with a diamond point tip. This diamond-tipped ballpoint micro engraver is also as small as a pen, so it easily fits in your pocket or purse for easy transport.

- Contoured grip for comfort and control
 - Pen-type design fits in a shirt pocket or purse and goes anywhere
 - Precision-ground stainless steel bit with diamond point tip
 - Requires two AAA batteries, included
- Measures: 6 1/4" Product Weight 1.86 lbs.

Cat. #	Description	Qty.
50465-15	Rotary Diamond Micro-Engraver Pen	each

► High Precision Diamond Scribing Tools

A newly designed diamond scribing tool set containing eight precision natural diamond scribes in various sizes and configurations. This set is perfect for precision work in microscopy. The set consists of eight diamond tips, 3 mm in diameter and are mounted in interchangeable tool cones and an MT-1 tool handle. The tool and handle are all housed in a hardwood instrument case. Individual scribers can be purchased separately.

62105-S1	Straight tip, .02" (.50mm) dia. by .06" (1.5mm) tip length	each
62105-B1	Bent tip, .02" (.50mm) dia. by .60" (1.5mm) tip length	each
62105-S2	Straight tip, .01" (.25mm) dia. by .06" (1.5mm) tip length	each
62105-B2	Bent tip, .01" (.25mm) dia. by .06" (1.5mm) tip length	each
62105-SE	Straight extended tip, .02" (.5mm) dia. by .2" (5.0mm) tip length. Good for tight areas	each
62105-BE	Bent extended tip, .02" (.5mm) dia. by .2" (5.0mm) tip length. Good for hard to reach areas	each
62105-HS	Straight, heavy duty tip, .03" (.8mm) dia. by .12" (3.1mm) tip length	each
62105-HC	Bent, heavy duty tip, .03" (.8mm) dia. by .12" (3.1mm) tip length	each
62090-00	MT-1 Tool Handle, 4.75" (112mm) long, gold anodized	each
62105-00	High Precision Diamond Scribing Tools, (8 tools & handle)	set

► Precision Pin Vise Handle and Diamond Stylus

This high precision pin vise handle is machined from the finest material, non-rolling gold-anodized aluminum, which makes it lightweight and versatile. It comes complete with a precision drawbar for positive collets chuck clamping. It features an 8mm (0.31") hexagonal barrel dimension by 100mm (4") long (overall length is 115mm fully assembled) and it has a knurled finger-grip for positive precision control for handling and tool manipulation.

The vice is supplied with a standard collet chuck opening of 2mm (0.78") diameter and will hold a selection of our specially designed tools - and collets adapter 0.8mm (0.003") for diamond stylus chucking.

Cat. #	Description	
62140-00	Precision Pin Vise & Collets	each
62140-50	Diamond Stylus, 0.5mm	each
62140-25	Diamond Stylus, 0.25mm	each

Following are Diamond Scribing Tools, with a 0.80mm (0.003") diameter mounting shank, for use with above Precision Pin Vise and Collets:

Cat. #	Description and Configuration	
62140-02	Bent tip scriber, 0.010" (0.25mm) Diameter. 1.5mm tip length	each
62140-03	Straight extended tip scriber, 0.020" (0.50mm) diameter by 0.200" (5.0mm) tip length. This tool is a must for reaching into and in between high density components.	each
62140-04	Bent extender tip scriber, 0.020" (0.50mm) diameter by 0.200" (5mm) tip length. Use for tight places	each
62140-05	Straight tip scriber 0.020" (0.50mm) diameter by 0.60" (1.5mm) tip length.	each
62140-06	Bent tip scriber, 0.020" (0.50mm) diameter by 0.60" (1.5mm) tip length	each
62140-07	Straight tip scriber, 0.010" (0.25mm) by 0.60" (1.5mm) tip length	each
62140-60	Set of 6 Diamond Scribing Tools and Pin Vise	set

► Tools:

► Micro Ruler: Extended Reach

FEATURES:

- Precision etched, non-glare ruler made from surgical stainless steel, only 3 mm wide. The ruler is calibrated in 0.1 mm graduations, 10 mm total range.
- Stainless steel handle 230 mm long. Balanced and angled for the ultimate in flexibility able to reach into areas which are impossible for other measuring devices.
- Available with or without a stainless steel autoclave case. Total weight of the ruler is 26 g.
- Applications include microscopy, chemistry and anywhere precise measurement in clean and very confined areas are of critical importance.

Cat. #	Description	Pack
62136-ER	Ext. Reach Micro Ruler only	each
62136-ERC	Ext. Reach Micro Ruler w/ Case	each

► Micro Mirror - Extended Reach

It is of similar construction with the Micro-Ruler (above), but comes with a 2.5x magnify Mirror - made from polished stainless steel, 4.8 mm diameter. Overall length is 230mm

Autoclavable Case is available as an option.

Cat #	Description	Pack
62136-M	Extended Reach Mirror	each
62136-MC	Extended Mirror With Case	each

► Adjustable Saw Frame

A Swiss made saw frame lightweight and perfectly balanced. Its ergonomic wooden handle reduces fatigue and provides greater dexterity. Patented blade-lock design eases blade insertion and maintains perfect alignment which eliminates wobble and reduces blade loss during use. It measures 2¼ (70mm) deep and accepts saw blades up to 1.2mm diameter and 130mm long.

This Saw Frame may be used ideally with the Diamond Wire and Spiral Saw Blades listed on page 302.

Cat. #	Description	Qty.
72009	Deluxe Saw Frame	each
72009-10	Diamond Wire	10/pk

For our Complete line of tools, See our Tool Section, pages 756-852. >>>>>

► Micro Sieve Set

This micro-sieve set consists of a stack of four interchangeable screen-holding sections, a catch pan, and a friction-fit cover. The entire unit is molded from polypropylene. All of the parts of the set are very easy to take apart for changing the mesh insert or for cleaning. Complete with the unit are phosphor-bronzed mesh inserts in the following sizes: 25, 35, 45, 60, 80, 120, 170, and 230 mesh. The holding sections are 2" (51mm) IDx6" (152mm)H.

50110-00	Micro Sieve Set	set
----------	-----------------	-----

Replacement Mesh Inserts

A set of 8 phosphor-bronzed screen inserts in the following sizes: 25, 35, 45, 60, 80, 120, 170, and 230 mesh.

50111-00	Replacement Mesh Inserts	8/set

► Tools:

► Arkansas Sharpening Stones

These stones are natural with close density oil-tones, and excellent qualities that make them the stone unequaled for sharpening tools such as gravers, knives, etc. Comes in a cedar wood box and they are available in two types: translucent (extra fine); and hard (fine).

Catalog #	Description	
62082-00	Arkansas Sharpening Stone, Translucent, Size 4" x 2"x½" (102 x 51 x12.7mm)	each
62082-10	Arkansas Sharpening Stone, Hard (Fine), Size 6" x 2"x½" (152 x 51 x12.7mm)	each

► Diamond Sharpening Stone

This patented process of heat treatment which bonds the highest quality industrial grade diamond particles in a stainless alloy to a precision matched metal substrate, has been imitated, but has never come close to being duplicated. Our stone which is set on a walnut pedestal with a cover is available in 3 grades: F- fine grit (600); M - medium grit (270), and C - coarse grit (180). Stone size is 2"x6" (51mmx152mm)

62082-50	Diamond Stone, Fine Grit	each
62082-51	Diamond Stone, Medium Grit	each

► Optical Fiber Cleaving Tools

These precision hand held tools can be used for scoring and cleaving all types of optical fibers.

► 1. Carbide Cleaver Tool

Made from a solid carbide rod. It has two angled sides which intersects into a very sharp cutting edge of about 4mm (0.160") in length. The third angle is lapped on the very tip to prevent breakage. The carbide shank is mounted into a non-rolling hexagon shaped anodized aluminum holder. The carbide part is 2.0mm dia x 10.0mm long. Overall: 120mm long

► 2. Retractable Diamond Cleaver Tool

A ground and polished natural diamond which has a v90 degree included angle with a relief angle of 30 degrees. The cleaver is retained in a quality metal pen like casing with a pocket clasp. The diamond part is 1.5mm wide x 3.0mm long. The overall length is 133mm.

► 3. Retractable Sapphire Cleaver Tool

Ground and polished natural sapphire wedge with a 60 degree included angle. The cleaver is retained in a quality metal pen like casing with pocket clasp. The sapphire part is 2.0mm wide x 3.0mm long. The overall length is 133mm

62165-CC	Carbide Cleaver Tool	each
62165-DC	Diamond Cleaver Tool	each
62165-SC	Sapphire Cleaver Tool	each

► Precision Stainless Steel Tubing

EMS's new special precision stainless steel tubing has been developed to be used as a support and connector ferrules for optical fiber. Other applications include wire feeding, miniature sensor shielding, fluid mechanics, and miniature tool holding and fine instrument work.

Hole sizes are as small as 100µm (0.0039") – 300:1 length to hole diameter ratio. Hole sizes are available from 100µm to 1200µm. Standard outside diameter is 1.46mm (0.058"), standard length is 300mm (1.2")

TOLERANCES:

Outside Diameter: ± 0.02mm
Hole Diameter: ± 0.01µm
Length: ±0.1mm

Eccentricity Inside to Outside Diameter, within 0.01µm Concentricity Funnel to Bore Diameter less than 0.02mm Funnel Angle is 45 degree.

The following are available in Single Funnel (SF) and Double Funnel (DF), 1/pk

Electron Microscopy Sciences offers a full range of equipment used in materials preparation for a variety of technological fields. Electron microscopy, metallography, wafer lapping and polishing, failure analysis, crystal orientation, plasma processing, MEMS and many other applications are facilitated by our equipment. Please contact us or see our comprehensive website, which includes our complete line.

INSTRUMENTATION

► Professional Manual Micro Manipulator FX-117

This three axis micro-manipulator provides safe and efficient positioning of microtools.

All three vernier readings are graduated in 0.1mm increments. The X-axis, which holds the tool clamp with microtool, has an additional fine movement with 0.001mm graduations.

The FX117 employs rack and pinion drive, V-shaped guide ways and cross bearings, so movement is precise and repeatable. Contact parts are milled from hardened steel for optimum performance and long life. Design employs in-line control knobs clustered within a 8cm area in a single vertical plane resulting in quick and precise hand manipulation.

The stand, the FX117-01 has a dovetail adapter and mounting post. The optional adapter FX115-03 (Microtool holder) can also be used.

Specifications:

Movements:	X axis fine	10mm travel	0.01mm graduations
	X axis	37mm travel	0.10mm graduations
	Y axis	20mm travel	0.10mm graduations
	Z axis	25mm travel	0.10mm graduations

Weight: 1.8 lbs (6.1 lbs with stand)

Dimensions: H 140mm (220mm with stand)
W 100mm (145mm with stand)
D 60mm (165mm with stand)

FX-116 Heavy-Duty Stand with Dovetail Adapter & Mounting Pin

62100-15 Micro Manipulator FX-117 w/Stand each

► Disc Punch

The EMS 310 Disc Punch is designed to prepare ductile metals and soft materials for TEM without mechanical distortion. Its solid construction and high tolerance design allows a maximum force to be used with difficult materials while maintaining specimen quality. A specimen alignment tool is included which guarantees maximum specimen yield and precise specimen location. After the disc is punched it is automatically selected from the die and collected in an easily removable tray.

FEATURES:

- Preparation of TEM samples without distortion
- Alignment fixture included for maximum yield and precise specimen location
- Solid construction for long term use without loss of precision
- Dimensions: 8"(W) x 8"(H) x 2.5"(D); Weight: 5 lb. Disc size: 3.0mm

50125-10	Disc Punch Set	set
Replacement parts and products that are available for Disc Punch:		
50125-50	Specimen Holder Base	each
50125-51	Specimen Holder	each
50125-52	Knurled Screw (to hold specimen holder to holder base)	each
50125-54	Specimen Tray	each

► Micro-Mill® Grinder

For fast, high-speed grinding of small samples from 20 to 50mm ($\frac{3}{4}$ " to 2"). The unit comes with a stainless steel or hard-faced blade which rotates at speeds up to 12,000 rpm and will successfully grind bauxite, bone, ceramics, coal, Devorda's alloy, fertilizer, filter paper, fly ash, frozen tissue, glass, grain, kaolinites, leaves, limestone, muscle tissue, pharmaceuticals, pigment blends, plastics, rocks, roots, seeds, slags, soil, teeth, wood, etc. The grinding chamber measures 2 $\frac{1}{2}$ " dia.x1" deep (54x25mm). Its overall dimensions are 5 $\frac{1}{2}$ "x7"x11"(H) (14x18x28cm). It comes with a 6 FT. (1.8m) 3-wire cord and grounded plug. Power: 115V, 60Hz or 220V, 60Hz.

FEATURES:

- The grinder operates only when the cover is latched and in place. This provides safety and prevents sample loss.
- The temperature of the grinding chamber can be maintained by means of built-in heat exchangers. $\frac{1}{4}$ " (6.4mm) tubing connections on the cover and housing accept tubes for circulating water, methanol/dry ice liquid, or liquid nitrogen.
- The cover, grinding assembly, and milling blade head are removable for easy cleaning.
- The aluminum housing has an epoxy finish and non-skid rubber feet.
- The control panel has an overload protection reset button and a pilot light.
- The 1/5 horsepower (150 watts) motor develops a torque of 30-ounce-inches (2.2 Kg-cm) at 12,000 rpm.

Ordering Information:

Micro-Mill® 1, with stainless steel blade, 0-5 minutes electrical timer with an ON position for continuous operation.

Micro-Mill® 2, with hard, stellate faced blade, with a momentary hold-down switch.

50100-01	Micro-Mill® Grinder 1, 115 V	each
50100-02	Micro-Mill® Grinder 1, 220 V	each
50101-01	Micro-Mill® Grinder 2, 115 V	each
50101-02	Micro-Mill® Grinder 2, 220 V	each
50104-01	Replacement Stainless Steel Blade	each
50104-04	Replacement Stellate-Faced Blade	each

► Microdrilling Systems

► 1. The Model L Microdrilling Machine

The Model L machine represents a new approach to efficient, low cost precision microdrilling. The L model employs standard spiral HSS micro-drills from 0.03mm to 0.50mm (0.0012" to 0.020") and solid carbide micro-drills from 0.10mm to 0.50mm (0.0039" to 0.020") diameter (and larger). These drills can be used for work on most metals and plastics.

The drill has a carbide faced interchangeable V-bearing frame in which the drill is held. A precision set-screw-type-pulley and an endless belt, together with the inclined drive motor design assure positive return of the drill to the "up" position.

Employing the V-bearing principle, the drill acts as its own spindle but will run much truer than in other holding devices such as collets or chucks. Micro-dial with a zero setting friction clutch provides 0.0075mm (0.0003") incremental feed. A returnable in-feed plunger is gently pressed for each increment set on the dial.

The Model L is available with optional equipment such as x-y positioning tables, vacuum chucks etc.

■ **Positioning Table, Model MD 025** travels 25mm and 50mm in x, y.

Supplied with 2 micrometers in mm or inches

■ **Vacuum chuck, Model MDC 040** assures positive holding

and accurate repeated placement of glass substrates by mean of 3 locating pins.

Specification:

- Machine Housing and Base:** Special alloy casting, table-balanced ground
- Machine Column:** 28.6mm dia (1 1/8") x 279mm (11") hardened & ground
- Drive Motor:** 24 VAC precision servo type
- Speed Control:** Variable 0 – 3500rpm, solid state (in machine base)
- Power requirement:** 115/230 VAC 45-400 Hz
- Vee Bearing Mount:** Two in-line vee-construction, frame with carbide bearing, interchangeable
- Drill Advancement:** Micro-dial and contact plunger, hand controlled
- Drill In feed:** Smallest increment 0.0075mm (0.0003")
- Total Drill Stroke:** 5mm (0.197")
- Drive Belt:** Special cast urethane, endless
- Drill Drive Pulley:** Drill drive pulley #2000-36
- Overall Dimensions:** 305mm x 457mm x 339mm (12" x 18" x 13")
- Shipping Weight:** 11 kg (25 lbs) domestic, 13.5 kg (30 lbs) foreign.

62088-L	Model L Micro Drilling Machine	each	62088-55	Vee-Bearing for L Model	each
62088-50	X-Y Portioning Table, MD 025	each	62088-56	Drive Belt Replacement for L Model	each
62088-54	Vacuum Chuck, MDC 040	each	62088-57	Drive Pulley for 1-254 Drill Bits	each

► 2. Micro Drill Bits – Series 1-254

A newly introduced sub-micron Grade spiral HSS Micro Drills – contains 9.5% cobalt for excellent cutting and minimum wear - designed for drilling very small holes with excellent chip removal properties, and for use with the Model L Drill Press above. These Drill Bits are available in small sizes of 0.03mm (30µm = 0.0012") diameter up to 0.50mm (500µm = 0.020") diameter, in increments of 0.01mm (10 µm = 0.004")

- Specifications:**
- 1mm (0.040") diameter shanks
 - 25mm (1.0") overall length
 - +/- 0.0005 (0.0002") shank & tip diameter tolerances

All catalog numbers are for each.

INSTRUMENTATION

► MultiLap™ Fish Otolith Polishing Tool - Model 195

In many materials preparation laboratories the need for high specimen throughput and precision made specimen preparation tools is a difficult bottleneck to correct. The Model 195 MultiLap™ is designed to grind and polish multiple specimens with precise control over each individual specimen. The fixture

incorporates up to 6 separate pistons which are used for holding the specimen during preparation and controlling the amount of material to be removed. The piston assemblies allow for specimens of up to 1" diameter to be polished in 10-micron increments. The specimen mounts also provide a means for viewing the specimen in transmitted light, enhancing detection of features that require a light transparent specimen. Wear resistant Delrin plastic legs provide support and are very gentle on many types of abrasive films and media. Overall, the Model 195 is a versatile and precise instrument for performing any precision lapping processes and is an excellent addition to any specimen preparation lab.

FEATURES:

- Tungsten carbide base resists wear and maintains sample planarity.
- Wide base ensures stability thereby minimizing sample damage and edge rounding.
- Wear ring is replaceable, on some fixtures, which extends the life of the fixture.
- Can be mounted in the Model 920 Lapping & Polishing Machine for semi-automatic processing.
- Micrometer depth control allows precise control over sample thickness.
- Precisely crafted stainless steel construction ensures long life and high precision.

Model 195 - 6 Position MultiLap™ Fixture includes:

- 1 x 6 Position MultiLap Base, (#50168-01)
- 6 x Piston Assembly, (#50168-02)
- 6 x Sample Holder Ring Mounts (#50168-03)
- 6 x Delrin Feet (#50168-04)

50168-95 6-Position MultiLap Fixture, Model 195 each

► Spare Parts and Accessories

Catalog Number	Description	Pack
50168-02	Piston Assembly	each
50168-10	6-Position Alignment Fixture	each
50168-03	Sample Holder Ring Mounts	each
50168-04	Delrin Foot for Model 195	each

► MicroPol Model Mc 2 Specimen Grinder/Polisher

MicroPol™ is compact, versatile, electrically controlled, precise mechanical specimen grinder/polisher, designed for planar grinding, thinning and polishing of specimen in the fields of nanotechnology, semiconductors, and materials science. The parameters of polishing (speed, load time, etc) can be matched according to the properties of the specimen. High quality samples are prepared with minimal efforts by the operator.

FEATURES

- Rugged, corrosion proof construction
- Variable speed control for precision polishing
- Quick change bayonet mount bowls
- Maximum sample size is about 10-15mm in diameter
- Timer for automatic operation
- 2 precision TEM sample holders included
- Extremely light load for fragile TEM samples

Application

While the MicroPol™ MC 2 is well suited for metallographic polishing, it has been specially designed for precision TEM polishing applications. Two specially designed TEM holders are provided with each unit that makes it ideal for the preparation of both planar and dimpled samples, respectively.

Operation

MicroPol polishes by the action of an arm that moves the specimen along a semi-random geometric pattern gently pressing it to the bottom of a bowl containing suitable abrasive material. The abrasive material can be grinding paper or suspensions of polishing compound deposited on polishing cloth.

Specifications

Mains voltage:100 – 240 VAC
 Temperature range:+5 – 35°C
 Frequency:50 – 60 Hz
 Power consumption:85 W maximum
 Moving speed of the arm:30 – 60 scans/min,
electronically adjustable
 Timing:1s – 60 min, electronically adjustable
 Load:0 – 5 N, mechanically adjustable
 Moved mass:150 g maximum
 Dimensions:251 x 220 x 181 mm

► Consumables Necessary for Operation of MicroPol™ Polisher:

- Abrasive papers (in about 300-800 grit sizes),
- Polishing cloth (e.g. PELLON type),
- Abrasive diamond paste or abrasive suspensions (diamond, Al₂O₃, SiC) in grain sizes of 1 and 10 mm for polishing,
- Transparent thermoplastic wax solidifying below 135°C for fixing the specimen to the steel stub of specimen holder (e.g. mounting wax, dental wax, or similar).

50174-MC2 Micro Pol™ MC 2 Grinder/Polisher Main Unit each

INSTRUMENTATION

► Spark Cutter – Model EE4 (*Electroerosion*)

Please Note: This version replaces the old version (Model TLSC2 Spark Cutter, #55100-SC2) which is no longer available.

The EE 4 Spark Cutter (Electroerosion Unit) is designed for drilling holes, slots and discs of virtually any profile in hard metals. The cutting speed will, of course, vary depending on the sample size and material. As an example, a hole can be drilled in titanium sheet of 0.3 mm thick in about 20 – 60 minutes depending on the surface quality required.

Application

Because of the basic operating principle of the Spark Cutter, it is advised that the device can only be used for high-conductivity materials (with the exception of aluminum). The work piece holder accessory can hold 5 mm wide metal bands. Work piece of different size require modification of the holder.

Operation

Operation of the device is based on an electrochemical process. The drilling tool and work-piece are connected to the power supply: the positive pole to the work-piece, and the drill through an electromagnetic coil to the negative pole. By switching on the power supply, electric current flows through the circuit consisting of the work-piece, the electromagnetic coil and the drill. When the electric current exceeds a certain limit, the magnetic field of the coil lifts up the drill and the current is cut off. The drill is then forced back to the work-piece by a spring in the head unit, and the cycle starts again. The drilling is effected by the electrochemical process taking place at the moment that the electric circuit is stopped.

Specifications**Power Supply Unit**

Power input100 – 120 VAC, 50/60 Hz 1 A, or
220 – 240 VAC, 50/60 Hz, 0.5A
 Power outputapprox. 1.5 – 20 VDC, 2 A (average)
 Dimensions100 x 170 x 235 mm

Head Unit

Power inputapprox. 1.5 – 20 VDC, 2 A(average)
 Dimensions140 x 260 x 290 mm

System Configuration

Power Supply Unit

Head Unit including drilling tool in diameter of 3 mm

Option

Drill tool of 1 mm in diameter.

► MicroSaw – Model MS 3

A Circular Diamond Saw for Precision Cutting under Stereo Microscope

Please Note: This version replaces the old version (MS 2, #55150-MS2) which is no longer available.

Application

MicroSaw is a small, versatile diamond wheel saw, to be mounted under a standard laboratory microscope. The precision offered by such an optical alignment makes MicroSaw ideal for cutting and sectioning required during the TEM specimen preparation. The compact design and easy operation, MicroSaw allows the user cut almost any solid material with precisely and reproducibly prior to thinning for TEM. Thin ceramic, semiconductor material, hard metals can be further sectioned with 0.01mm accuracy!

Operation

The Model MS 3 MicroSaw is driven by an electric motor through a helical transmission. The 12 V DC is provided by the power supply subunit. The speed at which the wheel turns is continuously adjustable. Adjustment of the specimen position, arm contact point, arm tension and the down-stop control mechanism is possible. Two adjustment screws at the bottom of the instrument allow positioning of the stand, and leveling the MicroSaw underneath of the stereomicroscope for precision sectioning.

Specifications

Power input12 VDC
 Power consumption15 W
 Dimensions260 x 150 x 80 mm
 Diamond wheeltype AC32 63/50, 50mm diameter,
 0.15mm thick
 Max. sample size~10 x 10 mm
 Min. slice thickness~100 microns

System Configuration

Switching power supply 100 – 240 VAC, 50/60 Hz

MicroSaw Model MS 3 comes with 1 diamond wheel (#55150-10)

Cat. #	Description	Qty
55150-MS3	MicroSaw, Model MS 3	each
55150-10	Replacement diamond wheel	each

► **MicroHeat – Model MH 2**

Thermoplastic gluing under stereo microscope

- Heat stabilized
- Small
- Ideal for thermoplastic gluing

Application

MicroHeat is a heat-stabilizes, combined with power supply, designed for embedding samples and for thermoplastic gluing under stereoptical microscope. The MicroHeat was developed to make the embedding procedure easier.

Because of MicroHeat is small dimensions, it is can be easily placed on the specimen table of the stereoptical microscope, and with the help of the microscope, the gluing faults can be avoided, this result is very important in case of sample requiring bubble-free sticking (e.g. cross section samples for EM).

With all of these features, MicroHeat is useful in the fields of material research, geology, semiconductors and optical industry for investigation of multilayer system, semiconductors and high Tc superconductors, diamond, composite materials, ceramics, glasses, rocks and minerals.

Operation

Model MH 2 is relatively simple to operate. The temperature of the hot plate can be adjusted continuously in a wide range and is kept constant by the built-in electronic. A control circuit maintains the temperature of the heated surface within $\pm 5^{\circ}\text{C}$. The temperature of the heated surface usually reaches the preset temperature within 1 – 3 minutes. However, it is recommended that to use the hot plate at least 5 minutes after the unit was on.

Specifications

Power input.....	12V DC, 1.2 A
Power consumption	14 W
Temperature range	50 - 180°C
Dimensions	100 x 100 x 30 mm

System Configuration

Main power supply 100 – 240 VAC, 50/60 Hz
MicroHeat unit.

Cat. #	Description	Qty
55110-MH2	MicroHeat, Model MH 2	each

► **HSS Tool Kit**

The mechanical sample preparation prior to thinning requires custom made mechanical hand tools. Containing six handy, reliable pieces, this kit has been designed on the basis of practical experience of many users. Some of the tools are suitable for adjusting the sample pieces into the Ti discs, others for removing the excess glue and cutting, or adjusting the seat plate of the sample holder.

55110-HSS	Tool Kit	each
-----------	----------	------

► **Ti Disc Embedding Ring for TEM Sample Preparation**

The most difficult step of cross-sectional thinning is the mechanical preparation of the sample, i.e. cutting a cross section and then embedding it into an appropriately designed ring.

We know offer a convenient, specially designed embedding ring for cross-sectional samples, shown schematically in Figure 1.

Using this ring, embedding cross sections is greatly simplified, since the samples do not need to be glued together prior to embedding. In order to fix the sample(s) in the ring it is deformed mechanically by an appropriate tool at the two points marked by the arrows. This deformation will both hold the sample in the ring and press both sample pieces together before gluing.

Ti disc is also offered for embedding bulk samples of brittle material for plan-view TEM investigations. The rings come in 5 sizes-0.6, 0.8 1.0, 1.2, 1.3 mm.

► **XTEM TEM Sample Preparation Kit**

EMS offers this kit specifically for the preparation of cross-sectional TEM (XTEM) specimens.

For the study of interfaces (such as semiconductor devices, thin film layers, etc.) by transmission electron microscope (TEM) it is critical to use TEM samples of ultimate quality (perfectly embedded, mechanically pretreated and ion milled ones). EMS offers a complete technology and product range for preparing cross-sectional samples of these quality including specially designed mechanical sample preparation tools and embedding ring. The EMS-XTEMprep Preparation Kit offers all the tools and materials that help to prepare high-quality cross-sectional TEM specimens:

THE KIT INCLUDES:

- Microsaw sectioning tool
- Micropol grinder and polisher
- Microheat embedding tool
- Embedding rings ("Ti disc") – 5 of each size
- Ion beam resistant glue
- Special purpose mechanical tools (HSS) for embedding
- LEIT-C conductive carbon cement
- Thermoplastic transparent glue
- Diamond paste

INSTRUMENTATION

► Rotary Disc Cutter – Model 360

Model 360 Rotary Disc Cutter is a precision instrument, which is designed to precisely align and cut discs or drill holes from a wide range of materials using either a tube shaped brass tool with an abrasive slurry or a diamond tipped tool. The Model 360's rotating tool is continually lowered into the specimen using an easily adjustable counterbalancing weight. The most common application for the instrument is to cut 2.3mm and 3.0mm discs for TEM, although discs as small as 1.25mm and as large as 50mm have been cut. The model 360 includes everything necessary to operate the unit.

► UltraSonic Cutter - Model 380

The UltraCut™ 380 Ultrasonic Cutter is a specialized cutting instrument which utilizes abrasive powders and high speed, vibratory motion to cut discs, holes, cylinder, squares and others shapes from hard, brittle materials.

The high speed motion is developed using an ultrasonic transducer oscillating at 26kHz. Boron carbide slurry is applied to the sample and the tool is lowered onto the specimen. The particles under the vibrating tool impact the sample and erode the material in the shape of the tool.

For complete information on this model, see our interactive web site @ www.emsdiasum.com

Model 36001 Alignment Microscope

If very precise alignment is required, it is recommended to use the Model 36001 Alignment Microscope. Three locating pins on the Alignment Microscope correspond to the three locating pins on the sample stage of the SoniCut™ 380 to ensure precise positioning.

► **Single Vertical Jet Electropolisher – Model 550D**

The model 550D single Vertical Jet Electropolisher is designed to perform dislocation free thinning of materials for subsequent analysis in a Transmission Electron Microscope. This extremely versatile instrument can be used to thin materials and alloys electrolytically with corrosive electrolytes; or to thin non-metals and semiconductors such as gallium or arsenide, chemically, using nitric hydrofluoric or bromide-methanol solutions. A new non-acid electrolyte has been developed to thin such materials as $YBa_2Cu_3O_x$ high Tc superconductors, gold and other traditionally difficult materials. Its high sensitivity is capable of routinely detecting perforations less than $10\mu m$ in diameter and its smooth polishing action yields large usable thin areas.

For complete information on this model, see our interactive web site @ www.emsdiasum.com

Accessories

Model 55001 Automatic Timer and Rinser (optional)

The Model 55001 consists of a reservoir that mounts on top of the Model 550D head assembly and an electronics box that can be placed on top of the Model 550D electronics. The Model 55001 offers 3 basic functions:

It measures elapsed time in minutes and seconds using an LED digital display and stops automatically when the system triggers off.

A predetermined amount of time can be set to automatically shut off the system. This is particularly useful for thinning to a specific depth in a sample.

The rinsing system can be used in either automatic or manual mode. In automatic mode, the sample will be rinsed with water or alcohol immediately after the system triggers off. The manual mode can be used if additional rinsing is desired.

Model 55095 2.3 mm Electrolytic Conversion Kit (optional)

This kit is used to convert the Model 550D chemical unit into an electrolytic unit using 2.3mm specimens. Conversion time is less than 30 minutes.

Model 55096 3.0mm Electrolytic Conversion Kit (optional)

This kit is used to convert the Model 550D chemical unit into an electrolytic unit using 3.0mm specimens. Conversion time is less than 30 minutes.

Model 55097 Chemical Conversion Kit (optional)

This kit is used to convert the Model 550D electrolytic unit into a chemical unit. Conversion time is less than 30 minutes.

55192-02	Head Assembly, Electrolytic, Model 55002	each
55190-1	Electronic Power Supply	each
55190-2	Jet Nozzle, Stainless Steel, 1mm hole	each
55190-3	Diaphragm Holder Assembly	each
55190-4	Diaphragms, 0.0015" thick for 3mm Samples (x25)	each
55190-5	Splash Shield Assembly, with Magnifier	each
55190-6	3mm Stainless Steel Pedestal Assembly	each
55190-7	Pyrex Jar, 6" diameter (reservoir for electrolyte)	each
55190-8	Nalgene Tub (for cooling with dry ice)	each
55190-9	Specimen Screen (used when not using diaphragm)	each
55190-10	Allen Wrench Set	each

► **Model 550DC – Chemical Jet Thinning Instrument**

The model 550DC includes everything necessary to operate.

55190-550DC Chemical Jet Thinning– Model 550DC each

Parts that are included with this Model 550DC

55192-03	Head Assembly, Electrolytic, Model 55003	each
55190-1	Electronic Power Supply	each
55190-52	PVC Pedestal Assembly	each
55190-53	PVC Jet Nozzle, 1.5mm Hole	each
55190-5	Splash Shield Assembly, with Magnifier	each
55190-56	Mylar Discs for holding Sample with Wax (x100)	each
55190-57	6" Dia Poly Propylene Jar (Reservoir for Acid)	each
55190-58	Polyethylene Cover for 6" Jar	each

Accessories

55192-01	Automatic Timer and Riser, Model 55001	each
55192-02	Electrolytic Thinning Head Assembly, Model 55002	each
55192-03	Chemical Thinning Head Assembly, Model 55003	each
55192-96	Electrolytic Conversion Kit (to Convert a Chemical Thinning System to Electrolytic), Model 55096	each
55192-97	Chemical Conversion Kit (to Convert an Electrolytic Thinning System to Chemical), Model 55097	each
55192-11	Jet Nozzle, Stainless Steel, 1.0mm Hole	each
55192-12	Jet Nozzle, Stainless Steel, 1.5mm Hole	each
55192-13	Jet Nozzle, Stainless Steel, 3.0mm Hole	each
55192-21	Jet Nozzle, PVC, 1.0mm Hole	each
55192-22	Jet Nozzle, PVC, 1.5mm Hole	each
55192-23	Jet Nozzle, PVC, 3.0mm Hole	each
55192-32	PVC Holding Cap, 2.3mm Diameter Hole	each
55192-33	PVC Holding Cap, 3.0mm Diameter Hole	each
55192-42	Pedestal Assembly, Stainless Steel, 2.3mm (for use #55192-32, Holding Cap)	each
55192-43	Pedestal Assembly, Stainless Steel, 3.0mm (for use #33192-33, Holding Cap)	each
55192-52	Pedestal Assembly, Stainless Steel w/Pt Tip, 2.3mm (for use #55192-32, Holding Cap)	each
55192-53	Pedestal Assembly, Stainless Steel w/Pt Tip, 3.0mm (for use #33192-33, Holding Cap)	each
55192-63	Pedestal Assembly, PVC, 3.0mm	each
55192-65	Pedestal Assembly, PVC, Large Sample Holder (Holding sample up to 16mm diameter)	each
55192-70	Pedestal Assembly, PTFE	each

Consumables

55193-2	Diaphragms, 0.0015" thick for 2.3mm Samples(x25)	each
55193-3	Diaphragms, 0.0015" thick for 3.0mm samples (x25)	each
55193-4	Mylar Discs for Holding Sample with Wax, (x100)	each
55193-5	PVC Plates for Holding Sample with Wax (used on #55192-65 Pedestal)	each
55193-6	'O' Ring Replacement Kit	each

INSTRUMENTATION

► Low Speed Diamond Wheel Saw – Model 650

The Model 650 Low Speed Diamond Wheel Saw is a compact, multipurpose, precision saw designed to cut a wide variety of materials with minimal substrate damage. Its low speed makes it possible to cut fragile materials that would otherwise fracture and soft materials that would load the diamond wheel on a higher speed saw. A variety of sample holders provides a means for mounting any shape sample while the goniometer adaptability simplifies cutting oriented crystals.

For complete information on this model, see our interactive web site @ www.emsdiasum.com

Special Features

- Belt drive system eliminates gear breakage which is common with less reliable fiber gear driven designs.
- Coolant reservoir is lowered and easily removed by opening an access door located on the front panel.
- Both coarse and fine sample position adjustments allow rapid and accurate sample positioning.
- Polyethylene coolant reservoir enables the use of both water soluble and oil based coolants.
- Automatic termination of the cutting process is controlled by an electromechanical downstop which minimizes supervision.
- Cutting arm pivots on a set of precision bearings rather than on the micrometer shaft which ensures accurate and repeatable sample positioning.
- Multiple diamond wheels can be used to gang slice materials up to 2" in length.
- Utilizes a high torque 1/15 HP DC motor to provide sufficient power for difficult materials.
- The 3 standard sample holders allow mounting of virtually any shape sample.
- 2-Axis Goniometer can be transferred from an x-ray track for cutting precisely oriented crystals.
- It's small size and simple operation make it ideal for glove box or hot cell adaption.

Accessories (continued)

55202-14	Sample Rotation System, Model 65014	each
55202-16	Ball Joint Work Arm Model 65016	each
55202-17	Bone Chuck Holder, Model 65017 (for holding irregular parts)	each
55202-18	Right Angle Bone Chuck Holder, Model 65018 (for holding irregular shape parts)	each
55202-19	Adjustable Right Angle Bone Chuck Holder, Model 65019 (for holding irregular parts)	each
55202-40	Alignment Microscope, Model 65040	each
55202-99	Starter Kit, Model 65099, Kit includes: One 3"x.006" & one 4" x.12" diamond wheel, one 4"x.015" Al ₂ O ₃ wheel, one 3"x.010" SiC wheel, 1.87" & 1.37" support collars, 1qt of coolant, 4 dressing sticks, 2 spare drive belts & mounting wax	each
55203-01	Support Table (table saw attachment)	each

► The Model 660 Low Speed Diamond Wheel Saw

The Model 660 is designed to be a multipurpose precision saw using diamond wheels up to 7" in diameter. Its low speed allows it to cut all materials traditionally cut with a high speed diamond wheel while also cutting very fragile and soft materials with minimal subsurface damage. A variety of sample holders provides a means to mount any shape sample while goniometer adaptability simplifies the cutting of orienting crystals.

Special Features

- An internal optic sensor and belt drive system eliminate broken gears and sample damage by terminating the cutting process when wheel rotation is impeded.
- Coolant reservoir is lowered and easily removed by opening an access door located on the front panel. Both coarse and fine sample position adjustments allow rapid and accurate sample positioning.
- Polyethylene coolant reservoir enables the use of both water soluble and oil based coolants.
- Automatic termination of the cutting process is controlled by an electromechanical downstop which minimizes supervision.
- Cutting arm pivots on a set of precision bearings rather than on the micrometer shaft which ensures accurate and repeatable sample positioning.
- Multiple diamond wheels can be used to gang slice materials up to 2" in length.
- Sturdy aluminum casting provides durability in the lab and stability during specimen preparation

► Diamond Band Saw - Model 865

Constructed from a high impact polymer, the lightweight Model 865 Diamond Band Saw is designed for medium precision, with efficient cutting of hard and brittle materials. However, the saw is rugged enough to cut through materials such as soft metals and polymers as well. Samples can be safely hand fed into the blade with or without the standard specimen guide. The diamond plated steel core blades are designed to last long under normal conditions. Easy blade access and replacement make occasional saw maintenance extremely simple. Coolant is contained in a reservoir at the base of the saw.

FEATURES:

- Small, lab bench size.
- Quick adjustable blade guide keeps the blade tracking properly.
- Rugged, corrosion-proof construction.
- Powerful motor cuts fast, won't bog down under load.
- Minimum coolant splash for clean cutting.
- Easy access coolant tray for fast and easy clean up.
- Large table for cutting bulk samples.
- Sample guide for straight, flat surfaces.
- Economically priced.

Specifications:

Dimension:	12" (W) x 14"(D) x 18"(H)
Weight:	15 lbs
Maximum Sample Dia:	3.25" (82.55mm)
Cutting Table Dimensions:	12"(W) x 13"(D)
Standard Blade Thickness:	0.022"
Electrical:	115VAC 50/60Hz

INSTRUMENTATION

► UltraSlice Precision Slicing Machine

Advanced slicing for most component sizes & shapes

Ultimate Versatility – the ULTRASLICE platform provides:

- Work-holding and machine variables to enable most cutting jobs.
- Long-cuts and dicing modes also possible
- Motorized table provides unattended operation
- Provides 'end of the line' capability for manufacturers / labs already with larger production units
- Intuitive and easy to use

Developed to facilitate precision sectioning applications in Industry and Research, ULTRASLICE Precision Saw provides the user with a unique combination of features:

Versatile Sample Holding

The system may be readily converted to handle sample cutting requirements of most shapes, sizes, and applications – e.g. transverse and longitudinal slicing, right through to dicing.

Cutting Accuracy

The use of precision lead screws on all sample feed mechanisms mean that cuts can be positioned accurately. The inbuilt 'Z-spindle' provides the ability to set the blade height 'on the fly'.

Reproducible Results

All-metal construction and an accurately calibrated and damped spindle movement assures low transmission of vibration to the workpiece. This gives reproducibility of performance for cutting materials of widely varying mechanical properties; from the hardest steels and non-metals down to delicate crystal materials.

Versatile Controls

ULTRASLICE has the power and range of blade speeds to achieve higher cutting rates when necessary.

The system features an integral coolant recirculation system which extends blade life and clears cutting debris to improve cutting rate and surface quality.

ULTRASLICE can handle sample cutting requirements of all shapes, sizes and applications. Samples may be presented to the blade with table attachments (X, Y, W, and Z direction accessories).

The system accepts a wide range of O.D. diamond and abrasive blades for standard cutting, and is readily adaptable to accept

Vise for ULTRASLICE, Cat No. 3575.1

A vise attachment that mounts onto the ULTRASLICE saw by means of a standard set of dowels and two mounting screws.

The Vise Attachment holds a large variety of sample types and sizes.

Lamp, Cat No. 1301.A

A Convenient incandescent lamp for illuminating the work area.

- 60W Max bulb
- Illuminates Work area
- Gooseneck for control of illumination area

Specifications

Power Requirements.....	110 - 240V, 50 / 60 Hz
Spindle Speed	Fully variable up to 6,000 rpm
Spindle Size	0.5 inches (12.7 mm)
Standard Stages.....	Motorized Y, lead screw-fed X (indexing) and Z-spindle (blade height)
Cutting Modes	Preset Constant Speed
Footprint	25 inches (wide) x 18 inches (high) x 25 inches (length)
Unit Weight	110 lbs (45 kg)

Ordering Information

Cat. No.	Description	Qty
8560.3	ULTRASLICE Diamond Saw - 110V-240V	each
System package includes: Saw Base Unit, 6000rpm max spindle speed (with tachometer, ammeter), 3582.2 X Stage for traveling table, Y axis motorized traveling table (with automatic cut-out), Z-spindle Stage, Recirculating Coolant System & Splash Guard, One 4" diamond blade (7412.1), Pair 2" dia. flanges (cheek plates)		
6004.1	Theta Stage	each
3541.8	Table Mounting Plate, with Quick Release interface	each
3575.1	Vise (for samples up to 2" dia.)	each
1301.5	Lamp	each

Standard Blades for a wide range of sample types:

7412.1	4 inch o.d., 0.5 inch arbor, 0.012" inches (over diamond) thickness – premium metalbond blade	each
7312.1	3 inch o.d., 0.5 inch arbor, 0.012" inches (over diamond) thickness – premium metalbond blade	each

► **UltraSlice Compact**

Versatile Precision Saw for small workspaces & small budgets

For the user who wants all the functionality and unique control of cutting parameters offered by a high end saw, while working on a tight budget or with limited lab space, ULTRASLICE Compact provides the answer.

The system features an integral coolant recirculation system which extends blade life and clears cutting debris to improve cutting rate and surface quality.

Work is fed into the blade by several different methods, by use of table attachments.

A wide range of workholders can be held by the saw. This method allows the workpiece to be mounted rapidly and conveniently without the need for mounting waxes or cements.

A fully splashguard enclosure is provided which may be opened to allow front panel access or be completely swung away from the cutting area.

For Industrial and research operations, ULTRASLICE Compact saw offers an unparalleled combination of cut quality, accuracy, versatility, and affordability.

Product Highlights

Versatility

The system may be readily converted to handle sample cutting requirements of most shapes, sizes and applications.

Cutting Accuracy

The use of precision lead screws on all sample feeds means cuts may be positioned accurately

Long Cuts & Dicing

The large work-table and layout of the machine allows for long cuts to be achieved - perfect for failure analysis, and QA applications such as longitudinal sectioning of components. Sectioned workpieces may be an end in themselves, or the starting point for lapping and polishing

Most Blade Types

The system accepts a wide range of O.D. diamond and abrasive blades for standard cutting, and is readily adaptable to accept special 'dicing' blades for the smallest kerf.

Vise attachment, Cat No. 3575.2

Compact Table with Substrate holder

Lamp, Cat No. 1301.A

A Convenient incandescent lamp for illuminating the work area.

- 60W Max bulb
- Illuminates Work area
- Gooseneck for control of illumination area

Automatic Cut-out Switch Assembly Cat No. 3632.1

Allows for unattended machine operation

INSTRUMENTATION

► UltraSlice Precision Macrotome

Precise sectioning of hard tissue & other materials

ULTRASLICE Macrotome precision diamond saw, is a quiet, direct drive design for smooth, chatter free slicing system for important and fragile industrial, biological and related specimens.

The system suits Fish & Game applications, such as Otolith and Stalolith samples. Specimens can be oriented to ensure a flat surface is parallel to the desired section plane such as sagittal, frontal or transverse.

MACROTOME can also be used in many other industrial applications where the best price/performance ratio is required.

The wheel (spindle) rotation is variable speed, to allow for optimized cut quality. An easy access coolant reservoir, allows for quick efficient coolant changes.

Product Highlights

- Suits Low Budgets
- Z-Spindle
- Manual Crank Table Feed, with motor option
- For otoliths and related specimens
- Fish & Game

► UltraTrim Diamond Saw

A refreshing idea for sample preparation

ULTRATRIM is a low cost, entry-level, precision sawing machine for producing rapid cross-sections for microscopy and QC checks.

The saw includes a straightforward coolant reservoir, the saw blade dips into the reservoir for effective cooling and lubrication of the sawing process. An intelligently designed manually fed cutting table, makes slicing fast and easy. The saw has a fully variable spindle speed and a small footprint.

Product Highlights

- Accepts 4 inch o.d. blades, with standard 0.5 inch spindle
- Quiet, powerful motor with speed control
- Manual Table-fed cutting for fast, convenient sample prep
- Convenient reservoir for blade coolant and lubrication
- Economical

► Wire Saw – Model 810

The Model 810 – Wire Saw offers the gentlest mechanical method for cutting virtually any material using either a diamond impregnated wire blade or a plain wire plate with abrasive slurry. In addition to traditional mechanical cutting, the saw can also be used as a string saw to cut water soluble crystals. It is most useful for cutting fragile crystals, substrates with delicate layers or any material that would be damaged when using diamond wheel saw. Very brittle materials will cut the fastest, but even soft materials can be cut since there is not the problem of loading the blade that is inherent with diamond or abrasive wheels. The Wire Saw has sample holders available to hold virtually any shape sample including a goniometer to simplify the cutting of oriented crystals.

For complete information on this model, see our interactive web site @ www.emsdiasum.com

Special Features

- Self contained recirculating system requires only a few cc's of slurry which makes it economical to use diamond slurries and minimizes clean up when cutting toxic materials.
- Wire tension gauge simplifies the process of selecting the proper tension for each diameter wire.
- Easy to replace continuous loop wire blade.
- Micrometer cross-feed mechanism provides precise sample positioning.
- Automatic termination of the cutting process is controlled by an electromechanical downstop which minimizes supervision.
- All sample holders can be rotated 360° and are interchangeable with the Model 650 Low Speed Diamond Wheel Saw.
- 2-Axis Goniometer can be transferred directly from an x-ray or optical track for cutting oriented crystals.
- Compact size and simple operation makes it ideal for use in glove boxes, fume hoods and hot cells.
- Integrated recirculating system makes it ideal for cutting water soluble crystals.
- Counterbalanced arm allows for fine adjustments in cutting pressures.

INSTRUMENTATION

► Wire Saw – Model 850

The Wire Saw 850 offers the gentlest mechanical method for cutting virtually any material using either a diamond impregnated wire blades or a plain wire blade with abrasive slurry. In addition to traditional mechanical cutting, the saw can also be used as a string saw to cut water soluble crystals. It is most useful for cutting fragile crystals, substrate with delicate layers of any materials that would be damaged when using diamond wheel saw. Very brittle materials will cut the fastest, but even soft materials can be cut since there is not the problem of loading the blade that is inherent with diamond or abrasive wheels. The Wire Saw has sample holders available to hold virtually any shape sample including a goniometer to simplify the cutting of oriented crystals

Operation

When used as an Abrasive Slurry Wire Saw the Model 850 offers the most gentle mechanical method for cutting a material. A sample is mounted to a sample holder and attached to a work table on the base of the saw. An appropriate load is applied by adjusting the counterbalancing weight and the mechanical downstop is set. The sample is then positioned in any starting position relative to the wire blade and then a micrometer is used for precise sample positioning. With the wire rotating, the arm is gently lowered until the wire blade touches the sample. Abrasive slurry is applied by hand from a drip bottle or automatically with the Model 85030 Abrasive Recirculating System. The cutting is accomplished by directing the abrasive slurry to the point of contact between the moving wire blade and the sample. The excess slurry will drain off the contoured base of the saw into a reservoir. Cutting will continue until the mechanical downstop is reached.

When used as a Diamond Wire Saw the Model 850 uses a diamond impregnated wire blade and a water coolant in place of the abrasive slurry. Diamond wire cutting is used for cutting hard materials or when contamination from an abrasive slurry is undesirable.

When used as a string saw the Model 850 can cut water soluble crystals such as sodium chloride, by having a water soaked wick rub against a standard wire blade. The water is carried on the wire blade to the sample and cuts by dissolving its way through the crystal.

Special Features

- Variable speed abrasive slurry pump and reservoir with mixing motor keeps abrasive in suspension and ensures that fresh abrasive is constantly applied to the cutting area.
- Easy to replace continuous loop wire blade.
- Micrometer cross-feed mechanism provides precise sample positioning.
- 2 or 3-Axis Goniometers can be transferred directly from an x-ray or optical track for cutting oriented crystals.
- Counterbalanced arm allows for fine adjustments in cutting pressures.
- Optional microscope provides a capability for precise sample alignment.

► **Dimpler – Model D 500i**

The Model D500i Dimpler has become an indispensable tool for TEM specimen preparation. The dimpling technique, which is applicable to a myriad of material types, yields a higher quality specimen with a broader, near electron transparent area which reduces ion milling times. The Model D500i automates the dimpling technique so that the most demanding specimen can be dimpled to < 10 microns routinely and repeatedly. Real time measurement of tool height, specimen thickness, and tool run out allow the user to precisely control the dimpling process. With the proper tooling and parameter adjustment, the dimpling technique with the D500i can be completed with ease.

Place this item in the same place with Tri-Pod Polisher 50115-series

INSTRUMENTATION

► Model 590 Tripod Polisher-TEM/SEM Sample Preparation

A Tripod Polisher was designed by scientists at IBM, which is used to prepare accurately micro sizes of TEM and SEM samples. For TEM samples, the Tripod Polisher has been used successfully to limit ion milling times to less than 15 minutes, and in some cases, has eliminated the need for ion milling. It can be used to prepare both plan-view and cross-sections from a variety of sample materials, such as ceramics, composites, metals and, geological specimens.

ADVANTAGES:

- Limited ion milling requirements reduce preferential thinning, radiation damage, and heating of the sample.
- No strong chemicals are used to prepare the specimen.
- The same sample can be studied with both SEM and TEM.
- Reduces sample preparation.
- Samples can be prepared for TEM without ion milling.

► Tripod Polisher® Accessories:

The Tripod Polisher® Base (#50116-05): holds the micrometer and has two captive screws that hold the L-Brackets or the Parallel Polishing Mount in position when polishing the samples.

The Precision Locking Micrometers (#50116-10): have special larger diameter locking rings for easy locking and are graduated in one micron increments with 13mm travel. Non-coating Micrometers also available, but not recommended.

The Delrin Feet (#50116-15): are applied to the tip of each micrometer and are designed to protect the micrometer as well as the lapping from damage when polishing TEM samples

The Plain L-Brackets (#50116-20): Can be used in place of the other 'L' bracket to polish the edge of the samples to the area of interest prior to polishing the wedge.

The Screw Clamp L-Bracket (#50116-25): can be used with the Pyrex Insert for Wedge Polishing (#50116-60), the SEM Stub (#50116-65) or the Wedge Polishing Mount (#50116-61). It can be used for polishing the edge of the sample to the area of interest for SEM evaluation or for preparation to do the final wedge polishing for TEM.

The Slotted L-Bracket (#50116-30): is used in exactly the same way as the Screw Clamp L-Bracket. The difference is the method of clamping. With the Screw Clamp L-Bracket, the Pyrex Insert, SEM Stub is held with two setscrews. With the Slotted L-Bracket they are held with a form fix clamp that is tightened with a single screw. The Inserts are held tightly with a good thermal contact for mounting samples when the L-Bracket is heated on a hot plate. When examining the mounted sample under a microscope it can be lit from the bottom as well as the side.

X-Section L-Bracket (#50116-31): is used to mechanically clamp a sample (such as an IC Package) on the side of an L-Bracket for optimal SEM cross sectioning.

The Parallel Polishing Mount (#50116-35): is mounted in the center of the Tripod Polisher(r) Base in place of the L-Bracket and is used for parallel polishing by adjusting the 3 micrometer feet.

The Planarizing Tool (#50116-40): is used to lap the three delrin feet to be coplanar in preparation for preparing samples with Parallel Polishing Mount.

50115-series

The Microscope Stand (#50116-55): is used to hold Model 590 Tripod Polisher(r) with sample facing up for viewing under a microscope or serve to protect the sample.

The Heater Block (#50116-50): is designed to hold any of the L-Brackets while they are being heated on a hot plate prior to mounting sample melted wax. This provides a slow, uniform temperature gradient, which minimizes thermal shock.

The Pyrex Insert for Wedge Polishing (#50116-60): is used with the Screw Clamp and Slotted L-Bracket for mounting sample for the TEM

The Wedge Polishing Mount (#50116-61): includes a Wedge Polishing Clamp (#50116-62) and 5 of Pyrex Wedge Polishing Rod (#50116-63). This holder is used for TEM Wedge Polishing and provides a small sample mounting area allowing for maximum adjustment range of the sample.

The Pyrex Wedge Polishing Rod (#50116-63): is a replacement part used with the model #50116-35 Wedge Polishing Mount.

The Pyrex Wedge Polishing Stub (#50116-64): is mounted to a Pyrex Insert (#50116-60) to produce a similar effect as is accomplished with the model #50116-61.

The SEM Stub (#50116-65): is used for mounting samples for SEM and can be transferred directly to the SEM or to the special holder for use in mil.

The Glass Leveling Slide (#50116-70): is used for leveling the 3 micrometer's feet or 2 of the feet and the sample.

The Tool Kit: contains 2 hex drivers (#50116-71 & #50116-72) and torque handle for use with the Model 590 Tripod Polisher® in addition to wrench (#50116-73) for micrometer repair.

► **Accessories for Tripod Polishers**

► **1. Ion Mill Stage, Model 59001**

The Ion Mill Stage is designed to accept the special SEM stub used with the Tripod Polisher. The SEM stub is mounted to the Ion Mill Stage and the samples are briefly ion milled in order to remove fine scratches, polishing debris and to give the surface topography prior to SEM analysis.

50118-01	Ion Mill Stage, Model 59001	each
----------	-----------------------------	------

50118-01

► **Starter Kit:**

This starter kit is designed to provide all of the necessary supplies needed for sample preparation in use with the Tripod Polishers.

Cat.#	Description	Pack
50118-05	Kit includes: Set of Diamond Lapping Film (1 each of 0.5, 1, 3, 6, 15, and 30 back); Multitex Polishing Cloth; 8" Glass Plate; 0.05µm Colloidal Silica; Mounting Wax; Squeegee; Slotted TEM Grids, Sample Cleaner; Cotton Swab 50/pk); Petri Dish, Filter Paper, Tweezers set, and Scotch Pad	each

Introducing DuraSiN™, revolutionizing the way samples are prepared and analyzed in the transmission electron microscope.

DuraSiN™ Film and Mesh products are affordably-priced, durable, nonorganic, low scatter support grids for quantitative TEM and X-ray analysis. Unlike other support films and grids, DuraSiN™ Film and Mesh products can withstand harsh chemical and temperature environments.

For more information, see page 152-157. >>>>

INSTRUMENTATION

▶ ASAP-1 IPS Digital Selected Area Preparation System

Product Highlights

- Suits all sizes of die - package, wafer and board-level
- Real Time Video Monitor with system parameter
- Touchscreen control with physical joystick & controls
- Rigidized Table Assembly and closed-loop, high-torque, motor control enhances the machining of tough and hard materials
- X, Y and Z axes all have deep sub-micron accuracy
- Accurately decaps, then thins substrate and polishes
- Patented Floating Head provides a true polishing action -- yields polishing quality & high survivability
- Intuitive menus provide a powerful, easy to use, system
- USB Flash Drive interface for preparation recipe storage
- Short set-up and process times
- Accurate die-tilt adjustment 'on the fly'
- Bench-top & Quiet in Operation

Since product launch, ASAP-1® hardware has become the standard piece of preparation equipment that engineers involved in disciplines such as failure analysis, yield enhancement, radiation testing, and competitive analysis have come to rely on for backside preparation. ULTRA TEC has produced leading solutions for backside preparation since 1999. With over 300 ASAP-1 units installed in Semiconductor industry labs throughout the world, we are proud to introduce the ASAP-1® IPS.

Enabling The Next Generation Of Failure Analysis

Ever since the inception of the ASAP-1 Project, ULTRA TEC's goal has been to offer both user-friendly and sample-friendly tools. The ASAP-1® analog systems offer elegant, intuitive controls which have enabled all labs to achieve quality results for subsequent analysis with Photon emission microscopes, laser/ thermal stimulus microscopes and FIB's. The user-friendly intuitive nature of the analog units has been carried forward, and expanded with ASAP-1® IPS.

Digital Control... Done Right!

ASAP-1® IPS offers deep sub-micron control on X, Y and Z axes, making it 'hands-down' the most accurate system ever seen in the market.

Much More Than A Mill

ASAP-1® IPS enhances the market-leading attributes of our legacy products with the latest digital technology. It is now possible to grind substrates thinner, polish flatter and de-process even more accurately. ASAP-1® IPS introduces a suite of features that automate many aspects of the process – from analyzing the part to be processed, to writing intuitive programmable recipes, to reading in-situ end-stop indicators that ensure each important sample is prepared correctly. The patented 'float down' polishing head design is retained, and enhanced with the use of force feedback. to achieve the quality of final polish demanded by customers for backside microscopy, Laser scan, FIB and SIL.

IPS real time monitor shows X, Y & Z Positions, speeds feeds & tool diameter

Machine vision, laser scan, & illumination provide feedback of system parameters

Improved System Controls

The dedicated machine-vision monitor provides an 'always on' realtime view of the part, overlaid with current system coordinates and parameter. Now you can see the part as it is being processed!

A touchscreen interface, a physical joystick and encoders -- alongside a suite of intuitive software and hardware features -- empowers the FA technician & engineering professional for the next generation of failure analysis.

The Touchscreen offers a powerful user interface - enhanced by physical controls

Specifications

- Z-Vertical Direction Precision:** 0.04 microns (40 nanometers)
- Table Precision (X& Y Travel):** 0.2 microns (200 nanometers)
- Table Travel Amplitude:** 100mm x 100mm
- Polishing Method:** Patented ASAP-1 Float-down head, with Z-lock, enhanced with electronic sensors and tool patterns
- Video:** Real-time machine vision with 6.5 inch video monitor. External Video Output (NTSC)
- Programming Input Method:** Touchscreen with joystick and 3 physical rotary encoders
- Machine Encoder:** Real-time Video of overlaid with stage and process variables.
- Tilt Control:** Computer-aided 2-circle tilt control, ULTRACOLLIMATOR Measurement (option)
- Force Control:** 1000grams (max) with 1 gram precision. Overall accuracy +/- 10 grams
- Recipe Load & Save:** USB Port, for removable flash drive (up to 2Gb) Z Position Touch-off Method Mechanical Positioning with Force-feedback (option) sensors.
- X & Y Position:** LASER Targeting
- Power Consumption:** 300 Watts Maximum in use
- Power Requirements:** Universal: 100-120VAC; 200-240VAC
- Footprint:** 19 inches (480mm) Width x 25 inches (635 mm) Depth x 22 Inches (560mm) Height

► ASAP-1 IPS Digital Selected Area Preparation System (continued)

Accessories

Wax-In Plate

Holds difficult packages

The Wax-in plate allows for packages with long vertical leads ("dead bug") or those with 'difficult' or non-standard shapes to be held in position for Selected Area Preparation.

- Works with paraffin wax or similar adhesives
- Holds dead-bug type packages

XYBOVE Re-application Tool

Re-mounting station for Xybove final polishing tips. The XYBOVE Re-Application Tool makes replacing XYBOVE Tips straightforward and rapid -- especially on smaller 1mm and 2mm diameter tools.

- Make Replacement XYBOVE Tips when required
- Save on buying new tools
- Fast and Convenient to use, especially on small diameter tools

Flip-over Workholder

Allows optical alignment of non-optically-accessible parts

Re-mounting station for Xybove final polishing tips. The XYBOVE Re-Application Tool makes replacing XYBOVE Tips straightforward and rapid -- especially on smaller 1mm and 2mm diameter tools.

ASAP-1 Standard Mounting Plate

Standard Mounting Plate for ASAP-1 systems. Mounts on to the system with four corner dowel holes and screw holes for even stronger mounting, if required. Includes flat, ground and lapped anodized aluminum surfaces, with a center optical alignment for use with the ULTRACOLLIMATOR. Tapped holes are include for mechanical mounting with wafer clamps or similar.

ASAP-1 Repeat Positioning Holders

Holders that work with the Standard Mounting Plate for ASAP-1 systems. Repeat Holders -- namely the Corner Square and the Small wax-in holder -- allow for many of the same part to be sequentially processed, without the need for re-centering or recalibration of the ASAP-1© system.

Particulate Vacuum Pump

- Used with ASAP-1© IPS
- Provides the safest working conditions, particularly when dry grinding encapsulants and electronic components
- Quiet and Efficient
- HEPA filter
- Allows best viewing in machine vision mode
- Driven by ASAP-1© IPS Software

Ordering Information

Cat No.	Description	Qty
6760.1	ASAP-1© IPS with Optical Control DIGITAL Selected Area Preparation System, 100-240V, 50/60Hz. Includes: X-Y table, tool spindle drive with deep sub-micron micron Z-resolution, compound sine tilt-table, touchscreen programming unit, ULTRACOLLIMATOR optical alignment, integrated real-time machine vision, 6.5 inch lcd monitor, set of 2mm and 3mm tools.	each
6760.2	ASAP-1© IPS DIGITAL Selected Area Preparation System, 100-240V, 50/60Hz. Includes: X-Y table, tool spindle drive with deep sub-micron micron Z-resolution, tilt-table, touchscreen programming unit, integrated real-time machine vision, 6.5 inch lcd monitor, set of 2mm and 3mm tools.	each
6715.1	High torque Motor (upgrade) 3X Torque motor. Suits aggressive material requirements such as removal of thick heat-sinks, removal of metals.	each
6389.1	Force Feedback Module System upgrade to add force feedback software for preparing delicate samples and dice for exhibiting in-package curvature.	each

3D Upgrade Modules

6394.1	Curvature Correction Adds sample curvature definition -- Suits decapsulation, thinning, and polishing of packaged dice showing warpage or non-flat conditions. Independent X & Y Axis Correction, AUTOCURVE Mode. Also adds Stage AUTOTILT function	each
6366.1	Thermal Relaxation Stage Adds thermal relaxation capability for warped die. Peltier-based heating plate with 1C accuracy. Hot Plate mode for convenient sample mount/demount. Includes stage, cable, two custom mounting plates with nylon retention screws	each

Characterization Modules

6368.1	End-Point Module High impedance / small capacitance based -- Hardware and Software Upgrade to add end-pointing for enhancement of decap, deprocessing, and polishing.	each
--------	---	------

Accessories

6373.1	Wax-in Mounting Plate	each
6316.1	XYBOVE Re-Application Tool. Supplied with 3 sheets of Xybove and tools for manufacture of 1mm, 2mm, 3mm and 5mm Xybove tips.	each
6388.1	Flip-over Sample Holder Allows for ULTRACOLLIMATOR alignment of packages and samples that have no access for 'opposite-side' alignment.	each
6371.1	Standard Mounting Plate for ASAP-1	each
6386.1	Repeat part Corner Square	each
6327.1	Small Wax-in Mounting Plate	each
6780.1	Particulate Vacuum Pump for ASAP-1© IPS Supplied with collection hose hardware -- 110V only	each
6780.2	Particulate Vacuum Pump for ASAP-1© IPS Supplied with collection hose hardware for -- 220 to 240V only	each

INSTRUMENTATION

Model 900 - Grinding and Polishing Machine

This light weight, bench top Grinding/Polishing model is ideal for surface preparation of small metallographic specimens. It is adjustable in speed from 0 to 1725 RPM, and has 1/3 HP and it is fully grounded. The coolant is applied to the wheel through an adjustable flow control goose-neck spout. The unit comes complete with a removable rubber splash guard for cleaning and a compression fitting for an easy connection into the existing coolant supply. Measures: 13" x 15.25 x 9.5" (H); Weight 35 lb. 110 volt, 60Hz

Model 900 Includes: Aluminum lapping plate, Lapping plate removal wrench, Metal splash guard, Metal holding band (for plain back paper) and Rubber splash guard

50120-10	Model 900	each
50120-20	Model 900CE (converted to comply with CE)	each

Accessories and Spare Parts

50120-40	Manual Work Arm for the Model 900 (must be factory installed)	each
50120-50	8" Aluminum Lapping Plate	each
50120-51	8" Glass Lapping Plate (used with plain back lapping film)	each
50120-60	Metal Holding Band	each
50120-61	Rubber Splash Guard	each
50120-62	Metal Splash Guard	each
50120-70	Motor Controller, 110 VAC	each
50120-72	Motor Controller, 220 VAC	each

**► Model 910 - Lapping and Polishing Machine**

This model 910 is specially designed to provide all of the features required to obtain outstanding results using the EMS Polisher. The Polisher is designed for SEM cross sectioning and also for TEM wedge polishing preparation. For instance, TEM wedge polishing requires that the polishing wheel rotates at a constant speed with high torque at a very low rpm. This combination of features is not found in standard grinders. Our model 910 provides all of the requirements that a Tripod Polisher needs. This includes the use of diamond lapping films and either colloidal silica or colloidal alumina suspensions. Plain backed diamond lapping film adhered to a glass plate by surface tension, and is easily removed for storage and re-use. Model 910 is also designed for ease of cleaning and disposal of abrasive debris.

FEATURES:

- Variable speed from 8 - 600 RPM
- Solid, cast aluminum construction
- Low speed, high torque rotation (makes it ideal for Tripod Polishing)
- Vibration free, quiet operation
- Stylish, tabletop design

Specifications:

Dimensions: 21" x 13" x 11"
Net weight: 60 lb (27kg)
Motor: 1/20 HP
Wheel Diameter: 8"
Electrical: 90-120VAC; 5-/60Hz or 200-240 VAC, 50/60Hz

Model 910 includes: Water and slurry delivery system, Aluminum lapping plate (includes O-ring #50122-30 for metal holding band), Metal holding band (for holding abrasive papers and polishing cloth, #50122-31), Glass plate, Dust cover, Hex wrench set

50122-10	Lapping and Polishing Model 910	each
----------	---------------------------------	------

Accessories and Spare Parts

50122-14	Workstation Post	
50122-15	8" Dia Glass Plate (must mounted to 50122-16, which is included with the Model 910)	each
50122-16	8" Dia Aluminum Lapping Plate	each
50122-17	8" Dia Cast Iron Lapping Plate	each
50122-18	8" Dia Cast Iron Lapping Plate, Concentric Grooves	each
50122-19	8" Dia Cast Iron Lapping Plate, Spiral Grooves	each
50122-24	8" Dia Cast Iron Lapping Plate, Radical Grooves	each
50122-25	Cast Iron Conditioning Ring (for use with cast iron plate only)	each
50122-26	8" Dia Copper Composite Lapping Plate	each
50122-27	Diamond Conditioning Ring (for use with copper composite plate only)	each
50122-40	Manual Yoke, Left side (includes post #01-02262-01)	each
50122-41	Manual Yoke, right side (include post #01-02262-01)	each
50122-42	Lapping Plate Flatness measuring kit (includes: granite leveling plate and flatness gauge #02-02134-01)	each

Electron Microscopy Sciences offers a full range of equipment used in materials preparation for a variety of technological fields. Electron microscopy, metallography, wafer lapping and polishing, failure analysis, crystal orientation, plasma processing, MEMS and many other applications are facilitated by our equipment. Please contact us or see our comprehensive website, which includes our complete line.

► **Model 920 - Lapping and Polishing Machine**

The model 920 is the first in a new generation of multi-purpose lapping machines designed for accurately lapping and polishing a wide range of materials. The 920 can be used as a standard metallurgical grinder/polisher utilizing abrasive papers, abrasive films, diamond discs, polishing cloths, etc., or it can be used as a high precision free abrasive lapping machine for flat polishing of optical and semiconductor materials.

When used as a free abrasive lapping machine, the 920 can accommodate most of our Lapping Fixtures for precise sample orientation and maximum flatness. The precision fixtures and the self turning lap ensure samples of the highest quality. In addition to flat lapping, we offer 2 fixtures for polishing oriented crystals. The crystals can be oriented and subsequently polished while maintaining their orientation.

The Model 920 is also available with two optional workstations. These independently controlled workstations rotate polishing fixtures automatically, thereby simplifying the polishing process and minimizing operator supervision. The 920 is ideal for high precision polishing in both R & D and production environments.

FEATURES:

- Variable Speed, 10 - 600 RPM
- Solid, Cast Aluminum Construction
- Quick exchange of worn-out disc
- Optional workstations for semi-automatic polishing
- Stylish, Tabletop design
- Vibration free, quiet operation

Model 920 includes: Model 920 is pre-wired for two workstation accessories and includes a water and a slurry deliver system. The aluminum plate #50122-16 (include 50122-30 O-ring for metal holding band). Metal holding band #50122-31 (for holding abrasive papers and polishing cloths). Glass plate #50122-15 (for use with abrasive film). Dust cover

50124-20R Lapping and Polishing Machine Model 920 each

Model 920L includes: Model 920 Lapping and Polishing Machine, Standard Motorized Yoke Assembly, Right Side (Model 92034L), Drive Motor Assembly, Right Side (Model 92012R)

50124-20L Lapping and Polishing Machine Model 920L each

Model 920LR includes: Model 920 Lapping and Polishing Machine, Standard Motorized Yoke Assembly, Left Side, (Model 92034L), Drive Motor Assembly, Left Side (Model 92012L), Standard Motorized Yoke Assembly, Right Side, (Model 92034R), Drive Motor Assembly, Right Side, (Model 92012R)

50124-20LR Lapping and Polishing Machine Model 920LR each

Accessories and Spare Parts

550124-50	Standard yoke assembly, left side, used with Model 92012L	each
50124-51	Standard Motorized post Assembly, Left Side	each
50124-52	Standard yoke assembly, right side, used with Model 92012R	each
50124-53	Standard drive motor post assembly, right side	each
50124-54	Yoke sweep mechanism, with motor drive, left side	each
50124-55	Yoke sweep mechanism, with motor drive, right side	each
50124-56	Digital RPM meter	each
50122-42	Lapping plate flatness measuring kit	each
50124-14	Tri-holder specimen mount (for metallographic mounts up to 38mm diameter)	each
50124-15	Quad-holder specimen mount (for metallographic mounts 25-32mm diameter)	each
50122-15	Glass Lapping plate, 8"	each
50122-16	Aluminum lapping plate, 8"	each
50122-17	Cast iron lapping plate, 8"	each
50122-18	Cast iron lapping plate, concentric grooves, 8"	each
50122-19	Cast iron lapping plate, spiral grooves, 8"	each
50122-25	Cast iron conditioning ring (for use with cast iron lapping plates only)	each
50122-26	Copper composite lapping plate, 8"	each
50122-27	Diamond conditioning ring (for use with copper composite lapping plate only)	each

Introducing Graphene, the ideal suport film for electron microscopy.

Graphene is a single atomic layer of carbon atoms tightly packed in a two-dimensional honeycomb lattice. This novel material is atomically thin, chemically inert, consists of light atoms, and possesses a highly ordered structure. Graphene is electrically and thermally conductive, and is the strongest material ever measured.

For more information, see pages 140-141 >>>>

INSTRUMENTATION

► MULTIPOL Precision Lapping & Polishing Machines

Product Highlights

- Versatility – all polishing methods can be used including, abrasive, diamond, slurry, CMP and etch polishing
- Optical quality polishing
- Easy to clean -All parts which could cause cause contamination can be easily detached. This means downtime is minimized.
- All lapping and polishing techniques can be accommodated
- Tight control of all process variables allows superior performance on most materials
- Bench-top and quiet in operation

MULTIPOL 8 and 10 are versatile lapping and polishing systems capable of preparing the most demanding specimens required by Research and Industry. Primarily designed for failure analysis, research and pilot-scale production applications, they allow for many methods of sample holding - producing a high versatility which is extended by the availability of a range of accessories and polishing plates.

Optical Standards of finish can be achieved with the use of the system's reciprocating sweep mechanism. This control allows maintenance of surface parallelism and flatness. Sample loading is fully variable, as are the sweep and rotation speeds.

All parts that come into contact with polishing media are produced from either stainless steel or heavy duty plastic and are quickly detachable for ease of cleaning and avoiding cross contamination. A spindle lock allows plates to be changed conveniently.

The fully-controllable reciprocating arm mechanism allows maintenance of plate flatness. This means that samples of the highest optical standards of flatness and parallelism may be prepared.

The exceptional degree of control which is available for all preparation parameters means that MULTIPOL's may be configured for hard, soft, and friable materials, and suits preparations of expensive and unique research materials.

Precision jig mounted on autocollimator for the production of extremely parallel sided samples

Specifications

Spindle Speed	0 to 90 rpm
Sweep Stroke	Variable +/- 8 degrees
Footprint	21 inches (53cm) wide
.....	x 18 inches (46cm) deep
.....	x 8 Inches (20cm) high
Unit Weight	40 kg (100 lbs)
Electrical	110 to 240V, 50 to 60 Hz

Ordering Information

Cat No.	Description	Qty
6108.1	MULTIPOL 8	each
6110.1	MULTIPOL 10	each

Accessories

6166.2	Precision Polishing Jig Kit for maximum 2 inch diameter samples	each
6166.3	Precision Polishing Jig Kit for maximum 3 inch diameter samples	each
6166.4	Precision Polishing Jig Kit for maximum 4 inch diameter samples	each
6158.1	Recirculating slurry pump	each
6230.1	Slurry containment tray	each

Lapping and Polishing Plates

Cat No.	Diameter	Surface	Application	Qty.
6191.8	8 inch			
6191.1	10 inch	Cast Iron scrolled	Initial lapping with loose abrasives, polishing very hard materials	each
6193.8	8 inch			
6193.1	10 inch	Copper-faced scrolled	Polishing hard materials	each
6195.8	8 inch			
6195.1	10 inch	Solder-faced scrolled	Polishing medium-hard materials	each
6197.8	8 inch			
6197.1	10 inch	Cast-iron plain	Preparing brittle and very small samples	each
6199.8	8 inch			
6199.1	10 inch	Stainless steel plain	General purpose, covered with films, cloths, papers and pads	each
6206.8	8 inch			
6206.1	10 inch	Polyurethane-faced plain	Polishing with slurries, used in CMP processes with colloidal silica and alumina suspensions	each

► **ULTRAPOL End & Edge Polisher**

Flat and angled preparation of optical and electronic components

Product Highlights

- Fully Angle adjustable Quick Release Interface allow for fast and repeatable mounting and demounting.
- Holders available for most components
- Fast process times
- Low run-out lap for flat optical polishes

ULTRAPOL End & Edge Polisher has been designed to provide accurate lapping and polishing for most research and industrial applications.

Key to the high quality performance of the unit is the calibration of the polishing base and the advanced angular control provided by the polishing head.

Built-in features such as tachometer, process end-indicator, timer, and head oscillation provide assurance the finest surface production.

The specific workholder for an application is held firmly and repeatably with the system's quick release interface. Standard holders are available for most applications, including:

- Capillary / glass ferrule polishing
- Planar Waveguide polishing
- Bare fiber polishing - flat and angle polishing
- Integrated optics
- Die Cross-sectioning
- SEM and TEM sample preparation
- IC Wafer and package-level backside preparation
- Encapsulated mount polishing

Custom workholders can also be designed to your specific needs.

ULTRAPOL End & Edge Polisher uses 8 inch diameter diamond lapping films which are easily changed for maximized output.

Specifications

Angular accuracy	0.1 degrees
Angular Range	0 to 12 degrees
Footprint	22 inches (55 cm) wide
.....	x 12 inches (30 cm) deep
.....	x 19 Inches (48 cm) high
System Weight	27 kg (60 lbs)

Ordering Information

Cat No.	Description	Qty
6390.1	ULTRAPOL End & Edge Polishing System	each
Configured for 100-220/240V. Includes advanced base unit with timer, tachometer, solenoid coolant system, speed control and process-end indicator. Micropositioner head includes, advanced angular control, low inertial mass loading system with auxiliary weight kit, oscillation control, 1 micron Z-control and "Quick Release" workholder mounting system.		

Accessories

2239.1	8" (200mm) anodized lapping plate	
1301.5	Lamp	
1503.1	Disc Holding Band	

Workholders

4079.1	Thin plate edge polishing holder – holds plates up to 2.5cm long	each
4079.2	Thin plate edge polishing holder – holds plates up to 5cm long	each
2707.1	Bare fiber holder (with 125 micron replaceable ferrule) – 1 position	each
2707.4	Bare fiber holder (with 125 micron replaceable ferrule) – 4 positions	each
2745.1	Bare fiber holder – holds 5-8 fibers – for fibers > 400 micron (specify fiber size when ordering)	each
3552.1	Saddle Clamp – holds endoscopes, glass rods etc	each
3547.1	V-clamp – holds large fiber bundles and rods (16mm to 34mm diameter)	each
2727.1	Capillary / glass ferrule workholder (1.25 to 2.5mm diameter) – 12 positions	each
2726.1	Capillary setting stand – works with 2727.1	each
2024.1	Encapsulated mount workholder – (holds mounts 0.5 to 1.5 inch diameter)	each
4065.1	Single die edge x-section / SEM Stub holder	each

INSTRUMENTATION

► ULTRAPOL Basic Manual Polisher

Manual polishing tools remain important to the lab needing good delayering and/or cross-sectioning results on a very tight budget. ULTRA TEC is proud to be associated with the polishing experts at Accelerated Analysis, and to offer their advanced manual tools for use with our ULTRAPOL Basic polisher.

Product Highlights

- Works with all 8" (200mm) surfaces
- Small footprint
- Speed Control and high torque motor
- Coolant speed control

UPF101 Accelerated Analysis Manual Cross Section Fixture

UPF201 Accelerated Analysis Manual Parallel Polish Fixture

Disc Holding Band

Our Disc Holding band works with ULTRAPOL 8" machines and many other 8" machines on the market. It holds down the lapping film or surface and can also stop splash.

Cat No.	Description	Qty
1209.1	ULTRAPOL Basic Polisher Configured for 100-220/240V operation. 0-500 RPM. Includes 8 inch (200mm) polishing system with speed control and solenoid-controlled coolant system	each
UPF101	Accelerated Analysis Manual Cross Section Fixture Includes 5 aluminum and 5 stainless steel sample mounts	each
UPF201	Accelerated Analysis Manual Parallel Polish Fixture Includes alignment mirror and 3 parallel polish sample mounts.	each
1503.1	Disc Holding Band	each
2239.1	ULTRAPOL Spare 8" (200mm) anodized aluminum plate	each

► UltraPol Manual Polishing Station

For quick, simple hand lapping applications, the manual lapping station has a smooth 8" glass surface to support precision lapping films. The fluid containment tray underneath the plate collects water run-off from the lapping surface for later disposal, keeping the polishing process area clean and contained. A Plexiglas lid protects the lapping surface when not in use and is an ideal, safe place to store lapping films flat. The manual station is ideal for short hand polishing processes and includes the glass plate and protective cover.

Cat No.	Description	Qty
1201.1	ULTRAPOL Manual Polishing Station includes fluid containment tray and 8 inch (203mm) aluminum polishing surface. Can be used with films, pads or glass surfaces.	each
1228.1	Plexiglass Lid for ULTRAPOL Manual Polishing Systems	each

Keeps films, fluids and surfaces safe and maintains moisture overnight

► Ultratool Manual Polishing Tool

ULTRATOOL was designed for manual polishing of fibers, either supported (connectorized) or unsupported (bare fibers). The tool uses various replaceable modules which are available for all types of connectors -- if needed, custom modules can be designed and manufactured by ULTRA TEC.

Key to ULTRATOOL's performance is a height adjust feature that is controlled by a fine pitch micrometer screw thread.

Flat, PC & APC polishes can be performed on all standard connector types. Another common use is bare-fiber polishing applications (flat and angled). ULTRATOOL is capable of holding bare fibers of the full size range and many other materials such as small wafer sections (for planar or edge polishes).

Cat No.	Description	Qty
1101.6	ULTRATOOLKIT package includes 1101.1 tool in carrying case with: 8x spare wear stops, 4 connector inserts (for ST, FC, SC and LC), locking tool, 1 oz bottle of ULTRAPOL B suspension	each
2240.1	Glass lapping plate, for manual polishing	each
1101.1	ULTRATOOL spare manual tool	each

► **FIBERTEC Mass Production Fiber Polisher**

Product Highlights

- LCD screen for storing up to nine different polishing recipes and process information
- Platen torque remains fixed even when speed is varied
- Air and water are kept separated inside of housing to ensure safe operation
- Adjustable weight allows for proper polishing force
- Anti-vibration feet allow for precise leveling - more consistent results

ULTRA TEC is proud to introduce a new mass-production connector polisher. FIBERTEC can polish between 10 and 24 connectors at a time.

Drawing on ULTRA TEC's unique legacy and in-depth knowledge of the fiber polishing process, the new FIBERTEC offers market-leading features that make polishing simple and productive for the operator. The system's LCD screen makes process control and great connector polishing results easier than ever to achieve. Pressure and platen speed are controlled for ultimate consistency and performance.

Recipe and process conditions can be saved

Industry-standard polishes are readily achieved due to a robust design and system build along with using the latest techniques.

Specifications

Footprint220mm Wide x 420mm
 Net Weight26Kg
 Power110VAC 60Hz or 220VAC 50Hz - 85w
 Air consumption3 kgf/cm (squared)
 Polishing Disk OD112mm (accepts 5 inch dia. polishing film)
 Polishing Plate Speed30 – 300 RPM
 Timer1 to 999 seconds

INSTRUMENTATION

► UT.Minipol.1 Polisher Single Position Fiber Polisher

Fiber polisher for small volume terminations

Product Highlights

- Retro-polishing - Bring already-installed connectors up to current industry requirements
- Wide range of holders
- Low Cost machinery solution

UT.MINIPOL.1 provides many of the features of larger polishing units in a small benchtop package—perfect for users with small production batches, or operating with a limited budget.

Versatility

All connector types may be prepared by the system, including SC, FC, ST, D4, SMA, bare fibers, PC, and Flat polishes are all accommodated by simple changes of the lap and/or the workholder.

Unique Features

A factory-set reciprocating arm movement rides the rotating lap producing high performance. This produces quality results at a low price.

Scope Of Use

UT.MINIPOL.1 allows for use as a retropolishing machine or as a quick factory-use system whether used singly, or in tandem with other units.

Accessories

The system can be powered by 110 or 220 VAC converter or by a standard 12V battery. A wide variety of Workholders are available for extending the use of the system at any time.

Tools And Consumables

ULTRA TEC stocks a wide range of Polishing Films, Papers, Pads and accessories for all polishing applications.

Specifications

Lap Diameter4inch (100mm)
 Weight:2.2kg (5 lbs.)

► NANOpol Bare Fiber Beveling System

NANOpol offers the fiber optic communications industry the ability to produce accurate polished bevels on bare optical fibers.

Angular control is achieved with the advanced positioning features of the integral micropositioned polishing head.

Designed for the price-conscious university and research environments, NANOpol uses a 4 inch diameter polishing lap – a size specially chosen for improved flatness/run-out and low consumables costs.

► **ULTRAPOL Fiber Lensing Machine**

The world's first **dedicated** mechanical fiber lensing system

Product Highlights

- Unsurpassed concentricity – singlemode compatible
- Fiber lens shapes of many types and angles
- Advanced angle control ensures optimum success rate
- Uses 5 inch lapping film – low consumable costs

ULTRAPOL Sculpted end polisher offers the fiber optic communications industry the ability to produce accurate end profiles on bare optical fibers.

Improved design of fiber holding, and all processing characteristics, provide concentricity of a couple of microns. This means that accurate bisecting of a singlemode (9micron) fiber core can be achieved.

Full angular control is achieved with the advanced positioning features of the integral micropositioned polishing head. This makes possible the production of the fiber lens shapes shown below.

The system uses a 5 inch diameter polishing lap – a size specially chosen for improved flatness/run-out and lower consumables costs.

Sculpted End Examples

Large included-angle tapers

Small included-angle tapers

Chisel/screwdriver tips

Bevels

INSTRUMENTATION

► Lapping and Polishing Fixtures

The Electron Microscopy Sciences Precision Lapping and Polishing Fixtures are designed to accurately produce polished parallel, tapered or critically oriented samples with minimal sub-surface damage. A series of specialized fixtures has been developed for lapping and polishing samples up to 6" in diameter, TEM samples and oriented crystals. In addition to size and shape, the fixtures differ in the type of thickness control techniques they employ. The Lapping and Polishing Fixtures are designed to be used either by hand or with a lapping machine (Model 920 above). Sample Mounting Fixtures are also designed to be used in conjunction with these fixtures to ensure that the sample is mounted parallel to the mounting block and that a thin, uniform layer of wax exists between the mounting block and the sample.

► Micrometer Controlled Fixtures

The micrometer method of thickness control employs a dial with 25 micron or finer graduations, that is adjusted relative to the outside support ring to set the amount of material to be removed. To set the dial, the sample is initially zeroed against the lapping plate and then the dial is adjusted to create a gap between the outside support ring and the center slide. This gap corresponds to the amount of material to be removed and gradually decreases, as the sample is lapped or polished, until the final thickness is reached. The load on the sample is varied by adding weights or finger pressure the top of the fixture. Due to the ease of adjustment a micrometer controlled fixture is generally used when desired sample thickness will vary from sample to sample.

FEATURES:

- Tungsten carbide base resists wear and maintains sample planarity.
- Wide base ensures stability thereby minimizing sample damage and edge rounding
- Wear ring is replaceable, on some fixtures, which extends the life of the fixture.
- Can be mounted in the Model 920 Lapping & Polishing Machine for semi-automatic processing
- Micrometer depth control allows precise control over sample thickness.
- Precisely crafted stainless steel construction ensures long life and high precision.

► Model 145 Lapping and Polishing Fixture

This model accommodates up to a ½" sample mount, which is held in place using a threaded draw rod and locating pin. This small, lightweight fixture is ideal for hand lapping or polishing of samples less than ½" in diameter. Comes with replaceable feet.

► Model 150 Lapping and Polishing Fixture

This model accommodates sample mounts up to 1" in diameter for both parallel and tapered samples. Angled blocks up to 45° are available and are simply mounted in place of standard parallel mounts when tapered sections are desired. The mounting blocks from this fixture are directly transferable from any cutting saw. The Model 150 is for general-purpose fixture and is capable of lapping and polishing multiple small or large samples up to 1" in diameter.

► Model 151 Counter-Balanced Lapping and Polishing Fixture

This model is identical to the model 150 except that the center slide is completely counter-balanced which enables the user to precisely vary the sample load. The model 151 is ideal when lapping or polishing very delicate materials, where only a minimal sample load can be tolerated.

► Model 155 Lapping and Polishing Fixture

This model works the same as the Model 150, but accommodates sample mounts up to 2" in diameter. A streamlined design reduces the overall fixture weight, which makes it ideal for lapping either by hand or on a lapping machine. This model also has replaceable tungsten carbide feet.

► Model 155DV Lapping and Polishing Fixture

This model is identical to the model 155 in all aspects, however, this model can be used to adapt an option of Vacuum (155V) or a Digital indicator (155D). The Model 155V has the ability to mount specimen up to 2" diameter using vacuum. The Model 155D has a digital indicator allowing 1micron resolution during the lapping and polishing process. You can purchase this model with both options (Model 155DV).

► Model 155L

The Model 155L (Previously Model 154) is ideal when lapping or polishing very delicate materials, where only a minimal sample load can be tolerated. The 155L uses counter-balance springs to reduce specimen load. The fixture is capable of lapping and polishing multiple small samples or larger samples up to 2" in diameter.

► Model 155E

Please see Model 147.

50152-05	155	2" (50mm) Diameter	each

INSTRUMENTATION

► Sample Mounting Fixtures

The proper mounting of samples is a critical step in the lapping and polishing process. It is imperative that the sample is firmly mounted parallel to the sample mount surface to ensure accurate results. Typically, samples are mounted using a low melting point wax (such as EMS #50400-01, Crystal Bond 509...) Sample Mounting Fixtures are designed to both monitor the temperature of the wax and to provide a uniform mounting pressure.

Operation:

When using low melting point wax, the mounting block is first heated on a hot plate then a thin layer of wax is melted evenly on it. The sample is placed on the mounting block, an appropriate size pressure plate is placed on the sample and they are placed together on the base of the mounting fixture. A spring-loaded rod is then positioned in the center of an indent in the pressure plate while setting the pressure with the height adjustment of the arm. The whole assembly is then placed on a hot plate until the correct temperature is reached and maintained for a short while to ensure a uniform layer of wax cooling tray to facilitate the hardening of the wax.

► Model 110 Sample Mount

This model is designed to mount samples up to 2" in diameter and is supplied with 6 Pressure Plates ranging in size from 1/2" to 2" diameter. The unit is also supplied with a set of tongs to lift the fixture when hot. The model 110 is the most basic model and is ideal for routine sample mounting in laboratories.

► Model 125 Cooling Tray

This model is intended to be used with a Hot Plate (see page 1076, EMS Cat. #72350) and is designed to handle a sample mount, which can slide directly from the hot plate onto the cooling tray platform without being lifted. The Cooling Tray consists of a large anodized aluminum plate with cooling fins that are designed to facilitate the rapid and uniform cooling of the Sample Mounting Fixture.

► Sample Mounting Kit

To facilitate all of your work, we offer the Sample Mounting Kit, which includes the necessary equipment to establish a basic sample mounting for your lab. This kit includes:

- 1 each Model 110 Sample Mount
- 1 each Model 420 Hot/Stir Plate (EMS Cat. #72350)
- 1 each Model 125 Cooling Tray and 1 package of Mounting Wax (Crystal Bond 509, Cat #50400-05).

Cat.#	Description	Pack
50160-10	Model 110 Sample Mount	each
50160-25	Model 125 Cooling Tray	each
72350	Stirrer/Hot Plate	each
50400-05	Crystal Bond 509, 5 Sticks	each
50160-00	Sample Mounting Kit	each

► Chemical Polishing Fixture - Model 160

The polishing of semiconductor materials often requires the use of harsh chemicals such as bromine or hydrofluoric acid solutions that would corrode the stainless steel from which most of the EMS fixtures are constructed. A special fixture for satisfying this requirement has been developed.

The Model 160 is made of PTFE and is designed to hold crystal wafers up to 2 1/2" diameter while they are being polished with very corrosive chemicals. The sample is held in place by vacuum and the sample is polished by rubbing the exposed sample against a suitable polishing cloth soaked with the chemical solution. The Model 160 is ideal for damage free polishing of semiconductor materials with harsh chemicals and has been used extensively for polishing GaAs with bromine-methanol solutions.

**SPECIAL FEATURES:**

- PTFE construction provides suitable level of chemical resistance.
- Vacuum mounting method ensures simple and uniform sample mounting.
- Allows polishing of samples up to 2 1/2" diameter
- Suitable for bromine-methanol polishing of GaAs.

Cat. #	Description	Qty.
50164-60	Chemical Polishing Fixture - Model 160	each

► The Quick Jig

A Universal Mounting Fixture

The Universal Sample Mounting Fixture is a versatile spring-loaded fixture for securing samples with pressure during mounting using adhesives, waxes, and epoxies. The fixture can be used at room temperature or on a hot plate for heat curable epoxies or faster drying of conductive paint. A scale on the pressure rod allows the user to apply reproducible pressure, from very light to heavy. Two interchangeable trays accommodate six different sized disk sample mounts (1/2", 3/4", 1", 1-1/4", 1-1/2", and 2" diameters) and five angled SEM pin stubs (0°, 45°, 52°, 70°, and 90°). The angled SEM pin stubs are held with screws on the angled surface so that the sample lies horizontally and the pressure applied vertically normal to the sample's surface. The 70° angle is useful for pre-tilted EBSD sample holders and the 52° angle is useful for FIB holders. The PTFE tip contacting the sample is compliant and easily cleaned if any adhesive inadvertently comes in contact with it. The fixture adapts to a large range in sample height.

Cat. #	Description	Qty.
50160-05	Universal Mounting Jig	each

► Model 180 Stackable Lapping Trays Hand Lapping Tray

This model consists of a replaceable 12" square glass lapping plate mounted into a cast aluminum tray. The tray is designed to serve as a secure surface for the glass plate while polishing with abrasive slurries, abrasive paper or abrasive films. The area under the glass plate acts as a reservoir to contain the used slurry or fluids.

50162-80	Model 180 Hand Lapping Tray	each
50162-85	Replacement Glass Bowl 12x12", 3/8" Thick	each

► Rail Polisher

FEATURES

- Low friction rails allow for a smooth glide of the fixture.
- Non-contact footing reduces abrasive film wear.
- Magnetic specimen mounts allow rapid and easy removal of specimens for viewing.
- Peek-thru aperture in the magnetic specimens mounts allow for transmitted light viewing.
- Variable loading is optional by adding weights or finger pressure to the top of the fixture.
- Micrometer depth control allows precise control over specimen thickness.
- Precisely crafted stainless steel construction ensures long life and high precision.

This newly introduced Lapping and Polishing Fixture, which is designed to accurately produce polished parallel, tapered or critically oriented samples with minimal sub-surface damage.

Derived from the Model 195 MultiLap™ Polishing Tool, the Rail Polisher version exhibits significant difference from the mode I195 MultiLap. The employment of the rail guide system allows for precision hand polishing of delicate specimens, which may be damaged on rotary polishing machines. Additionally, the rail guide system employs a non-contacting base, reducing wear on many types of abrasive films and media. The Rail polisher incorporates up to 3 separate pistons, which are used for holding the specimen during preparation and controlling the amount of material to be removed. Specimens up to 1" in diameter can be polished with controlled material removal for rapid viewing of the specimen in the light microscope. Also the magnetic mounts have a circular aperture, which provide means for viewing the specimen in transmitted light. Overall, the Rail Polisher is a versatile instrument for performing any controlled material removal process in the laboratory.

Micrometer Controlled Accuracy

The micrometer method of thickness control employs a dial with 10 μ m graduations that is adjusted relative to the outside support ring to set the amount of material to be removed. To set the dial, the sample is initially zeroed against the flat surface of the rail system and then the dial is adjusted to create a gap between the outside support ring and the

center slide. This gap corresponds to the amount of material to be removed and gradually decreases, as the sample is lapped or polished, until the final thickness is reached. Due to the ease of adjustment, a micrometer controlled fixture is generally used when desired sample thickness will vary from sample to sample.

Fixture Versatility:

EMS offers many different fixtures, which are suited for multiple applications. For example there are small fixtures such as the model 145 used in processing TEM and SEM specimens. Larger specimens such as wafers or optical devices can be processed using the model 150 or 155 lapping & polishing fixtures. Specific applications such as edge polishing can also be accommodated with special mounting blocks or special fixtures such as the models 147E or 155E. Additional options are available for most fixtures such as vacuum mounting and higher resolution thickness control by means of a digital indicator.

The Rail Polisher is available in either a one channel or a three channel model.

Sample Mounting Fixtures are available with One Piston, Two Pistons or Three Pistons.

Electron Microscopy Sciences offers a full range of equipment used in materials preparation for a variety of technological fields. Electron microscopy, metallography, wafer lapping and polishing, failure analysis, crystal orientation, plasma processing, MEMS and many other applications are facilitated by our equipment. Please contact us or see our comprehensive website, which includes our complete line.

► Twin Jet Electropolishing System Model MS-501B (METALTHIN Mk4)

The METALTHIN Twin-Jet Electropolisher was originally developed for producing high quality thin foils from radioactive materials. It is robust, compact, economical and easy to use.

The electrolyte tank, sample holder, thinning cell and tank base stand are machined from solid PVC to provide maximum resistance to corrosive electrolytes. The Cell parts are held together by stainless steel screws so that the Cell is easy to disassemble. The system incorporates the accumulated experience of many years of use in Universities, Industrial and Nuclear Research Centers and comprises a Thinning Cell and Control/Power Supply plus the optional Unipump and Dewar Flask.

New Features

Thinning current control: During the thinning process, small changes in electrical resistivity are caused by variations in the temperature of the electrolyte and by the thinning process itself. the CONTROL CURRENT facility automatically maintains the current that is initially set by the operator. This avoids the need to constantly monitor and adjust the setting.

The range of cell resistances to which automatic control of the thinning current can be applied are those that apply to the majority of electrolytes. If the conditions are outside the range of automatic control, the control current switch will flash to show that manual control is required.

- The external case has greatly increased strength and resistance to corrosive electrolytes.
- The electrical and instrumentation leads plug into the rear of the power supply to protect the connections from accidental contact with the electrolyte.
- The push switches are arranged in a single line on the front of the power supply.
- The push switches are fitted with flexible transparent covers to protect them from accidental contact with the electrolyte.
- The voltage and thinning current are displayed digitally.

For complete information of this unit, please visit our web site: www.emsdiasum.com

Suggested Accessories

55222-32	UniPump Cryogenic Pump	each
55222-40	Dewar Flask Optional Accessories	each
55222-06	Graduated Grinding Jig	each
55230-08	UniDisc 3mm Disc Punch	each

► Unidisc MK2 – Model 508

The Unidisc is designed to produce 3mm diameter discs for electropolishing, and subsequent TEM examination, from sample strips.

Sample strips are fed into the side of the Unidisc. When the handle is pulled, the strip is trapped between two rigid metal die faces. The punch then pierces the tightly held sheet and ejects the disc into the collection tray. Deformation is confined to a much localized shear zone at the edges of the disc away from the central region which is later thinned using either the twin jet electropolisher or the single jet electropolisher. The punch and die are replaceable items made from hardened tool steel.

The standard model produces 3mm discs for TEM from sheet/foil samples with minimum distortion.

Optional models produce discs from 1mm to 6mm in diameter. Examples of the use of these includes the production of 1mm discs of highly radioactive materials which are pressed into holes punched in non-radioactive 3 mm discs and the composite disc thinned. This reduces the radiation dose to the personnel involved. The larger disc specimens are used in SEM.

Ordering information

- The standard Unidisc Mk2 is used for making 3mm disc from samples 0.004 to 0.006" (0.10 to 0.15mm) thick i.e. the optimum for electro polishing.
- If the thickness of the sample is outside the 0.004 to 0.006: range, the same punch is used but the die has to be changed because a different clearance between the punch and the die is required to make good flat discs without any flash around the edges.
- Discs can be made from materials up to and including 1mm thick stainless steel. To order non-standard 3mm die quote: **the source material and thickness.**
- Punch and die sets and/or individual punches and dies can be supplied to produce discs in the range of 1 to 6mm in diameter. To obtain advice on the feasibility of your project quote: **the diameter of the disc required, the thickness and type of the source material.**

55230-08	UniDisc Disc Punch Model MS508	each
55232-1	1mm Disc Die Set	each
55232-2	2mm Disc Die Set	each
55231-2P	Replacement Standard Punch (3mm)	each
55231-2D	Replacement Standard Die (3mm)	each

► Plasma Cleaner – Model PC2000

The PC2000 is designed to simultaneously clean TEM specimens and specimen stages, which minimizes, and in many cases, eliminates contamination of the specimen being analyzed. The specimen holder and specimen are subjected to reactive gas plasma prior to electron microscope analysis

It has been well documented that low energy plasmas can be used to reactively etch or remove organic materials found on the surface of inorganic materials. This technology has been used by the industrial community to clean semiconductor wafers and optical materials for many years. A related technique is now being implemented in the field of electron microscopy, where specimens can become contaminated during the preparation process or from other sources. Current instruments use tightly focused, intense beams that create carbon deposits on the specimen surface due to organic contamination.

The specimen and the specimen stage are subjected to reactive gas plasma which efficiently removes a wide range of contaminants from critical surfaces. The procedure may be carried out prior to inserting the specimen and specimen stage into the EM by either mounting the specimen holder in the supplied port or by inserting the entire sample or sample assembly through the hinged upper port and into the 8" diameter x 4" high chamber. The system can be used with any side entry TEM holders, top entry TEM holders or with any sample that will fit inside the large, easily accessible chamber.

FEATURES

- Suitable for all side entry and top entry TEM holders. Large chamber also accommodates specimens up to 7" diameter and 3" high for cleaning tweezers, specimen mounts, etc.
- Digital LCD displays, indicate forward power in watts, reflected power, DC bias and vacuum level.
- Compatible with Argon, Oxygen, CF₄, and other gas mixtures.
- System comes standard with 3 ports which allow simultaneous cleaning of multiple holders or insertion of analytical tools into the plasma chamber.
- Power level can be optimized for each specimen type and gas species to maximize cleaning rate without risk of etching the specimen stage or the chamber.
- Viewport allows easy monitoring of the process.
- Safety interlocked controls simplify operation - ideal for multi-user environments.

For complete information on this model, see our interactive web site @www.emsdiasum.com

INSTRUMENTATION

► Plasma Etcher – Model PE 2000

The PE 2000 RF Plasma Etcher is specifically designed for reactive gas plasma etching and surface treatments. The unit is capable of 150 watts RF forward power at 13.56 MHz and up to four gas processing. The system is ideal for R&D applications where single sample processing is needed and total control of each process parameter is necessary.

Processes such as photoresist strips, BPSG removal, oxide and nitride layer etch, surface treatment of plastics and plasma cleaning are typical applications. Samples up to 6" diameter as well as irregular shaped substrates can be accommodated in the 200mm diameter vacuum chamber. A fully manual control system coupled with digital readouts and integral matching network with switching type power generator offer a wide range of experimental etch parameters

FEATURES

- High etch rates at moderate power levels of 100 watts forward power - 200 Å/minute for oxide and 500Å/minute for nitride.
- Stainless steel gas system with three-position feed provides maximum etch uniformity and the best possible utilization of the reactive species. Includes a separate vent to atmosphere line.
- Gas lines, fittings and stage assembly are all stainless steel construction and designed for corrosive applications – A Fomblin charged corrosive series rotary vane pump is included.
- Safety interlocks prevent mis-operation thereby protecting the user and the system.
- Manual controls, with digital readouts, make it possible to process in a range of vacuum pressure levels using an unlimited combination of reactive species including oxygen, fluorine and chlorine
- System is supplied with two manual gas channels, but up to four mass flow channels can be added.

For complete information on this model, see our interactive web site @www.emsdiasum.com

55312-03 Stainless Steel Chamber with Viewport each
55310-2 Chamber Gasket (2 required per unit) each

► Reactive Ion Etcher – Model RIE 2000

The RIE 2000 Reactive Ion Etcher is specifically designed for anisotropic etching of microelectronic devices. This R&D sized instrument is designed to simulate the operation of larger production instruments in process development and pilot production applications. The RIE 2000 is a turbo pumped system capable of reaching a base pressure of 10^{-6} torr. This low base pressure provides a clean etch environment and highly anisotropic etch without undercutting by eliminating residual species within the chamber prior to starting the etch process. Wafers up to 6" diameter as well as irregular shaped substrates can be accommodated in the 200mm diameter vacuum chamber. A fully manual control system coupled with digital readouts on the RIE 2000 offer a wide range of experimental etch parameters, and is not limited by routine, automated processing ranges.

FEATURES

- Manual controls make it possible to process in a wide range of vacuum pressure levels using an unlimited combination of reactive species.
- A stainless steel gas system with integral over the sample shower gas ring provides maximum etch uniformity and the best possible utilization of the reactive species.
- High etch rates at moderate power levels of 100 watts forward power can be achieved - greater than 200 Å/minute for oxide and 500Å/minute for nitride.
- System is supplied with two manual gas channels, but up to four mass flow channels can be added.
- Gas lines, fittings, and stage assembly are all stainless steel construction and designed for corrosive applications. Ceramic bearing turbo molecular pump and corrosive series rotary vane pump both are minimal maintenance, long life vacuum components.
- Safety interlocks prevent miss-operation thereby protecting the user and the system.

55320-03 Stainless Steel Chamber with View-Port each
55320-04 Oil-Free Diaphragm Pump to Back Turbo Pump each
(in place of rotary vane pump)
55320-05 Mass Flow Controller, One Channel each
55320-06 Mass Flow Controller, Two Channel each
55320-07 Mass Flow Controller, Four Channel each
55320-08 Cold Cathode Gauge for accurate reading of base pressure (requires stainless steel chamber 55320-03) each

► Ion Beam Sputter Deposition and Etching System Model IBS/e

The Model IBS/e is a high vacuum thin film deposition system designed to precisely deposit sub-nanometer grain, conductive coatings onto specimens prior to examination in the electron microscope. Thin, conductive films are deposited onto specimens to prevent charging effects and to enhance contrast. Thin films are deposited using two ion beam sources directed at a target material, eliminating radiation or heating effects common with other coating techniques. Extremely thin, continuous metal or carbon films are deposited without risking damage to delicate features present on the specimen. Virtually any target material can be used for ion beam deposition with precise control over the deposition thickness. An optional third ion source allows specialized ion beam etching techniques to be employed. The ability to deposit amorphous, continuous films makes the IBS/e system ideal for high resolution electron microscopy techniques.

Applications

Specimens examined in high resolution electron microscopes utilizing field emission electron sources demand fine grain, ultra-thin conductive coatings for image capture and specimen analysis. Low voltage SEM specimens must frequently be coated with a conducting film to reduce charging and enhance contrast in images. Ultra-thin films on specimens for examination by both AFM and STM are sometimes needed to decrease surface resistivity, bind small particles to a substrate, and reduce distortion from tip/specimen interaction. All of these techniques require uniform thin films to be deposited on the specimens of interest without heat or radiation. Standard coating techniques such as DC diode, vacuum evaporation, and other thermally driven methods are incapable of handling these requirements. The IBS/e is capable of precisely depositing thin films without exposing specimens to damaging photon flux. Additional applications include producing SEM samples for "channeling contrast", Electron Back Scatter Diffraction (EBSD) Patterns, Orientation Imaging Microscope (OIM) and multilayer deposition for research and development applications. Reactive etching and deposition can be achieved by introducing reactive gas such as oxygen or nitrogen through an optional micro-mixing valve.

Ion Sources

The IBS/e ion sources are specifically designed for simple operation and fast servicing. Both sources are directed at a target material which is sputtered with ejection energies of < 40 eV onto the specimen. Operating at 10 kV, the ion sources produce a beam flux of 15mA/cm² to produce a uniform distribution over the entire specimen. Ion beam current is displayed digitally for quick evaluation of the operating conditions. The sources are easily dismantled through the vacuum chamber door. 24 hour factory Quick Exchange Service is available for the anode assemblies.

An etching ion source is optional for nano-matching samples prior to sputter deposition. Etching improves image contrast on highly polished cross section SEM samples and can expose interesting aspects of various types of biological samples.

Specimen Stage Control

The Independent Rotate and Tilt Stage (IRT) drives specimens under the sputtered material with a wide range of parameters. Both the tilt and rotate axes are independently controlled to uniformly coat specimens. The IRT allows directional or rotary shadowing at fixed angles as well as variable speed controls for both tilt and rotation. The variable tilt angle rate improves uniformity by decreasing the tilt rate as the tilt angle increases. Specimens can be parked at 180° to shield them during target oxide removal.

The standard specimen stage can accommodate 2" wafers as well as SEM mounts and TEM specimens. Using the Large Area Stage (LAS) accommodates specimen wafers up to 4" diameter for ion beam sputter deposition.

High Vacuum System

The Model IBS/e creates a clean, hydrocarbon free, high vacuum automatically using a turbomolecular pump. Vacuum level is displayed digitally using a cold cathode high vacuum gauge. The system reaches a base pressure of 10⁻⁷ torr within minutes, allowing oxide-free metal films to be deposited with the need for liquid nitrogen trapping.

Film Thickness Monitor

Monitoring the film thickness precisely is done with a quartz crystal thickness monitor (QCTM). The QCTM will precisely monitor and repeatably terminate the sputtering process at preset film thickness or present time, whichever occurs first.

Targets

Four different target materials are selectable for deposition without breaking vacuum. Each target can be rotated into the sputter position simply by rotating a thumbwheel. The ability of the IBS/e to produce oxide free coatings without liquid nitrogen trapping allow refractory metals such as chromium, tungsten, and tantalum to be deposited without problems. For complete information of this product, please visit our web site @ www.emsdiasum.com

Specifications

Vacuum System

Roughing Pump:40 l/m N₂
 Turbo Pump:250 l/s/ N₂
 Base Pressure:10⁻⁷ torr
 Operating Pressure:x 10⁻⁵ torr (10 to 15 minutes)
 Vacuum Gauge:Cold cathode

Ion Sources

Beam Energy:2.5kV to 10 kV
 Beam Flux:15mA/cm²

IRT Stage

Tilt Range - Deposition Mode:0 to +/- 99°
 Tilt Range - Etch Mode:0 to +/- 99°
 Tilt Range - With Large Area Stage:0 to +/- 17 °
 Specimen Stage:2" Standard; 4" Optional
 Tilt Angle Rate:Variable
 Rotational Speed:0 to 40 RPM

Gas

Source Gas:Ar, 99.999% pure
 Pressure:2 sccm @ 5-7 PSI
 Vent Gas:N₂ @ 5 PSI

Power/Utilities

110 VAC / 15 A50/60 Hz
 220 VAC / 7.5 A50/60 Hz

55332-34	¹⁹⁷ Gold/ ¹⁰⁶ Palladium, 0.020" foil	each
55332-35	Carbon, 0.125"	each
55332-36	Tantalum, 0.125"	each
55332-37	Tungsten, 0.125"	each
55332-38	Chromium, 0.125"	each
55332-39	Iridium, 0.020"	each
55332-40	¹⁰⁷ Silver, 0.020 foil	each
55332-41	Nickel, 0.125"	each

² Not recommended for high resolution imaging. All others suggested for magnification < 200kX

Retrofit Options

55332-50	Quartz Crystal Thickness Monitor	each
55332-51	SI O ₈ Ion Source (SI O ₈ Ion Source retrofits to a second sputtering or etching port. Needle Valve, connecting Ar tube and SHV high voltage cable included)	each
55332-52	SI O ₈ Ion Source Mating Flange	each
55332-53	E IRT Stage for IBS/e	each
55332-54	E IRT Stage Controller for IBS/e	each

Spare Parts

55330-01	SI O ₈ Source Spare Pack (6 sets). Includes: 6 qty. Front Cathodes / 6 qty. Rear Cathodes / 36 qty. Calibrated Ceramic Insulators	each
55330-02	Front Shield for SI O ₈ Ion Source	each
55330-03	Rear Shield for SI O ₈ Ion Source	each
55330-04	Anode for SI O ₈ Ion Source	each
55330-05	HV Conductor for SI O ₈ Ion Source	each
55330-06	Rear Cathode for SI O ₈ Ion Source	each
55330-07	Front Cathode for SI O ₈ Ion Source	each
55330-08	IBS Chamber /eIRT O-ring Set	each
55330-09	SI O ₈ Source Alignment Tool	each
55330-10	Calibrated Ceramic Insulator (6 qty.)	each
55330-11	RP Mist Eliminator Cartridge	each
55330-12	High Voltage Cable (for model IBS TM200)	each
55330-13	Target Blanks (Al)	each

► Model 250 - 2-Axis Goniometer

The Model 250 2-Axis Goniometer is used to hold crystals in the process of determining crystallographic orientation using either Laue back reflection or optical orientation techniques. A crystal can be rotated 360 degrees adjustment while held in the plane, which is adjustable $\pm 30^\circ$ with respect to the goniometer mounting surface. There is 0.2° vernier on the 360° adjustment, and 0.1° vernier on the $\pm 30^\circ$ adjustment.

The goniometer combines rugged stainless steel construction with ease and accuracy of adjustment. After orientation, the model 250 can be mounted on the following equipment for subsequent processing:

- Oriented Crystal Lapping Fixture
- Electrolytic Polishing Instrument
- Low Speed Diamond Wheel Saw
- Acid Saw
- Wire Saw

Dimensions:

Model 250: 2"W x 2"D x 1.5"H (50 x 50 x 37.5mm)

► Accessories

► Model 25002 - Track Mount

The Model 25002 Track Mount is designed to fit either 2.19" or 1.99" wide tracks. It has a horizontal adjustment perpendicular to the x-ray or optical beam and a fixed height of 3.625" from the track to the center of the mounted Model 250 Goniometer.

Dimensions: Model 25002: 2.75"W x 3"D x 4.5"H (70 x 76 x 14mm)

► Model 25005 - Track Mount

The Model 25005 Track Mount is identical to the Model 25002 except it has a fixed height of 34" from the track to the center of the mounted Model 250 Goniometer

Dimensions: Model 25005: 2.75"W x 3"D x 5"H (70 x 76 x 127mm)

► Model 66005 - 2-Axis Goniometer

The Model 66005 is a 2-axis goniometer used for orienting and cutting single crystals. It can be mounted on an x-ray track for orientation using the Model 66011 Track Mount and then transferred to the Model 660 for cutting. With the sample mounted to the goniometer, the vertical axis can be rotated 360° within 0.2° while the horizontal axis can be rotated $\pm 50^\circ$ from the 0.2° vernier on the arm.

Dimensions: 2" (W) x 2" (D) x 2.5" (H)

► Model 66011 - Track Mount

The Model 66011 Track Mount is designed to mount the Model 66005 2-Axis Goniometer onto a 1.99" or 2.19" wide x-ray or optical track for crystal orientation.

Dimensions: 3.25"(W) x 3"(D) x 5"(H)

Model 66005 shown mounted on Model 66011 Track Mount

Model 250 mounted on model 25002

Model 66011 with Model 66005

► **Model 260 - 3-Axis Goniometer**

The Model 260 3-Axis Goniometer is constructed of hard-anodized aluminum and is used to hold crystals in the process of determining crystallographic orientation using either Laue back reflection or optical orientation techniques. (See EMS Model 210 Optical Orientation Instrument). The integral track mount is designed to fit a 2.19" wide or narrower x-ray or optical track. There is +/-25° of rotation in two of the axes and a full 360° of rotation in the other. The Model 260 is designed so that a 2" diameter crystal mounted on the goniometer with a 1/2" high mounting block is 3.625 inches above the track. The P/N 50176-61 riser can be used to raise the Model 260 by 1 inch when working with smaller crystals. The Model 260 can also be mounted on the following EMS equipment for subsequent processing:

■ **Model 850 Wire Saw**
 Dimensions: 3.5" W x 3.5" D x 3.25" H

► **Model 265 - 3-Axis Goniometer**

The Model 265 is a larger version of the Model 260 and is mounted on a 7" square flat base, which can be adapted for a wide range of applications. There is +/-25° of rotation in two of the axes and a full 360° of rotation in the other. The Model 265 is ideal for the orientation and cutting of large crystals and can easily be adapted to existing equipment.

Dimensions: 7" (W) x 7"(D) x 5"(H)

► **Model 170 - Multi-Axis Lapping Fixture**

The Model 170 was designed in collaboration with Lawrence Livermore National Laboratory and Max Planck Institute for the precision orientation and lapping or polishing of single crystals. This design is based on the work of Mader et al at MPI and is capable of applying a controlled force to delicate samples. The advantage of the Model 170 is that it can be mounted directly on an x-ray track for Laue back reflection. Precision of 0.1° in orientation can be obtained by double exposure with 180° rotation of the fixture in the optional x-ray track mount.

► **Model 25015 - Lapping and Polishing Fixture**

The Model 25015 is designed to complement the Model 250 2-Axis Goniometer and is used to lap or polish oriented crystals either by hand or on a rotating polishing wheel. The Model 250 Goniometer can be mounted on an x-ray track for orientation and then transferred directly into the Model 25015 for lapping or polishing. The Model 250 can also be transferred to an EMS saw prior to using the Model 25010. The Model 25015 utilizes a counterbalanced center slide to completely offset the weight of the center slide and the goniometer and is capable of lapping or polishing oriented crystals within 0.25°.

► **The Model 210 - Optical Orientation Instrument**

The Model 210 Optical Orientation Instrument is used to determine the orientation of a crystal or to align a crystal so that specifically oriented surfaces can be cut or polished. The Model 210 uses a laser beam that is reflected off a cleaved or preferentially etched crystal surface back onto a target that is perpendicular to the laser beam. Optical orientation is an orientation technique that can be used as an alternative to more hazardous and expensive x-ray techniques.

Ordering Crystal Orientation Equipment and Accessories

Description	Cat. #
Model 250 - 2-axis Goniometer (include mounting blocks and orientation software)	50176-50
Model 25002 - Track Mount (for 3.625" height)	50176-51
Model 25005 - Track Mount (for 4" height)	50176-52
Model 25015 - Lapping & Polishing fixtures (used to hold Model 250 for Polishing)	50176-53

Model 66005 - 2-axis Goniometer (used on Model 660)	50180-05
Model 66011 - Track Mount (for 3.625" to 4" height) used to hold the Model 66005	50180-11
Model 170 - Multi-axis Lapping Fixture (used to polish more than one sample)	50176-70
Model 17011 - Track Mount (for 3.625" height used on Model 170)	50176-71
Model 210 - Optical Orientation Instrument (includes laser w/o Goniometer or Track Mount)	50176-10
Spare Parts	
Set Screw A for Model 260	50177-10
Set Screw B for Model 260	50177-11
Set Screw C for Model 260	50177-12
Set Screw D for Model 260	50177-13
Brass Plug for Model 260	50177-20
Adapter to hold Model 260 onto Model 660 Saw	50177-25
Adapter to hold Model 250 onto Model 66007 (see Model 660 Saw)	50177-26
1" Stainless Steel Mounting Block (for use with Model 250, 66005)	50177-50
0.75" Stainless Steel Mounting Block (for use with Model 250, 66005)	50177-51
0.5" Stainless Steel Mounting Block (for use with Model 250, 66005)	50177-52
0.37" Stainless Steel Mounting Block (for use with Model 250, 66005)	50177-53

MicroCleave™ Kit - Model 520

The MicroCleave™ technique is a relatively simple and inexpensive method of producing superior cross sectional TEM specimens. For speed in preparation, it is unsurpassed.

One limitation of the technique is that it does require the substrate material to be cleaved or fractured. For this reason, it has been applied almost exclusively to semiconductor materials. Recently, the technique has been extended to other substrates, such as glass, silicon carbide, quartz, sapphire, and other hard materials. It is particularly well suited for rapidly examining coatings and thin films very soon after they are deposited.

An X-ray mirror consisting of 45 layers of alternating Mo/Amorphous Si (7.0 nm period) on Si substrate. Image courtesy of John McCaffrey – National Research Council of Canada

Multiple Quantum Well structure grown by MBE showing the thickness terraces possible with a MicroCleave™ sample. Courtesy of Scott Walk – Materials Directorate WPAFB. (Now with PPG Industries)

FEATURES:

- Relatively simple and inexpensive method for the preparation of TEM cross sections, where specific information is not required.
- Ideal when sample availability is limited as it requires very little starting material.
- While originally designed for semiconductors, the technique has been applied to glass, silicon carbide, quartz, sapphire, and other brittle materials.
- No ion milling is required. Therefore, no amorphization, no heating effects, no ion implantation, and no preferential sputtering.
- The MicroCleave™ sample is ideally suited for rapid crystallographic orientation and determination in the TEM
- The MicroCleave™ technique is fast and typically requires preparation times of less than 1 hour. This makes it particularly well suited for rapid examination of coatings and thin films shortly after deposition.

Ordering

50130-20	Model 520 MicroCleave™	Complete Kit
----------	------------------------	--------------

Complete Kit includes:

Product #	Description	Qty
50130-50	Model 150MC Lapping Fixture	each
50130-51	#5201 Grid Bending Jig with Cover	each
50130-52	Engraved Mounting Block for 150MC	3/pk

Meet the LatticeAx™

the small, accurate, fast, low-cost cleaving solution, suitable for any lab.

► LatticeAx™ Cleaving System

Overview

The LatticeAx™ is a precision cleaver that fits in the palm of your hand. In an amazingly small footprint (4" cube, 100mm³), the patent-pending "Ax" and process are designed to assist the user to cleave site specific targets, as well as wafers, strips, or pieces to precisely sized samples with localized targets. One of the smallest, most efficient silicon wafer cleaving tools in the world, the LatticeAx™ is sure to revolutionize your workflow.

The LatticeAx™ features and process optimizes the very basic elements of the manual cleaving technique and overcomes manual cleaving disadvantages, such as lack of accuracy and repeatability. This machine-assisted hybrid cleaving tool bridges the gap between manual scribing and fully automated cleaving. It increases success rate by any user while keeping costs down. It takes little training and users will be "cleaving in minutes and experts in a day."

See how it works... Learn how to do it...

We've added video content to our website to help you get to know our latest products even better!

Stop by and see what it's all about.

Fast – 5 Minute Process

- Quick targeting with variable zoom
- Digitally displayed real-time imaging

10-µm Targeting Accuracy*

- Advanced vision package with 5-µm resolution*
- 1688 x 1248 UXGA CCD Camera and dedicated SW*

Robust – Simple Operation By Any User

- All components are integrated on a single platform
- All movements controlled via X,Y stage, Rotation table and microscope coarse and fine focus*

* specific to the new LatticeAx™ 300

Versatile – wide range of sample size, substrate type and top layers

- Si-GaAs-Sapphire
- Cu
- Resist
- Polyimide
- Passivation
- Films

Applications

- Site specific cross-section for SEM analysis
- Target localization prior to FIB or broad ion beam
- Downsize samples for SEM with height restriction
- Cleaving to create uniform samples for other analysis tools with non-wafer scale stages
- Vertical, mirror image cleaving for photonics analysis

Setup Requirements

- Flat, stable surface to support the LatticeAx™ at least 18" x 24" or 41cm x 61cm surface space
- Power for the vacuum pump (110V or 220V depending on local requirements)
- Computer running Windows 7 or XP with mouse, keyboard, monitor, video cable to the monitor

Options

- The Wafer Cleaving Station
- Wafer Cleaving Kit
- Marker-Scriber Kit
- Lattice Scriber
- CleanBreak Pliers

LatticeAx™ 110

Every user can cleave samples with wide variation of size, thickness and materials at high quality within 2 minutes.

By using the Patent Pending LatticeAx™ base platform, every user can cleave samples with wide variation in size, thickness and materials at high quality within 2 minutes. It uses precision knobs to produce fine, reproducible surface indentation followed by slow, controlled cleaving. The indenter is controlled by a stage with 5-µm steps. Combine this tool with your own optical microscope to improve cleaving accuracy.

The standard configuration includes 1 each:

- LatticeAx™ 110 precision wafer cleaving tool
- LA Diamond Indenter – used for indenting the sample surface, pre-installed on the LatticeAx™
- V-115A or V-220A Vacuum pump (115V) or (220V) for securing wafer sample during indentation (hose included)
- LatticeAx™ transport case
- Manual and installation instructions

The Process

Using the LatticeAx™, wafer cleaving is accomplished in three basic steps that compliment existing skill sets used in wafer analysis. It's simple. Just SET... INDENT... CLEAVE... RESULT

Select target under high magnification (up to 80x) and use micrometer to position the indenter tip.

A precision control knob coupled with a sharp indenter tip results in fine indentation at the edge of the sample.

Cleaving position consists of a set cleaving pin and a cleaving bar used to apply uniform pressure to achieve a controlled cleave.

Cleave is always clean and precise.

LatticeAx™ 220

The LatticeAx™ 220 is the most popular cleaving tool delivering 20-µm cleaving accuracy.

The LatticeAx™ 220 combines the patent pending LatticeAx™ base with a digital microscope and real-time image acquisition and display software (SW) to achieve a cleaving accuracy of 20-µm and high quality cross-section surface in <5 minutes by any user. The LatticeAx™ 220 accepts samples with a wide range size, thickness and material.

The standard configuration includes 1 each:

- LatticeAx™ 110 precision cleaving tool
- LA Diamond Indenter – used for indenting the sample surface, pre-installed on the LatticeAx™
- USB digital microscope including:
 - Magnification adjustable, 10-90x
 - Interface USB 2.0
 - Software with measurement and calibration features (Windows XP, Windows 7 required)
- A robust stand:
 - 13" x 17" heavy duty work surface
 - Industrial vertical and horizontal poles and boom for mounting and operating the USB Digital Microscope

- V-115A or V-220A Vacuum pump (115V) or (220V) for securing wafer sample during indentation (hose included)
- LatticeAx™ transport case
- Manual and installation instructions

Computer and display not included

Specifications

<50 micron accuracy at 40x camera magnification
25 microns achievable at 90x camera magnification

Results

Site-Specific Cleaving of Etched TSVs

Cross section of SEMATECH 5x50 micron TSVs.

A single tool (LatticeAx) process was used to simply cleave through the etched vias and the image in the SEM without any other preparation.

Cleaving Accurately Flip Chip Copper Bumps

A multi-tool process was used to prepare cross sections of copper bumps. The LatticeAx was used to cleave close to a specific row of copper bumps for quick, final broad argon ion beam milling.

► LatticeAx™ Cleaving System (continued)

LatticeAx™ 300

LatticeAx™ 300 is Electron Microscopy Sciences' highest performance cleaving solution. It integrates vision package with 5- μ m optical resolution and precise control of all axes for accurate positioning.

LatticeAx™ 300 delivers a cleaving accuracy of 10- μ m in <5 min. The patent pending LatticeAx™ base is integrated with a complete vision package that includes a monocular microscope with 5- μ m optical resolution, color CCD camera and real-time image acquisition and display SW, as well as, X-Y-R stage and industrial stand and poles. This dedicated cleaving workstation is used to survey, align, indent, cleave, and inspect any sample by any user.

Features

The LatticeAx™ 300, a fully integrated cleaving solution. Using precision knobs and following a set of instructions, it allows every user to create fine, reproducible surface indentation followed by slow, controlled sample cleaving of a wide variety of semiconductor materials.

The LatticeAx™ 300 system consists of:

- A vision package, a monocular microscope, color CCD camera with image display software, coarse focusing mount, fine focus, and fiber optic ring lighting. The result, 5- μ m optical imaging resolution and variable zoom digitally displayed in real-time.
- A robust setup integrated into a single platform to support the vision package: 13" x 17" heavy duty work surface, industrial pole and boom, X-Y-R sample positioning stage.

This solution offers a dedicated station to survey that any user can use to align, indent, cleave, and inspect samples with cleaving accuracy of 10 micron and throughput of <5 minutes/cross-section.

LatticeAx™ 300 Process

SET

- X-Y-R sample positioning stage to support sample positioning
- Complete high accuracy vision system with SW to survey and select the AOI
- Integrated micrometer with 5- μ m steps enables the user to accurately move and position the LatticeAx™ indenter tip over the selected target or cleaving line

INDENT

- The LatticeAx™ diamond indenter indentation: L: 1mm (from leading edge), W: 10- μ m, D: several microns (user adjustable)
- A control knob allows the user to move the indenter in Z and control the depth of the indentation based on the sample type
- Indentation step occurs under high magnification

CLEAVE

- Cleaving step taken place under high magnification
- 3-point cleaving process – 2 teeth coming from the top (on the cleaving bar) and one tip under the sample
- Back wall line indicates the indentation positioning such that the force will be equal on both sides
- Constant force cleaving bar creates uniform force. Slow cleave is an option.
- The cleaving bar can be moved in Z by holding on the bar or using a control knob

Specifications

Cleaving accuracy: +/-10- μ m from selected target

Cleaving accuracy is based on the indentation accuracy relative to the target (cleaving line). The LatticeAx™ integrates all the tools to allow the user to control the indentation location based on a viewed target.

Cleaving cycle time: 5 minutes

Actual indentation and cleaving steps take <1 minute. The remaining time is predicted for sample survey, target identification and line drawings as needed. This time can fluctuate based on user familiarity with the target and the target type, size and location.

Sample size

Minimum Sample size:
Use the Ax for the full set-indent-cleave – minimum sample size 9mm width
For <9mm, use the Ax to survey the target and create the fine indentation, while cleaving manually off the LatticeAx™
Maximum sample size: ½ of 12" wafer
Larger samples can be attempted but more complicated to handle
Thickness of sample: 'out of the package' die to a fully processed sample (not including package material)

Accessories

Wafer Cleaving Kit

The complete tool set to get from wafer to cleanly cleaved pieces. This is a critical step to getting the best cross-sections. The kit includes wafer mat, scribes for marking and scribing, pliers for cleaving, rulers and instructions.

Includes:

- Diamond Scriber** - Pen style, optimal for top down scribe
- Diamond Scriber** - Straight tip, optimal for top down precise marking and/or scribing
- Diamond Scriber** - 30-degree tip, optimal for top down precise marking and/or scribing
- CleanBreak Pliers** - 6" wafer cleaving pliers. Simple and clean way to cleave (post scribe) wafers to strips and smaller pieces. 3/4" jaw, opening.
- Large Cutting Mat** - Wafer cutting mat, self healing, double-sided, green and black, 18" x 24"
- Small Ruler Mat** - Self healing, small wafer piece ruler mat, double-sided, green and black, 3 1/2" x 5 1/2"

Note: Always remember to use safety glasses when cleaving the wafer.

LatticeAx™ Diamond Indenter

Custom diamond indenter for the LatticeAx. The LatticeAx indenter is easily replaced by the user and comes with screws, allen wrench and installation instructions. Polished end for improved positioning.

Marker-Scriber Kit

Diamond scribes for marking fine marks and scribing the wafer surface. These diamond scribes also serve as replacements for those purchased in the starter kit. Three diamond scribes are included:

- Pen-style diamond scriber
- Fine scriber for precise marking and/or scribing
- Fine scriber with 30-degree tip for precise marking and/or scribing

Lattice Scriber

This is the best scriber you'll ever find for scribing semiconductor wafers. This custom scriber has an eight point truncated diamond tip that can be used for both toe and heel scribing held by robust 4" long pin vise handle.

CleanBreak Pliers

CleanBreak 6" wafer cleaving pliers. Simple and clean way to cleave (post scribe) wafers and wafer strips and smaller pieces. 3/4" jaw, opening. Comes with one set of replaceable jaws to maintain the best cleaving performance.

The Wafer Cleaving Station

The Wafer Cleaving Station includes a large cleaving mat, scribes for marking and scribing, pliers for cleaving, and rulers, everything in the Wafer Cleaving Kit. In addition, the Lattice Scriber, customized with an 8 point diamond tip that scribes well at any angle and an extra set of CleanBreak pliers is included with spare set of jaws so that a clean cleave is always possible. This package includes:

- Wafer Cleaving Kit
- Lattice Scriber: Ultimate scriber for semiconductor samples
- CleanBreak Pliers: Wafer-cleaving pliers

LatticeAx™ Options Package

Two spare custom diamond knives for the LatticeAx. The LatticeAx knife is replaced by the user and comes with allen wrenches and installation instructions. This package includes:

LatticeAx Diamond Indenter: Two spare diamond knives

Wafer Cleaving Kit The complete tool set to get from wafer to cleanly cleaved pieces. This is a critical step to getting the best crosssections. The kit includes wafer mat, scribes for marking and scribing, pliers for cleaving, rulers and instructions.

Diamond Scriber - Pen style, optimal for top down scribe

Diamond Scriber - Straight tip, optimal for top down precise marking and/or scribing

Diamond Scriber - 30 degree tip, optimal for top down precise marking and/or scribing

L-Square - 24"x 8.5", phenolic, non-warping, ruler acts as guide for macro cleaving up to 300mm wafers without damaging the top surface of the cleaving station

CleanBreak Pliers - 6" wafer-cleaving pliers. Simple and clean way to cleave (post scribe) wafers to strips and smaller pieces. 3/4" jaw

Large Cutting Mat - Wafer-cutting mat, self healing, double sided, green and black, 18 x 24"

Small Ruler Mat - Self healing, Small wafer piece ruler mat, double sided, green and black, 3.5 x 5.5"

► General Supplies for Cleaving

► Brush; Red Sable

Extremely soft and pliable. Perfect for the manipulation of pre-viously fixed, dehy-drated specimens into embedding capsules or molds.

66100-00	Brush, Red Sable, Size #0	each
66100-01	Brush, Red Sable, Size #1	each

► EMS Tweezers Style 122

Fine, bent, serrated tips. Length: 6" (150mm)

78357-122	EMS 122	each
-----------	---------	------

► Dumont Diamond Tweezers

Dumont Stainless Steel tweezers coated with an extremely fine diamond dust on the inside tips. They are essential in applications where a tight grip is necessary. They are also available with an improved locking system. They are 5½" (150mm) long. They may not be suitable for use with EM grids.

► Fine Points Diamond Tweezers

78100	Tip measures 0.25 x 0.25mm	each
-------	----------------------------	------

► Medium Points:

78106	Tip measures 0.50 x 0.50 mm	each
-------	-----------------------------	------

► Dust-Off Plus Model (DPSA)

Contains: Formula S (Difluoroethane) - 100% safe for the ozone. It comes with a patented 360° Vector Valve.

The multi-directional valve is used for easy blasting in hard to reach areas.

The valve can be removed from the can anytime without any loss of gas.

Its new concentrated formula will give you 57% more blasts per ounce, 17% more blasts per can.

The kit consists of a 8 oz. can and a Vector Valve nozzle. Refill is 8 oz can, 12 cans/case.

70840	Dust-Off DPSA Kit	each
70834	Vector Valve Nozzle Only	each
70843	Dust-Off Plus Refill, DPSR	each
70844	Dust-Off Plus Refill, DPSR	12/cs

71915 - PenVac with Deluxe Storage Case

71914 - Complete Pen-Vac System

► Pen Vac™

Pen-Vac™ is a new improved way to handle small, flat surface objects. Besides the electronics assembly industry, Pen-Vac is ideal for EM work as well. It can be used to handle grids, pick up stubs, align membranes, work with glass slides, cover slips and much more. Holds up to one minute.

- Lifts up to 50 grams.
- Totally self-contained vacuum.
- Light-weight, less than 1 ounce.
- Fits in your pocket like a pen.
- Brushed aluminum body.
- Optional storage compartment for vacuum tips and cups.
- No power supply needed.
- Available in various sizes.
- Interchangeable vacuum probes.

Pen-Vac™ comes with:

- A variety of Vacuum Probes, complete with a vacuum cup attached and it is available with plastic or aluminum hubs. Straight and angled to suit your applications. The stainless steel needle portion of the probes are one-half inch long.
- Vacuum Cups come in a wide range of materials. We offer the Static Dissipative and the Conductive Cups that provide ESD protection for electrostatic discharge of sensitive components. Cups comes in three sizes: ⅛" (3.17mm); ¼" (6.35mm); and ⅜" (9.52mm).

Set consists of:

One Pen with 6 Probes and Cups. (6 Probes: 3 angled, ⅛", ¼", ⅜" and 3 straight ⅛", ¼", ⅜")

71914	Complete Pen-Vac System	set
71915	Same as 71914 with Deluxe Case	set

Probes and Cups:

71916	⅛" Straight and Bent, Small	2/pk
71917	¼" Straight and Bent, Medium	2/pk
71918	⅜" Straight and Bent, Large	2/pk

► Mini-Cleaner Vacuum System

A powerful, lightweight, and compact cleaning system. Instead of blowing dust around with a freon duster, this high performance vacuum collects dust efficiently and removes it from delicate areas. The mini-cleaner comes with a crevice tool, 2 dusting brushes and 2 filters, weighs 8 oz. and provides 115 volts of cleaning power.

71910	Vacuum Kit	each
71912	Additional Filters	5/pk

➤ Adhesives and Mountants for Cleaving

➤ Crystalbond™/Wafer-Mount™

A temporary adhesive. These wash away adhesives are used as a temporary bond for holding delicate crystals, metallurgical specimens, glass components, and ceramic substrates for dicing, slicing, drilling and polishing. These materials adhere readily to metals, glass, ceramic and then can be washed after machining away using various solvents.

APPLICATIONS:

- Machining or slicing single crystal metal specimens.
- Grinding and polishing sapphire, ceramic, optical garnets, ferrites, and LCD glass.
- Dicing and slicing germanium and silicon wafers in semiconductor production.
- Holding beam leads in IC devices for pull-off tests.
- Dicing and slicing alumina and beryllia substrates for IC and microelectronic production.
- Dicing subminiature chip capacitors and microwave IC substrates.

Crystalbond 590

555

509

Wafer-Mount™ 559

562

➤ **Crystalbond™ 509:** offers excellent adhesion to metals, glass, and ceramic. This material is the best for precise high purity work since it leaves no residue after dissolving and does not clog the diamond wheel as compared to conventional waxes. Each stick weighs about 90 grams.

50400-01	Crystalbond 509, Clear Stick	each
50400-05	Crystalbond 509 Clear Stick	5/pk
50400-50	Crystalbond 509 Amber Stick	each
50400-S1	Crystal Bond 509 Stripper	1 qt
50400-S2	Crystal Bond 509 Stripper	1 gal

➤ **Crystalbond™ 555:** the same as 509 but used in applications where it is desirable to have a temporary bond which is water soluble. Each stick weighs about 90 grams.

50401-01	Crystalbond 555	each
50401-10	Crystalbond 555	10/pk

➤ **Crystalbond™ 590:** the same as 509 but offers maximum adhesion to subminiature parts. Each stick weighs about 225 grams.

50402-01	Crystalbond 590	each
50402-02	Crystalbond 590	2/pk
50402-S	Stripper	100 g

➤ **Wafer-Mount™ 559:** is available in sheet form 10"x10" (254x254mm). To use, remove the paper backing exposing the adhesive layer. The substrate is positioned on the film and pressed down firmly so that it adheres to the plastic film. No heating is required. The wafer mounted on the plastic film can then be held down using a vacuum manifold or mechanical means for dicing or scribing. After dicing or scribing, the parts can be separated from the wafer-mount 559 film by washing in acetone or MEK. Ideal for holding down silicon wafers, alumina, or glass substrates for scribing.

50403-02	Wafer-Mount 559	2/pk
50403-10	Wafer-Mount 559	10/pk

➤ **Wafer-Mount™ 562:** a dry temporary adhesive film, 0.003" thick, which can be easily cut to size with either a razor or scissor. This mount permits pre-placement of the adhesive film exactly where the user wants it. It melts at 195-210°F. After application it can be dissolved rapidly in trichloroethylene or toluene. This material is particularly useful in applications where a pre-formed adhesive film is needed to assure uniform bonding and flatness or in bonding stacks of substrates such as LCD glass slides for slicing. Sheet size 8"x10".

50404-10	Wafer-Mount 562	10/pk
50404-20	Wafer-Mount 562	20/pk

► Microtools

► High Precision Diamond Scribing Tools

A newly designed diamond scribing tool set containing eight precision natural diamond scribes in various sizes and configurations. This set is perfect for precision work in microscopy.

The set consists of eight diamond tips, 3 mm in diameter and are mounted in interchangeable tool cones and an MT-1 tool handle. The tool and handle are all

housed in a hardwood instrument case. Individual scribes can be purchased separately.

Cat. #	Description	Pack
62105-S1	Straight tip, .02" (.50mm) dia. by .06" (1.5mm) tip length	each
62105-B1	Bent tip, .02" (.50mm) dia. by .06" (1.5mm) tip length	each
62105-S2	Straight tip, .01" (.25mm) dia. by .06" (1.5mm) tip length	each
62105-B2	Bent tip, .01" (.25mm) dia. by .06" (1.5mm) tip length	each
62105-SE	Straight extended tip, .02" (.5mm) dia. by .2" (5.0mm) tip length. Good for tight areas.	each
62105-BE	Bent extended tip, .02" (.5mm) dia. by .2" (5.0mm) tip length. Good for hard to reach areas.	each
62105-HS	Straight, heavy duty tip, .03" (.8mm) dia. by .12" (3.1mm) tip length	each
62105-HC	Bent, heavy duty tip, .03" (.8mm) dia. by .12" (3.1mm) tip length	each
62090-00	MT-1 Tool Handle, 4.75" (112mm) long, gold anodized	each
62105-00	High Precision Diamond Scribing Tools, complete set	each

► High Precision Fine Diamond Scriber

This diamond scriber is the ultimate scribing instrument offering the most precision for the most delicate applications. It is available in straight or bent configurations.

APPLICATIONS INCLUDE:

- Fine scribing under the microscope - for silicon wafers and glass coverslips
- Precision scribing and repairing - for thin film circuits and microcircuits, etc.

These diamond mountings are 0.8mm diameter with a reduced shank size of 0.5mm or 0.25mm diameter, which holds the diamond stylus. The natural diamond has a 60° included angle and a 0.12mm tip radius. The integrated 6.35mm anodized hexagonal (non-rolling) aluminum handle has a positive finger grip in the form of grooves for easy control and non-slippage. Each diamond scriber is packaged in a protective plastic tube.

Cat. #	Configuration and Shank Size
62107-ST	Straight Mounting, 0.5mm diameter
62107-BT	Bent Mounting, 0.5mm diameter
62108-ST	Straight Mounting, 0.25mm diameter
62108-BT	Bent Mounting, 0.25mm diameter

► Micro Ruler – Extended Reach

- Precision etched, non-glare ruler made from surgical stainless steel, only 3 mm wide. The ruler is calibrated in 0.1 mm graduations, 10 mm total range.
- Stainless steel handle 230 mm long. Balanced and angled for the ultimate in flexibility able to reach into areas which are impossible for other measuring devices.
- Available with or without a stainless steel autoclave case. Total weight of the ruler is 26 g.
- Applications include microscopy, chemistry and anywhere precise measurement in clean and very confined areas are of critical importance.

Cat. #	Description	Pack
62136-ER	Ext. Reach Micro Ruler only	each
62136-ERC	Ext. Reach Micro Ruler w/ Case	each

► Micro Mirror – Extended Reach

It is of similar construction with the Micro-Ruler (above), but comes with a 2.5x magnify Mirror - made from polished stainless steel, 4.8 mm diameter. Overall length is 230mm. Autoclavable Case is available as an option.

Cat #	Description	Pack
62136-M	Extended Reach Mirror	each
62136-MC	Extended Mirror With Case	each

► Hardened Steel Deburring Tool Set

Made from hardened steel, this tool has three razor sharp cutting edges ranging from a very sharp point to one that is approximately 10mm in length. These nickel plated triangular tools are mounted in red and black plastic handles. Tool length is 30mm by 2.1mm across (1.2"x.08"). The overall length of the tool is 154mm (5.7"). 2 tools/set.

62161-SD	Hardened Steel Deburring Tool Set	set
----------	-----------------------------------	-----

► Sapphire Burnishing/Deburring Tool

This tool will out-perform any stone for the fine burnishing of soft or hard materials such as; miniature pivots, shafts, and pins that are made from hard steel, carbide and even ceramic.

This precisely ground sapphire blade is 1.5mm x 2.3mm, 14mm long (0.06 x 0.09 x .56"). It is permanently mounted in a hexagonal gold anodized aluminum handle. Total length is 120mm (4.75").

62160-00	Sapphire Burnishing/Deburring Tool	each

► Omni Grids

► Copper Lift-Out Grids

Custom copper lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations with both vertical bars and "V" shaped attachment surfaces. 3mm diameter.

75964-01 Copper Lift-Out Grids 100/vial

► Molybdenum Lift-Out Grids

Custom molybdenum lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations with both vertical bars and "V" shaped attachment surfaces. 3mm diameter.

75964-02 Molybdenum Lift-Out Grids 25/vial

► Beryllium Haft-Ring Grids

Custom beryllium haft ring grids. 3mm diameter.

75964-03 Beryllium Haft Ring Grids 10/pk

► Copper 5-Post Lift-Out Grids

Custom copper 5-post lift-out grids specially designed for in-situ lift-out. These grids include multiple indexed mounting locations, all with vertical bars attachment surfaces. Now with lower profile sides for easier access to outermost posts. 3mm diameter.

75964-04 Copper 5-Post Lift-Out Grids 100/vial

► Copper 4-Post Lift-Out Grids

Custom copper 4-post lift-out grids specially designed for in-situ lift-out. These grids include multiple indexed mounting locations, two with vertical bars attachment surfaces and two with "V" shaped alignment surfaces. Sides have lower profile for easier access to outermost posts. 3mm diameter.

75964-05 Copper 4-Post Lift-Out Grids 100/vial

► Molybdenum 4-Post Lift-Out Grids

Custom Molybdenum 4-post lift-out grids specially designed for in-situ lift-out. These grids include multiple indexed mounting locations, two with vertical bars attachment surfaces and two with "V" shaped alignment surfaces. Sides have lower profile for easier access to outermost posts. 3mm diameter.

75964-06 Mo 4-Post Lift-Out Grids 25/vial

► Copper 3-Post Lift-Out Grids, Side Access

3 post copper lift-out grids, similar to 75964-01, in design but 35 micron thick with 1 edge lower for easy access. Packaged in glass vials

75964-07 Copper 3-Post Lift-Out Grids, Side Access 100/vial

► Copper 3-Post Lift-Out Grids, Shallow Downset

3 post copper lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations with both vertical bar and "V" shaped attachment surfaces. These grids have a shallower downset and slightly wider center post than 75964-01. Packaged in glass vials.

75964-08 Copper 3-Post Lift-Out Grids, Shallow Downset 100/box

► Copper 5-Post Lift-Out Grids

5 post copper lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations, all with vertical bar attachment surfaces. Now with lower profile sides for easier access to outermost posts. 3mm dia. Packaged in glass vials.

75964-09 Copper 5-Post Lift-Out Grids 100/box

► Copper 4-Post Lift-Out Grids

4 post copper lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations, two with vertical bar attachment surfaces and two with "V" shaped alignment surfaces. Sides have lower profile for easier access to outermost posts. 3mm dia. Packaged in plastic vials.

75964-10 Copper 4-Post Lift-Out Grids 100/box

► Omni Grid Storage Box

Storage box for 100 standard or haft grids—3 mm diameter – TEM grids. Box comes complete with base, lid and clips.

75965-01 Grid Storage Box each

► Membrane Boxes

Our unique membrane storage boxes for the transfer, storage and shipping of many delicate items. Available in 5 different shapes and sizes these plastic containers, with a double elastic membrane on the top and bottom, offer security for all of your sensitive items. Once your item is placed in the box the elastic membrane conforms around the enclosed object and protects it from any movement.

ALL MEASUREMENTS ARE IN MILLIMETERS (mm)

► Gel-Pak® Storage/Carrier Box

Patented gel technology – the innovative solutions for storage and carrying delicate materials

The traditional Gel-Box, Gel-Tray® and Gel-Slide Carriers are perfect for applications where devices are manually offloaded by tweezers or by hand.

- **Gel-Box (AD Series)** - Hinged plastic boxes coated with Gel in the bottom.
- **Gel-Tray® (BD Series)** - A removable 2" plastic tray coated with Gel and contained inside a hinged plastic box.
- **Gel-Slide (CD series)** - A removable 2" glass slide coated with Gel and contained inside a hinged plastic box.

(Gel-Pak® is A Division of Delphon Industries)

► GEL-BOX (AD Carrier Boxes)

Gel-Box AD Series Carriers owe their unique device-holding capabilities to a proprietary GEL coating applied directly to the bottom of a hinged box. Devices are held once contact is made with the GEL surface and will stay in place, even if the carrier is tilted or jarred. The carriers are designed for manual off-loading with tweezers or by hand. GEL-PAK AD series are ideal for handling devices where no direct contact with the top of the device is important.

The GEL-BOX Carriers may also be used for bare die handling, such as GaAs, PETs, laser diodes, and beam-lead devices where the die size is small (less than 1mm) and tweezers or other specialized techniques are used for off-handling.

FEATURES:

- No need for custom-molded containers for each device size.
- Ideal for handling subassemblies, hybrid models and packaged devices.
- Available in Transparent, Conductive and Anti-Static carriers in multiple sizes.
- Retention Level available: x0, x1, x2, x3, x4, x5, and x8 (the higher the number the more retention capability)

We offer standard retention level X4. Other retention levels are available with the order of 100 or more, and at least two weeks for delivery.

► GEL-TRAY® (BD Series) And GEL-SLIDE (CD Series)

Same as the Gel-Box, the Gel-Tray and Gel-Slide products are intended for manual applications in which the devices are loaded and unloaded using tweezers or by fingers. The Gel-Pak BD and CD series of pocketless trays are both configured as a 2" carrier stored in a protective plastic hinged box. The Gel coating is applied directly to the surface of the plastic tray (BD Series) or glass slide (CD Series).

These products offer the same functionality as the Gel-Box, however the plastic tray or glass slide can be easily removed from the box allowing for convenient handling when loading or unloading fixtures are being used.

The Gel-Slide (coated glass slides) is designed for higher temperature applications such as bonding and reflow where a plastic tray will not work. The CD slide has a temperature capability up to 220°C. The CD glass slides are also ideal for backside inspection due to their optical clarity.

Both the Gel-Tray and Gel-Slide products are available in the standard retention levels (X0, X4, X5, and X8) to accommodate variations in device size, weight, and surface roughness.

The protective 2" hinged boxes are available in transparent styrene (T), conductive black (C) and antistatic (AS) materials. The boxes, trays, and slides may be customized with a print pattern (grid) or company logo. Standard available Prints can be viewed at Gel-Tray/Gel-Slide Print options

78426-96 EMS 96 each

► Rubis Wafer Tweezers

Made from SA steel with serrated handles. These tweezers are specially designed to handle different fragile and delicate materials of gallium or silicon wafers. They have a smooth polished non-glare surface with a satin finish. The tweezers have stopping pins turned up on lateral edges and graduated lower paddles prevent the wafer from slipping. The tweezers are also available in Peek material. Peek: An ESD Safe, $10^9\Omega \times \text{cm}$. Soft, conductive fiber, with heat resistance up to 250°C (short exposure 300°C). (Not compatible with nitric and sulfuric acids.)

► Style 2LB/4

No teeth. Length: 128mm (5"). B = 12.5mm ($\frac{1}{2}$ "), C = 8mm ($\frac{1}{8}$ "), D = 3mm ($\frac{1}{8}$ "), E = 2mm ($\frac{1}{2}$ "), F = 4mm ($\frac{1}{8}$ "), M = 9mm ($\frac{1}{8}$ "), N = 2mm ($\frac{1}{2}$ "), R = 48mm ($1\frac{3}{4}$ "), S = 42mm ($1\frac{3}{8}$ ")

78220-01 Wafer Tweezers, Style 2LB/4 each

► Style 39S-4

4 teeth, lower part perforated. Length: 128mm (5"). B = 12.5mm ($\frac{1}{2}$ "), C = 10mm ($\frac{1}{8}$ "), E = 2mm ($\frac{1}{2}$ "), F = 6mm ($\frac{1}{4}$ "), M = 9mm ($\frac{1}{8}$ "), N = 1.5mm ($\frac{1}{16}$ "), R = 48mm ($1\frac{3}{4}$ "), S = 4mm ($1\frac{1}{2}$ ")

78225-01 Wafer Tweezers, Style 39s each

► Style 41LB-2

2 teeth. Flat lower paddle. Length: 128mm (5"). B = 6mm ($\frac{1}{4}$ "), C = 7.0mm ($\frac{1}{4}$ "), E = 2mm ($\frac{1}{2}$ "), F = 3mm ($\frac{1}{8}$ "), M = 9mm ($\frac{1}{8}$ "), N = 1.5mm ($\frac{1}{16}$ "), R = 52mm (2"), S = 42mm ($1\frac{3}{8}$ ")

78226-01 Wafer Tweezers, Style 4 each

➤ Amphibian Ringer Solution

Ingredients: NaCl; KCl; $CaCl_2 \cdot 6H_2O$ and Distilled water.

RT	11762-05	Amphibian Ringer Solution	500ml
RT	11762-10	Amphibian Ringer Solution	1 L

➤ B-5 Fixative

For lymph nodes.

RT	64122-05	B-5 Fixative	500 ml
RT	64122-06	B-5 Fixative	1 lt
RT	64122-10	B-5 Fixative	4 lt

➤ Borate Buffer *see Buffers on next page.*

➤ Bouin's Solution

Bouin's solution can be used as a fixation and a staining fluid. Bouin's fixative is excellent for use on biopsy specimens of the gastrointestinal tract. Tissue from the endocrine system are well fixed and many antibodies react well with tissue fixed in Bouin's. Bouin's solution may be used as a routine fixative or a staining solution, but should not be used as a preservative for tissue. Tissue cannot be held in Bouin's solution for extended periods. The maximum fixation time in this solution should be less than 48 hours and should be transferred to alcohol. Packaged in leak-proof histo-containers, pre-filled and ready-to-use.

Formulated with Picric Acid saturated aqueous solution 75%, Formalin (40% aqueous formaldehyde) 25% and Glacial Acetic acid 5% in de-ionized water

RT	15990-01	Bouin's Fluid	1 L
RT	15990-04	Bouin's Fluid	4 L

Bouin's Fluid in Pre-filled cups:

RT	15990-10	Bouin's Fluid	50 x 10 ml/cs
RT	15990-20	Bouin's Fluid	50 x 20 ml/cs
RT	15990-30	Bouin's Fluid	20 x 30 ml/cs

FIXING, CLEARING, AND DEHYDRATING CHEMICALS

All of our ready-to-use buffers are...

...Conveniently packaged.

...Prepared fresh for each order.

...Economical and time-saving.

The buffer is a vehicle for the fixative and requires certain properties:

a.) To maintain constant pH during the time of the fixation. The pH of the fixative in EM is adjusted using the buffer system chosen; e.g. range 6.5-8.0.

b.) The ionic constitution to prevent the extraction of cellular components, or the deposition of precipitates of fixative chemicals.

Desired pH should be specified when ordering.

➤ Acetate Buffer

RT	11482-42	Acetate Buffer, 0.2M, pH 4.2	500 ml
RT	11482-50	Acetate Buffer, 0.2M, pH 5.0	500 ml
RT	11482-56	Acetate Buffer, 0.2M, pH 5.6	500 ml

➤ Antibody Diluent

Buffer for diluting your primary and secondary antibodies, especially if they were stored for a while, even at -20 in glycerol, or in refrigerator.

4-8°C	62713	Antibody Diluent	50 ml
4-8°C	62714	Antibody Diluent	125 ml
4-8°C	62715	Antibody Diluent	500 ml
4-8°C	62713-01	Antibody Diluent for Frozen Sections	50 ml
4-8°C	62714-01	Antibody Diluent for Frozen Sections	125 ml
4-8°C	62715-01	Antibody Diluent for Frozen Sections	500 ml

See more information, see page 615 >>>>

➤ Antibody Dilution Buffer with Immunoglobulin- Free BSA

This ready-to-use Antibody Dilution Buffer is designed for the dilution of antibodies in all immunoassays, including immunofluorescence, IHC, ELISA, WB. This buffer contains immunoglobulin free BSA and does not contain phosphate, sodium azide, or mercury preservatives. It can be used for the dilution of all antibodies, including peroxidase, and antibodies to phosphoproteins. However, it is not suitable for dilution of antibodies to S100 proteins. This buffer contains green food color.

- Reagent Supplied: Ready to use buffer
- Application: Dilute antibodies, primary or secondary as recommended in the protocol by the manufacturer of these products.
- Storage: 2 – 8°C. Diluted antibodies can be stored at 2 – 8°C for several weeks, depending upon the stability of antibodies.

2-8°C	25886-01	Antibody Dilution Buffer, free BSA	100 ml
2-8°C	25886-05	Antibody Dilution Buffer, free BSA	500 ml

➤ Borate Buffer

RT	11455-78	Borate Buffer, pH 7.8	500 ml
RT	11455-82	Borate Buffer, pH 8.2	500 ml
RT	11455-90	Borate Buffer, pH 9.0	500 ml

➤ Citrate Buffer 0.2M

Buffer of Citric Acid and Sodium Citrate

0-5°C	11492-04	Citrate Buffer 0.2M, pH 4.0	1 L
0-5°C	11492-06	Citrate Buffer 0.2M, pH 6.0	1 L

➤ Citrate Buffer pH 6.0 (10x)

This buffer is intended for heat-induced antigen retriever on formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies.

	Cat. #	Description	Qty.
2-8°C	64142-07	Citrate Buffer pH 6.0	100 ml
2-8°C	62142-08	Citrate Buffer pH 6.0	1000 ml

See more information, see page 618 >>>>

➤ EDTA Buffer pH 8.5 (10x)

This buffer is intended for heat-induced antigen retriever on formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies.

	Cat. #	Description	Qty.
2-8°C	64142-09	EDTA Buffer pH 8.5	100 ml
2-8°C	62142-10	EDTA Buffer pH 8.50	1000 ml

See more information, see page 616 >>>>

➤ HRP-Conjugate Diluent

Specifically designed for preparing solution of your HRP-conjugate used as the detection reagent. It is the Antibody-diluent buffer with additional component for stabilizing your HRP-conjugate. Allows you to further standardize the assay preparing ready-to-use conjugate solutions in advance and store them in refrigerator without loss of activity.

	Cat. #	Description	Qty.
4-8°C	62716	HRP Conjugate Diluent	50 ml
4-8°C	62717	HRP Conjugate Diluent	125ml
4-8°C	62718	HRP Conjugate Diluent	500 ml

➤ ImmunoHistoZyme™, Ready-to-Use

ImmunoHistoZyme is used for proteolytic digestion of formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies.

	Cat. #	Description	Qty.
2-8°C	64142-13	ImmunoHistoZyme	15 ml
2-8°C	62142-14	ImmunoHistoZyme	100 ml

See more information, see page 616 >>>>

➤ Michel's Buffer

RT	18041-05	Michel's Buffer	500 ml
RT	18041-10	Michel's Buffer	1 L

➤ Millonig's Phosphate Buffer

Millonig (1964); Karlsson and Schultz (1965)

Ingredients: Sodium Phosphate, monobasic (NaH₂PO₄•xH₂O); Sodium Phosphate, dibasic (Na₂HPO₄•xH₂O); 0.5% Sodium Chloride (NaCl)
Shipping Conditions: Ambient Temperature
Maximum shelf life after receipt: 1 month

The pH of this buffer is 7.4 (0.1M); the osmolarity is 440 mosmols, so this buffer is hypertonic to most body fluids. Millonig recommended to use this buffer for the fixation of very hydrated tissues with osmium tetroxide. For marine organisms, a higher concentration of sodium chloride (3%) is recommended. We supply it in a double strength (0.2M), pH 7.4. Dilution is needed before use.

0-5°C	11582-05	Millonig's Phosphate Buffer 0.2M	500ml
0-5°C	11582-10	Millonig's Phosphate Buffer 0.2M	1 L

FIXING, CLEARING, AND DEHYDRATING CHEMICALS

► Pepsin Reagent, Ready To Use

Description: Pepsin is used for proteolytic digestion of formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. Pepsin digestion of FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: Use as antigen retriever for some antibodies in IHC. Please refer to primary antibody protocol for IHC.

Reagent: Ready-to-use Pepsin reagent available in 2 sizes: 15 and 100 ml

Cat. #	Description	Qty.
2-8°C 64142-05	Pepsin Reagent	15 ml
2-8°C 62142-06	Pepsin Reagent	100 ml

► Phosphate Buffer, 0.1M

Prepared from Sodium Phosphate Monobasic Hydrate and Sodium Phosphate Dibasic Heptahydrate Non-Sterile. Meant for research purposes only.

0-5°C 19340-60	Phosphate Buffer, pH 6.0	1 L
0-5°C 19340-65	Phosphate Buffer, pH 6.5	1 L
0-5°C 19340-70	Phosphate Buffer, pH 7.0	1 L
0-5°C 19340-72	Phosphate Buffer, pH 7.2	1 L

► Phosphate Buffer Saline (PBS)

PBS is commonly used in biochemistry. It is a salty solution containing calcium chloride, sodium phosphate and potassium phosphate. PBS is isotonic and non-toxic to cells. 1X PBS final concentration is 0.137M NaCl, 0.01M Na₂HPO₄, 0.0027M KCl and pH 7.4.

0-5°C 19342-10	Phosphate Buffered Saline, 10X	1L
0-5°C 19242-40	Phosphate Buffered Saline, 10X	1 gal
0-5°C 19343-10	Phosphate Buffered Saline, 2X	1L
0-5°C 19343-40	Phosphate Buffered Saline, 2X	1 gal
0-5°C 19344-10	Phosphate Buffered Saline, 1X	1L
0-5°C 19344-20	Phosphate Buffered Saline, 1X	1 gal

► Pronase Reagent, Ready To Use

Description: Pronase is used for proteolytic digestion of formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. Pronase digestion of FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: Use as antigen retriever for some antibodies in IHC. Please refer to primary antibody protocol for IHC.

Reagent: Ready-to-use Pronase reagent available in 2 sizes: 15 and 100 ml.

2-8°C 64142-03	Pronase Reagent	15 ml
2-8°C 62142-04	Pronase Reagent	100 ml

► R-UNIVERSAL Epitope Recovery Buffer (10x stock)

Properties: Clear, non-toxic solution.

Presentation: R-Universal Buffer is supplied as 10x concentrate. For epitope recovery dilute 1 part of stock with 9 parts of deionized water.

Application: For epitope recovery dilute 1 part of stock with 9 parts of deionized water.

Stability and Storage: The preparation is stable for 1 year when stored unopened at +4°C. Every lot is issued with a certificate indicating the expiry date. After opening, store at +4°C in the refrigerator and use within 6 months.

Certification: Each lot is certified for compliance to specifications. The product is produced under DIN EN ISO 9001: 2008 Quality Management system for the products in Immunoassay Development and Measurement, Products for Bioanalytics and Immunoassays.

Cat. #	Description	Qty.
0-4°C 62719-10	R-UNIVERSAL Epitope Recovery Buffer (10x stock)	125 ml
0-4°C 62719-20	R-UNIVERSAL Epitope Recovery Buffer (10x stock)	500 ml

See more information, see page 614 >>>>

► Section Block

A new class of blocking solutions based on chemically modified and fragmented ultra-pure casein. Effectively reduces unwanted binding of primary antibody and conjugates you use to charged surface of the slide and tissue section. Greatly reduces non-specific binding while preserving the specific reaction, by saturating potential non-specific protein-protein interactions. Moreover, in contrast to BSA-based, IgGm casein or serum-based blocking solutions there is no interaction of specific antibody and blocking protein itself. or oth ls not comparable to other commercially available or home-made blocking solutions. Recommended for research and diagnostic pathology, especially for retrieved sections and polyclonal antibodies..

Cat. #	Description	Qty.
62710	Section Block	50 ml
62711	Section Block	125 ml
62712	Section Block	500 ml

► Sodium Cacodylate Buffer

Prepared from Sodium Cacodylate Trihydrate (F.W. 214.02).

0-5°C 11650	Sodium Cacodylate Buffer, 0.2M, pH 7.4	225 ml
0-5°C 11652	Sodium Cacodylate Buffer, 0.2M, pH 7.4	500 ml
0-5°C 11653	Sodium Cacodylate Buffer, 0.2M, pH 7.4	1 L
0-5°C 11654	Sodium Cacodylate Buffer, 0.4M, pH 7.2	500 ml
0-5°C 11655	Sodium Cacodylate Buffer, 0.4M, pH 7.2	1 L

► Sorensen's Phosphate Buffer

A phosphate buffered mixed salts, prepared from sodium phosphate monobasic and sodium phosphate dibasic.

0-5°C 11600-10	Sorensen's Phosphate Buffer, 0.2M, pH 7.2	1 L
0-5°C 11600-40	Sorensen's Phosphate Buffer, 0.2M, pH 7.2	4 L
0-5°C 11601-10	Sorensen's Phosphate Buffer, 0.2M, pH 7.4	1 L
0-5°C 11601-40	Sorensen's Phosphate Buffer, 0.2M, pH 7.4	4 L

FIXING, CLEARING, AND DEHYDRATING CHEMICALS

► Sym-Collidine Buffer Kit

2,4,6-Trimethylpyridine
 $N:C(CH_3)CH:C(CH_3)CH:CCH_3$
 CAS #108-75-8 F.W. 121.18
 Bennett & Luft., Biophys & Biochem. Cytol., 6,113 (1959).
 A very stable buffer, used with Osmium tetroxide; provides excellent fixation, better stability and buffering capacity. The pH can be adjusted by varying the amount of hydrochloric acid in the final volume of 200ml.
 Preparation Instructions: Pour 9ml of 2N HCl; add 5.34ml of Sym-Collidine, mix well and add distilled water up to 200ml for a pH 7.4 solution.

Set consists of:

- 1 amp 5.34ml Sym Collidine
- 1 amp 9.0ml of 2N HCl

RT	11500	Sym-Collidine Buffer Kit	One set
RT	11510	Sym-Collidine Buffer Kit	Box/5 sets

► Tris (Hydroxymethyl) Aminomethane

Maleate Buffer

RT	11730		250 ml
RT	11740		500 ml

0-5°C	11730-20	Tris-HCL Buffer	250ml
0-5°C	11730-25	Tris-HCL Buffer	500ml

► Tris Buffer pH 10.0 (10x)

Description: This buffer is intended for heat-induced antigen retriever on formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. The use of this buffer on FFPE tissue section improves accessibility of antibodies to tissue antigens.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: 1X buffer solution is intended for heat-induced antigen retriever in IHC. Please refer to primary antibody protocol.

Reagent: 10 X, pH 10 antigen retriever solution.

Preparation of Working Solution: Dilute this 10X buffer as needed (e.g. 90 ml of deionized or distilled water + 10 ml of this buffer), mix well, 1X buffer can be stored at 2-8°C

	Cat. #	Description	Qty.
2-8°C	64142-11	Tris Buffer pH 10.0	100 ml
2-8°C	62142-12	Tris Buffer pH 10.0	1000 ml

► Trypsin Reagent

Description: Trypsin is used for proteolytic digestion of formalin-fixed paraffin-embedded (FFPE) tissue sections prior to application of antibodies. In IHC most commonly used fixative like formalin; mask tissue antigens (cellular, membrane and nuclear) by cross-linking process, this results in poor or no staining in IHC. Trypsin digestion improves immunoreactivity of some antigens in FFPE tissue sections. For cytokeratin clone AE3 and AE1/AE3, this enzyme works much better than boiling the tissue with citrate buffer.

Storage: 2–8°C. **DO NOT FREEZE**

Intended Use: Use as antigen retriever for some antibodies in IHC. Please refer to primary antibody protocol for IHC.

Reagent: This enzyme is supplied as concentrated form along with buffer. The kit comes in 2 sizes. Small: Reagent B (Buffer) is 15 ml and the Reagent E (Enzyme) is 2 ml

Large: Reagent B (Buffer) is 100 ml and the Reagent E (Enzyme) is 10 ml

	Cat. #	Description	Qty.

2-8°C	62142-02	Trypsin Kit Large	Kit

► Universal Immunoassay Buffer™, 10X

Immunoassay buffer is used as a 1X in all immunoassays (immunofluorescence, IHC, ELISA, WB etc.) as a washing buffer and it can be used as a dilution buffer for antibodies; however it does not contain any carrier proteins. This buffer also does not contain any phosphate, sodium azide or mercury as preservatives and can be used for dilution of all antibodies, including peroxidase, antibodies to phosphoproteins. It is not suitable for dilution of antibodies to S100 proteins.

■ **Reagent Supplied:** 10X Buffer

■ **Application:** Dilute this 10X buffer 10 times with DI water. (90 ml water + 10 ml this buffer – mixed well). Wash 3-5 times with this buffer in between the steps of your immunoassay protocol.

RT	25880-01	Universal Immunoassay Buffer, 10X	100 ml
RT	25880-10	Universal Immunoassay Buffer, 10X	1 L

► Universal Antibody Dilution Buffer™

This ready-to-use Universal Antibody Dilution Buffer is designed for dilution of antibodies in all immunoassays, including immunofluorescence, IHC, ELISA, WB. This buffer does not contain any mammalian proteins, phosphate, sodium azide, or mercury preservatives and can be used for dilution of all antibodies, including peroxidase, and antibodies to phosphoproteins. However, it is not suitable for dilution of antibodies to S100 proteins,

■ **Application:** Dilute antibodies, primary or secondary as recommended in the protocol by the manufacturer of these products.

■ **Storage:** 2 – 8°C. Diluted antibodies can be stored at 2 – 8°C for several weeks, depending upon the stability of antibodies.

2-8°C	25885-01	Universal Antibody Dilution Buffer	100 ml
2-8°C	25885-05	Universal Antibody Dilution Buffer	500 ml

► **RDO Rapid Decalcifier**

RDO and RDO Gold were developed with the basic premise of making your work routine quicker and easier without sacrificing the quality and integrity of your samples.

RDO and RDO Gold are remarkably effective multipurpose decalcifiers that can be tailored to suit your specific lab routine.

**Both RDO and RDO Gold:**

- Offer crisp nuclear staining and definition
- Give distinguishable chromatin
- Show great surface decalcification
- Safe enough to be disposed down to lab sink to drain

How is RDO Gold different from the original RDO

- RDO Gold is designated for those biopsies which contain minimal amounts of calcium
- No filtration is required with RDO Gold
- RDO Gold gives stellar morphological representation of bone biopsies
- There is no folding of tissues with RDO Gold
- RDO Gold is clear and non-precipitate

Both RDO and RDO Gold are:

- Far superior to other decalcifiers
- Great cellular differentiation
- Safe – non-toxic – non-corrosive
- Dilutable
- Microwavable
- Superb staining quality
- Biodegradable
- Translucent
- Available in wide mouth liter bottle

FIXING, CLEARING, AND DEHYDRATING CHEMICALS

Techniques for RDO Rapid Decalcifier

Animal Tissue Techniques

*Fourth edition
Gretchen L. Humason
Decalcification*

Calcium deposits may be so heavily concentrated in the tissue that they may interfere with sectioning and result in torn sections and nicks on the knife edge. If deposits are sparse, overnight soakings of blocked tissue in water will soften the deposits sufficiently for sectioning. Heavy deposits may be removed by any of several methods, but do not leave tissue in any fluid longer than necessary.

If any doubt arises about the completion of decalcification, check for calcium by the following method:

To 5ml of the solution containing the tissue add 1ml of 5% sodium or ammonium oxalate. Allow to stand for 5 minutes. If precipitate forms, decalcification is not complete. A clear solution indicates it is complete. Sticking needles in the tissue to check hardness is a sloppy technique that can damage cells.

An excellent decalcifying fluid, RDO can be purchased by the gallon. After using RDO for several years, I recommend it as superior to other solutions. Its rapidity of action is remarkable and the quality of staining and histological detail following its use is excellent. Old bones cut down to one centimeter in thickness, if possible, require a six hour treatment: small and young pieces, only one to two hours. Teeth will require overnight and up to eighteen to twenty four hours. Do not over decalcify; this detracts from the staining quality. Decalcifying may be followed by a brief washing in water but this is not necessary. Fixation and decalcification may be combined in a mixture of one part undiluted formalin with nine parts RDO.

Manufacturers Note:

The combination of RDO and formalin is discourage, but should always be done under a fume hood to ensure the removal of potentially harmful vapors. Always follow the suggested directions for use.

► Deionized Water, Reagent Grade A.C.S.

H₂O F.W. 18.02 CAS #7732-18-5

RT	64122-10	B-5 Fixative	4 lt

► Bouin's Solution

Bouin's solution can be used as a fixation and a staining fluid. Bouin's fixative is excellent for use on biopsy specimens of the gastrointestinal tract. Tissue from the endocrine system are well fixed and many antibodies react well with tissue fixed in Bouin's. Bouin's solution may be used as a routine fixative or a staining solution, but should not be used as a preservative for tissue. Tissue cannot be held in Bouin's solution for extended periods. The maximum fixation time in this solution should be less than 48 hours and should be transferred to alcohol. Packaged in leak-proof histo-containers, prefilled and ready-to-use.

Formulated with Picric Acid saturated aqueous solution 75%, Formalin (40% aqueous formaldehyde) 25% and Glacial Acetic acid 5% in de-ionized water

RT	15990-01	Bouin's Fluid	1 L
RT	15990-04	Bouin's Fluid	4 L

Bouin's Fluid in Pre-filled cups:

► Carson's Phosphate Buffered Formalin

Millonig's phosphate buffered formalin as modified by Carson, Martin and Lynn, by using 4% formalin in 0.1M sodium phosphate monobasic with sodium hydroxide to pH 7.2

RT	15732-05	Carson's Phosphate Buffered Formalin	500 ml
RT	15732-10	Carson's Phosphate Buffered Formalin	1 L

► Carson's Phosphate Buffered Paraformaldehyde

For some tissues, the use of formalin (contains 10 – 15% Methanol) is not suitable, we offer the alternative formaldehyde (prepared from paraformaldehyde – contains no methanol) for your convenience.

RT	15733-05	Carson's Phosphate Buffered Paraformaldehyde	500 ml
RT	15733-10	Carson's Phosphate Buffered Paraformaldehyde	1 L

► CytoPrep Fixative

CytoPrep Fixative forms a clear protective coating over specimens while fixing cells. It is ideal for cytological smears and it dries within 4 to 6 minutes. Good for safe storage and transportation of slides. It is water soluble and contains no chlorofluorocarbons. Comes in a 4 oz. spray can.

RT	64145-01	CytoPrep Fixative	4 oz.
RT	64145-12	CytoPrep Fixative	12 x 4 oz.

► Davidson's Fixative (Hartmann's/ Davidson's Fixative)

This is rapid fixative. Results with good nuclear detail and minimal formalin pigment. Hartmann's (Davidson's) Fixative is useful for preparing tumors, bone marrow, gynecologic specimen, fatty breast, medical biopsies. Fixation of small specimen is rapid. Exposure to the fixative should be limited to 24 hours (tissue may then be transferred to neutral buffered formalin or 70% alcohol for storage).

Based on the volume of 1125 ml solution, there is 2 part Formalin (35-39%), 3 part Ethanol, 1 part Glacial Acetic acid, and 3 part of tap water.

RT	64133-10	Hartmann's (Davidson's Fixative)	1 L
RT	64133-14	Hartmann's (Davidson's Fixative)	4 L

► Modified Davidson's Fixative

(14% Ethyl Alcohol, Denatured, 37.5% Formalin 37-39%, 6.25% Glacial Acetic Acid, and D.I. Water)

RT **15680** 450 mlRT **15681** 4 x 450 mlRT **15682** 1 qt (946 ml)► **Formaldehyde, 37%, Microfiltered (Formalin Microfiltered)**

HCHO F.W. 30.03 CAS# 50-00-0

Microfiltered with a 0.45 micron membrane; suitable as an EM fixative when a methanol free solution is not necessary.

RT **15686** 10 x 10 ml► **Formaldehyde (Karnovsky's Fixatives)**RT **15720** kitRT **15730** box of 5 kits► **Formaldehyde/Zinc Fixative**

Prepared: Ready-to-use.

- Preserves fine nuclear details.
- Good for immunostaining.
- Contains no mercury.
- Can be used with automated tissue processors.
- Works well with standard and special stains because zinc is a stain enhancing mordant.

► **Formaldehyde Aqueous Solution, 16% (Paraformaldehyde Aqueous Solution)**

EM Grade

Paraformaldehyde - methanol free solution. A more efficient and rapid penetrant fixative used in combination with Glutaraldehyde and Acrolein fixatives. Easy to break, prescored, 10ml ampoules sealed under inert gas, or 100ml bottles.

16% Aqueous SolutionRT **15700** 10 mlRT **15710** 10 x 10 mlRT **15710-S** 100 mlRT **15711** 10 box/lot**10% Aqueous Solution**RT **15712** 10 x 10 mlRT **15712-S** 100 ml**20% Aqueous Solution**RT **15713** 10 x 10 mlRT **15713-S** 100 ml**32% Aqueous Solution**RT **15714** 10 x 10 mlRT **15714-S** 100 ml

In addition to our complete line of Formaldehyde solutions shown above we have now added to the line.

METHANOL FREE

Since the DOT (Department of Transportation) has changed the definition of what a non dangerous solution of formaldehyde is to under 10%, we are now offering an 8% and a 4% solution. This will allow us to ship overnight as well as overseas without any hazardous charges saving our customers a good deal of money.

The quality of our 8% and 4% aqueous Paraformaldehyde solution is as good as all of the other concentrations that we offer.

4% Aqueous SolutionRT **157-4** 10 x 10 mlRT **157-4-100** 100 ml**8% Aqueous Solution**RT **157-8** 10 x 10 mlRT **157-8-100** 100 ml► **Perfusion Wash and Perfusion Fixative Ready to use**

For all of the best results we offer ready to use Perfusion washes and fixatives which are recommended by the NeuroScience Association. All of our solutions are ready made and are of the highest quality.

We have three groups of solutions commercially available.

Group I : Perfusion wash and Fixative Technical Grade. To be used for Standard stains:

Perfusion Wash (1220SK):
Phosphate Buffered Saline 0.1M
Phosphate Buffer pH 7.2-7.4

Perfusion Fixative (1221SK): 10%
Phosphate Buffered Formaldehyde

Group II: Perfusion wash and Fixative Reagent Grade. To be used for Standard and ImmunoHistochemistry Stains.

Perfusion Wash (1219SK):
Phosphate Buffered Saline 0.1M
Phosphate Buffer pH 7.2-7.4

Perfusion Fixative (1224SK):
Paraformaldehyde 4%/Sucrose 4%
in Phosphate Buffer 0.2M pH 7.2

Group III: Perfusion wash and Fixative Superior Reagent Grade. For the best results use this group. This is Sodium Cacodylate based for NSA'S Disintegrative Degeneration Stain

Perfusion Wash (1222SK): 0.8%
NaCl/0.4% Dextrose/0.8% Sucrose/
0.023% CaCl₂/Sodium Cacodylate
0.034%

Perfusion Fixative (1223SK): 4%
Paraformaldehyde/4% Sucrose/
1.4% Sodium Cacodylate

For a complete procedure and protocol for the use of these washes and fixatives please see the following site:
www.neuroscienceassociates.com/perf-solution1 or 2 or 3.htm

1220SK Perfusion Wash, Technical 1000 ml

1221SK Perfusion Fixative, Technical 1000 ml

1219SK Perfusion Wash, Reagent 1000 ml

1224SK Perfusion Fixative, Reagent 1000 ml

1222SK Perfusion Wash, Super Reagent 1000 ml

1223SK Perfusion Fixative, Super reagent 1000 ml

If you want a custom wash or fixative made, please just let us know and we will be happy to make you whatever you require.

TECHNICAL TIP

To fix cornea, one should use the following fixative: 2% Glutaraldehyde, 1% Paraformaldehyde (Formaldehyde) in a 0.1M Sodium Cacodylate buffer; pH 7.4 containing 0.02% Picric Acid. (Assouline, et al 1992)

FIXING, CLEARING, AND DEHYDRATING CHEMICALS

► Fixatives (continued)

► CoreDish™ Multiple Biopsy Containers Half Prefilled with 10% Formalin

Few recommendations concerning how the biopsies should be handled have been published. Performing a large number of biopsies means an increase in the number of containers handled and consequently a technical overload of the transmission network, which occurs without any financial counterpart. A new approach had to be developed in order to increase productivity.

We are proud to offer a multi-compartment container in the shape of a dish and half prefilled with 10% Neutral buffered Formalin, for holding and transporting biopsies. It is supplied with a leak-proof closure with O-ring ensuring total protection of contents. It conforms to OSHA directives. These CoreDish™ measure only 15mm H x 95 mm Diameter. Each compartment is clearly identified to allow proper placement and visualization of the biopsy being inserted. Thanks to CoreDish™ it is no more necessary to use a multiple of individual containers, thereby reducing cost and risks of confusion.

CoreDish™ available in many configurations to serve in different biopsy, such as prostate, upper GI tract and lower GI tract. A label allows recording the related information, patient ID, doctor, date and time.

► M970-D5B-2 CoreDish™ Breast Biopsy Container

Half Prefilled with 10% Formalin

This multi-compartment container (out of five compartments, four are labeled: LUQ, RUQ, LLQ, RLQ) in the shape of a dish and half prefilled with 10% Neutral Buffered Formalin, for holding and transporting biopsies. It is supplied with a leak-proof screw closure with O-ring ensuring total protection of contents. It conforms to OSHA directives. The dish measures only 15 x 95 mm in diameter. Each compartment is clearly identified to allow proper placement and visualization of the breast biopsy being inserted. A writing area for patient information is provided.

15736-10

Cat. #	For	Compartments	
RT 15736-10	Breast	5	10/pk

► M970-D8P CoreDish™ Prostate Biopsy Container

Half Prefilled with 10% Formalin

For prostate biopsies. Eight compartments. Leakproof seal with O-ring lid. An area for patient information is provided. Seven labeled compartments: Base, Lateral Base, Medium, Lateral Medium, Apex, Lateral Apex.

15736-20

Cat. #	For	Compartments	
RT 15736-20	Prostate	8	10/pk

► M970-D8UGI CoreDish™ Upper GI Biopsy Container

Half Prefilled with 10% Formalin

For upper GI track biopsies. Eight compartments. Leakproof seal with O-ring lid. An area for patient information is provided. Seven labeled compartments: Gastric Card, Gastric Body, GE Junction, Gastric ATR, Distal Esophage, Pylorus, Duodenum.

15736-30

Cat. #	For	Compartments	
RT 15736-30	Upper GI	8	10/pk

► M970-D12LGI CoreDish™ Lower Gi Biopsy Container

Half Prefilled with 10% Formalin

For lower GI track biopsies. Twelve compartments. Leakproof seal with O-ring lid. An area for patient information is provided. Ten labeled compartments: Proximal Flexure Colon, Hepatic Fleure Colon, Distal Transverse Colon, Ascending Colon, Splenic flexure Colon, Cecum, Descending Colon, Terminal Ileum, Rectum, Sigmoid Colon.

FIXING, CLEARING, AND DEHYDRATING CHEMICALS

► Glutaraldehyde

OCH₂CH₂CH₂CHO F.W. 100.12
CAS #111-30-8

Specific Gravity @ 20/20°C: 1.131

**THE HIGHEST
PURITY!**

Glutaraldehyde

For any special concentration, or packaging requirements other than those already listed, please call us today. We will manufacture in accordance to your specifications.

► EM Grade Distillation Purified

- The Universal Fixative for Electron Microscopy.
- Purified to EM Grade from commercial grade by "all-glass vacuum-distillation."
- THE HIGHEST PURITY, free from polymers and other contaminants.
- Each lot is tested and assayed in our lab before we ship and guarantee its purity.
- Sealed under dry nitrogen.
- Refrigerated prior to shipment.

After glutaraldehyde has been purified to EM grade, it has a high risk of polymerizing if it is not handled properly. Electron Microscopy Sciences takes special precautions to assure a polymer-free, pure glutaraldehyde.

Every lot of our EM grade glutaraldehyde is assayed prior to shipping assuring you consistent purity and the highest possible quality. If stored properly, our Glutaraldehyde has a very long shelf life.

We package our glutaraldehyde in 10ml, single dose ampoules, sealed under dry nitrogen, and kept refrigerated until it is shipped. We offer our glutaraldehyde in a wide range of percentages to simplify mixing procedures and avoiding waste.

EM grade glutaraldehyde, stored in volumes greater than 100ml, with repeated defrosting and recapping, will polymerize in time, producing an absorption peak of 235nm rather than the 280nm of pure EM grade. The presence of polymerized glutaraldehyde greatly reduces its efficiency as a cross-linking agent, preventing proper fixation. For this reason, we provide 10ml ampoules and 100ml bottle quantities for larger applications.

► Serum Vial Glutaraldehyde

Over the years, many of our valued customers have requested purchasing our Glutaraldehyde in serum vials. This packaging allows the user to puncture the special non-reactive seal with a hypodermic syringe and draw out the exact quantity of Glutaraldehyde needed without opening the container. This packaging assures freshness and purity of the Glutaraldehyde at all times

FIXING, CLEARING, AND DEHYDRATING CHEMICALS

► **Fixatives** (continued)► **HISTOCHOICE™ MB® ***
The Molecular Biology Fixative

- **SAFE** - Contains no Formaldehyde, Glutaraldehyde or Mercury
- **NON-TOXIC** – Is completely odorless and can be safely disposed of down the drain

HISTOCHOICE™ MB® Tissue Fixative is the first fixative designed for the molecular biologist. It is specialty formulated to preserve antigenic sites for antibody probes and nucleic acid sites for immunohistochemistry. HISTOCHOICE™ MB® replaces formaldehyde based, alcohol based, Zenkers, B-5, B-3, Bouin's and other fixatives with superior results. Tissue fixed in HISTOCHOICE™ MB® exhibit vibrant staining, better nuclear and cytoplasmic detail, and will retain a crisp appearance even after long-term fixation.

Because this formula is designed specially for molecular biology applications, HISTOCHOICE™ MB® fixed sections do not require pre-digestion or other recovery procedures to make important sites available. This means you spend less time preparing slides and more time doing research.

More than a fixative, HISTOCHOICE™ MB® is a preservative that leaves antigens and nucleic acids in their native state, allowing binding for specific probes. Primary antibodies can often be diluted several-fold due to the increased number of preserved antigenic sites, saving cost on every slide you process.

HISTOCHOICE™ MB® fixed tissue retains a much more natural look and feel than formalin fixed tissue. It is important to remember that these tissues are not fixed by formalin, but rather preserved by HISTOCHOICE™ MB®.

RT	64115-01	HISTOCHOICE™ MB® Fixative	1 L
RT	64115-04	HISTOCHOICE™ MB® Fixative	4 L
RT	64115-44	HISTOCHOICE™ MB® Fixative	4 x 4 L

* HISTOCHOICE™ is registered name of Amresco

► **Hollande's Fixative**

A modification of Bouin's solution. It is stable and will decalcify small bone specimens. Tissue that is fixed with Hollande's can be stained successfully with most stains, and the cupric acetate in the solution stabilizes red blood cell membranes and eosinophil and endocrine cell granules so that less lysis occurs than with Bouin's solution. Hollande's is widely used as a fixative for biopsy specimens of the gastrointestinal tract.

Thorough washing of the fixative prior to placing the specimen in a phosphate buffered formalin solution is necessary because the salts present in the solution will form an insoluble phosphate precipitate. Packaged in leak-proof histo-containers; prefilled ready-to-use.

	Cat.#	Cup Size	Filled	Pack/cs

► **McDowell Trumps Fixative**

RT	18030-05	McDowell Trumps Fixative	500 ml
RT	18030-10	McDowell Trumps Fixative	1 L

► **Michel's Fixative, pH 7.0 – 7.4**

RT	18040-05	Michel's Fixative	500 ml
RT	18040-10	Michel's Fixative	1 L
RT	18040-20	Michel's Fixative Pre-filled	20 x 10 ml

TECHNICAL TIP**Tissue Biopsy in Michel's Fixative**

Place tissue biopsy in Michel's fixative for 24-48 hours and then wash the tissue with Michel's Buffer three changes a minimum of 10 minutes each change and freeze at -70°C.

► **Mirsky's Fixative™**

- **Saponin/Glyoxylate Fixative**
- **Preserves Immunohistological activity**
- **Contains no formaldehyde**
- **Fast-acting**

Mirsky's Fixative™ is a superior fixing agent for use in immunohistological and immunological protocols. Mirsky's contains no formaldehyde or glutaraldehyde. Therefore, it has considerably reduced toxicity and virtually no odor. Mirsky's Fixative is neutral, buffered, and isotonic (308 mOsmol). Additionally, Mirsky's Fixative does not contain toxic or hazardous buffers such as cacodylate or barbital. Hardening or shrinkage of tissue is considerably reduced.

Double reactive sites afford excellent cross-linking properties while maintaining sample enzyme activity. Samples processed in Mirsky's Fixative for light microscopy can subsequently be used in electron microscopy procedures. Special buffer systems may be used in place of the buffer provided.

Use as a replacement for formalin and/or glutaraldehyde fixatives in immunohistological and immunocytological staining protocols. Tissue size is unlimited, as long as the sample is no thicker than 0.5cm in at least one plane to assure uniformity of tissue penetration. The gross visual appearance will be different than in formaldehyde and tissue may seem "raw". This is due to double site binding of the fixative with a resultant reduction in tissue shrinkage. Microscopic examination of tissue morphology will be noticeably improved. This material is intended to maintain enzyme and antibody activity. For best results, tissue section of high digestive enzyme content should be thoroughly rinsed in saline solution before fixation (e.g. trypsin in intestinal samples). Once fixed, tissue may be retained in Mirsky's Fixative and ethanol indefinitely.

Mirsky's Fixative is normally distributed as a concentrated two bottle system, although high through-put laboratories often use the single bottle ready-to-use format. The two bottle system is comprised of Mirsky's Fixative 10X Concentrated and Mirsky's Fixative 10X Buffer. To reconstitute to working strength, add 1 part Mirsky's Fixative 10X Buffer to 8 parts distilled or deionized water, mix thoroughly, then add 1 part Mirsky's Fixative 10X Concentrate and mix again.

The two bottle system has a shelf life of 12 months while the ready-to-use format has a shelf life of 30 days.

FIXING, CLEARING, AND DEHYDRATING CHEMICALS

► **Russell's Zenker Fixative (Russel's Modified Zenker)**

Due to the hazardous nature of mercury, Zenker's fluid is no longer available however in place of it we are offering Russell's Zenker Fixative, which contains Zinc Chloride, and the staining results produced by this fixative are comparable to those of Zenker's Stock solution. Russell's Modified Zenker's is used in the same manner as Zenker's stock solution.

RT	16750	4 x 450 ml

For ImmunoGold Reagents...

See Section 2, pages 72-90

Including not only the more commonly known reagents for EM and LM but, as well, a newly introduced line of products such as Silver Enhancement specifically for EM, Ultra-Small Fab fragments, Blocking Solutions, and even a line of donkey gold conjugates.

FIXING, CLEARING, AND DEHYDRATING CHEMICALS

► HISTOCHOICE® Clearing Agent

Histology grade – Non-flammable, replacement for Xylene for all tissue clearing needs.

64114-01	Histochoice Clearing Agent	4 L
64114-04	Histochoice Clearing Agent	4x4 L

► HISTOCHOICE™ MB® *
The Molecular Biology Fixative

■ **SAFE** - Contains no Formaldehyde, Glutaraldehyde or Mercury

■ **NON-TOXIC** – Is completely odorless and can be safely disposed of down the drain

HISTOCHOICE™ MB® Tissue Fixative is the first fixative designed for the molecular biologist. It is specially formulated to preserve antigenic sites for antibody probes and nucleic acid sites for immunohistochemistry. HISTOCHOICE™ MB® replaces formaldehyde based, alcohol based, Zenkers, B-5, B-3, Bouin's and other fixatives with superior results. Tissue fixed in HISTOCHOICE™ MB® exhibit vibrant staining, better nuclear and cytoplasmic detail, and will retain a crisp appearance even after long-term fixation.

Because this formula is designed specially for molecular biology applications, HISTOCHOICE™ MB® fixed sections do not require pre-digestion or other recovery procedures to make important sites available. This means you spend less time preparing slides and more time doing research.

More than a fixative, HISTOCHOICE™ MB® is a preservative that leaves antigens and nucleic acids in their native state, allowing binding for specific probes. Primary antibodies can often be diluted several-fold due to the increased number of preserved antigenic sites, saving cost on every slide you process.

HISTOCHOICE™ MB® fixed tissue retains a much more natural look and feel than formalin fixed tissue. It is important to remember that these tissues are not fixed by formalin, but rather preserved by HISTOCHOICE™ MB®.

RT	64115-01	HISTOCHOICE™ MB® Fixative	1 L
RT	64115-04	HISTOCHOICE™ MB® Fixative	4 L
RT	64115-44	HISTOCHOICE™ MB® Fixative	4 x 4 L

* HISTOCHOICE™ is registered name of Amresco

► Histo-Clear®/Histo-Clear II®

Histo-Clear (Distilled essential oils – food grade) and Histo-Clear II (A mixture of Aliphatic Hydrocarbon and Distilled essential oils – food grade, reduced citrus odor) are excellent non-toxic clearing agents replacing Xylene.

Histo-Clear® is register name of National Diagnostics

► Histosol™ - Xylene Substitute

Histosol™ is the original high flash point (114°F TCC) histological clearing agent. It is intended to be used as a replacement for xylene where the hazards associated with aromatic hydrocarbon vapors are to be reduced. Museum-quality tissue slides can be prepared with Histosol without change in protocol or procedure. Histosol is manufactured from petrochemical products and is miscible in all proportions with ethanol, isopropanol, and t-butanol. It is also miscible with all paraffin-based tissue embedding media and all permanent mounting materials.

23405-01	Histosol – Xylene Substitute	1 gal
23405-04	Histosol – Xylene Substitute	4 x 1 gal

Histosol® is register name of National Diagnostics

► Hollande's Fixative

A modification of Bouin's solution. It is stable and will decalcify small bone specimens. Tissue that is fixed with Hollande's can be stained successfully with most stains, and the cupric acetate in the solution stabilizes red blood cell membranes and eosinophil and endocrine cell granules so that less lysis occurs than with Bouin's solution. Hollande's is widely used as a fixative for biopsy specimens of the gastrointestinal tract.

Thorough washing of the fixative prior to placing the specimen in a phosphate buffered formalin solution is necessary because the salts present in the solution will form an insoluble phosphate precipitate. Packaged in leak-proof histo-containers; prefilled ready-to-use.

TECHNICAL TIP

Tissue Biopsy in Michel's Fixative

Place tissue biopsy in Michel's fixative for 24-48 hours and then wash the tissue with Michel's Buffer three changes a minimum of 10 minutes each change and freeze at -70°C.

► **Millonig's Phosphate Buffer**

Millonig (1964); Karlsson and Schultz (1965)

Ingredients: Sodium Phosphate, monobasic (NaH₂PO₄•xH₂O); Sodium Phosphate, dibasic (Na₂HPO₄•xH₂O); 0.5% Sodium Chloride (NaCl)

Shipping Conditions: Ambient Temperature
 Maximum shelf life after receipt: 1 month

The pH of this buffer is 7.4 (0.1M); the osmolarity is 440 mosmols, so this buffer is hypertonic to most body fluids. Millonig recommended to use this buffer for the fixation of very hydrated tissues with osmium tetroxide. For marine organisms, a higher concentration of sodium chloride (3%) is recommended. We supply it in a double strength (0.2M), pH 7.4. Dilution is needed before use.

► Poly-L-Lysine Solutions

► A/ Poly-L-Lysine Hydrobromide, F.W. < 30,000 – 70,000 >

CAS #25988-63-0

A polycation, which binds to DNA, red cell membranes and any negatively, charged proteins. It is useful for promoting cell adhesion; for the preparation of polycationic beads, useful in immobilization techniques; immobilization of membranes; immobilization of plant protoplasts. In cell culture, immobilization by micro encapsulation with the alginate-poly-L-lysine microcapsule system. We offer a prepared 0.1% aqueous solution, micro-filtered, which is ideal for cell culture growth.

0-5C	11655	Sodium Cacodylate Buffer, 0.4M, pH 7.2	1 L

FIXING, CLEARING, AND DEHYDRATING CHEMICALS

► Sodium Hydroxide, Solution

CAS #1310-73-2

Carbonate-free. This solution is prepared from ACS Reagent grade sodium hydroxide, and is standardized colorimetrically against potassium biphthalate primary reference material.

Normal Concentration 1.98-2.02

RT	21170	Sodium Hydroxide Solution 2N	225 ml
RT	21170-01	Sodium Hydroxide Solution 1N	225 ml

► Sodium Hydroxide Aqueous Solutions

RT	21172-1	Sodium Hydroxide, 1% Aqueous	500 ml
RT	21172-2	Sodium Hydroxide, 2.5% Aqueous	500 ml
RT	21172-3	Sodium Hydroxide, 3.1% Aqueous	500 ml
RT	21172-10	Sodium Hydroxide, 10% Aqueous	500 ml

► Sodium Bisulfite Solution

A 1% aqueous stock solution for fungal staining.

RT	26084-05	Sodium Bisulfite Solution	500 ml
RT	26084-06	Sodium Bisulfite Solution	1 L

► Sodium Meta-Bisulfate Aqueous Solution

RT	21175-1	Sodium Meta-Bisulfite, 1% Aqueous	500 ml
RT	21175-3	Sodium Meta-Bisulfite, 3% Aqueous	500 ml
RT	21175-5	Sodium Meta-Bisulfite, 5% Aqueous	500 ml

► Sodium Thiosulfate Aqueous Solution

RT	21360-1	Sodium Thiosulfate, 1% Aqueous	500 ml
RT	21360-2	Sodium Thiosulfate, 2% Aqueous	500 ml
RT	21360-10	Sodium Thiosulfate, 10% Aqueous	500 ml

► Sorensen's Phosphate Buffer

A phosphate buffered mixed salts, prepared from sodium phosphate monobasic and sodium phosphate dibasic.

0-5°C	11600-10	Sorensen's Phosphate Buffer, 0.2M, pH 7.2	1 L
0-5°C	11600-40	Sorensen's Phosphate Buffer, 0.2M, pH 7.2	4 L
0-5°C	11601-10	Sorensen's Phosphate Buffer, 0.2M, pH 7.4	1 L
0-5°C	11601-40	Sorensen's Phosphate Buffer, 0.2M, pH 7.4	4 L

► Sucrose, Reagent, A.C.S.

C₁₂H₂₂O₁₁ F.W. 342.20 CAS #57-50-1

Specifications:

Insoluble Matters	0.005%
Loss on Drying 105°C	0.03%
Residue after Ignition	0.01%
Titrateable acid	0.0008meq/g
Chloride	0.005%

► Tannic Acid Aqueous Solutions

21702-5	Tannic Acid, 5% Aqueous	500 ml
21702-10	Tannic Acid, 10% Aqueous	500 ml

► Tartrazine Solutions

RT	21740	Tartrazine, 1.5% in 1.5% Acetic Acid, Aqueous	500 ml
RT	21741	Tartrazine, 1.5% Aqueous	500 ml
RT	21742	Tartrazine, Saturated in Cellosolve	500 ml

► Thionin Solutions

RT	21910	Thionin, 0.5% in 20% Alcohol	500 ml
RT	21911	Thionin, 0.1% Aqueous	500 ml

► Tissue-Tek® VIP™ Fixative

Eliminate the need for routine warm water flushing with the Tissue-Tek® VIP™ Fixative. Using the unique Neutra-pHase™ technology, the Tissue-Tek® VIP™ Fixative produces no precipitates in the presence of alcohol, contrary to all other 10% neutral buffered formalin products. The Tissue-Tek® VIP™

Fixative will not promote formation of salts within the tissue processor lines which can cause costly damages to any brands of tissues processors unless regular maintenance is performed. Since the base ingredient is formalin, it is fully compatible and can replace 10% NBF without any adjustments to your procedures. The product is offered in three convenient package sizes: 1 gallon, 2.5 gallons and 5 gallons.

EMS#	Tissue-Tek	Description	Qty
62582-01	5990	Tissue-Tek™ VIP® Fixative	1 gal
62582-04	5990	Tissue-Tek™ VIP® Fixative	4 x 1 gal
62582-02	5989	Tissue-Tek™ VIP® Fixative	2.5 gal
62582-05	5991	Tissue-Tek™ VIP® Fixative	5 gal

► Toluene Reagent, A.C.S.

C₆H₅CH₃ FW 92.14 CAS #108-88-3Specific Gravity (H₂O=1): 0.866

b.p. 110-111°C

Assay99.9%

Specifications:

Color (A.P.H.A.)	10
Residue after evaporation	0.001%
Subs. darkened by H ₂ SO ₄	To pass test
Sulfur compound (as S)	0.003%
Water	0.03%

RT	22030		450 ml
RT	22032		4 x 450 ml

► Tris (Hydroxymethyl) Aminomethane, Free-base, Reagent Grade

White crystalline powder

C₄H₁₁NO₃ F.W. 121.14 CAS #77-86-1

A 40% (w/v) aqueous solution. It is clear and colorless.

Assay>99.9%

Water<0.2%

Heavy Metals2ppm

RT	11700		100 g
RT	11720		500 g

► Tris (Hydroxymethyl) Aminomethane

➤ **Xylene Substitute**

A xylene substitute for use in histology and cytology. It is safer and a more preferable alternative to xylene. It can be used as a solvent and clearing agent, as well as for dissolving paraffin waxes, glues and adhesives.

PROPERTIES:

- Minimal tissue shrinkage.
 - Dries faster with no residue.
 - Non-corrosive and far less toxic than xylene.
 - Soluble with alcohol, paraffin embedding media, and mounting media.
- It can be used in all procedures that require xylene. Biodegradable.

RT	23410-01	Xylene Substitute	1 gal
RT	23410-04	Xylene Substitute	4 x 1 gal

➤ **Histosol® - Xylene Substitute**

Histosol® is the original high flash point (114°F TCC) histological clearing agent. It is intended to be used as a replacement for xylene where the hazards associated with aromatic hydrocarbon vapors are to be reduced. Museum-quality tissue slides can be prepared with Histosol® without change in protocol or procedure. Histosol® is manufactured from petrochemical products and is miscible in all proportions with ethanol, isopropanol, and t-butanol. It is also miscible with all paraffin-based tissue embedding media and all permanent mounting materials.

RT	23405-01	Histosol® - Xylene Substitute	1 gal
RT	23405-04	Histosol® - Xylene Substitute	4 x 1 gal

Histol® is a registered name of National Diagnostics

➤ **Xylene: Peanut oil, 2:1**

RT	23402	Xylene:Peanut oil, 2:1	500 ml
----	--------------	------------------------	--------

➤ **Xylene Substitute – Hemo-De® ***

An intensive study from 1992 throughout 2000 has shown that Hemo-De® (d-Limonene) a terpene-based chemical with a pleasant citrus fragrance, was able to replace many of the clinical laboratories toxic reagents, such as carbol-xylene, xylene, ethyl acetate and formalin.

In Parasitology – Hemo-De replaces ethyl acetate in the concentration procedure; Hemo-De replaces carbol-xylene, xylene and formalin in the trichrome procedure.

In Histology – Hemo-De replaces xylene in most all procedures. Hem-De is a superior solvent and Clearing agent that can be used in all tissue processing, deparaffinating and slide preparation.

Hemo-De Features:

- Soluble with alcohol and mounting media
- Biodegradable, non-corrosive, non-flammable (Combustible)
- Contains no benzene and no toluene
- Low toxicity levels
- Minimal tissue shrinkage
- Reasonably fast drying and leaves no residue

Hemo-De Application:

In Research and Medical – Hematology, Cytology, Pathology, Microbiology, Histology, Pathology, Hospital

In Mechanical Applications – Cleaning of machine parts, cleaning tools, engines etc.

In Electronic Applications – Circuits boards, electronic components, tools.

General Applications – Clean metal and glass surfaces. Dilute with water can be used to clean all plastic surfaces. Removal of adhesives, glues, tars...

Hem-De Information:

Chemical name:d-Limonene (Terpene Hydrocarbon, n.o.s.)
 Composition:d-Limonene, CAS [5989-27-5]
 98.0% Butylated Hydroxyanisole (BHA),
 CAS [25013-16-5] <0.024%

Flash Point (TCC):121°F (49.4°C)
 Boiling Point:349°F (176°C) @ 760mmHg
 Freezing Point:-74°C
 Shipping:Terpene Hydrocarbons, n.o.s. ID No. 04858003,
 Flammable Liquid, Group III

RT	23412-01	Xylene Substitute	1 gal
RT	23412-04	Xylene Substitute	4 x 1 gal
RT	23412-05	Xylene Substitute	5 gal

NOTE: Hemo-De® is a product of Scientific Solvents

➤ **Russell's Zenker Fixative (Russel's Modified Zenker)**

Due to the hazardous nature of mercury, Zenker's fluid is no longer available however in place of it we are offering Russell's Zenker Fixative, which contains Zinc Chloride, and the staining results produced by this fixative are comparable to those of Zenker's Stock solution. Russell's Modified Zenker's is used in the same manner as Zenker's stock solution.

RT	64123-05	Russell's Modified Zenker's Solution	500 ml
RT	64123-06	Russell's Modified Zenker's Solution	1 L

➤ **Zinc/Formalin - see Formaldehyde/Zinc #15675, page 454 >>>>**

STAINING CHEMICALS AND PREPARED SOLUTIONS

► Certified Dyes/Stains

Certified by the Biological Stain Commission

All Dyes/Stains are for research use only. Not meant for drug, food, or household use.

Cat.#	Storage	Dyes/Stain	C.N. #	Major uses	Size
10035	RT	Acid Fuchsin	DcR-8	Stain for connective tissue and erythrocytes; and proteinaceous material in liver. Cain's method for mitochondria.	25g
10050	RT	Acridine Orange		Pickett's fluorescence method for fungi fluorescent against a dark background. For differentiation of nucleic acids and cytology.	25g
10350	RT	Alcian Blue 8GX	AnAn-6	Acid mucopolysaccharides. Cell walls. Cartilage granules. As a carbohydrate & mucosubstance stain in different pH levels. Movat's method for connective tissue stain. Monroe/Frommer method for pituitary staining. AB/PAS/OG method for human adenohypophyseal cytology.	25g
10360	RT	Alizarin Red S	DcAr-5	Minute bone and fetal ossification in mammalian embryos. Used with toluidine blue for distinction of bone & cartilage in mammalian embryos.	25g
10840	RT	Aniline Blue	DcK-11	Used with bieberich scarlet for staining collagen, reticulum, muscle, plasma, and nuclei. All connective tissues. Used as a counterstain with red nuclear dye.	25g
10850	RT	Auramine O	DcAu-4	Staining paraffin sections of infected tissue. Acid-fast organisms exhibit fluorescence.	25g
11150	RT	Azocarmine G		Alpha, beta, and all D-cells of the islets of Langerhans and animals.	5g
11240	RT	Azur A		A nuclear stain. Cell granules McNeal method for leukocytes.	10g
11200	RT	Azur B		Distinction of cellular RNA & DNA in botanical tissue. Negri body stain. Malarial parasites.	10g
11210	RT	Azur II		Morphological details of marrow cells, nuclei, and bacteria.	10g
11260	RT	Basic Fuchsin (Rosaniline)	DcFb-26	Gram positive/negative bacteria. A pituitary stain.	25g
18100	RT	Basic Green 4 (Malachite Green)	DcMg-11	In microbiology, distinction of diphtheria and other bacteria. A vital stain for onion epidermis.	25g
11265	RT	Bieberich Scarlet (Ponceau BS)		Used with picric acid/aniline blue for staining collagen, reticulum, muscle, and plasma. Luna's method for erythrocytes & eosinophil granules. Guard's method for sex chromatin and nuclear chromatin.	25g
11310	RT	Bismarck Brown Y		PAP for staining smears. Nuclei & granules. Mucin & calciform cells of intestine, cartilage & embryo.	25g
11465	RT	Brilliant Cresyl Blue	DcV-5	Platelets & reticulum of immature red cells. Counterstained with Wright's stain.	10g
12410	RT	Carmine (Alum Lake)	DcCa-16	Glycogen stain. Elastic fibers in blood vessels, nuclei, & collagen.	10g
12780	RT	Cresyl Fast Violet, (Cresyl Violet Acetate)	DcW-5	Vogt's method for nerve cells. A neurological tissue stain. Nissl substance & PAS-positive material. Powers & Clark method for spinal cord and brain with formalin or Bouins fixed.	5g
12785	RT	Crystal Violet	DcC-38	Gram positive/Gram negative bacteria, and filaments. Holzer's method for glial fibers (nerve). Amyloid in pathological human tissue. Determining chromatin & nucleoli in plant tissue.	25g
14851	RT	Eosin Y	DcE-40	Maximow's method for morphological details of marrow cells; a constituent of Wright Stain for elastic fibers in blood; as a eosin-phloxine counterstain.	25g
15010	RT	Erythrosin B (Erythrosin extra bluish)	DcEr-5	Used with methylene blue as a plasma stain for nerve cells. Use crystal violet for plant tissue.	10g
15500	RT	Fast Green FCF	DcGf-12	Lillie modification of Masson's for cells, cytoplasm, muscle, and collagen; Guard method for sex chromatin.	5g
15670	0-5°C	Fluorescein Isothiocyanate		Culing's Method for fluorescent antibody staining for demonstration of specific antigens.	½g

STAINING CHEMICALS AND PREPARED SOLUTIONS

► Certified Dyes/Stains (continued)

15942	RT	Giemsa	(Dry Powder) DcGe-19	Thin film stain for differentiation of types of leucocytes; Rickettsiae, bacteria, & inclusion bodies. May-Grunwald/Giemsa for bone marrow stain. Pinkus' acid orcein-giemsa for connective tissue staining.	10g
15940	RT	Giemsa	(solution) DcGe-19	Same as above; Prepared ready-to-use.	100ml
16620	RT	Hematoxylin	DcH-48	Weigert's iron hematoxylin for nuclear stains. Gill's hematoxylin for nuclei & nuclear chromatin	10g
16910	RT	Indigo Carmine	DcI-7	A stain for Negri bodies; used with acid fuchsin. Used in picric acid in contrast to basic fuchsin. In plant cytology.	25g
17920	RT	Light Green SF, Yellowish	DcL-30	Grocott's method for fungi. Dahl's method as a bone and calcium stain. McManus' method for glycogen. Fraser-Lendrum method as a connective tissue stain.	10g
18700	RT	Methyl Green	DcG-10	Myeloperoxidase stain; Used with bismarck brown for mucin & calcifomrcells of intestine, cartilage of trachea, and embryonic tissue; Used with toluidine blue for differentiating between diphtheria & other bacteria.	25g
18600	RT	Methylene Blue	DcA-24	For use in acid-fast bacteria, acid-fast baccilli, and as a rickettsia stain. Cain's method for mitochondria. For staining Negri bodies in nerve cells.	25g
18850	RT	Methyl Violet 2B	DcMv-5	Highman's method for amyloid and nuclei staining. Used with crystal violet & bismarck brown Y for staining metachromatic granules of diphtheria organisms.	25g
19010	RT	Nigrosin, W.S.		For staining the central nervous system. For the negative staining of bacteria; used in place of India ink.	25g
19020	RT	Nile Blue A		A fat and lipid stain; differentiation of melamines and lipofuchsin. Staining for phospholipids.	10g
19056	RT	Oil Red O	DcRo-3	Used as a pigment stain.	10g
19060	RT	Orange II		Kalter's method used with fast green FCF, safranin O, and crystal violet for quadruple staining of tissues. Orange G substitution for better contrast.	25g
19070	RT	Orange G	DcO-13	For staining fibrin, keratin, collagen, and erythrocytes. Staining alpha, beta, and gamma cells. For staining nissl substances and PAS-positive material.	25g
19350	RT	Phloxine B	DcPh-6	For staining inclusion bodies and nuclei. Thomas's method for malarial parasites. For staining hemaglobin and hemosiderin. For staining keratin, prekeratin and mucin. A beta cell stain. Counterstain for hematoxylin.	25g
19560	RT	Pyronin Y	DcPy-2	Cudder's method combined Gram/Pappenheim stain for gonorrheal pus. Kurnick's method used with methyl green which stains liver cells. For staining protein in the diazosulfanilic acid technique; a substitute for azur A. Can be used for pyronin B.	5g
20800	RT	Safranin O	DcS-25	Prussian Blue method for hemosiderin. Weigert's iron hematoxylin with methachromic dyes which stain nuclei and granules. A alkaline phosphate stain. Flemming's method for staining chromatin and nuclear elements.	25g
21610	RT	Sudan Black B	DcZb-2	A stain for fat in animal tissue. A stain for chromosomes, golgi, and 25g leucocyte granules.	
22050	RT	Toluidine Blue O	DcU-10	Alizarin red/Toluidine blue for distinction between bone & cartilage and the degree of ossification in mammalian embryos. Johnson's method for methachromatic tissue. With cresyl violet for staining DNA & RNA. With thionin for malignant cells of biopsy specimens.	50g
22720	RT	Wright Stain	DcWr-38	For differentiation of blood corpuscles. Used with brilliant cresyl blue for staining platelets and reticulum of immature red cells. For staining blood and bone marrow films.	25g

For further description of the above stains/dyes or for more stains/dyes, see pages 468-471 alphabetically listed.

STAINING CHEMICALS AND PREPARED SOLUTIONS

► Certified Dyes/Stains (continued)

► Acid Fuchsin, Certified, C.N. #DcR-8

(Rubin S, Fuchsin S, Fuchsin Acid, Acid Magenta, Acid Violet 19)
 $C_{20}H_{17}N_3Na_2O_6S_3$ F.W. 585.54 CAS #3244-88-0
 Solubility: 0.053% Water; 1.21% Alcohol

RT **10035** 25 g

► Acridine Orange, Certified C.N. #46005

(Basic Orange 14)
 $C_{17}H_{19}N_3HCl \cdot ZnCl_2$ F.W. 369.94 CAS #10127-02-3
 Ultrastructural probes on DNA templates within human bone marrow and lymph node cells. Frenstar, J., Adv. Cell Mol. Biol., 3, 1(1974) Used to detect changes in DNA template activity within cells. Frenster, J. Cell Nucl., 1, 565 (1974) Fluorescent dye for cytochemistry. J. Histochem. Cytochem., 31, 737 (1983) J. Lab. Med., 15 (3),180, (1984)

RT **10050** 25g

► Alcian Blue 8GX, Certified, C.N. #AnAn-6

(Ingrain Blue I)
 $C_{56}H_{68}N_{16}S_4Cu$ F.W. 1298.88 CAS #12040-44-7
 Solubility: Water-soluble
 Dye Content: Approx. 50%
 Used as a fixative: 0.5-2% Alcian Blue in Glutaraldehyde fixative enhances the preservation and contrast of the cell coat and intercellular substances. Used as a stain: For staining cell surface materials and cartilage components.
 Schofield, et al., Histochem J. 7, 139,1975
 Used as a wetting agent: Sommer, J. R (1977). To cationize glass. J.Cell Bio. 75, 245a. Alcian Blue and Ruthenium Red were used to study cartilage ultrastructure. Thyberg, J., Lohmander, S., and Friberg, U., J. Ultrastruct. Res., 45, 407 (1973).

RT **10350** 25g

► Alizarin Red S, Certified, C.N. #DcAr-5

(Alizarin Carmine, Mordant Red 3)
 $C_{14}H_7O_7SNa \cdot H_2O$ F.W. 360.28 CAS #130-22-3
 Solubility: 7.69% Water; 0.1% Alcohol.
 Certified for Staining Bone. Stain for nervous tissue in small invertebrates, and for sections of nervous tissue. Lee, "The Microtometist's Vade-Mecum", 10th Ed., The Blakiston Co., Phila., 1937; Dawson, Stain Tech., 1, 123 (1926); Lundvall, Anat. Anz., 27, 521 (1905); 137. Used to differentiate bone from cartilage in mammalian embryos; used with Toluidine Blue. William, Stain Tech., 16, 23 (1941)

RT **10360** 25g

► Aniline Blue Disodium Salt, Water Soluble, Certified, CN. #DcK-11

$C_{32}H_{25}N_3O_9S_3Na_2$ F.W. 737.74 CAS #28631-66-5
 (Acid Blue 22; China Blue; Cotton Blue; Marine Blue V; Soluble Blue 3M, 2R; Water Blue)
 Solubility: 50% Water; 0.0% Alcohol; 4.5% Cellosolve; 7.8% Glycol; 0.0% Xylene.Used in connective tissue staining procedures to stain collagen. Used in differential staining. Snodgress et al., Lab Invest. 26:329, 1972.

RT **10840** 25g

► Auramine O, Certified, C.N. #DcAu-4

(Pyocyaninum aureum; Basic Yellow 2; Pyoktanin Yellow; Canary Yellow)
 $C_{17}H_{21}N_3HCl \cdot H_2O$ F.W. 321.86 CAS # 2465-27-2
 Solubility: 1.0% Water; 4.0% Alcohol; 1.2% Cellosolve; 1.75% Glycol; 0.05% Xylene

RT **10850** 25 g

► Azocarmine G, Certified, C.N. #50085

(Acid red 101; Basalan Carmine GE; Rosinduline)
 $C_{28}H_{17}N_3Na_2O_6S_2$ F.W. 601.57 CAS #25641-18-3
 Solubility: 1.0% Water; 0.1% Alcohol; 1.75% Cellosolve; 4.5% Glycol; 0.01% Xylene

RT **11150** 5 g

► Azur A, Certified, C.N. #52005

(Methylene Azur A)
 $C_{14}H_{14}ClN_3S$ F.W. 291.80 CAS #531-53-3
 Solubility: Water-soluble; Alcohol-soluble
 Used in nuclear staining; A polychromatic blood stain.

RT **11240** 10G

► Azur B, Certified, C.N. #52010

(Azur I; Methylene Azur B)
 $C_{15}H_{16}N_3S$ F.W. 305.83 CAS #531-55-5
 Solubility: Water-soluble; Alcohol-slightly soluble. An important component of Giemsa's stain for blood protozoa. Used for staining semi-thin sections of plant tissue. Hoefert, L.L. (1968). Polychromatic stains for thin sections of Beta embedded in epoxy resin.

Stain Tech. 43:145

RT **11200** 10g

► Azur II, C.N. #52010/52015

(Azur B/Methylene Blue 1:1) CAS #37247-10-2

RT **11210** 10g

► Azur II Eosin, C.N. #52010/52015/45380

(Azur B/Methylene Blue/Eosin 1:1:1) CAS #53092-85-6

RT **11220** 10g

► Basic Fuchsin, Certified, C.N. #DcFb-26

(Rasaniline Hydrochloride; Basic Violet 14, Dye Content: ~88% min.)
 $C_{20}H_{19}N_3 \cdot HCl$ F.W. 337.86 CAS #632-99-5
 Berkowitz et al., (1968). Selective staining of nervous tissue for light microscopy following preparation for electron microscopy. J. Histochem. Cytochem. 16:808.Sato, T., and Shamoto, M (1973). A simple rapid polychrome stain for epoxy-embedded tissue. Stain Technol. 48:223.

RT **11260** 25g

► Basic Green 4, Certified, C.N. #DcMg-11

(Malachite Green Oxalate; Diamond Green B; BX or P Extra; Light Green N, Solid Green O; Victoria Green B or WB; Dye Content ~90%, (oxalate form)
 $2(C_{23}H_{25}N_2) \cdot 2(C_2H_2O_4) \cdot C_2O_4$ F.W. 927.03 CAS #2437-29-8
 Solubility: 10.0% Water; 8.5% Alcohol; 5.5% Cellosolve; 7.0% Glycol; 0.0% Xylene.
 Used as a bacteria stain and a counterstain for botanical material.

RT **18100** 25g

STAINING CHEMICALS AND PREPARED SOLUTIONS

▶ Certified Dyes/Stains (continued)

▶ Biebrich Scarlet, Water Soluble, Certified, C.N. #26905

(Bonceau BS; Acid Red 66; Croceine Scarlet; Double Scarlet BSF)
 $C_{22}H_{14}N_4Na_2O_7S_2$ F.W. 556.49 CAS #4196-99-0
 Solubility: 5.0% Water; 0.25% Alcohol; 1.5% Cellosolve; 1.5% Glycerol; 0.0% Xylene

RT 11265 25 g

▶ Bismarck Brown Y, Certified, C.N. #21000

(Basic Brown 1; Basic Brown G, GX, GXP; Vesuvine; Leather Brown; Manchester Brown; Phenylene Brown)
 $C_{18}H_{18}N_8 \cdot 2HCl$ F.W. 419.32 CAS #10114-58-6
 Solubility: 1.5% Water; 3.0% Alcohol; 3.0% Cellosolve; 7.9% Glycerol; 0.05% Xylene

RT 11310 25 g

▶ Brilliant Cresyl Blue, Certified, C.N. #DcV-5

(Brilliant Blue C; Cresyl Blue 2RN)
 $C_{17}H_{21}N_4OCl$ F.W. 332.84 CAS #10127-36-3
 Solubility: 3.0% Water; 2.6% Alcohol; 2.25% Cellosolve; 8.0% Glycerol; 9.5% Xylene

RT 11465 10g

▶ Bromophenol Blue, Reagent, A.C.S.

(3',3'',5'-Tetrabromophenol-sulfonphthalein)
 $C_{19}H_{10}O_5SBr_4$ F.W. 669.97 CAS #115-39-9

RT 11470 5g

RT 11471 25g

▶ Carmine, Certified, C.N. #DcCa-16

Alum Lake of Carminic acid
 (Natural Red 4) CAS # 1390-65-4
 Solubility: 0.0% Water; 0.2% Alcohol; 0.5% Cellosolve; 4.0% Glycerol; 0.0% Xylene.

RT 12410 10g

▶ Cresyl Fast Violet, Certified, C.N. # DcW-5

(Cresyl Violet Acetate)
 $C_{18}H_{15}N_3O_3$ F.W. 321.33 CAS # 10510-54-0
 Solubility: 0.13% water Dye Contents ~ 75%
 Certified Stain. To differentiate DNA and Nissl bodies in spinal cord and brain tissues.
 For staining Nissl substances in nerve cells and for bulk staining of nerve tissue. Stain Technol., 30, 83 (1955)
 Stain for fresh tumor tissue for biopsy. J. Lab. Clin. Med., 8, 250 (1923). Biological Stains 9th Ed., 601 (1987)

RT 12780 5 g

▶ Crystal Violet, Certified, C.N. #DcC-38

(Basic Violet 3; Gentian Violet; Methyl Violet 10B; Hexamethyl Violet)
 $C_{25}H_{30}N_3Cl$ F.W. 407.99 CAS #548-62-9
 Solubility: 9.0% Water; 8.75% Alcohol; 7.5% Cellosolve; 7.0% Glycerol; 0.0% Xylene
 Dye Contents ~88% min.

Certified Stain. For differentiating between gram-negative and gram-positive bacteria. Using Safranin O as a counterstain.
 Certified for staining chromatin and nucleoli in plant tissue.

Biological Stains, 9th Ed. 586 (1977)

RT 12785 25 g

▶ Eosin Y, Certified, C.N. #DcE-40

(Acid Red 87, Eosin Yellowish)
 $C_{20}H_6Br_4Na_2O_5$ F.W. 691.88 CAS #17372-87-1

Solubility: 44.0% Water; 2.0% Alcohol; 25.0% Cellosolve; 27.5% Glycerol; 0.0% Xylene.

Used with Hematoxylin for showing cell nuclei in embryos and kidneys.
 Conn, "Biological Stain" 9th ed., The Williams and Wilkins Co., Baltimore 1977, pg. 7.

Component of Wright's stain for blood corpuscles.

Wright, J. Med. Res., 7, 138 (1902)

For staining bone marrow to show cell morphology. Bech, "Lab. Manual of Hematological Tech.", W. B. Saunders Co., Phila., 1908, p. 233

RT 14850 10g

RT 14851 25g

▶ Erythrosin B, Certified, C.N. #DcEr-5

(Acid Red 51, Erythrosin extra Bluish; Eosin J; Iodeosin B; Pyrosin B)
 $C_{20}H_6O_5I_4Na_2$ F.W. 879.87 CAS #16423-68-0
 Solubility: 10.0% Water; 5.0% Alcohol; 7.0% Cellosolve; 8.25% Glycerol; 0.0% Xylene.

RT 15100 10 g

▶ Fast Green FCF, Certified, C.N. #DcGf-12

(Food Green 3)
 $C_{37}H_{34}O_{10}N_2S_3Na_2$ F.W.808.86 CAS #2353-45-9
 Solubility:4.0% Water; 9.0% Alcohol; 8.0% Cellosolve; 6.25% Glycerol; 0.0% Xylene

The main advantage of this dye is its resistance to fading. Mammalian tissue stain for visualizing collagen, muscle, cytoplasm, cells and cornified epithelium. Kornhauser, Stain Tech., 18,95 (1943); 20, 23 (1945); Lillie, Arch. Path., 29, 705 (1940). Modified Feulgen stain for visualizing chromosomes in root tips and other meristematic tissue. DeTomas, Stain Tech., 11, 137 (1936). Used in plant histology. O. Conn, "Biological Stains" 9th ed., Williams & Wilkins Co., Baltimore, 1977, pp. 252-3; Haynes, Stain Tech., 3, 40 (1928).

RT 15500 5g

STAINING CHEMICALS AND PREPARED SOLUTIONS

➤ Certified Dyes/Stains (continued)

➤ Giemsa Solution, C.N. #DcGe-19

Ingredients:

Glycerin (cas# 56-81-5):61%
Methyl Alcohol (cas# 67-56-1):38.3%
Azur II (cas# 37247-10-2):0.16%
Azur II Eosin (cas# 53092-85-6):0.6%

Specific Gravity: 0.89

Differentiates types of leucocytes, bacteria and inclusion bodies. Giemsa, Centralbl. F. Publ., Abt. 1,37, 308 (1904) Stain for thick blood films; shows malarial parasites. Barber and Komp, Publ. Health Rep., 44, 2330 (1929) Bone marrow and stain for showing cell morphology; together with May-Grunwald Solution for pap staining. Pappenheim, Folia Haemat., 13, 338 (1912)

STAINING CHEMICALS AND PREPARED SOLUTIONS

► Certified Dyes/Stains (continued)

► Nile Blue A, Certified, C.I. #51180

(Basic Blue 12, Nile Blue Sulfate)

 $(C_{20}H_{20}N_3O)_2SO_4$ F.W. 732.84 CAS #3625-57-8

Solubility: 6.0% Water; 5.0% Alcohol; 5.0% Cellosolve; 5.0% Glycol; 0.25% Xylene. Dye content: approx. 65%

Differentiates melamins and lipofuscins; Used in fat staining.

Lillie, Stain Tech., 31,151 (1956); J. Histochem., 4,377;

Z. Anal. Chem. 260, 290 (1972).

For staining bone sections. Cytologia, 11, 261 (1940)

RT 19020 10g

► Oil Red O, Certified, C.N. #DcRo-3

(Solvent Red 27, Sudan Red 5B)

 $C_{26}H_{24}N_4O$ F.W. 408.49 CAS [1320-06-5]

Oil Red O is lysochrome (fat soluble dye) used demonstrate fat or lipids in fresh tissue sections. The polyoazo group of dyes include the Oil Red, Sudan Red and the Sudan Blacks – all these dyes are interchangeable.

RT 19056 10g

► Orange II, Certified, C.I. #15510

(Acid Orange 7; Acid Orange II, Y or A; Gold Orange; Mandarin G; Orange A, P or R; Orange Extra; Tropaeolin 000 No.2)

 $C_{16}H_{11}N_2O_4SNa$ F.W. 350.33 CAS #633-96-5

Solubility: 3.0% Water; 0.15% Alcohol; 2.5% Cellosolve; 8.0% Glycol; 0.0% Xylene; Dye Content: approx. 75%

A general tissue stain with Eosin and Azur-C. French, Stain Tech., 1, 79 (1926). Counterstain for Heidenhain's Hematoxylin in animal histology.

A substitute for Orange G if a stronger yellow is desired for contrast. J.

Lab. Med., 28, 995 (1943)

RT 19060 25g

► Orange G, Certified, C.N. #DcO-13

(Acid Orange 10, Wood Orange 2G)

 $C_{16}H_{10}N_2O_5S_2Na_2$ F.W. 452.38 CAS #1936-15-8

Solubility: 8.0% Water; 0.22% Alcohol; 1.7% Cellosolve; 3.0% Glycol; 0.0% Xylene; Dye Content: approx. 60%

Kornhauser's Quad stain for most elementary structures of tissues. Stain Tech., 18, 985 (1943) Mallory's tissue stain for connective tissue.

Mallory, J. Exper. Med., 5,15 (1900). Used with safranin and tannic acid for showing shoot apex in plant tissue. Stain Tech., 18, 105 (1943).

RT 19070 25g

► Phenol Red

(Phenolsulfonphthalein)

 $C_{19}H_{14}O_5S$ F.W. 354.38 CAS #143-74-8

A standard indicator for preparing buffers, pH range 6.4-8.2.

RT 19327 5g

► Phenol Red Sodium Salt

(Phenolsulfonphthalein Sodium Salt)

 $C_{19}H_{13}NaO_5S$ F.W. 376.37 CAS #34487-61-1

A standard indicator for preparing buffers, pH range 6.8-8.2.

RT 19328 5g

► Phloxine B, Certified, C.N. #DcPh-6

(Acid Red 92; Cyanosine; Eosin 10B; Phloxine TA, N, BP Super, RB, TB, or BB)

 $C_{20}H_2O_5Cl_4Br_4Na_2$ F.W. 829.66 CAS #18472-87-2

Solubility: 10.5% Water; 5.0% Alcohol; 9.0% Cellosolve; 4.5% Glycol; 0.0% Xylene

RT 19350 25 g

► Pyronin Y, Certified, C.N. #DcPy-2

(Pyronin G) $C_{17}H_{19}N_2OCl$ F.W. 302.81 CAS #92-32-0

Solubility: 9.0% Water; 0.5% Alcohol; 1.85% Cellosolve; 4.35% Glycol; 0.0% Xylene

RT 19560 5g

► Safranin O, Certified, C.N. #DcS-25

(Safranin T, Y or A; Basis Red 2; Cotton Red; Gossypimine)

 $C_{20}H_{19}N_4Cl$ F.W. 350.85 CAS #477-73-6

Solubility: 4.5% Water; 3.5% Alcohol; 5.0% Cellosolve; 3.5% Glycol; 0.0% Xylene

RT 20800 25g

► Sudan Black B, Certified, C.N. #DcZb-2

(Solvent Black 3) $C_{20}H_{24}N_6$ M.W. 456.56 CAS #4197-25-5

Solubility: Water-insoluble; Alcohol-soluble; 4.0% Cellosolve; 1.0% Glycol.

RT 21610 25g

► Toluidine Blue O, Certified, C.N. #DcU-10

(Basic blue; Methylene Blue T50 or T Extra)

 $C_{15}H_{16}N_3SCI$ FW 305.83 CAS #92-31-9

Dye Content: approx. 85% min.

Solubility: 3.25% Water; 1.75% Alcohol; 3.5% Cellosolve; 5.5% Glycol; 0.0% Xylene

■ A general stain for epoxy thick sections. Barajas et al.(1981)

Identification of renal neuroeffector junctions by electron microscopy of reembedded light microscopic autoradiograms of semithin sections. J. Ultrastruct. Res. 77: 379.Campbell, R.D., And Hermans, C.O.

(1972). A rapid method for resectioning 0.5 - 4.0 micron epoxy sections for electron microscopy. Stain Technol. 47:115.

RT 22050 50g

► Wright's Stain, Certified, C.N. #DcWr-38

CAS #68988-92-1

Solubility: 0.091% Water; 0.23% Alcohol

RT 22720 25g

STAINING CHEMICALS AND PREPARED SOLUTIONS

► Staining Solutions

We now offer a complete line of prepared, ready-to-use, high quality staining solutions for all standard staining procedures used by the Biological Staining Commission and the Armed Forces Institute of Pathology.

- All solutions and concentrations are packaged and prepared in convenient and precise quantities.
- Premixed ready-to-use; saves you time and effort.
- Consistently uniform results are obtained.

For a partial list of all of our stains, please see chart on pages 466-467, and for descriptions of the stains, see pages 468-471.

► Acid Fuchsin Aqueous Solutions

RT	26020-02	Acid Fuchsin, 0.2% Aqueous	500 ml
RT	26020-05	Acid Fuchsin, 0.5% Aqueous	500 ml
RT	26020-10	Acid Fuchsin, 1.0% Aqueous	500 ml
RT	26020-11	Acid Fuchsin, 1.0% in 1% Acetic Acid	500 ml

► Acridine Orange Aqueous Solution

RT	26024-01	Acridine Orange 0.1% Aqueous	500 ml
RT	26024-02	Acridine Orange 0.2% Aqueous	500 ml

► Alcian Blue Solutions

RT	26026-13	Alcian Blue, 1% in 3% Acetic Acid, pH 2.5	250 ml
RT	26026-11	Alcian Blue, 1% in 1% Acetic Acid	250 ml
RT	26026-01	Alcian Blue, 1% Aqueous	250 ml

► Alcoholic Stain Solutions

RT	26090-05	Alcoholic Congo Red, 0.2% Solution	500 ml
RT	26091-01	Alcoholic Hematoxylin, 1% in 95% Alcohol	500 ml
RT	26091-10	Alcoholic Hematoxylin, 10% in 95% Alcohol	500 ml
RT	26092-05	Alcoholic Iodine, 0.5% in 95% Alcohol	500 ml
RT	26092-06	Alcoholic Iodine, 0.5% in 85% Alcohol	500 ml
RT	26092-20	Alcoholic Iodine, 2% in 85% Alcohol	500 ml
RT	26093-60	Alcoholic Saffron, 6%	100 ml
RT	26094-05	Alcoholic Thionin, 0.5% in 20% Alcohol	500 ml
RT	26096	Aldehyde Fuchsin Solution	250 ml
RT	26097	Alum Hematoxylin Solution	500 ml

► Alum Celestine Blue
(Iron Alum – Celestine Blue)

Lendrum & McFarlane, (1940). J. of Pathology & Bacteriology, v. 50, pp 381
A stain solution for nuclei. A substitute for Hematoxylin/Eosin.

RT	26023-02	Alum Celestine Solution	250 ml
RT	26023-05	Alum Celestine Solution	500 ml

► Alum Hematoxylin Solution

For staining nuclei

RT	26097	Alum Hematoxylin Solution	500 ml
----	-------	---------------------------	--------

► Aniline Blue Solution

RT	26027-10	Aniline Blue, 2.5% in 2% Acetic Acid	500 ml
RT	26027-20	Aniline Blue-Phosphomolybdic Acid Solution	500 ml
RT	26027-30	Aniline Blue-Orange G Solution	500 ml

► Basic Fuchsin Solution

RT	26031-02	Basic Fuchsin, 0.25% Aqueous	500 ml
RT	26031-05	Basic Fuchsin, 0.5% Aqueous	500 ml
RT	26031-10	Basic Fuchsin, 0.1% in 95% Methanol	500 ml
RT	26031-20	Basic Fuchsin Working Solution	500 ml

► Best's Carmine Stock Solution

Stain is used for selectively staining glycogen. (Keep Refrigerated)

RT	26025-02	Best's Carmine Stain Solution	250 ml
RT	26025-05	Best's Carmine Stain Solution	500 ml

► Biebrich Scarlet Solution

RT	26033-02	Biebrich Scarlet, 0.2% in 1% Acetic Acid	500 ml
RT	26033-10	Biebrich Scarlet, 1% in 1% Acetic Acid	500 ml
RT	26033-20	Biebrich Scarlet, 1% Aqueous	500 ml
RT	26033-25	Biebrich Scarlet – Acid Fuchsin	500 ml

► Congo Red Solution

RT	26090-05	Alcoholic Congo Red, 0.2% Solution	500 ml
RT	26090-20	Congo Red, 0.5% Aqueous	500 ml
RT	26090-25	Congo Red, 1% Aqueous	500 ml

► Cresyl Violet Acetate Solution

RT	26089-01	Cresyl Violet Acetate, 0.1% Aqueous	500 ml
RT	26089-20	Cresyl Violet Acetate, 2% Aqueous	250 ml

► Crystal Violet Solution

RT	26088-10	Crystal Violet, 1% Aqueous	500 ml
RT	26088-15	Crystal Violet, Hucker's Solution	500 ml
RT	26088-16	Crystal Violet, Lieb's Stock Solution	250 ml
RT	26088-17	Crystal Violet, Lilies Solution	250 ml
RT	26088-18	Crystal Violet, Stirling's Solution	250 ml

► EA Counterstain, Gill's Modified Solution

For use with Papanicolaou stain; a general tissue stain. Ready-to-use.

RT	26050-05	EA Counterstain, Gill's Modified	500 ml
RT	26050-06	EA Counterstain, Gill's Modified	1 L

► Ehrlich's Hematoxylin

Stain selectivity for nuclei. Ready-to-use.

RT	26040-05	Ehrlich's Hematoxylin	500 ml
RT	26040-06	Ehrlich's Hematoxylin	1 L

RT	26051-21	Eosin Y – Phloxine B Solution	500 ml

► Fast Frozen Stain Kit

See page 475 >>>>

► Fast Green FCF Solution

RT	26053-02	Fast Green FCF, 0.2% Aqueous	500 ml
RT	26053-05	Fast Green FCF, 0.5% Aqueous	500 ml
RT	26053-25	Fast Green FCF, 2.5% in 2% Acetic Acid	500 ml

STAINING CHEMICALS AND PREPARED SOLUTIONS

➤ Staining Solutions (continued)

➤ Fluorophore-Infiltrated Resin Microscopy (FIRM)

Rapid staining technique that provides high-contrast fluorescence microscopy imaging of resin embedded samples, reminiscent of low magnification transmission electron microscopy.

- Works with Epoxy and Acrylic type resins
- Simply mount your sections on glass slides, air dry, and overlay with 100 microliters FIRM for 30 seconds, wash and coverslip with water or an aqueous mountant. View in Rhodamine channel of a standard wide field Fluorescence Microscope.
- FIRM staining is unique in that the brightly fluorescent dye infiltrates the resin, revealing tissue structures in negative relief, with extremely high contrast and resolution.
- Perfect for previewing specimens prior to EM Analysis
- High Throughput, high contrast image phenotyping of model organisms such as drosophila
- Ideal for material and food science analytical microscopy

RT	12780-05	FIRM for Acrylic Resin Sections	10ml
RT	12780-06	FIRM for Epoxy Resin Sections	10ml

➤ Giemsa Solution

Ingredients:

Glycerin (cas# 56-81-5):61%
 Methyl Alcohol (cas# 67-56-1): 38.3%
 Azur II (cas# 37247-10-2) :0.16%
 Azur II Eosin (cas# 53092-85-6):0.6%
 Specific Gravity: 0.89

Differentiates types of leucocytes, bacteria and inclusion bodies.
 Giemsa, Centralbl. F. Publ., Abt. 1,37, 308 (1904) Stain for thick blood films; shows malarial parasites. Barber and Komp, Publ. Health Rep., 44, 2330 (1929) Bone marrow and stain for showing cell morphology; together with May-Grunwald Solution for pap staining. Pappenheim, Folia Haemat., 13, 338 (1912)

RT	15940	Giemsa Stock Solution	100 ml
RT	15941	Giemsa Stock Solution	500 ml

Giemsa for thin and thick film see page 478 >>>>

➤ Differential Quick Staining Kit (Modified Giemsa)

This kit is a Modified Giemsa Stain kit for quick turn around results The kit may be used for rapid blood smears for differential assessment, as well as for the detection of H. Pylori microorganisms. The kit comes complete with a fixative for air dried cell suspensions and or touch preparation slides.

Applications:

Fine Needle Aspirations, Frozen Sections, Blood Smears, Cytological Specimens, Cytopreps, Microorganism Detection, Bone Marrow Biopsies

This stain offers results in 15 seconds.

The Kit comes complete with 3 solutions and is available in 3 sizes.

➤ Gill's Hematoxylin Staining Solution

Gill's Hematoxylin is a specially formulated solution for use as a biological stain for the nuclei and nuclear chromatin of normal and abnormal cells whether in whole or sliced cells. Our Gill's Hematoxylin is designed to use at its full strength. It is microfiltered prior to shipment; therefore, filtration before use is not required. For repeated use further filtration is recommended. At the discretion of the user, the Gill's Hematoxylin No. 2 and No. 3 may be diluted with ethylene glycol (25% is recommended) to produce a weaker stain solution.

RT	26030-10	Gill's Hematoxylin No. 1	1 L
RT	26030-14	Gill's Hematoxylin No. 1	4 L
RT	26030-20	Gill's Hematoxylin No. 2	1 L
RT	26030-24	Gill's Hematoxylin No. 2	4 L
RT	26030-30	Gill's Hematoxylin No. 3	1 L
RT	26030-34	Gill's Hematoxylin No. 3	4 L

➤ Goodpasture's Stain Solution (MacCallum)

RT	26031	Goodpasture's Stain Solution	500 ml
----	-------	------------------------------	--------

➤ Gram's Iodine

For use as a bacterial, fungal and inclusion body stain.

RT	26054-05	Gram's Iodine Solution	500 ml
RT	26054-06	Gram's Iodine Solution	1 L

➤ Harris' Hematoxylin

Stain selectivity for nuclei, fat and lipids. Ready-to-use.

RT	26041-05	Harris' Hematoxylin	500 ml
RT	26041-06	Harris' Hematoxylin	1 L
RT	26041-20	Harris Hematoxylin without Mercury	500 ml

➤ Hematoxylin Solution

RT	26042-1	Hematoxylin, 1% Aqueous	500 ml
RT	26042-5	Hematoxylin, 5% in SD Alcohol	500 ml
RT	26042-10	Hematoxylin in 95% Alcohol	500 ml
RT	26042-20	Heidenhain's Hematoxylin	500 ml

➤ ImmunoSaver Antigen Retriever

ImmunoSaver allows for Immunostaining with quick and easy activation of cell membranes and the nucleus. ImmunoSaver provides efficient antigen retrieval for successful immunostaining of a wide variety of antigens under optimized conditions. Protocols for both Light and Electron Microscopy may be found with this reagent.

RT	64142	ImmunoSaver	100 ml

RT	18035-05	MacFarlane's Stock Solution	500 ml
RT	18036-05	MacFarlane's Working Solution	500 ml

➤ Mayer's Hematoxylin

Stain selectivity for nuclei. Ready-to-use.

RT	26043-05	Mayer's Hematoxylin	500 ml
RT	26043-06	Mayer's Hematoxylin	1 L
RT	26043-10	Mayer's Hematoxylin	4 L

➤ Modified Mayer's Hematoxylin

Stock Solution, Ready to use. Ingredients: Hematoxylin 0.4%, Ammonium Aluminum Sulfate 0.5%, Sodium Iodate: 0.03%, Citric Acid 0.1%, Chloral Hydrate 5%

RT	26043-18	Modified Mayer's Hematoxylin	500ml
----	-----------------	------------------------------	-------

➤ May-Grunwald Staining Solution

A ready-to-use stain for bone marrow staining.

RT	26064-05	May-Grunwald Stain Solution	500 ml
RT	26064-06	May-Grunwald Stain Solution	1 L

➤ Methenamine Solution

A stock solution for use in bacterial and fungal stains (Grocott's Method/GMS).

RT	26083-05	Methenamine, 3% Aqueous Solution	500 ml
RT	26083-06	Methenamine, 3% Aqueous Solution	1 L

➤ Methylene Blue Solution

RT	26075-10	Methylene Blue, 1% Aqueous	500 ml
RT	26075-14	Methylene Blue 1.4% in 95% Alcohol	500 ml
RT	26075-20	Methylene Blue Working Solution	500 ml

➤ Methyl Green - Pyronin, Purified Aqueous Solution

A stain solution is for demonstrate RNA and DNA.

RT	18710-02	Methyl Green-Pyronin Solution	250 ml
RT	18710-05	Methyl Green-Pyronin Solution	500 ml

➤ Miller's Elastic Stain

RT	26076-05	Miller's Elastic Stain	500 ml
RT	26076-10	Miller's Elastic Stain	1 L

➤ Mucicarmine

For use with hematoxylin and metanil yellow for the determination of carbohydrates and mucosubstances.

RT	26080-05	Mucicarmine Stock Solution	500 ml
RT	26080-06	Mucicarmine Stock Solution	1 L

➤ New Methylene Blue Solution

RT	26077-05	New Methylene Blue 0.50% Aqueous	500 ml
RT	26077-20	New Methylene Blue Solution (Reticulocyte Stain)	500 ml

➤ Nuclear Fast Red Solution

RT	26078-05	Nuclear Fast Red Solution	500 ml
----	-----------------	---------------------------	--------

➤ Oil Red O Solution

RT	26079-05	Oil Red O Saturated in Isopropanol	500 ml
RT	26079-15	Oil Red O Saturated in Propylene Glycol	500 ml

➤ Orange G Solution

RT	26066-05	Orange G, 0.5% Aqueous	500 ml
RT	26066-15	Orange G-Phosphotungstic Acid Solution	500 ml

➤ Papanicolaou Stain, OG-6

RT	26048-05	OG-6 Stain Solution	500 ml
RT	26048-06	OG-6 Stain Solution	1 L

➤ Papanicolaou Stain, EA-50 (EA Counterstain)

RT	26049-05	EA-50 Stain Solution	500 ml
RT	26049-06	EA-50 Stain Solution	1 L

➤ Resorcin-Fuchsin Solution

RT	26067-05	Resorcin-Fuchsin Working Solution	500 ml
----	-----------------	-----------------------------------	--------

➤ Safranin O Solution

RT	26069-05	Safranin O, 0.1% in 0.1% Acetic Acid	500 ml
RT	26069-15	Safranin O, 0.2% in 1% Acetic Acid	500 ml

➤ Toluidine Blue O Solution

RT	26074-05	Toluidine Blue O, 0.1% Aqueous Solution	500 ml
RT	26074-15	Toluidine Blue O, 1% Aqueous Solution	500 ml

➤ Van Gieson's Solution

To use with Weigert's Iodine or Weigert's Iron as a connective tissue stain.

RT	26046-05	Van Gieson's Solution	500 ml
RT	26046-06	Van Gieson's Solution	1 L

➤ Weigert's Iodine Solution

A histological stain. Demonstration of connective tissue is useful in cases of emphysema, arteriosclerosis and other vascular diseases.

RT	26045-05	Weigert's Iodine Solution	500 ml
RT	26045-06	Weigert's Iodine Solution	1 L

➤ Weigert's Iron Hematoxylin

Stain selectivity for nuclei, fungal, and general applications. Ready-to-use.

RT	26044-05	Weigert's Iron Hematoxylin A	500 ml
RT	26044-06	Weigert's Iron Hematoxylin A	1 L
RT	26044-15	Weigert's Iron Hematoxylin B	500 ml
RT	26044-16	Weigert's Iron Hematoxylin B	1 L

➤ Woodstain Scarlet-Acid Fuchsin Solution

RT	26061-05	Woodstain Scarlet-Acid Fuchsin Solution	500 ml
----	-----------------	---	--------

➤ Wright Staining Solution

For use as a blood stain. Ready-to-use.

RT	26060-05	Wright Stain Solution	500 ml
RT	26060-06	Wright Stain Solution	1 L

STAINING CHEMICALS AND PREPARED SOLUTIONS

➤ Prepared Staining Kits for Histology and Pathology

➤ Fast Frozen Stain Kit

A rapid method to stain frozen tissue for permanent use. This kit includes a unique Fast Frozen Fix that is alcohol based, and will not interfere with immunohistochemical procedures and suitable for Laser Capture Microdissection (LCM). Kit consists of: 100 ml Fast Fix (15280-01), 100 ml Eosin Y 0,5% Solution (15285-02), 100 ml Gill Hematoxylin #3 (15285-03), 100 ml Scott's Bluing Solution (#15285-04) and one 100 ml CitraMount® Medium (#18005)

RT 15285-00 Fast Frozen Stain Kit 100 ml

➤ Neat Stain® Staining Kits

Neat Stain® Kits are specifically designed for stat procedures and/or laboratories using manual staining methods. Neat Stain® is available as a rapid three-step differential hematology stain, Gram stain and Trichrome stain staining kit. They are quite simple to use, just immerse your slides sequentially in each reagent for the correct time, air dry and read.

- Neat – Pre-filled multi-well vessels with self-contained foil sealed
- Fast – Immerse slides sequentially in each reagent for specified time, air dry and read
- Convenient – Additional foils for re-sealing containers.

Neat-Stain™ kits are prepared for STAT procedures and /or laboratory using manual staining methods.

➤ Neat Stain® Hematology Stain Kit

This 3-step stain procedure is designed for differentiation of morphological cell types in peripheral blood smears. This kit is also useful in andrology labs staining microorganism and spermatozoa.

Staining characteristics are similar to the Wrights and Wright-Giemsa stains. Neat Stain offers the flexibility of a three dip staining format in both the stain and counter stain solution.

Kit Contains:
6 Reagent Packs,
One Plastic
Stand,
6 Re-seal Foils.
Kit performs
150 tests.

Slide Holder sold separately, Cat. #71411-01.

RT 27104-01 Neat Stain Hematology Stain Kit

➤ Neat Stain® GRAM Kit

This 4-step stain kit is prepared for staining bacteria from cultures or specimens by the differential Gram stain method.

This kit stains similar to the traditional Wright's and Wright-Giemsa stains. Neat Stain® offers the flexibility of the three dip staining sequence in both the stain and counter stain solution.

Kit Contains:
6 Reagent Packs,
one Plastic
Stand,
6 Re-seal Foils.
Kit performs
150 tests.

Slide Holder sold separately, Cat. #71411-01

RT 27100-01 Neat Stain® GRAM Stain Kit

➤ Neat Stain™ Trichrome Stain Kit

This seven-step stain procedure is designed for the staining of stool specimens. Based upon the Wheatley Trichrome technique is a rapid staining procedure providing good results for routine examination. Simplified method, use of mordant prior to staining is not necessary.

Staining characteristics are similar to the traditional Wright's and Wright-Giemsa stains.

Kit Contains: 3 Reagent Packs, One Plastic Stand, 6 Re-seal Foils. Kit performs 75 tests.

Slide Holder sold separately, Cat. #71411-01.

RT 27106-01 Neat Stain Trichrome Stain Kit

➤ Slide Holder

Molded from polypropylene. Adjustable to hold 2 to 5 3x1" slides, or 10 slides back-to-back firmly. This Slide Holder works well with all Neat Stain Kits above.

71411-01 Slide Holder

STAINING CHEMICALS AND PREPARED SOLUTIONS

➤ Prepared Staining Kits for Histology and Pathology (continued)

A.1 BACTERIAL STAINS

➤ Truant's Fluorescent Method for Acid Fast Organism

For bacterial stain.

Stain results:*Acid Fast:*Fluoresce reddish yellow*Artifacts:*Fluoresce yellow**REFERENCES:**

RT	26102-03	Acid Alcohol 1%	500 ml

➤ Brown and Brenn Method for Gram Positive and Gram Negative Bacteria

For bacteria stain: Gram + / Gram - bacteria and filaments of nocardia, etc.

Stain results:*Gram + Bacteria, Nocardia and Actinomyces Filaments:*Blue*Gram - Bacteria, Nuclei:*Red*Additional tissue elements:*Yellow

Note: Also see the Taylor Modification of the Brown and Brenn +/- technique noted for the varying differentiation available. Over-differentiation in the B&B sep 6 is a problem with some sections; run the control slides at varying rates to determine the amount for the specific organism.

B. STAIN FOR BLOOD AND HEMATOLOGIC ELEMENTS

► Wright-Giemsa Stain

Lillie (1972)

For differentiation of blood corpuscles.

Stain results:

Erythrocytes:Pink-Tan
Eosinophiles -Granules:Red
Lymphocytes -Granules:Red-Purple
-Cytoplasm:Blue
Neutrophils -Granules:Purple-Pink

REFERENCES:

RT	26357-02	Sirius Red, 0.1% in Saturated Picric Acid	100 ml
RT	26357-03	Hydrochloric Acid, 0.01N	500 ml

F.2 Stains with Poly-Acid Step

➤ Lillie Modification of Masson's Trichrome

Lillie (1940)

Stains cells, cytoplasm muscle and collagen of mammalian tissue

Stain results:

Nuclei:Black
 Cytoplasm:Brown to Pink
 Muscle:Red
 Erythrocytes:Brilliant Scarlet
 Collagen:Blue to Blue Green
 Myelinated fibers:Red
 Fibrin:Red to Pink

REFERENCES:

- Clark, G.: Staining Procedures. Williams & Wilkins Co., Baltimore, 3rd ed., c. 1973, p.59

RT	26364-08	Sodium Thiosulfate, 5% Aqueous	500 ml

➤ Masson's Trichrome for Connective Tissue

Sheehan and Hrapchak (1980)

For stain nuclei, argentaffin granules, collagen, cytoplasm, keratin, etc.

Stain results:

Nuclei:Black
 Cytoplasm, Keratin, Muscle Fibers:Red
 Collagen, Mucin:Blue

REFERENCES:

- Sheehan and Hrapchak: Theory and Practice of Histotechnology, St. Louis. The Moxby Company 1980, p. 190

STAINING CHEMICALS AND PREPARED SOLUTIONS

► Prepared Staining Kits For Histology And Pathology (cont.)

F. CONNECTIVE TISSUE STAINS (cont.)

F.3 Elastic Tissue Stains

► Modified Verhoff Elastic Van Gieson Stain

For connective tissue stains – Stain with a poly-acid step

Stain results:

Nuclei	Grayish-Black
Collagen Fibers	Red
Elastic Fibers	Bluish-Black
Muscle	Greenish-Yellow

REFERENCES:

- Gravey, Winsome et al “A modified Verhoff Elastic Van Gieson Stain” *The Journal of Histotechnology*, Vol. 14, No. 2, pp113 –114. June 1991.

RT	26369-01	Alcoholic Hematoxylin, 3%	250 ml
RT	26369-02	Ferric Chloride, 2% aqueous	500 ml
RT	26369-03	Lugol's Iodine	500 ml
RT	26369-04	Ferric Chloride, 0.4% aqueous	500 ml
RT	26369-05	Van Geisons Solution	250 ml

► Weigert's Resorcin Fuchsin

Lillie (1965); Mallory (1938); Weigert (1898)

For stain elastic fibers in blood vessel walls, nuclei and collagen.

Stain results:

Elastic Tissues:	Dark Blue
Nuclei (red if Orth's Carmine used):	Dark Blue
Collagen:	Red-Pink
Miscellaneous Tissue Elements:	Yellow (with Van Gieson's stain)

REFERENCES:

- Mallory, FB: *Pathological Technique*; New York: Hafner Publishing Co., c. 1961, p. 168

RT	26370-05	Acid Alcohol, 1%	500 ml

► Verhoeff's Van-Gieson's (VVG Method)

Sheehan and Hrapchak (1980)

For stain elastic fibers, nuclei, collagen and other tissue elements.

Stain results:

Elastic Fibers:	Blue-black to Black—Fine elastic fibrils may not be stained with this method
Nuclei:	Blue to Black
Collagen:	Red
Other Tissue Elements:	Yellow

REFERENCES:

- Sheehan, Dezna C., Hrapchack, Barbara B.: *Theory and Practice of Histotechnology*, 2nd ed. The C.V. Mosby C., St Louis, p. 196-197, c. 1980

RT	26374-06	Van-Gieson's Solution	500 ml

► Carstairs Method for Fibrin and Platelets

Carstairs (1965)

For the staining of fibrin and platelets.

Stain results:

		48 hours or more	Less than 48 hours
Fibrin:	Bright Red	Orange to Orange-Red	
Platelets:	Gray blue to navy	Light Gray	
Collagen:	Bright Blue	Bright Blue	
Muscle:	Red	Red	
Red Blood Cells:	Clear Yellow	Red, Green or Yellow	

RT	26381-01	Ferric Ammonium Sulfate, 5% Aqueous	500 ml
RT	26381-02	Mayer's Hematoxylin	500 ml
RT	26381-03	Picric Acid-Orange G Solution	500 ml
RT	26381-04	Ponceau Acid Fuchsin Solution	500 ml
RT	26381-05	Phosphotungstic Acid, 1%	500 ml
RT	26381-06	Aniline Blue Solution	500 ml

► Modified Movat's Stain

For connective tissue stains – Elastic tissue stains.

Stain results:

Nuclei	Black
Cytoplasm	Red
Elastic Fibers	Purple to Black
Collagen and Bone	Yellow
Mucopolysaccharides	Blue-Green
Muscle	Red

F.4 Silver Methods

➤ Wilder Modification of Bielschowsky's Method

Wilder (1935)

For the staining of Collagen and reticulum.

Stain results:

Reticulum Fibers (If beading is observed and/or a dark background, replace the ammonium hydroxide silver Nitrate solution and the reducing solution):Black
 Collagen:Rose
 Other Tissue Elements:Red

REFERENCES:

■ Wilder, H.C., Amer. J. Clin. Path.: 11:817, 1935

F.5 Keratin Stains

➤ Dane's Method for Prekeratin, Keratin, and Mucin

Keratin stain method for the staining of keratin, prekeratin, acid mucopolysaccharides and nuclei.

Stain results:

Acid Mucopolysaccharides:Blue
 Prekeratin and Keratin:Orange to Red
 Nuclei:Brown

REFERENCES:

■ Dane, E.T., and Herman, D.L.: Stain Technology, 38:97, 1963.

RT	26401-02	Alcian Blue Solution, 0.5%	250 ml
RT	26401-03	Orange G Solution	500 ml
RT	26401-04	Mayer's Hematoxylin	500 ml

STAINING CHEMICALS AND PREPARED SOLUTIONS

► Prepared Staining Kits For Histology And Pathology (cont.)

G. CYTOPLASMIC GRANULE STAINS

G.1 Pancreatic Islet Cell Stains

► Mallory-Heidenhain Azan-Gomori's Modification for Islet Cells

For the staining of alpha, beta and D-cells of the islets of langerhans.

Stain results (Bouin Fixation):

	Human Tissue	Guinea Pig
Alpha granules	Red, bright	Orange - Tan
Beta granules	Orange-Brown, dull	Red, fiery
D-cell granules	Dark Blue	Deep Blue

REFERENCES:

- Clark, G., (ed): Staining Procedures 3rd Ed.; Baltimore: Williams & Wilkins Co., c. 1973, p. 171

RT	26450-05	Orange G, 0.2% in Alcohol	500 ml

G.2 Mast Cell Stains

► Toren's Method for Mast Cells

Cytoplasmic granule stains: Mast cell stains.

Stain results:

Mast Cell Granules	Deep Blue
Collagen & Cartilage	Blue-Green
Muscle & Elastic Fibers	Red
Fibrin	Purple
Bone	Green
Colloid, Keratin & Erythrocytes	Orange Red to Orange

REFERENCES:

- Toren, D.A.: Stain Techn., 38:249-250, 1963

RT	26472-03	Pollacks's Trichrome Solution	100 ml

G.3 Other Granule Stains

► Methenamine Silver Method for Argentaffin Cells

For the staining of argentaffin granules of enterochromaffin cells.

Stain results:

Argentaffin Cells:Black
Coarse connective tissue
of the submucosa:Variable amount of blackening
by 3-3½ hr. of impregnation

Granules of eosinophil leukocytes,
nuclei, smooth muscle

& surface epithelium:show additional blackening
after incubation beyond 3-3½ hr.

Granules of mast cells:Remain red after nuclei
& reticulum are blackened

RT	26516-03	Neutral Red Solution, 1%, Aqueous	250 ml

TECHNICAL TIP

When a stain is applied both en-bloc and as a post-stain for thin sections, maximum contrast will be achieved.

TECHNICAL TIP

Staining Tips With Hematoxylin

1. Check a slide from each batch of slides during times the workload is heavy to insure good staining by the Hematoxylin.
2. Do not allow the slides to dry out at any point during your staining procedure.
3. Increase your staining time in Hematoxylin for tissues that have been in fixative longer than normal.
4. Increase your staining time by at least 1/3 for autopsy tissues.
5. Do not agitate the slides if you are using Ammonia water to Blue. The tissues are more susceptible to washing off if you agitate the slides.
6. Check the pH of the Hematoxylin daily.

TECHNICAL TIP

To eliminate section contamination during the staining procedure please refer to:

- Mollenhauer, H.H. and Morre', D.J. (1978). Contamination of thin sections, cause and elimination. Proc. 9th Int. Cong. Electron. Microsc., Vol.II, p.78
- Mollenhauer, H.H. (1986b). Stain contamination and embedding in electron microscopy. Proc. 44th Ann. Meet. EMSA, p.50. San Francisco Press, San Francisco
- Kuo, J., et al (1981). Forming and removing stain precipitates on ultrathin sections. Stain Technol., 56:199

TECHNICAL TIP

Stability Of Special Staining Solutions

General Guidelines Concerning Solutions

1. Check stock solutions regularly for signs of deterioration.
2. All solutions should be dated and initialed by the person who prepared the solution.
3. Use caution to prevent cross solution contamination.
4. Use distilled or double distilled water to prepare solutions.
5. Use reagent grade chemicals.
6. Use dyes which are certified .
7. Keep solutions in well stoppered bottles at all times.
8. Refrigerated solutions should be poured into the staining jar, and the bottled solution returned to the refrigerator before it warms to room temperature.
9. Return all staining solutions to shelves soon after use to prevent mix-up.
10. Always use clean glassware.
11. Make sure that balance, pH meter, etc., are in proper working order.

STAINING CHEMICALS AND PREPARED SOLUTIONS

For ImmunoGold Reagents...

See Section 2, pages 72-90

Including not only the more commonly known reagents for EM and LM but, as well, a newly introduced line of products such as Silver Enhancement specifically for EM, Ultra-Small Fab fragments, Blocking Solutions, and even a line of donkey gold conjugates.

► Embedding Media

► Paramat and Paramat Extra

Paramat is the original British blend of paraffin wax and plastic polymers and it has been used in histology labs throughout the world for over 20 years. It has been found that when plastic polymers are added to the paraffin the elasticity of the final block is greater as compared with paraffin alone. As well the mixture offers improved tissue penetration, easier ribboning of sections, reduced tendency to crumble, and improved overall results with fibrous tissue.

A recent development to Paramat is the addition of a very small amount of dimethyl sulfoxide (DMSO) which produces PARAMAT EXTRA. This formulation offers additional advantages, such as faster penetration of the tissue with a more homogeneous matrix to support the specimen.

TECHNICAL INFORMATION

■ **Appearance:** Milky-white, pastilles.

■ **Crystalline Structure under the microscope:** Needles & Platelets.

■ **Effect of heating (@ 60°C/ 100g):** Clear melt within max. 16 hrs.

■ **Solubility in Xylene (@ 20°C/ 1g in 50ml):** Clear solution within max. 16 hrs.

■ **Cutting results for 4mm sections:** Over 75% usable single; over 65% usable serial.

■ **Solubility in Xylene (section):** Max. 45 sec.

■ **Melting Point:** 56-58°C.

■ **Solidification Point:** 58-56°C.

■ **Tears and Vascoles:** None.

■ **Adhesion of sections Very good;** protein, to microscope slides: glycerol etc. is not required to hold the section in place.

■ **Free acid content:** Max. 0.01%.

■ **Block Structure:** No mottling, no shrinking.

■ **Block Solidification (Room Temperature):** About 2 hrs.

■ **DMSO content (Paramat Extra-only):** Less than 0.1%.

RT	19286-01	Paramat	1 kilo
RT	19286-10	Paramat	10 kilo

RT	19287-01	Paramat Extra	1 kilo
RT	19287-10	Paramat Extra	10 kilo

► Tissue-Tek® V.I.P.™

Sakura Finetek - High-quality paraffin for processing and embedding. Quality prepared wax - allows optimal sample preparation

■ **Allows reduced compression in sections as thin as 2µ**

■ **Melts at 56°C to protect samples from excessive heat**

■ **Will not discolor or produce resin precipitate**

■ **Small pellets for rapid melting in tissue processors/embedding centers.**

■ **Leaves no plasticizer residue to clog paraffin lines**

SPECIFICATIONS:

Medium Composition Purified paraffin and synthetic resin blend

Applications Processing/Embedding

Additives None

Melting Point 56°C

High Temperature Stability 65°C

Solid Product Range Pellets

Sectioning Range Down to 2µ

Cat.#	Tissue-Tek	Description	Pack
RT 62580-01	4005	Process/Embedding Wax	1 kg
RT 62580-08	4005	Process/Embedding Wax	8x1 kg

► Paraplast Embedding Medium

► Paraplast X-tra

Handy pellet form melts rapidly. Melting Point 53-54°C. Cuts to 2 micron thickness with exceptional ribbon continuity. Extra compression resistance provides total support of tissues.

RT	19214	Paraplast X-tra	1 kg
RT	19215	Paraplast X-tra	8 kg

► Paraplast Plus

Reduces infiltration time by one-third. Cuts to 2 micron thickness with excellent ribbon continuity. Convenient pellet form melts rapidly. Melting point 56°C. Double filtered. No need for filtration before use.

RT	19216	Paraplast plus	1 kg
RT	19217	Paraplast plus	8 kg

► Paraplast Medium

Handy pellet form melts rapidly. Melting Point 56°C. Cuts to 4 micron thickness with excellent ribbon continuity – no crumbling or cracking. Double filtered. No need for filtration before use.

RT	19218	Paraplast Medium	1 kg
RT	19219	Paraplast Medium	8 kg

► Carbowax, Polyethylene Glycol $H(OCH_2CH_2)_nOH$ CAS #25322-68-3

An embedding medium for microscopy and histochemistry.

► Peel Away Paraffin Embedding Wax

A New low melting point polymer paraffin is introduced in the Peel-A-Way line for routine Histology work.

- This new paraffin formulation is more translucent and allows for small dermatological and biopsy specimens to be seen and sectioned easier.
- Its lower polymer content is easier to remove with all cleaning agents. (deparaffinization)
- Its lower viscosity allows for complete infiltration using routine times established for most tissue processors.

These new paraffins are sold in 2.5 kg lined paper and re-closable with a clip bag, and 4 bags per case.

RT	19300-01	Melting Point 52 – 54°C	2.5 kg
RT	19300	Melting Point 52 – 54°C	4x2.5 kg
RT	19302-01	Melting Point 56 – 58°C	2.5 kg
RT	19302	Melting Point 56 – 58°C	4x2.5 kg
RT	19304-01	Melting Point 62 – 64°C	2.5 kg
RT	19304	Melting Point 62 – 64°C	4x2.5 kg

Peel away embedding molds see page 554 >>>>

► Polyester Wax

A synthetic polyester wax with a very low melting point (37°C). Invented by Dr. H.F. Steedman, as a ribboning embedding medium. Its main advantage over paraffin and ester waxes is its low melting point, which reduces tissue hardening, shrinkage, and eliminates the need for infiltration ovens.

The wax is soluble in most organic solvents, including alcohol, ethers, esters, ketones and hydrocarbons. The wax is water tolerant, almost opaque, and sections easily. No electrification of ribbons occurs during sectioning. Sections of 2 microns and more may be cut at room temperatures between 10 and 22°C. It is advantageous to keep the wax in its solid state prior to use.

RT	19312	Polyester Wax	500 g
----	-------	---------------	-------

► Polyfin™

Polyfin is a mixture of highly refined paraffins and co-polymer alloys in a convenient wax pellet. This unique formulation provides optimal tissue support while maintaining exceptional clarity. Our Polyfin™ has been institutionally tested and found to function flawlessly in pressure/vacuum fluid flow processors. Its low melting point (55°C) eliminates any tissue distortion caused by excessive heat during processing. In a recent study conducted by a Medical Center Histologist, monitored by a CPA firm using standard blind protocols, POLYFIN™ clearly demonstrated the least compression of seven popular paraffins.

RT	19280-01	Polyfin Embedding Medium	1 kilo
RT	19280-08	Polyfin Embedding Medium	8x1 kilo
RT	19280-15	Polyfin Embedding Medium	15 kilo

► Para/Gard™

A paraffin repellent for countertops as well as equipment. Just spray and wipe away. No more paraffin build up around your work area. Para/Gard™ is a pleasant smelling, non-toxic spray which is safe for use on metal, wood, and plastic surfaces. Comes in a 4 oz. pump bottle.

RT	64140-01	Para/Gard	4 oz.
RT	64140-06	Para/Gard	6x4 oz./cs

► Tissue Freezing Medium; TFM™

An embedding matrix for frozen sections. TFM™ is an ultra pure formulation of water-soluble glycols and resins that provides a solid bond between the tissue and the object holder with the following features:

- Less Ice Artifacts: TFM's reduced water content minimizes freeze-fracturing.
- Less Curling: TFM allows you to pick up flat serial sections with ease.
- Freezes Faster: TFM freezes very fast and offers better turn-around time.
- Completely water soluble: TFM reduces tissue dislodging.
- Now available in 5 colors: clear, yellow, green, red and blue.

► Tissue-Tek® O.C.T. Compound

Sakura Finetek - This is a well known water soluble glycol's and resins compound that provides an excellent specimen matrix for cryostat sectioning at temperatures of -10°C and below. It leaves no residue during the staining procedure.

Cat.#	Tissue-Tek	Description	Pack
RT	62550-01	4583 O.C.T. Compound	4 oz
RT	62550-12	4583 O.C.T. Compound	12/cs

► Cryogenic-Gel

- It replaces the messy "runny" embedding media.
- It's easy to use.
- Sticks to where you want it.
- Will not run – No waste.

This gel is highly viscous, water-soluble embedding medium for frozen sections that "stays put". The gel is packaged in a pump-dispenser bottle that instantly dispenses the gel in any desired position. The dispenser has a built-in "guillotine" that cleanly severs the gel from the pump spout and prevents any "stringy" medium from pulling away when the bottle is removed. Simply dispense gel on a room temperature block-holder. Use cold heat extractor to form a base layer. Dispense additional gel. Place the tissue on top of gel. Use cold heat extractor to freeze tissue and form block.

Cat.#	Description	Pack
62806-01	Cryo-Gel™ 4.3oz	each
62806-06	Cryo-Gel™ 4.3oz	12/cs

► Tissue-Tek® NEUTRA-GUARD™ Aldehyde Control Systems

These products offer a safe, efficient and economical solution for the control of aldehyde wastes and/or spills:

- 4 unique products for fast, safe and efficient aldehyde neutralization
- Eliminates exposure to potentially hazardous conditions
- It is a certified technology for treating formalin waste
- Complies with federal, state, and local ordinances

► Neutralex™

- CAL/EPA certified technology
- Complete aldehyde neutralization in 15 minutes
- No drain-clogging polymer by-products
- Final neutralization levels down to 10 ppm
- No pH adjustment
- Easy to use: Pre-measured pouches are ready to use convenient to store and will not leak or freeze during the winter months.
- Neutralex® Starter Kit consists of:
 - 16 Neutralex® pre-measured pouches, each pouch neutralizes 4 liters (1 gallon) of aldehyde
 - Aldehyde Test Kit consisting of 100 analytical test strips
 - 9.5 L (2.5 gallon) Reaction Container

Cat. #	Tissue-Tek	Description	Pack
63330-SK	4046	Neutralex™ Starter Kit	each
63330-16	4047	Pre-measured Pouches	16/pk.
63330-10	4050	Aldehyde Test Kit	100/pk.
63330-25	4276	9.5 L Reaction Container	each

► Neutra Pads™

- Revolutionary grossing pad that absorbs and neutralizes 10% formalin
- Significantly reduces the effects of noxious vapors
- Unique pad design encapsulates formalin and promotes neutralization
- Exclusive plastic pad backing prevents escape of harmful liquids; keep grossing area drier, cleaner and safer

- Neutra-Pads™ come packaged: 10 pads per bag, 10 bags per case, each pad measures 20.3 x 25.4 cm (8" x 10")

Cat. #	Tissue-Tek	Description	Pack
63332-01	4295	Neutra-Pads™	10/pk.
63332-10	4295	Neutra-Pads™	100/pk.

► Neutra-Wipes™

- Rapidly absorbs and neutralizes small formalin spills
- Significantly reduces the effects of noxious vapors
- Perfect liner for tissue transporting trays
- Ideal as a shelf liner in tissue storage areas
- Convenient pop-up dispensing container provides fast accessibility to wipes
- Neutra-Wipes™ Starter Pack consists of:
 - 1 dispenser
 - 1 roll of Neutra-Wipes™

- Four-Roll Packs consists of: 4 rolls, 60 wipes per roll; Wipe size: 30.5 cm x 31.8 cm or (12" x 12.5")

Cat. #	Tissue-Tek	Description	Pack
63334-SP	4278	Starter Pack	each
63334-04	4279	4-Roll Pack	each

► Neutra-Form™

- Fast, effective control agent for accidental aldehyde spills
- Diminishes harmful vapors
- Neutralizes hazardous aldehydes
- Neutra-Form™ Sets consist of: 2 containers; each container neutralizes larger spills of 10% formalin or 2% glutaraldehyde.

Cat. #	Tissue-Tek	Description	Pack
63335-02	4304	Neutra-Form™ Set	each

► Histocryl Resin

Histocryl acrylic resin has been specially formulated for light microscopy. It is water clear, and because it is hydrophilic (polar) it permits the use of most routine staining techniques without prior removal or etching.

RT	14390	Kit consists of:	
		500ml Histocryl resin	
		25gm Histocryl Catalyst	
		10ml Histocryl Accelerator	Complete Kit

► GMA, Water Soluble

Glycol Methacrylate embedding medium provides excellent preservation (especially enzymatic autoradiographic studies). Good for E.M., L.M., and Histo. Leduc. & Bernard, (1967) J. Ultrastr. Res., 4, 196-99.

RT	14200	Kit consists of:	
		450ml GMA	
		225ml n-Butylmethacrylate	
		15g Benzoyl Peroxide paste.	Kit

► GMA/PEG

Polyethylene Glycol - Glycol methacrylate mixture. A water miscible embedding medium for cytochemical studies and enzyme localization when light and electron microscopy need to be correlated.

Spaur, R.C. & Moriarty, G., (1977) J Histochem. Cytochem., 23:163.

RT	14250	Kit consists of:	
		450ml Glycol methacrylate, GMA	
		225ml n-Butyl methacrylate	
		50ml Ethylene glycol dimethacrylate	
		15g Benzoyl Peroxide Paste	
		20ml Polyethylene Glycol 400	Kit

► Immuno-Bed™ Embedding Resin

■ A low viscosity media for light microscopy and immuno- histo-chemistry techniques.

■ It allows for the penetration of large immunoglobulins through the plastic sections for demonstration of antigenic sites.

J. Histochem, Cytochem., 35:595 (1987)

	14260-00	Kit consists of:	
		800 ml Solution A	
		30 ml Solution B	
		12 g Catalyst	
0-5C	14260-01	Immuno-Bed Solution A only	800 ml
RT	14260-04	Immuno-Bed Solution B only	30 ml
RT	14260-06	Immuno-Bed Catalyst only	12 g

For all of our Methacrylate Embedding Kits including our complete Technovit line see pages 94, 97, 98-100 >>>>

► JB-4™ Embedding Kit

A water soluble embedding media which is based on Glycol Methacrylate (GMA) plastic embedding. It is intended for use in preparing samples for high resolution microscopes (HRLM). The catalyzed monomer acts as a dehydration and infiltration agent; therefore, complete dehydration through 100% ethanol is not necessary (although recommended for large or dense tissues). Conventional paraffin sections have a greater degree of shrinkage and produce inadequate morphology when compared to JB-4.

FEATURES:

- Thin sections (.5-2.0 micron) with excellent morphological structure preservation.
- Water-clear blocks; casts in 90 minutes max. at room temp.
- Good lipid and enzyme retention when processing at low temperatures (4°C).
- Removal of JB-4 resin prior to staining is not necessary.
- Clearing agents such as xylene and chloroform are not needed.
- Higher clarity and contrast than with paraffin sections.
- Easy processing of difficult specimens such as calcified bone and delicate embryonic tissue.

RT	14270-00	JB-4 Kit Consists of:	
		800 ml Solution A	
		30 ml Solution B	
		12 g Catalyst	Kit
RT	14270-01	JB-4 Solution A only	800ml
RT	14270-04	JB-4 Solution B only	30ml
RT	14270-06	JB-4 Catalyst	12gm

► JB-4 Plus™ Embedding Kit

JB-4 Plus offers all of the same features as JB-4 with the following additions:

- It produces less of an exothermic reaction than JB4 which is good for temperature sensitive tissues.
- It produces harder blocks which is ideal for dense samples, such as bone.

RT	14272-00	JB-4 Plus Kit Consists of:	
		500 ml Solution A	
		15 ml Solution B	
		8 g Benzoyl Peroxide Catalyst	Kit
RT	14272-01	JB-4 Plus Solution A only	500ml
RT	14272-04	JB-4 Plus Solution B only	15ml
RT	14272-06	JB-4 Plus Catalyst	8g

For all other Embedding Media Kits see page 92-102 >>>>

► Feather™ Scalpel Blades Selection

► 1. Scalpel Handle with Blade; Disposable

Made by Feather. Sterile, stainless steel disposable scalpels with a handle. They are packed in aluminum foil, and are available in a variety of sizes.

Cat.#	Description	Qty/Box
72042-10	Disposable Scalpel Set #10	20/bx
72042-11	Disposable Scalpel Set #11	20/bx
72042-12	Disposable Scalpel Set #12	20/bx
72042-15	Disposable Scalpel Set #15	20/bx
72042-20	Disposable Scalpel Set #20	20/bx
72042-21	Disposable Scalpel Set #21	20/bx
72042-22	Disposable Scalpel Set #22	20/bx
72042-23	Disposable Scalpel Set #23	20/bx
72042-24	Disposable Scalpel Set #24	20/bx

► 2. Scalpel Blades/Feather

Sterile, stainless steel surgical scalpel blades, wrapped individually.

Cat.#	Description	Qty/Box
72044-10	Sterile Scalpel Blades #10	100/bx
72044-11	Sterile Scalpel Blades #11	100/bx
72044-12	Sterile Scalpel Blades #12	100/bx
72044-15	Sterile Scalpel Blades #15	100/bx
72044-20	Sterile Scalpel Blades #20	100/bx
72044-21	Sterile Scalpel Blades #21	100/bx
72044-22	Sterile Scalpel Blades #22	100/bx
72044-23	Sterile Scalpel Blades #23	100/bx
72044-24	Sterile Scalpel Blades #24	100/bx

► 3. Feather; Sterile MicroScalpels; Stainless Steel

- Micro precision, ultra sharp, points.
- Sure-grip aluminum or plastic handle-color coded for easy angle identification.
- Sterilized by gamma irradiation.
- Disposable.
- Available in 3 angle styles: 15, 30 and 45°.
- Comes in a carbonate plastic case.

Cat.#	Description	Blade Thickness	Qty
72045-15	Feather Micro Scalpel, 15°, Al Handle	0.1mm	5/bx
72045-30	Feather Micro Scalpel, 30°, Al Handle	0.1mm	5/bx
72045-45	Feather Micro Scalpel, 45°, Al Handle	0.1mm	5/bx
72046-15	Feather Micro Scalpel, 15°, Plastic Handle	0.1mm	5/bx
72046-30	Feather Micro Scalpel, 30°, Plastic Handle	0.1mm	5/bx
72046-45	Feather Micro Scalpel, 45°, Plastic Handle	0.1mm	5/bx

► 4. Scalpel Handles/Feather

- Handle #3; 100mm long, flat with corrugated grip. For use with scalpel blades #10, #11, #12 and #15.
- Handle #4; 105mm long, flat with corrugated grip. For use with scalpel blades #20, #21, #22, #23, and #24.
- Handle #7; 140mm long, slender, contoured with corrugations. For use with scalpel blades #10, #11, #12, and #15

Cat. #	Description	Qty.
72040-03	Scalpel Handle #3	each
72040-04	Scalpel Handle #4	each
72040-07	Scalpel Handle #7	each

► 5. Microsurgical Knife - Premier Edge™

Made from tool steel wire. Sharpened to microsurgical quality. The knife-edges are available in three different configurations: 45, 30 and 15 degrees angle. The handle is plastic and they come sterile and in a blister pack individually, 6 blister packs to a box.

Cat.#	Description	Blade Thickness	Qty
72047-15	Microsurgical Knife, 15°	0.11–0.19mm	6/bx
72047-30	Microsurgical Knife, 30°	0.11–0.19mm	6/bx
72047-45	Microsurgical Knife, 45°	0.11–0.19mm	6/bx

► Disposable Mini Scalpel - Sterile

Feather® Disposable Mini Scalpels are made from heat-treated stainless steel. The blades are smaller than standard blades, come with chemical resistant, slender plastic handle. Handle is 5¼" (145mm) long. Available in three popular styles: #11, #14 and #15, and packaged in a sterile pouch, 20 per box. ISO 14001 compliant, ISO 9001 certified and ISO13485 certified.

Cat. #	Description	Qty.
72041-11	Disposable Scalpel, Mini, #11	20/pk.
72041-14	Disposable Scalpel, Mini, #14	20/pk.
72041-15	Disposable Scalpel, Mini, #15	20/pk.

► Feather® Safeshield™

Disposable Scalpel – Sterile

Made from heat-treated stainless steel, these scalpels are excellent for delicate precise procedures. They fit the hand comfortably and are designed with safety in mind. They reduce injury and transmitted disease from contaminated blades. They feature a clear protective, retractable shield and have a color coded button on the protective shield which assists with blade size identification.

Individually packaged, 10 per box.

Cat. #	Description	Qty.
72043-10	Feather® Safeshield™ Blade #10	10/pk.
72043-11	Feather® Safeshield™ Blade #11	10/pk.
72043-14	Feather® Safeshield™ Blade #14	10/pk.
72043-15	Feather® Safeshield™ Blade #15	10/pk.
72043-15C	Feather® Safeshield™ Blade #15C	10/pk.
72043-20	Feather® Safeshield™ Blade #20	10/pk.
72043-21	Feather® Safeshield™ Blade #21	10/pk.
72043-22	Feather® Safeshield™ Blade #22	10/pk.
72043-23	Feather® Safeshield™ Blade #23	10/pk.
72043-24	Feather® Safeshield™ Blade #24	10/pk.
72043-25	Feather® Safeshield™ Blade #25	10/pk.

► BD* Carbon Steel Scalpel Blade 60

Made from surgical carbon steel, size 60 with convex cutting edge. The most useful in histology labs.

These scalpel blades are 2½" (6cm) long and ribbed for extra rigidity. They are non-sterile and are wrapped individually. Bard-Parker brand.

72050-10 #60 Scalpel Blade (BD #371340) 150/cs

► BD* Disposable Blade Knife Handles

These strong, molded plastic handles provide a secure palm-fitting grip for postmortem work, trimming light plaster casts, and similar forceful cutting. Handle size #6 and #8 Bard-Parker* brand. Handles are sold separately from the interchangeable listed above.

Use blade sizes 10, 11, 12, 15 for handle size 5. Use blade sizes 20, 21, 22, 23 for handle size 6. Use blade size 60 for handle size 8

Cat.#	Size/Length	Pack
72040-05	#5/ 4¾" (12.4cm)	each
72040-06	#6/ 5⅝" (13.1cm)	each
72040-08	#8/ 5½" (13.4cm)	each

► Graduated Scalpel Handle #3

This #3 scalpel handle comes with metric graduations.

72040-30 #3 Graduated Scalpel Handle each

► Scalpel Handles

Made from carbon steel for the blades below.

Cat. #	Description	Qty
72051-3	Scalpel Handle #3	1/pk
72051-4	Scalpel Handle #4	1/pk

► Scalpel Blades

Premiere® Blades are made from carbon steel, individually foil wrapped and gamma radiation sterilized. They are exceptionally strong and relatively uniformly sharp, ideal for routine laboratory dissecting, tissue mincing and where you do not need high cost blades.

Cat. #	Description	Qty
72049-10	Premiere® Blade #10	100/pk
72049-11	Premiere® Blade #11	100/pk
72049-12	Premiere® Blade #12	100/pk
72049-15	Premiere® Blade #15	100/pk
72049-20	Premiere® Blade #20	100/pk
72049-21	Premiere® Blade #21	100/pk
72049-22	Premiere® Blade #22	100/pk
72049-23	Premiere® Blade #23	100/pk
72049-24	Premiere® Blade #24	100/pk
72049-25	Premiere® Blade #25	100/pk

► Tissue-Tek® Accu-Edge® Disposable Scalpel

(1) Handle; (2) Blade #61; (3) Blade #62

Sakura Finetek—These reusable handles and disposable blades are ideal for surgical specimens and dissecting work. These sterile stainless steel blades are available in size #61 and #62 and are approximately 2 inches long. The durable plastic handles are autoclavable.

Cat.#	Tissue-Tek	Description	Pack
62566-01	4791	Scalpel Handle	each
62566-61	4792	Scalpel Blades #61	20/pk
62566-62	4793	Scalpel Blades #62	20/pk

► Tissue-Tek® Accu-Edge® Semi-Disposable Autopsy Knife System
